

**Program Directory for
IBM IMS High Performance Prefix Resolution for z/OS**

V3.01.00

Program Number 5655-M27

FMID H1IP310

for Use with
z/OS

Document Date: November 2009

GI10-8592-02

Note!

Before using this information and the product it supports, be sure to read the general information under 7.0, "Notices" on page 20.

A form for reader's comments appears at the back of this publication. When you send information to IBM, you grant IBM a nonexclusive right to use or distribute the information in any way it believes appropriate without incurring any obligation to you.

1.0 Introduction

This Program Directory is intended for the system programmer responsible for program installation and maintenance. It contains information concerning the material and procedures associated with the installation of IBM IMS High Performance Prefix Resolution for z/OS. This publication refers to IBM IMS High Performance Prefix Resolution for z/OS as IMS High Performance Prefix Resolution.

The Program Directory contains the following sections:

- 2.0, "Program Materials" on page 3 identifies the basic and optional program materials and documentation for IMS High Performance Prefix Resolution.
- 3.0, "Program Support" on page 6 describes the IBM support available for IMS High Performance Prefix Resolution.
- 4.0, "Program and Service Level Information" on page 8 lists the APARs (program level) and PTFs (service level) incorporated into IMS High Performance Prefix Resolution.
- 5.0, "Installation Requirements and Considerations" on page 9 identifies the resources and considerations required for installing and using IMS High Performance Prefix Resolution.
- 6.0, "Installation Instructions" on page 14 provides detailed installation instructions for IMS High Performance Prefix Resolution. It also describes the procedures for activating the functions of IMS High Performance Prefix Resolution, or refers to appropriate publications.

Before installing IMS High Performance Prefix Resolution, read the *CBPDO Memo To Users* and the *CBPDO Memo To Users Extension* that were supplied with this program in softcopy form as well as this Program Directory and then keep them for future reference. Section 3.2, "Preventive Service Planning" on page 6 tells you how to find any updates to the information and procedures in this Program Directory.

IMS High Performance Prefix Resolution is supplied in a Custom-Built Product Delivery Offering (CBPDO, 5751-CS3). The Program Directory is provided in softcopy form on the CBPDO tape which is identical to the hardcopy form provided with your order. Your CBPDO contains a softcopy preventive service planning (PSP) upgrade for this product. All service and HOLDDATA for IMS High Performance Prefix Resolution are included on the CBPDO tape.

Do not use this Program Directory if you are installing IMS High Performance Prefix Resolution with a SystemPac or ServerPac. When using these offerings, use the jobs and documentation supplied with the offering. This documentation may point you to specific sections of the Program Directory as required.

1.1 IMS High Performance Prefix Resolution Description

IMS High Performance Prefix Resolution incorporates the prefix resolution and update functions.

- The HPPRPIPE data transfer service eliminates the intermediate Work File 2 (WF2) and Work File 3 (WF3) data sets to avoid much of the I/O, tape handling, and DASD requirements associated with prefix resolution and update.

- You can:
 - Resolve and update the prefixes of IMS databases involved in logical relationships as a single job step.
 - Execute the prefix resolution and prefix update functions as replacements for the IMS Prefix Resolution and IMS Prefix Update utilities. Each of these functions provide performance improvements over the corresponding utilities by taking advantage of the HPPRPIPE data transfer service and HPPR buffer handler.

1.2 IMS High Performance Prefix Resolution FMID

IMS High Performance Prefix Resolution consists of the following FMID:

H1IP310

2.0 Program Materials

An IBM program is identified by a program number and a feature number. The program number for IMS High Performance Prefix Resolution is 5655-M27 and its feature number is 5802.

Basic Machine-Readable Materials are materials that are supplied under the base license and feature numbers, and are required for the use of the product. Optional Machine-Readable Materials are orderable under separate feature numbers, and are not required for the product to function.

The program announcement material describes the features supported by IMS High Performance Prefix Resolution. Ask your IBM representative for this information if you have not already received a copy.

2.1 Basic Machine-Readable Material

The distribution medium for this program is magnetic tape or downloadable files. It is installed using SMP/E, and is in SMP/E RELFILE format. See 6.0, "Installation Instructions" on page 14 for more information about how to install the program.

Information about the physical tape for the Basic Machine-Readable Materials for IMS High Performance Prefix Resolution can be found in the *CBPDO Memo To Users Extension*.

Non-CBPDO Customers

If you receive the product tape and program directory outside the CBPDO process, refer to 6.1.3, "Sample Jobs" on page 14 for details (media volser, file name, tape file number) and how to proceed.

You can refer to the *CBPDO Memo To Users Extension* to see where the files reside on the tape.

Notes:

1. The data set attributes in this table should be used in the JCL of jobs reading the data sets, but since the data sets are in IEBCOPY unloaded format, their actual attributes may be different.
2. If any RELFILEs are identified as PDSEs, ensure that SMPTLIB data sets are allocated as PDSEs.

Figure 1 (Page 1 of 2). Program File Content

Name	ORG	RECFM	LEN	BLK SIZE
SMPMCS	SEQ	FB	80	8800
IBM.H1IP310.F1	PDS	FB	80	8800

Figure 1 (Page 2 of 2). Program File Content

IBM.H1IP310.F2	PDS	FB	80	8800
IBM.H1IP310.F3	PDS	U	0	6144
IBM.H1IP310.F4	PDS	FB	80	8800

2.2 Optional Machine-Readable Material

No optional machine-readable materials are provided for IMS High Performance Prefix Resolution.

2.3 Program Publications

The following sections identify the basic and optional publications for IMS High Performance Prefix Resolution.

2.3.1 Basic Program Publications

Figure 2 identifies the basic unlicensed program publications for IMS High Performance Prefix Resolution. One copy of each of these publications is included when you order the basic materials for IMS High Performance Prefix Resolution. For additional copies, contact your IBM representative.

Figure 2. Basic Material: Unlicensed Publications

Publication Title	Form Number
IBM IMS High Performance Prefix Resolution for z/OS License Information	GC18-9229

Figure 3 identifies the basic unlicensed or licensed publications that are not available in hardcopy form, but are available through the internet or other media for IMS High Performance Prefix Resolution.

Figure 3. Basic Material: Other Unlicensed or Licensed Publications

Publication Title	Form Number	How Available
IBM IMS High Performance Prefix Resolution for z/OS User's Guide	SC18-9230	http://www.ibm.com/software/data/db2imstools/library.html

Publications are available in PDF and BookManager formats on CD-ROM and on DVD on the next release of software product libraries:

- *z/OS Software Products Collection, SK3T-4270*
- *z/OS Software Products DVD Collection, SK3T-4271**
*requires a DVD drive in DVD-9 (single-sided, dual-layer) format

2.3.2 Optional Program Publications

No optional publications are provided for IMS High Performance Prefix Resolution.

2.4 Program Source Materials

No program source materials or viewable program listings are provided for IMS High Performance Prefix Resolution.

2.5 Publications Useful During Installation

The publications listed in Figure 4 may be useful during the installation of IMS High Performance Prefix Resolution. To order copies, contact your IBM representative or visit the IBM Publications Center on the World Wide Web at:

<http://www.ibm.com/shop/publications/order>

<i>Figure 4. Publications Useful During Installation</i>	
Publication Title	Form Number
<i>IBM SMP/E for z/OS User's Guide</i>	SA22-7773
<i>IBM SMP/E for z/OS Commands</i>	SA22-7771
<i>IBM SMP/E for z/OS Reference</i>	SA22-7772
<i>IBM SMP/E for z/OS Messages, Codes, and Diagnosis</i>	GA22-7770

3.0 Program Support

This section describes the IBM support available for IMS High Performance Prefix Resolution.

3.1 Program Services

Contact your IBM representative for specific information about available program services.

3.2 Preventive Service Planning

Before installing IMS High Performance Prefix Resolution, it is VERY IMPORTANT that you review the current Preventive Service Planning (PSP) information. The PSP buckets maintain current lists of any recommended or required service for this package's installation. This includes software PSP information that contains HIPER, and/or required PTFs against the base release.

While there can be overlap between SW, HW and functional PSP buckets, reviewing all that apply to this package will ensure that you identify any known service required for your installation of this package.

If you obtained IMS High Performance Prefix Resolution as part of a CBPDO, there is HOLDDATA included on the PDO.

If the CBPDO for IMS High Performance Prefix Resolution is more than two weeks old when you install it, you should contact the IBM Support Center, use S/390 SoftwareXcel to obtain the current "PSP Bucket" or obtain the current PSP from the Web at <https://techsupport.services.ibm.com/server/390.psp390>

For program support, access the Software Support Web site at <http://www-3.ibm.com/software/support/>

PSP Buckets are identified by UPGRADEs, which specify product levels, and SUBSETs, which specify the FMIDs for a product level. The UPGRADE and SUBSET values for IMS High Performance Prefix Resolution are:

Figure 5. PSP Upgrade and Subset ID

UPGRADE	SUBSET	Description
5655M27	H11P310/0933	IMS HPPR

For additional Service related information, visit <http://www.ibm.com/software/data/db2imstools/support.html>

3.3 Statement of Support Procedures

Report any difficulties you have using this program to your IBM Support Center. If an APAR is required, the Support Center will provide the address to which any needed documentation can be sent.

Figure 6 identifies the component IDs (COMPID) for IMS High Performance Prefix Resolution.

<i>Figure 6. Component IDs</i>			
FMID	COMPID	Component Name	RETAIN Release
H1IP310	565511500	IMS HP PREFIX RESOL	310

4.0 Program and Service Level Information

This section identifies the program and any relevant service levels of IMS High Performance Prefix Resolution. The program level refers to the APAR fixes incorporated into the program. The service level refers to the PTFs incorporated into the program.

4.1 Program Level Information

The following APAR fixes against previous releases of IMS High Performance Prefix Resolution have been incorporated into this release. They are listed by FMID.

- FMID H1P210

PQ65840

PQ82426

4.2 Service Level Information

PTFs containing APAR fixes against this release of IMS High Performance Prefix Resolution have been incorporated into this product tape. For a list of included PTFs, examine the ++VER statement in the product's SMPMCS.

Over time it is HIGHLY recommended that you frequently check the IMS High Performance Prefix Resolution PSP bucket for HIPER and SPECIAL Attention PTFs against all FMIDs which should be installed.

5.0 Installation Requirements and Considerations

The following sections identify the system requirements for installing and activating IMS High Performance Prefix Resolution. The following terminology is used:

- *Driving system*: the system used to install the program.
- *Target system*: the system on which the program is installed.

In many cases, the same system can be used as both a driving system and a target system. However, you may want to set up a clone of your system to use as a target system by making a separate IPL-able copy of the running system. The clone should include copies of all system libraries that SMP/E updates, copies of the SMP/E CSI data sets that describe the system libraries, and your PARMLIB and PROCLIB.

Some cases where two systems should be used include the following:

- When installing a new level of a product that is already installed, the new product will delete the old one. By installing onto a separate target system, you can test the new product while still keeping the old one in production.
- When installing a product that shares libraries or load modules with other products, the installation can disrupt the other products. Installing onto a test system or clone will allow you to assess these impacts without disrupting your production system.

5.1 Driving System Requirements

This section describes the environment of the driving system required to install IMS High Performance Prefix Resolution.

5.1.1 Machine Requirements

The driving system can run in any hardware environment that supports the required software.

5.1.2 Programming Requirements

<i>Figure 7. Driving System Software Requirements</i>	
Program Number	Product Name and Minimum VRM/Service Level
Any one of the following:	
5694-A01	z/OS V1.09.0 or later
5655-G44	IBM SMP/E for z/OS V3.04.0 or later

5.2 Target System Requirements

This section describes the environment of the target system required to install and use IMS High Performance Prefix Resolution.

IMS High Performance Prefix Resolution installs in the DBS (P115) SREL.

5.2.1 Machine Requirements

The target system can run in any hardware environment that supports the required software.

5.2.2 Programming Requirements

5.2.2.1 Installation Requisites: An installation requisite is defined as a product that is required and **must** be present or one that is not required but **should** be present on the system for the successful installation of this product.

A mandatory installation requisite identifies products that are required, without exception, or this product **will not install** on your system. This includes products specified as PREs or REQs.

IMS High Performance Prefix Resolution has no mandatory installation requisites.

A conditional installation requisite identifies products that are **not** required for successful install but may resolve such things as certain warning messages at installation time. They include products that are specified as IF REQs.

IMS High Performance Prefix Resolution has no conditional installation requisites.

5.2.2.2 Operational Requisites: An operational requisite is defined as a product that is required and **must** be present or a product that is not required but **should** be present on the system in order for this product to operate all or some of its functions.

A mandatory operational requisite identifies products that are required, without exception, or this product **will not operate** its basic function unless the requisite is met. This includes products specified as PREs or REQs.

Figure 8 (Page 1 of 2). Mandatory Operational Requisites

Program Number	Product Name and Minimum VRM/Service Level
Any one of the following:	
5655-J38	IMS V09.01.00
5635-A01	IMS V10.01.00

Figure 8 (Page 2 of 2). Mandatory Operational Requisites

Program Number	Product Name and Minimum VRM/Service Level
5635-A02	IMS V11.01.00

A conditional operational requisite identifies products that are **not required** for the basic function but are needed at run time for this product to utilize specific functions. They may include products specified as IF REQs.

IMS High Performance Prefix Resolution has no conditional operational requisites.

5.2.2.3 Toleration/Coexistence Requisites: A toleration/coexistence requisite is defined as a product which must be present on a sharing system. These systems can be other systems in a multisystem environment (not necessarily sysplex), a shared DASD environment (such as test and production), or systems that reuse the same DASD at different time intervals.

IMS High Performance Prefix Resolution has no toleration/coexistence requisites.

5.2.2.4 Incompatibility (Negative) Requisites: A negative requisite identifies products which must *not* be installed on the same system as this product.

IMS High Performance Prefix Resolution has no negative requisites.

5.2.3 DASD Storage Requirements

IMS High Performance Prefix Resolution libraries can reside on all supported DASD types.

Figure 9 lists the total space required for each type of library.

Figure 9. Total DASD Space Required by IMS High Performance Prefix Resolution

Library Type	Total Space Required
Target	19 tracks
Distribution	17 tracks

Notes:

1. IBM recommends use of system determined block sizes for efficient DASD utilization for all non-RECFM U data sets. For RECFM U data sets, IBM recommends a block size of 32760, which is the most efficient from a performance and DASD utilization perspective.
2. Abbreviations used for the data set type are:

- U** Unique data set, allocated by this product and used only by this product. To determine the correct storage needed for this data set, this table provides all required information; no other tables (or Program Directories) need to be referenced for the data set size.
- S** Shared data set, allocated by this product and used by this product and others. To determine the correct storage needed for this data set, the storage size given in this table needs to be added to other tables (perhaps in other Program Directories). If the data set already exists, it must have enough free space to accommodate the storage size given in this table.
- E** Existing shared data set, used by this product and others. This data set is NOT allocated by this product. To determine the correct storage needed for this data set, the storage size given in this table needs to be added to other tables (perhaps in other program directories). This existing data set must have enough free space to accommodate the storage size given in this table.

If you currently have a previous release of this product installed in these libraries, the installation of this release will delete the old one and reclaim the space used by the old release and any service that had been installed. You can determine whether or not these libraries have enough space by deleting the old release with a dummy function, compressing the libraries, and comparing the space requirements with the free space in the libraries.

For more information on the names and sizes of the required data sets, please refer to 6.1.7, "Allocate SMP/E Target and Distribution Libraries" on page 17.

3. All target and distribution libraries listed have the following attributes:

- The default name of the data set may be changed.
- The default block size of the data set may be changed.
- The data set may be merged with another data set that has equivalent characteristics.
- The data set may be either a PDS or a PDSE.

4. All target libraries listed have the following attributes:

- The data set may be SMS-managed.
- It is not required for the data set to be SMS-managed.
- It is not required for the data set to reside on the IPL volume.
- The values in the "Member Type" column are not necessarily the actual SMP/E element types identified in the SMPMCS.

5. All target libraries listed which contain load modules have the following attributes:

- The data set may be in the LPA.
- It is not required for the data set to be in the LPA.
- The data set may be in the LNKLST.
- It is not required for the data set to be APF-authorized.

The following figures describe the target and distribution libraries required to install IMS High Performance Prefix Resolution. The storage requirements of IMS High Performance Prefix Resolution must be added to the storage required by other programs having data in the same library.

Note: The data in these tables should be used when determining which libraries can be merged into common data sets. In addition, since some ALIAS names may not be unique, ensure that no naming conflicts will be introduced before merging libraries.

Figure 10. Storage Requirements for IMS High Performance Prefix Resolution Target Libraries

5.3 FMIDs Deleted

Installing IMS High Performance Prefix Resolution may result in the deletion of other FMIDs. To see what FMIDs will be deleted, examine the ++VER statement in the product's SMPMCS.

If you do not wish to delete these FMIDs at this time, you must install IMS High Performance Prefix Resolution into separate SMP/E target and distribution zones.

Note: These FMIDs will not automatically be deleted from the Global Zone. Consult the SMP/E manuals for instructions on how to do this.

5.4 Special Considerations

IMS High Performance Prefix Resolution has no special considerations for the target system.

6.0 Installation Instructions

This chapter describes the installation method and the step-by-step procedures to install and to activate the functions of IMS High Performance Prefix Resolution.

Please note the following:

- If you want to install IMS High Performance Prefix Resolution into its own SMP/E environment, consult the SMP/E manuals for instructions on creating and initializing the SMPCSI and the SMP/E control data sets.
- Sample jobs have been provided to help perform some or all of the installation tasks. The SMP/E jobs assume that all DDDEF entries required for SMP/E execution have been defined in the appropriate zones.
- The SMP/E dialogs may be used instead of the sample jobs to accomplish the SMP/E installation steps.

6.1 Installing IMS High Performance Prefix Resolution

6.1.1 SMP/E Considerations for Installing IMS High Performance Prefix Resolution

This release of IMS High Performance Prefix Resolution is installed using the SMP/E RECEIVE, APPLY, and ACCEPT commands. The SMP/E dialogs may be used to accomplish the SMP/E installation steps.

6.1.2 SMP/E Options Subentry Values

The recommended values for some SMP/E CSI subentries are shown in Figure 12. Use of values lower than these may result in failures in the installation process. DSSPACE is a subentry in the GLOBAL options entry. PEMAX is a subentry of the GENERAL entry in the GLOBAL options entry. Refer to the SMP/E manuals for instructions on updating the global zone.

Figure 12. SMP/E Options Subentry Values

SUB-ENTRY	Value	Comment
DSSPACE	(200,200,500)	3390 DASD tracks
PEMAX	SMP/E Default	IBM recommends using the SMP/E default for PEMAX.

6.1.3 Sample Jobs

The following sample installation jobs are provided as part of the product to help you install IMS High Performance Prefix Resolution:

Figure 13. Sample Installation Jobs

Job Name	Job Type	Description	RELFILE
FABYCSIA	SMP/E	Sample job to allocate and initialize a new SMP/E CSI data set (Optional)	IBM.H1IP310.F1
FABYCSID	SMP/E	Sample job to allocate SMP/E data sets (Optional)	IBM.H1IP310.F1
FABYRECV	RECEIVE	Sample RECEIVE job	IBM.H1IP310.F1
FABYALLC	ALLOCATE	Sample job to allocate target and distribution libraries	IBM.H1IP310.F1
FABYDDEF	DDDEF	Sample job to define SMP/E DDDEFs	IBM.H1IP310.F1
FABYAPPL	APPLY	Sample APPLY job	IBM.H1IP310.F1
FABYACCP	ACCEPT	Sample ACCEPT job	IBM.H1IP310.F1

You can access the sample installation jobs by performing an SMP/E RECEIVE and then copying the jobs from the relfiles to a work data set for editing and submission. See Figure 13 on page 14 to find the appropriate relfile data set.

You may also choose to copy the jobs from the tape or product files by submitting the job below. Use either the //TAPEIN or the //FILEIN DD statement, depending on your distribution medium, and comment out or delete the other statement. Add a job card and change the lowercase parameters to uppercase values to meet your site's requirements before submitting.

```
//STEP1 EXEC PGM=IEBCOPY
//SYSPRINT DD SYSOUT=*
//*****
/* If you wish to create a new global zone do not run the *
/* RCVPDO job supplied with CBPDO. RCVPDO assumes that *
/* you will be installing into an existing global zone. *
/* Make the //TAPEIN DD statement below active if you install*
/* from a CBPDO tape by uncommenting the DD statement below. *
//*****
/*TAPEIN DD DSN=IBM.H1IP310.F1,UNIT=tunit,
/* VOL=SER=volser,LABEL=(x,SL),
/* DISP=(OLD,KEEP)
//*****
/* Make the //TAPEIN DD statement below active if you install*
/* from a product tape received outside the CBPDO process *
/* (using the optional SMP/E RECEIVE job) by uncommenting *
/* the DD statement below. *
//*****
/*TAPEIN DD DSN=IBM.H1IP310.F1,UNIT=tunit,
/* VOL=SER=1IP310,LABEL=(2,SL),
/* DISP=(OLD,KEEP)
//*****
/* Make the //FILEIN DD statement below active for *
/* downloaded DASD files. *
```

```

//*****
//*FILEIN DD DSN=IBM.H1IP310.F1,UNIT=SYSALLDA,DISP=SHR,
//* VOL=SER=filevol
//OUT DD DSNAME=jcl-library-name,
// DISP=(NEW,CATLG,DELETE),
// VOL=SER=dasdvol,UNIT=SYSALLDA,
// SPACE=(TRK,(20,10,5))
//SYSUT3 DD UNIT=SYSALLDA,SPACE=(CYL,(1,1))
//SYSIN DD *
COPY INDD=xxxxIN,OUTDD=OUT
/*

```

In the sample above, update the statements as noted below:

If using TAPEIN:

- tunit** is the unit address where the product tape is mounted
- volser** is the volume serial matching the product tape
- x** is the tape file number where the data set name is on the tape
- Refer to the documentation provided by CBPDO to see where IBM.H1IP310.F1 is on the tape.

If using FILEIN

- filevol** is the volume serial of the DASD device where the downloaded files reside.

OUT

- jcl-library-name** is the name of the output data set where the sample jobs will be stored
- dasdvol** is the volume serial of the DASD device where the output data set will reside

SYSIN

- xxxxIN** is either TAPEIN or FILEIN depending on your input DD statement.

You can also access the sample installation jobs by performing an SMP/E RECEIVE and then copying the jobs from the refiles to a work data set for editing and submission. See Figure 13 on page 14 to find the appropriate refile data set.

6.1.4 Allocate SMP/E CSI (Optional)

If you are using an existing CSI, do not execute this job.

If you are allocating a new SMP/E data set for this install, edit, and submit sample job FABYCSIA to allocate the SMP/E data set for IMS High Performance Prefix Resolution.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

6.1.5 Initialize CSI zones (Optional)

Edit and submit sample job FABYCSID to initialize SMP/E zones for IMS High Performance Prefix Resolution. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

6.1.6 Perform SMP/E RECEIVE

Note: If you obtained IMS High Performance Prefix Resolution as part of a CBPDO, use the RCVPDO job found in the CBPDO RIMLIB data set to RECEIVE the IMS High Performance Prefix Resolution FMIDs as well as any service, HOLDDATA, or preventive service planning (PSP) information included on the CBPDO tape. For more information, refer to the documentation included with the CBPDO.

You can also choose to edit and submit sample job FABYRECV to perform the SMP/E RECEIVE for IMS High Performance Prefix Resolution. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

6.1.7 Allocate SMP/E Target and Distribution Libraries

Edit and submit sample job FABYALLC to allocate the SMP/E target and distribution libraries for IMS High Performance Prefix Resolution. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

6.1.8 Create DDDEF Entries

Edit and submit sample job FABYDDEF to create DDDEF entries for the SMP/E target and distribution libraries for IMS High Performance Prefix Resolution. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

6.1.9 Perform SMP/E APPLY

Edit and submit sample job FABYAPPL to perform an SMP/E APPLY CHECK for IMS High Performance Prefix Resolution. Consult the instructions in the sample job for more information.

To receive the full benefit of the SMP/E Causer SYSMOD Summary Report, do *not* bypass the following on the APPLY CHECK: PRE, ID, REQ, and IFREQ. This is because the SMP/E root cause analysis identifies the cause only of **ERRORS** and not of **WARNINGS** (SYSMODs that are bypassed are treated as warnings, not errors, by SMP/E).

Once you have taken any actions indicated by the APPLY CHECK, remove the CHECK operand and run the job again to perform the APPLY.

Note: The GROUPEXTEND operand indicates that SMP/E apply all requisite SYSMODs. The requisite SYSMODS might be applicable to other functions.

Expected Return Codes and Messages from APPLY CHECK: You will receive a return code of 0 if this job runs correctly.

Expected Return Codes and Messages from APPLY: This job should complete with a return code 4 or less, and may issue any of the following messages which do not affect product installation:

GIM23903W and IEW2609W

6.1.10 Execute the Installation Verification Program for IMS High Performance Prefix Resolution

Edit and submit member FABYIVP in the SHPSJCL0 library to run the IVP for IMS High Performance Prefix Resolution. Consult the instructions in the job for more information.

Expected Return Codes and Messages from IVP: You will receive a return code of 0 if this job runs correctly.

Note: If you are JES3 user, Edit and submit member FABYIVP0 in the SHPSJCL0 library before executing FABYIVP.

6.1.11 Perform SMP/E ACCEPT

Edit and submit sample job FABYACCP to perform an SMP/E ACCEPT CHECK for IMS High Performance Prefix Resolution. Consult the instructions in the sample job for more information.

To receive the full benefit of the SMP/E Causer SYSMOD Summary Report, do *not* bypass the following on the ACCEPT CHECK: PRE, ID, REQ, and IFREQ. This is because the SMP/E root cause analysis identifies the cause only of **ERRORS** and not of **WARNINGS** (SYSMODs that are bypassed are treated as warnings, not errors, by SMP/E).

Before using SMP/E to load new distribution libraries, it is recommended that you set the ACCJCLIN indicator in the distribution zone. This will cause entries produced from JCLIN to be saved in the distribution zone whenever a SYSMOD containing inline JCLIN is ACCEPTed. For more information on the ACCJCLIN indicator, see the description of inline JCLIN in the SMP/E manuals.

Once you have taken any actions indicated by the ACCEPT CHECK, remove the CHECK operand and run the job again to perform the ACCEPT.

Note: The GROUPEXTEND operand indicates that SMP/E accept all requisite SYSMODs. The requisite SYSMODS might be applicable to other functions.

Expected Return Codes and Messages from ACCEPT CHECK: You will receive a return code of 0 if this job runs correctly.

If PTFs containing replacement modules are being ACCEPTed, SMP/E ACCEPT processing will linkedit/bind the modules into the distribution libraries. During this processing, the Linkage Editor or Binder may issue messages documenting unresolved external references, resulting in a return code of 4 from the ACCEPT step. These messages can be ignored, because the distribution libraries are not executable and the unresolved external references will not affect the executable system libraries.

Expected Return Codes and Messages from ACCEPT: You will receive a return code of 0 if this job runs correctly.

6.1.12 Run REPORT CROSSZONE

The SMP/E REPORT CROSSZONE command will identify requisites defined for products that have been installed in separate zones. This command will also create APPLY and ACCEPT commands in the SMPPUNCH data set which you can use to install those cross-zone requisites it identifies.

After you have installed IMS High Performance Prefix Resolution, it is recommended that you run REPORT CROSSZONE against the new or updated target and distribution zones. REPORT CROSSZONE requires a global zone with ZONEINDEX entries describing all the target and distribution libraries to be reported on.

For more information on REPORT CROSSZONE, see the SMP/E manuals.

6.2 Activating IMS High Performance Prefix Resolution

The publication *IMS High Performance Prefix Resolution User's Guide, SC18-9230* contains the necessary information to customize and use IMS High Performance Prefix Resolution.

7.0 Notices

References in this document to IBM products, programs, or services do not imply that IBM intends to make these available in all countries in which IBM operates. Any reference to an IBM product, program, or service is not intended to state or imply that only IBM's product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe on any of IBM's intellectual property rights may be used instead of the IBM product, program, or service. Evaluation and verification of operation in conjunction with other products, except those expressly designated by IBM, is the user's responsibility.

APAR numbers are provided in this document to assist in locating PTFs that may be required. Ongoing problem reporting may result in additional APARs being created. Therefore, the APAR lists in this document may not be complete. To obtain current service recommendations and to identify current product service requirements, always contact the IBM Customer Support Center or use S/390 SoftwareXcel to obtain the current "PSP Bucket".

IBM may have patents or pending patent applications covering subject matter in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to the

Reader's Comments

Program Directory for IBM IMS High Performance Prefix Resolution for z/OS, November 2009

You may use this form to comment about this document, its organization, or subject matter with the understanding that IBM may use or distribute whatever information you supply in any way it believes appropriate without incurring any obligation to you.

For each of the topics below please indicate your satisfaction level by circling your choice from the rating scale. If a statement does not apply, please circle N.

RATING SCALE					
very satisfied 1	<----->	2	3	4	>----->
very dissatisfied 5					not applicable N

	Satisfaction					
Ease of product installation	1	2	3	4	5	N
Contents of Program Directory	1	2	3	4	5	N
Installation Verification Programs	1	2	3	4	5	N
Time to install the product	1	2	3	4	5	N
Readability and organization of Program Directory tasks	1	2	3	4	5	N
Necessity of all installation tasks	1	2	3	4	5	N
Accuracy of the definition of the installation tasks	1	2	3	4	5	N
Technical level of the installation tasks	1	2	3	4	5	N
Ease of getting the system into production after installation	1	2	3	4	5	N

How did you order this product?

- CBPDO
- CustomPac
- ServerPac
- Independent
- Other

Is this the first time your organization has installed this product?

- Yes
- No

Were the people who did the installation experienced with the installation of z/OS products?

- Yes
