1.0 Introduction

This program directory is intended for system programmers who are responsible for program installation and maintenance. It contains information about the material and procedures associated with the installation of IBM DB2 Administration Toolkit for z/OS - SAP Edition. This publication refers to IBM DB2 Administration Toolkit for z/OS - SAP Edition as DB2 Administration Toolkit - SAP Edition.

The Program Directory contains the following sections:

- **2.0, “Program Materials” on page 3** identifies the basic and optional program materials and documentation for DB2 Administration Toolkit - SAP Edition.
- **3.0, “Program Support” on page 7** describes the IBM support available for DB2 Administration Toolkit - SAP Edition.
- **4.0, “Program and Service Level Information” on page 9** lists the APARs (program level) and PTFs (service level) that have been incorporated into DB2 Administration Toolkit - SAP Edition.
- **5.0, “Installation Requirements and Considerations” on page 11** identifies the resources and considerations that are required for installing and using DB2 Administration Toolkit - SAP Edition.
- **6.0, “Installation Instructions” on page 19** provides detailed installation instructions for DB2 Administration Toolkit - SAP Edition. It also describes the procedures for activating the functions of DB2 Administration Toolkit - SAP Edition, or refers to appropriate publications.

Before installing DB2 Administration Toolkit - SAP Edition, read the *CBPDO Memo To Users* and the *CBPDO Memo To Users Extension* that are supplied with this program in softcopy format and this Program Directory; then keep them for future reference. Section 3.2, “Preventive Service Planning” on page 7 tells you how to find any updates to the information and procedures in this Program Directory.

DB2 Administration Toolkit - SAP Edition is supplied in a Custom-Built Product Delivery Offering (CBPDO, 5751-CS3). The Program Directory that is provided in softcopy format on the CBPDO tape is identical to the hardcopy format if one was included with your order. All service and HOLDDATA for DB2 Administration Toolkit - SAP Edition are included on the CBPDO tape.

Do not use this program directory if you install DB2 Administration Toolkit - SAP Edition with a SystemPac or ServerPac. When you use one of those offerings, use the jobs and documentation supplied with the offering. The offering will point you to specific sections of this program directory as needed.

1.1 DB2 Administration Toolkit - SAP Edition Description

IBM DB2 ADMINISTRATION TOOLKIT FOR Z/OS THE SAP EDITION, V03.01.00 (5697-DAR) includes IBM DB2 Administration Tool for z/OS, V11.01.00 and IBM DB2 Object Comparison Tool for z/OS, V11.01.00, which work together to form a function-rich object management solution, helping to conduct quality assurance in an SAP ERP environment by comparing objects in SAP ERP database objects before they are transported from test to production.
DB2 Administration Tool can reduce the complexity of managing and executing SAP-initiated database changes, which can enable DBAs to make faster and more accurate decisions, and provides important features for the administration of SAP systems. This tool provides easy, fast navigation of a DB2 catalog, allowing you to issue DB2 commands, execute utilities, and examine schema structures.

DB2 Object Comparison Tool can help conduct quality assurance and promote database object integrity when objects are transported from test to production environments. This tool also helps to identify potential risks or long-running changes.

- Reduction of the time required to verify that changes are propagated to each SAP instance. While there are seldom ad-hoc changes, when SAP does change or sends instructions to change the structures, these changes (including testing) will sometimes take a long time to accomplish.
- Alerts for your DBA of any user defined objects, usually indexes, which will be affected by applying the change.

DB2 Administration Tool V11.01.00 and DB2 Object Comparison Tool V11.01.00 added many new features, including:

- The ability to implement a change from a source environment to multiple target environments. A target environment may be a different object set in the same subsystem, or the same or different object in another subsystem. This allows each target environment to have a unique owner, name, or mask, or to ignore a change. You also have the flexibility to import changes to the target environments at once or in stages, to suit your particular business needs. This feature can improve availability with the ability to move changes into multiple environments quickly and safely.

- Full management capabilities for those customers using the IBM DB2 Analytics Accelerator for z/OS. The DB2 Analytics Accelerator for z/OS is a software offering that, together with related, prerequisite hardware, form an integrated high-performance solution offering that is part of an integrated hardware and software solution designed to work with IBM System z to deliver dramatically faster analytic query responses transparently to users. It integrates into DB2 10 for z/OS data warehouse environments, forming a high-performance analytic query appliance powered by Netezza technology.

### 1.2 DB2 Administration Toolkit - SAP Edition FMIDs

DB2 Administration Toolkit - SAP Edition consists of the following FMIDs:

- H0IHB10
- H0IHKY3
- H25GB10
2.0 Program Materials

An IBM program is identified by a program number and a feature number. The program number for DB2 Administration Toolkit - SAP Edition is 5697-DAR and its feature number is 5802.

Basic Machine-Readable Materials are materials that are supplied under the base license and feature numbers, and are required for the use of the product. Optional Machine-Readable Materials are orderable under separate feature numbers, and are not required for the product to function.

The program announcement material describes the features supported by DB2 Administration Toolkit - SAP Edition. Ask your IBM representative for this information if you have not already received a copy.

2.1 Basic Machine-Readable Material

The distribution medium for this program is physical media or downloadable files. This program is in SMP/E RELFILE format and is installed by using SMP/E. See 6.0, “Installation Instructions” on page 19 for more information about how to install the program.

You can find information about the physical media for the basic machine-readable materials for DB2 Administration Toolkit - SAP Edition in the CBPDO Memo To Users Extension.

4 DB2 Administration Toolkit - SAP Edition Program Directory
2.2 Optional Machine-Readable Material

No optional machine-readable materials are provided for DB2 Administration Toolkit - SAP Edition.

2.3 Program Publications

The following sections identify the basic and optional publications for DB2 Administration Toolkit - SAP Edition.

2.3.1 Basic Program Publications

Figure 4 identifies the basic unlicensed program publications for DB2 Administration Toolkit - SAP Edition. One copy of each of these publications is included when you order the basic materials for DB2 Administration Toolkit - SAP Edition. Additional copies can be obtained from the IBM Publications Website at URL: http://www.ibm.com/shop/publications/order/

Contact your IBM representative for further assistance.

3.0 Program Support

This section describes the IBM support available for DB2 Administration Toolkit - SAP Edition.

3.1 Program Services

Contact your IBM representative for specific information about available program services.

3.2 Preventive Service Planning

Before you install DB2 Administration Toolkit - SAP Edition, make sure that you have reviewed the current Preventive Service Planning (PSP) information. Review the PSP Bucket for General Information, Installation Documentation, and the Cross Product Dependencies sections. For the Recommended Service section, instead of reviewing the PSP Bucket, it is recommended you use the IBM.ProductInstall-RequiredService fix category in SMP/E to ensure you have all the recommended service installed. Use the FIXCAT(IBM.ProductInstall-RequiredService) operand on the APPLY CHECK command. See 6.1.10, “Perform SMP/E APPLY” on page 24 for a sample APPLY command.

If you obtained DB2 Administration Toolkit - SAP Edition as part of a CBPDO, HOLDDATA is included.

If the CBPDO for DB2 Administration Toolkit - SAP Edition is older than two weeks by the time you install the product materials, you can obtain the latest PSP Bucket information by going to the following website:

You can also use S/390 SoftwareXcel or contact the IBM Support Center to obtain the latest PSP Bucket information.

For program support, access the Software Support Website at http://www-01.ibm.com/software/support/.

PSP Buckets are identified by UPGRADEs, which specify product levels; and SUBSETs, which specify the FMIDs for a product level. The UPGRADE and SUBSET values for DB2 Administration Toolkit - SAP Edition are included in Figure 7.

Figure 7. PSP Upgrade and Subset ID
3.3 Statement of Support Procedures

Report any problems which you feel might be an error in the product materials to your IBM Support Center. You may be asked to gather and submit additional diagnostics to assist the IBM Support Center in their analysis.

Figure 8 on page 8 identifies the component IDs (COMPID) for DB2 Administration Toolkit - SAP Edition.

4.0 Program and Service Level Information

This section identifies the program and relevant service levels of DB2 Administration Toolkit - SAP Edition. The program level refers to the APAR fixes that have been incorporated into the program. The service level refers to the PTFs that have been incorporated into the program.

4.1 Program Level Information

The following APAR fixes against previous releases of DB2 Administration Toolkit - SAP Edition have been incorporated into this release. They are listed by FMID.

- FMID H0IHA20

4.2 Service Level Information

No PTFs against this release of DB2 Administration Toolkit - SAP Edition have been incorporated into the product package.

Frequently check the DB2 Administration Toolkit - SAP Edition PSP Bucket for HIPER and SPECIAL attention PTFs against all FMIDs that you must install. You can also receive the latest HOLDDATA, then add the `FIXCAT(IBM.PRODUCTINSTALL-REQUIREDSERVICE)` operand on your APPLY CHECK command. This will allow you to review the recommended and critical service that should be installed with your FMIDs.
5.0 Installation Requirements and Considerations

The following sections identify the system requirements for installing and activating DB2 Administration Toolkit - SAP Edition. The following terminology is used:

- **Driving system**: the system on which SMP/E is executed to install the program.
  
  The program might have specific operating system or product level requirements for using processes, such as binder or assembly utilities during the installation.

- **Target system**: the system on which the program is configured and run.
  
  The program might have specific product level requirements, such as needing access to the library of another product for link-edits. These requirements, either mandatory or optional, might directly affect the element during the installation or in its basic or enhanced operation.

In many cases, you can use a system as both a driving system and a target system. However, you can make a separate IPL-able clone of the running system to use as a target system. The clone must include copies of all system libraries that SMP/E updates, copies of the SMP/E CSI data sets that describe the system libraries, and your PARMLIB and PROCLIB.

Use separate driving and target systems in the following situations:

- When you install a new level of a product that is already installed, the new level of the product will replace the old one. By installing the new level onto a separate target system, you can test the new level and keep the old one in production at the same time.

- When you install a product that shares libraries or load modules with other products, the installation can disrupt the other products. By installing the product onto a separate target system, you can assess these impacts without disrupting your production system.

5.1 Driving System Requirements

This section describes the environment of the driving system required to install DB2 Administration Toolkit - SAP Edition.

5.1.1 Machine Requirements

The driving system can run in any hardware environment that supports the required software.

5.1.2 Programming Requirements
5.2 Target System Requirements

This section describes the environment of the target system required to install and use DB2 Administration Toolkit - SAP Edition.

DB2 Administration Toolkit - SAP Edition installs in the DBS (P115) SREL.

5.2.1 Machine Requirements

The target system can run in any hardware environment that supports the required software.

5.2.2 Programming Requirements

5.2.2.1 Installation Requisites: Installation requisites identify products that are required and must be present on the system or products that are not required but should be present on the system for the successful installation of this product.

Mandatory installation requisites identify products that are required on the system for the successful installation of this product.

<table>
<thead>
<tr>
<th>Program Number</th>
<th>Product Name</th>
<th>Minimum VRM</th>
<th>Minimum Service Level will satisfy these APARs</th>
<th>Included in the shipped product?</th>
</tr>
</thead>
<tbody>
<tr>
<td>5655-DAT</td>
<td>DB2 Administration Tool for z/OS</td>
<td>11.01.00</td>
<td>N/A</td>
<td>Yes</td>
</tr>
</tbody>
</table>
Installation might require migration to new z/OS releases to be service supported. See http://www-03.ibm.com/systems/z/os/zos/support/zos_eos_dates.html.

Conditional installation requisites identify products that are not required for successful installation of this product but can resolve such things as certain warning messages at installation time.

DB2 Administration Toolkit - SAP Edition has no conditional installation requisites.

**5.2.2.2 Operational Requisites:** Operational requisites are products that are required and must be present on the system or products that are not required but should be present on the system for this product to operate all or part of its functions.

Mandatory operational requisites identify products that are required for this product to operate its basic functions.

**Note:** IBM Tools Base for z/OS, (5655-V93) is a mandatory operational pre-requisite for DB2 Administration Tool and DB2 Object Comparison Tool. IBM Tools Base for z/OS is a no-charge product that must be separately ordered. Tools Base contains IBM Tools Customizer for z/OS, FMID HTCZ110, which must be installed in order to customize both DB2 Administration Tool and DB2 Object Comparison Tool. Refer to the IBM Tools Base for z/OS, Program Directory (GI10-8819) for installation instructions.
Conditional operational requisites identify products that are not required for this product to operate its basic functions but are required at run time for this product to operate specific functions. These products are specified as IF REQs.

<table>
<thead>
<tr>
<th>Program Number</th>
<th>Product Name and Minimum VRM/Service Level</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>5655-DOC</td>
<td>DB2 Object Comparison Tool for z/OS V11.01.00</td>
<td>Is required for use of the change management function</td>
</tr>
</tbody>
</table>

5.2.2.3 Toleration/Coexistence Requisites: Toleration/coexistence requisites identify products that must be present on sharing systems. These systems can be other systems in a multisystem environment (not necessarily sysplex), a shared DASD environment (such as test and production), or systems that reuse the same DASD environment at different time intervals.

DB2 Administration Toolkit - SAP Edition has no toleration/coexistence requisites.

5.2.2.4 Incompatibility (Negative) Requisites: Negative requisites identify products that must not be installed on the same system as this product.

DB2 Administration Toolkit - SAP Edition has no negative requisites.

5.2.3 DASD Storage Requirements

DB2 Administration Toolkit - SAP Edition libraries can reside on all supported DASD types.

Figure 14 lists the total space that is required for each type of library in DB2 Administration Tool.

<table>
<thead>
<tr>
<th>Library Type</th>
<th>Total Space Required in 3390 Trks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Target</td>
<td>6494 Tracks</td>
</tr>
<tr>
<td>Distribution</td>
<td>2621 Tracks</td>
</tr>
</tbody>
</table>

Figure 14 lists the total space that is required for each type of library in DB2 Object Comparison Tool.

<table>
<thead>
<tr>
<th>Library Type</th>
<th>Total Space Required in 3390 Trks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Target</td>
<td>1011 Tracks</td>
</tr>
<tr>
<td>Distribution</td>
<td>142 Tracks</td>
</tr>
</tbody>
</table>
Notes:

1. For non-RECFM U data sets, IBM recommends using system-determined block sizes for efficient DASD utilization. For RECFM U data sets, IBM recommends using a block size of 32760, which is most efficient from the performance and DASD utilization perspective.

2. Abbreviations used for data set types are shown as follows.
   - **U** Unique data set, allocated by this product and used by only this product. This table provides all the required information to determine the correct storage for this data set. You do not need to refer to other tables or program directories for the data set size.
   - **S** Shared data set, allocated by this product and used by this product and other products. To determine the correct storage needed for this data set, add the storage size given in this table to those given in other tables (perhaps in other program directories). If the data set already exists, it must have enough free space to accommodate the storage size given in this table.
   - **E** Existing shared data set, used by this product and other products. This data set is not allocated by this product. To determine the correct storage for this data set, add the storage size given in this table to those given in other tables (perhaps in other program directories). If the data set already exists, it must have enough free space to accommodate the storage size given in this table.

If you currently have a previous release of this product installed in these libraries, the installation of this release will delete the old release and reclaim the space that was used by the old release and any service that had been installed. You can determine whether these libraries have enough space by deleting the old release with a dummy function, compressing the libraries, and comparing the space requirements with the free space in the libraries.

For more information about the names and sizes of the required data sets, see 6.1.8, “Allocate SMP/E Target and Distribution Libraries” on page 24.

3. All target and distribution libraries listed have the following attributes:
   - The default name of the data set can be changed.
   - The default block size of the data set can be changed.
   - The data set can be merged with another data set that has equivalent characteristics.
   - The data set can be either a PDS or a PDSE.

4. All target libraries listed have the following attributes:
   - These data sets can be SMS-managed, but they are not required to be SMS-managed.
   - These data sets are not required to reside on the IPL volume.
   - The values in the "Member Type" column are not necessarily the actual SMP/E element types that are identified in the SMPMCS.

5. All target libraries that are listed and contain load modules have the following attributes:
   - These data sets can be in the LPA, but they are not required to be in the LPA.
   - These data sets can be in the LNKLST.
   - These data sets are not required to be APF-authorized.
The following figures describe the target and distribution libraries required to install DB2 Administration Toolkit - SAP Edition. The storage requirements of DB2 Administration Toolkit - SAP Edition must be added to the storage required by other programs that have data in the same library.

**Note:** Use the data in these tables to determine which libraries can be merged into common data sets. In addition, since some ALIAS names may not be unique, ensure that no naming conflicts will be introduced before merging libraries.

5.3 FMIDs Deleted

Installing DB2 Administration Toolkit - SAP Edition might result in the deletion of other FMIDs. To see which FMIDs will be deleted, examine the ++VER statement in the SPMCS of the product.

If you do not want to delete these FMIDs at this time, install DB2 Administration Toolkit - SAP Edition into separate SMP/E target and distribution zones.

**Note:** These FMIDs are not automatically deleted from the Global Zone. If you want to delete these FMIDs from the Global Zone, use the SMP/E REJECT NOFMID DELETEFMID command. See the SMP/E Commands book for details.

5.4 Special Considerations

DB2 Administration Toolkit - SAP Edition has no special considerations for the target system.
6.0 Installation Instructions

This chapter describes the installation method and the step-by-step procedures to install and to activate the functions of DB2 Administration Toolkit - SAP Edition.

Please note the following points:

- If you want to install DB2 Administration Toolkit - SAP Edition into its own SMP/E environment, consult the SMP/E manuals for instructions on creating and initializing the SMPCSI and the SMP/E control data sets.
- You can use the sample jobs that are provided to perform part or all of the installation tasks. The SMP/E jobs assume that all DDDEF entries that are required for SMP/E execution have been defined in appropriate zones.
- You can use the SMP/E dialogs instead of the sample jobs to accomplish the SMP/E installation steps.

6.1 Installing DB2 Administration Toolkit - SAP Edition

6.1.1 SMP/E Considerations for Installing DB2 Administration Toolkit - SAP Edition

Use the SMP/E RECEIVE, APPLY, and ACCEPT commands to install this release of DB2 Administration Toolkit - SAP Edition.

6.1.2 SMP/E Options Subentry Values

The recommended values for certain SMP/E CSI subentries are shown in Figure 19. Using values lower than the recommended values can result in failures in the installation. DSSPACE is a subentry in the GLOBAL options entry. PEmax is a subentry of the GENERAL entry in the GLOBAL options entry. See the SMP/E manuals for instructions on updating the global zone.

<table>
<thead>
<tr>
<th>Subentry</th>
<th>Value</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>DSSPACE</td>
<td>(500,500,500)</td>
<td>3390 DASD tracks</td>
</tr>
<tr>
<td>PEmax</td>
<td>SMP/E Default</td>
<td>IBM recommends using the SMP/E default for PEmax.</td>
</tr>
</tbody>
</table>
6.1.3 SMP/E CALLLIBS Processing

DB2 Administration Toolkit - SAP Edition uses the CALLLIBS function provided in SMP/E to resolve external references during installation. When DB2 Administration Toolkit - SAP Edition is installed, ensure that DDDEFs exist for the following libraries:

- CSSLIB
- SCEELKED
- SDSNLOAD
- SISPLOAD

**Note:** CALLLIBS uses the previous DDDEFs only to resolve the link-edit for DB2 Administration Toolkit - SAP Edition. These data sets are not updated during the installation of DB2 Administration Toolkit - SAP Edition.

6.1.4 Sample Jobs

The following sample installation jobs are provided as part of the product to help you install DB2 Administration Toolkit - SAP Edition:

<table>
<thead>
<tr>
<th>Job Name</th>
<th>Job Type</th>
<th>Description</th>
<th>RELFILE</th>
</tr>
</thead>
<tbody>
<tr>
<td>ADBALBA</td>
<td>SMP/E</td>
<td>Sample job to allocate and initialize a new SMP/E CSI data set <em>(Optional)</em></td>
<td>IBM.H01HB10.F2</td>
</tr>
<tr>
<td>ADBALB</td>
<td>SMP/E</td>
<td>Sample job to allocate SMP/E data sets <em>(Optional)</em></td>
<td>IBM.H01HB10.F2</td>
</tr>
<tr>
<td>ADBRECEV</td>
<td>RECEIVE</td>
<td>Sample RECEIVE job for DB2 Administration Tool</td>
<td>IBM.H01HB10.F2</td>
</tr>
<tr>
<td>ADBRECE1</td>
<td>RECEIVE</td>
<td>Sample RECEIVE job for DB2 Administration Toolkit SAP Edition Identifier</td>
<td>IBM.H01HKY3.F2</td>
</tr>
<tr>
<td>GOCRECEV</td>
<td>RECEIVE</td>
<td>Sample RECEIVE job for DB2 Object Comparison Tool</td>
<td>IBM.H25GB10.F2</td>
</tr>
<tr>
<td>ADBALLOC</td>
<td>ALLOCATE</td>
<td>Sample job to allocate target and distribution libraries for DB2 Administration Tool</td>
<td>IBM.H01HB10.F2</td>
</tr>
<tr>
<td>GOCALLOC</td>
<td>ALLOCATE</td>
<td>Sample job to allocate target and distribution libraries for DB2 Object Comparison Tool</td>
<td>IBM.H25GB10.F2</td>
</tr>
<tr>
<td>ADBDDDEF</td>
<td>DDDEF</td>
<td>Sample job to define SMP/E DDDEFs for DB2 Administration Tool</td>
<td>IBM.H01HB10.F2</td>
</tr>
<tr>
<td>GOCDDDEF</td>
<td>DDDEF</td>
<td>Sample job to define SMP/E DDDEFs for DB2 Object Comparison Tool</td>
<td>IBM.H25GB10.F2</td>
</tr>
<tr>
<td>ADBAPPLY</td>
<td>APPLY</td>
<td>Sample APPLY job for DB2 Administration Tool</td>
<td>IBM.H01HB10.F2</td>
</tr>
</tbody>
</table>
You can access the sample installation jobs by performing an SMP/E RECEIVE (refer to 6.1.7, “Perform SMP/E RECEIVE” on page 23) then copy the jobs from the RELFILES to a work data set for editing and submission. See Figure 20 on page 20 to find the appropriate relfile data set.

You can also copy the sample installation jobs from the tape or product files by submitting the following job. Depending on your distribution medium, use either the //TAPEIN or the //FILEIN DD statement and comment out or delete the other statement. Before you submit the job, add a job card and change the lowercase parameters to uppercase values to meet the requirements of your site.

```
//STEP1 EXEC PGM=IEBCOPY
//SYSPRINT DD SYSOUT=*
///***************************
//* Make the //TAPEIN DD statement below active if you install* 
//* from a CBPDO tape by uncommenting the DD statement below. *

//SYSIN DD *
COPY INDD=xxxxIN1,OUTDD=OUT
COPY INDD=xxxxIN2,OUTDD=OUT
COPY INDD=xxxxIN3,OUTDD=OUT
/*

See the following information to update the statements in the previous sample:

TAPEIN1/TAPEIN2/TAPEIN3:
- tunit is the unit value that matches the product package.
- volser is the volume serial that matches the product package.
- x is the tape file number that indicates the location of the data set name on the tape.
- See the documentation that is provided by CBPDO for the location of IBM.H0IHB10.F2 on the tape.

FILEIN1/FILEIN2/FINEIN3:
- filevol is the volume serial of the DASD device where the downloaded files reside.

OUT:
- jcl-library-name is the name of the output data set where the sample jobs are stored.
- dasdvvol is the volume serial of the DASD device where the output data set resides.

SYSIN:
- xxxxIN1 is either TAPEIN1 or FILEIN1 depending on your input DD statement.
- xxxxIN2 is either TAPEIN2 or FILEIN2 depending on your input DD statement.
- xxxxIN3 is either TAPEIN3 or FILEIN3 depending on your input DD statement.
6.1.5 Allocate SMP/E CSI (Optional)

If you are using an existing CSI, do not execute this job.

If you are allocating a new SMP/E data set for this install, edit and submit sample job ADBALA to allocate
the SMP/E data set for DB2 Administration Toolkit - SAP Edition. Consult the instructions in the sample
job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

6.1.6 Initialize CSI zones (Optional)

Edit and submit sample job ADBALB to initialize SMP/E zones for DB2 Administration Toolkit - SAP
Edition. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

6.1.7 Perform SMP/E RECEIVE

If you have obtained DB2 Administration Toolkit - SAP Edition as part of a CBPDO, use the RCVPDO job
in the CBPDO RIMLIB data set to receive the DB2 Administration Toolkit - SAP Edition FMIDs, service,
and HOLDDATA that are included on the CBPDO package. For more information, see the documentation
that is included in the CBPDO.

You can also choose to edit and submit sample job ADBRECEV to perform the SMP/E RECEIVE for DB2
Administration Tool. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

You can also choose to edit and submit sample job ADBRECE1 to perform the SMP/E RECEIVE for DB2
Administration Toolkit SAP Edition Identifier. Consult the instructions in the sample job for more
information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

You can also choose to edit and submit sample job GOCRECEV to perform the SMP/E RECEIVE for DB2
Object Comparison Tool. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.
6.1.8 Allocate SMP/E Target and Distribution Libraries

Edit and submit sample job ADBALLOC to allocate the SMP/E target and distribution libraries for DB2 Administration Tool. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

Edit and submit sample job GOCALLOC to allocate the SMP/E target and distribution libraries for DB2 Object Comparison Tool. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

6.1.9 Create DDDEF Entries

Edit and submit sample job ADBDDDEF to create DDDEF entries for the SMP/E target and distribution libraries for DB2 Administration Tool. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

Edit and submit sample job GOCDDDEF to create DDDEF entries for the SMP/E target and distribution libraries for DB2 Object Comparison Tool. Consult the instructions in the sample job for more information.

Expected Return Codes and Messages: You will receive a return code of 0 if this job runs correctly.

6.1.10 Perform SMP/E APPLY

1. Ensure that you have the latest HOLDDATA; then edit and submit sample job ADBAPPLY to perform an SMP/E APPLY CHECK for DB2 Administration Tool. Consult the instructions in the sample job for more information.

The latest HOLDDATA is available through several different portals, including http://service.software.ibm.com/holddata/390holddata.html. The latest HOLDDATA may identify HIPER and FIXCAT APARs for the FMIDs you will be installing. An APPLY CHECK will help you determine if any HIPER or FIXCAT APARs are applicable to the FMIDs you are installing. If there are any applicable HIPER or FIXCAT APARs, the APPLY CHECK will also identify fixing PTFs that will resolve the APARs, if a fixing PTF is available.

You should install the FMIDs regardless of the status of unresolved HIPER or FIXCAT APARs. However, do not deploy the software until the unresolved HIPER and FIXCAT APARs have been analyzed to determine their applicability. That is, before deploying the software either ensure fixing PTFs are applied to resolve all HIPER or FIXCAT APARs, or ensure the problems reported by all HIPER or FIXCAT APARs are not applicable to your environment.

To receive the full benefit of the SMP/E Causer SYMMD Summary Report, do not bypass the PRE, ID, REQ, and IFREQ on the APPLY CHECK. The SMP/E root cause analysis identifies the cause only of errors and not of warnings (SMP/E treats bypassed PRE, ID, REQ, and IFREQ conditions as warnings, instead of errors).
Here are sample APPLY commands:

a. To ensure that all recommended and critical service is installed with the FMIDs, receive the latest HOLDDATA and use the APPLY CHECK command as follows

\[
\text{APPLY } S(fmid,fmid,...) \text{ CHECK}
\]
\[
\text{FORFMID}(fmid,fmid,...)
\]
\[
\text{SOURCEID}(RSU*)
\]
\[
\text{FIXCAT}(IBM.ProductInstall-RequiredService)
\]
\[
\text{GROUPEXTEND}
\]

Some HIPER APARs might not have fixing PTFs available yet. You should analyze the symptom flags for the unresolved HIPER APARs to determine if the reported problem is applicable to your environment and if you should bypass the specific ERROR HOLDs in order to continue the installation of the FMIDs.

This method requires more initial research, but can provide resolution for all HIPERs that have fixing PTFs available and are not in a PE chain. Unresolved PErs or HIPERs might still exist and require the use of BYPASS.

b. To install the FMIDs without regard for unresolved HIPER APARs, you can add the BYPASS(HOLDCLASS(HIPER)) operand to the APPLY CHECK command. This will allow you to install FMIDs even though one or more unresolved HIPER APARs exist. After the FMIDs are installed, use the SMP/E REPORT ERRSYSMDS command to identify unresolved HIPER APARs and any fixing PTFs.

\[
\text{APPLY } S(fmid,fmid,...) \text{ CHECK}
\]
\[
\text{FORFMID}(fmid,fmid,...)
\]
\[
\text{SOURCEID}(RSU*)
\]
\[
\text{FIXCAT}(IBM.ProductInstall-RequiredService)
\]
\[
\text{GROUPEXTEND}
\]
\[
\text{BYPASS(HOLDCLASS(HIPER))}
\]

This method is quicker, but requires subsequent review of the Exception SYSMOD report produced by the REPORT ERRSYSMDS command to investigate any unresolved HIPERS. If you have received the latest HOLDDATA, you can also choose to use the REPORT MISSINGFIX command and specify Fix Category IBM.ProductInstall-RequiredService to investigate missing recommended service.

If you bypass HOLDs during the installation of the FMIDs because fixing PTFs are not yet available, you can be notified when the fixing PTFs are available by using the APAR Status Tracking (AST) function of ServiceLink or the APAR Tracking function of ResourceLink.

2. After you take actions that are indicated by the APPLY CHECK, remove the CHECK operand and run the job again to perform the APPLY.

Note: The GROUPEXTEND operand indicates that SMP/E applies all requisite SYSMODs. The requisite SYSMODs might be applicable to other functions.

Expected Return Codes and Messages from APPLY CHECK: You will receive a return code of 0 if this job runs correctly.
**Expected Return Codes and Messages from APPLY:** You will receive a return code of 0 or 4 if this job runs correctly.

You may receive the following message codes which do not affect the product installation:
GIM23903W, GIM23904W, GIM43401W, I EW2455W.

3. Once you have run the ADBAPPLY jobs, you will need to run the ADBAPPL1 job to perform the SMP/E APPLY CHECK for DB2 Administration Toolkit SAP Edition Identifier. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages from ADBAPPL1:** You will receive a return code of 0 if this job runs correctly.

After you take the actions indicated by the APPLY CHECK, remove the CHECK operand and run the job again to perform the APPLY.

**Expected Return Codes and Messages from ADBAPPL1 WITHOUT CHECK:** You will receive a return code of 0 if this job runs correctly.

4. Once you have run the ADBAPPL1 jobs, you will need to run the GOCAPPLY job to perform the SMP/E APPLY CHECK for DB2 Object Comparison Tool. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages from GOCAPPLY:** You will receive a return code of 0 if this job runs correctly.

After you take the actions indicated by the APPLY CHECK, remove the CHECK operand and run the job again to perform the APPLY.

**Expected Return Codes and Messages from GOCAPPLY WITHOUT CHECK:** You will receive a return code of 0 or 4 if this job runs correctly.

You may receive the following message codes which do not affect the product installation:
GIM23903W, GIM23904W, GIM23913W, GIM23914W.

### 6.1.11 Perform SMP/E ACCEPT

Edit and submit sample job ADBACCEP to perform an SMP/E ACCEPT CHECK for DB2 Administration Tool. Consult the instructions in the sample job for more information.

To receive the full benefit of the SMP/E Causer SYSMOD Summary Report, do not bypass the PRE, ID, REQ, and IFREQ on the ACCEPT CHECK. The SMP/E root cause analysis identifies the cause of only errors but not warnings (SMP/E treats bypassed PRE, ID, REQ, and IFREQ conditions as warnings rather than errors).

Before you use SMP/E to load new distribution libraries, it is recommended that you set the ACCJCLIN indicator in the distribution zone. In this way, you can save the entries that are produced from JCLIN in the distribution zone whenever a SYSMOD that contains inline JCLIN is accepted. For more information about the ACCJCLIN indicator, see the description of inline JCLIN in the SMP/E Commands book for details.
After you take the actions that are indicated by the ACCEPT CHECK, remove the CHECK operand and run the job again to perform the ACCEPT.

**Note:** The GROUPEXTEND operand indicates that SMP/E accepts all requisite SYSMODs. The requisite SYSMODS might be applicable to other functions.

**Expected Return Codes and Messages from ACCEPT CHECK:** You will receive a return code of 0 if this job runs correctly.

If PTFs that contain replacement modules are accepted, SMP/E ACCEPT processing will link-edit or bind the modules into the distribution libraries. During this processing, the Linkage Editor or Binder might issue messages that indicate unresolved external references, which will result in a return code of 4 during the ACCEPT phase. You can ignore these messages, because the distribution libraries are not executable and the unresolved external references do not affect the executable system libraries.

**Expected Return Codes and Messages from ACCEPT:** You will receive a return code of 0 if this job runs correctly.

Once you have run the ADBACCEP jobs, you will need to run the ADBACCE1 job to perform the SMP/E ACCEPT CHECK for DB2 Administration Toolkit SAP Edition Identifier. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages from ADBACCE1:** You will receive a return code of 0 if this job runs correctly.

After you take the actions indicated by the APPLY CHECK, remove the CHECK operand and run the job again to perform the ACCEPT.

**Expected Return Codes and Messages from ADBACCE1 WITHOUT CHECK:** You will receive a return code of 0 if this job runs correctly.

Once you have run the ADBACCE1 jobs, you will need to run the GOCACCEP job to perform the SMP/E ACCEPT CHECK for DB2 Object Comparison Tool. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages from GOCACCEP:** You will receive a return code of 0 if this job runs correctly.

After you take the actions indicated by the ACCEPT CHECK, remove the CHECK operand and run the job again to perform the APPLY.

**Expected Return Codes and Messages from GOCACCEP WITHOUT CHECK:** You will receive a return code of 0 if this job runs correctly.
6.1.12 Run REPORT CROSSZONE

The SMP/E REPORT CROSSZONE command identifies requisites for products that are installed in separate zones. This command also creates APPLY and ACCEPT commands in the SMPPUNCH data set. You can use the APPLY and ACCEPT commands to install those cross-zone requisites that the SMP/E REPORT CROSSZONE command identifies.

After you install DB2 Administration Toolkit - SAP Edition, it is recommended that you run REPORT CROSSZONE against the new or updated target and distribution zones. REPORT CROSSZONE requires a global zone with ZONEINDEX entries that describe all the target and distribution libraries to be reported on.

For more information about REPORT CROSSZONE, see the SMP/E manuals.

6.2 Activating DB2 Administration Toolkit - SAP Edition

The publication IBM DB2 Administration Tool for z/OS User's Guide, SC19-4134 contains the necessary information to customize and use DB2 Administration Tool.

The publication IBM DB2 Object Comparison Tool for z/OS User's Guide, SC19-4139 contains the necessary information to customize and use DB2 Object Comparison Tool.
7.0 Notices

References in this document to IBM products, programs, or services do not imply that IBM intends to make these available in all countries in which IBM operates. Any reference to an IBM product, program, or service is not intended to state or imply that only IBM's product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe on any of IBM's intellectual property rights may be used instead of the IBM product, program, or service. Evaluation and verification of operation in conjunction with other products, except those expressly designated by IBM, is the user's responsibility.

APAR numbers are provided in this document to assist in locating PTFs that may be required. Ongoing problem reporting may result in additional APARs being created. Therefore, the APAR lists in this document may not be complete. To obtain current service recommendations and to identify current product service requirements, always contact the IBM Customer Support Center or use S/390 SoftwareXcel to obtain the current "PSP Bucket".

IBM may have patents or pending patent applications covering subject matter in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to the
