Program Directory for
DataQuant for z/OS

V01.02.00
Program Number 5697-N64
FMID HRDZ120

for use with
z/OS

Document Date: January 2012

GI10-8759-02
Note!

Before using this information and the product it supports, be sure to read the general information under 7.0, "Notices" on page 26.

A form for reader's comments appears at the back of this publication. When you send information to IBM, you grant IBM a nonexclusive right to use or distribute the information in any way it believes appropriate without incurring any obligation to you.

1.0 Introduction

This Program Directory is intended for the system programmer responsible for program installation and maintenance. It contains information concerning the material and procedures associated with the installation of IBM DataQuant for z/OS. This publication refers to IBM DataQuant for z/OS as “DataQuant for z/OS”.

The Program Directory contains the following sections:

- **2.0, “Program Materials” on page 3** identifies the basic and optional program materials and documentation for DataQuant for z/OS.
- **3.0, “Program Support” on page 10** describes the IBM support available for DataQuant for z/OS.
- **4.0, “Program and Service Level Information” on page 12** lists the APARs (program level) and PTFs (service level) incorporated into DataQuant for z/OS.
- **5.0, “Installation Requirements and Considerations” on page 13** identifies the resources and considerations required for installing and using DataQuant for z/OS.
- **6.0, “Installation Instructions” on page 19** provides detailed installation instructions for DataQuant for z/OS. It also describes the procedures for activating the functions of DataQuant for z/OS, or refers to appropriate publications.

Before installing DataQuant for z/OS, read the CBPDO Memo To Users and the CBPDO Memo To Users Extension that were supplied with this program in softcopy form as well as this Program Directory and then keep them for future reference. Section **3.2, “Preventive Service Planning” on page 10** tells you how to find any updates to the information and procedures in this Program Directory.

DataQuant for z/OS is supplied in a Custom-Built Product Delivery Offering (CBPDO, 5751-CS3). The Program Directory is provided in softcopy form on the CBPDO tape which is identical to the hardcopy form provided with your order. All service and HOLDDATA for DataQuant for z/OS are included on the CBPDO tape.

Do not use this Program Directory if you are installing DataQuant for z/OS with a SystemPac or ServerPac. When using these offerings, use the jobs and documentation supplied with the offering. This documentation may point you to specific sections of the Program Directory as required.

1.1 DataQuant for z/OS Description

IBM DataQuant is a business intelligence tool that features robust query, analytical, reporting, and executive dashboard capabilities that help you transform the raw data behind your business into the critical decisions that drive it forward. In the Workstation environment, DataQuant is an Eclipse-based, rich client desktop application that is ideally suited to content authoring. In the WebSphere environment, DataQuant is a Web application that uses a thin-client deployment model to disseminate reports, queries, and dashboards across the enterprise via an ordinary Web browser.

© Copyright IBM Corp. 2007, 2012
Note: Both the Workstation and WebSphere components are shipped on CD-ROM for installation on Windows, Linux, and Solaris. Also shipped is an SMP/E installable tape for DataQuant for WebSphere installation on z/OS. The z/OS installation will place a DataQuant for WebSphere EAR file in an HFS or zFS directory on z/OS in preparation for deployment to a WebSphere Application Server for z/OS. This program directory will guide you through the installation of the DataQuant for WebSphere tape via SMP/E only. Refer to the product publication *Installing and Managing DataQuant, GC19-1166*, for complete installation instructions for any of these installation methods.

1.2 DataQuant for z/OS FMIDs

DataQuant for z/OS consists of the following FMIDs:

HRDZ120
2.0 Program Materials

An IBM program is identified by a program number and a feature number. The program number for DataQuant for z/OS is 5697-N64 and its feature number is 5802.

Basic Machine-Readable Materials are materials that are supplied under the base license and feature numbers, and are required for the use of the product. Optional Machine-Readable Materials are orderable under separate feature numbers, and are not required for the product to function.

The program announcement material describes the features supported by DataQuant for z/OS. Ask your IBM representative for this information if you have not already received a copy.

2.1 Basic Machine-Readable Material

The distribution medium for this program is magnetic tape or downloadable files. It is installed using SMP/E, and is in SMP/E RELFILE format. See 6.0, “Installation Instructions” on page 19 for more information about how to install the program.

Figure 1 describes the program file content for DataQuant for z/OS. You can refer to the CBPDO Memo To Users Extension to see where the files reside on the tape.

Notes:

1. The data set attributes in this table should be used in the JCL of jobs reading the data sets, but since the data sets are in IEBCOPY unloaded format, their actual attributes may be different.
2. If any RELFILEs are identified as PDSEs, ensure that SMPTLIB data sets are allocated as PDSEs.

2.2 Optional Machine-Readable Material

No optional machine-readable materials are provided for DataQuant for z/OS.
2.3 Program Publications

The following sections identify the basic and optional publications for DataQuant for z/OS.

2.3.1 Basic Program Publications

Figure 2 identifies the basic unlicensed program publications for DataQuant for z/OS. One copy of each of these publications is included when you order the basic materials for DataQuant for z/OS. For additional copies, contact your IBM representative.

<table>

3.0 Program Support

This section describes the IBM support available for DataQuant for z/OS.

3.1 Program Services

Contact your IBM representative for specific information about available program services.

3.2 Preventive Service Planning

Before installing DataQuant for z/OS, it is VERY IMPORTANT that you review the current Preventive Service Planning (PSP) information. The PSP buckets maintain current lists (which have been identified since the package was created) of any recommended or required service for this package's installation. This includes software PSP information that contains HIPER, and/or required PTFs against the base release.

While there can be overlap between software, hardware and functional PSP buckets, reviewing all that apply to this package will ensure that you identify any known service required for your installation of this package.

If you obtained DataQuant for z/OS as part of a CBPDO, there is HOLDDATA included on the PDO.

If the CBPDO for DataQuant for z/OS is more than two weeks old when you install it, you should contact the IBM Support Center, use S/390 SoftwareXcel to obtain the current "PSP Bucket" or obtain the current PSP from the Web at https://techsupport.services.ibm.com/server/390.psp390.

PSP Buckets are identified by UPGRADEs, which specify product levels, and SUBSETs, which specify the FMIDs for a product level. The UPGRADE and SUBSET values for DataQuant for z/OS are:

<table>
<thead>
<tr>
<th>UPGRADE</th>
<th>SUBSET</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>5697N64</td>
<td>HRDZ120</td>
<td>DataQuant for WebSphere z/OS</td>
</tr>
</tbody>
</table>
3.3 Statement of Support Procedures

Report any difficulties you have using this program to your IBM Support Center. If an APAR is required, the Support Center will advise how you should submit any needed information or documentation.

Figure 15 on page 11 identifies the component IDs (COMPID) for DataQuant for z/OS.

<table>
<thead>
<tr>
<th>FMID</th>
<th>COMPID</th>
<th>Component Name</th>
<th>RETAIN Release</th>
</tr>
</thead>
<tbody>
<tr>
<td>HRDZ120</td>
<td>5697N6400</td>
<td>DATAQUANT WEBS Z/OS</td>
<td>120</td>
</tr>
</tbody>
</table>
4.0 Program and Service Level Information

This section identifies the program and any relevant service levels of DataQuant for z/OS. The program level refers to the APAR fixes incorporated into the program. The service level refers to the PTFs incorporated into the program.

4.1 Program Level Information

No APARs have been incorporated into DataQuant for z/OS.

4.2 Service Level Information

No PTFs against this release of DataQuant for z/OS have been incorporated into the product tape.

Over time it is HIGHLY recommended that you frequently check the DataQuant for z/OS PSP bucket for HIPER and SPECIAL Attention PTFs against all FMIDs which should be installed.
5.0 Installation Requirements and Considerations

The following sections identify the system requirements for installing and activating DataQuant for z/OS. The following terminology is used:

- **Driving system**: the system used to install the program.
  
  The program may have specific operating system or product level requirements for utilizing processes such as binder or assembly utilities during the install.

- **Target system**: the system on which the program is intended to run.
  
  The program may have specific product level requirements such as needing access to another product's library for link-edits that may directly affect the elements during the install or for its basic or enhanced operation. These requirements may be mandatory or optional.

In many cases, the same system can be used as both a driving system and a target system. However, you may want to set up a clone of your system to use as a target system by making a separate IPL-able copy of the running system. The clone should include copies of all system libraries that SMP/E updates, copies of the SMP/E CSI data sets that describe the system libraries, and your PARMLIB and PROCLIB.

Some cases where two systems should be used include the following:

- When installing a new level of a product that is already installed, the new product will delete the old one. By installing onto a separate target system, you can test the new product while still keeping the old one in production.

- When installing a product that shares libraries or load modules with other products, the installation can disrupt the other products. Installing onto a test system or clone will allow you to assess these impacts without disrupting your production system.

5.1 Driving System Requirements

This section describes the environment of the driving system required to install DataQuant for z/OS.

5.1.1 Machine Requirements

The driving system can run in any hardware environment that supports the required software.

5.1.2 Programming Requirements
5.2 Target System Requirements

This section describes the environment of the target system required to install and use DataQuant for z/OS.

DataQuant for z/OS installs in the DBS (P115) SREL.

### 5.2.1 Machine Requirements

The target system can run in any hardware environment that supports the required software.

### 5.2.2 Programming Requirements

#### 5.2.2.1 Installation Requisites:

An installation requisite is defined as a product that is required and must be present or one that is not required but should be present on the system for the successful installation of this product.

A mandatory installation requisite identifies products that are required, without exception, or this product will not install on your system. This includes products specified as PREs or REQs.

DataQuant for z/OS has no mandatory installation requisites.

A conditional installation requisite identifies products that are not required for successful install but may resolve such things as certain warning messages at installation time. They include products that are specified as IF REQs.

DataQuant for z/OS has no conditional installation requisites.
5.2.2.2 Operational Requisites: An operational requisite is defined as a product that is required and must be present or a product that is not required but should be present on the system in order for this product to operate all or some of its functions.

A mandatory operational requisite identifies products that are required, without exception, or this product will not operate its basic function unless the requisite is met. This includes products specified as PREs or REQs.

For information about QMF compatibility with DB2 releases not listed above, see http://www.ibm.com/support/docview.wss?uid=swg21409518. In some cases, QMF PTFs might need to be applied for QMF to operate properly.

A conditional operational requisite identifies products that are not required for the basic function but are needed at run time for this product to utilize specific functions. They may include products specified as IF REQs.

**Figure 17. Mandatory Operational Requisites**

<td>Firefox V1.5</td>
</tr>
</tbody>
</table>

**Notes**

- For information about QMF compatibility with DB2 releases not listed above, see http://www.ibm.com/support/docview.wss?uid=swg21409518. In some cases, QMF PTFs might need to be applied for QMF to operate properly.

**Figure 18. Conditional Operational Requisites**

<td>DB2 QMF Enterprise Edition V09.01.00</td>
<td>Full compatibility with QMF infrastructure and objects</td>
</tr>
</tbody>
</table>
5.2.2.3 Toleration/Coexistence Requisites: A toleration/coexistence requisite is defined as a product that must be present on a sharing system. These systems can be other systems in a multisystem environment (not necessarily sysplex), a shared DASD environment (such as test and production), or systems that reuse the same DASD at different time intervals.

DataQuant for z/OS has no toleration/coexistence requisites.

5.2.2.4 Incompatibility (Negative) Requisites: A negative requisite identifies products that must not be installed on the same system as this product.

DataQuant for z/OS has no negative requisites.

5.2.3 DASD Storage Requirements

DataQuant for z/OS libraries can reside on all supported DASD types. The values below are for 3390 DASD.

Figure 19 lists the total space required for each type of library.

<table>
<thead>
<tr>
<th>Library Type</th>
<th>Total Space Required in 3390 Trks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Target</td>
<td>8 tracks</td>
</tr>
<tr>
<td>Distribution</td>
<td>1949 tracks</td>
</tr>
<tr>
<td>HFS or zFS</td>
<td>166528 512k blocks</td>
</tr>
</tbody>
</table>

Notes:

1. IBM recommends use of system determined block sizes for efficient DASD utilization for all non-RECFM U data sets. For RECFM U data sets, IBM recommends a block size of 32760, which is the most efficient from a performance and DASD utilization perspective.

2. Abbreviations used for the data set type are:

- **U**: Unique data set, allocated by this product and used only by this product. To determine the correct storage needed for this data set, this table provides all required information; no other tables (or Program Directories) need to be referenced for the data set size.

- **S**: Shared data set, allocated by this product and used by this product and others. To determine the correct storage needed for this data set, the storage size given in this table needs to be added to other tables (perhaps in other Program Directories). If the data set already exists, it must have enough free space to accommodate the storage size given in this table.

- **E**: Existing shared data set, used by this product and others. This data set is NOT allocated by this product. To determine the correct storage needed for this data set, the storage size given in this table needs to be added to other tables (perhaps in other program directories). This
(existing data set must have enough free space to accommodate the storage size given in this table.

If you currently have a previous release of this product installed in these libraries, the installation of this release will delete the old one and reclaim the space used by the old release and any service that had been installed. You can determine whether or not these libraries have enough space by deleting the old release with a dummy function, compressing the libraries, and comparing the space requirements with the free space in the libraries.

For more information on the names and sizes of the required data sets, please refer to 6.1.7, “Allocate SMP/E Target and Distribution Libraries” on page 22.

3. Abbreviations used for the HFS or zFS Path type are:

- **N** New path, created by this product.
- **X** Path created by this product, but may already exist from a previous release.
- **P** Previously existing path, created by another product.

4. All target and distribution libraries listed have the following attributes:

- The default name of the data set may be changed.
- The default block size of the data set may be changed.
- The data set may be merged with another data set that has equivalent characteristics.
- The data set may be either a PDS or a PDSE.

5. All target libraries listed have the following attributes:

- The data set may be SMS-managed.
- It is not required for the data set to be SMS-managed.
- It is not required for the data set to reside on the IPL volume.
- The values in the “Member Type” column are not necessarily the actual SMP/E element types identified in the SMPMCS.

6. All target libraries listed which contain load modules have the following attributes:

- The data set may be in the LPA.
- It is not required for the data set to be in the LPA.
- The data set may be in the LNKLST.
- It is not required for the data set to be APF-authorized.

The following figures describe the target and distribution libraries and HFS or zFS paths required to install DataQuant for z/OS. The storage requirements of DataQuant for z/OS must be added to the storage required by other programs having data in the same library or path.

**Note:** The data in these tables should be used when determining which libraries can be merged into common data sets. In addition, since some ALIAS names may not be unique, ensure that no naming conflicts will be introduced before merging libraries.
5.3 FMIDs Deleted

Installing DataQuant for z/OS may result in the deletion of other FMIDs. To see what FMIDs will be deleted, examine the ++VER statement in the product's SMPMCS.

If you do not wish to delete these FMIDs at this time, you must install DataQuant for z/OS into separate SMP/E target and distribution zones.

**Note:** These FMIDs will not automatically be deleted from the Global Zone. Consult the SMP/E manuals for instructions on how to do this.

5.4 Special Considerations

DataQuant for z/OS has no special considerations for the target system.
6.0 Installation Instructions

This chapter describes the installation method and the step-by-step procedures to install and to activate the functions of DataQuant for z/OS.

Please note the following:

• If you want to install DataQuant for z/OS into its own SMP/E environment, consult the SMP/E manuals for instructions on creating and initializing the SMPCSI and the SMP/E control data sets.

• Sample jobs have been provided to help perform some or all of the installation tasks. The SMP/E jobs assume that all DDDEF entries required for SMP/E execution have been defined in the appropriate zones.

• The SMP/E dialogs may be used instead of the sample jobs to accomplish the SMP/E installation steps.

6.1 Installing DataQuant for z/OS

6.1.1 SMP/E Considerations for Installing DataQuant for z/OS

This release of DataQuant for z/OS is installed using the SMP/E RECEIVE, APPLY, and ACCEPT commands. The SMP/E dialogs may be used to accomplish the SMP/E installation steps.

6.1.2 SMP/E Options Subentry Values

The recommended values for some SMP/E CSI subentries are shown in Figure 23. Use of values lower than these may result in failures in the installation process. DSSPACE is a subentry in the GLOBAL options entry. PEMAX is a subentry of the GENERAL entry in the GLOBAL options entry. Refer to the SMP/E manuals for instructions on updating the global zone.

<table>
<thead>
<tr>
<th>SUB-ENTRY</th>

6.1.3 Sample Jobs

The following sample installation jobs are provided as part of the product to help you install DataQuant for z/OS:
You can access the sample installation jobs by performing an SMP/E RECEIVE and then copying the jobs from the refiles to a work data set for editing and submission. See Figure 24 on page 19 to find the appropriate refile data set.

You may also choose to copy the jobs from the tape or product files by submitting the job below. Use either the //TAPEIN or the //FILEIN DD statement, depending on your distribution medium, and comment out or delete the other statement. Add a job card and change the lowercase parameters to uppercase values to meet your site's requirements before submitting.

```
//STEP1 EXEC PGM=IEBCOPY
//SYSPRINT DD SYSOUT=/c5197
///c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197 ... 97/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197

///c5197 DISP=(OLD,KEEP)
///c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197 ... 97/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197/c5197
```
In the sample above, update the statements as noted below:

If using TAPEIN:
- `tunit` is the unit address where the product tape is mounted
- `volser` is the volume serial matching the product tape
- `x` is the tape file number where the data set name is on the tape
  - Refer to the documentation provided by CBPDO to see where IBM.HRDZ120.F1 is on the tape.

If using FILEIN:
- `filevol` is the volume serial of the DASD device where the downloaded files reside.

OUT
- `jcl-library-name` is the name of the output data set where the sample jobs will be stored
- `dasdvol` is the volume serial of the DASD device where the output data set will reside

SYSIN
- `xxxxIN` is either TAPEIN or FILEIN depending on your input DD statement.

6.1.4 Allocate SMP/E CSI (Optional)

If you are using an existing CSI, do not execute this job.

If you are allocating a new SMP/E data set for this install, edit and submit sample job RDZALA to allocate the SMP/E data set for DataQuant for z/OS.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

6.1.5 Initialize CSI zones (Optional)

Edit and submit sample job RDZALB to initialize SMP/E zones for DataQuant for z/OS. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.
6.1.6 Perform SMP/E RECEIVE

Having obtained DataQuant for z/OS as part of a CBPDO, use the RCVPDO job found in the CBPDO RIMLIB data set to RECEIVE the DataQuant for z/OS FMIDs as well as any service, HOLDDATA, included on the CBPDO tape. For more information, refer to the documentation included with the CBPDO.

You can also choose to edit and submit sample job RDZRECEV to perform the SMP/E RECEIVE for DataQuant for z/OS. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

6.1.7 Allocate SMP/E Target and Distribution Libraries

Edit and submit sample job RDZALLOC to allocate the SMP/E target and distribution libraries for DataQuant for z/OS. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

6.1.8 Allocate HFS or zFS Paths

The target system HFS or zFS data set must be mounted on the driving system when running the sample RDZISMKD job since the job will create paths in the HFS or zFS.

Before running the sample job to create the paths in the file system, you must ensure that OMVS is active on the driving system, and that the target system's HFS or zFS file system is mounted to the driving system. zFS must be active on the driving system if you are installing DataQuant for z/OS into a file system that is zFS.

If you plan to install DataQuant for z/OS into a new HFS or zFS file system, you must create the mountpoint and mount the new file system to the driving system. For DataQuant for z/OS, the recommended mountpoint is: /usr/lpp/DataQuant

Edit and submit sample job RDZISMKD to allocate the HFS or zFS paths for DataQuant for z/OS. Consult the instructions in the sample job for more information.

If you create a new HFS or zFS for this product, you should consider updating the BPXPRMxx PARMLIB member to mount the new file system at IPL time. This may be helpful if an IPL occurs before the installation is complete.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.
6.1.9 Create DDDEF Entries

Edit and submit sample job RDZDDDEF to create DDDEF entries for the SMP/E target and distribution libraries for DataQuant for z/OS. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

6.1.10 Perform SMP/E APPLY

1. Ensure you have the latest Enhanced HOLDDATA, then edit and submit sample job RDZAPPLY to perform an SMP/E APPLY CHECK for DataQuant for z/OS. Consult the instructions in the sample job for more information.

   Enhanced HOLDDATA introduces ERROR HOLDS against FMIDs for HIPER APARs. Prior to installing, you should ensure you have the latest Enhanced HOLDDATA (available at url http://service.software.ibm.com/holddata/390holddata.html). The FMID(s) should be installed regardless of the status of unresolved HIPERs, however, the software should not be deployed until the unresolved HIPERs have been analyzed to determine applicability.

   To receive the full benefit of the SMP/E Causer SYSMOD Summary Report, do not bypass the following on the APPLY CHECK: PRE, ID, REQ, and IFREQ. This is because the SMP/E root cause analysis identifies the cause only of **ERRORS** and not of **WARNINGS** (SYSMODs that are bypassed are treated as warnings, not errors, by SMP/E).

   There are two methods to complete an FMID installation where ++HOLDS for HIPERs exist for the FMID(s) being installed:

   a. To ensure that all recommended and critical service is installed with the FMID(s), add the SOURCEIDs of PRP, HIPER, and RSU* to the APPLY command. There may be PE or HIPER APARs that do not have resolving PTFs available yet. You need to analyze the symptom flags to determine if you want to BYPASS the specific ERROR HOLDS and continue the FMID installation.

      ```
      APPLY S(fmid,fmid,...)
      FORFMID(fmid,fmid,...)
      SOURCEID(PRP,HIPER,RSU*,...)
      GROUPEXTEND .
      ```

      This method requires more initial research, but will provide resolution for all HIPERs that have fixes available and are not in a PE chain. There may still be unresolved PEs or HIPERs that will require the use of BYPASS.

   b. To install the FMID(s) as it would have been installed prior to Enhanced HOLDDATA, you can add a BYPASS(HOLDCLASS(HIPER)) operand to the APPLY command. This will allow the FMID to be installed even though there are HIPER ERROR HOLDS against it. Note that not all ERROR HOLDS were bypassed, only the HIPER ERROR HOLDS. After the FMID(s) are installed, the SMP/E REPORT ERRSYSMODS command should be run to identify any missing HIPER maintenance.
APPLY $fmid,fmid,...$
FORFMID($fmid,fmid,...$)
SOURCEID($RSU*$)
GROUPEXTEND
BYPASS($HOLDCLASS(HIPER)) .
..any other parameters documented in the program directory

This method is the quicker of the two, but requires subsequent review of the REPORT ERRSYSMODS to investigate any HIPERs.

If you bypass any HOLDs during the installation of the FMID(s) because fixing PTFs were not yet available you can use the APAR Status Tracking (AST) function of ServiceLink or the APAR Tracking function of ResourceLink to be notified when the fixing PTF is available.

2. After you have taken any actions indicated by the APPLY CHECK, remove the CHECK operand and run the job again to perform the APPLY.

Note: The GROUPEXTEND operand indicates that SMP/E apply all requisite SYSMODs. The requisite SYSMODS might be applicable to other functions.

Expected Return Codes and Messages from APPLY CHECK: You will receive a return code of 0 if this job runs correctly.

Expected Return Codes and Messages from APPLY: You will receive a return code of 0 if this job runs correctly.

6.1.11 Perform SMP/E ACCEPT

Edit and submit sample job RDZACCEP to perform an SMP/E ACCEPT CHECK for DataQuant for z/OS. Consult the instructions in the sample job for more information.

To receive the full benefit of the SMP/E Causer SYSMOD Summary Report, do not bypass the following on the ACCEPT CHECK: PRE, ID, REQ, and IFREQ. This is because the SMP/E root cause analysis identifies the cause only of ERRORS and not of WARNINGS (SYSMODs that are bypassed are treated as warnings, not errors, by SMP/E).

Before using SMP/E to load new distribution libraries, it is recommended that you set the ACCJCLIN indicator in the distribution zone. This will cause entries produced from JCLIN to be saved in the distribution zone whenever a SYSMOD containing inline JCLIN is ACCEPTed. For more information on the ACCJCLIN indicator, see the description of inline JCLIN in the SMP/E manuals.

Once you have taken any actions indicated by the ACCEPT CHECK, remove the CHECK operand and run the job again to perform the ACCEPT.

Note: The GROUPEXTEND operand indicates that SMP/E accept all requisite SYSMODs. The requisite SYSMODS might be applicable to other functions.

Expected Return Codes and Messages from ACCEPT CHECK: You will receive a return code of 0 if this job runs correctly.
If PTFs containing replacement modules are being ACCEPTed, SMP/E ACCEPT processing will link-edit/bind the modules into the distribution libraries. During this processing, the Linkage Editor or Binder may issue messages documenting unresolved external references, resulting in a return code of 4 from the ACCEPT step. These messages can be ignored, because the distribution libraries are not executable and the unresolved external references will not affect the executable system libraries.

**Expected Return Codes and Messages from ACCEPT:** You will receive a return code of 0 if this job runs correctly.

### 6.1.12 Run REPORT CROSSZONE

The SMP/E REPORT CROSSZONE command will identify requisites defined for products that have been installed in separate zones. This command will also create APPLY and ACCEPT commands in the SMPPUNCH data set that you can use to install those cross-zone requisites it identifies.

After you have installed DataQuant for z/OS, it is recommended that you run REPORT CROSSZONE against the new or updated target and distribution zones. REPORT CROSSZONE requires a global zone with ZONEINDEX entries describing all the target and distribution libraries to be reported on.

For more information on REPORT CROSSZONE, see the SMP/E manuals.

### 6.2 Activating DataQuant for z/OS

#### 6.2.1 HFS or zFS Execution

After the SMP/E installation of DataQuant for z/OS, run the following shell command to expand the installation archive into the various components for the DataQuant for WebSphere product. Run this command from the -PathPrefix-/usr/lpp/DataQuant/ directory:

```bash
jar -xf ./ARDZHFS.JAR
```

Refer to the ASCII readme.txt file you will find in the -PathPrefix-/usr/lpp/DataQuant/ directory. The publication *Installing and Managing DataQuant*, GC19-1166, contains the step-by-step procedures to activate the functions of the DataQuant for WebSphere component of DataQuant for z/OS.

**Note:** -PathPrefix- was specified in sample job RDZISMKD.
7.0 Notices

References in this document to IBM products, programs, or services do not imply that IBM intends to make these available in all countries in which IBM operates. Any reference to an IBM product, program, or service is not intended to state or imply that only IBM's product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe on any of IBM's intellectual property rights may be used instead of the IBM product, program, or service. Evaluation and verification of operation in conjunction with other products, except those expressly designated by IBM, is the user's responsibility.

APAR numbers are provided in this document to assist in locating PTFs that may be required. Ongoing problem reporting may result in additional APARs being created. Therefore, the APAR lists in this document may not be complete. To obtain current service recommendations and to identify current product service requirements, always contact the IBM Customer Support Center or use S/390 SoftwareXcel to obtain the current "PSP Bucket".
