## Preface

This manual describes the format and content of CICSplex<sup>®</sup> SM resource tables that begin with a letter in the range M to Z. CICSplex SM resource table descriptions - A to L contains the alphabetic list of resource tables from M to Z. If you want to look up a resource table that begins with a letter in the range A to L, see CICSplex SM resource tables overview in the CICSplex SM Resource Tables Reference Vol 1.

The resource tables can be accessed by the application programming interface (API) or the batched repository-update facility, or can be used in realtime analysis.

A set of machine-readable copybooks is provided for each CICSplex SM resource table. The set consists of one copybook for each language supported by the API. For a description of the resource table copybooks and how to access them see the *CICSplex System Manager Application Programming Guide*.

---

## Who this book is for

This book is for application and systems programmers using the CICSplex System Manager application programming interface, the batched repository-update facility or real-time analysis EVALDEFs.

---

## What you need to know

This is a reference book that is used in conjunction with other books.

The *CICSplex System Manager Application Programming Guide* and the *CICSplex System Manager Application Programming Reference* describe the CICSplex SM API.

*CICSplex System Manager Administration* contains information about the use of the batched repository-update facility.

*CICSplex System Manager Managing Resource Usage* contains information about real-time analysis EVALDEFs.

---

## Terminology

In this manual, the term **CICSplex SM** means the CICSplex SM element of CICS<sup>®</sup> TS for z/OS<sup>®</sup>. The term *CICSplex* means the largest set of CICS systems to be managed by CICSplex SM as a single entity.

---

## Changes in CICS Transaction Server for z/OS, Version 4 Release 2

For information about changes that have been made in this release, please refer to *What's New* in the information center, or the following publications:

- *CICS Transaction Server for z/OS What's New*
- *CICS Transaction Server for z/OS Upgrading from CICS TS Version 4.1*
- *CICS Transaction Server for z/OS Upgrading from CICS TS Version 3.2*
- *CICS Transaction Server for z/OS Upgrading from CICS TS Version 3.1*

Any technical changes that are made to the text after release are indicated by a vertical bar (|) to the left of each new or changed line of information.

## CICSplex SM resource class overview

CICSplex SM resource tables describe the information available for resource classes created or managed by CICSplex SM.

A resource class is a template that describes the attributes of the actual objects that exist in a CICSplex. For example, a local transaction installed in a CICS system has the attributes described by the LOCTRAN resource class. Likewise, the MONDEF resource class describes the attributes of each CICSplex SM monitor definition created by a user.

Each resource class in CICSplex SM has a unique name. The resource class name is used as the name of the resource table that describes its attributes. In many, but not all, cases the resource class name is the same as the Web User Interface (WUI) view that provides information about the resource class. The view names are relative distinguishing names that have a meaning only within the WUI. A resource class name is a unique distinguishing name in CICSplex SM. All requests for resource data from the API, batched repository-update facility, or RTA evaluation definitions must use the resource class name that is defined in the resource table.

The terms *resource table* and *resource class* are used to refer to the resource class. The terms *attribute* and *field* are both used to refer to a resource class attribute definition.

## Resource class key attributes

Each resource class can have many object instances in a CICSplex. Each object instance is a named entity and one or more attributes provide the instance key.

For example, the attribute TRANID in the LOCTRAN resource class identifies the attribute that is the name or key field. Resource class key fields are highlighted in the resource table descriptions. Some resource classes have multiple key fields.

For resource classes that describe CICSplex SM definitions, the key attributes are used to construct the physical keys used in the EYUDREP VSAM KSDS file. For these resource classes, one or two key fields are defined. One key field is identified as the **Primary** key. The other field, if used, is identified as the **Secondary** key. A suffix of *-n*, where *n* is the key level number, is added to the name in the table.

Key fields are used to:

- Uniquely identify resources for the CREATE, UPDATE, and REMOVE statements in the API and batched repository-update facility.

When you create, update, or remove a CICSplex SM definition, you must supply all the key values. Furthermore, the values for the key fields must be specific; generic values are not allowed.

- Identify the selection criteria for the LIST or DUMP statements in the batched repository-update facility.

When you list or dump CICSplex SM definitions, only the **Primary** key field can be referenced. For these statements, both specific and generic values are allowed for key fields.

- Identify object instances in an evaluation definition.

The instance pattern field in the EVALDEF create panel identifies a specific or generic pattern for the key field of a resource table. The INSTANCE attribute of the EVALDEF resource table is the field in which this information is stored.

The CICSplex SM resource table descriptions in the following sections identify the **Primary** key field for each CICSplex definition resource class. The CICSplex SM notification resource class does not have key fields. The content of the notification identifies the objects associated with the notification.

---

## Special attribute and resource table considerations

Certain attributes in the CICSplex SM resource tables are for internal use only; you should not attempt to modify or manipulate them. Similarly, certain resource tables can be accessed only in certain ways.

---

### EYU\_ attributes

In CICS resource and CICS monitored tables, CICSplex SM uses the following attributes to uniquely identify which CICS system contains the resource:

- EYU\_CICSNAME
- EYU\_CICSREL

These attributes are included in every CICS resource and CICS monitored resource table record and can be used by the CICSplex SM API. However, you cannot refer to these attributes in any batched repository-update facility command.

---

### CHANGEAGENT, CHANGEAGREL, CHANGETIME, CHANGEUSRID, and CREATETIME attributes

The resource table descriptions identify the CHANGETIME attribute for CICSplex SM and CICS definitions. The CHANGETIME attribute always contains the date and time of the last modification to the definition. CICS definition resource tables also include the CREATETIME attribute, which is the date and time when the definition was created.

CICS TS 4.1 introduced new attribute fields CHANGEAGENT, CHANGEAGREL, and CHANGEUSRID to the resource table resource definition record. These new attributes, combined with the existing CHANGETIME and CREATETIME attributes, form the resource definition signature and are valid only for BAS resource definitions.

CHANGEAGENT displays how the resource was defined or last modified. CHANGEAGREL contains the level of CICS system that created or last modified the resource definition. CHANGEUSRID contains the user ID that created or last modified the resource definition.

The CHANGEAGENT, CHANGEAGREL, CHANGETIME, CHANGEUSRID and CREATETIME attributes are maintained internally by CICSplex SM. Do not attempt to change their values in any way.

---

### LNKSxSCG Records (LNKSMSCG, LNKSRSCG, LNKSWSCG)

When a CICSplex SM specification-to-CICS system group link record (LNKSxSCG) is created or removed, an additional operand, **keyword**, is required. This keyword indicates how the link being created or removed applies to the current members of the CICS system group. The keywords for the CREATE and REMOVE commands are as follows:

#### CREATE

Specify one of the following:

**FORCE** All current members of the CICS system group should have

implicit links established to the named specification. When a link already exists, it is replaced with the newly CREATED link.

**NULL** Current members of the CICS system group should have implicit links established to the named specification only if no link already exists.

**NONE** No implicit links should be established.

#### **REMOVE**

Specify one of the following:

**KEEP** All implicit links are to be converted to explicit links.

**NONE** No implicit links are to be converted to explicit links.

**Note:** You cannot update LNKSxSCG records using the API or batched repository-update facility; you must use the end-user interface.

---

## **LNKSxSCS Records (LNKSMSCS, LNKSRSXS, LNKSWSXS)**

When a CICSplex SM specification-to-CICS system link record (LNKSxSCS) is created or removed using the batched repository-update facility, two of the **keyword (value)** operand pairs cannot be used. The keyword(value) pairs that must be omitted from the CREATE and REMOVE commands are the LINK and GROUP pairs. For more information, see the description of the batched repository-update facility in the CICSplex System Manager Administration book.

---

## **CSYSDEF xxxACTION and xxxSEV attributes**

The CICSplex SM API allows the CSYSDEF xxxACTION and xxxSEV attributes to be used in more than one way.

The following values can be specified for the xxxACTION attributes:

1. The name of an action that is to be taken when this condition occurs.
2. An asterisk (\*). This allows the action to be inherited. The rules for specifying inheritance are given in CSYSDEF Resource Table.
3. Leave the attribute blank. This causes a default value to be used. Default notification values are listed in the CICSplex System Manager Managing Resource Usage book..

The following values can be specified for the xxxSEV attributes:

1. The value that is to be used as the severity for this condition.
2. NO. This means that the condition is not to be monitored.
3. The EYUDA INHERIT value. This causes the value to be inherited.
4. The EYUDA N\_A value. This causes the default security level for this condition to be used.

---

## Parameters for managing CICSplex SM Definitions

You can use CICSplex SM to describe the set of CICS definitions to be installed in a CICS system.

---

### Creating CPSM definitions

When you create a CICS system definition using the batched repository-update facility or the API, you can identify an existing CICS system to be used as a model. The CREATE command for the SYSRES object accepts the following parameter:

**MODEL(csysdef)**

(Optional) Specify the name of an existing CICS system whose system links definitions are to be used as a model.

---

## Parameters for managing CICS Definitions

You can use CICSplex SM to manage your CICS resource definitions as CICS Definition objects.

---

## Parameters for managing CICS definitions with BAS

You can use CICSplex SM to manage your CICS resource definitions as CICS definition objects with BAS.

### Creating Resource descriptions

A resource description represents the largest set of resources that can be managed as a unit by CICSplex SM. It might consist of all the resources in several resource groups or resource assignments (much like a CSD group list) or the set of resources that make up a given application on various CICS systems. When you create a resource description using the batched repository-update facility or API, you can identify an existing resource description to be used as a model. The **CREATE** command for the RESDESC object accepts the following parameter:

**MODEL(resdesc)**

(Optional) Specify the name of an existing resource description whose resource assignments are to be used by the new resource description.

### Creating Resource groups

One aspect of managing CICS Definitions is combining them into logical sets of resources in a resource group (RESGROUP). When you create a resource group using the batched repository-update facility or API you can identify an existing resource group to be used as a model. The **CREATE** command for the RESGROUP object accepts the following parameters:

**MODEL(resgroup)**

(Optional) Specify the name of an existing resource group whose resource definitions are to be used by the new group.

**MODE(option)**

(Required, if you specified a MODEL value) Indicate which definitions are to be copied from the model resource group to the new group:

**NO** Do not copy any definitions from the model group.

**ASSOCIATIONS**

Copy the associations between resource definitions and the model group (RESINGRP definitions) and create a new set of associations from the existing resources to the new group.

**MEMBERS**

Copy all the resource definitions in the model group and create a new set for use by the new group.

### Adding CICS Definitions to a Resource group

When you create CICS Definitions using the batched repository-update facility or API you can add them to an existing resource group by using the RESGROUP parameter. The **CREATE** command for each CICS Definition object (such as CONNDEF) supports the following parameter:

**RESGROUP(resgroup)**

(Optional) Specify the name of an existing resource group to which the CICS Definition should be added.

## Selecting CICS Definitions

When you use the GET API command to create a result set of CICS Definition records, you can limit your request to definitions in a given resource group, or CICS system. The GET command for each CICS Definition object (such as CONNDEF) supports the following parameters:

**RESGROUP(resgroup)**

(Optional) Specify the name of an existing resource group from which CICS Definition records should be selected.

**CICSSYS(value)**

(Required for SYSRES definition, optional for all others) Specify the name of an existing CICS system whose system links definitions are to be used as a model.

When the CICSSYS parameter is used, the result set will contain records that have been modified to show what the record would look like when installed in the system specified by CICSSYS(value).

---

## Managing CICS definitions in the CSD

You can use CICSplex SM to manage your CICS resource definitions in the CSD.

### Add a resource to a group

Add a CSD resource to a CSD group either with the **CREATE** command or with the **CSDCOPY** action.

The **CREATE** command creates a new resource definition in the CSD. When the resource definition is created, it must be assigned to a group. The **CREATE** command contains the following parameter:

**CSD** This parameter is optional.

Specifies whether the resource is a CSD resource. You must specify **PARM=CSD** if you are creating a CSD resource.

The **CSD** parameter is defined without a value. The CSD group into which the resource definition is defined is specified as an attribute of the resource definition: **CSDGROUP=groupname**

The **CSDCOPY** action copies an existing CICS resource definition, which is defined in the CSD, from one CSD group to another. The **CSDCOPY** action contains the following parameters:

**AS\_RESOURCE(value)**

Specifies the name that the copy of the resource will take.

The **AS\_RESOURCE** and **TO\_CSDRESOURCE** parameters are mutually exclusive. Specify only one of these parameters on a **CSDCOPY** action.

**DUPACTION {DUPERROR | DUPNOREPLACE | DUPREPLACE}**

This parameter is optional.

Specifies the action that CPSM takes if the **CSDCOPY** action would result in a duplicate definition in the target CSD group.

#### DUPERROR

If **DUPACTION=DUPERROR** is specified, an error is returned to the user if the **CSDCOPY** action would result in a duplicate resource in the target CSD group.

#### DUPREPLACE

If **DUPACTION=DUPREPLACE** is specified, duplicate resource definitions in the target CSD group are replaced by the resource definitions that are being copied into the CSD group.

#### DUPNOREPLACE

If **DUPACTION=DUPNOREPLACE** is specified, duplicate resource definitions in the target CSD group are not replaced.

#### TO\_CSDGROUP(*value*)

Specifies the destination CSD group into which a copy of the resource will be added.

The **AS\_RESOURCE** and **TO\_CSDRESOURCE** parameters are mutually exclusive. Specify only one of these parameters on a **CSDCOPY** action.

## Add a CSD group to a list

Add a CSD group to a CSD list with the **CSDADD** action.

The **CSDADD** action adds a group of CSD resources to a list of CSD groups. The **CSDADD** action contains the following parameters:

#### TO\_CSDLIST(*value*)

Specifies the CSD list to which to add the CSD group.

#### ADD\_CSDGROUP(*value*)

This parameter is optional.

Specifies which existing CSD group to position the supplied CSD group next to in the CSD list. The **ADD\_LOCATION** parameter defines whether the supplied CSD group is added before or after the existing CSD group.

#### ADD\_LOCATION {BEFORE|AFTER}

This parameter is optional. If this parameter is not specified, the supplied CSD group is appended to the end of the list.

Specifies whether to add the supplied CSD group BEFORE or AFTER the existing CSD group in the CSD list.

## Remove a resource from a group

Delete a CSD resource definition from a CSD group with the **REMOVE** command.

The **REMOVE** command, when issued against a CICS resource definition in a CSD group, deletes the resource from the group and CSD.

**CSD** This parameter is optional.

Specifies that the resource is to be removed from a group in the CSD.

## Remove a group from a list

Remove a CSD group from a CSD list with the **REMOVE** command.

The **REMOVE** command, when issued against the CSDINLST resource, removes a CSD group from a CSD list.

Issuing a **REMOVE** command against the CSDINLST resource is equivalent to issuing a CEDA REMOVE GROUP(*group\_name*) LIST(*list\_name*) command.

## Delete a group

Delete a CSD group from the CSD with the **REMOVE** command.

The **REMOVE** command, when issued against the CSDGROUP resource, deletes a CSD group, and all resource definitions in the group, from the CSD.

Issuing the **REMOVE** command against the CSDGROUP resource is equivalent to issuing a CEDA DELETE GROUP(*group\_name*) ALL(\*) command.

The **REMOVE** command contains the following parameter:

### **LISTREMOVE**

This parameter is optional.

Specifies that the CSD group is to be removed from all CSD lists.

---

## Parameters for installing CICS definitions using BAS

You can use CICSplex SM to install CICS definition objects in CICS systems that support the EXEC CICS CREATE command.

CICS resources that are represented by CICS definitions can be installed in the following ways:

- Individually, using the INSTALL action for a CICS Definition object (such as CONNDEF).
- As part of a resource group, using the INSTALL action for the RESGROUP object.
- As part of a resource description, using the INSTALL action for the RESDESC object.

The syntax of the INSTALL action, which is shown with each of the resource tables that support it, is essentially the same for each method of installation. Some or all of the following parameters can be used:

### ASSIGNMENT

(Optional) When installing a resource group, specify the name of a resource assignment (RASGNDEF) to be used for the install.

### CRITERIA

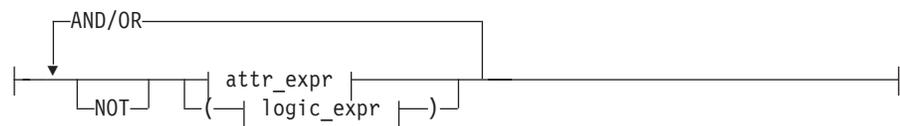

(Optional) When installing a resource group, identify attributes that are to be used in selecting the resources to be installed. CICSplex SM processes only those resources that meet the specified filter criteria.

A filter expression can be made up of one or more attribute expressions in the form:

#### Filter Expression

►► | logic\_expr | . ◄◄

#### logic\_expr:

#### attr\_expr:

| attr oper value |

where:

**attr** Is the name of an attribute in the resource table.

You can name the same attribute more than once in a filter expression.

**Note:** You cannot specify the EYU\_CICSNAME or EYU\_CICSREL attributes in a filter expression.

**oper** Is one of the following comparison operators:

- < Less than
- <= Less than or equal to
- = Equal to
- >= Greater than or equal to
- > Greater than
- ≠ Not equal to

**value** Is the value for which the attribute is being tested. The value must be a valid one for the resource table attribute.

If the attribute accepts character data, this value can be a generic. Generic values can contain:

- An asterisk (\*), to represent any number of characters, including zero. The asterisk must be the last or only character in the specified value. For example:

```
TRANID=PAY*
```

- A plus sign (+), to represent a single character. A + can appear in one or more positions in the specified value. For example:

```
TRANID=PAY++96
```

If the value contains imbedded blanks or special characters (such as periods, commas, or equal signs), the entire value string must be enclosed in single quotes. For example:

```
TERMID='Z AB'
```

To include a single quote or apostrophe in a value, you must repeat the character, like this:

```
DESCRIPTION='October''s Payroll'
```

### **AND/OR**

Combines attribute expressions into compound logic expressions using the logical operators AND and OR, like this:

```
attr_expr AND attr_expr.
```

Filter expressions are evaluated from left to right. You can use parentheses to vary the meaning of a filter expression. For example, this expression:

```
attr_expr AND (attr_expr OR attr_expr).
```

has a different meaning than this one:

```
(attr_expr AND attr_expr) OR attr_expr.
```

**NOT** Negates one or more attribute expressions.

You can negate a single attribute expression, like this:

```
NOT attr_expr
```

You can also negate multiple attribute expressions or even a whole filter expression, like this:

```
NOT (attr_expr OR attr_expr).
```

Note that you must place parentheses around the attribute expressions (or the filter expression) to be negated.

## **FORCEINS**

(Optional) Specify YES or NO to indicate whether you want to install the resource even if it already exists. YES is the default.

If you specify NO, the definition will be installed anywhere it does not currently exist. CICSplex SM checks to see if the resource is currently installed in the CICS system. If so, CICSplex SM does not install the new resource, to avoid inadvertently changing attributes of an active resource.

If you specify YES, CICSplex SM bypasses this duplicate resource checking and installs the new resource unconditionally.

## **MODE**

(Optional. When installing a RESGROUP with the assignment parameter see "Installing a RESGROUP when ASSIGNMENT is specified" on page 22.) For some resource types, CICSplex SM requires additional information to determine which subset of resource attributes to use in completing the installation. The MODE value you should specify depends on the resource type being installed:

### **Program definitions (PROGDEF)**

If REMOTE is specified in the Usage field, you can identify how the program is to be routed:

#### **DYNAM**

Programs are processed by the dynamic routing program (DTR).

**STAT** Programs are sent to the remote CICS system identified in the Related Scope

### **Transaction definitions (TRANDEF)**

If you specified a USAGE of REMOTE, you must identify the type of remote reference:

#### **DYNAM**

Transactions should be processed by the dynamic transaction routing (DTR) program.

**STAT** Each transaction should be sent to the remote CICS system identified in the transaction definition (TRANDEF).

The value you specify here overrides the Dynamic value in the TRANDEF.

### **Transient data queue definitions (TDQDEF)**

You can identify the type of transient data queue to be installed:

#### **INTRA**

Intrapartition TDQ.

#### **EXTRA**

Extrapartition TDQ.

**IND** Indirect TDQ.

If you do not specify the MODE parameter, CICSplex SM uses the Type value in the TDQDEF to install the transient data queue. If the Type value is REMOTE, CICSplex SM installs an indirect TDQ.

## **NOTIFY**

(Optional) Specify the type of checking that should be performed before attempting to install a resource:

**NO** No checking is performed.

**INACTIVE**

Check for CICS systems in the target scope that are not currently active.

**RELEASE**

Check for CICS systems in the target scope that do not support EXEC CICS CREATE commands.

**FULL** Perform both INACTIVE and RELEASE checking.

**OVERRIDE**

(Optional. When installing a RESGROUP with the assignment parameter see "Installing a RESGROUP when ASSIGNMENT is specified" on page 22.) Identify attributes of the specified resource whose values are to be modified when it is installed in one or more of the specified scopes. (The OVERTYPE value determines which scope the override values are applied to.)

An override expression can be made up of one or more attribute expressions in the form:

**Override Expression**

where:

**attr** Is the name of a modifiable attribute in the resource definition.

**value** Is the value to which you want the attribute set. The following restrictions apply:

- The value must be a valid one for the attribute.
- If the value contains imbedded blanks or special characters (such as periods, commas, or equal signs), the entire value string must be enclosed in single quotes, like this:

DESCRIPTION='Payroll.OCT'

- To include a single quote or apostrophe in a value, you must repeat the character, like this:

DESCRIPTION='October''s Payroll'

**OVERTYPE**

(Optional. ) If you plan to specify an OVERRIDE expression for the installation, indicate which scope the override values should be applied to:

**TARGET**

Apply the override values to the TARGET scope only.

**RELATED**

Apply the override values to the RELATED scope only.

**BOTH** Apply the override values to both the TARGET and RELATED scopes.

**NONE**

Do not apply any override values.

**REASSIGN**

(Required when installing a CONNDEF) Identify the resource assignment

(RASGNDEF) that applies to the related sessions definitions (SESSDEF). For each connection definition, CICSplex SM requires one or more sessions definitions to properly construct the actual CICS connection.

#### RELATED

(Required, if USAGE is REMOTE. Optional when installing a RESGROUP with the assignment parameter. See “Installing a RESGROUP when ASSIGNMENT is specified” on page 22.) Specify the name of an existing CICS system or CICS system group into which a resource identified as REMOTE is to be installed as LOCAL.

#### RESTYPE

(Required when installing a RESGROUP) Specify the type of resource being installed, as one of the following CICS Definition objects:

- ATOMDEF
- BUNNDEF
- CONNDEF
- DB2CDEF
- DB2EDEF
- DB2TDEF
- DOCDEF
- ENQMDEF
- FENODDEF
- FEPOODEF
- FEPRODEF
- FETRGDEF
- FILEDEF
- FSEGDEF
- IPCONDEF
- JRNLDEF
- JRNMDEF
- LIBDEF
- LSRDEF
- MAPDEF
- MQCONDEF
- PARTDEF
- PROCDEF
- PROFDEF
- PROGDEF
- PRTNDEF
- RQMDEF
- TCPDEF
- TDQDEF
- TERMDEF
- TRANDEF
- TRNCLDEF
- TSMDEF
- TSQDEF
- TYPTMDEF

Note that sessions definitions (SESSDEF) cannot be directly installed. They are installed along with their associated connection definitions (CONNDEF)

#### STATECHK

(Optional) Specify YES or NO to indicate whether the existence and operational state of the resource is checked before an EXEC CICS CREATE command is issued. If you specify YES and one or more resources are not in the required state, the **EXEC CICS CREATE COMMAND** is not issued for any of the selected resources. FORCEINS and STATECHK parameters must both be set to YES for the check to be carried out.

#### TARGET

(Required except when installing a RESGROUP with the assignment parameter. See “Installing a RESGROUP when ASSIGNMENT is specified” on page 22.) Specify the name of an existing CICS system or CICS system group into which the resource is to be installed.

#### USAGE

(Required except when installing a RESGROUP with the assignment parameter. See “Installing a RESGROUP when ASSIGNMENT is specified” on page 22.) Specify how the resource will be used:

##### LOCAL

The resource is contained within the target CICS system. LOCAL is valid for all supported resource types.

##### REMOTE

The resource definition refers to a resource installed in a different CICS system. If you specify REMOTE, you must also specify a

RELATED value to identify the CICS system that contains a local instance of the resource. REMOTE is valid only for the following resource types:

- FILEDEF
- PROGDEF
- TDQDEF
- TRANDEF

---

## Replacing a Resource description

You can use CICSplex SM to replace a resource description, using the REPLACE action for the RESDESC object. CICSplex SM attempts to replace all of the resources associated with an installed resource description with the resources associated with a new description. That is, CICSplex SM:

- Discards any resources that are associated with the old resource description, but not the new one.
- Reinstalls any resources that are associated with both the old resource description and the new one, regardless of whether the definitions have changed.
- Installs any additional resources that are associated with the new resource description.

For replacement to occur, the CICS systems named in the Target and Related scope fields of both resource descriptions must be active and must be running a release of CICS that supports the EXEC CICS CREATE command.

Some or all of the following parameters can be used:

### **CURRENT**

(Required) Specify the specific or generic name of a currently installed resource description that is to be replaced.

### **FORCEINS**

(Optional) See page FORCEINS for a description of the FORCEINS parameter.

### **NOTIFY**

(Optional) See page NOTIFY for a description of the NOTIFY parameter.

### **STATECHK**

(Optional) See page STATECHK for a description of the STATECHK parameter.

---

## Installing a RESGROUP when ASSIGNMENT is specified

When the ASSIGNMENT parameter is used on the INSTALL action for the RESGROUP, the following parameters can be used to override temporarily the values in the RASGNDEF specified by the ASSIGNMENT parameter:

- TARGET
- RELATED
- USAGE
- MODE
- OVERRIDE

In this case the above parameters are optional. In all other cases including the case where a RESGROUP is installed and the ASSIGNMENT parameter is NOT specified, refer to the descriptions listed above for the correct usage.

---

## How to Read resource table descriptions

Each resource class is represented by a resource table that fully describes the attributes of that resource. In this book, the information for a resource table is presented in two tables: one that describes the resource table as a whole, and one that describes the individual attributes of the resource table.

---

### Resource table definition

The first table presented for each resource table defines the general characteristics of the resource table.

The characteristics of a resource table are:

**Characteristic**

**Meaning**

**Table** The name of the managed object that this resource table describes. This name is used to identify the object in all API commands and from the batched repository-update facility.

**Description**

A 1- to 30-character description of the resource table.

**External resource name**

An external name used for referencing the resource table.

**Length**

The external length of the resource table. This is a fullword value which indicates the length of the resource table records returned in response to an API FETCH command.

**Usage** Identifies the valid uses for the resource table, as one of the following:

**API** It can be referenced from the CICSplex SM API.

**Batch Utility**

It can be processed using the batched repository-update facility.

**CICS Management Client Interface**

It can be referenced from the CICS Management Client Interface.

**EVALDEF**

It can be named in a real-time analysis evaluation definition.

**API View**

A value of YES indicates the resource table can be referenced in an API SPECIFY VIEW command.

**Object Type**

The type of managed object, as one of the following:

- CICS Definition
- CICS Resource
- CICS Monitored
- CICSplex SM Definition
- CICSplex SM Configuration
- CICSplex SM Manager

- CICSplex SM MetaData
- CICSplex SM Notification

### Copybook identifier

A unique name for each copy book version of the resource table in each language. The copy book names take the form:

EYUtnnnn

where:

**t** Identifies which language the copy book supports, as one of the following:

**A** Assembler

**P** PL/I

**L** COBOL

**C** C

**nnnn** Is a 4-character numeric resource table identifier.

### Valid API Operations

Identifies which standard API operations (GET, SET, CREATE, UPDATE, and REMOVE) can be requested of the resource table.

### Valid CICS Management Client HTTP methods

Identifies which standard HTTP methods (DELETE, GET, POST, or PUT) can be requested of the resource table.

### Table Invalid CICSREL

For tables with an object type of CICS Definition or CICS Resource, the releases of CICS that do not support the managed object. The CICS release values are shown as follows:

**E620** CICS TS for z/OS Version 2 Release 2

**E630** CICS Transaction Server for z/OS, Version 2 Release 3

**E640** CICS TS for z/OS Version 3 Release 1

**E650** CICS TS for z/OS Version 3 Release 2

**E660** CICS TS for z/OS Version 4 Release 1

**E670** CICS TS for z/OS Version 4 Release 2

### PARMS

For objects that require the PARM operand for standard API operations, the valid parameter values. The logical OR character (|) indicates values that are mutually exclusive.

### ACTION

The valid actions for the object. For tables with an object type of CICS Resource, CICS release restrictions, if any, are also shown.

### Active FEEDBACK Error Codes

The error codes and values that can appear in the FEEDBACK resource table when an error occurs for this object.

---

## Resource table attribute definitions

The second table presented for each resource table defines the attributes in the resource table. Attributes are discrete named elements that represent specific characteristics of a resource class.

The attributes are presented in a tabular format that is consistent with the object type of the resource table. Different attribute characteristics may be shown based on the object type. The following list includes all the characteristic columns. The description of a characteristic indicates the object types to which the characteristic applies.

The characteristics of a resource table attribute are described below:

**Note:** If an attribute participates in the native key of the resource class, the attribute value is shown in reverse highlighting with a numeric value appended to the end for example, **Name-1**. When a resource class uses multiple attributes to identify its native key, the numeric value indicates which segment, in the range of 1 to 9, of the native key this attribute reflects.

**Name** A unique 1- to 12-character name, which is used to identify the attribute.

### Datatype

The data type of the values returned for this attribute. The data types identify the internal format of the data. When an attribute is accessed by the batched repository-update facility, the Web User Interface (WUI), or after conversion by a REXX **TPARSE** API command, the data is displayed in an appropriate formatted manner. When accessed by any other API command, the attribute value is presented in its unchanged internal form. The valid data type keywords are listed here.

When times are displayed as a formatted value, they can include fractions of a second. In the descriptions which follow, for times that include fractions of a second, *t* is tenths of seconds, *h* is hundredths of seconds, *m* is milliseconds, *i* is ten-thousandths of seconds, *j* is hundred-thousandths of seconds, and *u* is microseconds.

### Keyword

#### Description

#### ADDRESS

Storage Address. Displayed externally as a printable hexadecimal value.

#### AVERAGE

Average. Maintained internally as a binary value with a single implied decimal place. Displayed externally as a zoned decimal value of the form NNN.t.

#### AVERAGE3

Average. Maintained internally as a doubleword binary value with three implied decimal places. Displayed externally as a zoned decimal value of the form NNN.ttt.

#### BINARY

Binary value. Displayed externally as zoned decimal digits. The null value is binary zero.

#### BIT

Bit string. Maintained internally as a binary value. Displayed externally as a printable hexadecimal value.

**BITSTRIP**

Maintained internally as a binary value of a set of 32 flags.  
Displayed as single bit values or sequences of bits, separated by commas; for example 4-7, 9, 11-12, 15, 17, 19-20, 26-29.

**CHAR**

Character string. Maintained and displayed as the character data.  
The null value is blanks.

**CODEDBIN**

CICS coded Binary value. Displayed externally as zoned decimal digits, or a value of N/A if the value is -1.

**CVDAS**

CICS CVDA value. Maintained internally as an encoded binary integer. Displayed externally as a 16-character value.

**CVDAT**

CICS CVDA value Terminal Device Type. Maintained internally as an encoded binary integer. Displayed externally as a 16-character value.

**DATETIME**

Date Time Group. Maintained internally as a System z Store Clock value. Displayed externally as a 24-digit formatted value MT/DY/YYYY-HH:MM:SS.thmi. When specified in an RTA Evaluation definition (EVALDEF object), the fractions of a second (thmi) are not required. The other data must be entered exactly as specified with leading zeros, if necessary. For Assembler and COBOL resource tables, the CPSM translator generates a single doubleword (8 bytes) sized field definition. However, for PL/I and C resource tables a two-fullword array is generated for the DATETIME fields.

**DECDATE**

Date. Maintained internally as a 4-byte packed decimal field of the form 0CYD+ where C is the century code, YY is the last two digits of the year, DD is the day number within the year, and + indicates a positive number. A century code of 0 indicates a year in the 20th century (19xx) and a century code of 1 indicates a year in the 21st century (20xx). Displayed as a character string of the form YYYY/DDD.

**DECIMAL**

Decimal value. Maintained internally in packed decimal form.  
Displayed externally as zoned decimal digits.

**DECTIME**

Time in units of tenths of a second. Maintained internally as a 4-byte packed decimal field of the form HHMMSSt+ where HH is the number of hours, MM is the number of minutes, SS is the number of seconds, t is the number of tenths of a second, and + indicates a positive number. Displayed as a character string of the form HH:MM:SS.

**DECTIMES**

Time in units of seconds. Maintained internally as a 4-byte packed decimal field of the form 0HHMMSS+ where HH is the number of hours, MM is the number of minutes, SS is the number of seconds, and + indicates a positive number. Displayed as a character string of the form HH:MM:SS.

**EYUDA**

CPSM value. Maintained internally as an encoded binary integer. Displayed externally as a 16-character value.

**HIDCHAR**

Hidden character string. Maintained as the character data.

**HEX**

Hexadecimal value. Maintained internally as a binary value. Displayed externally as a printable hexadecimal value. The null value is blanks.

**HHMM**

Hours and Minutes. Maintained internally as an encoded binary value. Displayed externally as 4 zoned decimal digits.

**INTSTCK**

Time Interval in System/390 form. Maintained internally as a binary value. Displayed externally as a 17-digit formatted value HHHH:MM:SS.thmiju (where t is tenths of seconds, h is hundredths of seconds, m is milliseconds, i is ten-thousandths of seconds, j is hundred-thousandths of seconds, and u is microseconds). The value is usually the result of an arithmetic operation (such as subtraction) being applied to System/390 Store Clock values. When specified in an RTA Evaluation definition (EVALDEF object), the fractions of a second (thmi) are not required. The other data must be entered exactly as specified with leading zeros, if necessary.

**INTUSEC**

Time Interval in microseconds. Maintained internally as a binary value. Displayed externally as a 17-digit formatted value HHHH:MM:SS.thmiju (where t is tenths of seconds, h is hundredths of seconds, m is milliseconds, i is ten-thousandths of seconds, j is hundred-thousandths of seconds, and u is microseconds). When specified in an RTA Evaluation definition (EVALDEF object), the fractions of a second (thmi) are not required. The other data must be entered exactly as specified with leading zeros, if necessary.

**INTMSEC**

Time Interval in milliseconds. Maintained internally as a binary value. Displayed externally as a 15-digit formatted value HHHH:MM:SS.thmi. When specified in an RTA Evaluation definition (EVALDEF object), the fractions of a second (thmi) are not required. The other data must be entered exactly as specified with leading zeros, if necessary.

**INTSEC**

Time Interval in seconds. Maintained internally as a binary value. Displayed externally as a 10-digit formatted value HHHH:MM:SS. When specified in an RTA Evaluation definition (EVALDEF object), the data must be entered exactly as specified with leading zeros, if necessary.

**INT16US**

Time Interval in 16 microseconds. Maintained internally as a binary value.

For attributes which have a length of 4 bytes, this is displayed externally as a 17-digit formatted value HH:MM:SS.thmiju (where t is tenths of seconds, h is hundredths of seconds, m is milliseconds, i is ten-thousandths of seconds, j is hundred-thousandths of

seconds, and u is microseconds). Note that the precision of the *HH* value is such that a wrap-around will occur in approximately 18 hours.

For attributes which have a length of 8 bytes, you can specify either *HH:MM:SS.thmi ju*, or *HHHH:MM:SS.thmi ju* in an RTA Evaluation definition (EVALDEF object).

When specified in an RTA Evaluation definition (EVALDEF object), the fractions of a second (*thmi*) are not required. The other data must be entered exactly as specified with leading zeros, if necessary.

#### PERCENT

Percentage. Maintained internally as a binary value with a single implied decimal place. Displayed externally as a zoned decimal value of the form *NNN.t*.

#### PERCENT3

Percentage. Maintained internally as a fullword binary value with three implied decimal places. Displayed externally as a zoned decimal value of the form *NNN.ttt*.

**RATE** Consumption rate. Maintained internally as a binary value with a single implied decimal place. Displayed externally as a zoned decimal value of the form *NNN.t*. The value presented describes the resource consumption over the sample period, which is expressed in seconds. For example, a rate of 1.5 is read as 1.5 consumption units per second.

#### RATE3

Consumption rate. Maintained internally as a doubleword binary value with three implied decimal places. Displayed externally as a zoned decimal value of the form *NNN.ttt*. The value presented describes the resource consumption over the sample period, which is expressed in seconds. For example, a rate of 1.575 is read as 1.575 consumption units per second.

#### RESTYPE

Resource type. Maintained internally as a binary value. Displayed externally as zoned decimal digits.

#### SCLOCK

CICS monitoring facility (CMF) 8 byte interval store clock. Maintained internally as a binary value.

The first 4 bytes contain the time accumulated by the clock, and they are displayed externally as a formatted value, with the default format *HH:MM:SS.thmi*. Note that for the standard SCLOCK, the capacity of the clock is such that a wrap-around will occur in approximately 19 hours.

The last 4 bytes contain a count of the measurement periods during which the time was accumulated. The count can also be displayed externally. In the **Monitor data for local or dynamic transactions** (MLOCTRAN) views, and the MLOCTRAN resource table, the count and time components are available as separate attributes. However, in other cases, the count is displayed externally by selecting the count formatting option for the attribute.

EXEC CPSM API programs have access to the entire internal SCLOCK data value, but REXX applications only have access to the first 4 bytes containing the time.

When specified in an RTA Evaluation definition (EVALDEF object), the last 4 bytes containing the count are not available. The other data must be entered in one of the following formats, with leading zeros, if necessary:

1. HH:MM:SS
2. HH:MM:SS.thmi
3. HHHH:MM:SS.thmi

For more information about clocks see the Clocks and time stamps in the CICS Performance Guide.

### SCLOCK12

CICS monitoring facility (CMF) 12 byte interval store clock. Maintained internally as a binary value.

The first 8 bytes contain the time accumulated by the clock, and they are displayed externally as a formatted value, with the default format HHHH:MM:SS.thmi ju.

The last 4 bytes contain a count of the measurement periods during which the time was accumulated. The count can be displayed externally by selecting the count formatting option for the attribute.

EXEC CPSM API programs have access to the entire internal SCLOCK12 data value, but REXX applications only have access to the first 8 bytes containing the time.

When specified in an RTA Evaluation definition (EVALDEF object), the last 4 bytes containing the count are not available. The other data must be entered in one of the following formats, with leading zeros, if necessary:

1. HH:MM:SS
2. HH:MM:SS.thmi
3. HHHH:MM:SS.thmi
4. HHHH:MM:SS
5. HHHH:MM:SS.thmi ju

Only the first **three** of these formats are compatible with earlier releases of CICSplex SM. If you need to use an Evaluation definition (EVALDEF object) involving SCLOCK12 data with an earlier release of CICSplex SM, do not use format 4 or 5. This applies to Evaluation definitions (EVALDEF object) installed directly on a back-level CICSplex SM system, and also to Evaluation definitions (EVALDEF object) installed as part of a batched repository update job (BATCHREP) or using the batch utility EYU9XDBT. For more information about clocks, see Clocks and time stamps in the CICS Performance Guide.

**SUM** Sum of values. Maintained internally as a binary value with a single implied decimal place. Displayed externally as a zoned decimal value of the form NNN.t.

### SUM3

Sum of values. Maintained internally as a doubleword binary value

with three implied decimal places. Displayed externally as a zoned decimal value of the form NNN.ttt.

**TIMESTP**

System/390 Timestamp. Maintained internally as a System/390 Store Clock value. Displayed externally as a 13-digit formatted value HH:MM:SS.thmi. When specified in an RTA Evaluation definition (EVALDEF object) the fractions of a second (thmi) are not required. The other data must be entered exactly as specified with leading zeros, if necessary.

**Source**

How the attribute value was acquired. The valid source keywords are:

**Keyword**

**Description**

**CPSM**

Using CICSplex SM services

**INQ**

From CICS SPI Inquire

**STAT**

From CICS SPI Statistics

**CMF**

From CICS Monitor Performance class record

**Len**

The internal length of the value for the attribute. All length values identify the number of bytes occupied by the attribute value, regardless of the datatype.

**Req**

Whether the attribute is required when constructing an instance of a CPSM Definition. This column is only shown for the CPSM Definition object type.

A value of YES indicates that an attribute value must be provided when using the Batch Utility or the API **CREATE** or **UPDATE** commands to create object instances.

A value of n/a appears for the CREATETIME and CHANGETIME attributes only. This is because these attributes are required for the construction of a CPSM definition but are maintained internally by CICSplex SM. You should not attempt to change their value in any way.

**Sum**

Identifies the default summary option that will be used if an API **GROUP** command is issued. The summary option may be changed using the SUMOPT operand of GROUP. Valid values are:

**Keyword**

**Description**

**AVG**

Average of values

**DIF**

Different character pattern

**LIKE**

Like values

**MIN**

Minimum value

**MAX**

Maximum value

**SUM**

Sum of values

CICSplex SM notifications and the OBJSTAT resource table do not participate in summary operations. See Programming overview in the CICSplex SM Application Programming Guide for more information about the OBJSTAT resource table.

**Set** Whether the attribute may be modified using the API **SET** command. A value of YES indicates modification is allowed. This column is only shown for CICS or Monitored CICS resources.

**Description**

1 to 30 characters of text that describes the attribute.

**Get/Set Invalid**

For CICS resource and CICS monitored objects, identifies releases of CICS that do not support either the attribute itself (if the heading is Get), or modification of the attribute (if the heading is Set). The CICS release values are shown as follows:

**E620** CICS TS for z/OS, Version 2.2

**E630** CICS TS for z/OS, Version 2.3

**E640** CICS TS for z/OS, Version 3.1

**E650** CICS TS for z/OS, Version 3.2

**E660** CICS TS for z/OS, Version 4.1

**E670** CICS TS for z/OS, Version 4.2

In addition, you might also see the release followed by PLUS; for example, E660PLUS. This syntax means that the field is not valid for the specified release and all later releases.

**Default**

For CPSM Definition objects, the default value assumed for the attribute. If the attribute is required, an explicit value must be provided.

**Value Range**

For CPSM Definition objects, identifies the range of valid values that are accepted when an object of this type is created or updated.

**Attr ID**

The number of the attribute in the table. This is the "relative ID" used in processing ASYNCREQ and FEEDBACK data.

**Valid Values**

For attributes with a data type of EYUDA, CVDA, or CVDT, identifies the valid values for the attribute. Up to three different sets of values may be shown:

**Input Valid Values**

Values that can be specified in API actions or with the batched repository-update facility.

**Output Valid Values**

Values that can be tested in an Evaluation definition (EVALDEF object) or that may be visible when an instance of the object is fetched.

**Input/Output Valid Values**

Values that are valid in both cases.

**Note:** For attributes with a datatype of CHAR, the value shown may be a valid value in a value range (as opposed to a character string).

## CICSplex SM resource table descriptions - M to Z

The CICSplex SM resource table descriptions are listed in alphabetic order from M to Z. Each resource description includes the external resource name, the list of valid API operations, the valid CMCI HTTP methods, the error codes, and the resource attributes.

To look up resource tables from A to L, see CICSplex SM resource tables overview in the CICSplex SM Resource Tables Reference Vol 1.

## MAS Resource Table

A CPSM Topology Manager object that describes the attributes of a managed application system. A MAS is the run-time representation of a CICS system definition. MAS objects can be referenced even if the CICS system is not active.

The **Primary** key field for this resource class is CICSNAME.

The CICSNAME attribute key field is ignored when named in an EVALDEF. The object instances returned are a function of the current scope in effect when the request is made.

When the EVALDEF is used by MRM, the scope is that of the CICS system for which the RTADEF is being installed.

When the EVALDEF is used by APM, the scope is that established when the RTADEF was associated with the APSPEC.

The following action is supported:

### STOP

Terminate the CICSplex SM MAS agent component.

The STOP action requires no unique parameter data.

## MASHIST Resource Table

A CICSplex SM Operations Resource that describes the state of CICSplex SM history recording for a MAS.

The MASHIST resource does not provide an explicit key attribute. The set of object instances returned is a function of the scope in effect when the request is made.

## MASQRYER Resource Table

This CICS resource object provides information about CMASes and MASes which failed to respond to a GET, PERFORM OBJECT, PERFORM SET, REFRESH, or SET command targeting a CICS operate resource table.

The **Primary** key field for this resource class is CICSTYPE.

The **Secondary** key field for this resource class is CICSNAME.

This resource class has no object specific actions.

## MCICSRGN Resource Table

A CICS Monitored resource that describes a subset of the CICS region attributes sampled by the CICSplex SM MAS Monitor agents.

The MCICSRGN resource class does not provide an explicit key attribute. The set of object instances returned is a function of the current scope in effect when the request is made.

The following actions are supported:

**DISCARD**

Remove the Monitored resource instance.

**RESET**

Reset all Monitoring instance attributes.

These actions require no unique parameter data.

## MLSRPBUF Resource Table

A CICS Monitored resource that describes a subset of the LSR pool buffer attributes sampled by the CICSplex SM MAS Monitor agents.

While the MLSRPBUF resource class identifies multiple key attributes, only the POOLSIZE TYPE attribute can be specified in an EVALDEF INSTANCE attribute.

The following actions are supported:

### DISCARD

Remove the Monitored resource instance.

### RESET

Reset all Monitoring instance attributes.

These actions require no unique parameter data.

## MONDEF Resource Table

A CPSM Monitor Definition that describes the monitoring requirements for a class of CICS resources. Monitoring requirements include both CICSplex SM resource and resource status facility status monitoring. The resource class and name selection criteria are identified by the attribute values.

The **Primary** key field for this resource class is NAME.

The following action is supported:

**INSTALL**

Install the definition into each active CICS system that has monitoring active within the specified scope. If provided the PERIODEF is used to determine the valid operational time of the MONDEF.

The parameter data for the INSTALL action is:

PARM('[PERIOD(period)].')

where:

period = The name of a PERIODEF definition.

The MONDEF is installed in each active CICS system in the current scope that has Monitoring active. If provided, the PERIODEF definition is used to determine the valid operational time of the MONDEF.

## MONGROUP Resource Table

A CPSM Monitor Definition that provides the association anchor for a set of MONDEF definitions. References to the MONGROUP are inferred to be references to the set of associated MONDEF instances.

The **Primary** key field for this resource class is NAME.

The following action is supported:

## INSTALL

Install the set of MONDEF definitions in the group into each active CICS system that has monitoring active within the specified scope.

The INSTALL action requires no unique parameter data.

The set of MONDEFs is installed in each active CICS system in the current scope that has Monitoring active.

## MONITOR Resource Table

This CICS resource provides CICS monitoring and statistics information in an active system being managed by CICSplex SM.

The MONITOR resource class does not provide an explicit key attribute. The set of object instances returned is a function of the scope in effect when the request is made.

This resource class has no object specific actions.

## MONSPEC Resource Table

A CPSM Monitor Definition that describes the control directives for monitoring a set of CICS systems. Using group associators, a MONSPEC object can determine which MONDEF instances are to be installed in each CICS system. Using scope link associators (LNKSMSCS), a MONSPEC object can determine which CICS systems fall under its processing scope. A CICS System can have a scope link associator to only one MONSPEC.

## MQCON Resource Table

A CICS Resource that provides information about the WebSphere MQ connection definition (MQCONN resource definition) for the CICS system.

The **Primary** key field for this resource class is NAME.

The following actions are supported:

### CONNECT

Connect to WebSphere MQ.

### DISCONNECT

Disconnect from WebSphere MQ.

The parameter data for the DISCONNECT action is:

PARM('BUSY(*cvda*).')

where *cvda* is required and is one of the following valid CVDA values for the WebSphere MQ connection busy condition:

WAIT  
NOWAIT  
FORCE

### DISCARD

Discard the WebSphere MQ connection definition.

## MQCONDEF Resource Table

A CICS Definition that describes the connection properties of a WebSphere MQ connection.

The **Primary** key field for this resource class is NAME.

The following actions are supported:

### INSTALL

Install a WebSphere MQ connection definition.

The parameter data for the INSTALL action is described in "Parameters for installing CICS definitions using BAS" on page 17.

### External resource name

## PROGRAM Resource Table

A CICS Resource that describes a program in an active CICS system being managed by CICSplex SM.

The **Primary** key field for this resource class is PROGRAM.

The following actions are supported:

**DISABLE**

Disable the program.

**DISCARD**

Remove the installed program.

**ENABLE**

Enable the program.

**NEWCOPY**

Load a new copy of the program.

CICS loads the new version from the DFHRPL or dynamic LIBRARY concatenation, or uses an LPA resident version, depending on the PRIVATE or SHARED options. PRIVATE is the default setting.

**PHASEIN**

CICS will use a new copy of the program for all new transaction requests. CICS continues to use the old copy for all currently running transactions until they have finished, and have a RESCOUNT value of zero. CICS loads the new version from the DFHRPL or dynamic LIBRARY concatenation. or uses an LPA resident version, depending on the PRIVATE or SHARED options. PRIVATE is the default setting.

These actions require no unique parameter data.

**Note:**

1. The CVDA value returned by CICS for the attribute APIST(CICSAPI) conflicts with an existing CVDA value. In order to retain the attribute's uniqueness, CICSplex SM adds 9000 to the value returned by CICS.

## RASPROC Resource Table

A CPSM Business Application Services Manager object that describes the set of CICS Definitions to be installed in CICS systems for a particular resource assignment (RASGNDEF), if the assignment is associated with a resource description (RESDESC). The CICS systems include all systems named in the target and related scopes (TARGET and RELATED) of the RASGNDEF.

This object is referenced within the scope of a CICSplex and resource assignment. As such, the resource assignment must be explicitly identified in the API GET command PARM option by coding the following text string:

### APAR PQ30578

Documentation for APAR PQ30578 added 18/04/2000

```
PARM('RASGNDEF(resassign).')
```

where resassign = (Required) The name of a resource assignment.

Other parameters can also be specified, but the resource assignment name is required.

The **Primary** key field for this resource class is RESDEF.

## RECOVERY Resource Table

A CICS Resource that provides recovery manager information in an active system being managed by CICSplex SM.

The RECOVERY resource class does not provide an explicit key attribute. The set of object instances returned is a function of the scope in effect when the request is made.

There are no object specific actions for this resource class.

## RESDESC Resource Table

A CPSM Business Application Services Definition that describes a set of logically related CICS Definitions. The set of CICS Definitions can be installed in CICS systems that support EXEC CICS CREATE and named as the scope for CICSplex SM requests.

The **Primary** key field for this resource class is RESDESC.

The following actions are supported:

### INSTALL

Install a Resource Description.

### REPLACE

Replace a Resource Description.

The parameter data for these actions is described in "Parameters for installing CICS definitions using BAS" on page 17. For information about the API CREATE parameter, MODEL see "Creating Resource descriptions" on page 13.

## RESGROUP Resource Table

A CICSplex SM Business Application Services Definition that provides the association anchor for a set of CICS Definitions. References to a RESGROUP are inferred to be references to the set of associated CICS Definition instances.

The **Primary** key field for this resource class is RESGROUP.

The following actions are supported:

### INSTALL

Install definitions from a Resource Group.

The parameter data for the INSTALL action is described in "Parameters for installing CICS definitions using BAS" on page 17.

For information on the API CREATE parameters (MODEL and MODE), see "Parameters for managing CICS Definitions" on page 13.

## RTADEF Resource Table

A CPSM Real Time Analysis Definition that describes a single analysis operation for a set of evaluations. The analysis operation controls identify the evaluations to reference and information about the frequency and modes used to determine if the analysis state is TRUE.

The **Primary** key field for this resource class is NAME.

The following actions are supported:

**INSTALL**

Install the definition into each active CICS system that has Real Time Analysis active within the specified scope. If provided the PERIODEF is used to provide the valid operational time of the RTADEF.

The parameter data for the INSTALL action is:

PARM('[PERIOD(period)].')

where:

period = The name of a PERIODEF definition.

**APINSTALL**

Install the definition into an active APSPEC.

The parameter data for the APINSTALL action is:

PARM('APSPEC(spec) [PERIOD(period)].')

where:

spec = (Required) The name of an active APSPEC.

period = The name of a PERIODEF definition.

The RTADEF is installed in each active CICS system in the current scope that has Real Time Analysis active. If provided, the PERIODEF is used to determine the valid operational time of the RTADEF.

## RTAGROUP Resource Table

A CPSM Real Time Analysis Definition that provides the association anchor for a set of RTADEF or STATDEF definitions. References to the RTAGROUP are inferred to be references to the set of associated RTADEF or STATDEF instances.

The **Primary** key field for this resource class is NAME.

The following actions are supported:

## INSTALL

Install the set of definition RTADEF and STATDEF instances in the group into each active CICS system that has Real Time Analysis active within the specified scope.

## APINSTALL

Install the set of definition into an active APSPEC.

The parameter data for the APINSTALL action is:

```
PARM('APSPEC(spec).')
```

where:

spec = (Required) The name of an active APSPEC.

Only the set of RTADEF instances associated with the RTAGROUP are installed since an APSPEC does not support STATDEF objects.

## RTASPEC Resource Table

A CPSM Real Time Analysis Definition that describes the RTA control directives for a set of CICS systems. Using group associators, an RTASPEC object can determine which RTADEF and STATDEF instances are to be installed in each CICS system. Using scope link associators (LNKSRSCS), an RTASPEC object can determine which CICS systems fall under its processing scope. A CICS system can have a scope link associator to only one RTASPEC.

## STATDEF Resource Table

A CPSM Real Time Analysis Definition that describes a site-defined status probe program to be run in a CICS system as part of Real Time Analysis processing.

The **Primary** key field for this resource class is NAME.

The following action is supported:

### INSTALL

Install the definition into each active CICS system that has Real Time Analysis active within the specified scope. If provided the PERIODEF is used to provide the valid operational time of the STATDEF.

The parameter data for the INSTALL action is:

```
PARM('[PERIOD(period)].')
```

where:

period = The name of a PERIODEF definition.

The STATDEF is installed in each active CICS system in the current scope that has Real Time Analysis active. If provided, the PERIODEF is used to determine the valid operational time of the STATDEF.

## SYSDUMP Resource Table

A CICS Resource that describes a system dump code in an active CICS system being managed by CICSplex SM.

The **Primary** key field for this resource class is SYSDUMPCODE.

The following actions are supported:

**ADD** Add a system dump code.

The parameter data for the ADD action is:

```
PARM('CODE(code) [SCOPE(cvda1)] [MAX(nnn)]
      [SHUT(cvda2)] [SDUMP(cvda3)] [DAE(cvda4)] .')
```

where:

- *code* is required and must be the 1- to 8-character system dump code.
- *cvda1* is one of the following valid CVDA values for the dump scope option:  
LOCAL  
RELATED
- *nnn* is the maximum number of dumps, from 0 - 999.
- *cvda2* is one of the following valid CVDA values for the shutdown option:  
SHUTDOWN  
NOSHUTDOWN
- *cvda3* is one of the following valid CVDA values for the system dump option:  
SYSDUMP  
NOSYSDUMP
- *cvda4* is one of the following valid CVDA values for the DAE option:

## SYSLINK Resource Table

A CICSplex SM topology definition that describes the endpoints of a communications link between two CICS systems being managed by CICSplex SM. A SYSLINK record is created when connection and sessions definitions (CONNDEF and SESSDEF) or IPIC and TCP/IP definitions (IPCONDEF and TCPDEF) are installed in one of the CICS systems; that information is used to create a link to the other CICS system.

The **Primary** key field for this resource class is FROMCSYS.

The following actions are supported:

### INSTALL

Install a System Link.

The parameter data for the INSTALL action is:

```

PARM(' [NOTIFY(notify)]
      [STATECHK(statechk)]
      [FORCEINS(forceins)]. ')

```

where:

notify = Type of checking to be performed before install.  
statechk = Whether the existence and operational state of each resource should be checked before install.  
forceins = Whether definitions should be installed even if CICSplex SM believes they do not need to be.

## SYSPARM Resource Table

A CICS Resource that describes a system initialization parameter or a system initialization parameter override in an active CICS system being managed by CICSplex SM.

The **Primary** key field for this resource class is KEYWORD.

For system initialization parameter values greater than 255 bytes, the value is split across multiple SYSPARM records. Each of the records making up the same parameter value is referred to as a segment and has a segment number referenced by the SEGNUM attribute.

The following action is supported:

**GET** Get a parameter from a specified source table. Only SYSPARM records from CICS regions at Version 4.1 or higher are returned by this command.

## SYSRES Resource Table

A CPSM Business Application Services Manager object that describes the set of CICS Definitions to be installed in a CICS system.

This object is referenced within the scope of a CICSplex and CICS system. As such, the CICS system must be explicitly identified in the API GET command PARM option by coding the following text string:

**APAR PQ30578**

Documentation for APAR PQ30578 added 18/04/2000

PARM('CICSSYS(sysname).')

where:

sysname = (Required) The name of a CICSplex SM managed CICS system.

The CICS system name is required.

The **Primary** key field for this resource class is RESDEF.

There are no object specific actions for this resource class.

## TAPEJRNL Resource Table

A CICS Resource that describes a tape journal in an active CICS system being managed by CICSplex SM.

The **Primary** key field for this resource class is JOURNALNUM.

The following actions are supported:

**ADVANCE**

Advance a tape journal.

**CLOSE**

Close a tape journal.

**LEAVE**

Close and leave a tape journal position.

**OPEN**

Open a tape journal.

These actions require no unique parameter data.

## TASKASSC Resource Table

A CICSplex SM definition that, in a TCP/IP network, provides information about the tasks that make up a set of interrelated transactions. The interrelated tasks have the same transaction group ID and thus the records are organized by transaction group ID. You can filter the records using a substring of the user correlation data that has been added (by a CICS XAPADMGR global user exit program) to the user data section of the task's associated data origin descriptor.

The following actions are supported:

**GET** Retrieve the TASKASSC records for a specified task or transaction group ID.

**TASK Resource Table**

This CICS resource describes a task in an active CICS system being managed by CICSplex SM.

The **Primary** key field for this resource class is TASK.

When used in an EVALDEF, you might want to limit the evaluation to include only those tasks for which a specific transaction is associated. To do so include the TRANID attribute in the evaluation filter expression; for example, TRANID=TRN1.

The following actions are supported:

**PURGE**

Purge a task.

The parameter data for the PURGE action is:

PARM('PURGETYPE(cvda).')

where:

cvda = (Required) Valid CVDA value for the type of operation.

Valid CVDA values for the PURGE action are PURGE, FORCEPURGE and KILL; for example: PARM('TYPE(FORCEPURGE).').

**FORCEPURGE**

Force purge a task.

There are no parameters for the FORCEPURGE action.

**KILL** Kill a task.

There are no parameters for the KILL action.

**Note:** The KILL action can lead to unpredictable results and should be used only in exceptional circumstances.

## TASKTSQ Resource Table

A CICS Resource that describes tasks and the CICS Temporary Storage Queues they have used in an active system being managed by CICSplex SM. Note that for these records to be available, the MAS must be running with the SIT parameter MNRES=ON, and be using an MCT that specifies a value greater than 0 for TSQUEUE on the DFHMCT TYPE=INITIAL macro.

The key for this resource class is a composite element.

There are no object specific actions for this resource class.

## TCPDEF Resource Table

A CICS Definition that describes a TCP/IP Service.

The **Primary** key field for this resource class is NAME.

The following actions are supported:

### INSTALL

Install a TCP/IP Service Definition.

The parameter data for the INSTALL action is described in "Parameters for installing CICS definitions using BAS" on page 17.

## TCPIPS Resource Table

A CICS Resource that describes a TCP/IP Service in an active CICS system being managed by CICSplex SM.

The **Primary** key field for this resource class is NAME.

The following actions are supported:

### CLOSE

Close a TCP/IP Service

**DISCARD**

Discard a TCP/IP Service

**IMMCLOSE**

Close a TCP/IP Service immediately

**OPEN** Open a TCP/IP Service

These actions require no unique parameter data.

## TDQDEF Resource Table

A CICS Definition that describes an intrapartition, extrapartition, indirect or remote transient data queue.

The **Primary** key field for this resource class is NAME. Note that a TDQ name can be only 4 characters long. The remainder of the 8-character NAME field should be padded with blank spaces.

The following actions are supported:

### INSTALL

Install a Transient Data Queue Definition.

The parameter data for the INSTALL action is described in "Parameters for installing CICS definitions using BAS" on page 17.

### External resource name

## TDQGBL Resource Table

A CICS Resource that describes the general characteristics of transient data usage in an active CICS system being managed by CICSplex SM .

The **TDQGBL** resource class does not provide an explicit key attribute. The set of object instances returned is a function of the current scope in effect when the request is made.

There are no object specific actions for this resource class.

## TDQINGRP Resource Table

A CPSM Business Application Services Definition that describes the membership of a transient data queue definition (TDQDEF) in a resource group (RESGROUP). A TDQDEF can be a member of multiple RESGROUPs.

The **Primary** key field for this resource class is TDQGROUP.

There are no object specific actions for this resource class.

## TERMDEF Resource Table

A CICS Definition that describes a terminal device with which CICS is to communicate.

The **Primary** key field for this resource class is NAME. A terminal name can be only 4 characters long. The remainder of the 8-character NAME field should be padded with blank spaces.

The **Secondary** key field for this resource class is DEFVER.

The **Tertiary** key field for this resource class is CSDGROUP.

The following actions are supported:

**INSTALL**

Install a Terminal Definition.

The parameter data for the INSTALL action is described in “Parameters for installing CICS definitions using BAS” on page 17.

## TERMNL Resource Table

A CICS Resource that describes a terminal in an active CICS system being managed by CICSplex SM.

The **Primary** key field for this resource class is TERMID.

The following actions are supported:

### ACQUIRE

Acquire a terminal.

**CANCEL**

Cancel AID queuing for a terminal.

**DISCARD**

Discard a terminal.

**FORCEPURGE**

Force transactions associated with a terminal to be purged immediately.

**INSERVICE**

Set a terminal in service.

**KILL** Kill the transactions associated with the terminal.

**Note:** Kill can lead to unpredictable results and should be used only in exceptional circumstances.

**OUTSERVICE**

Set a terminal out of service.

**PURGE**

Purge transactions associated with a terminal.

**RELEASE**

Release a terminal.

These actions require no unique parameter data.

**External resource name**

CICSTerminal

**Length**

456

**Usage** API or CICS Management Client Interface or EVALDEF

**API view**

## TRANCLAS Resource Table

A CICS Resource that describes a transaction class in an active CICS system being managed by CICSplex SM.

The TRANCLAS resource class can be used to request object instances that were identified as TCLASS objects in versions of CICS before 4.1.

The following action is supported:

### DISCARD

Discard a transaction class.

This action requires no unique parameter data.

### External resource name

CICSTransactionClass

### Length

176

**Usage** API or CICS Management Client Interface or EVALDEF

### API view

Yes

### CMAS context

No

**SCOPE applies**

Yes

**Only query CMASs in workload**

No

**Object type**

CICS Resource

**Copybook identifier**

## TRANDEF Resource Table

A CICS Definition that describes how a transaction is to run.

The **Primary** key field for this resource class is NAME. Note that a transaction name can be only 4 characters long. The remainder of the 8-character NAME field should be padded with blank spaces.

The following actions are supported:

### INSTALL

Install a Transaction Definition.

The parameter data for the INSTALL action is described in "Parameters for installing CICS definitions using BAS" on page 17.

## TRANDUMP Resource Table

A CICS Resource that describes a transaction dump code in an active CICS system being managed by CICSplex SM.

The **Primary** key field for this resource class is TRANDUMPCODE.

The following actions are supported:

**ADD** Add a transaction dump code.

The parameter data for the ADD action is:

```
PARM('CODE(code) [SCOPE(cvda1)] [MAX(nnn)]  
[SHUT(cvda2)] [SDUMP(cvda3)] [TDUMP(cvda4)].')
```

where:

- *code* is required and must be the 1- to 8-character transaction dump code.
- *cvda1* is one of the following valid CVDA values for the dump scope option:
  - LOCAL
  - RELATED
- *nmn* is the maximum number of dumps, from 0 - 999.
- *cvda2* is one of the following valid CVDA values for the shutdown option:
  - SHUTDOWN
  - NOSHUTDOWN
- *cvda3* is one of the following valid CVDA values for the system dump option:
  - SYSDUMP
  - NOSYSDUMP
- *cvda4* is one of the following valid CVDA values for the transaction dump option:
  - TRANDUMP
  - NOTRANDUMP

**DELETE**

Remove a transaction dump code.

**RESET**

Reset transaction dump code values.

## URIMAP Resource Table

A CICS resource that describes the universal resource identifier (URI) of requests from web clients or requests to a remote server.

The **Primary** key field for this resource class is NAME.

The following actions are supported:

### ENABLE

Enable access to the URIMAP definition by programs.

### DISABLE

Disable program access to the URIMAP definition. A URIMAP definition has to be disabled before it can be reinstalled or discarded.

### DISCARD

Remove a URIMAP definition from the system.

## URIMPDEF Resource Table

A CICS definition that describes the universal resource identifier (URI) of requests from web clients or requests to a remote server.

The **Primary** key field for this resource class is NAME.

The following actions are supported:

### INSTALL

Install a Connection Definition.

The parameter data for the INSTALL action is described in "Parameters for installing CICS definitions using BAS" on page 17.

### ADDTGRP

Add to resource group

PARM(' [ERRQUEUE] RESGROUP(value) .')

**Note:** When creating this resource you should consider specifying the HOST attribute in lower case as CICS will convert this attribute name to lower case at install time. If you have not used a lower case name, you may subsequently have difficulty finding your host.

## VOLUME Resource Table

A CICS Resource that describes a tape volume used by a tape journal in an active CICS system being managed by CICSplex SM.

The **Primary** key field for this resource class is VOLUME.

The following actions are supported:

**ADD** Add a volume.

The parameter data for the ADD action is:

```
PARM('VOLSER(volser) JOURNAL(jrn1)
      [AVAILSTAT(cvda)].')
```

where:

```
volser = (Required) 6-character volume serial number
jrn1   = (Required) Journal number, from 1 - 99
cvda   = Valid CVDA for the volume availability condition
```

## WEBSVDEF Resource Table

A CICS definition that describes aspects of the run-time environment for a CICS application program deployed in a Web services setting, where the mapping between application data structure and SOAP messages has been generated using CICS-supplied tools.

The **Primary** key field for this resource class is NAME.

The following actions are supported:

### INSTALL

Install a Connection Definition.

The parameter data for the INSTALL action is described in "Parameters for installing CICS definitions using BAS" on page 17.

### ADDTOGRP

## WLMATAFF Resource Table

A CICSplex SM Workload Manager object that describes an active affinity relationship for a dynamic transaction. An instance of this object exists for the duration of the affinity, which in many cases is a very short period of time.

This object is referenced within the scope of a workload. The workload name must be explicitly identified in the PARM option of the API GET command by coding the following text string:

```
PARM('WORKLOAD(workload).')
```

*workload* is the name of an active workload and is required. Alternatively, you can code the following text string:

```
PARM('WORKLOAD(*).')
```

You can specify a workload name of \* as a wildcard. Using this wildcard returns a WLMATAFF record for every workload with which the target region is associated. No other generic form of workload name can be specified. You must use an explicit workload name or the wildcard.

The key for this resource class is a composite element.

The following action is supported:

**FORCE**

Force an affinity to be broken.

This action is provided for use when system failures occur and manual recovery of a workload is required. It is not intended for general use and may cause damage if used in an inappropriate manner. CICSplex SM makes no checks before the forced removal of an affinity relation.

## WLMATGRP Resource Table

A CICSplex SM Workload Manager object that describes a transaction group installed in an active workload.

This object is referenced within the scope of a workload. The workload name must be explicitly identified in the PARM option of the API GET command by coding the following text string:

```
PARM('WORKLOAD(workload).')
```

*workload* is the name of an active workload and is required. Alternatively, you can code the following text string:

```
PARM('WORKLOAD(*)')
```

You can specify a workload name of \* as a wildcard. Using this wildcard returns a WLMATGRP record for every workload with which the target region is associated. No other generic form of workload name can be specified - it must be an explicit workload name or the wildcard.

You can specify other parameters, but the workload name is required.

The key for this resource class is a composite element.

The following actions are supported:

**ACTIVE**

Activate the Transaction Group.

**DORMANT**

Make the Transaction Group dormant.

**SET**

Modify attributes of the Active Transaction Group.

These actions require no unique parameter data.

A transaction group in the dormant state does not make affinity relation decisions about AOR target selection. It does, however, record static affinity relations. This allows a transaction group to be installed before activating dynamic transaction routing to record affinities based on the existing static routing configuration. When the transaction group is made active, it then has a valid representation of affinities created using static facilities.

## WLMATRAN Resource Table

A CICSplex SM Workload Manager object that describes a dynamic transaction defined explicitly to CICSplex SM. Dynamic transactions have to be defined only if they have specific separation or affinity criteria.

This object is referenced within the scope of a workload. The workload name must be explicitly identified in the PARM option of the API GET command by coding the following text string:

```
PARM('WORKLOAD(workload).')
```

*workload* is the name of an active workload and is required. Alternatively, you can code the following text string:

```

You can specify a workload name of \* as a wildcard. Using this wildcard returns a WLMATRAN record for every workload with which the target region is associated. No other generic form of workload name can be specified. You must use an explicit workload name or the wildcard.

You can specify other parameters, but the workload name is required.

## WLMWAOR Resource Table

A CICSplex SM Workload Manager object that describes a CICS system used as an AOR in an active workload.

This object is referenced within the scope of a workload. The workload name must be explicitly identified in the PARM option of the API GET command by coding the following text string:

```
PARM('WORKLOAD(workload).')
```

*workload* is the name of an active workload and is required. Alternatively, you can code the following text string:

```
PARM('WORKLOAD(*)').')
```

You can specify a workload name of \* as a wildcard. Using this wildcard returns a WLMWAOR record for every workload with which the target region is associated. No other generic form of workload name can be specified. You must use an explicit workload name or the wildcard.

You can specify other parameters, but the workload name is required.

The key for this resource class is a composite element.

The following actions are supported:

**ACTIVATE**

Allow transactions to be routed to an AOR.

**QUIESCE**

Do not route new transactions to an AOR.

These actions require no unique parameter data.

When an AOR QUIESCE is requested, no new transactions are routed to the AOR. Existing tasks are not affected. Only transactions with an affinity to the AOR continue to be routed. When all affinities have been removed, the AOR no longer receives any new transactions.

**Note:** 2147483647 is a special value for *ROUTEWGHT* indicating that the target is quiesced.

## WLMWDEF Resource Table

A CPSM Workload Manager object that describes a workload definition installed in an active workload.

This object is referenced within the scope of a workload. The workload name must be explicitly identified in the PARM option of the API GET command by coding the following text string:

```
PARM('WORKLOAD(workload).')
```

*workload* is the name of an active workload and is required. Alternatively, you can code the following text string:

```
PARM('WORKLOAD(*).')
```

You can specify a workload name of \* as a wildcard. Using this wildcard returns a WLMWDEF record for every workload with which the target region is associated. No other generic form of workload name can be specified. You must use an explicit workload name or the wildcard.

You can specify other parameters, but the workload name is required.

The key for this resource class is a composite element.

The following action is supported:

### **DISCARD**

Remove the installed definition.

The DISCARD action requires no unique parameter data.

## WLMAWTOR Resource Table

A CICSplex SM Workload Manager object that describes a CICS system used as a TOR in an active workload.

This object is referenced within the scope of a workload. The workload name must be explicitly identified in the PARM option of the API GET command by coding the following text string:

```
PARM('WORKLOAD(workload).')
```

*workload* is the name of an active workload and is required. Alternatively, you can code the following text string:

```

```

You can specify a workload name of \* as a wildcard. Using this wildcard returns a WLMAWTOR record for every workload with which the target region is associated. No other generic form of workload name can be specified. You must use an explicit workload name or the wildcard.

You can specify other parameters, but the workload name is required.

## WLMSPEC Resource Table

A CPSM Workload Manager Definition that describes the control directives for generating a workload. Using group associators a WLMSPEC object can determine which WLMDEF instances are to be installed into the workload. Using scope link associators (LNKSWSCS), a WLMSPEC object can determine which CICS systems are to be referenced as TORs. A CICS system acting as a TOR can have a scope link associator to only one WLMSPEC.

## XMLTRANS Resource Table

A CICS resource that provides information about transformations between XML and application data.

The **Primary** key field for this resource class is NAME.

The following actions are supported:

**INQUIRE**

Inquire about an XMLTRANSFORM resource. The resource must be installed in the CICS region.

**External resource name**

CICSXmltransform

**Length**

688

**Usage** API or CICS Management Client Interface or EVALDEF

**API view**

Yes

**CMAS context**

No

**SCOPE applies**

Yes

**Only query CMASs in workload**

No

**Object type**

CICS Resource

**Copybook identifier**

## Accessibility

Accessibility features help a user who has a physical disability, such as restricted mobility or limited vision, to use software products successfully.

You can perform most tasks required to set up, run, and maintain your CICS system in one of these ways:

- using a 3270 emulator logged on to CICS
- using a 3270 emulator logged on to TSO
- using a 3270 emulator as an MVS system console

IBM Personal Communications provides 3270 emulation with accessibility features for people with disabilities. You can use this product to provide the accessibility features you need in your CICS system.
