Explanation: The maximum number of MVS CSA bytes used so far in this IPL by the CICS interregion communication facility (for interregion buffers), is *nnnn*.

System action: Processing continues.

User response: None.

Destination: CSMT

Modules: DFHZCX

XMEOUT Parameters: *date, time, applid, nnnn*

DFHIR3795 **ABNORMAL TERMINATION - STATUS CODE DH xx**

Explanation: The IMS high-level programming interface (HLPI) has found a condition caused by a programming error, or DL/I has returned a status code to HLPI that indicates an error. *xx* is the status code.

System action: The batch program abnormally terminates with abend code 3795.

User response: Correct the error and try again. See the *IMS Application Programming: DL/I Calls* or the *Application Programming: EXEC DLI Commands* for an explanation of the IMS status code.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHDRPG

DFHIR3796 *date time applid* **Transaction *trandid* *termid* - A connected transaction sent issue abend with following message: *xxxxxx***

Explanation: Transaction *trandid* was connected to a transaction in another CICS system via an MRO link. The other transaction sent an ISSUE-ABEND flow with a message.

System action: Processing continues.

User response: Examine the information in the included message to determine the circumstances and what action to take.

Destination: CSMT

Modules: DFHZIS1.

XMEOUT Parameters: *date, time, applid, trandid, termid, xxxxxx*

DFHIR3798 *applid* IRC Not Started. Unable to load Interregion Communication Work Exit DFHIRW10.

Explanation: As part of interregion communication initialization, an attempt is made to establish an internal work exit mechanism. This attempt has failed.

The most likely reason for the failure is that the interregion communication work exit module, DFHIRW10, cannot be loaded. This module should appear in an APF authorized library in the STEPLIB concatenation for the CICS region, in the linklist, or in the LPA.

System action: The attempt to initiate the interregion communication facility (via the IRCSTRT DFHSIT or override option or via the CEMT SET IRC OPEN command) fails. CICS continues.

User response: Ensure that the interregion communication work exit module, DFHIRW10, is available to be loaded.

Destination: Console

Modules: DFHSIJ1

DFHJCxxxx messages

DFHJC4522 DDNAME *ddname* HAD A PERMANENT I/O ERROR.

Explanation: An unrecoverable I/O error occurred while the CICS journal print utility was processing the data set defined in the DD statement *ddname*.

System action: If the error occurred on an output data set, and multiple output copies were specified, processing continues with the other copies. Otherwise, the journal print utility terminates abnormally.

User response: If the error occurred on an output data set, and you wish to rerun, change the DD statement to refer to a different volume, and resubmit the job. Take the original volume offline for recovery, if possible.

If the error occurred on an input data set, to be able to recover you must have a backup copy of the defective volume. You can change the DD statement to refer to the backup volume, and rerun the job. If you have a backup copy of a defective disk, you can use IBM utilities to recover the disk by flagging the defective track and pointing to an alternate track.

Note: This message cannot be changed with the message editing utility.

DFHJC4523 PROCESSING IS BEING TERMINATED FOR THIS OPTION.

Explanation: This is an informative message issued by

XMEOUT Parameter: *applid*

DFHIR3799 *applid* Unable to start interregion communication because DFHIRP services are down level.

Explanation: The version of DFHIRP being used is at a lower level than that of the caller wishing to make use of interregion communication.

System action: The interregion communication session is not started.

User response: If IRC is required, update the level of the DFHIRP module in the LPA such that it matches the level of the latest CICS version in use. If IRC is not required, run with system initialization override option IRCSTRT=NO.

Destination: Console

Modules: DFHSIJ1, DFHDRPF

XMEOUT Parameter: *applid*

the CICS journal print utility, when it completes processing for an OPTION card. The card referred to is the last OPTION card before this message on SYSPRINT.

System action: The journal print utility continues processing with the next option.

User response: If no other messages appear between the OPTION card and this message, the termination is normal. If other messages have been issued, check them to see if the termination is normal or abnormal. If abnormal termination has occurred, correct the errors notified in other message(s), and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHJUP

DFHJC4524 INVALID CONTROL CARD FORMAT.

Explanation: The CICS journal print utility detected an error in an input CONTROL card. The card is displayed on SYSPRINT on the line before this message.

System action: The journal print utility ignores the invalid card, and assumes standard defaults.

User response: If the output of the run is not what you want, correct the invalid card and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHJUP

DFHJC4525 INVALID CARD TYPE.

Explanation: The CICS journal print utility read an input card that did not contain one of the following strings starting in column 1:

'CONTROL', 'OPTION', '*', or 'END'.

The invalid card is displayed on SYSPRINT in the line before this message.

System action: The journal print utility ignores the invalid card and continues processing.

User response: If the job fails or the output is not what you want, correct the invalid card and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHJUP

DFHJC4526 INVALID OPTION CARD OR PRIOR ERROR.

Explanation: The CICS journal print utility detected an error in an OPTION card or ignored it because of a previous error. The card is displayed in the line before this message.

System action: The journal print utility ignores the card and continues processing.

User response: If the job fails or the output is not what you want, correct the error and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHJUP

DFHJC4527 END OF JOB.

Explanation: This is an end-of-job information message issued by the CICS journal print utility when it terminates normally. Errors may have been detected but none was sufficient to cause abnormal termination.

System action: The journal print utility terminates normally.

User response: Check that all options completed normally. If not, submit another job for the options that you still need.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHJUP

DFHJC4528 NO OPTION CARDS SUPPLIED.

Explanation: The CICS journal print utility detected that, for one CONTROL card:

1. No OPTION cards were supplied **OR**
2. All the OPTION cards contained errors (notified in previous messages).

System action: The journal print utility does no processing for the CONTROL card with no OPTION cards.

User response: Supply correct OPTION cards for the options you want and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHJUP

DFHJC4529 UNABLE TO OPEN INPUT FILE.

Explanation: The CICS journal print utility was unable to open the input data set associated with the CONTROL card displayed before this message.

System action: The journal print utility continues processing with the next input card.

User response: Check the JCL. For a data set without a standard label, check that the data set control block (DCB) parameters are supplied. If you find a JCL error, correct it and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHJUP

DFHJC4530 ELEMENT LIST ERROR.

Explanation: The CICS journal print utility detected an error while processing an input file.

System action: The journal print utility terminates processing with the MVS user abend code 0185.

User response: This is usually caused by a previous error, for which a message has been issued. If any previous error messages were displayed, make the necessary corrections and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHJUP

DFHJC4531 END OF FILE ON INPUT.

Explanation: The CICS journal print utility has reached EOF on the current input file.

System action: The journal print utility completes processing for the CONTROL card preceding this message on SYSPRINT.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHJUP

DFHJC4532 OPTION COMPLETE.

Explanation: The CICS journal print utility has completed processing for the OPTION card preceding this message on SYSPRINT.

System action: The journal print utility continues processing with the next OPTION card or, if there are no further options before the END card, completes processing for the current control card.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHJUP

DFHJC4533 UNABLE TO OPEN OUTPUT FILE.

Explanation: The CICS journal print utility was unable to open the output data set associated with the last CONTROL card displayed on SYSPRINT before this message.

System action: The journal print utility terminates processing for this CONTROL card, and continues processing with the next CONTROL card.

User response: Check the JCL. For a data set without a standard label, check that the data set control block (DCB) parameters are supplied. If you find a JCL error, correct it and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHJUP

DFHJC4534 NO ELEMENT LIST ADDRESS.

Explanation: During CICS journal print utility processing, an error occurred in building the element list.

System action: The journal print utility terminates processing for this element list, and terminates abnormally with the MVS user abend code, 0184.

User response: This is an internal error in the journal print utility, DFHJUP. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHJUP

DFHJC4571 AN ERROR (CODE X'code') HAS OCCURRED IN THE USER EXIT PROGRAM.

Explanation: An error has been detected in the user exit program. The code *code* is the value returned in register 15 from the exit program to DFHJUP. The journal print utility terminates without processing any remaining OPTION cards.

User response: Correct the error in the user exit program and resubmit the job.

Note: This message cannot be changed with the message editing utility.

DFHKC0102 *date time applid terminal userid tranid* **PFT entry for *profname* has been added.**

Explanation: This is an audit log message indicating that profile entry *profname* has been added to the PFT using the INSTALL command.

terminal is the netname or termid of the terminal at which the INSTALL command was entered.

userid is the user identifier of the operator performing the INSTALL command.

tranid is the transaction used to perform the INSTALL command.

System action: The system continues normally.

User response: None.

Destination: CSKL

Modules: DFHKCQ

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, profname*

DFHKC0104 *date time applid terminal userid tranid* **PFT entry for *profname* has been deleted.**

Explanation: This is an audit log message indicating that profile entry *profname* has been deleted from the CICS profile table (PFT) using the DISCARD command.

terminal is the netname or termid of the terminal at which the DISCARD command was entered.

userid is the user identifier of the operator performing the DISCARD command.

tranid is the transaction used to perform the DISCARD command.

System action: The system continues normally.

User response: None.

Destination: CSKL

Modules: DFHKCQ

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, profname*

DFHKC0106 *date time applid terminal userid tranid* **PFT entry for *profname* has been replaced.**

Explanation: This is an audit log message indicating that profile entry *profname* has been replaced in the CICS profile table PFT using the INSTALL command.

terminal is the netname or termid of the terminal at which the INSTALL command was entered.

userid is the user identifier of the operator performing the INSTALL command.

tranid is the transaction used to perform the INSTALL command.

System action: The system continues normally.

User response: None.

Destination: CSKL

Modules: DFHKCQ

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, profname*

DFHKC0301 *applid* **Program DFHKCRP cannot be found.**

Explanation: The transaction manager recovery program is not available. CICS cannot find DFHKCRP in any data set concatenated in the DFHRPL DD statement in the CICS startup job stream.

System action: CICS terminates abnormally with a dump.

User response: To correct this error, place DFHKCRP in a partitioned data set in the DFHRPL DD statement.

Destination: Console

Modules: DFHKCQ

XMEOUT Parameter: *applid*

| **DFHKC0302** *applid* **Transaction Manager restart failed.**
| **Reason - *rc*.**

| **Explanation:** During transaction manager
| initialization, CICS executes the following steps in the
| order in which they are listed:-

- | 1 Building the profile table (PFT) directory.
- | 8 Purging profile definitions from the global
| catalog using the catalog domain.
- | 10 Restoring profile definitions from the global
| catalog using the catalog domain.

| The transaction manager restart has failed for reason *rc*,
| where *rc* indicates the job step that did not complete
| successfully. Subsequent steps have not been attempted.

| **System action:** CICS terminates the task under which
| DFHKCRP is running with an AKCB abend code, and
| issues message DFHSI1521.

| **User response:** Examine the trace in the CICS AKCB
| transaction dump to see the history of the task that
| DFHKCRP is running under for further information
| regarding the precise cause of the failure.

| **Destination:** Console

| **Modules:** DFHKCRP

| **XMEOUT Parameters:** *applid, rc*

DFHKC0308I *applid* **ERROR OCCURRED IN SRB MODE.**

Explanation: An error such as a program check was detected by the operating system during the execution of a unit of work scheduled by means of a service request block (SRB). The SRB was scheduled, directly or indirectly, by CICS in order to issue a VTAM authorized path request.

A message could not be issued because the error was detected when running under an SRB.

Diagnostics: The error is handled by a functional recovery routine (FRR) in DFHKCSP. This FRR saves the system diagnostic work area (SDWA) if one was provided, and issues a CALLRTM to terminate the CICS TCB with user abend code 0308.

This, in turn, causes the ESTAE exit established by DFHKESTX to be taken, resulting in the storing of the CICS TCB status and provision of a dump as for abends occurring during execution under the CICS TCB.

The SDWA saved by DFHKCSP may be located in the dump by:

- Finding the module itself (look for characters 'DFHKCSP').
- Finding the save area (look for characters 'SRB SDWA SAVE AREA'); the SDWA follows this character string.

Analysis: The SDWA, located as described above, is a standard MVS SDWA. The principal contents of the SDWA are:

SDWAGRSV

General registers 0 through 15

SDWAEC1

Program status word (PSW) at the time of the interrupt.

In general, registers 12 and 13 will not address a TCA or the CSA.

The registers and PSW recorded in DFHKESTX represent the state of the CICS TCB when CICS was

terminated by the FRR. Normally this information is not relevant to the cause of the failure, but may give clues to the environment in which the SRB was running.

System action: CICS is terminated with user abend code U0308. The system diagnostic work area (SDWA) presented at the time of error is copied into module DFHKCSP. DFHKCSP resides in protected storage and can be printed from an MVS region dump.

User response: Locate the SDWA, situated in DFHKCSP after the characters "SRB SDWA WORK AREA". This contains the PSW and registers at the time of the error.

If the address in SDWAEC1 is in CICS code, examine the code to determine the expected register contents at this point. If this does not suggest any obvious local problem, look for a pointer to the RPL associated with the SRB mode execution. This will indicate the location of the MVS save area.

If the address in SDWAEC1 is not in CICS code (that is in MVS), try using the contents of register 13 to trace back through the save areas to the one provided by CICS. The contents of this save area will show the point of call in CICS (in DFHZHPRX), and the arguments passed to the access method, in particular the address of the RPL (register 1). Failure in an access method may be due to an incorrect RPL. Therefore check the ACB address, entry point, and I/O area address.

Note: When CICS is executing in SRB mode, it is not possible for the message to be issued. However, user abend code 308 is generated and should appear in message DFHSR0606.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKCSP

DFHKExxxx messages

DFHKE0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a three digit hexadecimal MVS code (if applicable), followed by a four digit

alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: An exception entry is made in the

trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in *OS/390 MVS System Codes*.

Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHKEDD, DFHKEDS, DFHKEGD, DFHKETI

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHKE0002 *applid* **A severe error (code X'code')** has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code *code* is the exception trace point id which uniquely identifies what the error is and where the error was detected.

For further information about CICS exception trace entries, see the *CICS Problem Determination Guide*.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: An exception entry (code X'code' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS will continue unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHKEDD, DFHKEGD, DFHKEIN

XMEOUT Parameters: *applid, X'code', modname*

DFHKE0004 *applid* **A possible loop has been detected at offset X'offset' in module modname.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'offset'. This is the offset of the instruction which was executing at the time the error was detected.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you

consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname* and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. However, you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHKEDD, DFHKEDS, DFHKEGD, DFHKETI

XMEOUT Parameters: *applid*, *X'offset'*, *modname*

DFHKE0005 *applid* **A hardware error has occurred (module *modname*, code *X'code'*). The MVS store clock was found inoperative.**

Explanation: A hardware error has occurred during the running of module *modname*. The MVS store clock facility is the timing mechanism for the operating system.

The code *code* is the exception trace point ID which uniquely identifies the place where the error was detected.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS. This is probably a hardware error and you should first investigate the MVS store clock and find out whether it is working properly. If this is the cause, you should take the appropriate action to have it repaired or replaced.

In the unlikely event that this is not a hardware problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKETI

DFHKE0006 *applid* **Insufficient storage to satisfy Getmain (code *X'code'*) in module *modname*. MVS code *mvscode*.**

Explanation: An MVS GETMAIN was issued by module *modname* but there was insufficient storage available to satisfy the request.

The code *X'code'* is the exception trace point ID which uniquely identifies the place where the error was detected.

The code *mvscode* is the MVS GETMAIN return code.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS will terminate with a system dump. An exception entry is made in the trace table (code *code* in the message).

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Inform the system programmer.

You can get diagnostic information about the MVS return code by consulting the relevant MVS codes manual which is listed in the book list at the front of this book.

Try decreasing the overall size limit of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. If CICS is not already terminated, you will need to bring CICS down to do this. See the *CICS System Definition Guide* or the *CICS Performance Guide* for further information on CICS storage.

Destination: Console

Modules: DFHKEIN

XMEOUT Parameters: *applid*, *X'code'*, *modname*, *mvscode*

DFHKE0101 *applid* **DFHSIP IS NOT APF-AUTHORIZED. CICS WILL TERMINATE.**

Explanation: Part of CICS initialization must be done in an APF-authorized state. The kernel has detected that DFHSIP is not APF-authorized.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS will terminate. The CICS job step terminates with return code 12.

User response: All libraries concatenated in the STEPLIB concatenation should be APF-authorized, and DFHSIP should be link-edited with an authorization code of 1.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKESIP

DFHKE0102 *applid* UNSUCCESSFUL
PRE-INITIALIZATION OF *domain*
DOMAIN. CICS WILL TERMINATE.

Explanation: A domain has failed to pre-initialize and as a result the system will terminate.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

Since this problem has occurred so early in CICS initialization, possible causes include a severe lack of storage or corruption of the local catalog.

System action: CICS terminates.

User response: Examine all earlier messages sent to the console to look for any obvious cause of the domain pre-initialisation failure.

If you cannot find the cause of the failure from the messages, inform the system programmer. If a dump is taken, investigate this problem using the exception trace which is issued by the failing domain.

You may need further assistance to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKETCB.

DFHKE0103 *applid* IDENTIFY FAILED IN MODULE
modname. MVS CODE *mvscode*. CICS
WILL TERMINATE.

Explanation: The kernel has issued an MVS IDENTIFY which has failed.

The code *mvscode* is the MVS IDENTIFY return code.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates. The CICS job step terminates with return code 12.

User response: Inform the system programmer.

To resolve the problem, use the MVS IDENTIFY return code *mvscode* and the *MVS/XA Supervisor Services and Macro Instructions* manual, (GC28-1154), to determine why the IDENTIFY failed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKETCB.

DFHKE0104 *applid* CICS HAS BEEN SUPPLIED
WITH INCORRECT SVC NUMBER
svcno.

Explanation: CICS has validated the SVC number *svcno*, but it does not correspond to the correct CICS Type 3 SVC for this release of CICS. CICS cannot function without the correct CICS SVC.

The SVC number *svcno* has been specified in the SIT, or as an override, by the CICSSVC= parameter.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: Control is returned to the parameter manager for interaction with the operator. Further action depends upon which PARMERR= parameter has been specified.

- If PARMERR=ABEND, CICS is terminated with a system dump.
- If PARMERR=IGNORE, CICS is terminated with a system dump.
- If PARMERR=INTERACT, the operator is prompted to enter another SVC number, or to bypass entry. If the operator bypasses entry, CICS is terminated with a system dump.

User response: The CICS Type 3 SVC is defined to MVS in SYS1.PARMLIB member IEASVCxx. SVC *svcno* must be defined as a Type 3 SVC with an entry point equal to the entry point name specified when the SVC module was installed into SYS1.LPALIB. Ensure that this is the case.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKEGD.

DFHKE0105 *applid* CICS INITIALIZATION IS NOT
SUPPORTED ON THIS LEVEL OF
OPERATING SYSTEM.

Explanation: The kernel has detected that the release level of the operating system is earlier than the pre-requisite release level required to run CICS.

System action: CICS will terminate. The CICS job step terminates with return code 12.

User response: Refer to the *CICS Program Directory* and install the pre-requisite operating system release level or higher.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** DFHKESIP

DFHKE0201 *applid* **ABOUT TO TAKE SDUMP.**
DUMPCODE: *dumpcode*, **DUMPID:**
dumpid. (**MODULE** *modname*).

Explanation: An error during pre-initialization or termination, possibly signalled by a previous message, has caused the kernel domain to take a dump, which will issue this message immediately before calling the MVS SDUMP facility.

The dump code *dumpcode* is the 8-character dump code 'KERNDUMP'.

The dumpid *dumpid* is the string '0/0000'.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: When the dump is complete, message number DFHKE0202 is issued.

User response: Inform the system programmer. See the associated dump and error messages for further guidance.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

DFHKE0202 *applid* **SDUMP COMPLETE.** (**MODULE** *modname*).

Explanation: This message is issued on successful completion of an SDUMP.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS will terminate.

User response: Print off the system dump if required. A previous MVS message will identify in which SYS1.DUMP data set this dump can be found.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

DFHKE0208 *applid* **SDUMP BUSY - CICS WILL
RETRY IN FIVE SECONDS.** (**MODULE**
modname).

Explanation: At the time of the MVS SDUMP request issued by CICS, another address space in the same MVS system was in the process of taking an SDUMP. This causes MVS to reject the new request. A nonzero value for the DURETRY parameter on the SIT means that CICS waits for five seconds before reissuing the SDUMP request.

System action: CICS issues an MVS STIMER macro which causes CICS to stop for five seconds. The request is reissued when the delay interval has expired. CICS delays and retries every five seconds for a total time equal to the number of seconds specified on the DURETRY system initialization parameter.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

DFHKE0209 *applid* **RETRYING SDUMP.** (**MODULE** *modname*).

Explanation: At the time of the MVS SDUMP request issued by CICS, another address space in the same MVS system was in the process of taking an SDUMP. This caused MVS to reject the new request. CICS has waited for five seconds (as indicated by message DFHKE0208) and is now reissuing the SDUMP request.

System action: CICS reissues the SDUMP request.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

DFHKE0210 *applid* **SDUMP REQUEST FAILED.**
(**MODULE** *modname*) - *reason*.

Explanation: An MVS SDUMP request from CICS signalled by message DFHKE0201 has failed to complete successfully. The possible reasons *reason* for the failure are detailed below.

**SDUMP RETURN CODE X'nn' ONLY PARTIAL
DUMP** The SYS1.DUMP data set to which the dump was written was not large enough to contain all of the dumped storage.

**SDUMP RETURN CODE X'nn' REASON X'mm'
SDUMP BUSY**

At the time of the MVS SDUMP request issued by CICS, another address space in the same MVS system was in the process of taking an SDUMP. This caused MVS to reject the new request.

If a nonzero value has been specified for the DURETRY SIT parameter, CICS will have retried the SDUMP request every five seconds for the specified period. This message is issued if SDUMP is still busy after the final retry.

**SDUMP RETURN CODE X'nn' REASON X'mm' NO
DATA SET AVAILABLE**

No data set is available for the SDUMP request.

SDUMP RETURN CODE X'nn' REASON X'mm'

MVS rejected the SDUMP request for some other reason than those listed above. X'nn' gives the hexadecimal SDUMP return code and X'mm' gives the hexadecimal SDUMP reason.

NOT AUTHORIZED IN CICS

SDUMP is not authorized for this CICS run.

INSUFFICIENT STORAGE

CICS issued an MVS GETMAIN for Subpool 253 storage during the processing of the SDUMP request. The GETMAIN was rejected by MVS.

STIMERM FAILED

In order to delay for five seconds before retrying SDUMP after an SDUMP busy condition, CICS issues an MVS STIMERM macro request. MVS has indicated that the STIMERM request has failed.

DFHDUSVC FESTAE FAILED

CICS issued an MVS FESTAE request from DFHDUSVC during the processing of the SDUMP request. The FESTAE has been rejected by MVS.

DFHDUSVC FUNCTION INVALID

CICS called DFHDUSVC during the processing of the SDUMP request. The function passed to DFHDUSVC was invalid.

During initialization, CICS does not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS proceeds as if the dump had been successful.

User response: The user response depends on the reason for the failure. For:

**SDUMP RETURN CODE X'nn' ONLY PARTIAL
DUMP** Examine the reason code that explains why

the partial dump was taken. This code is contained in the MVS message IEA911E. See the *OS/390 MVS System Messages, Volume 1* for a description of this reason code.

**SDUMP RETURN CODE X'nn' REASON X'mm'
SDUMP BUSY**

Cause the SDUMP to be reissued by increasing the DURETRY value on the SIT. See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the SDUMP return code X'nn' and reason X'mm'.

**SDUMP RETURN CODE X'nn' REASON X'mm' NO
DATA SET AVAILABLE**

Clear a SYS1.DUMP data set and then cause the SDUMP request to be reissued. See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the SDUMP return code X'nn' and reason X'mm'.

SDUMP RETURN CODE X'nn' REASON X'mm'

No action is required if the dump was suppressed deliberately. If the dump failed because of an error in the MVS SDUMP routine, use MVS problem determination methods to fix the error and then cause the SDUMP request to be reissued. See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the SDUMP return code X'nn' and reason X'mm'.

NOT AUTHORIZED IN CICS

This reason should not appear, because an SDUMP is unconditionally authorized during CICS initialization, and should be authorized throughout the CICS run. If you do get this reason, the CICS AFCB (Authorized Function Control Block) has probably been accidentally overwritten.

INSUFFICIENT STORAGE

Ensure sufficient storage is available to MVS for subpool 253 requests.

STIMERM FAILED

Use MVS problem determination methods to fix the STIMERM failure and then cause the SDUMP request to be reissued.

DFHDUSVC FESTAE FAILED

Use MVS problem determination methods to fix the FESTAE failure and then cause the SDUMP to be reissued. See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the FESTAE macro.

DFHDUSVC FUNCTION INVALID

The CICS DAFPB (dump authorized function parameter block) has probably been accidentally overwritten.

Notify the system programmer. If CICS is still running, it will be necessary to decide whether to terminate CICS.

You may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

To resolve the problem, collect any dumps and any relevant messages and contact your IBM Support Center.

Further guidance on how to prepare information for IBM support is given in the *CICS Problem Determination Guide*. If you are not familiar with this process, refer to the guide before contacting IBM support.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

DFHKE0301 *applid* **Insufficient storage to satisfy Getmain in module *modname*. MVS code *mvscode*.**

Explanation: The kernel (KE) domain has issued an MVS GETMAIN for kernel stack storage, but there was insufficient storage available to satisfy the request.

The code *mvscode* is the MVS GETMAIN return code.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates abnormally with a system dump. No exception entry is made in the trace table since a call to the trace (TR) domain would itself require kernel stack storage.

User response: Inform the system programmer.

You can get diagnostic information about the MVS return code by consulting the relevant MVS codes manual which is listed in the book list at the front of this book. Also look at the kernel domain section of the system dump to see how the kernel stack storage has been used up.

Try decreasing the size limits of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. See the *CICS System Definition Guide* or the *CICS Performance Guide* for further information on CICS storage.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKESGM

DFHKE0302 *applid* **Freemain of stack storage failed in module *modname*. MVS code *mvscode*.**

Explanation: The kernel (KE) domain has issued an MVS FREEMAIN for kernel stack storage, but a bad return code was returned.

The code *mvscode* is the MVS FREEMAIN return code.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates abnormally with a system dump. No exception entry is made in the trace table since a call to the trace (TR) domain would itself require kernel linkage.

User response: Inform the system programmer.

You can get diagnostic information about the MVS return code by consulting the *OS/390 MVS System Codes* manual.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKEDS

DFHKE0303 *applid* **A RECURSIVE ABEND HAS BEEN DETECTED BY THE KERNEL DOMAIN.**

Explanation: The kernel (KE) domain has detected that the current task is recursively abending while attempting to recover from an abend.

System action: CICS terminates abnormally with a system dump. No exception entry is written to the trace table because the trace (TR) domain may be the cause of the loop.

User response: Use the dump provided to investigate the kernel error table to diagnose the earlier abends for the failing task.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKERRI

DFHKE0401 *applid* **CICS REGISTER CALL TO AUTOMATIC RESTART MANAGER FAILED (RETURN CODES *X'resp'*, *X'reason'*).**

Explanation: An attempt to invoke a REGISTER request against the MVS automatic restart manager (ARM) failed.

The codes *resp*, *reason* are the hexadecimal response and reason codes from ARM.

System action: A system dump is taken.

CICS continues, but cannot subsequently be restarted by ARM.

User response: It is necessary to decide whether to terminate CICS.

| For problem diagnosis look up the return codes from
| the IXCARM macro in the *OS/390 MVS Sysplex Services*
| *Reference* manual.

| Further information about how to use ARM can also be
| found in *OS/390 MVS Setting Up a Sysplex*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKEAR

DFHKE0402 *applid* CICS DEREGISTER CALL TO AUTOMATIC RESTART MANAGER FAILED (RETURN CODES *X'resp'*, *X'reason'*).

Explanation: An attempt to invoke a DEREGISTER request against the MVS automatic restart manager (ARM) failed.

The codes *resp*, *reason* are the hexadecimal response and reason codes from ARM.

System action: If the request failed during startup, a dump is taken and CICS continues.

If the request failed during shutdown, an exception entry is made in the trace table, and a system dump is taken unless you have specifically suppressed dumps in the dump table. CICS continues to shut down unless you have specified in the dump table that CICS should terminate. The DEREGISTER failed so a subsequent failure of CICS or an IMMEDIATE shutdown may result in ARM restarting CICS.

| **User response:** For problem diagnosis look up the
| return codes from the IXCARM macro in the *OS/390*
| *MVS Sysplex Services Reference* manual.

| Further information about how to use ARM can also be
| found in the *MVS/ESA Setting Up a Sysplex* manual.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHKEAR

XMEOUT Parameters: *applid, X'resp', X'reason'*

DFHKE0405 *applid* CICS WAITPRED call to automatic restart manager timed out (return codes *X'resp', X'reason'*).

Explanation: A WAITPRED request against the MVS automatic restart manager (ARM) timed out.

The codes *resp, reason* are the hexadecimal response and reason codes from ARM.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. The WAITPRED request time out may result in other subsystems not being available when CICS initialization completes.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

| For problem diagnosis look up the return codes from
| the IXCARM macro in the *OS/390 MVS Sysplex Services Reference* manual.

| Further information about how to use ARM can also be
| found in the *MVS/ESA Setting Up a Sysplex* manual.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHKEAR

XMEOUT Parameters: *applid, X'resp', X'reason'*

DFHKE0406I *applid* CICS is about to wait for predecessors defined in the MVS automatic restart management policy for this region.

Explanation: CICS is about to invoke a WAITPRED request against the automatic restart manager. This may result in a delay before CICS processing continues.

System action: CICS continues.

User response: None.

Destination: Console

Modules: DFHKEAR

XMEOUT Parameter: *applid*

DFHKE0407 *applid* XRF IS INCOMPATIBLE WITH AUTOMATIC RESTART MANAGER. CICS IS TERMINATING.

Explanation: CICS has registered with the MVS automatic restart manager (ARM) after having been restarted but the restart JCL specifies XRF=YES. XRF is incompatible with ARM.

System action: CICS terminates.

User response: Ensure that the XRF=YES option in the restart JCL is correct.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKEAR

DFHKE0408D *applid* PLEASE SPECIFY START TYPE, 'ASIS' OR 'AUTO'.

Explanation:

An attempt to REGISTER with the MVS automatic restart manager (ARM) has failed when a cold or initial start has been specified in the SIT.

When the CICS region has been restarted with JCL that specifies START=COLD or START=INITIAL, CICS relies on ARM to determine whether to override the start type and change it to AUTO. As the REGISTER has failed, CICS cannot determine whether the region is being restarted by ARM, and so does not know whether to override the start type.

System action:

CICS waits until the operator supplies the START type to be used by this region.

User response: If the region is being restarted by ARM, specify AUTO. If the startup type of COLD or INITIAL in the SIT should be preserved, specify ASIS.

See the previously issued message DFHKE0401 for guidance on dealing with the underlying REGISTER failure.

Note: This message cannot be changed with the message editing utility.

Destination: Console Routecodes 1 and 11

Modules: DFHKEAR

| **DFHKE0410** *applid* CICS REGISTER CALL TO
| AUTOMATIC RESTART MANAGER
| FAILED BECAUSE THE JOB TYPE IS
| INVALID.

| **Explanation:** An attempt to invoke a REGISTER
| request against the MVS automatic restart manager
| (ARM) failed because the job type is invalid to ARM.

| CICS can only register with ARM if it is being run as a started task or a batch job.

| **System action:** CICS continues, but cannot subsequently be restarted by ARM.

| **User response:** None.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** Console

| **Modules:** DFHKEAR

DFHKE0411 *applid* CICS REGISTER CALL TO AUTOMATIC RESTART MANAGER FAILED BECAUSE MAXIMUM NUMBER OF USERS WAS REACHED.

Explanation: An attempt to invoke a REGISTER request against the MVS automatic restart manager (ARM) failed because the maximum number of ARM users allowed for in the ARM couple data set has been reached. This response is never given by ARM if ARM is restarting CICS.

System action: CICS continues, but cannot subsequently be restarted by ARM.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKEAR

| **DFHKE0412I** *applid* CICS WAITPRED call to automatic restart manager has completed.

| **Explanation:** A WAITPRED request against the MVS automatic restart manager (ARM) has completed.

| Further information about how to use ARM can also be found in the *MVS/ESA Setting Up a Sysplex* manual.

| You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Destination:** Console

| **Modules:** DFHKEAR

| **XMEOUT Parameter:** *applid*

| **DFHKE0413** *applid* CICS REGISTER CALL FAILURE IN MODULE DFHKESVC (RETURN CODE X'resp').

| **Explanation:** An attempt to invoke a REGISTER request against the MVS automatic restart manager (ARM) failed in module DFHKESVC.

| The code *resp* is the hexadecimal response from DFHKESVC and its meanings are:

- | • 08 - The requested function is not supported.
- | • 0C - The getmain for the dynamic storage failed.
- | • 10 - Unable to establish the recovery routine.
- | • 14 - The DFHAUTH CHECK failed.

| **System action:**

| CICS continues, but cannot subsequently be restarted by ARM.

| **User response:**

| It is necessary to decide whether to terminate CICS.

| Further information about how to use ARM can also be found in *OS/390 MVS Setting Up a Sysplex*.

| You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

DFHKE0414 BAD RETURN FROM MVS SERVICE CSRL16J.

Explanation: An attempt to invoke the MVS service CSRL16J (Load 16 and Jump) has returned to CICS with a non-zero return code. This service is called from the CICS Kernel 'Reset Address' function.

System action: CICS continues by deliberately executing a privileged instruction which causes a program exception with code 0C2 which leads to an ASRA abend. Register 4 has been loaded with the return code from the CSRL16J service.

User response: Inform the systems programmer.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKERET

| **DFHKE0500** *applid* MAXPROCUSER exceeded while executing 'service-routine'.

| **Explanation:** The Kernel issued a call to the *service-routine* callable service, and received a response of EMVSINITIAL with a reason code of X'0012', indicating that the number of processes for the current CICS region userid has been exceeded.

| **System action:** CICS initialization continues.

| **User response:** If this error occurs frequently, consider increasing the MAXPROCUSER value in the

| BPXPRMxx member of SYS1.PARMLIB.

| **Destination:** Console

| **Modules:** DFHKETCB

| **XMEOUT Parameters:** *applid, service-routine*

| **DFHKE0501** *applid* **The Kernel received a return value of X'rcode', a return code of X'rcode' and a return reason of X'rreason' from the *uss* service-routine.**

| **Explanation:** Unix System Services has returned a non-zero return code/reason code to a service-routine call made by the Kernel during CICS initialization.

| **System action:** CICS initialization continues since it is too early to tell whether Unix System Services will be required later in the CICS run.

| **User response:** Determine the reason for this response. The return code and reason code included in the message text should be described in the z/OS UNIX System Services Messages and Codes manual.

| **Destination:** Console

| **Modules:** DFHKETCB

| **XMEOUT Parameters:** *applid, X'rcode', X'rreason', *uss**

DFHKE0999 *applid* **MVS HAS CALLED DFHKESTX WITH NO SDWA. ABEND CODE X'code'.**

Explanation: MVS has made a call to the CICS ESTAE-type recovery routine DFHKESTX, but it supplied no system diagnostic work area (SDWA). DFHKESTX is unable to continue with the recovery.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: Module DFHKESTX produces a system dump and percolates the error to the next ESTAE routine. This is potentially a serious error. CICS continues processing pending the result of the error percolation.

User response: The abend code X'code' is the reason the CICS ESTAE was called. You need to find out which product has produced the abend. Typically it is an MVS system completion code, for example D37. However the abend may have been issued by CICS, for example abend 1596, or another product such as IMS.

Since there is little further diagnostic information in this case, look for any messages that may indicate the reason for the abend. The entry in the appropriate manual for the abend code gives user guidance regarding the error, and may also give some guidance concerning the appropriate user response.

The reason why no SDWA was passed and subsequently no recovery was attempted is probably a shortage of storage. This storage shortage may also be an influencing factor in the abend itself.

Note: This message cannot be changed with the message editing utility.

Modules: DFHKESTX

DFHKE1798 *applid* **FO TCB FORCED TO TERMINATE.**

Explanation: During an immediate shutdown of CICS the file owning TCB is detached before VSAM is able to close all data sets normally.

The detaching of this TCB can cause abends during shutdown. At CICS restart VSAM may need to perform a VERIFY for any data set that is open for update when the immediate shutdown is performed, and this can cause a long delay.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If this is the case CICS uses the default *applid* value DBDCCICS.

System action: The immediate shutdown of CICS continues.

User response: None.

If this message occurs frequently, you may wish to issue a CEMT SET FILE ALL CLOSED before immediate shutdown is performed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKESIP

DFHKE1799 *applid* **TERMINATION OF CICS IS COMPLETE.**

Explanation: This message is issued when CICS has terminated.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: Control is given back to the operating system.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKESIP

DFHKE1800 *applid* **ABNORMAL TERMINATION OF CICS IS COMPLETE.**

Explanation: CICS issues this message when it terminates abnormally.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: The abnormal termination of CICS continues. The kernel returns control to the operating system by issuing a user 1800 abend.

The original error which caused the abnormal termination may also have produced a dump. No

specific dump is produced to accompany this message.

User response: If a dump is produced, check the dump to determine the cause of the error. Use the *CICS Problem Determination Guide* to assist you to determine the problem.

If no dump is produced, check for other CICS and MVS messages and abend codes to help you to determine the cause of the problem.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHKESIP

DFHLDxxxx messages

DFHLD0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation: An unexpected program check or abend occurred with abend code *aaa/bbbb*.

The program status word (PSW) at the time of the program check or abend indicated that CICS was executing at offset *X'offset'* in module *modname*. This may have been caused by corruption of CICS code or control blocks.

System action: A system dump is taken and the system attempts to continue operation unless otherwise directed by entries in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the cause of the program check or abend using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHLDDM, DFHLDDMI, DFHLDLDD, DFHLDLDD1, DFHLDLDD2, DFHLDLDD3, DFHLDNNT, DFHLDDST

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*, *modname*

DFHLD0002 *applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation: The loader has received an unexpected error response from some other part of CICS or an operating system service. The operation requested by the loader is described by code *X'code'*.

For further information about CICS exception trace

entries, refer to the *CICS Problem Determination Guide*.

System action: A system dump is taken and the system attempts to continue operation unless specifically inhibited by dump table entries.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the cause of the problem as follows:

1. Determine if the problem can be explained by any previous messages output from some other part of CICS.
2. Examine the symptom string.
3. Examine the dump.

Destination: Console

Modules: DFHLDDM, DFHLDDMI, DFHLDLDD, DFHLDLDD1, DFHLDLDD2, DFHLDLDD3, DFHLDNNT, DFHLDDST

XMEOUT Parameters: *applid*, *X'code'*, *modname*

DFHLD0004 *applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation: CICS has detected what it believes to be a code execution loop. At the time execution was interrupted, the program status word (PSW) indicated the next instruction address would have been at offset *X'offset'* in module *modname*.

System action: CICS is terminated with a system dump unless dump table options specifically prevent this.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the existence of a previous error situation which may have led to corruption of CICS control blocks or to the non-completion of an expected event. If there is no evidence of a previous error, you will need further assistance from IBM to

resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHLDDDM, DFHLDDMI, DFHLDDL, DFHLDDL1, DFHLDDL2, DFHLDDL3, DFHLDNT, DFHLDST

XMEOUT Parameters: *applid, X'offset', modname*

DFHLD0101I *applid* CICS nucleus module *modname* not found.

Explanation: The CICS loader (LD) was unable to locate a copy of module *modname* in either the link pack area (LPA) in or the DFHRPL library concatenation.

System action: A system dump is taken and CICS execution continues unless specifically inhibited by a dump table entry.

User response: This message is followed by one or more messages informing the user of reduced function availability due to the missing module *modname*.

Ensure that there is a copy of module *modname* in the LPA and/or in a library within the DFHRPL concatenation.

If module was expected to be in the LPA, ensure CICS is utilizing LPA resident modules by specifying LPA=YES as a start up override.

Destination: Console

Modules: DFHLDDMI

XMEOUT Parameters: *applid, modname*

DFHLD0102 *applid* Unable to declare gate *ff* for module *modname*.

Explanation: As part of its initialization, the CICS loader has attempted to define domain gate *ff* for module *modname*, but has received a bad response.

System action: A system dump is taken and CICS execution continues unless specifically inhibited by a dump table entry.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This message diagnoses an internal error within CICS. Investigate whether previous errors have left CICS in a damaged state. If there is no evidence of previous serious errors, you will need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHLDDMI

XMEOUT Parameters: *applid, ff, modname*

DFHLD0103I *applid* Module Storage Compression OFF. All modules are USAGE=TRANSIENT.

Explanation: This message is normally preceded by either message DFHLD0101 or DFHLD0102 and indicates that the loader (LD) domain was unable to initialize its dynamic program storage compression facility.

System action: CICS execution continues but all nonresident application programs are treated as if they had been defined with the USAGE=TRANSIENT option. Therefore they are removed from storage the moment their use count reaches zero.

For some functions, this can lead to a performance degradation as programs may be loaded many times during the life of a transaction instead of only once.

User response: Investigate the reasons for the previous problem concerning module DFHLDNT as diagnosed by either message DFHLD0101 or DFHLD0102.

Destination: Console

Modules: DFHLDDMI

XMEOUT Parameter: *applid*

DFHLD0104I *applid* Module Statistics are not being collected.

Explanation: This message is normally preceded by either message DFHLD0101 or DFHLD0102 and indicates that the loader (LD) domain was unable to initialize its statistics collection module.

System action: CICS execution continues but no module statistics will be collected.

User response: Investigate the reasons for the previous problem concerning module DFHLDST as diagnosed by either message DFHLD0101 or DFHLD0102.

Destination: Console

Modules: DFHLDDMI

XMEOUT Parameter: *applid*

DFHLD0105 *applid* Restart of Loader Option Block (LOB) failed. System defaults in use.

Explanation: The initialization of the CICS loader has detected one or more invalid parameters in the loader option block (LOB) recovered from the local catalog.

This may indicate that corruption of the local catalog has occurred.

System action: A system dump is taken and CICS execution continues unless specifically inhibited by a dump table option.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the possibility of corruption of the local catalog. If you suspect that the local catalog is corrupt, reinitialize it and resubmit the CICS job.

Destination: Console

Modules: DFHLDDDM

XMEOUT Parameter: *applid*

DFHLD0106 *applid* Bad response X'resp' returned on an OPEN of DFHRPL.

Explanation: The CICS loader has attempted to open the DFHRPL library concatenation during initialization and has received the response code *resp*.

System action: CICS execution continues although only link pack area (LPA) resident modules are accessible.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Ensure the DFHRPL concatenation is correctly specified in the JCL and that the libraries specified in it are operational. The response code returned may be interpreted as for a BSAM open request.

Destination: Console

Modules: DFHLDDDM

XMEOUT Parameters: *applid, X'resp'*

DFHLD0107I *applid modname1* is unable to locate module *modname2* in the LPA. DFHRPL version of module will be used.

Explanation: The user has specified the system initialization parameter LPA=YES. Module *modname2* is either defined as USELPACOPY=YES via RDO or is a CICS PCLASS=SYSTEM module. CICS has been unable to find *module2* in the link pack area (LPA).

System action: CICS execution continues with an attempt to locate module *modname2* in the CICS program library DFHRPL.

User response: carry out one of the following:

- Load module *modname2* into the LPA, if this is required and the module is LPA eligible (refer to the *CICS Transaction Server for z/OS Installation Guide* for LPA eligibility of CICS modules).
- Code PRVMOD=*modname2* as a SIT option which ensures that CICS will not search the LPA for that module.
- Code LPA=NO as a system initialization parameter. This ensures that CICS does not search the LPA for any module.

- Inhibit this message from all or selected consoles using the MVS VARY command. For more information on how to do this, refer to the *CICS Transaction Server for z/OS Installation Guide*.

Destination: Console Routecode 11

Modules: DFHLDDMI, DFHLDLDD1

XMEOUT Parameters: *applid, modname1, modname2*

DFHLD0108I *applid* The maximum of 32767 entries that CICS allows on a BLDL has been exceeded.

| **Explanation:** During a warm or emergency restart, the loader domain has detected more than 32767 modules eligible for BLDL.

| **System action:** A BLDL macro call is issued to locate the first 32767 modules and the rest are ignored. CICS initialization continues normally.

| This is not a problem because CICS attempts to locate those modules not located during initialization when the module is first used.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHLDDMI

| **XMEOUT Parameter:** *applid*

DFHLD0201 *applid* Corrupt Loader load structure detected at X'*address*'. Module marked as unavailable.

Explanation: During the execution of a CICS loader request, the loader detected an invalid field in the control block type *tttt* at storage address *address*.

System action: A system dump is taken and execution continues unless specifically inhibited by a dump table option.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the possibility of corruption of CICS modules or control blocks or the local or global catalogs.

Destination: Console

Modules: DFHLDLDD1

XMEOUT Parameters: *applid, load,X'address'*

DFHLD0202 *applid* Loader SVC *svc* request failed due to shortage of free storage in the region.

Explanation: The loader domain has issued a request to its CICS SVC service routine, DFHLDSVC, but the execution of this request failed due to a lack of free storage in the MVS region. The type of request is indicated by *svc*.

System action: A system dump will be taken unless specifically suppressed through a dump table entry and the system will continue execution. The task requesting loader services will be abnormally terminated with abend code APCT, or a PGMIDERR condition will be raised.

User response: Ensure there is adequate free storage in the MVS region by balancing the overall size limits of the DSAs or EDSAs with the size of the MVS region specified by the REGION parameter on the job card of the CICS job JCL.

Destination: Console

Modules: DFHLDL1

XMEOUT Parameters: *applid, svc*

DFHLD0203 *applid* Loader SVC *svc* request failed due to I/O errors on library DFHRPL.

Explanation: The loader domain has issued a request to its CICS SVC service routine, DFHLDSVC, but the execution of this request failed due to I/O errors on the relocatable library, DFHRPL. The type of request is indicated by *svc*.

System action: A system dump is taken unless specifically suppressed through a dump table entry and the system continues execution. The task requesting loader services is abnormally terminated with abend code APCT, or a PGMIDERR condition is raised.

User response: Investigate the possible causes of the I/O errors encountered. The MVS system console log may contain more information about the problem in the form of access method or I/O subsystem messages. The loader domain exception trace entries, from the full

trace, in the system dump normally identify the module or modules for which the I/O error occurred.

A possible cause of this problem is the compression of a partition data set (PDS) within the DFHRPL concatenation.

Destination: Console

Modules: DFHLDL1

XMEOUT Parameters: *applid, svc*

DFHLD0204 *applid* Bad Loader PDB for module *modname* recovered from the {Local | Global} catalog. Corruption suspected.

Explanation: The loader definition record, PDB, for module *modname* has been read from either the local (DFHLCD) or the global (DFHGCD) catalog during startup and has been found to contain invalid data.

System action: System initialization terminates with a system dump, unless the dump is specifically suppressed. If the system dump is suppressed, the module definition is ignored.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Ensure the specified catalog data set has not been corrupted and is available to the CICS job.

Destination: Console

Modules: DFHLDDMI, DFHLDL1

XMEOUT Parameters: *applid, modname, {1=Local, 2=Global}*

DFHLGxxxx messages

DFHLG0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue and bring

CICS down at a convenient time to resolve the problem.

If you cannot continue without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHLGDM, DFHLGGL, DFHLGLD, DFHLGJN, DFHLGST DFHL2HS2, DFHL2HS3, DFHL2HS4, DFHL2HS5, DFHL2HS6, DFHL2HS7, DFHL2HS8, DFHL2HS9, DFHL2HSF, DFHL2HSG, DFHL2HSJ

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHLG0002 *applid* **A severe error (code X'code')** has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code X'code' is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code X'code' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot continue without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHLGDM, DFHLGGL, DFHLGLD, DFHLGJN, DFHLGST

XMEOUT Parameters: *applid, X'code', modname*

DFHLG0004 *applid* **A possible loop has been detected at offset X'offset' in module modname.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'offset'. This is the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* in the message is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently, but you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHLGLB

XMEOUT Parameters: *applid, X'offset', modname*

DFHLG0101I *applid* **Log manager domain initialization has started.**

Explanation: This is an informational message indicating the start of log manager domain initialization.

System action: Initialization continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Modules: DFHLGDM

XMEOUT Parameter: *applid*

DFHLG0102I *applid* **Log manager domain initialization has ended.**

Explanation: This is an informational message indicating the end of log manager domain initialization.

System action: Initialization continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Modules: DFHLGDM

XMEOUT Parameter: *applid*

DFHLG0103I *applid* **System log (*journalname*) initialization has started.**

Explanation: This is an informational message indicating the start of system log initialization for the specified journal (either DFHLOG or DFHSHUNT).

System action: Initialization continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Modules: DFHL2SLN

XMEOUT Parameters: *applid, journalname*

DFHLG0104I *applid* **System log (*journalname*) initialization has ended. Log stream *logstreamname* is connected to structure *structurename*.**

Explanation: This is an informational message indicating the end of system log initialization for the specified journal (either DFHLOG or DFHSHUNT).

| The name shown as
| LOGSTREAMNAME(logstreamname) in the message is
| the name of the log stream associated with this journal.
| A value of '*****' implies that it is a
| dummy log.

| The name shown as STRUCTNAME(structname) in the

| message is the structure name of the log stream
| associated with this journal. A value of '*****'
| implies that it has no related structure, which means
| that either the log stream is a dummy log or of type
| DASDONLY(YES).

System action: Initialization continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Modules: DFHL2SLN

XMEOUT Parameters: *applid, journalname, logstreamname, structurename*

DFHLG0191 *subsys-name* {*CONVERTER* | *ALLOCATION*} **VERIFICATION HAS FAILED BECAUSE OF A {*SEVERE ERROR* | *SYNTAX ERROR* | *MUTUAL EXCLUSION FAILURE*}**

Explanation: A parse error was encountered while CICS was verifying the SUBSYS options of the application's JCL DD statement.

The message includes the following inserts:

- *subsys_name* - the installation defined subsystem name for the system logger.
- *CONVERTER* - the error was detected during MVS JCL conversion.
- *ALLOCATION* - the error was detected during MVS allocation processing.
- *SEVERE ERROR* - the parser encountered a severe error during its processing.
- *SYNTAX ERROR* - the statement failed the syntax check. MVS message ASA104I is issued specifying the keyword in error and acceptable keywords.
- *MUTUAL EXCLUSION FAILURE* - the parser encountered mutually exclusive keywords. MVS message ASA103I is issued specifying the keywords in error.

System action: If the error was detected during MVS JCL conversion, the job is not executed because of the JCL error.

If the error was detected during MVS allocation processing, the allocation request is rejected.

User response: Correct the SUBSYS= specification and resubmit the job.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHLGIPI, DFHLGIMS

DFHLG0192 ERROR IN MVS LOGGER MACRO
macro_name FOR REQUEST *request_type*.
MVS LOGGER CODES X'X'return-code'
X'X'reason-code''

Explanation: The CICS subsystem exit made a call to the MVS logger to access a log. This message gives the return code and reason code for that operation. Usually this message is issued only when the return code indicates an error in the MVS logger macro.

The message includes the following inserts:

- *macro_name* MVS logger macro
- *request_type* MVS logger macro REQUEST parameter
- *return-code* MVS logger macro return code
- *reason-code* MVS logger macro reason code.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: The subsystem exit terminates the logstream read, and passes a return code back to the caller.

This message is followed by message DFHLG0193 which specifies the logstream. In some cases a dump is also produced.

User response: Use the MVS logger return and reason codes to diagnose the problem. If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHLGSSI, DFHLGIGT

DFHLG0193 *log-stream-name*

Explanation: This message gives the logstream referred to in the preceding DFHLG0192 message.

System action: See message DFHLG0192.

User response: See message DFHLG0192.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHLGSSI, DFHLGIGT

DFHLG0194 ERROR DETECTED BY CICS
SUBSYSTEM. *error-description* X'data1'
X'data2' X'data3'

Explanation: The CICS subsystem exit detected an unexpected error. The error is described by the *error-description* and optional hex data fields.

In some cases a dump is also produced.

System action: The subsystem exit terminates the logstream read, and passes a return code back to the caller. If DELETE was specified as an option on the SUBSYS keyword then it will be ignored.

User response: Use the *error-description* to identify the cause of the error. A possible cause is an invalid logstream or invalid entries within a valid logstream; the CICS logger and DFHJUP work only with CICS logstreams containing CICS records for the appropriate release.

If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHLGSSI, DFHLGIGT

DFHLG0301 *date time applid* **An error has been detected for log stream *stream* for journal name *journalname*. The journal status has been set to FAILED.**

Explanation: An error has been detected for log stream *stream* which is used by journal *journalname*.

System action: An exception entry is made in the trace table.

CICS marks the journal as failed and ends the associated connection with the log stream. Applications which attempt to use the journal receive an IOERROR response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

See the associated messages issued by CICS or the MVS system logger for more information and for guidance about appropriate recovery actions.

If journal *journalname* is not crucial to the running of your CICS system, you may decide to continue.

If the problem with the log stream can be resolved, use of the journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces.

If you cannot continue without the full use of journal *journalname* you should bring CICS down in a controlled shutdown.

Destination: CSMT

Modules: DFHLGJN

XMEOUT Parameters: *date, time,applid, stream, journalname*

DFHLG0302 *date time applid* **Journal name** *journalname* **has been installed. Journal type:** {MVS | SMF | DUMMY}*stream*.

Explanation: Journal name *journalname* has been installed and is available for use. The type of journal, and for type MVS only, the log stream name *stream* are also shown.

System action: An event entry is made in the trace table.

User response: None

Destination: CRDI

Modules: DFHLGJN

XMEOUT Parameters: *date, time,applid, journalname, {1=MVS ,2=SMF, 3=DUMMY}, stream*

DFHLG0303 *date time applid* **An error has been detected while connecting to log stream** *stream* **for journal name** *journalname*. **The journal status has been set to FAILED.**

Explanation: An error has been detected connecting to log stream *stream* which is used by journal *journalname*.

System action: An exception entry is made in the trace table.

CICS marks the journal as failed. Applications which attempt to use the journal receive an IOERROR response and may terminate abnormally.

User response: Notify the system programmer.

See the associated messages issued by CICS or the MVS system logger for more information and for guidance about appropriate recovery actions.

If CICS is still running, it is necessary to decide whether to terminate CICS.

If journal *journalname* is not crucial to the running of your CICS system, you may decide to continue.

If the problem with the log stream can be resolved, use of the journal can be restored by issuing the CEMT or EXEC CICS command SET

JOURNALNAME(*journalname*) ACTION(RESET).

If you cannot continue without the full use of journal *journalname* you should bring CICS down in a controlled shutdown.

Destination: CSMT

Modules: DFHLGJN

XMEOUT Parameters: *date, time,applid, stream, journalname*

DFHLG0304 *date time applid* **An error has been detected writing the catalog entry for journal name** *journalname*.

Explanation: An error has been detected writing the global catalog entry for journal *journalname*.

System action: An exception entry is made in the trace table.

The new journal entry is used for this CICS run but does not persist over a CICS restart

User response: Notify the system programmer.

See the associated CICS messages for more information, and for guidance about appropriate recovery actions.

If you cannot continue without the full use of journal *journalname*, you should bring CICS down in a controlled shutdown.

Destination: CSMT

Modules: DFHLGJN

XMEOUT Parameters: *date, time,applid, journalname*

DFHLG0305 *date time applid* **An error has been detected deleting the catalog entry for journal name** *journalname*.

Explanation: An error has been detected deleting the global catalog entry for journal *journalname*.

System action: An exception entry is made in the trace table.

The old journal entry could not be discarded and may reappear after a CICS restart

User response: Notify the system programmer.

See the associated CICS messages for more information and for guidance about appropriate recovery actions.

If you cannot continue without the full use of journal *journalname*, you should bring CICS down in a controlled shutdown.

Destination: CSMT

Modules: DFHLGJN

XMEOUT Parameters: *date, time,applid, journalname*

DFHLG0306 *date time applid* **Journal name** *journalname* **has been discarded.**

Explanation: Journal name *journalname* has been discarded and is no longer available for use.

Future attempts to use the journal name will cause it to be reinstalled using the journal model definitions active at that time.

System action: An event entry is made in the trace table.

User response: None.

Destination: CRDI

Modules: DFHLGJN

XMEOUT Parameters: *date, time,applid, journalname*

DFHLG0401 *date time applid* **Journal model resource *journalmodel* has been installed.**

Explanation: The journal model resource entry *journalmodel* has been installed and is available for use.

System action: An event entry is made in the trace table.

User response: None.

Destination: CRDI

Modules: DFHLGLD

XMEOUT Parameters: *date, time,applid, journalmodel*

DFHLG0402 *date time applid* **An error has been detected writing the catalog entry for journal model *journalmodel*.**

Explanation: An error has been detected writing the global catalog entry for journal model *journalmodel*.

System action: An exception entry is made in the trace table.

The new journal model entry is used for this CICS run but does not persist over a CICS restart

User response: Notify the system programmer.

See the associated CICS messages for more information and for guidance about appropriate recovery actions.

If you cannot continue without the full use of journal model *journalmodel* you should bring CICS down in a controlled shutdown.

Destination: CSMT

Modules: DFHLGLD

XMEOUT Parameters: *date, time,applid, journalmodel*

DFHLG0403 *date time applid* **An error has been detected deleting the catalog entry for journal model *journalmodel*.**

Explanation: The deletion of the global catalog entry for journal model *journalmodel* has failed.

System action: An exception entry is made in the trace table.

The old journal model entry could not be deleted and may reappear after a CICS restart

User response: Notify the system programmer.

See the associated CICS messages for more information and for guidance about appropriate recovery actions.

If you cannot continue without the full use of journal

model *journalmodel* you should bring CICS down in controlled shutdown.

Destination: CSMT

Modules: DFHLGJN

XMEOUT Parameters: *date, time,applid, journalmodel*

DFHLG0404 *date time applid* **Journal model resource *journalmodel1* has been replaced by *journalmodel2*.**

Explanation: A journal model resource entry has been replaced because journal model *journalmodel2* has the same journal name template as *journalmodel1*.

System action: An event entry is made in the trace table.

User response: None.

Destination: CRDI

Modules: DFHLGLD

XMEOUT Parameters: *date, time,applid, journalmodel1, journalmodel2*

DFHLG0405 *date time applid* **Journal model *journalmodel* has been discarded.**

Explanation: Journal model *journalmodel* has been discarded and is no longer available for use.

System action: An event entry is made in the trace table.

User response: None.

Destination: CRDI

Modules: DFHLGLD

XMEOUT Parameters: *date, time,applid, journalmodel*

DFHLG0501 *date time applid* **Log stream definition for *stream* suppressed by XLGSTRM user exit.**

Explanation: MVS log stream *stream* does not exist but could not be defined because the XLGSTRM user exit suppressed automatic installation.

System action: An exception entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications attempting to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Define the log stream directly to the MVS system logger.

If stream *stream* is not crucial to the running of your

CICS system, you may decide to continue.

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CRDI

Modules: DFHLGST

XMEOUT Parameters: *date, time,applid, stream*

DFHLG0502 *date time applid* **Log stream *stream* defined to MVS using model stream *model*.**

Explanation: MVS log stream *stream* did not exist and has been successfully defined to the MVS system logger using the attributes of model log stream *model*.

System action: An event entry is made in the trace table.

CICS connects and uses the newly defined log stream.

User response: None.

Destination: CRDI

Modules: DFHLGST

XMEOUT Parameters: *date, time,applid, stream, model*

DFHLG0503 *date time applid* **Log stream *stream*, using model stream *model*, not defined to MVS for reason *X'rc'*/*X'reason'*.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* for reason *X'rc'*/*X'reason'*.

X'rc' is the return code from the IXGINVNT macro and *X'reason'* is the reason code returned by the IXGINVNT macro. These are described in the *OS/390 MVS Programming: Assembler Services Reference* and in the IXGCON macro.

System action: An event entry is made in the trace table. The trace entry contains additional diagnostic information from the system logger answer area (IXGANSAA).

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If

CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream* you should bring CICS down in a controlled shutdown. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSMT

Modules: DFHLGST

XMEOUT Parameters: *date, time,applid, stream, model, X'rc', X'reason'*

DFHLG0504 *date time applid* **Log stream *stream* using model stream *model* not defined to MVS due to insufficient authority.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because of insufficient authority.

To define a log stream CICS requires the following authority:

- ALTER authority to *stream* in the LOGSTRM class,
- UPDATE authority to *model* in the LOGSTRM class,
- UPDATE authority to resource IXLSTR.structure_name in the FACILITY class if the XLGSTRM exit supplies a structure name.

System action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream* you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CSMT

Modules: DFHLGST

XMEOUT Parameters: *date, time,applid, stream, model*

DFHLG0505 *date time applid* **Log stream *stream* using model stream *model* not defined to MVS because of an invalid HLQ parameter.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because of an invalid high level qualifier (HLQ) parameter.

The HLQ parameter specifies the high level qualifier to be used for log stream data sets.

System action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Correct the HLQ parameter in the *model* logger definition or the XLGSTRM exit, or both.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CSMT

Modules: DFHLGST

XMEOUT Parameters: *date, time,applid, stream, model*

DFHLG0506 *date time applid* **Log stream *stream* using model stream *model* not defined to MVS because of insufficient LOGR couple data set space.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because of insufficient space in the MVS system logger's LOGR couple data set.

System action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Redefine the MVS system logger's LOGR couple data set to contain space for this log stream and for future requirements.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CSMT

Modules: DFHLGST

XMEOUT Parameters: *date, time,applid, stream, model*

DFHLG0507 *date time applid* **Log stream *stream* using model stream *model* not defined to MVS. Maximum number of streams reached.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because the maximum number of log streams for the coupling facility structure has been reached.

The maximum number of streams per structure is specified in the LOGSNUM parameter when defining a structure to the MVS system logger.

System action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Change the STRUCTNAME parameter in the *model* logger definition or the XLGSTRM exit to point to a structure that has room for more streams or delete unneeded streams from the current structure.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, you can restore the use of an associated journal by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CSMT

Modules: DFHLGST

XMEOUT Parameters: *date, time,applid, stream, model*

DFHLG0508 *date time applid* **Log stream *stream* not defined to MVS because model stream *model* does not exist.**

Explanation: MVS log stream *stream* could not be defined to the MVS system logger because the model log stream *model* does not exist.

System action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU). or you can define the *model* log stream to the MVS logger if there are likely to be more log streams to be defined using the same model.

If the problem with the log stream can be resolved, you can restore the use of an associated journal by issuing

SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream* you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CSMT

Modules: DFHLGST

XMEOUT Parameters: *date, time,applid, stream, model*

DFHLG0509 *date time applid* **Log stream *stream* using model stream *model* not defined to MVS because of an invalid structure name.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because of an invalid coupling facility structure name.

System action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Correct the STRUCTNAME parameter in the *model* logger definition or the XLGSTRM exit, or both.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, you can restore the use of an associated journal by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream* you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CSMT

Modules: DFHLGST

XMEOUT Parameters: *date, time,applid, stream, model*

DFHLG0510 *date time applid* **Log stream *stream* using model stream *model* not defined to MVS because of an invalid stream name.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because *stream* is an invalid stream name.

System action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Correct the JOURNALMODEL definition used to create the stream name and DISCARD any JOURNAL definitions which refer to the stream name or, if the stream is a VSAM forward recovery log stream, correct the stream name in the VSAM data set's catalog entry.

If the problem with the log stream can be resolved, you can restore the use of an associated journal by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream* you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CSMT

Modules: DFHLGST

XMEOUT Parameters: *date, time,applid, stream, model*

DFHLG0511 *date time applid* **Log stream *stream* using model stream *model* not defined to MVS because STRUCTNAME parameter missing in model.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because the model log stream definition does not contain the required STRUCTNAME parameter.

System action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If

CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Redefine the model log stream in the MVS system logger's LOGR couple data set using the IXCMIAPU utility ensuring the model stream definition contains the STRUCTNAME(*structure_name*) parameter to indicate which coupling facility structure is to be used for the log stream. Alternatively you can use the CICS exit, XLGSTRM, to supply the structure name to the MVS system logger.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Destination: Console and Transient Data Queue CSMT

Modules: DFHLGST

XMEOUT Parameters: *date, time,applid, stream, model*

DFHLG0512 *date time applid* **Log stream *stream* cannot be used as both a system log and a general log.**

Explanation: MVS log stream *stream* cannot be used as both a system log and as a general log.

It is likely that a JOURNALMODEL resource definition has resulted in the same log stream name for a user journal as for the system log journal names (DFHLOG and DFHSHUNT).

Alternatively a system log stream name may have been specified in the ICF catalog as the forward recovery log stream for a VSAM data set.

System action: CICS cannot connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Review and correct your installed Journalmodels to ensure that the the same log stream is not used for system logs (DFHLOG and DFHSHUNT) as for other

journals. Use the CEMT DISCARD JOURNALNAME() command to remove any journals that have been installed with the incorrect stream name.

Note: If you change the Journalmodel definitions which apply to DFHLOG and DFHSHUNT, you will need to perform an initial start.

If the ICF catalog specifies the wrong stream name, use the IDCAMS ALTER command to correct it.

Destination: CSMT

Modules: DFHLGST

XMEOUT Parameters: *date, time,applid, stream*

DFHLG0513 *date time applid* **Log stream *stream* has failed and new connections cannot be accepted.**

Explanation: MVS log stream *stream* has been marked as failed by a previous error. The stream cannot be used again until all current users of the stream have disconnected and the problem that caused the failure has been resolved.

System action: CICS cannot connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

CICS continues with attempting to quiesce usage of the log stream and will disconnect from the log stream.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

CICS should automatically quiesce usage of the log stream but if CEMT INQUIRE STREAM(*stream*) shows continued use of the log stream, you should investigate whether there are any long running transactions that are preventing the closure of files which use the log stream as a forward recovery log or autojournal.

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing the command SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Destination: CSMT

Modules: DFHLGST

XMEOUT Parameters: *date, time,applid, stream*

DFHLG0514 *date time applid* **Log stream *stream* is in use by another CICS system.**

Explanation: MVS log stream *stream* is in use by another CICS region.

General log streams can be shared between CICS regions but each CICS region must have unique system log streams.

One of the following may have occurred:

- You are running two copies of the CICS region (same APPLID)
- A JOURNALMODEL resource definition has resulted in the same log stream name for a system log as for the system log journal names (DFHLOG and DFHSHUNT) for another CICS region.
- A JOURNALMODEL resource definition has resulted in the same log stream name for a user journal as for the system log journal names (DFHLOG and DFHSHUNT).
- A system log stream name may have been specified in the ICF catalog as the forward recovery log stream for a VSAM data set.

System action: CICS cannot connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Use the MVS console command DISPLAY GRS,RES=(DFHSTRM,*stream*) to find which other CICS region or regions are using the log stream,

Review and correct your installed Journalmodels to ensure that the the same log stream is not used for system logs (DFHLOG and DFHSHUNT as for other journals. Use the command CEMT DISCARD JOURNALNAME() to remove any journals that have been installed with the incorrect stream name.

Note: If you change the Journalmodel definitions which apply to DFHLOG and DFHSHUNT, you will need to perform an initial start.

If the ICF catalog specifies the wrong stream name, use the IDCAMS ALTER command to correct it.

Destination: Console and Transient Data Queue CSMT

Modules: DFHLGST

XMEOUT Parameters: *date, time,applid, stream*

DFHLG0730 *applid* **A severe error (code X'code')** has occurred while opening the system log (*journalname*). CICS will be terminated.

Explanation: The CICS log manager has detected a severe error while opening the primary or secondary system log. The nature of the error is indicated by a previous CICS message. The code *code* is the exception trace point ID which uniquely identifies the place where the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken and CICS is terminated immediately. CICS cannot tolerate a failure of this nature for the system log.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Using the previous message as a guide, correct the problem and restart CICS, ensuring that the appropriate SIT START parameter is specified in order to maintain data integrity.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHL2SLN

XMEOUT Parameters: *applid, X'code', journalname*

DFHLG0731 *applid* **A failure has occurred while opening the system log (*journalname*).** CICS will be terminated.

Explanation: The CICS log manager has detected a failure while opening the primary or secondary system log. The nature of the failure is indicated by a previous CICS message.

System action: An exception entry is made in the trace table, and CICS is terminated immediately. CICS cannot tolerate a failure of this nature for the system log.

User response: Using the previous message as a guide, correct the problem and restart CICS, ensuring that the appropriate SIT START parameter is specified in order to maintain data integrity.

If you cannot resolve the problem, or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHL2SLN

XMEOUT Parameters: *applid, journalname*

DFHLG0733 *applid* **A log stream type of SMF has been requested for the system log (*journalname*).** This is not allowed.

Explanation: A log stream type of SMF has been specified on the JOURNALMODEL definition for either the primary or secondary system log. JOURNALMODEL definitions for the system log must have a log stream type of either MVS or DUMMY.

System action: An exception entry is made in the trace table and CICS is terminated. CICS can not operate with an SMF system log.

User response: Change the JOURNALMODEL definition so that a log stream type of either MVS or DUMMY is specified.

Destination: Console

Modules: DFHL2SLN

XMEOUT Parameters: *applid, journalname*

DFHLG0734 *applid* **A severe error (code X'code')** has occurred while accessing the CICS system log. CICS will be terminated.

Explanation: The CICS log manager has detected a severe error while writing to or reading from the primary or secondary system log. The nature of the error is indicated by a previous CICS message. The code *code* is the exception trace point ID which uniquely identifies the place where the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken and CICS is terminated immediately. CICS cannot tolerate a failure of this nature for the system log.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Using the previous message as a guide, correct the problem and restart CICS, specifying the SIT START parameter as AUTO.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHL2SLE

XMEOUT Parameters: *applid, X'code'*

DFHLG0735 *applid* **A failure has occurred while {writing to | reading from} the system log (*journalname*).** Access to the system log has been lost. CICS will be terminated.

Explanation: The CICS log manager has detected a failure while writing to or reading from the system log. The nature of the failure is indicated by a previous

CICS message, and implies that data on the log has not been lost.

System action: An exception entry is made in the trace table, and CICS is terminated immediately. CICS cannot tolerate a failure of this nature for the system log.

User response: Using the previous message as a guide, correct the problem and restart CICS, ensuring that the appropriate SIT START parameter is specified in order to maintain data integrity.

If you cannot resolve the problem, or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHL2SLE

XMEOUT Parameters: *applid*, {1=writing to, 2=reading from}, *journalname*

DFHLG0736 *applid* A failure has occurred while reading from the system log (*journalname*). The requested data could not be found. CICS will be quiesced allowing some tasks to complete. Further work requires an initial start.

Explanation: The CICS log manager is unable to locate previously hardened data when reading from the system log during the dynamic backout of a task. This implies that data on the system log has been lost. The integrity of the system log is therefore suspect.

System action: No more blocks are written to the system log. CICS is quiesced via a normal shutdown to let as many tasks complete as possible. Any tasks that enter dynamic backout from this point onwards are suspended. If the next CICS start is not an initial start, CICS will terminate before allowing user processing to begin because system log data may have been lost.

User response: Transactions that failed to complete before shutdown will need to be recovered by other means before starting CICS again.

You may need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHL2SLE

XMEOUT Parameters: *applid*, *journalname*

DFHLG0737 *applid* A failure has occurred while writing to the system log (*journalname*). A log record was longer than the maximum block size for the MVS log stream. CICS will be terminated.

Explanation: The CICS log manager has detected a failure while writing to the system log. An attempt was made to write a log record longer than the maximum block size allowed for the MVS log stream. The size mismatch is indicated by a previous DFHLG0742 message written to the CSMT TD destination.

System action: An exception entry is made in the trace table, and CICS is terminated immediately. CICS cannot tolerate a failure of this nature for the system log.

User response: Using the DFHLG0742 message as a guide, define a larger block size for the MVS log stream structure that the system log will use. Then restart CICS, ensuring that the appropriate SIT START parameter is specified in order to maintain data integrity.

Destination: Console

Modules: DFHL2SLE

XMEOUT Parameters: *applid*, *journalname*

DFHLG0738 *applid* A failure has occurred while reading the system log (*journalname*). The requested data could not be found. CICS will be terminated. Further work requires an initial start.

Explanation: The CICS log manager is unable to locate previously hardened data when reading from the system log during a restart of CICS. This implies that data on the system log has been lost. The integrity of the system log is therefore suspect.

System action: No blocks are written to the system log. CICS restart is abandoned. If the next CICS start is not an initial start, CICS will terminate before allowing user processing to begin because system log data may have been lost.

User response: Incomplete transactions will need to be recovered by other means before starting CICS again.

You may need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHL2SLE

XMEOUT Parameters: *applid*, *journalname*

DFHLG0739 *applid* An attempt to start transaction CSQC to perform a normal shutdown of CICS has failed. Perform a normal shutdown of CICS manually.

Explanation: The CICS log manager attempted to start transaction CSQC to quiesce CICS via a normal shutdown but the attempt was unsuccessful. CICS was being quiesced because the integrity of the system log is suspect.

System action: An exception entry is made in the trace table, and a system dump is taken. CICS continues processing but any tasks that enter dynamic backout are suspended indefinitely and remain inflight.

User response: Issue CEMT PERFORM SHUTDOWN to quiesce CICS via a normal shutdown. This lets as many transactions complete as possible. Refer to the explanations for messages DFHLG0736 and DFHLG0740.

Also attempt to establish why transaction CSQC failed to start, and correct the problem. If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHL2SLE

XMEOUT Parameter: *applid*

DFHLG0740 *applid* While writing data to the system log (*journalname*), a lost data warning was received. CICS will be quiesced without logging, allowing tasks to complete. Further work requires an initial start.

Explanation: The CICS log manager received a lost data warning when writing to the system log. This means that one or more blocks of previously hardened data have been lost from the system log. The integrity of the system log is therefore suspect.

System action: No more blocks are written to the system log. CICS is quiesced via a normal shutdown to let as many tasks complete as possible. Any tasks that enter dynamic backout from this point onwards are suspended. If the next CICS start is not an initial start CICS will terminate before allowing user processing to begin because system log data may have been lost.

User response: Transactions that failed to complete before shutdown will need to be recovered by other means before starting CICS again.

You may need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHL2SLE

XMEOUT Parameters: *applid, journalname*

DFHLG0741 *applid* A failure to read data from the system log during dynamic backout has caused task *tasknum* to be suspended indefinitely. *Tranid tranid, termid termid*.

Explanation: Task *tasknum* with *tranid tranid* running at *termid termid* has been suspended indefinitely. Data required during dynamic backout could not be located on the system log. This message is preceded by message DFHLG0736.

System action: The task is suspended. CICS in the process of quiescing via a normal shutdown.

User response: Refer to the message explanation for message DFHLG0736.

Destination: Console

Modules: DFHL2SLE

XMEOUT Parameters: *applid, tasknum, tranid, termid*

DFHLG0742 *date time applid* Log record too long for block. Record size *rsize bytes*. Block size *bsize bytes*. {MVS log stream | SMF journal name}.

Explanation: The CICS log manager has detected an attempt to write a log record to an MVS logger log stream or SMF journal where the log record is too long to fit in the maximum block size allowed.

The message indicates the size of the log record and the maximum size of a block for that log stream. The size of the log record includes a CICS record header (up to 200 bytes for system log, 56 bytes otherwise) and any user prefix data. There must also be enough room in the block for a CICS block header (158 bytes for SMF, 52 bytes for system log, 40 bytes otherwise).

System action: An exception entry is made in the trace table. If the log stream is part of the CICS system log and the log record was not written by a user application or exit program then CICS is terminated. Otherwise an exception is passed back to the caller.

User response: First establish whether a log record of the indicated size is expected. If the log record was written by a user application or exit program using EXEC CICS WRITE JOURNALNAME or DFHJCJCX WRITE_JOURNAL_DATA, the program could be in error.

If the log record is correct, you should increase the block size for an MVS logger log stream by defining a larger block size for the structure that the log stream will use. For an SMF journal, the block size is fixed at 32756 bytes and cannot be changed.

Destination: CSMT

Modules: DFHL2LB, DFHL2WF, DFHL2CHM

XMEOUT Parameters: *date, time,applid, rsize, bsize, {1=MVS log stream, 2=SMF journalname}*

DFHLG0743 *date time applid* **Tail of log stream *lsn* deleted at block id *X'blockid'*.**

Explanation: The CICS log manager has trimmed the tail of MVS logger log stream *lsn*. All records that occurred before (older) the specified MVS logger block id *blockid* have been deleted.

This occurs during activity keypoint processing when CICS decides it no longer needs records beyond a certain age on a CICS system log log stream.

System action: CICS continues processing.

User response: None.

Destination: CSMT

Modules: DFHL2CHE

XMEOUT Parameters: *date, time,applid, lsn, X'blockid'*

DFHLG0744 *date time applid* **All records in log stream *lsn* have been deleted.**

Explanation: The CICS log manager has deleted all records from MVS logger log stream *lsn*.

This occurs either at CICS startup when the start type is initial, or during activity keypoint processing, when CICS decides it no longer needs any of the records currently on a CICS system log log stream.

System action: CICS continues processing.

User response: None.

Destination: CSMT

Modules: DFHL2CC, DFHL2CHE

XMEOUT Parameters: *date, time,applid, lsn*

DFHLG0745I *applid* **System log full scan has started.**

Explanation: The CICS log manager has started the full scan of the system log during startup.

This is a progress message.

System action: CICS continues processing.

User response: None. The message can be suppressed with the SIT parameter MSGLVL=0.

Destination: Console

Modules: DFHL2CHA

XMEOUT Parameter: *applid*

DFHLG0746 *date time applid* **System log scan trim record found. Primary logstream block id *X'pblock'*, secondary logstream block id *X'sblock'*.**

Explanation: The CICS log manager has encountered a trim record during the scan of the system log stream during startup. The primary logstream trim record block id is *pblock*, the secondary logstream trim record block id is *sblock*.

This is an informational message.

System action: CICS continues processing.

User response: None.

Modules: DFHL2CHN

XMEOUT Parameters: *date, time,applid, X'pblock', X'sblock'*

DFHLG0747I *applid* **System log scan continuing, *count* records processed.**

Explanation: The CICS log manager has processed *count* records during the scan of the system logstream at a CICS restart.

The message is produced every 'n' records - where 'n' is half of AKPFREQ or 500, which ever is the greatest.

This is a progress message.

System action: CICS continues processing.

User response: None. The message can be suppressed with the SIT parameter MSGLVL=0.

Destination: Console

Modules: DFHL2CHN DFHL2CH4

XMEOUT Parameters: *applid, count*

DFHLG0748I *applid* **System log selective scan has started.**

Explanation: The CICS log manager has started the selective scan of the system log during startup.

This is a progress message.

System action: CICS continues processing.

User response: None. The message can be suppressed with the SIT parameter MSGLVL=0.

Destination: Console

Modules: DFHL2CHH

XMEOUT Parameter: *applid*

| **DFHLG0749I** *applid* System log scan has completed.

| **Explanation:** The CICS log manager has finished the scan of the system log stream during startup.

| This is a progress message.

| **System action:** CICS continues processing.

| **User response:** None. The message can be suppressed with the SIT parameter MSGLVL=0.

| **Destination:** Console

| **Modules:** DFHL2CHL

| **XMEOUT Parameter:** *applid*

DFHLG0750 *applid* Transaction CSQC has failed to perform a normal shutdown of CICS. Perform a normal shutdown of CICS manually.

Explanation: Transaction CSQC has failed to quiesce CICS via a normal shutdown because an error was detected. CICS was being quiesced because the integrity of the system log is suspect.

System action: A system dump is taken. CICS continues processing but any tasks that enter dynamic backout are suspended indefinitely and remain in flight.

User response: Issue CEMT PERFORM SHUTDOWN to quiesce CICS via a normal shutdown. This lets as many transactions complete as possible. Refer to the explanations for messages DFHLG0736 and DFHLG0740.

Attempt to establish why transaction CSQC failed to quiesce CICS, and correct the problem. If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHLGQC

XMEOUT Parameter: *applid*

DFHLG0760 *date time applid* Log stream *lsn* not trimmed by keypoint processing. Number of keypoints since last trim occurred: *trimnum*. History point held by transaction: *transid*, task number: *trannum*.

Explanation: The CICS log manager has been unable to trim the tail of MVS logger log stream *lsn*, during an activity keypoint.

CICS will attempt to trim the system log streams during activity keypoint processing, to delete redundant data from the oldest end of the log stream (the tail).

Note that this message is only issued if the primary

system log stream (DFHLOG) fails to be trimmed during a keypoint operation. It is not issued if a trim does not occur for the secondary system log stream (DFHSHUNT). This is since a trim of the primary system log stream is considerably more likely to occur per keypoint, and hence failures to trim the primary system log stream should be recognized, and investigated if required.

System action: CICS continues processing.

User response: This is an informational message, but should be treated as a warning of a potential problem if the number of keypoints that have been unable to trim the primary system log stream continues to increase. Occasional keypoints that fail to trim DFHLOG are not unexpected events. However, if the message is issued by a number of sequential keypoints then this warrants further investigation.

The keypoint operation was unable to trim the tail of DFHLOG because the oldest log records on the log stream belong to a Unit Of Work (UOW) that is still required. This may be a validly long-running UOW; alternatively, it may be part of a long-running task executing an application that generates log records but does not issue syncpoint requests regularly enough.

This may be a transient phenomenon due to an atypical long-running UOW. Review the number of keypoints that have been unable to trim the log. Check what message CICS issues for log stream *lsn* at the next activity keypoint. Message DFHLG0743 indicates the log stream is now successfully trimmed. Another DFHLG0760 message indicates a long-running UOW still exists on the system. If the log stream still cannot be trimmed, use the CEMT INQUIRE UOW command to review the oldest UOWs on the system.

The transaction identifier and the task number of the task whose UOW relates to the oldest data on DFHLOG are also provided in the DFHLG0760 message. The CEMT INQUIRE TASK command may be used to review them.

It is also worthwhile reviewing how often CICS is performing activity keypoints (as defined by the AKPFREQ system definition parameter).

Destination: CSMT

Modules: DFHL2CHE

XMEOUT Parameters: *date, time, applid, lsn, trimnum, transid, trannum*

DFHLG0770 *applid* A severe error has occurred while writing to the SMF log, which was accessed via journal *jname*. SMF response *X'resp'*.

Explanation: The CICS log manager has detected a severe error while writing to the SMF log. This is accessed via journal *jname*. SMF returns the response byte *X'resp'*.

System action: An exception entry is made in the trace table, a system dump is taken and an exception is returned to the caller.

User response: Using the SMF response byte, diagnose and correct the problem. If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHL2LB

XMEOUT Parameters: *applid, jname, X'resp'*

DFHLG0771 *date time applid* **A temporary error condition occurred during MVS logger operation** {IXGCONN | IXGWRITE | IXGBRWSE | IXGDELETE | IXGQUERY }CONNECT | DISCONNECT | | START | READCURSOR | READBLOCK | END | ALL | RANGE} **for log stream** *lsn*. **MVS logger codes:** X'ret', X'rsn'.

Explanation: The CICS log manager made a call to the MVS logger to access a log, which returned a temporary error condition. The MVS logger operation that returned the error condition is identified in the message. The return and reason codes shown are those returned by the MVS logger.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: The log manager automatically retries the operation while the temporary error condition persists. This message is issued every thirty seconds following the first/previous issue.

User response: None. This is a temporary condition.

Destination: CSMT

Modules: DFHL2HS2, DFHL2HS3, DFHL2HS4, DFHL2HS5, DFHL2HS6, DFHL2HS7, DFHL2HS8, DFHL2HS9, DFHL2HSF, DFHL2HSG, DFHL2HSJ

XMEOUT Parameters: *date, time, applid, {1=IXGCONN, 2=IXGWRITE, 3=IXGBRWSE, 4=IXGDELETE, 5=IXGQUERY }, {1=CONNECT, 2=DISCONNECT, 3=,4=START, 5=READCURSOR, 6=READBLOCK,7=END, 8=ALL, 9=RANGE}, lsn, X'ret', X'rsn'*

DFHLG0772 *applid* **An error has occurred during MVS logger operation** {IXGCONN | IXGWRITE | IXGBRWSE | IXGDELETE | IXGQUERY }CONNECT | DISCONNECT | | START | READCURSOR | READBLOCK | END | ALL | RANGE | CHECKCONNSTATUS(YES)} **for log stream** *lsn*. **MVS logger codes:** X'ret', X'rsn'. **Log stream attributes:** SYSTEMLOG({YES | NO}), DASDONLY({YES | NO}), STRUCTNAME(*structname*), RETPD(X'retpd'), AUTODELETE({YES | NO}).

Explanation: The CICS log manager made a call to the MVS logger to access a log, which returned an error condition. The MVS logger operation that returned the error condition is identified in the message, and the return and reason codes shown are those returned by the MVS logger. This is followed by some of the attributes which define the log stream. A structure name of "*****" indicates that no structure is being used by this log stream.

If the error occurred during a log stream connection, these attributes may not have been updated to the correct values for the log stream and should be ignored. These attributes are only valid following a successful connection.

This message may be followed by other CICS messages, especially if the log stream is part of the CICS system log.

This situation can occur when CICS calls the MVS logger using an obsolete log stream connection token, when the MVS logger has been restarted following either a crash or a user request. A restart of the MVS logger implicitly disconnects all connections to it.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table, and a system dump is taken.

The log manager returns an exception condition.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If the MVS logger was recently restarted, AUTO start CICS. Otherwise use the MVS logger return and reason codes to diagnose the problem. If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Modules: DFHL2HS2, DFHL2HS3, DFHL2HS4, DFHL2HS5, DFHL2HS6, DFHL2HS7, DFHL2HS8,

DFHL2HS9, DFHL2HSF, DFHL2HSG, DFHL2HSJ,
DFHL2HB

XMEOUT Parameters: *applid*, {1=IXGCONN,
2=IXGWRITE, 3=IXGBRWSE, 4=IXGDELETE,
5=IXGQUERY }, {1=CONNECT, 2=DISCONNECT, 3=
4=START, 5=READCURSOR, 6=READBLOCK, 7=END,
8=ALL, 9=RANGE, 10=CHECKCONNSTATUS(YES)}, *lsn*,
X'ret', *X'rsn'*, {1=YES,2=NO}, {1=YES, 2=NO},
structname, *X'retpd'*, {1=YES,2=NO}

DFHLG0773 *applid* **A severe error (code *X'code'*) has occurred while accessing ({IXGCONN | IXGWRITE | IXGBRWSE | IXGDELETE }{CONNECT | DISCONNECT | | START | READCURSOR | READBLOCK | END | ALL | RANGE}) the log stream *lsn*.**

Explanation: The CICS log manager has detected a severe error while attempting to access a log. The code *X'code'* is the exception trace point ID which uniquely identifies where the error was detected. This message is preceded by DFHLG0001, and usually followed by other messages.

System action: An exception entry is made in the trace table. A system dump will have been taken by DFHLG0001. The log manager returns a disaster condition to the caller. If the log is the CICS system log, a forward recovery log or autojournal log, another message is issued. Otherwise a disaster condition is returned to the application program.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Refer to other messages following this message for more information and guidance.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHL2HS2, DFHL2HS3, DFHL2HS4,
DFHL2HS5, DFHL2HS6, DFHL2HS7, DFHL2HS8,
DFHL2HS9, DFHL2HSF, DFHL2HSG, DFHL2HSJ

XMEOUT Parameters: *applid*, *X'code'*, {1=IXGCONN,
2=IXGWRITE, 3=IXGBRWSE, 4=IXGDELETE },
{1=CONNECT, 2=DISCONNECT, 3=
4=START, 5=READCURSOR, 6=READBLOCK, 7=END, 8=ALL,
9=RANGE}, *lsn*

DFHLG0774 *applid* **The MVS logger has returned an alert during operation {IXGCONN CONNECT | IXGWRITE }for logstream *lsn*. The log stream data set directory is full. MVS logger codes: *X'ret'* *X'rsn'*.**

Explanation: The CICS log manager has detected a warning while attempting to access a log stream. The log stream's data set directory is full.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

CICS continues normal operation until the current data set of the log stream becomes full. When this happens message DFHLG0772 is issued.

User response: You should delete data from the log stream tail before the current data set fills up. You may wish to take a copy of the data before deleting it. Alternatively you could use a new log stream, but this may be too disruptive.

Destination: Console

Modules: DFHL2HS2, DFHL2HSF

XMEOUT Parameters: *applid*, {1=IXGCONN CONNECT,
2=IXGWRITE }, *lsn*, *X'ret'*, *X'rsn'*

DFHLG0775 *applid* **The MVS logger has returned an alert during operation {IXGCONN CONNECT | IXGWRITE }for log stream *lsn*. The log stream writer offload task is failing. MVS logger codes: *X'ret'* *X'rsn'*.**

Explanation: The CICS log manager has detected a warning while attempting to access a log stream. The writer offload task for the log stream is failing.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

CICS can continue normal operation until the log stream's structure becomes full. When this happens DFHLG0772 is issued.

User response: You should investigate and fix the failing log stream writer offload task, which is part of the MVS logger, before the log stream structure in the coupling facility fills up.

Destination: Console

Modules: DFHL2HS2, DFHL2HSF

XMEOUT Parameters: *applid*, {1=IXGCONN CONNECT,
2=IXGWRITE }, *lsn*, *X'ret'*, *X'rsn'*

DFHLG0776 *applid* **The MVS logger has returned an alert during operation IXGWRITE for log stream *lsn*. The log stream staging data set has failed. MVS logger codes: *X'ret'* *X'rsn'*.**

Explanation: The CICS log manager has detected an alert while attempting to access a log stream. The log stream staging data set has failed.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

CICS continues normal operation, but the data written to the log stream structure is not being duplexed. Consequently, if the structure (or coupling facility) fails, the data cannot be recovered.

User response: You are recommended to shutdown CICS as soon as possible. You should investigate and fix the failing log stream, without losing the data.

If the failing log stream is the CICS system log and CICS was shutdown immediately, you should emergency restart CICS in order to recover the inflight transactions.

Destination: Console

Modules: DFHL2HSF

XMEOUT Parameters: *applid, lsn, X'ret', X'rsn'*

DFHLG0777 *applid* **A temporary error condition occurred during MVS logger operation {IXGCONN | IXGWRITE | IXGBRWSE | IXGDELET | IXGQUERY } {CONNECT | DISCONNECT | | START | READCURSOR | READBLOCK | END | ALL | RANGE} for log stream lsn. MVS logger codes: X'ret', X'rsn'.**

Explanation: The CICS log manager made a call to the MVS logger to access a log, which returned a temporary error condition. The MVS logger operation that returned the error condition is identified in the message. The return and reason codes shown are those returned by the MVS logger.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: The log manager automatically retries the operation every three seconds while the temporary error condition persists. This message is issued every ten retries following the first/previous issue.

User response: None. This is a temporary condition.

Destination: Console

Modules: DFHL2HS2, DFHL2HS3, DFHL2HS4, DFHL2HS5, DFHL2HS6, DFHL2HS7, DFHL2HS8, DFHL2HS9, DFHL2HSF, DFHL2HSG, DFHL2HSJ

XMEOUT Parameters: *applid, {1=IXGCONN, 2=IXGWRITE, 3=IXGBRWSE, 4=IXGDELET, 5=IXGQUERY }, {1=CONNECT, 2=DISCONNECT, 3=, 4=START, 5=READCURSOR, 6=READBLOCK, 7=END, 8=ALL, 9=RANGE}, lsn, X'ret', X'rsn'*

DFHLG0778 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream lsn. CICS does not have authority to perform this operation. MVS logger codes: X'ret' X'rsn'.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. CICS region userid has not been defined to the MVS logger with the authority to perform this operation.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

Ensure that the CICS region userid has authority to access the log stream. For further guidance, see the *CICS RACF Security Guide*.

Destination: Console

Modules: DFHL2HS2

XMEOUT Parameters: *applid, lsn, X'ret', X'rsn'*

DFHLG0779 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream lsn. The log stream is being deleted by another program. MVS logger codes: X'ret' X'rsn'.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. The log stream is being deleted by a request from another program and CICS cannot connect to it until this program has finished.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log stream is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

You will need to understand why another program was deleting the log stream. Either prevent such a conflict from occurring in the future, or allocate a different log stream to CICS.

Destination: Console

Modules: DFHL2HS2

XMEOUT Parameters: *applid, lsn,X'ret', X'rsn'*

DFHLG0780 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream lsn. Some data previously written to this log stream has been lost. MVS logger codes: X'ret' X'rsn'.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. Some of the data written to this log stream has been permanently lost.

This message is issued only if the log stream is a general log (not a CICS system log).

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller.

User response: This log stream is a general log, therefore it must be deleted and redefined before it can be used by CICS again.

If the log stream is used as a forward recovery log, take a fresh backup of all data sets that use this log stream as soon as possible.

If the log stream is used as a user journal, the associated journal needs to be reenabled before it can be used again. To do this, issue the command

```
SET JOURNALNAME(...) RESET
```

Use the MVS logger return and reason codes to further diagnose the problem.

Destination: Console

Modules: DFHL2HS2

XMEOUT Parameters: *applid, lsn,X'ret', X'rsn'*

DFHLG0781 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream lsn. The maximum number of log stream connections that the MVS logger can support has been reached. MVS logger codes: X'ret' X'rsn'.**

Explanation: The CICS log manager has detected an

error while attempting to access a log stream. The maximum number of log stream connections that the MVS logger can support has been reached.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

It may be possible to retry this transaction later when other work has completed and the number of concurrent transactions has reduced. Otherwise you should investigate your usage of log streams within the sysplex with a view to reducing the number of log streams that need to be connected concurrently.

Destination: Console

Modules: DFHL2HS2

XMEOUT Parameters: *applid, lsn,X'ret', X'rsn'*

DFHLG0782 *applid* **The MVS logger has returned an error during operation {IXGCONN CONNECT | IXGWRITE} for log stream lsn. The MVS logger does not have authority to access the log stream structure. MVS logger codes: X'ret' X'rsn'.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. The MVS logger does not have the authority to access the log stream structure.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

Ensure that the MVS logger address space has authority to access the log stream structure.

Destination: Console

Modules: DFHL2HS2, DFHL2HSF

XMEOUT Parameters: *applid*, {1=IXGCONN CONNECT, 2=IXGWRITE}, *lsn*, X'ret', X'rsn'

DFHLG0783 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream *lsn*. CICS attempted to connect to a log stream model, which is not possible. MVS logger codes: X'ret' X'rsn'.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. CICS attempted to connect to a log stream model, which is not possible.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

It is possible that a user journal definition has been defined with the wrong log stream name or that the log stream has been defined incorrectly to have the MODEL(YES) attribute. See the *CICS System Definition Guide* for guidance on defining user journals.

Destination: Console

Modules: DFHL2HS2

XMEOUT Parameters: *applid*, *lsn*, X'ret', X'rsn'

DFHLG0784 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream *lsn*. You cannot connect to a DASDONLY log stream that is already connected to another MVS image. MVS logger codes: X'ret' X'rsn'.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. The MVS logger rejected the connect request because the log stream is of type DASDONLY and is already connected to another MVS image.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is

issued. Otherwise an exception condition is returned to the application program.

User response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

Log streams of type DASDONLY were designed to work within the scope of a single MVS image only (although the MVS image itself can still be part of a sysplex).

The possibilities are:-

- The connect request is using the wrong log stream name.
- The current connection is using the wrong log stream name.
- The log stream was wrongly defined as being of type DASDONLY.

Destination: Console

Modules: DFHL2HS2

XMEOUT Parameters: *applid*, *lsn*, X'ret', X'rsn'

DFHLG0785 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream *lsn*. This is a DASDONLY log stream, which is not supported by the current system release level. MVS logger codes: X'ret' X'rsn'.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. The MVS logger rejected the connect request because the log stream is of type DASDONLY and is not supported by the current system release level.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

Log streams of type DASDONLY are supported by system release level OS/390 2.4 or later.

The possibilities are:-

- CICS was running on the wrong system.
- The log stream was wrongly defined as being of type DASDONLY.
- The connect request is using the wrong log stream name.

DFHLG0789 *DATE TIME APPLID DELETION OF LOGSTREAM "LSN" DATA WAS SUPPRESSED BY THE LOGGER RESOURCE MANAGER INTERFACE. MVS LOGGER CODES: X'RET' X'RSN' .*

Explanation: When the CICS log manager issued an IXGDELET request to delete data from the logstream, the logger resource manager interface suppressed the delete operation.

System action: An exception entry is written in the trace table.

User response: This may be expected behaviour. Check the status and settings of the logger resource manager interface, in relation to the meaning of the

reason code from the IXGDELET request.
Destination: CSMT
Modules: DFHL2CHE, DFHL2CC
XMEOUT Parameters: *date, time, applid, lsn, X'ret', X'rsn'*

DFHLG0800 *applid* The MVS logger failed to locate a blockid requested by the CICS log manager. Missing blockid: *X'blkid1'*; Chain History Point: *X'blkid2'*.

Explanation: The MVS logger has returned an IxgRsnCodeNoBlock (00000804) Reason Code to the CICS log manager. This means that the log block requested by CICS could not be located by the MVS logger.

The blockid of the requested block, and the blockid representing the Chain History Point for the log block chain in question, are shown.

System action: This is an informational message to provide the blockid of the missing block, and the blockid of the Chain History Point for the chain which should contain the requested block.

This message will have been preceded by message DFHLG0772. An exception trace was written and a system dump taken.

If the failure occurred while CICS was reading from the system log message DFHLG0736 will follow, and a

quiesce of CICS will be initiated.

User response: Compare the requested blockid with the Chain History Point blockid. If the requested blockid is equal to, or a higher relative number than, the Chain History Point, the blockid represents a log block which CICS is still validly interested in and which should be available from the MVS logger.

If the requested blockid is a lower relative number than the Chain History Point blockid, then the CICS log manager has requested a block which was written earlier than the current logical start of the chain. This indicates an internal logic error within CICS.

The logstream should be printed before CICS is restarted, using the DFHJUP utility. For guidance in using this, refer to the *CICS Operations and Utilities Guide*. Note if the failure occurred for the CICS system log then print both the primary and secondary CICS system log logstreams before restarting CICS.

Refer to any messages issued subsequently for further guidance.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHL2BLC

XMEOUT Parameters: *applid, X'blkid1', X'blkid2'*

DFHLMxxxx messages

DFHLM0001 *applid* An abend (code *abcode*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *abcode* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If there is an MVS code, look it up in the relevant MVS codes manual which is detailed in the book list in the front of this manual. Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHLMMDM, DFHLMDS, DFHLMIQ, DFHLMMLM

XMEOUT Parameters: *applid, abcode, X'offset', modname*

DFHLM0002 *applid* **A severe error (code X'code')** has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code X'code' is the exception trace point ID which uniquely identifies what the error is and where the error was detected. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS will continue unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMMDM). A message will be issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Inform the system programmer. This indicates a possible error in CICS code. The severity of its impact will depend on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHLMMDM, DFHLMDS, DFHLMIQ, DFHLMMLM

XMEOUT Parameters: *applid, X'code', modname*

DFHLM0004 *applid* **A possible loop has been detected at offset X'offset'** in module *modname*.

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'offset'. This is the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it will be necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS will purge a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* in the message will be terminated and CICS will continue.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname* and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHLMMDM, DFHLMDS, DFHLMIQ, DFHLMMLM

XMEOUT Parameters: *applid, X'offset', modname*

DFHLM0006 *applid* **Insufficient storage to satisfy Getmain (code X'code')** in module *modname*. MVS code *mvscode*.

Explanation: An MVS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request. The code X'code' is the exception trace point id which uniquely identifies the place where the error was detected.

This error has occurred above the 16M line.

The code *mvscode* is the MVS GETMAIN return code.

System action: An exception entry is made in the trace table (code *code* in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS will continue unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Inform the system programmer. If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the user response suggested for these messages.

If CICS is still running, the problem may be a temporary one which will right itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If

the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

Try decreasing the overall size limits of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. If CICS is not already terminated, you will need to bring CICS down to do this. See the *CICS System Definition Guide* or the *CICS Performance Guide* for further information on CICS storage.

Destination: Console

DFHMCxxxx messages

| **DFHMC4000** CICS SYNAD EXIT TAKEN FOR
| *dscname*, INPUT MSG TRUNCATED.

| **Explanation:** This message is issued when the SYNAD
| exit is taken for an input queue. *dscname* represents the
| DSCNAME.

| **System action:** The DCB is closed and then opened
| again. The data is truncated to the specified block size
| and passed to the user.

| **User response:** Increase the block size or reduce the
| length of input.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** MVS data management determines the
| problem. This message is issued from the
| CICS-provided SYNAD routine generated in the
| terminal control table (TCT).

| from the interval control program (ICP) during
| initiation of the purge delay transaction, CSPQ.

| The return code is caused by one of the following.

- | • A TRANSID error.
- | • An INVALID REQ error.
- | • An UNEXPECTED error.

| **System action:** Purge delay does not operate for this
| execution of CICS. A dump is taken.

| **User response:**

- | • For a TRANSID error, define transaction CSPQ.
- | • For an INVALID REQ, the ICP returned an INVALID
| REQUEST return code in response to the INITIATE
| request. Determine why this has occurred and correct
| the problem.
- | • For an UNEXPECTED error, the ICP returned an
| unrecognized error code in response to the INITIATE
| request. The error code can be found in the dump at
| label MCPINERR in program DFHMCP. Determine
| why this has occurred and correct the problem.

| **Destination:** CSMT

| **Modules:** DFHMCP

| **XMEOUT Parameters:** *date, time,applid, {1=transid,
| 2=invalid req, 3=unexpected}*

| **DFHMC4001I** *date time applid* Error purge delay
| **inoperative**, {*transid* | *invalid req* |
| *unexpected*} **error**

| **Explanation:** An error return code has been received

DFHMExxxx messages

DFHME0001 *applid* An abend (code *xxx/yyyy*) has
| occurred at offset *X'offset'* in module
| *modname*.

Explanation: An abnormal end or program check has
| occurred in module *modname*.

The code *xxx/yyyy* is a 3-digit hexadecimal MVS code
| (if applicable), followed by a 4-digit alphanumeric CICS
| code. The MVS code is a system completion code (for
| example, 0C1 or D37). If an MVS code is not applicable,

this field is filled with three hyphens. The CICS code is
| an abend code (for example AKEA) or a number
| referring to a CICS message (for example 1310 refers to
| CICS message DFHTS1310).

System action: An exception entry is made in the
| trace table. A dump is taken, unless you have
| specifically suppressed dumps in the dump table. Since
| this error may not be critical, CICS is not terminated,
| even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Since the abend affects the national language modules in the message (ME) domain, CICS is not automatically terminated. However, you may decide that your system should not be allowed to run without these modules, in which case you need to bring CICS down.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in this manual. Look up the CICS alphanumeric code in this manual. This code tells you, for example, whether the error was a program check, an abend, a runaway, or a recovery percolation.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEDM, DFHMEME, DFHMESR

DFHME0002 *applid* **An error (code X'code') has occurred in module modname.**

Explanation: An error has been detected in module *modname*. The code X'code' is the exception trace point id which uniquely identifies the place where the error was detected.

System action: A bad return code is sent to the caller of the message (ME) domain. If the call is made by the domain manager, DFHDMDM, CICS is terminated by the domain manager, and a message is issued to this effect. However, if the message is issued by a message domain module, CICS is allowed to continue.

An exception entry is made in the trace table. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this error may not be critical, CICS is not terminated immediately, even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Inform the system programmer as this message indicates a severe error in CICS code. Its impact may or may not be severe, depending on the circumstances. For example, if it only occurs once and CICS has not been terminated by the domain manager, you may decide to continue to run and bring CICS down at a convenient time. But if the message recurs or if you cannot run without the full use of all CICS

messages, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEDM, DFHMEME, DFHMESR, DFHMEWT

DFHME0004 *applid* **A possible loop has been detected at offset X'offset' in module modname.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'offset'. This is the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. This situation may not be an error, or if it is an error it may not be critical, so CICS is not terminated immediately, even if you have specified **terminate** in the dump table. CICS will purge the runaway task if you have specified this in the SIT.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This error affects message generation, and the message (ME) domain does not automatically terminate CICS. You should decide whether the problem is serious enough to bring CICS down.

Since some transactions can use a lot of CPU time, this message may have been caused by a long-running transaction. Usually, CICS terminates a task which it considers to be a runaway task. It does this termination when the task exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds).

If you have declared ICVR=0, you have to terminate the task yourself if you consider that it has gone into a loop. Purge the task using the CEMT transaction.

If CICS has purged the task and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time in order to do this.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEDM, DFHMESR, DFHMEME

DFHME0006 *applid* **Insufficient storage to satisfy GETMAIN (code X'code') in module modname. MVS code mvscode.**

Explanation: An MVS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request. The code X'code' is the exception trace point ID which uniquely identifies the place in the code where the error occurred. The code *mvscode* is the MVS GETMAIN return code.

System action: An exception entry is made in the trace table with code X'code'. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated immediately, even if you have specified **terminate** in the dump table. However, if this error indicates a general problem with storage, CICS could be abnormally terminated by the CICS storage manager. A message will be issued to this effect.

If the GETMAIN fails for DFHMEDM, a return code is sent to the domain manager, DFHDMDM, and CICS is terminated by the domain manager. A message is issued to this effect.

If the GETMAIN fails for the message domain DFHMEME, it could occur in one of four places. The code X'code' indicates which GETMAIN has failed as follows:

Code	Meaning
X'0340'	- During formatting of TD message The message is not issued.
X'0341'	- During build of message The message is not issued.
X'0342'	- While building user exit parameters The message is issued to original destination.
X'0343'	- During rebuild of message in English The rebuilt English message is not issued.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If CICS is terminated, look out for the relevant termination messages from the storage manager or the domain manager and the user response suggested.

Try decreasing the size limits of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. You will need to bring CICS down to do this, if it has not already been terminated.

The problem may be a temporary one which rights itself if more storage becomes available. If CICS is still running, and you can manage without the full set of CICS messages, you may decide to continue and bring CICS down at a convenient time.

You can get diagnostic information about the MVS return code by consulting the relevant MVS codes manual.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEDM, DFHMEME

DFHME0101 *applid* **An error (code X'code') occurred while writing message msgno to transient data destination dest**

Explanation: CICS has tried to write message *msgno* to the transient data destination *dest*. This has failed for one of the following reasons:

1. Destination *dest* has not been defined in the DCT.
2. Destination *dest* is currently disabled.
3. The transient data queue for destination *dest* is full.
4. An I/O error has occurred writing to destination *dest*.

The code X'code' is the exception trace point ID which uniquely identifies the place where the error was detected.

System action: An exception entry is made in the trace table and CICS continues.

User response: Check that *dest* is defined in your DCT.

If (1), add a new entry to the DCT for destination *dest*. Alternatively, if *msgno* is a DFHDB2xxx message, refer to the installed DB2CONN object. Change any of the *msgqueue1*, *msgqueue2* and *msgqueue3* parameters of the DB2CONN that specify destination *dest* so that they name a valid destination defined in the DCT.

If (2), use CEMT to reset the status of the queue to 'enabled'.

If (3), allocate more space for the queue, or reset the trigger level (if messages are being issued to a terminal or printer).

If (4), investigate and fix the cause of the I/O error.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEME

DFHME0102 *applid* An error (code X'code') has occurred in module *modname* while producing message *msgno*.

Explanation: A severe error has been detected and the message (ME) domain has been unable to produce message *msgno*. The code X'code' is the exception trace point ID which uniquely identifies the place where the error was detected.

System action: A return code is sent to the caller of the message (ME) domain, but since the call was made by a message domain module, CICS is allowed to continue.

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated immediately, even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Inform the system programmer as this indicates a severe error in CICS code. However, its impact may not be serious. For example, if the error only occurs once and you can run without message *msgno*, you may continue to run and bring CICS down at a convenient time.

However, if the message recurs (and on each recurrence there is a different message number *msgno*), or if you cannot run without the full use of all CICS messages, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEBU, DFHMEIN, DFHMEWT, DFHMEME

DFHME0105 *applid* Insufficient storage to load module *modname*.

Explanation: An MVS load has failed. The message language module *modname* could not be loaded as there was insufficient storage available. The language module is defined in the SIT for messages in a particular language, or is the default language module.

The default language is always used for messages sent to transient data queues and to consoles (providing that it is not a double-byte language in which case the message is sent to the console in English). If the default language module cannot be loaded, no messages can be delivered. Terminals can have messages in the default language or in another chosen language. If the chosen language module cannot be loaded, terminal messages

use the default language instead.

System action: An exception entry is made in the trace table and a dump is taken, unless you have specifically suppressed dumps in the dump table. As this may not be a critical problem, CICS is not terminated unless the default language module cannot be loaded, (even if you have specified **terminate** in the dump table).

If the missing module is not the default language module, CICS uses the default language for messages to terminals. If the default language module cannot be loaded, a return code is sent to the domain manager and CICS is terminated by the domain manager.

User response: If the default language is in operation and this is acceptable, you need not bring CICS down. (Or you may bring CICS down at a more convenient time.)

If the default language is in operation and this is not acceptable, or if the default language module itself is missing, try decreasing the size limits of the DSAs or EDSAs. Or you could try increasing the size of the whole region, if it is not already at maximum size.

Alternatively, you may be able to get more storage space by removing unwanted language modules from storage. To do this, bring CICS down, remove the language codes you do not need from the SIT or respecify the list of language modules as an override parameter, and restart CICS.

Note: You should not remove the default language module from the SIT.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEDM

DFHME0106 *applid* Module *modname* could not be loaded. REGISTER 1 = X'nnnnnnnnn' and REGISTER 15 = X'nnnnnnnnn'

Explanation: The message language module *modname* could not be loaded. The reason that it could not be loaded is given by the contents of registers 1 and 15, which are returned by MVS.

System action: If the missing module is not the default language module, CICS uses the default language for messages.

If the default language module is missing, a return code is sent to the domain manager and CICS is terminated.

An exception entry is made in the trace table and a dump is taken, unless you have specifically suppressed dumps in the dump table. As this may not be a critical problem, CICS is not terminated unless the default

language module cannot be loaded (even if you have specified **terminate** in the dump table).

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If the default language is in operation and this is acceptable, you need not bring CICS down, or you may do so at some convenient time.

If the default language is in operation and this is not acceptable, or if the default language module itself is missing, consult the MVS messages and codes manual to check the return codes displayed in the message. The return codes indicate why the module could not be loaded.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEDM

DFHME0107 *applid* **Module *modname* cannot be found in the library.**

Explanation: The message load module *modname* was not found in the library defined in the JCL for the CICS job. This load module is a language module for messages. It is either a module which has been defined in the SIT for messages in a particular language, or it is the default language module.

The default language is always used for messages sent to transient data queues and to consoles (providing that it is not a double-byte language, in which case the message is sent to the console in English). If the default language module is missing no messages can be delivered.

Terminals can have messages in the default language or in another chosen language. If the chosen language module is missing, terminal messages use the default language instead.

System action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. But since this may not be a critical error, CICS is not terminated immediately, even if you have specified this in the dump table, unless the default language module is missing, (even if you have specified **terminate** in the dump table).

If the missing module is not the default language module, CICS uses the default language for messages. If the default language module is missing, a return code is sent to the domain manager and CICS is terminated.

User response: This error could have occurred because of a problem in a library or in the SIT. If the default language is in operation and this is acceptable,

you need not bring CICS down, or you may do so at some convenient time.

The missing module may have been placed in the wrong library, or the wrong or misspelled module name may have been used in the right library.

If the default language is in operation and this is NOT acceptable, link the missing module into the library defined in the JCL for your CICS job by correcting whichever of the problems has occurred. You have to bring CICS down to do this.

It is also possible that an incorrect or misspelled language code has been used in the SIT. In this case, you have to bring CICS down, reinstall your chosen language code as a system initialization parameter, and restart CICS.

If you no longer need this language module, you should remove it from the SIT at the next convenient opportunity.

If the default language module is missing, CICS is terminated by the domain manager. You need to discover whether the fault is in the library or the SIT and follow the appropriate procedure above.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEDM

DFHME0108 *applid* **Message *msgno* cannot be found in module *modname*.**

Explanation: Message *msgno* should have been delivered, but was not found in message language module *modname*.

This module is the national language module specified in the SIT by the user which gives messages in a chosen language.

System action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue to run without message number *msgno*.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

Note that this message will appear after maintenance has been applied to the CICS message domain if there are older, pre-maintenance, versions of the DFHMETxl

message modules elsewhere in the STEPLIB concatenation.

If you have just applied maintenance and are encountering this message, check for, and remove, older versions of the message modules in the STEPLIB concatenation.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEIN

DFHME0109 *applid* **Message set *setname* could not be found in module *modname* while producing message *msgno*.**

Explanation: Message set *setname* was not found in the message language module *modname*.

The *setname* is the first two characters after the DFH in CICS messages (for example, LD or 21), which is followed by the message number.

System action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without message number *msgno*.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEIN

DFHME0110 *applid* **Optional value *nn* is missing from insert *ii* for message *msgno*.**

| **Explanation:** Optional insert value *nn* was requested
| for insert *ii* on a call to the message domain but could
| not be found in the definition template for message
| *msgno*.

System action: CICS delivers the message with ??? in place of the insert *ii* as it cannot resolve which optional value has been requested for the insert.

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This message indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without message *msgno*.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEBU

DFHME0111 *applid* **Insert *ii* is missing for message *msgno*.**

Explanation: Insert *ii* is required for message *msgno*. The insert was not found.

System action: CICS delivers the message with ??? in place of the missing insert *ii*.

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. But since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Ensure that you have loaded the correct message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates a severe error in CICS code. However, its impact may not be serious. For example, the error may only occur once, or you may decide to continue without message *msgno*.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEBU

DFHME0112 *applid* **Insert number *ii* is invalid for message *msgno* (code *X'code'*).**

Explanation: Insert *ii*, supplied on the call to the message (ME) domain, was invalid. For example, it may have been a decimal insert with a length greater than 4 bytes.

The code *X'code'* uniquely identifies the occurrence of the invalid insert.

System action: CICS delivers the message with ??? in place of the invalid insert *ii*.

An exception entry with code *X'code'* is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Ensure that you have loaded the correct message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates an error in CICS code. However, its impact may not be serious. For example, the error may only occur once, or you may decide to continue without message *msgno* being produced.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEBU

DFHME0113 *applid* **Incorrect parameters used in call to DFHMEME for message *msgno*.**

Explanation: A call to the message (ME) domain for message *msgno* was made with an invalid combination of parameters.

System action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Ensure that you have loaded the correct message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates a severe error in CICS code. However, its impact may not be serious. For example, the error may only occur once, or you may decide to continue without message *msgno*.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEME

DFHME0114 *applid* **There are no destinations specified for message *msgno***

Explanation: There was no destination *destid* specified in the message language module for message *msgno*. This error could occur if the message language module has been corrupted or is not at the correct release level.

System action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this error may not be critical, CICS is not terminated even if you have specified **terminate** in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Ensure that you have loaded the correct message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job

contains the correct message language module.

This message indicates a severe error in CICS code. However, its impact may not be serious. For example, the error may only occur once, or you may decide to continue without message *msgno* being produced. If you feel it is not critical, you can continue to run your system without message *msgno* until a convenient time comes to resolve the problem.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEIN

DFHME0115 *applid modname* **Message module for language *language* not found. The default module *modnameb* is used.**

Explanation: The message language module *modname* for the national language *language* could not be found in the list of available modules. It is not found if a CICS program calls for a message in a particular language from the message domain, but the message domain cannot locate the message in that language.

The message language module may be unavailable because the LOAD for the appropriate message language module failed at initialization. In this case, there will have been an earlier message about the failed LOAD. Alternatively, the module may not be available because the language specified on the terminal definition, or userid definition, was not specified in the SIT or was specified incorrectly.

System action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

All messages which should appear in language *language* in module *modname* appear in the system default language *modnameb* instead.

User response: Your action depends on whether the use of the default language for messages is acceptable or not. If it is acceptable, you can delay taking any action until a convenient time. This may entail changing a terminal or userid definition if that is the cause of the problem.

If the use of the default language is not acceptable, and if module *modname* failed to load at initialization, take the action described for the appropriate message about

a failed LOAD issued during start-up.

Otherwise, bring CICS down and specify module *modname* in the SIT or respecify the list of language modules as an override parameter, and restart CICS.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEIN

DFHME0116 *applid (Module:modname)* **CICS symptom string for message *msgno* is *symstring***

Explanation: Message *msgno* has been issued as the result of a possible CICS error.

Symptom string *symstring* has been produced to provide additional diagnostic information for IBM support.

System action: This message accompanies message *msgno* and has no effect on the system action. The system action is that stated in message *msgno*.

User response: Refer to the user response of message *msgno* which provides the necessary information to determine if the error is serious enough to be reported to IBM Support.

Destination: Console

Modules: DFHMEME

XMEOUT Parameters: *applid, msgno, symstring, modname*

DFHME0117 *applid* **The Message User Exit point XMEOUT is unavailable for message *msgno***

Explanation: The message (ME) domain was unable to use the message user exit point 'XMEOUT' when it was processing message *msgno*. This is probably because it was invoked too early in CICS initialization. A response of KERNERROR has been returned to the message (ME) domain from the program which invokes the user exit, DFHAPEX.

System action: The message (ME) domain continues processing as this error is not severe. The message *msgno* which the message (ME) domain was trying to produce is not suppressed or rerouted by the message user exit. Instead, it is issued to the original destination defined for message *msgno*.

User response: None. You cannot suppress message *msgno* because the error has occurred too early in initialization.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEME

DFHME0118 *applid* **An error has occurred when calling the Message User Exit for message *msgno***

Explanation: The message (ME) domain has received an incorrect response from DFHAPEX, the program which invoked the message user exit.

System action: The message (ME) domain will continue processing as this error is not severe. The message *msgno* which the message (ME) domain was trying to produce is not suppressed or rerouted but is issued to its original destination.

User response: This message indicates a probable error in the message user exit. Ensure that your message user exit program is working properly.

However, it is possible that the user exit invoking program DFHAPEX interface has been corrupted. DFHAPEX issues an exception trace entry to indicate that there is an error, but is not able to issue its own error message via the message (ME) domain as doing so would cause CICS to loop. In this case, you will need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEME

DFHME0119 *applid* **Message *msgno* has an invalid {Destination | User Exit | Message Identification} component**

Explanation: The message (ME) domain has encountered an invalid component in the definition of message *msgno* in the message language module. The message language module may have been corrupted or be at the wrong release level.

System action: The ME domain produces an exception trace entry and continues processing. No dump is taken.

User response: Ensure that you are using the correct level of the message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates a severe error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without message number *msgno*. If you feel it is not important, you can continue to run your system without this message until a convenient time comes to resolve the problem.

If you are using a message table which has been

created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEIN

DFHME0120I *applid* **Message *msgno* has been rerouted to its original destination.**

Explanation: The message domain user exit point XMEOUT has attempted to route message *msgno* to a transient data (TD) queue while CICS is quiescing or terminating. After CICS shutdown has started, a message can only be rerouted to a TD queue if its original destination has a TD queue.

System action: The message is rerouted to its original destination.

User response: None. For programming information about the XMEOUT user exit, see the *CICS Customization Guide*.

Destination: Console

Modules: DFHMEME

XMEOUT Parameters: *applid, msgno*

DFHME0121 *applid* **The {first | second} attempt at formatting message *msgno*, TD queue *queuename* has failed - {Invalid DBCS format | Unknown error}**

Explanation: The message (ME) domain was trying to produce message *msgno* (destined for transient data queue *queuename*). However, an invalid response has been returned from the message formatting routine, DFHMEFO. This error is probably due to invalid DBCS characters being found in either the message inserts or the message text. The message text is checked at definition time for mismatched shift-out and shift-in characters. However, adjacent shift-in and shift-out characters could appear in a message, for instance, if a double byte message insert has not been supplied correctly.

The message (ME) domain first tries to format the message into 120-byte segments. However, if the transient data queue has been defined with a different queue length, formatting is performed a second time using the new queue length. (Hence the reason for *first* or *second* attempts at formatting the message.)

System action: A dump is taken. The message domain does not issue the message being formatted. An

exception trace entry is made by the formatting routine DFHMEFO.

User response: This message indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without the message *msgno*. If you feel it is not critical, you can continue to run your system without message *msgno* until a convenient time comes to resolve the problem.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEME

DFHME0122 *applid* **The Message User Exit has returned invalid route code information for message number *msgno***

Explanation: The message user exit program has set an invalid route code as the destination of message *msgno*. Valid route codes are numbers 1 to 28 inclusive.

System action: The message (ME) domain ignores the invalid route code and defaults to the original destination defined for message *msgno* in the message language module.

User response: Check that your message user exit program sets valid route code information for message *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEME

DFHME0123 *applid* **The Message User Exit has returned invalid TD queue information for message number *msgno***

Explanation: The message user exit program has set an invalid queue name as the destination of the message *msgno*. Valid queue names consist of 4 alphanumeric characters.

System action: The message (ME) domain ignores the invalid queue name and defaults to the original destination defined for message *msgno* in the message language module.

User response: Check that your message user exit

program sets valid queue name information for message *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEME

DFHME0124 *applid* **TD is unavailable for writing message *msgno* to TD queue *queuename***

Explanation: The message (ME) domain has tried to output message *msgno* to transient data queue *queuename*. However, transient data (TD) is not yet available. This situation may occur early in CICS initialization.

System action: If the message destination is CDBC, the message is rerouted to the console instead. If the message destination is any other TD queue, it is lost.

User response: The impact of this error may not be severe. For example, the error may only occur once, or you may decide to continue without message *msgno*. If you feel it is not critical, you can continue to run your system without message *msgno* until a convenient time comes to resolve the problem.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEME

DFHME0125 *applid* **The Message User Exit has returned an invalid return code *rc* for message *msgno***

Explanation: The message user exit has returned a return code *rc*, which is neither 0 or 4 when it was processing message *msgno*. (A return code of 4 indicates that the message is to be suppressed.)

System action: The message (ME) domain continues processing as normal and does not suppress or reroute the message. Instead, it issues the message as it was originally defined in the message language module.

User response: Check that your message user exit program is working properly, and that it is passing the correct return code back to the message (ME) domain.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEME

DFHME0126 *applid* **Error in SYMREC invocation.**
Return code in R15 = X'mmmm', Reason code in R0 = X'nnnn'.

Explanation: While handling an error, CICS tried to write a symptom record to SYS1.LOGREC.

However, a further problem was detected while attempting to invoke the SYMREC service.

Return code X'mmmm' in register 15 and reason code X'nnnn' in register 0 indicate the reason for the error. This may be one of the following.

- CICS has been prevented from writing the symptom record to SYS1.LOGREC by the ASREXIT MVS installation exit. In this case a system dump is not produced.
- There is an error in the SYMRBLD macro. (This is the macro CICS uses to build its symptom records.)
- CICS has supplied invalid data to be added to the symptom record.
- There is an error in the SYMREC service. Examples of possible problems include a storage error, or insufficient space in the LOGREC buffer.
- The SYMREC service is currently inoperative.

System action: Processing continues and a system dump may be produced.

An exception trace entry (pointid=X'0806') is made in the trace table which contains the symptom record which CICS attempted to write.

User response: Determine whether the error was caused by a problem in the format of the symptom record produced by CICS, or by a problem in the SYMREC service.

The meanings of the return and reason codes, together with additional information about the SYMREC service can be found in the OS/390 MVS Programming: Assembler Services Reference manual.

Return codes 0010 or 0014 indicate a problem in the SYMREC service which must be reported to the MVS System Administrator.

A return code of 000C and a reason code of 0F1C indicates that the ASREXIT installation exit has prevented CICS from writing the symptom record. This could be caused by an installation error. Report the problem to your MVS system administrator.

Any other return code indicates that the symptom record is invalid to the SYMREC service.

The impact of this error need not be severe, if for example, the problem occurs only as an isolated incident or on the production of a particular message. In these cases, this message can be ignored.

However, if the problem is persistent, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEWS

DFHME0127 *applid* **A severe error (code X'code') has occurred in module modname.**

Explanation: An error has been detected in module *modname*. The code X'code' is the exception trace point ID which uniquely identifies the place where the error was detected.

System action: An exception entry is made in the trace table. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

A dump is taken, unless you have specifically suppressed dumps in the dump table. But since this error may not be critical, CICS is not terminated immediately, even if you have specified **terminate** in the dump table.

No symptom string is produced for this message because the error has occurred in a module concerned with symptom strings.

User response: Inform the system programmer. This message indicates a severe error in CICS code. However, the impact of this error should not be severe because the module DFHMEWS is not crucial to CICS functioning.

If the problem recurs, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEWS

DFHME0128 *applid* **Message msgno has an invalid route code.**

Explanation: The routine which issues the console message was unable to do so as it encountered an invalid route code associated with message *msgno*. Valid route codes are numbers from 1 through 28.

This error could only happen if the route codes have become corrupted as they are being passed to the routine which issues the console message, DFHSUWT.

System action: The message (ME) domain issues an exception trace entry. Message *msgno* is not issued.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEME

DFHME0129 *applid* Unable to format console message *msgno* as it contains invalid DBCS characters.

Explanation: The routine which attempted to format console message *msgno* was unable to do so as it was found to contain invalid double byte (DBCS) characters. For example, adjacent or unmatched pairs of shift-in and shift-out characters are invalid in a string of DBCS text.

This situation could occur if there are inserts in the message which contain, for example, a shift-out and a shift-in character with no double byte characters entered in between.

System action: The message (ME) domain continues processing but message *msgno* is not issued as it cannot be formatted. The message formatting routine, DFHMEFO, issues an exception trace entry. The routine which issues console messages, DFHSUWT, also issues an exception trace entry.

User response: Ensure that any double-byte information entered from a terminal which may be used as a message insert is entered correctly.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEME

DFHME0130 *applid* Message *msgno* has an invalid descriptor code.

Explanation: The routine which issues the console message was unable to do so as it encountered an invalid descriptor code associated with message *msgno*. Valid descriptor codes are numbers 1 through 16.

This error could only happen if the descriptor codes have become corrupted as they are being passed to the routine which issues the console message, DFHSUWT.

System action: The message (ME) domain issues an exception trace entry. Message *msgno* is not issued.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEME

DFHME0131 *applid* Unable to calculate length of message *msgno* due to message table corruption, code(*code*)

Explanation: The message (ME) domain could not calculate the length of the message *msgno* due to possible corruption of the message language module.

System action: A return code is sent to the caller of the message (ME) domain. The message *msgno* is not issued.

User response: Ensure that you are using the correct level of the message data module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without message number *msgno*. If you feel it is not critical, you can continue to run your system without message *msgno* until a convenient time comes to resolve the problem.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEME

DFHME0132 *applid* The User's Message Exit program has failed while processing message *msgno*

Explanation: The user's message exit program is either looping or has failed with a program check.

System action: The message (ME) domain continues processing and issues message *msgno* to its original destination. The user exit invoking program DFHAPEX issues an exception trace entry to indicate that the user's message exit program has failed, but it cannot issue its own error message via the message (ME) domain as doing so would cause CICS to loop.

User response: Disable your message exit program and ensure it is working properly.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEME

DFHME0133 *applid* Message *msgno* could not be found in module DFHMEMGT

Explanation: The message domain was trying to issue one of its own error messages to indicate that an error had occurred in the message domain. However, the message domain was unable to find the message it was attempting to issue in its own internal message table DFHMEMGT.

System action: An exception entry is made in the trace table by the message domain. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

User response: This message indicates an error in CICS code. However, its impact may not be severe.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHSUME

DFHME0134 *applid* Message *msgno* has been truncated because it was too long.

Explanation: The message (ME) domain was trying to output message *msgno*, but truncated the message because it was too long. Message *msgno* is a conversational message to an operator which has exceeded the maximum size of 119 characters.

System action: The ME domain truncates the message to 119 bytes before issuing it. An exception trace entry is made and a dump taken, but processing continues.

User response: This message indicates that *msgno* has been incorrectly defined in the message table, or that the inserts supplied to the message have caused it to exceed the size limit imposed on conversational messages. If enough information can be obtained from the truncated message, the impact of this error may not be severe. If necessary, you can continue to run your system without this message until a convenient time comes to resolve the problem.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance

from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEME

DFHME0135 *applid* The default language *language* specified in the SIT NATLANG parameter is invalid. It has been defaulted to E.

Explanation: The default language is the first character in the NATLANG system initialization parameter. The default language *language* is not in the list of valid CICS language suffixes.

System action: CICS continues with a default language of E (US English).

User response: If you do not want a default language of E, change the first character in the NATLANG system initialization parameter to another valid CICS language suffix. See the *CICS System Definition Guide* for a list of valid CICS language suffixes.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMESR

DFHME0136 *applid* Message *msgno* is missing from national language module *modname*. Searching the English message table for the message text.

Explanation: Message *msgno* cannot be issued in the specified language because the message was not found in the national language module *modname*.

This could be the result of a PTF containing message *msgno* not being applied to the module *modname*. In this case, the text of the missing message could be present in the English language message table DFHMET1E.

System action: An exception entry is made in the trace table. The message domain tries to find the message in the English language message table. If the message is not found in the English table either, message DFHME0108 is issued followed by a system dump.

User response: Run the MEU PTF update process to ensure that any new messages have been applied to your language table *modname*, and rebuild this table. See the *CICS Operations and Utilities Guide* for guidance on this.

If message DFHME0108 follows this message, there is an error in CICS code and you will need further

assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEIN

DFHME0137 *applid* Message *msgno* cannot be rerouted to a transient data destination by the message user exit XMEOUT.

Explanation: The message *msgno* cannot be rerouted to a transient data destination via XMEOUT because by doing so, CICS could get into a loop.

System action: An exception entry is made in the trace table. The message (ME) domain ignores the queue destination returned by the message exit and defaults to the original destination defined for message *msgno* in the message language module.

User response: Alter your message user exit program to avoid rerouting the message *msgno* to a transient data destination. The *noreroute* indicator is passed by the message domain to the exit so that the exit program can check whether or not it is valid to reroute a particular message.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMEME

DFHME0138 Message *msgno* not issued by *module* because MVS WTO is short on storage

Explanation: The message *msgno* cannot be written to the console because MVS is short on storage and the MVS WTO has abended with either abend code 878, 80A or 804 while trying to issue the message. The message domain module which was attempting to issue the message is *module*.

System action: An exception trace entry is written by the message domain and a dump is taken for dumpcode ME0138. Message DFHME0138 is written out in message text part of the dump summary instead of being sent to the console in order to avoid causing another abend.

User response: Ensure you have enough storage for MVS or reduce the storage requirements of your CICS system below 16MB. Try decreasing the limits of the CICS dynamic storage areas (DSAs), or increasing the MVS region size. To increase the MVS region size you must terminate CICS and change the MVS JCL REGION parameter. For more information about how to do this, see the *CICS Performance Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEME, DFHSUME

DFHME0139 *applid* (Module:*modname*) Message *msgno* has been suppressed by KILL processing.

Explanation: Message *msgno* has been suppressed for a task that is being killed.

The message and system dump request have been suppressed because the error has been caused by the attempt to kill the task.

System action: The attempt to kill the task continues.

User response: None

Destination: Console

Modules: DFHMEME

XMEOUT Parameters: *applid, modname, msgno*

DFHME0140 *applid* CICSplex SM messages cannot be issued because the English message table *mmmmmmmm* cannot be found.

Explanation: The message load module *mmmmmmmm* was not found in STEPLIB for the CICS job. This load module is required for CICSplex SM messages.

System action: An exception entry is made in the CICS trace table. Message domain stops processing this message and returns a disaster response to CICSplex SM which in turn cannot continue to issue messages because its message module has not been loaded.

User response: This error could have occurred because the CICSplex SM authorized library, which contains the default message load module is not in the JCL for the CICS job. Ensure that the correct library is included in the STEPLIB concatenation of the CICS JCL and restart your CICS.

Destination: Console

Modules: DFHMEME

DFHME0500 PLEASE ENTER A MESSAGE NUMBER.

Explanation: No search of the messages and codes file has been made because both the component ID and message number fields were blank when you pressed the ENTER key.

System action: The transaction redisplay the main menu with this message.

User response: Enter a valid message number or abend code.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Modules: DFHCMAC

DFHME0501 AN INVALID OPTION HAS BEEN ENTERED.

Explanation: A key other than F3 or ENTER has been pressed.

System action: The transaction redisplay the main menu with this message.

User response: Enter a valid message number or abend code and press ENTER, or press a valid function key.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Modules: DFHCMAC

DFHME0502 THE CMAC FILE IS DISABLED.

Explanation: The CMAC file is disabled for one of these reasons:

- The file was initially defined as disabled and has not been enabled
- The file has been disabled by an EXEC CICS SET command or by the CEMT transaction.

System action: The transaction redisplay the main menu with this message.

User response: If the CMAC file was defined as disabled, use the CEMT transaction to enable the file.

If the CMAC file has been disabled, determine the reason. It might have been disabled for maintenance or update.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Modules: DFHCMAC

DFHME0503 THE CMAC FILE CANNOT BE FOUND IN THE FCT.

Explanation: The CMAC file cannot be found in the file control table (FCT).

System action: The transaction redisplay the main menu with this message.

User response: Check that the CMAC file has been defined and installed. See the *CICS Transaction Server for z/OS Installation Guide* for guidance.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Modules: DFHCMAC

DFHME0504 RESOURCE SECURITY CHECK FAILED ON CMAC FILE.

Explanation: The resource security check has failed.

System action: The transaction redisplay the main menu with this message.

User response: Ensure that the resource security class is correct.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Modules: DFHCMAC

DFHME0505 THE CMAC FILE IS CLOSED OR UNENABLED.

Explanation: One of the following has occurred:

- The requested file is CLOSED and UNENABLED. The CLOSED, UNENABLED state is reached after a close request has been received against an OPEN ENABLED file and the file is no longer in use. This state can be specified as the initial state by means of the FILSTAT parameter of the DFHFCT TYPE=FILE control table macro, or by defining a file using the RDO options STATUS = UNENABLED and OPENTIME = FIRSTREF.
- The requested file is OPEN and UNENABLED and in use by other transactions, but a close request against the file has been received.

System action: The transaction redisplay the main menu with this message.

User response: Use the CEMT transaction to ensure that the CMAC file is in the OPEN ENABLED state.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Modules: DFHCMAC

DFHME0506 REQUESTED MESSAGE NUMBER/ABEND CODE NOT FOUND

Explanation: The attempt to retrieve the specified message number or abend code has been unsuccessful.

System action: The transaction redisplay the main menu with this message.

User response: Ensure that the correct message number or abend code has been entered.

If no message numbers or abend codes appear to be valid, check that the correct DSName has been specified on the CMAC file definition.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Modules: DFHCMAC

**DFHME0507 CHECK THAT THE CORRECT
DSNAME IS BEING USED.**

Explanation: An attempt to retrieve a record from the CMAC data set has been unsuccessful because the CMAC DSName is incorrectly specified.

System action: The transaction redisplay the main menu with this message.

User response: Ensure that the correct DSName has been specified on the CMAC file definition.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Modules: DFHCMAC

**DFHME0508 THE CMAC TRANSACTION IS
INVALID FOR THE CONSOLE.**

Explanation: You have tried to invoke the CMAC transaction from a CONSOLE. This is not permitted.

System action: The CMAC transaction ends with this message.

User response: Ensure that CMAC is invoked from a terminal that is not being used as a CONSOLE.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Modules: DFHCMAC

**DFHME9993I UNABLE TO DETERMINE LENGTH
OF MESSAGE *msgno - response reason***

Explanation: The message DFH*msgno* could not be found by the message (ME) domain in the message tables.

System action: CICS continues.

User response: If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination*

Guide for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Modules: DFHMGPME

**DFHME9994I UNABLE TO RETRIEVE MESSAGE
*msgno - response reason***

Explanation: The message DFH*msgno* could not be retrieved by the message (ME) domain from the message tables.

System action: CICS continues.

User response: If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Modules: DFHMGPME

**DFHME9996I MESSAGE PARAMETER LIST
ERROR - CHECK PLIST**

Explanation: The parameter list for the message generation process is not valid.

System action: CICS continues but the message in error cannot be issued.

User response: Ensure that the DFHMGT entry for the message has been built correctly.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Modules: DFHMGP00

**DFHME9997I MESSAGE FIND ERROR - CHECK
THE MESSAGE MODULE**

Explanation: The message being issued could not be found by the message generation process in the DFHMGT table entry for this message set.

System action: CICS continues but the message in error cannot be issued.

User response: Ensure that an entry exists for the message number in the appropriate DFHMGT tables.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Modules: DFHMGP00

DFHME9998I MESSAGE NUMBERS GREATER THAN 9999 ARE INVALID

Explanation: The message being issued has a message number greater than 9999. Message numbers should be in the range 1 through 9999.

System action: CICS continues but the message in error cannot be issued.

User response: Redefine the message number.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Modules: DFHMGP00

DFHMNxxxx messages

DFHMN0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation: An abend or program check has occurred in module *modname*. This implies an error in CICS code. Alternatively, it is possible that unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the *OS/390 MVS System Codes* manual.

Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning a user response.

DFHME9999I THE MESSAGE INDEX MODULE 'DFHMGT' IS MISSING

Explanation: The message generation process cannot find an index module in the DFHMGT table for the message it is trying to issue. This can occur where a message defined as being destined for either a console or a TDQ is being issued as a terminal end user message.

System action: CICS continues but the message in error cannot be issued.

User response: Ensure that the destination is correct for the message being issued.

Note: This message cannot be changed with the message editing utility.

Destination: Terminal End User

Modules: DFHMGP00

If module *modname* is not crucial to the running of your CICS system, you have the option to continue to run and to bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHMNDM, DFHMNMN, DFHMNNT, DFHMNSR, DFHMNST, DFHMNSU, DFHMNTI, DFHMNUE, DFHMNXM

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*, *modname*

DFHMN0002 *applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point id which uniquely identifies what the error is and where the error was detected. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS will continue unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller

of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Inform the system programmer. This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *module* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHMNDM, DFHMNMN, DFHMNNT, DFHMNSR, DFHMNST, DFHMNSU, DFHMNTI, DFHMNUE, DFHMNXM

XMEOUT Parameters: *applid, X'code', modname*

DFHMN0003 *applid* **Insufficient storage to satisfy Getmain (code X'code') in module *modname*.**

Explanation: A CICS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request.

The code X'code' is the exception trace point ID which uniquely identifies the place where the error was detected.

System action: An exception entry is made in the trace table (code *code* in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table. This is a critical error.

If DFHMNDM issues this message, CICS terminates, even if you have specified in the dump table that CICS should not terminate.

If DFHMNMN, DFHMNST or DFHMNXM issues this message, an exception trace and a system dump is taken and CICS continues.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the user response for these messages.

If CICS is still running, the problem may be a temporary one which will right itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

Try increasing the size limits of the DSAs or EDSAs. See the *CICS System Definition Guide* or the *CICS Performance Guide* for further information on CICS storage.

Destination: Console

Modules: DFHMNDM, DFHMNMN, DFHMNST, DFHMNXM

XMEOUT Parameters: *applid, X'code', modname*

DFHMN0004 *applid* **A possible loop has been detected at offset X'offset' in module *modname*.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'offset'. This is the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it will be necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS will purge a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* will be terminated and CICS will continue.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time

interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHMNDM, DFHMNMN, DFHMNSR, DFHMNST, DFHMNSU, DFHMNTI, DFHMNUE, DFHMNXM

XMEOUT Parameters: *applid, X'offset', modname*

DFHMN0005 *applid* **A hardware error has occurred (module *modname*, code *X'code'*). The Time-of-Day clock is invalid.**

Explanation: A hardware error has occurred during the running of module *modname*. The MVS Store Clock facility is the timing mechanism for the operating system. The code *X'code'* is the exception trace point ID which uniquely identifies the place where the error was detected.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS will continue unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. This is in all probability a hardware error and you should in the first instance investigate the MVS Store Clock and find out whether it is working properly. If this is the cause, you should take the appropriate action to have it repaired or replaced.

In the unlikely event that this is not a hardware problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHMNDM, DFHMNMN, DFHMNST, DFHMNUE, DFHMNXM

XMEOUT Parameters: *applid, modname, X'code'*

DFHMN0101 *applid* **SMF error - SMF return code *X'rc'*.**

Explanation: The monitoring domain authorized services routine issued a SMFEWTM macro to write a record to the MVS system management facilities (SMF) data set and encountered a non-zero return code.

System action: The request is ignored and the SMF record is lost. An exception entry is made in the trace table. CICS operation continues.

If the same error condition occurs continuously, the error messages are suppressed but tracing continues. The message is reissued if a different error condition occurs or if a zero return code has been received since the message was last issued.

User response: Consult the *OS/390 MVS System Programming Library: System Management Facilities (SMF)* manual for a detailed explanation of the return codes.

Destination: Console

Modules: DFHMNSU

XMEOUT Parameters: *applid, X'rc'*

DFHMN0103I *applid* **Monitoring control table for suffix '*xx*' not found.**

Explanation: The monitoring control table for suffix *xx* could not be found in the library described by the DFHRPL DD statement. This suffix is specified as a system initialization parameter.

System action: Control is returned to the parameter manager for interaction with the operator. Further action depends upon which PARMERR= parameter is specified. The operator may enter another suffix or continue with system initialization.

If initialization continues without an override, monitoring domain uses the default monitoring control table.

User response: There are three likely causes of this error:

- The monitoring control table is not in the library.
- The monitoring control table name has been misspelled.
- An incorrect suffix has been used at startup.

Ensure that the suffix specified is correct and that a library described in the DFHRPL DD statement contains a copy of the named monitoring control table.

If the suffix is incorrect and PARMERR=INTERACT is specified, the operator is prompted to enter an alternative suffix.

If the suffix is incorrect and PARMERR=IGNORE is specified, the monitoring domain uses the default monitoring control table.

If the monitoring control table is missing or misspelled and you want to reinstall it, CICS has to be terminated. Reassemble the monitoring control table into the relevant library.

Destination: Console

Modules: DFHMNSR

XMEOUT Parameters: *applid, xx*

DFHMN0104 *applid* Monitoring Control Table with suffix 'xx' required for restart not found.

Explanation: The monitoring domain has determined the monitoring control table suffix *xx* from the last CICS execution, but was unable to locate the monitoring control table in the library described by the DFHRPL DD statement and no override suffix has been specified.

Subsequent executions of CICS will continue to use the suffix specified in the message until it is changed in the SIT.

System action: Initialization continues with the monitoring domain using the default monitoring control table.

User response: Ensure that a library described in the DFHRPL DD statement contains a copy of the named monitoring control table. If the monitoring control table is missing, it must have been deleted. If you want to reinstall the table, CICS must be terminated. Reassemble the monitoring control table into the relevant library.

Destination: Console

Modules: DFHMNDM

XMEOUT Parameters: *applid, xx*

DFHMN0105I *applid* Using default Monitoring Control Table.

Explanation: The monitoring domain is initializing with default monitoring control table settings. This occurs:

1. If the user has specified MCT=NO, or
2. Following message DFHMN0104, or
3. After message DFHMN0103 or DFHMN0106 has been issued, but no corrective action has been taken.

System action: System initialization continues.

User response: None.

Destination: Console

Modules: DFHMNDM

XMEOUT Parameter: *applid*

DFHMN0106 *applid* Unable to read the catalog record for the Monitoring Domain.

Explanation: The monitoring domain has attempted to re-establish the status of the monitoring classes and the monitoring control table suffix under which it was running during the last execution of CICS. But it was unable to successfully read the record from the global catalog.

System action: An exception entry is made in the trace table.

System initialization continues with the supplied system initialization parameters.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the cause of the error using any dump or other diagnostic messages which have been issued (for example, from VSAM or MVS).

If the problem has been caused by an I/O error, there will be an earlier CICS message from the catalog. Follow the user response for this message.

If the problem has been caused by an invalid data length, there will be an exception trace entry in the trace table.

Destination: Console

Modules: DFHMNDM

XMEOUT Parameter: *applid*

DFHMN0107 *applid* Unable to update the catalog record for the Monitoring Domain.

Explanation: The monitoring domain has attempted to update either the status of the monitoring classes or the monitoring control table suffix in the CICS global catalog, but was unable to successfully complete the request.

System action: An exception entry is made in the trace table, and CICS operation continues with the updated values. Since the updates are not saved across a restart, the subsequent execution of CICS will restart with values recorded before the updates were applied.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the cause of the error using any dump or other diagnostic messages which have been issued (for example, from VSAM or MVS).

If the problem has been caused by an I/O error, there will be an earlier CICS message from the catalog. Follow the user response for this message.

If the problem has been caused by an invalid data length, there is an exception trace entry in the trace table.

Destination: Console

Modules: DFHMNSU

XMEOUT Parameter: *applid*

DFHMN0108I *applid* Using Monitoring Control Table suffix 'xx'.

Explanation: The monitoring control table with the suffix *xx* is used for this CICS run.

System action: Processing continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Modules: DFHMNDM

XMEOUT Parameters: *applid, xx*

DFHMN0109I *applid* CICS Monitoring is active.

Explanation: The CICS monitoring facility is currently active for this run of CICS.

System action: Processing continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Modules: DFHMNDM

XMEOUT Parameter: *applid*

DFHMN0110I *applid* CICS Monitoring is inactive.

Explanation: The CICS monitoring facility is currently inactive for this run of CICS.

System action: Processing continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Modules: DFHMNDM

XMEOUT Parameter: *applid*

DFHMN0201 S Invalid parameter. The equals sign is missing.

Explanation: A SYSIN parameter has been encountered that does not contain an equals sign. Equals signs are mandatory for every keyword supported by the monitoring dictionary utility.

System action: The job step is terminated with a return code of 12.

User response: Correct the SYSIN keyword that does not have an equals sign and resubmit the job. For further guidance on the syntax of DFHMNDUP keywords, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0202 S Invalid parameter. MCT incorrectly specified

Explanation: Following the equals sign of the MCT= keyword there must be a 2-character operand or a delimiter. Neither has been found. The 2-character operand is treated as the suffix for an MCT to load.

System action: The job step is terminated with a return code of 12.

User response: Correct the MCT= keyword with a valid operand or delimiter.

If you do not wish to have a dictionary record constructed from a particular MCT, you can use a default MCT image by specifying a blank or a comma after the equals sign, or by specifying MCT=NO. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0203 S Invalid parameter. SYSID must be four characters or less.

Explanation: A SYSID of greater than 4 characters, or a SYSID keyword without an operand has been specified.

System action: The job step is terminated with a return code of 12.

User response: Specify a valid SYSID of up to 4 characters. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0204 S Invalid parameter. GAPPLID must be eight characters or less.

Explanation: A generic APPLID (GAPPLID) of greater than 8 characters, or a GAPPLID keyword without an operand has been specified.

System action: The job step is terminated with a return code of 12.

User response: Specify a valid GAPPLID of up to 8 characters. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0205 S Invalid parameter. SAPPLID must be eight characters or less.

Explanation: A specific APPLID (SAPPLID) of greater than 8 characters has been specified.

System action: The job step is terminated with a return code of 12.

User response: Specify a valid SAPPLID of up to 8 characters or allow the SAPPLID to default to the GAPPLID by not specifying SAPPLID. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0206 S Invalid parameter. DATE must be of format yyddd or yyyyddd.

Explanation: The date has been specified incorrectly. There are three possible reasons for this:

- The date specified is not in the correct format of yyddd or yyyyddd
- The date contains nonnumeric characters
- 'ddd' is not in the range 1 through 366.

System action: The job step is terminated with a return code of 12.

User response: Ensure that the date is in the format 'yyddd' or 'yyyyddd' and that the values are valid.

If you want DATE to default to the current date, do not specify this parameter. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0207 S Invalid parameter. TIME must be of format hhhmss.

Explanation: The time has been specified incorrectly. There are three possible reasons for this:

- More than 6 characters have been specified
- The value specified contains nonnumeric characters
- The hours (hh), minutes (mm), or seconds (ss) are outside of the valid range.

System action: The job step is terminated with a return code of 12.

User response: Ensure that the time specified is in the format 'hhmmss' and that the values are valid.

If you want TIME to default to the current time, do not specify this parameter. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0208 S Invalid parameter. Keyword is unknown.

Explanation: A SYSIN parameter has been processed and found to contain an unrecognized keyword.

System action: The job step is terminated with a return code of 12.

User response: Rename the unrecognized keyword. See the *CICS Operations and Utilities Guide* for a complete list of supported keywords. Also, ensure that there are no blanks preceding any of the keywords in the SYSIN data set.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0209 S No SYSIN parameters have been specified.

Explanation: There are no SYSIN parameters specified in the JCL.

System action: The job step is terminated with a return code of 12.

User response: Check the JCL for the existence of SYSIN parameters. If SYSIN does not exist or has no parameters, see the *CICS Operations and Utilities Guide* for guidance on coding DFHMNDUP parameters.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0210 S applid Load for MCT has failed. MCT cannot be found. A dump will be provided.

Explanation: DFHMNDUP attempted to load 'DFHMCTxx' from STEPLIB, where 'xx' is the suffix

provided via the MCT= keyword. This MCT was not found in the STEPLIB concatenation.

System action: The job step is abended with a dump.

User response: Ensure that the MCT suffix is correct and that the library that contains it is in the STEPLIB concatenation for the job step.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMNDUP

DFHMN0211 S Getmain storage for control blocks has failed.

Explanation: An MVS GETMAIN for the utilities global storage has failed. There is not enough MVS storage below the line available in the region.

System action: The job step is terminated with a return code of 12.

User response: Increase the REGION= parameter of your JCL and try again. If this fails, consult your MVS system programmer.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0212 S Getmain storage for output record has failed.

Explanation: An MVS GETMAIN for the 32KB record buffer storage has failed. There is not enough MVS storage below the line available in the region.

System action: The job step is terminated with a return code of 12.

User response: Increase the REGION= parameter of your JCL and try again. If this fails, consult your MVS system programmer.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0213 S The MVS TIME macro has failed. There is a clock error.

Explanation: Because DATE and/or TIME have not been specified, DFHMNDUP has attempted to retrieve the current DATE and/or TIME from MVS using the TIME macro. The TIME macro has reported that the MVS clocks are damaged.

System action: The job step is terminated with a return code of 12.

User response: Inform your MVS system programmer of the failure.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0214 S Invalid parameter. Missing delimiter detected.

Explanation: DFHMNDUP parameter syntax requires keyword/operand pairs to be separated by a delimiter in the form of a comma or a blank space. A delimiter has been found missing from a keyword/operand.

System action: The job step is terminated with a return code of 12.

User response: If the SYSIN data set has been coded such that there are multiple parameters on one line, then ensure that there is one blank or one comma between each parameter. If the SYSIN data set has been coded such that there is only one parameter on a line, ensure that it is terminated with a blank or a comma. For further guidance on the syntax of DFHMNDUP parameters, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0215 S Mandatory SYSIN parameter(s) missing.

Explanation: The two mandatory parameters are for the generic APPLID (GAPPLID) and the MVS system identifier (SYSID). These two parameters have not been specified and there are no defaults.

System action: The job step is terminated with a return code of 12.

User response: Specify the following:

- the generic APPLID of the CICS system that DFHMNDUP is going to produce a dictionary record for
- the MVS system identifier for the MVS system that produced the monitoring performance class records you are going to process.

For further guidance on the syntax of DFHMNDUP parameters, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0216 S Invalid parameter. JOBNAME must be eight characters or less.

Explanation: A JOBNAME has been specified with more than eight characters.

System action: The job step is terminated with a return code of 12.

User response: Specify a valid JOBNAME of up to eight characters. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0217 S Invalid parameter. JOBDATE must be of format yyddd or yyyyddd.

Explanation: The JOBDATE parameter has been specified incorrectly. There are three possible reasons for this:

- The date specified is not in the correct format of yyddd or yyyyddd
- Nonnumeric characters have been specified
- The number of days 'ddd' is not in the range 1 through 366.

System action: The job step is terminated with a return code of 12.

User response: Ensure that JOBDATE consists of valid characters in the format 'yyddd' or 'yyyyddd'.

If you want JOBDATE to default to the current date, do not specify this parameter. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0218 S Invalid parameter. JOBTIME must be of format hhmmss.

Explanation: The JOBTIME parameter has been specified incorrectly. There are three possible reasons for this:

- More than six characters have been specified
- Nonnumeric characters have been specified
- The hours (hh), minutes (mm), or seconds (ss) are outside of the valid range.

System action: The job step is terminated with a return code of 12.

User response: Ensure that JOBTIME consists of valid characters in the format 'hhmmss'.

If you want JOBTIME to default to the current time, do not specify this parameter. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0219 S Invalid parameter. USERID must be eight characters or less.

Explanation: A USERID has been specified with more than eight characters.

System action: The job step is terminated with a return code of 12.

User response: Specify a valid USERID of up to eight characters. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMNDUP

DFHMN0220 DFHMNDUP CANNOT OPEN THE SYSPRINT FILE.

Explanation: The SYSPRINT file cannot be opened because the SYSPRINT DD statement is missing or incorrectly defined.

System action: The job step is terminated with a return code of 12.

User response: Ensure that the SYSPRINT DD statement has been correctly defined. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHMNDUP

DFHMN0221 DFHMNDUP CANNOT OPEN THE SYSIN FILE.

Explanation: The SYSIN file cannot be opened because the SYSIN DD statement is missing or incorrectly defined.

System action: The job step is terminated with a return code of 12.

User response: Ensure that the SYSIN DD statement has been correctly defined. For further guidance, see the *CICS Operations and Utilities Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHEISUP

DFHMS0102 S PRIMARY PARAMETER PARAMETER WAS NOT RECOGNIZED.

Explanation: The Scanner failed to recognize the first parameter passed.

System action: None.

User response: Refer to the documentation for correct usage of the Scanner.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHEISUP

DFHMS0105 S CONVERT OF DD TO FULLY QUALIFIED DSNNAME FAILED.

Explanation: The Scanner needs to convert a name given on a DD back to its Fully Qualified Name in order to access members. This conversion process failed.

System action: None.

User response: You may need further assistance from IBM to resolve this problem.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHEISUP

DFHMS0103 S SECONDARY PARAMETER PARAMETER WAS NOT RECOGNIZED.

Explanation: The Scanner failed to recognize the second parameter passed.

System action: None.

User response: Refer to the documentation for correct usage of the Scanner.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHEISUP

DFHMS0106 S FAILED TO OPEN PDS DURING DD CONVERT.

Explanation: The Scanner encountered an error whilst attempting to open the PDS *PDS* to retrieve its Fully Qualified Name.

System action: None.

User response: Refer to the documentation for correct usage of the Scanner.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHEISUP

DFHMS0104 S UNABLE TO OPEN INPUT FILE LIST FILELIST.

Explanation: The Scanner has been asked to scan the

DFHMS0107 S PDS, MALLOC FAILED FOR N BYTES.

Explanation: During PDS processing, there was not

sufficient memory remaining to allocate *N* bytes.

System action: None.

User response: Increase the size of the region allocated to the Scanner at runtime.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHEISUP

DFHMS0108 S PDS, FAILED TO OPEN PDS: PDS.

Explanation: The Scanner was asked to deal with PDS *PDS*, but was unable to open the PDS for access.

System action: None.

User response: Check the accessibility of datasets specified in the JCL.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHEISUP

DFHMS0109 S PDS, FAILED TO READ PDS.

Explanation: The Scanner was asked to deal with a PDS, but was unable to retrieve data from the PDS.

System action: None.

User response: Ensure the Scanner has access to datasets specified in the JCL.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHEISUP

DFHMS0110 S UNABLE TO OPEN THE FILTER INPUT DATASET: FILTER.

Explanation: The Scanner was instructed to use dataset *FILTER* as its filter input table, but was unable to open the dataset for processing.

System action: None.

User response: Ensure the Scanner has access to DD DFHFLTR specified in the JCL.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHEISUP

DFHMS0111 S FILTER VALIDATION HAS WARNINGS ABOUT FILTERLINE. THE FOLLOWING WARNINGS APPLY: WARNINGS.

Explanation: The Scanner found problems during validation of the specified filter. The filter line *FILTERLINE* was found to have the following warnings. *WARNINGS*

System action: None.

User response: Correct the errors in the offending filter lines, and rerun the Scanner. Refer to the documentation for assistance with specifying filters.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHEISUP

DFHMS0112 S FILTER VALIDATION HAS FAILED TO VALIDATE FILTERLINE. THE FOLLOWING PROBLEMS WERE FOUND: PROBLEMS.

Explanation: The Scanner found problems during validation of the specified filter. The filter line *FILTERLINE* was found to have the following problems. *PROBLEMS*

System action: None.

User response: Correct the errors in the offending filter lines, and rerun the Scanner. Refer to the documentation for assistance with specifying filters.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHEISUP

DFHMS0113 S UNEXPECTED VERB VERB WITH NO PARAMETERS FOUND.

Explanation: The Scanner has encountered an internal error with Verb *VERB*.

System action: None.

User response: You may need further assistance from IBM to resolve this problem.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHEISUP

**DFHMS0114 S INSUFFICIENT STORAGE
SCANNING MODULE, NUMBER
SCANNED.**

Explanation: The Scanner was unable to allocate sufficient storage to complete the scan and stopped whilst scanning *MODULE*.

System action: None.

User response: Increase the region size for the Scanner job, or decrease the number of modules to be scanned.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHEISUP

DFHMUxxxx Message editing utility messages

**DFHMU0102 SOURCE DATA FILE NOT FOUND, OR
RECORD FORMAT OR LENGTH NOT
VALID.**

Explanation: Either the input file has been deleted or has not been defined correctly.

System action: Processing terminates.

User response: Ensure the input file exists and has been defined as RECFM F LRECL 80.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

**DFHMU0103 UNRECOGNIZED CONTROL WORD
ON INPUT DATA RECORD.**

Explanation: An unrecognized control word was encountered during processing. The line printed following this message contains the word in error.

System action: Processing continues.

User response: Correct or remove the incorrect control word.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

**DFHMU0104 MISPLACED INPUT RECORD IN
DATA SEQUENCE.**

Explanation: An input record has been placed incorrectly. The record in error is printed after this message.

System action: Processing continues.

User response: Place the record in error in the correct position.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

**DFHMU0105 PREMATURE END OF FILE REACHED
IN 'SCANPARAMS' DATA SEQUENCE.**

Explanation: End of file (EOF) was detected while processing the SCANPARAMS section of the message source (DFHMExxE) file.

System action: Processing terminates.

User response: Check the message source file for corruption and ensure that the SCANPARAMS section and subsequent message definitions have been completed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

**DFHMU0106 PREMATURE END OF FILE REACHED
IN 'MEMBERLIST' DATA SEQUENCE.**

Explanation: Processing of a link-edit (DFHMETxx) file has ended because of an unexpected end-of-file (EOF) condition in the MEMBERLIST section.

System action: Processing terminates.

User response: Correct and complete the MEMBERLIST section of the link-edit file.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

**DFHMU0107 PREMATURE END OF FILE REACHED
IN 'GLOBALS' DATA SEQUENCE.**

Explanation: Processing of the DFHME00x file (where x is the current language suffix identifier) GLOBALS section was terminated due to an end-of-file (EOF) condition.

System action: Processing terminates.

User response: Check DFHME00x for corruption, and

ensure that the GLOBALS section is complete and valid.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0108 MESSAGE *msgno*: PREMATURE END OF FILE REACHED IN 'MSGDEF' DATA SEQUENCE.

Explanation: An end-of-file (EOF) condition was encountered during the processing of message *msgno*. This is due to an incomplete message definition.

System action: Processing terminates.

User response: Complete the message definition for *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0109 NEXT LINE IS INCORRECT. IT MUST BE 'MEMBERLIST', 'SCANPARAMS', 'GLOBALS', OR 'MSGDEF'.

Explanation: The next line in the message source file being processed has not been recognized.

System action: Processing terminates after the validation routine.

User response: Ensure that the following parameters are present.

- MEMBERLIST in message link-edit (DFHMETxx) files.
- SCANPARAMS as the first parameter in all message source (DFHMExxE) files.
- GLOBALS in the NLS module DFHMET00x (where x is the current language suffix identifier).
- MSGDEF at the start of all message definition groups.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0110 MISPLACED RECORD IN 'SCANPARAMS' SEQUENCE.

Explanation: A record is not recognized as being part of the SCANPARAMS sequence. The record is printed after this message.

System action: Processing terminates after the validation routine.

User response: Reposition the incorrect parameter from the SCANPARAMS sequence in its correct position in the file. If the parameter is unknown, remove it from the file.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0111 INCORRECT INPUT RECORD FOUND WHEN 'MEMBER' EXPECTED.

Explanation: The keyword encountered on the record being processed is invalid for the link-edit (DFHMETxx) files. The record is printed after this message.

System action: Processing continues.

User response: Correct or remove the invalid record.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0112 MISPLACED RECORD IN 'GLOBALS' SEQUENCE

Explanation: A keyword has been encountered that is not valid in the GLOBALS section of the message file. The record in error is printed after this message.

System action: Processing continues.

User response: Correct or remove the record containing the invalid keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0113 MISPLACED RECORD IN 'MSGDEF' SEQUENCE

Explanation: A record is out of sequence in the message definition. The record in error is printed after this message.

System action: Processing continues.

User response: Sequence the message definition records correctly.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0114 NUMBER OF MEMBERS IN MEMBERLIST EXCEEDS MAXIMUM ALLOWED.

Explanation: The maximum of 150 message members has been exceeded in the link-edit DFHMETxx module.

System action: Processing continues.

User response: Reduce the number of members in the MEMBERLIST section.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0115 MESSAGE *msgno*: TOO MANY SOURCE LINES.

Explanation: The maximum of 80 non-null and non-comment source lines has been exceeded in message *msgno*.

System action: Processing continues.

User response: Reduce the number of source lines in message *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0116 'MEMBER' RECORD IS NOT A VALID 2-CHARACTER MESSAGE COMPONENT IDENTIFIER.

Explanation: The DFHMETxx member record printed after this message has an incorrect identifier.

System action: Processing continues.

User response: Ensure that all message component identifiers (MEMBER records) are correct.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0117 VALUE MISSING FOR KEYWORD ON GLOBAL OR PARAMETER RECORD.

Explanation: The keyword on the record printed after this message requires a value.

System action: Processing continues.

User response: Enter the required value for the keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0118 MESSAGE *msgno*: NO DATA DEFINED BETWEEN 'MSGDEF' AND 'ENDMSG'.

Explanation: The message definition for message *msgno* is incomplete. Only the MSGDEF and ENDMSG records have been created.

System action: Processing continues.

User response: Complete or remove the definition of message *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0119 MESSAGE *msgno*: INVALID KEYWORD FOUND ON 'MSGDEF' DATA RECORD.

Explanation: A keyword specified on the MSGDEF record is not known to the system.

System action: Processing continues.

User response: Ensure that the spelling of the MSGDEF keywords is correct.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0120 MESSAGE NUMBER IS MISSING OR NOT A VALID 4-DIGIT NUMBER.

Explanation: A message number is missing or does not consist of 4 digits.

System action: Processing continues.

User response: Specify a valid 4-digit message number after the MSGNO keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0121 MESSAGE *msgno*: DESTINATION NAME MISSING FROM 'DEST' RECORD.

Explanation: The destination identifier is missing from the DEST keyword in message *msgno*.

System action: Processing continues.

User response: Specify a valid destination identifier.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0122 MESSAGE *msgno*: NO DELIMITERS FOUND FOR TEXT STRING.

Explanation: Opening and closing delimiters are missing from a text string in message *msgno*. The text string is printed after this message.

System action: Processing continues.

User response: Ensure all text strings are enclosed in delimiters.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0123 MESSAGE *msgno*: AN OPENING OR CLOSING DELIMITER IS MISSING FROM A TEXT STRING.

Explanation: An opening or closing delimiter is missing from a text string in message *msgno*. The text string is printed after this message.

System action: Processing continues.

User response: Ensure that all text strings are enclosed in delimiters.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0124 MESSAGE *msgno*: SUFFIX FOR 'INS#NN','REPLY#NN' OR 'VALUE#NN' IS INCORRECT. 'NN' MUST BE IN RANGE 1 TO 10.

Explanation: A maximum of 10 inserts is permitted for each message definition. The insert number *nn* in INS#*nn*, REPLY#*nn*, or VALUE#*nn* in message *msgno* has been mistyped or exceeds the maximum value.

System action: Processing continues.

User response: Correct the insert number.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0125 MESSAGE *msgno*: INSERT DATA RECORD HAS 'FORMAT' KEYWORD MISPLACED OR MISSPELLED.

Explanation: The FORMAT keyword for the record that defines an insert has either been misplaced or misspelled. FORMAT must always be the first keyword of the insert definition.

The incorrect record is printed after this message.

System action: Processing continues.

User response: Correct the spelling or position of the FORMAT keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0126 MESSAGE *msgno*: INVALID FORMAT TYPE. FORMAT MUST BE CHAR, HEX, DEC, TIME, OR DATE.

Explanation: The format type which is specified after the FORMAT keyword for message *msgno* is not valid. The FORMAT record at fault is printed after this message.

System action: Processing continues.

User response: Specify CHAR, HEX, DEC, TIME, or DATE after the FORMAT keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0127 MESSAGE *msgno*: 'FORMAT'
OPERAND IS INCOMPLETE.
'FORMAT' MUST BE CHAR, HEX,
DEC, TIME, OR DATE.

Explanation: The FORMAT record in message *msgno* is incomplete. The record at fault is printed after this message.

System action: Processing continues.

User response: Complete the FORMAT record details.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0128 MESSAGE *msgno*: VALUE#*nn*
KEYWORD INCORRECT OR MISSING
ON INS#*nn* DATA RECORD.

Explanation: The keyword VALUE has been misspelled or is missing on the INSERT record of message *msgno*. The record at fault is printed after this message.

System action: Processing continues.

User response: Correct the record.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0129 MESSAGE *msgno*: INVALID KEYWORD
keyword ON 'SPECIAL_INSERT/
TIMESTAMP' CARD.

Explanation: An invalid keyword *keyword* follows the TIME special insert record.

System action: Processing continues.

User response: Correct or remove the invalid keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0130 MESSAGE *msgno*: INTERNAL LOGIC
ERROR CONVERTING FULLWORD
TO CHARACTER FORMAT.

Explanation: The value of the message number being processed is greater than 9999. This is an internal error caused by the corruption of DFHMEU.

System action: Processing terminates.

User response: Restore DFHMEU and retry the process. If the process fails again, you will need further assistance. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0131 MESSAGE *msgno*: DESTINATION IS
NOT VALID.

Explanation: The destination for message *msgno* is not recognized.

System action: Processing terminates at the end of the validation routine.

User response: Specify a valid message destination after the DEST keyword for message 'msgno'.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0132 MESSAGE *msgno*: ONE OR MORE
SHIFT-OUT OR SHIFT-IN SYMBOLS
MISPLACED OR MISSING.

Explanation: One or more Shift-Out or Shift-In symbols have not been found in the double-byte character set (DBCS) message *msgno*.

System action: Processing continues.

User response: Ensure all text strings in DBCS messages are surrounded by Shift-Out and Shift-In symbols.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

**DFHMU0133 INVALID VALUE FOR GLOBAL
FORMAT DEFINITION.**

Explanation: The value listed for the keyword on the record printed after this message is not valid.

System action: Processing continues.

User response: Correct the keyword value.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0134 MESSAGE *msgno* IS OUT OF SEQUENCE IN SOURCE FILE.

Explanation: The definition of message *msgno* is out of sequence in the message file. Message definitions must be positioned in ascending order of their message numbers.

System action: Processing continues.

User response: Move the definition of message *msgno* to its correct position in the source file.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0135 MESSAGE *msgno*: DUPLICATE MESSAGE NUMBER IN SOURCE FILE.

Explanation: The message *msgno* has already been defined in the message file.

System action: Processing continues.

User response: Remove the duplicate message definition or reassign with a unique message number.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0136 MESSAGE *msgno*: PREMATURE END OF FILE IN 'SYMDEF' DATA SEQUENCE.

Explanation: End of file (EOF) was detected while processing the SYMDEF section of the message definition. The SYMDEF section should be terminated by an ENDSYM record.

System action: Processing terminates.

User response: Insert an ENDSYM record to terminate the SYMDEF section of message *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0137 MESSAGE *msgno*: UNRECOGNIZED SYMPTOM KEYWORD.

Explanation: The record being processed is not recognized as a symptom keyword.

System action: All records up to the next ENDSYM keyword are rejected. If a record with an ENDSYM is not found, all records are rejected until end of file.

User response: Ensure that an ENDSYM record exists for the symptom section and that all keywords are valid.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0138 MESSAGE *msgno*: MISSING SYMPTOM ARGUMENT.

Explanation: The SYMPTOM keyword printed after this message does not have an associated argument.

System action: Processing continues.

User response: Add a valid argument to the SYMPTOM keyword for message *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0139 MESSAGE *msgno*: INVALID SYMPTOM ARGUMENT: INS#n | SPECIAL_INSERT | TEXT STRING.

Explanation: The argument specified for the SYMPTOM keyword printed after this message is not valid.

System action: Processing continues.

User response: Correct the SYMPTOM keyword argument for message *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0140 MESSAGE *msgno*: UNDEFINED INSERT IN SYMPTOM OR EXIT RECORD.

Explanation: The insert number specified on the SYMPTOM or EXIT record printed after this message has not been defined in the message definition.

System action: Processing continues.

User response: Correct the SYMPTOM or EXIT keyword insert.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0141 MESSAGE *msgno*: SYMPTOM DATA ARGUMENT IS NOT VALID.

Explanation: The argument specified for the SYMPTOM keyword shown following this message is incorrect for this symptom.

System action: Processing continues.

User response: Ensure that the specified argument is the correct one for the SYMPTOM keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0142 MESSAGE *msgno*: SPECIAL INSERT IS NOT VALID AS A SYMPTOM ARGUMENT.

Explanation: The special insert specified as an argument to the SYMPTOM keyword for message *msgno* is not valid in the symptom string. The symptom record is printed after this message.

System action: Processing continues.

User response: Correct the symptom record.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0143 MESSAGE *msgno*: TEXT SYMPTOM ARGUMENT CONTAINS INVALID CHARACTERS.

Explanation: The text specified in the SYMPTOM argument contains one or more characters that are not allowed in IBM's RETAIN system.

System action: Processing continues.

User response: Ensure text arguments for SYMPTOM keywords contain only the following characters A to Z, 0 to 9, @, #, \$, and &.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0144 MESSAGE *msgno*: NO ROUTECODES SPECIFIED. DEFAULTING TO 2 AND 11.

Explanation: The ROUTECODES keyword has been specified without any routecodes and has defaulted to routecodes 2 and 11.

System action: Processing continues.

User response: Accept the defaults or specify alternate valid routecodes.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0145 MESSAGE *msgno*: INVALID DESTINATION KEYWORD. IT SHOULD BE *x*.

Explanation: The system encountered an invalid destination keyword. The valid keyword should be *x*. The line in error is printed after this message.

System action: Processing continues.

User response: Correct the destination keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0146 MESSAGE *msgno* ROUTECODE *x* IS OUT OF RANGE. VALID RANGE IS >0 TO <=*n*.

Explanation: An invalid value has been specified for a routecode.

System action: Processing continues.

User response: Correct the routecode value. The routecode should be greater than 0 and less than or equal to *n*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0147 MESSAGE *msgno*: TRANSIENT DATA QUEUE *qname* IS NOT VALID.

Explanation: The destination transient data queue (TDQ) *qname* in message *msgno* is unknown to the system.

System action: Processing continues.

User response: Correct the TDQ name.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0148 MESSAGE *msgno*: THE VALUE *x* IS NOT VALID. IT MUST BE NUMERIC.

Explanation: An EXIT parameter has been specified with a nonnumeric value.

System action: Processing continues.

User response: Ensure all EXIT parameters are defined with numeric values.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0149 MESSAGE *msgno*: INVALID ARGUMENT GIVEN FOR EXIT PARAMETER *n*.

Explanation: The insert argument specified on EXIT parameter *n* is unknown.

System action: Processing continues.

User response: Specify a valid argument for the exit parameter *n*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0150 MESSAGE *msgno*: EXIT PARAMETER *n* SPECIFIES AN INSERT NOT IN THE MESSAGE DEFINITION.

Explanation: The EXIT parameter *n* has specified an insert which does not exist in the definition template of message *msgno*.

System action: Processing continues.

User response: Specify only existing inserts for the EXIT parameters.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0151 MESSAGE *msgno*: NO EXIT PARAMETERS HAVE BEEN SPECIFIED.

Explanation: No EXIT parameters have been specified for this message. These are required because the message contains inserts.

System action: Processing continues.

User response: Add user exit information to the message definition.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0152 MESSAGE *msgno*: EXIT PARAMETER *n* IS MISSING.

Explanation: The EXIT parameter for insert *n* is missing.

System action: Processing continues.

User response: Insert the missing EXIT parameter.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0153 MESSAGE *msgno*: EXIT PARAMETER NUMBER IS NOT VALID. IT MUST BE GREATER THAN ZERO.

Explanation: An EXIT parameter number was defined with a number of zero. These parameter numbers should start from 1.

System action: Processing continues.

User response: Renumber the EXIT parameters correctly.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0154 MESSAGE *msgno*: INSERT *n* DOES NOT HAVE AN EXIT PARAMETER.

Explanation: A mismatch was found between the number of inserts and the user exit parameters defined for this message. There must be an EXIT parameter defined for each message insert.

System action: Processing continues.

User response: Correct the user exit parameters defined for this message.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0155 MESSAGE *msgno*: QUEUE NAME MISSING FROM TDQ DESTINATION.

Explanation: Message *msgno* has a transient data queue (TDQ) destination type but no TDQ name has been specified.

System action: Processing continues.

User response: Enter a valid TDQ name.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0156 MESSAGE *msgno*: 'QUEUES' KEYWORD IS MISSING.

Explanation: The TDQ destination QUEUES keyword has been omitted from the definition of message *msgno*.

System action: Processing continues.

User response: Specify the QUEUES keyword and a valid TDQ name.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0157 MESSAGE *msgno*: KEYWORD *keyword* HAS ALREADY BEEN SPECIFIED.

Explanation: The destination keyword *keyword* has already been specified for message *msgno*.

System action: Processing continues.

User response: Remove the duplicate entry or merge the destinations with the previous destination definition for this message.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0158 MESSAGE *msgno*: TOO MANY INSERTS ON SPECIAL INSERT LINE.

Explanation: More than four special inserts have been specified on one line.

System action: Processing continues.

User response: If you need more than four special inserts, create another SPECIAL_INSERT line with the extra inserts.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0159 MESSAGE *msgno* DESTINATION *destid*: TDQ NAME OR ROUTE CODE *destname* IS REPEATED.

Explanation: The destination *destid*, (either console or TDQ), has a duplicate *destname* entry. The *destname* is a route code if *destid* is console, or a transient data queue name if *destid* is TDQ.

System action: Processing continues.

User response: Correct the destination information for this message by removing the duplicate entry.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0160 MESSAGE *msgno*: INSERT *n* HAS ALREADY BEEN SPECIFIED.

Explanation: The insert *n* has been repeated in the definition of the exit parameters. There should only be one exit parameter per insert.

System action: Processing continues.

User response: Correct the insert definition in the exit parameter section of message *msgno*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0162 'MEXDEF' KEYWORD IS MISSING OR MISPLACED.

Explanation: The MEXDEF keyword is either missing or in the wrong place. This keyword signifies the start of the user exit parameters definition section. It should appear after the definition of the message text and before the ENDMSG keyword.

System action: Processing continues.

User response: Ensure the MEXDEF keyword is present and in the correct place.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0163 MESSAGE *msgno*: 'MEXDEF' IS SPECIFIED BUT NO INSERTS EXIST IN THE MESSAGE DEFINITION..

Explanation: The MEXDEF keyword has been included in the definition of message *msgno* but there are no inserts defined for it. MEXDEF indicates the start of the user exit parameter definition section, and user exit parameters are only needed when a message contains inserts.

System action: Processing continues.

User response: Remove the MEXDEF keyword or ensure that message inserts have not been omitted from the message template.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0165 MESSAGE *msgno*: 'MEXDEF' SPECIFIED FOR A MESSAGE THAT IS NEITHER CONSOLE NOR TDQ.

Explanation: A MEXDEF record has been included in a message definition when the output destination is not Console or TDQ. The MEXDEF record implies that the message is available for the message user exit. Only messages to a console or TDQ destination can go through the message user exit.

System action: Processing continues.

User response: Either remove the MEXDEF record or change the message destination.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0166 MESSAGE *msgno*: USER EXIT DATA SPECIFIED FOR A BOOKONLY OR OFFLINE MESSAGE.

Explanation: User exit parameters have been specified for message *msgno* which is not produced by the message domain because it is a bookonly or offline message. This message does not need user exit parameters as it is not available for the message user exit.

System action: Processing continues.

User response: Ensure that message *msgno* has been correctly defined as bookonly or offline. If it has, remove the user exit parameters.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0167 MESSAGE *msgno*: 'ROUTECD' OR 'QUEUES' KEYWORD IS OUT OF SEQUENCE.

Explanation: A ROUTECODES or QUEUES keyword is in the wrong position in the message definition template.

System action: Processing continues.

User response: Correct the keyword sequence. The ROUTECODES keyword should be on the DEST line after the CONSOLE keyword. The QUEUES keyword should be on the DEST line after the TDQ keyword.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0169 MESSAGE *msgno*: 'APPLID' SPECIAL INSERT MISSING ON CONSOLE MESSAGE.

Explanation: Console messages must have the APPLID special insert specified before the message text. This special insert is either missing or misspelled.

System action: Processing continues.

User response: Add the APPLID special insert to the message definition before the start of the message text.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

DFHMU0170 MESSAGE *msgno*: DATE, TIME, OR
APPLID SPECIAL INSERTS MISSING
OR INCORRECT ON TDQ MESSAGE.

Explanation: Messages with a destination of TDQ should be defined with DATE, TIME, and APPLID special inserts before the message text. One or more of these special inserts is missing or incorrect.

System action: Processing continues.

User response: Ensure that the three special inserts are present and correct.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

| **DFHMU0171 MESSAGE:** *msgno* RESP2 VALUE IS
| TOO LONG. THE MAXIMUM IS 4
| DIGITS.

| **Explanation:** Message *msgno* is being defined with an
| associated RESP2 value that will be returned as
| EIBRESP2 by the CICS command that issues the
| message. The value specified for RESP2 exceeds the
| maximum length of four decimal digits.

DFHMVxxxx messages

**DFHMV0001E SEVERE ERROR IN CICS SVC
SERVICES DURING RESMGR EXIT
CLEAN-UP PROCESSING, R15OUT =
X'XXXXXXXX', R0OUT = X'XXXXXXXX',
R1OUT = X'XXXXXXXX', R15IN =
X'XXXXXXXX', R0IN = X'XXXXXXXX',
SVC NUMBER = X'X'.**

Explanation: The CICS RESMGR exit stub has twice called the CICS SVC to perform clean-up for a particular functional area during normal or abnormal termination of a CICS TCB or address space. However, the SVC return code was nonzero both times. The message inserts identify the functional area concerned (*R0IN*), the SVC number, and the inputs and outputs.

System action: CICS termination continues.

DFHNCxxxx messages

**DFHNC0101I Named counter server initialization is
in progress.**

Explanation: The named counter sequence number server program has started execution.

System action: Initialization continues.

User response: None.

| **System action:** Processing continues.

| **User response:** Ensure that the RESP2 value is correct.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHMEU

**DFHMU0999 INTERNAL LOGIC ERROR: NO
MESSAGE FOR ERROR CODE** *code*.

Explanation: The system attempted to display an error message that has not been defined in the internal message table.

System action: Processing of the utility program terminates.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHMEU

Subsequently, other CICS regions might encounter severe errors in the functional area for which termination clean-up has failed.

User response: Inform the system programmer. Keep any dumps, the system log, and the output from the failing job. If other CICS systems are being seriously degraded by persistent errors in the functional area affected, it is usually necessary to re-IPL MVS to correct the problem.

Note: This message cannot be changed with the message editing utility.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCMN

**DFHNC0102I Named counter server for pool
poolname is now active.**

Explanation: The named counter sequence number server for the named pool has completed initialization and is now ready to accept connections.

System action: The server waits for connection requests or operator commands.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCMN

DFHNC0103 Named counter server initialization failed because the POOLNAME parameter was not specified.

Explanation: The named counter sequence number server program needs to know the name of the associated named counter pool in order to complete initialization, but no pool name was specified in the SYSIN or PARM field parameters.

System action: The server is terminated.

User response: Ensure that the parameter **POOLNAME=name** is specified either in the SYSIN parameters or in the PARM field of the JCL for the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCMN

DFHNC0104 Named counter server initialization failed because program DFHNCMN is not APF authorized.

Explanation: The named counter sequence number server main program DFHNCMN cannot complete initialization because it is not running with APF authorization.

System action: The server is terminated.

User response: Ensure that the named counter sequence number server program DFHNCMN is loaded from an APF authorized library and has been link-edited with the option AC(1).

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCMN

DFHNC0111I Named counter server for pool poolname is terminating.

Explanation: The named counter sequence number server has started termination processing, so no further requests will be processed.

System action: Termination continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCMN

DFHNC0112I Named counter server has terminated, return code retcode, reason code rsncode.

Explanation: The named counter sequence number server has completed termination processing. For normal termination, the return code and reason code are both zero. If the termination was caused by an error, the return code will be 8 and the reason code will be the number of the previous DFHNCnnnn message giving the reason for termination.

System action: The named counter sequence number server program returns control (via the AXM termination routines) to MVS for job step termination.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCMN

DFHNC0113 Named counter server completion code is cmrcode, reason code rsncode.

Explanation: The named counter sequence number server has terminated after intercepting an abnormal termination (ABEND) request. If the completion code is a system completion code, it is shown as three hexadecimal digits, otherwise it is shown as four decimal digits for a user completion code. Any associated reason code is shown as a four byte hexadecimal value, which will be zero if no reason code was provided.

System action: The named counter sequence number server program returns control (via the AXM termination routines) to MVS for job step termination.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCMN

DFHNC0121I Automatic restart support is not available because &SYSCLONE may not be unique within the sysplex.

Explanation: The server attempted to generate a default ARM element identifier to use for automatic restart registration, using the one or two character &SYSCLONE value to identify the MVS system. Normally, MVS verifies during start-up that &SYSCLONE is unique within the sysplex. However, the server is running on a level of MVS where this check is optional and has not been performed, so the server is unable to generate a unique element identifier.

System action: The server is terminated.

User response: Servers should not normally be run on a level of MVS which does not enforce unique &SYSCLONE values. However, the problem can be bypassed by specifying an ARM element name explicitly on the server ARMELEMENT parameter.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCRS

DFHNC0122 IXCARM REQUEST=*reqtype* failed, return code *retcode*, reason code *rsncode*.

Explanation: A request to the MVS automatic restart manager (ARM) gave an unexpected return code. The return code and reason code are shown in hexadecimal notation.

System action: The server is terminated.

User response: See the IXCARM macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCRS

DFHNC0123 IXCARM REQUEST=*reqtype* failed, # return code *retcode*, reason code *rsncode*.

Explanation: Automatic restart support is not # available. The MVS automatic restart manager (ARM) # gave an unexpected return code. The return and reason # code are shown in hexadecimal notation.

System action: The server continues initialization.

User response: See the IXCARM macro in *z/OS MVS # Programming: Sysplex Services Reference* (GC28-1772) for

the explanation of the return and reason code.

Note: This message cannot be changed with the # message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCRS

DFHNC0201I Processing *type* parameters

Explanation: The named counter sequence number server parameter processing routine is interpreting the specified parameter string. The first word gives the type of parameter (SYSIN/PARM/SET/DISPLAY/PRINT) and the rest is the specified parameters optionally followed by descriptive comment text after one or more spaces. If the parameters start with an asterisk or a space, the whole line is taken as descriptive comments.

System action: Any specified parameters will be processed.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCPR

DFHNC0202 Unknown parameter keyword: *keyword*

Explanation: This parameter keyword did not match any of the defined parameter keywords for the named counter sequence number server.

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter keyword (or remove the incorrect parameter) and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCPR

DFHNC0203 Value *value* for parameter *keyword* is incorrect. It must be a name of up to *maxlength* characters.

Explanation: The value of this named counter sequence number server parameter should have been specified as a name containing not more than the indicated number of characters.

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCPR

DFHNC0204 Value *value* for parameter *keyword* is incorrect. It must be a decimal number.

Explanation: The value of this named counter sequence number server parameter should have been specified as a decimal number but was not in a valid format. (Numeric parameters can optionally be followed by the letter K, M or G to denote the appropriate powers of 1024).

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCPR

DFHNC0205 Value *value* for parameter *keyword* is greater than the maximum allowed value *maximum*.

Explanation: The value of this named counter sequence number server parameter exceeded the maximum allowed value, given in the message.

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCPR

DFHNC0206 Value *value* for parameter *keyword* is less than the minimum allowed value *minimum*.

Explanation: The value of this named counter sequence number server parameter was less than the minimum allowed value, given in the message.

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCPR

DFHNC0207 Value *value* for parameter *keyword* is incorrect. It should be a time hh:mm:ss or hh:mm or a number of seconds.

Explanation: The value of this named counter sequence number server parameter did not conform to the correct syntax for a time interval.

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCPR

DFHNC0208 Parameter *keyword* *keyword* is not supported for *command*.

Explanation: A named counter sequence number server parameter *keyword* was specified in a context where it is not valid, such as an attempt to SET a parameter which can only be specified at initialization time, or to specify at initialization time a parameter which is only valid on DISPLAY.

System action: Processing of the current parameter

string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: If the error occurred at initialization, remove the incorrect parameter and restart the server. If it occurred on a server command, check that the command and parameter were correctly entered.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCPR

DFHNC0209 Parameter text contains invalid character: *text*

Explanation: The named counter sequence number server parameter processing routine found some unexpected text when attempting to process parameters.

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameters (or remove the incorrect parameter) and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCPR

DFHNC0210 Parameter keyword *keyword* should not have a value for *command*.

Explanation: A named counter sequence number server parameter keyword was specified in the form *keyword=value* in a context where it was not expected, for example on a **DISPLAY** command.

System action: Processing of the current line of parameters is terminated.

User response: Reenter the command without specifying a value for the parameter to be displayed.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCPR

DFHNC0211 Parameter value: *keyword=value*

Explanation: This message is issued to show the current value of a named counter sequence number server parameter setting in response to a **DISPLAY** or **PRINT** command.

System action: Processing continues normally.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCPR

DFHNC0212 Value *value* for parameter *keyword* is incorrect. It must be one of *validlist*.

Explanation: The value of this named counter sequence number server parameter was not recognized. It should have been specified as one of the indicated list of values.

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCPR

DFHNC0213 Value for parameter *keyword* is missing. The correct form is *keyword=value*.

Explanation: A parameter keyword was specified without an associated parameter value on a named counter sequence number server **SET** command or in a SYSIN or PARM parameter string. Note that the only character which should appear between the parameter keyword and its intended value is the equals sign, without any extra spaces.

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Reenter the parameter specification in the correct form *keyword=value*.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCPR

DFHNC0301I Console operator *consname* issued
command: *command*

Explanation: A named counter sequence number server operator command has been issued via the MVS MODIFY or STOP command. This message identifies the console name (or TSO userid) from which the command was issued and the text of the command.

System action: Processing continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHNCOP

DFHNC0302I *command* command ignored because no
valid parameters were given.

Explanation: A named counter sequence number server command was issued which had no valid parameters on it but was otherwise syntactically valid. The command has had no effect.

System action: Processing continues normally.

User response: Ensure that the command was entered correctly.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCOP

DFHNC0303I *command* command has been processed.

Explanation: A named counter sequence number server command has been processed successfully.

System action: Processing continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCOP

DFHNC0304I STOP command is waiting for
connections to be closed. Number of
active connections = *connections*.

Explanation: A named counter sequence number server STOP command has been issued (either via an MVS STOP command or via an MVS MODIFY command with the text STOP) but there are still active connections to the server, so the STOP command has not yet taken effect.

System action: The server rejects any further attempts to establish new connections, but continues processing requests for existing connections. Each time a connection is terminated, this message will be repeated as long as there are more active connections.

User response: Further information about the connections which are still active may be obtained using the command DISPLAY CONNECTIONS.

If the server needs to be shut down without waiting for connections to be closed, issue the server CANCEL command. Note that this will immediately terminate any active connections, causing any further requests for that server to be given a SYSIDERR indication. (The MVS CANCEL command can also be used, but should preferably be avoided because it will prevent the server from producing its normal closedown statistics and reports).

Note that if a CICS region is abnormally terminated while server connect or disconnect processing is in progress, or is terminated without going through end of task processing (for example using the FORCE command) there is a slight chance that the server will not be notified that the connection has been terminated. In this case the server will not be able to be closed down with the server STOP command, but only with the server CANCEL command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCOP

DFHNC0305I STOP command has been processed.

Explanation: Processing of a named counter sequence number server STOP command has now been successfully completed. This means that there are no longer any active connections and the server is ready to close down.

System action: The named counter sequence number server starts termination processing.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCOP

DFHNC0306 Named counter server does not support this command: *command*

Explanation: An operator command was addressed to the named counter sequence number server using the MVS **MODIFY** command, but the first word of the **MODIFY** parameter text is not a recognized server command (**SET**, **DISPLAY**, **PRINT**, **STOP**, **CANCEL** or an accepted abbreviation for one of these).

System action: The command is ignored.

User response: Correct and reenter the command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCOP

DFHNC0307I CANCEL *parm* command has been processed. Number of active connections = *connections*.

Explanation: A named counter sequence number server **CANCEL** command has been issued, either from an operator console or internally by the server in response to a severe error such as coupling facility failure. This message includes any restart parameter specified on the command and the number of active connections which may be affected by this command.

System action: The server terminates immediately, without waiting to close connections.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCOP

DFHNC0308 Named counter server does not support CICS commands. To close it down, you can use the STOP command.

Explanation: An operator command which appears to be a CICS command (a four-character transaction code of the form 'CExx') was addressed to the named counter sequence number server using the MVS **MODIFY** command.

System action: The command is ignored.

User response: Correct and reenter the command. If the intention is to close down the server, use the server **STOP** or **CANCEL** command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCOP

DFHNC0309 Parameter *parm* on CANCEL command is incorrect. The only valid parameters are RESTART=YES or RESTART=NO.

Explanation: A named counter sequence number server **CANCEL** command was issued with a parameter which did not match the valid parameter keywords.

System action: The command is ignored.

User response: Correct and reenter the command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCOP

DFHNC0310 Parameter *parm* on STOP command is incorrect. No parameters should be specified.

Explanation: A named counter sequence number server **STOP** command was issued with parameters, but the **STOP** command does not support any parameters.

System action: The command is ignored.

User response: Correct and reenter the command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCOP

DFHNC0351I Connection: Job *jobname* Applid *applid* Idle *idletime*

Explanation: This describes a single connection from a CICS region to the named counter sequence number server, in response to the server command **DISPLAY CONNECTIONS** or **PRINT CONNECTIONS**. The information shows the job name, the generic **APPLID** and the time in hours, minutes and seconds since the most recent request was issued using the connection.

System action: A message in this form is issued for each active connection to the current server, then message DFHNC0352I is issued to show the total number of active connections.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCN

DFHNC0352I Total connections to this server:
connections.

Explanation: This describes the total number of active connections from CICS regions to the named counter sequence number server, in response to the server command **DISPLAY CONNECTIONS** or **PRINT CONNECTIONS**.

System action: Processing continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCN

DFHNC0361I Counter names: *counter1 counter2*

Explanation: This message lists one or two counter names in response to the named counter sequence number server command **DISPLAY COUNTERS** or **PRINT COUNTERS**.

System action: This message is issued as many times as is necessary to list all current counter names, then message DFHNC0362I is issued to show the total number of counters.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCRQ

DFHNC0362I The total number of named counters in the pool is *counters.*

Explanation: This describes the total number of counters within the the pool, in response to the named counter sequence number server command **DISPLAY COUNTERS** or **PRINT COUNTERS**.

System action: Processing continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCRQ

DFHNC0363I Details for named counter *counter:*

Explanation: This message shows counter details in response to the named counter sequence number server command **DISPLAY COUNTER=name** or **PRINT COUNTER=name**.

The detailed message layout is as follows:

Current value	Minimum value	Maximum value
n	n	n

Options: x y

System action: Processing continues.

User response: The output shows the current counter value, the minimum counter value that can be assigned and the maximum counter that can be assigned. If the maximum value has just been assigned, the counter will be at its limit value, which is one greater than the maximum value that can be assigned.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCRQ

DFHNC0364 No named counter was found matching *counter.*

Explanation: A counter name specified on the named counter sequence number server command **DISPLAY COUNTER=name** or **PRINT COUNTER=name** did not match any existing counter in the pool.

System action: The command is ignored.

User response: Ensure that the counter name was entered correctly, and that the command was addressed to the correct pool server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCRQ

DFHNC0365I The number of named counters in the pool matching *counter is counters.*

Explanation: This indicates the number of matching named counters within the pool for which details were displayed in response to the named counter sequence number server command **DISPLAY COUNTERS** or **PRINT COUNTERS** where the counter name contained one or more wild card characters.

System action: Processing continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCRQ

DFHNC0401I Connected to CF structure *strname*.

Explanation: The named counter sequence number server has successfully established a connection to the coupling facility list structure for the named counter pool, using the IXLCONN macro.

System action: Processing continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0402I CF structure *strname* was allocated by this connection.

Explanation: The named counter pool list structure did not previously exist and was allocated as part of the connection process.

System action: List structure initialization will be performed if necessary.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0403 Connection to CF structure *strname* failed, IXLCONN return code *retcode*, reason code *rsncode*.

Explanation: The IXLCONN macro to connect the named counter sequence number server to its pool list structure failed.

System action: The named counter sequence number server is terminated.

User response: See the documentation of the IXLCONN macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code. If the reason code is of the form xxxx0C08, indicating structure allocation failure, this message will be followed by message DFHNC0409 giving the facility reason code for each coupling facility in which allocation was attempted.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0404 CF structure *strname* cannot be used because it has been allocated with attribute *attribute*.

Explanation: The named counter sequence number server has successfully connected to its pool list structure but has found that the structure has been allocated using an IXLCONN structure attribute keyword which is not supported by the server.

System action: The server is terminated.

User response: This probably indicates that the structure has been allocated or modified by some program other than the named counter sequence number server program. In this case, the incorrect structure should be deleted (using the MVS SETXCF FORCE command) so that it will be reallocated correctly when the server is restarted.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0406 Initialization failed for CF structure *strname* with response *response*.

Explanation: The named counter sequence number server processing to initialize the pool list structure failed with an abnormal internal response code.

System action: The server is terminated.

User response: If the response code is 6 (I/O error), it indicates that an IXLLIST macro gave an abnormal return code, in which case a previous DFHNC0441 message will have been issued giving the IXLLIST return code and reason code. If this response code is any other value, this indicates that the list structure is in a state which should not occur, probably indicating that it was allocated or modified by a program other than the named counter sequence number server. In this case the structure may need to be deleted (using the MVS SETXCF FORCE command) so that it will be reallocated when the server is restarted.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0407 CF structure *strname* is not available for shared use.

Explanation: The named counter sequence number pool is currently locked for exclusive use by some other job such as a pool unload or reload job. (This

serialization uses an MVS ENQ with scope SYSTEMS, major name 'SYSZDFH' and minor name equal to the structure name, 'DFHNCLS_poolname').

System action: The server is terminated.

User response: Check whether a pool maintenance job is currently running. If it is, wait until it has finished before trying to start the server again. You can find out what jobs are currently using the pool using this MVS command:

```
DISPLAY GRS,RES=(SYSZDFH,'DFHNCLS_poolname')
```

Note that for this command the pool name must be exactly eight characters, padded with trailing spaces if necessary.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0408 CF structure *strname* is not available for exclusive use.

Explanation: The current named counter sequence number unload or reload job requires exclusive use of the pool, but some other job is running which already has shared or exclusive use of the pool. (This serialization uses an MVS ENQ with scope SYSTEMS, major name 'SYSZDFH' and minor name equal to the structure name, 'DFHNCLS_poolname').

System action: The server is terminated.

User response: Check whether a named counter sequence number server or maintenance job is currently running. If it is, wait until it has finished before trying to run the current job again. You can find out what jobs are currently using the pool using this MVS command:

```
DISPLAY GRS,RES=(SYSZDFH,'DFHNCLS_poolname')
```

Note that for this command the pool name must be exactly eight characters, padded with trailing spaces if necessary.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0409 CF structure *strname* could not be allocated in facility *cfname*, reason code *rsncode*.

Explanation: If a previous named counter sequence number server message DFHNC0403 indicated an IXLCONN failure because the structure could not be allocated, this message is issued for each coupling facility in which allocation was attempted to show the

facility reason code indicating why structure allocation failed. If the reason code is known to the server, the name of the reason code is given (as defined in the MVS macro IXLYCONA, but without the 'ConaRsn' prefix), otherwise its decimal value is shown.

If the response indicates InvalidStructureSize, this means that the initial list structure size (specified on the server POOLSIZE parameter or in the CFRM policy INITSIZE parameter) is not large enough to contain the required structure control information. The size of the control information is affected by the maximum structure size specified in the CFRM policy.

System action: The server is terminated.

User response: If further details are required, see the descriptions of the reason codes in the source of the MVS macro IXLYCONA which maps the connect answer area.

If the response was InvalidStructureSize, increase the initial structure size specification in the server POOLSIZE parameter or the CFRM policy INITSIZE parameter to ensure that there is enough space for data in addition to the structure control information. Also, check that the maximum structure size specified in the CFRM policy is not unnecessarily large. See the CICS *System Definition Guide* for more information on how to estimate pool sizes.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0411I CF structure *strname* now has *percentage%* of entries in use.

Explanation: This message is issued by the named counter sequence number server when the percentage of list entries in use within the list structure increases past certain set threshold levels, or when it decreases past a threshold level after previously being at a higher level. This message is also issued immediately after a structure alter request has completed in order to show how the percentage has been affected by changes in the structure size. The percentage is calculated using information that is returned by successful coupling facility access requests, so if the message was triggered by structure alter completion and the current server has not processed any successful requests recently, the information may not be accurate.

System action: The warning threshold is increased to the next higher level (normally 5% higher if less than 95%, otherwise 1% higher), or decreased to the previous lower level depending on whether the usage is increasing or decreasing.

User response: Note that the structure may soon become full, preventing new counters from being created. If the structure is currently allocated at less

than its maximum size and the coupling facility has enough free space, the size of the structure can be increased dynamically using the MVS SETXCF command with the START,ALTER option, and any active servers will be able to use the increased space immediately.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0417I Alter request completed normally for CF structure *strname*.

Explanation: The named counter sequence number server has been notified by the system that a structure alter request has completed normally.

System action: New values for the structure size and number of entries are stored. This message is followed by message DFHNC0411 to indicate the new usage percentage.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0418I Alter request ended abnormally for CF structure *strname* with status *status*.

Explanation: The named counter sequence number server has been notified by the system that a structure alter request has ended abnormally. The two bytes of status information in this message are taken from EEPLALTERENDSTATEFLAGS in the event exit parameter list (defined in the MVS macro IXLYEEPL).

System action: No action is taken as a result of this notification, but any problem which caused the alter request to fail may result in other related problems.

User response: If further information is required, look for MVS messages on the system log indicating the reason for the structure alter request failure. For further information about the status flags, see the source of the MVS macro IXLYEEPL.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0419I Alter request ended normally for CF structure *strname* but target was not attained.

Explanation: The named counter sequence number server has been notified by the system that a structure alter request has ended normally but the target size was not attained.

System action: New values for the structure size and number of entries are stored. This message is followed by message DFHNC0411 to indicate the new usage percentage.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0424 Connectivity has been lost to CF structure *strname*. The named counter server cannot continue.

Explanation: The named counter sequence number server has been notified by the system that connectivity has been lost to the coupling facility containing the pool list structure.

System action: The server issues an internal CANCEL command to terminate itself immediately.

User response: Restart the server when connectivity to the coupling facility from the current system has been reestablished. If connectivity is still available from other systems, CICS transactions which require access to the affected pool should be diverted to those systems if possible.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0425 CF structure *strname* has failed. The named counter server cannot continue.

Explanation: The named counter sequence number server has been notified by the system that the named counter pool list structure has been lost due to coupling facility structure failure. All named counters in the pool have been lost.

System action: Each server for the affected pool issues an internal CANCEL command to terminate itself immediately.

User response: If another coupling facility is available and is included in the CFRM preference list for the failed structure, restart the servers to cause a fresh copy

of the list structure to be allocated on the alternate coupling facility. If no other coupling facility is available, wait until the original coupling facility has been made available again before restarting the servers.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0431I Access statistics for CF structure
strname:

Explanation: This message gives a summary of coupling facility access statistics. It is issued in response to a named counter sequence number server **DISPLAY** or **PRINT** command which includes the **CFSTATS** parameter, and may also be produced on the SYSPRINT file during interval statistics if the statistics options include print file output.

The detailed message layout is as follows:

```
Requests: Create Get Set Delete Inquire Browse
           n   n   n   n   n   n   n
Responses: Asynch Unavail
           n   n
Normal Not fnd Vers chk List chk Str Full I/O err
           n   n   n   n   n   n   n   n
```

System action: Processing continues.

User response: The statistics are described in detail in the DFHNCS4D data area. The individual fields have the following meanings:

- Response counts:

Asynch

Number of requests for which completion was asynchronous.

Unavail

Number of times requests were deferred because the structure was temporarily unavailable, for example because system-managed rebuild was in progress.

Normal

Number of normal responses.

Not fnd

The specified entry (table or item) was not found.

Vers chk

A version check failed for an entry being updated. This occurs when a duplicate name is found while creating a new entry, or when an assign request finds the counter has reached its limit, or when a compare and swap type request (assign with increment, rewind or update) finds that the counter changed before the attempt to set

the new value, in which case the request is retried until successful.

List chk

A list authority comparison failed. This should only be possible during server initialization.

Str full The list structure became full.

I/O err Some other error code was returned by IXLLIST.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0432I Pool statistics for CF structure
strname:

Explanation: This message gives a summary of the usage statistics for the named counter pool list structure. It is issued in response to a named counter sequence number server **DISPLAY** or **PRINT** command which includes the **POOLSTATS** parameter, and may also be produced on the SYSPRINT file during interval statistics if the statistics options include print file output.

The detailed message layout is as follows:

```
Structure: Size Max size
           nK   nK
Entries: Total In use Max used Free Min free
           n   n   n   n   n
           100% n%   n%   n%   n%
```

System action: Processing continues.

User response: The statistics are described in detail in the DFHNCS6D data area. Pool usage statistics are calculated from information returned by recent coupling facility requests, and are not always very accurate, especially if the pool has not been accessed recently by the current server.

The individual fields have the following meanings:

- Structure:

Size Current allocated size of the list structure.

Max size

Maximum size to which this structure could be altered.

- Entries:

Total Total entries in the currently allocated structure (initially set at structure connection time and updated on completion of any structure alter request).

In Use Number of entries currently in use.

Max Used

Maximum number in use (since last reset).

Free Number of entries currently free (total minus used).

Min Free

Minimum number of free entries (since last reset).

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0441 CF structure *strname* request failed, IXLLIST return code *retcode*, reason code *rsncode*.

Explanation: A coupling facility access request issued by the named counter sequence number server using the IXLLIST macro gave an abnormal return code.

System action: The failing request is given a return code indicating a coupling facility access error.

User response: See the documentation of the IXLLIST macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0442 CF structure *strname* request failed, structure is full.

Explanation: A coupling facility access request issued by the named counter sequence number server using the IXLLIST macro failed because there is no free entry to create a new named counter.

System action: The failing request is given a return code indicating that there is no space available in the pool. This message will not be issued for further failures until the the number of entries in use has fallen well below the warning threshold.

User response: Any named counters which are no longer in use should be deleted so that the space can be reused. If the structure is currently allocated at less than its maximum size and the coupling facility has enough free space, the size of the structure can be increased dynamically using the MVS SETXCF command with the **START,ALTER** option, and any active servers will be able to use the increased space immediately. However, if this action is possible it should normally have been taken in response to earlier warning message before the structure became full.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0451 Purge for CF structure *strname* failed, IXPURGE return code *retcode*, reason code *rsncode*.

Explanation: A named counter sequence number access request was terminated abnormally and the server issued an IXPURGE macro to ensure any active IXLLIST request was purged before releasing the I/O buffer, but the IXPURGE macro gave a non-zero return code.

System action: The error is ignored because this only occurs when a request is already being terminated abnormally.

User response: See the documentation of the IXPURGE macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0461I Disconnected from CF structure *strname*.

Explanation: The named counter sequence number server has successfully disconnected from the pool list structure (using the IXLDISC macro) during termination.

System action: Processing continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0462 Disconnect from CF structure *strname* failed, IXLDISC return code *retcode*, reason code *rsncode*.

Explanation: The IXLDISC macro to disconnect the named counter sequence number server from its pool list structure failed.

System action: The error is ignored, as disconnection only occurs when the server is already terminating.

User response: See the documentation of the IXLDISC macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCCF

DFHNC0481I Waiting for structure *strname* to become available.

Explanation: The named counter sequence number server was unable to connect to its coupling facility structure because of an environmental error, such as the structure being unavailable, as described in a previous DFHNC0403 message. The server is now waiting for this problem to be fixed, and will retry the connection request when it is notified via the ENF facility that the specific structure may now be available or that some change has occurred in the status of general coupling facility resources.

System action: The server waits to be notified of a relevant event.

User response: No action is required, but the waiting server can optionally be terminated using the MVS CANCEL command if it is no longer required.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCEN

DFHNC0482I Retrying connection to structure *strname*.

Explanation: The named counter sequence number server has been notified via ENF that its list structure may now be available or that a change has occurred in the status of some general coupling facility resources, so it is about to make another attempt to connect to the structure.

System action: The original IXLCONN request is retried.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCEN

DFHNC049I ENFREQ ACTION=*action* failed, return code *retcode*.

Explanation: An ENF request issued by the named counter sequence number server gave an unexpected return code.

System action: If this occurs on the ENFREQ ACTION=LISTEN request and the server is

subsequently unable to connect to the list structure, the server will be terminated instead of waiting for the structure to become available.

User response: See the documentation of the ENFREQ macro in *OS/390 MVS Programming: Authorized Assembler Services Reference, Volume 2 (ENFREQ-ITTFMTB)* (GC28-1765) for the explanation of the return and reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCEN

DFHNC0601I Starting statistics collection for interval since *lasttime*.

Explanation: The named counter sequence number server is about to collect interval, end of day or closedown statistics. This message identifies the start of the time interval to which the statistics apply, which is either the time that the server was started up or the time of the last reset, which occurs whenever interval or end of day statistics are produced. The format of the timestamp is yyyy-mm-dd hh

System action: The server proceeds with statistics collection.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHNCST

DFHNC0602I Statistics collection completed, reset performed.

Explanation: Named counter sequence number server statistics have been collected and counters have been reset. This occurs for interval or end of day statistics.

System action: Processing continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHNCST

DFHNC0603I Statistics collection completed.

Explanation: Named counter sequence number server statistics have been collected but counters have not been reset. This normally occurs at server closedown.

System action: Processing continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCST

DFHNC0604 Timer SET failed, return code *retcode*, reason code *rsncode*.

Explanation: The statistics subtask in the named counter sequence number server tried to set up a timer wait interval but failed.

System action: The interval statistics function is terminated with message DFHNC0606.

User response: Check the return code and reason code. A return code of 4 indicates an attempt to set up more than one concurrent timer interval, which indicates a logic error in the server. The reason code in this case is the MVS STIMERM identifier for the existing timer interval. A return code of 8 indicates that the MVS STIMERM macro failed, in which case the reason code indicates the return code received from STIMERM SET.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCST

DFHNC0605 Timer CANCEL failed, return code *retcode*, reason code *rsncode*.

Explanation: The statistics subtask in the named counter sequence number server tried to cancel a timer wait interval but failed.

System action: The interval statistics function is terminated with message DFHNC0606.

User response: Check the return code and reason code. A return code of 4 indicates an attempt to cancel a nonexistent timer interval, which indicates a logic error in the server. A return code of 8 indicates that the MVS STIMERM macro failed, in which case the reason code indicates the return code received from STIMERM CANCEL.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCST

DFHNC0606 Statistics collection function is no longer available.

Explanation: The statistics collection subtask in the named counter sequence number server was unable to continue processing and has terminated. The reason will have been indicated by an earlier message.

System action: The interval statistics subtask terminates and no further interval statistics or end of day statistics will be produced for this run of the server.

User response: See the earlier message indicating the reason for the termination of the subtask.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCST

DFHNC0610I Statistics written to SMF, return code was *retcode*.

Explanation: Named counter sequence number server statistics have been sent to SMF. The return code from the SMFEWMTM macro is indicated in this message. A non-zero return code usually indicates that SMF recording was suppressed because of current SMF options or an installation exit.

System action: Processing continues.

User response: If the return code is non-zero but SMF statistics were expected to be successfully written, see the documentation of the SMFEWMTM macro in *OS/390 MVS System Management Facilities (SMF)* (GC28-1783) for more information about return codes.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHNCST

DFHNC0701I Named counter pool *poolname* is to be unloaded.

Explanation: The named counter sequence number server program has been started with the UNLOAD option requesting that the named counter pool is unloaded to a sequential data set.

System action: The server starts to process the unload request. In this case, the rest of cross-memory server initialization is bypassed as it will not be needed.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCUL

DFHNC0702I Named counter pool *poolname* has been successfully unloaded.

Explanation: The named counter pool has been unloaded successfully.

System action: The server closes down normally.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCUL

DFHNC0703I Number of unloaded counters: *counters*. Blocks written: *blocks*.

Explanation: This message provides additional information about the results of the named counter pool unload process, giving the number of named counters which were unloaded and the number of 4K data blocks written to the unloaded named counter pool data set.

System action: Server termination continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCUL

DFHNC0704 DFHNCUL data set for unload could not be opened.

Explanation: The data set to contain the unloaded named counter pool could not be opened.

System action: Unload processing is terminated and the server is closed down with message DFHNC0706.

User response: Check that the DFHNCUL DD statement is present in the JCL for the unload job.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCUL

DFHNC0705 Unload access to CF structure *strname* failed with response *response*.

Explanation: The named counter pool unload process failed because of a problem with coupling facility access.

System action: Unload processing is terminated and the server is closed down with message DFHNC0706.

User response: If the response code is 6, this indicates that an unexpected IXLLIST error occurred, for which a previous message DFHNC0441 will have been issued. Any other response code indicates an internal logic error.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCUL

DFHNC0706 Unload for named counter pool *poolname* was unsuccessful.

Explanation: The named counter pool unload process failed. The reason will have been described in a previous message.

System action: The server is terminated.

User response: See the previous message giving the reason for the unload failure. Note that any unload data set produced in this case will be incomplete and will not be valid for reload purposes.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCUL

DFHNC0801I Named counter pool *poolname* is to be reloaded.

Explanation: The named counter sequence number server program has been started with the **RELOAD** option requesting that the named counter pool is to be reloaded from a sequential data set produced using the **UNLOAD** option.

System action: The server starts to process the reload request. In this case, the rest of cross-memory server initialization is bypassed as it will not be needed.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCRL

DFHNC0802I Named counter pool *poolname* has been successfully reloaded.

Explanation: The named counter pool has been reloaded successfully.

System action: The server closes down normally.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCRL

DFHNC0803I Counters reloaded: *counters*. **Counters bypassed:** *duplicates*. **Blocks read:** *blocks*.

Explanation: This message provides additional information about the results of the named counter pool reload process. Named counters on the unloaded data set are bypassed during reload processing if they already exist in the pool (for example as a result of a previous reload which could not be completed due to lack of space).

System action: Server termination processing continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCRL

DFHNC0804 DFHNCRL data set for reload could not be opened.

Explanation: The data set containing the named counter pool to be reloaded could not be opened.

System action: Reload processing is terminated and the server is closed down with message DFHNC0808.

User response: Check that the DFHNCRL DD statement is present in the JCL for the reload job.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCRL

DFHNC0805 Reload access to CF structure *strname* failed with response *response*.

Explanation: The named counter pool reload process failed because of a problem with coupling facility access.

System action: Reload processing is terminated and the server is closed down with message DFHNC0808.

User response: If the response code is 6, this indicates that an unexpected IXLLIST error occurred, for which a previous message DFHNC0441 will have been issued. Any other response code indicates an internal logic error.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCRL

DFHNC0806 Unexpected end of file encountered on reload data set.

Explanation: End of file was encountered on the data set containing the unloaded named counter pool before the logical end of the unloaded data was encountered.

System action: Reload processing is terminated and the server is closed down with message DFHNC0808.

User response: This indicates that the unloaded data set is incomplete, perhaps because the unload process was abnormally terminated.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCRL

DFHNC0807 Reload data set contains incorrect data near block *block*, offset *offset*.

Explanation: The named counter pool reload process failed because the unloaded pool data set is not in the correct format.

System action: Reload processing is terminated and the server is closed down with message DFHNC0808.

User response: Check that the correct data set is being used and that the unload process completed normally.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCRL

DFHNC0808 Reload for named counter pool *poolname* was unsuccessful.

Explanation: The named counter pool reload process could not be completed. The reason will have been described in a previous message.

System action: The program is terminated.

User response: See the previous message giving the reason for the reload failure.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHNCRL

DFHNC0809 Reload for CF structure *strname* failed, structure is full.

Explanation: Named counter pool reload processing failed because there are insufficient free entries or elements to store the new data in the structure.

System action: Reload processing is terminated and the server is closed down with message DFHNC0808.

User response: If the structure is currently allocated at less than its maximum size and the coupling facility has enough free space, the size of the structure can be increased dynamically using the MVS SETXCF command with the **START,ALTER** option, and the reload job can then be run again as soon as the alter request completes, in which case it will skip over duplicate information which has already been successfully reloaded. If the structure is at its maximum size, use the MVS SETXCF **FORCE** command to delete the structure, then increase the **SIZE** and **INITSIZE** parameters in the current CFRM policy and activate the updated policy, and rerun the reload job. The approximate amount of information which could not be reloaded can be estimated by comparing the numbers of blocks read and named counters reloaded, as described by following message DFHNC0803, with the corresponding numbers from message DFHNC0703 in the unload job.

Note: This message cannot be changed with the message editing utility.

Modules: various

DFHNQxxxx messages

DFHNQ0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Next, look up the CICS alphanumeric code in this manual. for further guidance.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHNQDM, DFHNQED, DFHNQIB, DFHNQNQ

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*, *modname*

DFHNQ0002 *applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHNQDM, DFHNQED, DFHNQIB, DFHNQNQ

XMEOUT Parameters: *applid*, *X'code'*, *modname*

DFHNQ0004 *applid* A possible loop has been detected at offset *X'offset'* in module *modname*.

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset *X'offset'*. This is the offset of the instruction which happened to be executing at the time when the error was detected.

System action: An exception entry is made in the trace table.

A system dump is taken unless you have specifically suppressed the dump (by a user exit program at the XDUREQ exit, in the dump table or by global system dump suppression). CICS processing continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error. Usually, CICS purges a CICS function which exceeds the runaway

task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that execution of module *modname* is terminated and CICS continues.

If you have specified ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If the runaway has occurred in module DFHNQIB, it is probably the result of a long-running UOWENQ browse. If there are many enqueues in the system (particularly if many are owned by the same task), CICS can take a long time to process the browse. This can be resolved by increasing the runaway interval associated with the task performing the browse. To do this change the RUNAWAY attribute of the associated transaction definition.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online using the CEMT transaction.

If raising the ICVR time does not solve the problem, you may need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **XMEOUT Parameters:** *applid, X'code',tran*

| **DFHNQ0105** *date time applid ENQMODEL model* was
| **either disabled or in the waiting state
| when transaction tran attempted to
| enqueue on a matching resource name.**

| **Explanation:** An EXEC ENQ has been issued on a
| resource for which the enqmodel is either disabled or
| in the waiting state.

| **System action:** The ENQ request is rejected, and the

| issuing task abended abcode ANQE ENQ_DISABLED.
| **User response:** To avoid multiple transaction abends,
| such transactions should be disabled before disabling
| the enqmodel.
| **Destination:** CSMT
| **Modules:** DFHNQRN
| **XMEOUT Parameters:** *date, time,applid, model, tran*

| **DFHMQ0106** *date time applid ENQMODEL model* has
| **been replaced.**

| **Explanation:** The ENQMODEL resource *model* has
| been replaced on the local system.
| **System action:** The enqmodel is replaced and CICS
| continues normally.
| **User response:** None required.
| **Destination:** CSMT
| **Modules:** DFHNQRN
| **XMEOUT Parameters:** *date, time,applid, model*

| DFHOTxxxx messages

| **DFHOT0001** *applid* **An abend (code *aaa/bbbb*) has**
| **occurred at offset X'*offset*' in module**
| ***modname*.**

| **Explanation:** An abnormal end (abend) or program
| check has occurred in module *modname*. This implies
| that there may be an error in CICS code.

| Alternatively:
| • Unexpected data has been input,
| • Storage has been overwritten, or
| • There has been a program check within a user
| program.

| The code *aaa* is, if applicable, a 3-digit hexadecimal
| MVS system completion code (for example, 0C1 or
| D37). If an MVS code is not applicable, this field is
| filled with three hyphens. The 4-digit code *bbbb*, which
| follows *aaa*, is a user abend code produced either by
| CICS or by another product on the user's system.

| If X'*offset*' contains the value X'FFFF', then module
| *modname* was in control at the time of the abend, but
| the program status word (PSW) was not addressing
| this module.

| **System action:** An exception entry is made in the
| trace table. A system dump is taken, unless you have
| specifically suppressed dumps in the dump table.

| **Either** this is a critical error and CICS is terminated,
| even if you have specified in the dump table that CICS
| should not terminate.

| **Or** CICS will continue unless you have specified in the
| dump table that CICS should terminate. Message

| **DFHMQ0107** *date time applid ENQMODEL model1* **must**
| **be disabled before enabling**
| **ENQMODEL *model2*.**

| **Explanation:** An attempt to enable an enqmodel
| failed, because a less specific enqmodel is enabled.
| Enqmodels forming nested generic enqnames must be
| enabled in order, from the most to the least specific.
| ENQMODEL *model1* must be disabled before enabling
| ENQMODEL *model2*.

| **System action:** The enqmodel is not installed, but
| CICS continues normally.

| **User response:** Review the enqmodel definitions. If an
| enqmodel containing AB* is enabled, it must be
| disabled before enabling one with ABCD*. If enqmodels
| containing AB* and ABC* are installed, one must be
| discarded before installing an enqmodel with ABCD*.

| **Destination:** CSMT
| **Modules:** DFHNQRN

| **XMEOUT Parameters:** *date, time,applid, model1, model2*

| DFHME0116 is normally produced containing the
| symptom string for this problem.

| **User response:** Notify the system programmer.

| Look up the MVS code *aaa*, if there is one, in the
| relevant MVS codes manual which is detailed in the
| book list in the front of this manual.

| If the *modname* insert contains the value ????, then
| CICS was unable to determine which module has
| abnormally terminated. In this case, examine the
| system dump to determine which area of code has
| caused the program check.

| The user should examine other messages to determine
| what the module which issued this message was doing
| at the time the abend occurred. From these messages
| they can deduce which product has produced the
| abend code *bbbb*. If *bbbb* is identified as a CICS code, it
| may be either alphameric or numeric.

| • If the CICS code is alphameric (for example AKEA)
| then it is a CICS transaction abend code.
| • If the CICS code is numeric (for example 1310), it
| refers to a CICS message (DFHTS1310 in our
| example).

| If the user abend code is from another product (for
| example, IMS), refer to the appropriate messages and
| codes manual to determine the cause of the abend.

| The entries in the appropriate manuals will give the
| user guidance regarding the nature of the error, and
| may also give some guidance concerning the
| appropriate user response.

| **Note:** The program check may have occurred in a user
| program. If this is the case, the program check is
| usually followed by an ASRA or an ASRB
| transaction abend and a transaction dump.

| If you want to suppress system dumps that precede
| ASRA and ASRB abends, you must specify this on an
| entry in the dump table, using either CEMT or an
| EXEC CICS command. Further guidance on
| suppressing system dumps can be found in the *CICS
| System Definition Guide*.

| You may need further assistance from IBM to resolve
| this problem. See Part 4 of the *CICS Problem
| Determination Guide* for guidance on how to proceed.

| **Destination:** Console

| **Modules:** DFHOTxx

| **XMEOUT Parameters:** *applid, aaa/bbbb,X'offset', modname*

| **DFHOT0002** *applid* **A severe error (code X'code')** has
| **occurred in module** *module*.

| **Explanation:** The OT domain has received an
| unexpected error response from some other part of
| CICS. The operation requested by OT is described by
| code X'code'.

| For further information about CICS exception trace
| entries, refer to the *CICS Problem Determination Guide*.

| **System action:** A system dump is taken and the
| system attempts to continue operation unless
| specifically inhibited by dump table entries.

| Message DFHME0116 is normally produced containing
| the symptom string for this problem.

| **User response:** Investigate the cause of the problem as
| follows:

- | 1. Determine if the problem can be explained by any
| previous messages issued from some other CICS
| component.
- | 2. Examine the symptom string.
- | 3. Examine the dump.

| If you cannot resolve the problem, you will need
| further assistance from IBM. See Part 4 of the *CICS
| Problem Determination Guide* for guidance on how to
| proceed.

| **Destination:** Console

| **Modules:** DFHOTDM, DFHOTTR, DFHOTCO,
| DFHOTSU

| **XMEOUT Parameters:** *applid, X'code',module*

| **DFHOT0004** *applid* **A possible loop has been detected
| at offset X'offset' in module** *modname*.

| **Explanation:** A CICS function is taking more time to
| process than CICS expects. A possible loop has been
| detected in module *modname* at offset X'offset'. This is
| the offset of the instruction which was executing at the
| time the error was detected.

| **System action:** An exception entry is made in the
| trace table. A system dump is taken, unless you have
| specifically suppressed dumps in the dump table.

| **Either** this is a critical error and CICS is terminated,
| even if you have specified in the dump table that CICS
| should not terminate.

| **Or** CICS will continue unless you have specified in the
| dump table that CICS should terminate.

| **User response:** Notify the system programmer. If
| CICS has not been terminated, it will be necessary to
| decide whether the problem is serious enough to bring
| CICS down.

| This may not be an error as some CICS functions can
| use a lot of processor time, and this message may have
| been caused by a long-running function.

| Usually, CICS will purge a CICS function which
| exceeds the runaway task time interval which you have
| specified in the SIT (this is the ICVR parameter, which
| is measured in milliseconds). This means that the
| module *modname* will be terminated and CICS will
| continue.

| If you have declared ICVR=0 in the SIT and you
| consider that module *modname* has gone into a loop,
| you will have to terminate CICS in order to terminate
| the runaway function.

| If CICS has terminated module *modname*, and you
| consider that it was not a runaway function, you
| should increase the ICVR time interval in the SIT. You
| will have to bring CICS down at a suitable time to do
| this permanently. You can change the ICVR time
| interval temporarily online, using the CEMT
| transaction.

| If raising the ICVR time does not solve the problem,
| you need further assistance from IBM to resolve this
| problem.

| **Destination:** Console

| **Modules:** DFHOTRM

| **XMEOUT Parameters:** *applid, X'offset', modname*

| **DFHOT0101** *applid* **A severe error has occurred. The
| description is 'description'. The error
| occurred in class** *classname/methodname*.

| **Explanation:** A Java class of the OT domain has
| detected an unexpected error condition. The description
| of the error is described in *description*. The class and

method are described in *classname* and *methodname*.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: A system dump is taken and the system attempts to continue operation unless specifically inhibited by dump table entries.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the cause of the problem as follows:

1. Determine if the problem can be explained by any previous messages issued from some other CICS component.
2. Examine the symptom string.
3. Examine the dump.

If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHOTDM, DFHOTTR, DFHOTCO, DFHOTSU, dfhjts.jar

XMEOUT Parameters: *applid, description, classname/methodname*

DFHOT0102 *applid* Task running transaction *tranid* could not be purged for OTS timeout. Transaction token X'*tran_token*'

Explanation: The task with transaction token *tran_token* has been executing with an inflight OTS transaction for a period of time exceeding its timeout value. An attempt was made to purge the task, but this failed either because the task was protected from being purged at this time, or the transaction definition for *tranid* specifies SPURGE(NO).

System action: The task continues to execute with no further attempts to purge the task.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Consider making the transaction definition for *tranid* specify SPURGE(YES). See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHOTIS2

XMEOUT Parameters: *applid, tranid, X'tran_token'*

DFHPAxxxx messages

DFHOT0103 *applid* A system exception has occurred while processing a GIOP request. The server that was processing the request can be identified by the hostname *hostname*.

Explanation: A system exception was thrown while a GIOP request was being processed by this server. The *hostname* identifies the server.

System action: The system exception is returned to the client of the GIOP request.

User response: Investigate the cause of the problem as follows:

1. Determine if the problem can be explained by any previous messages issued from some other CICS component. Look especially for DFHEJxxx or DFHIIxxx messages.
2. If a trace is available look for OT, EJ or II exception trace points.

Also look for II trace points 0132, 0714 and 0201. II 0132 and 0714 trace GIOP requests and replies. If a reply contains a system exception the II 0132 or 0714 is followed by an II 0201 with SYSTEM_EXCEPTION in the trace interpretation.

If you cannot resolve the problem, you need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: dfhjts.jar

XMEOUT Parameters: *applid, hostname*

DFHOT0105 *applid* Task running transaction *tranid* has been purged as it exceeded its specified OTS timeout. Transaction token X':*mv.tran_token:emv*.'

Explanation: The task with transaction token *tran_token* has been executing with an inflight OTS transaction for a period of time exceeding its timeout value.

System action: The task is purged.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate why the transaction exceeded the OTSTimeout value specified in the transaction definition. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHOTIS2

XMEOUT Parameters: *applid, tranid, X'tran_token'*

DFHPA0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An unexpected program check or operating system abend with abend code *aaa/bbbb* occurred at offset *X'offset'* in module *modname*. This can be caused by corruption of CICS code or control blocks.

During initialization, CICS might not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: A system dump is taken unless specifically suppressed for this system abend code, and the system attempts to continue operation unless termination has been requested via the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the cause of the abend or program check using the dump, the abend code, the trace table, and any other diagnostic messages which may have been issued.

Destination: Console

Modules: DFHPAGP, DFHPADM, DFHPAIO

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*, *modname*

DFHPA0002 *applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation: An error has been detected in module *modname*

The code *X'code'* is the exception trace point id which uniquely identifies what the error is and where the error was detected.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the

importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHPADM

XMEOUT Parameters: *applid*, *X'code'*, *modname*

DFHPA0004 *applid* A possible loop has been detected at offset *X'offset'* in module *modname*.

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset *X'offset'*. This is the offset of the instruction which was executing when the error was detected.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that the CICS module identified in the message is terminated and CICS continues..

However, if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a

loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. However, you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHPADM

XMEOUT Parameters: *applid*, *X'offset'*, *modname*

DFHPA1100 *applid* **OVERRIDE PARAMETERS FROM JCL EXEC STATEMENT:** *parm*

Explanation: This message is displayed during CICS initialization to show the SIT overrides obtained from the PARM parameter of the JCL EXEC statement for the CICS job. If the parameter string *parm* contains 40 characters or less, it is shown on this message. Otherwise it is shown on a DFHPA1927 message following this message.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: System initialization continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPAIO

DFHPA1101 *applid* **DFHSITxx IS BEING LOADED.**

Explanation: This is an informational message displayed during CICS initialization.

xx, if present, represents the 1- or 2-character suffix for the SIT being used.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: System initialization continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1102 *applid* **OVERRIDE PARAMETERS FROM SYSIN:**

Explanation: This message is displayed during CICS initialization before displaying the SIT overrides obtained from the SYSIN data set. The message is followed by a series of DFHPA1927 messages that show the actual contents of the SYSIN records.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: System initialization continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPAIO

DFHPA1103 *applid* **END OF FILE ON SYSIN.**

Explanation: This is an informational message displayed when CICS has reached the end of the SYSIN data set.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: System initialization continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPAIO

DFHPA1104 *applid* **SPECIFY ALTERNATIVE SIT PARAMETERS, IF ANY, AND THEN TYPE '.END'.**

Explanation: If the word "CONSOLE" or "CN" was detected in either the parameter input stream on the EXEC statement of the CICS JCL, or in the SYSIN data set, then this prompt message will be displayed when the parameter (PA) manager is ready to accept console overrides.

System action: The system initialization program waits for a response from the operator.

User response: Enter the required parameter changes,

separated by commas. Terminate your reply by entering '.END'.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPAIO

DFHPA1105 *applid* CONTINUE SPECIFYING SIT PARAMETERS AND THEN TYPE '.END'.

Explanation: While SIT overrides are being entered on the console, this prompt message will be displayed to request more overrides if the previous line did not end with ".END".

System action: The system initialization program waits for more override parameters to be entered by the operator.

User response: Continue entering the required parameter changes, separated by commas. Terminate your reply by entering '.END'.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPAIO

DFHPA1106 *applid* MODULE DFHSIT xx COULD NOT BE LOADED. SPECIFY NEW SUFFIX, 'NONE'(UNSUFFIXED) OR 'CANCEL'.

Explanation: During PA domain initialization, a SIT with a suffix of xx could not be loaded.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: The PA domain initialization routines wait for the operator to enter an alternative 1- or 2-character suffix, or YES to request the unsuffixed SIT, or CANCEL. If CANCEL is entered, CICS is abnormally terminated.

User response: Determine whether the suffix is correct. If it is not, enter the correct suffix or enter 'YES' for the unsuffixed version. Otherwise enter 'CANCEL', correct the error (by adding the module to the appropriate library) and restart CICS.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1107 *applid* A level VERSION OF MODULE DFHSIT xx WAS LOADED. CICS CAN ONLY INITIALIZE WITH THE CURRENT LEVEL SIT.

Explanation: During PA domain initialization, a SIT with a suffix of xx and a release level of *level* was loaded. Since this version is not compatible with current CICS code, CICS is abnormally terminated.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates abnormally.

User response: To correct the error, reassemble the SIT at the current CICS level. Refer to the *CICS Transaction Server for z/OS Migration from CICS TS Version 2.3* for guidance on changes to the SIT that may be required for the new release. CICS should then be restarted.

Alternatively, the system may have been pointing to the wrong SIT. To correct this second case, check the bring up JCL to make sure that the 'SIT=' override is correct. Refer to the *CICS System Definition Guide* for guidance on coding system initialization parameters. Furthermore, check the library search order to make sure that stray SITs, which may be unknowingly present, are removed or renamed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1108 *applid* DFHSIT xx HAS BEEN LOADED. (GENERATED AT MM/DD= *mm/dd* HH/MM= *hh/mm*).

Explanation: This is an informational message displayed during CICS initialization. It displays the date and time that the loaded system initialization table was generated.

- xx is the suffix of the SIT being used.
- *mm/dd* is the date (month and day) that the SIT was generated.
- *hh/mm* is the time (hours and minutes of the 24 hour clock) that the SIT was generated.

System action: CICS Initialization continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1901 *applid modname* **COULD NOT BE FOUND OR IS IN A NON-APF LIBRARY/CONCATENATION. CICS IS TERMINATED.**

Explanation: An error has occurred while attempting to load either DFHPASYL or DFHPAIO.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates abnormally.

User response: Correct the problem with the module that failed to load.

For example, check that a module *modname* actually exists in the program libraries used by CICS. Check the JCL and that the correct name, the correct library and the correct member in the library are used.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1902 *applid* **UNABLE TO OPEN SYSIN DATA SET. CICS IS TERMINATED.**

Explanation: An error has occurred while attempting to open the SYSIN data set. This occurs if the SYSIN data set does not exist.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates abnormally.

User response: Ensure that the SYSIN data set exists and is correct.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPAIO

DFHPA1903 *applid* **ERROR WHILE READING FROM SYSIN DATA SET. CICS IS TERMINATED.**

Explanation: An error has occurred while attempting to read a record from the SYSIN data set. This can occur if the SYSIN data set has been corrupted, or has been incorrectly defined (for example, has not been defined with a logical record length, LRECL, of 80).

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this

message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates abnormally.

User response: Correct the problem in the SYSIN data set.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPAIO

DFHPA1907 *applid DATA data* **IS INVALID FOR KEYWORD *keyword*. KEYWORD IS IGNORED.**

Explanation: This message is displayed if the data specified, either for a keyword in the SIT or for a SIT override, is invalid, AND the PARMERR=IGNORE option is specified in the SIT or as an override. The message inserts are as follows:

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data.

System action: The keyword is ignored. CICS will attempt to initialize without the keyword in error.

User response: Correct the error by specifying a valid value for the keyword wherever it has been specified, either in the SIT or in the CICS input JCL, prior to restarting CICS. Refer to the *CICS System Definition Guide* for information on how to do this.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPAGP

DFHPA1908 *applid DATA data* **IS INVALID FOR KEYWORD *keyword*. CICS IS TERMINATED.**

Explanation: This message is displayed if the data specified, either for a keyword in the SIT or for a SIT override, is invalid, and the PARMERR=ABEND option is specified in the SIT or as an override. The message inserts are as follows:

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data.

This message is issued only if the data for keyword MCT is in error.

System action: CICS terminates abnormally.

User response: Correct the error by specifying a valid value for the keyword wherever it has been specified, either in the SIT or in the CICS input JCL, prior to

restarting CICS. Refer to the *CICS System Definition Guide*. for information on how to do this.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPAGP

DFHPA1909 *applid* DATA *data* IS INVALID FOR KEYWORD *keyword*. RESPECIFY KEYWORD AND DATA.

Explanation: This message is displayed if the data specified, either for a keyword in the SIT or for a SIT override, is invalid, and the PARMERR=INTERACT option is specified in the SIT or as an override. The message inserts are as follows:

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data.

Note: PARMERR=INTERACT is the default action for invalid keyword data.

System action: CICS waits for the corrected keyword and data to be entered as an override on the console by the operator, and analyzes this override.

User response: Enter the corrected SIT keyword and data on the console, or bypass by typing '.END', or just supply a blank line.

Refer to the *CICS System Definition Guide* for information on how to do this.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPAGP

DFHPA1910 *applid* SIT OVERRIDE *keyword* IS NOT RECOGNIZED. OVERRIDE IS IGNORED. (MODULE *modname*).

Explanation: This message is displayed if a keyword specified in the input override parameter stream is invalid, and the PARMERR=IGNORE option is specified in the SIT, or as an override. The insert *keyword* is the invalid keyword.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: The keyword is ignored, and CICS attempts to initialize without the keyword in error.

User response: Ensure the keyword specified is correct and update CICS input JCL with the corrected keyword prior to the next initialization of CICS.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM, DFHPAGP

DFHPA1911 *applid* SIT OVERRIDE *keyword* IS NOT RECOGNIZED. CICS IS TERMINATED.

Explanation: This message is displayed if a keyword specified in the input override parameter stream is invalid, and the PARMERR=ABEND option is specified in the SIT, or as an override. the insert *keyword* is the invalid keyword.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates abnormally.

User response: Correct the error by specifying a valid keyword in the SIT overrides, then restart CICS. Refer to the *CICS System Definition Guide*. for information on how to do this.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1912 *applid* SIT OVERRIDE *keyword* IS NOT RECOGNIZED. SPECIFY CORRECT SIT OVERRIDE.

Explanation: This message is displayed if a keyword specified in the input override parameter stream is invalid, and the PARMERR=INTERACT option is specified in the SIT, or as an override. The insert *keyword* is the invalid keyword. Note that PARMERR=INTERACT is the default action for invalid SIT overrides.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS waits for the corrected override to be entered on the console by the operator, and analyzes this override.

User response: Enter the corrected SIT override on the console, or bypass by typing '.END', or just supply a blank line.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1913 *applid* **INVALID DATA HAS BEEN DETECTED FOR SIT OVERRIDE**
keyword **BY MODULE** *modname*.
OVERRIDE IS IGNORED.

Explanation: This message can be issued in the following situations:

- If the data supplied for a SIT override is syntactically invalid, and the PARMERR=IGNORE system initialization parameter is specified. The insert *keyword* is the keyword for which the value is in error.
- In response to invalid data when PARMERR=INTERACT is specified but the user has been attempting to correct a previous invalid SIT keyword or value. In this case, message DFHPA1912 or DFHPA1915 follows this message to prompt for the correction to the original error.
- When PARMERR=INTERACT is specified if invalid data has been passed in PARM or SYSIN for a keyword that cannot be entered from the console (and therefore cannot be corrected by interaction with the console). This typically applies to security keywords.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: The keyword is ignored, and CICS attempts to initialize without the keyword in error.

User response: Ensure the value specified is correct and update CICS input JCL with the corrected keyword prior to the next initialization of CICS.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM, DFHPAGP

DFHPA1914 *applid* **INVALID DATA HAS BEEN DETECTED FOR SIT OVERRIDE**
keyword. **CICS IS TERMINATED.**

Explanation: This message is displayed if the data specified for a SIT override is syntactically invalid, and the PARMERR=ABEND option is specified in the SIT, or as an override.

The insert *keyword* is the keyword for which the value is in error.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates abnormally.

User response: Correct the error by specifying a valid value for the keyword in the SIT overrides, then restart CICS.

Refer to the *CICS System Definition Guide* for information on how to do this.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1915 *applid* **INVALID DATA HAS BEEN DETECTED FOR SIT OVERRIDE**
keyword. **RESPECIFY THE OVERRIDE.**

Explanation: This message is displayed if the data specified for a SIT override is syntactically invalid or is a numeric value of 2 gigabytes or greater. It is only displayed if the PARMERR=INTERACT option is specified in the SIT, or as an override.

The insert *keyword* is the keyword for which the value is in error.

Note: PARMERR=INTERACT is the default action for invalid SIT overrides.

System action: CICS waits for the corrected override to be entered on the console by the operator, and then analyzes this override.

User response: Enter the corrected SIT override on the console, or bypass by typing '.END', or just supply a blank line.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1916 *applid* **SIT OVERRIDE DATA** *data* **IS OUT OF RANGE FOR KEYWORD**
keyword. **OVERRIDE IS IGNORED.**

Explanation: This message is displayed if the data supplied for a SIT override is out of range, and the PARMERR=IGNORE option is specified in the SIT, or as an override. The message inserts are as follows:

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data.

System action: The keyword is ignored. CICS will attempt to initialize without the keyword in error.

User response: Ensure the value specified is correct and update CICS input JCL with the corrected keyword prior to the next initialization of CICS.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPAGP

DFHPA1917 *applid* **SIT OVERRIDE DATA *data* IS OUT OF RANGE FOR KEYWORD *keyword*. CICS IS TERMINATED.**

Explanation: This message is displayed if the data specified for a SIT override is out of range, and the PARMERR=ABEND option is specified in the SIT, or as an override. The message inserts are as follows:

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data.

System action: CICS terminates abnormally.

User response: Correct the error by specifying a valid value for the keyword in the SIT overrides, and restart CICS.

Refer to the *CICS System Definition Guide* for information on how to do this.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPAGP

DFHPA1918 *applid* **SIT OVERRIDE DATA *data* IS OUT OF RANGE FOR KEYWORD *keyword*. RESPECIFY THE OVERRIDE.**

Explanation: This message is displayed if the data specified for a SIT override is out of range, and the PARMERR=INTERACT option is specified in the SIT, or as an override. The message inserts are as follows:

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data.

Note: PARMERR=INTERACT is the default action for invalid SIT overrides.

System action: CICS waits for the corrected override to be entered on the console by the operator, and analyzes this override.

User response: Enter the corrected SIT override on the console, or bypass by typing '.END', or just supply a blank line.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPAGP

DFHPA1919I *applid* **SPECIFIED DATA IS INCORRECT. ALL SUBSEQUENT OVERRIDES ON THIS LINE IGNORED.**

Explanation: An invalid value for a keyword has been entered after message DFHPA1912 or DFHPA1915 has been issued. CICS has been unable to analyze the overrides following the invalid one.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS continues to prompt for the corrected override using either message DFHPA1912 or message DFHPA1915.

User response: Enter the corrected SIT override, ensuring that the data is in the valid range for that keyword.

You cannot suppress this message with the system initialization parameter MSGLVL=0.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1920I *applid* **SIT KEYWORD *keyword* AND ALL SUBSEQUENT OVERRIDES ON THIS LINE IGNORED.**

Explanation: An invalid keyword has been entered in response to message DFHPA1912 or DFHPA1915. CICS has been unable to analyze the overrides following the invalid one.

The insert *keyword* is the invalid keyword.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS continues to prompt for the corrected keyword using message DFHPA1912 or message DFHPA1915.

User response: Enter the corrected SIT override, ensuring that the keyword is valid.

Refer to the *CICS System Definition Guide* for information on how to do this.

You cannot suppress this message with the SIT parameter, MSGLVL=0.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1921 *applid* PLEASE SPECIFY THE REQUIRED SIT SUFFIX, OR SPECIFY 'NONE'(UNSUFFIXED).

Explanation: The System Initialization Table (SIT) holds information needed for CICS to initialize. This is loaded during preinitialization. The user specifies a 1- or 2-character suffix to identify which SIT to load. To use the unsuffixed default SIT, reply with 'SIT=NO'.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: The system loads and uses the specified SIT if it can be found. Otherwise the user is prompted to enter a valid suffix.

User response: Type 'SIT=xx' in response to the message, where *xx* represents the SIT suffix to be used. (A suffix of 'NO' causes the system to load an unsuffixed SIT).

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM.

DFHPA1922I *applid* SPECIAL KEYWORD *keyword* HAS BEEN REPEATED AND IS IGNORED.

Explanation: There are 2 special keywords, each with an abbreviation. The first is SYSIN, which has the abbreviation SI. The second is CONSOLE, which has the abbreviation CN. These keywords direct CICS to read SIT overrides from the SYSIN data stream and from the console respectively.

The system has found a duplication of one of these keywords. The JCL should be amended.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: System initialization continues.

User response: Correct the JCL by removing the second occurrence of the special keyword specified. (Refer to the *CICS Operations and Utilities Guide* for more information on coding CICS system initialization parameters).

You cannot suppress this message with the system initialization parameter MSGLVL=0.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1923I *applid* SPECIAL KEYWORD *keyword* HAS BEEN DEFINED OUT OF CONTEXT.

Explanation: There are 2 special keywords, each with an abbreviation. The first is SYSIN, which has the abbreviation SI. The second is CONSOLE, which has the abbreviation CN. These keywords direct CICS to read SIT overrides from the SYSIN data stream and from the console respectively.

SYSIN cannot be specified from either the SYSIN data stream, or from the console. CONSOLE cannot be specified from the console.

The system has found the specified keyword *keyword* in one of the situations described above, and so the JCL should be amended.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: System initialization continues.

User response: Correct the JCL by removing the special keyword specified (Refer to the *CICS Operations and Utilities Guide* for more information on coding CICS system initialization parameters).

You cannot suppress this message with the system initialization parameter MSGLVL=0.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1924I *applid* Initialization parameter *parm1* exceeds *parm2*. Both are defaulted. (module *modname*).

| **Explanation:** One of two situations may have occurred:

- | • In the first, parameter *parm1* has been set as greater than parameter *parm2* by override.
- | • In the second, parameter *parm1* may have been set to a certain level in the SIT macro, but parameter *parm2* has been changed by override so that it is now less than parameter *parm1*.

In either case, the condition is invalid, and so default values are applied to both parameters.

System action: Both parameters are set to their default values and system initialization continues.

User response: The system initialization parameters should be altered so that *parm2* is greater than *parm1*

for the next bring up of CICS. (Refer to the *CICS System Definition Guide* for more information about system initialization parameters.)

CICS initialization continues with the default values. The user can then change the defaulted values using the CICS supplied transaction.

You cannot suppress this message with the system initialization parameter, MSGLVL=0, unless it has been issued from DFHPAGP via the message domain.

Destination: Console

Modules: DFHPADM, DFHPAGP

XMEOUT Parameters: *applid, parm1,parm2, modname*

DFHPA1926 *applid* **A MISSING DELIMITER HAS BEEN DETECTED FOR OVERRIDE keyword (MODULE modname).**

Explanation: The data supplied for a SIT override *keyword* has not been delimited correctly.

System action: CICS terminates abnormally.

User response: Correct the specified override in the SYSIN data set by entering the opening or the closing delimiter on its data.

Restart CICS.

Refer to the *CICS System Definition Guide* for the required delimiter for keyword *keyword*.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1927 *applid text*

Explanation: This message is displayed during CICS initialization to show parameters that will override the system initialization parameters coded on the DFHSIT macro. If it is preceded by message DFHPA1100, *text* shows the contents of the PARM parameter from the JCL EXEC statement. If it is preceded by message DFHPA1102, *text* shows the contents of a record read from the SYSIN data set.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: System initialization continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPAIO

DFHPA1928 *applid* **IF XRF=YES, THE GENERIC AND SPECIFIC APPLIDS MUST BE DIFFERENT. CICS IS TERMINATED.**

Explanation: In an XRF CICS system, a generic and a specific *applid* must be defined. They must also be unique.

This message is displayed and CICS is terminated if both these *applids*, which are defined as SIT overrides, are found to be identical in an XRF environment.

This message is also displayed if only the generic *applid* is defined.

System action: CICS terminates abnormally.

User response: Correct the error by defining both the generic and the specific *applids* as SIT overrides. Ensure that they are unique. Refer to the *CICS System Definition Guide* for further information on how to do this.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1929 *applid* **CSDBKUP=DYNAMIC REQUIRES CSDRECOV=ALL. CSDBKUP HAS BEEN DEFAULTED TO STATIC.**

Explanation: When the value DYNAMIC is specified for the CSDBKUP keyword the CSDRECOV keyword must have the value ALL. However, the override parameter stream has overridden the SIT values and this requirement has not been fulfilled.

System action: To enable initialization to continue, CSDBKUP is set to the default value STATIC. Because CSDBKUP is set to STATIC, the CICS CSD as defined in the input JCL, or by dynamic allocation, is not eligible for backup while open for update.

User response: Update CICS input JCL with the correct values for CSDBKUP and CSDRECOV keywords prior to the next initialization of CICS.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1930 *applid* CSDFRLOG=*nn* HAS BEEN IGNORED AS CSDRECOV=ALL HAS NOT BEEN SPECIFIED.

Explanation: When a forward recovery log value is specified for the CSDFRLOG keyword, the CSDRECOV keyword must have the value ALL. However, the override parameter stream has overridden the SIT values and this requirement has not been fulfilled.

System action: To enable initialization to continue, the CSDFRLOG value has been ignored. Because CSDFRLOG is ignored, the CICS CSD as defined in the input JCL, or by dynamic allocation, is not eligible for forward recovery logging.

User response: Update CICS input JCL with the correct values for the CSDFRLOG and CSDRECOV keywords prior to the next initialization of CICS.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1931 *applid keyword* IS A SECURITY KEYWORD AND CANNOT BE ENTERED AT THE CONSOLE. THE KEYWORD IS IGNORED.

Explanation: A SIT override has been entered at the console which is deemed to be a member of the set of security system initialization parameters. Security system initialization parameters cannot be entered at the console.

During initialization, CICS might not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS ignores the security SIT override, and initialization continues.

User response: Update CICS input JCL so that security keywords are included in the SIT, SYSIN or PARM prior to the next initialization of CICS.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1932 *applid* A PSDINT VALUE GREATER THAN ZERO WAS SPECIFIED WITH XRF=YES. PSDINT HAS BEEN RESET TO 0.

Explanation: A conflict of options has been detected. You have requested Persistent Session Support by specifying a nonzero value for the PSDINT system

initialization parameter. This parameter is used to set the Persistent Sessions delay interval. However, you have also requested XRF support by specifying XRF=YES. Persistent Sessions Support and XRF are mutually exclusive.

System action: The PSDINT value defaults to 0. CICS attempts to continue with XRF support.

User response: Before you next initialize CICS, alter the system initialization parameters so that either PSDINT=0 or XRF=NO. See the *CICS System Definition Guide* for further information.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1934I *applid* START TYPE CHANGED TO *type*.

Explanation: The start type specified in the SIT has been changed to that shown in the message.

System action: Initialization continues with the new start type.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPAGP

DFHPA1935 *applid keyword* IS A SECURITY KEYWORD. THIS KEYWORD AND ALL SUBSEQUENT KEYWORDS ON THIS LINE ARE IGNORED.

Explanation: A SIT override has been entered at the console which is deemed to be a member of the set of security system initialization parameters. Security system initialization parameters cannot be entered at the console. CICS has been unable to analyze the overrides following the security keyword.

During initialization, CICS might not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS ignores the security SIT override and all subsequent overrides entered on this line. Initialization continues.

User response: Update CICS input JCL so that security keywords are included in the SIT, SYSIN or PARM prior to the next initialization of CICS.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1936 *applid* A VALUE WAS SPECIFIED FOR GRNAME WITH XRF=YES. GRNAME HAS BEEN RESET TO BLANKS.

Explanation: A conflict of options has been detected. You have requested generic resource support by specifying a value for the GRNAME system initialization parameter. This parameter is used to register CICS as a VTAM generic resource. However, you have also requested XRF support by specifying XRF=YES. Generic resource support and XRF are mutually exclusive.

System action: The GRNAME value is reset to blanks. CICS attempts to continue with XRF support but without generic resource support.

User response: Before you next initialize CICS, alter the system initialization parameters so that either GRNAME is not specified or XRF=NO. See the *CICS System Definition Guide* for further information.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1937 *applid* GRNAME SPECIFIED WITH SPECIFIC AND GENERIC APPLIDS. THE GENERIC APPLID HAS BEEN SET EQUAL TO THE SPECIFIC.

Explanation: A conflict of options has been detected. You have requested generic resource support by specifying a value for the GRNAME system initialization parameter. This parameter is used to register CICS as a VTAM generic resource. However, you have also specified different values for the generic and specific applids. Generic resource support requires that only one value should be specified for the APPLID parameter.

System action: The generic applid is set to the value of the specific. CICS continues and attempts to register as a VTAM generic resource.

User response: If you intended that CICS should register as a VTAM generic resource, take no action. If you did not, remove the GRNAME parameter before you next initialize the system.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1938 *applid* GRNAME AND APPLID ARE THE SAME. GRNAME RESET TO BLANKS.

Explanation: A conflict of options has been detected. You have requested generic resource support by specifying a value for the GRNAME system initialization parameter. This parameter is used to register CICS as a VTAM generic resource. However, the value specified for GRNAME is the same as the CICS applid. VTAM requires that the generic resource name must be different from the CICS applid.

System action: The generic resource name is set to blanks. CICS will not attempt to register as a VTAM generic resource.

User response: If you intended that CICS should register as a VTAM generic resource, specify the correct GRNAME when you next initialize the system.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1940 *applid* CSDINTEG=CONSISTENT AND CSDINTEG=REPEATABLE REQUIRE CSDRLS=YES. CSDINTEG HAS BEEN SET TO UNCOMMITTED.

Explanation: Read integrity on the CICS system definition (CSD) file has been requested by specifying either CSDINTEG=CONSISTENT or CSDINTEG=REPEATABLE. However, these read integrity options are not available because the CSD has been defined to be opened in non-RLS mode. Read integrity is only available to files defined in RLS mode.

System action: CICS startup continues. The CSD is read without read integrity.

User response: Do one of the following to correct the error:

- Specify CSDRLS=YES to make the CSD eligible to be opened in RLS mode.
- Remove the CSDINTEG keyword if you do not wish to open the CSD in RLS mode.

Destination: Console

Modules: DFHPADM

XMEOUT Parameter: *applid*

DFHPA1941 *applid* VTAM=NO HAS BEEN SPECIFIED BUT NO UOWNETQL PARAMETER HAS BEEN SPECIFIED. A DEFAULT UOWNETQL WILL BE USED.

Explanation: VTAM=NO has been specified as a

system initialization parameter but the UOWNETQL system initialization parameter is missing.

On a non-VTAM system, CICS requires the UOWNETQL parameter in order to construct a default qualified LUNAME to be passed to the recovery manager domain. On a VTAM system, the name is obtained at OPEN ACB time. Recovery manager uses the default qualified LUNAME when constructing unit of work (UOW) identifiers.

System action: If this is an initial start, CICS continues processing using a dummy default UOWNETQL of '9UNKNOWN'. This dummy UOWNETQL is invalid because the first character is a number. UOWNETQL is given this invalid name to highlight the problem.

If this is a cold, warm or emergency start, the name used on the previous run is restored and used.

User response: Specify a valid UOWNETQL system initialization parameter.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1942 *applid* **CSDRLS=YES BUT RLS=NO. CSDRLS=NO WILL BE USED.**

Explanation: The system initialization parameter CSDRLS=YES has been specified but RLS=YES has not been specified. This means that if initialization were to continue with these parameter settings the open of the CSD in record level sharing (RLS) mode would fail because RLS is not available in the system.

CICS requires that if you specify CSDRLS=YES, RLS must be enabled by specifying RLS=YES.

System action: CICS continues processing but forces CSDRLS=NO.

User response: If CSDRLS is required, bring CICS up with RLS=YES.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1943 *applid* **START=COLD OR START=INITIAL MAY NOT BE SPECIFIED WITH OFFSITE=YES. CICS IS TERMINATED.**

Explanation: The system initialization override OFFSITE=YES has been specified but START=COLD or START=INITIAL has also been specified. OFFSITE=YES means that CICS is being restarted in offsite recovery mode, but recovery is not possible on a cold or initial

start, so this combination of system initialization parameters is incompatible.

System action: CICS initialization is terminated.

User response: You should specify START=AUTO when restarting CICS in OFFSITE recovery mode.

If you intended to perform a cold or initial start, and specified OFFSITE=YES in error, either change the OFFSITE override to NO, or remove it and allow it to default to NO.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1944 *applid* **CSDRECOV=ALL CANNOT BE SPECIFIED WITHOUT A CSDFRLOG IF CSDRLS=NO. CICS IS TERMINATED.**

Explanation: The system initialization parameter CSDRECOV=ALL has been specified together with CSDRLS=NO, but CSDFRLOG has either not been specified, or has been specified as NO.

If the CSD is to be accessed in non-RLS mode (CSDRLS=NO) and forward recovery is specified (CSDRECOV=ALL), a forward recovery log must also be specified using the CSDFRLOG system initialization parameter.

If the CSD is to be accessed in RLS mode (CSDRLS=YES), the recovery attributes are obtained from the VSAM catalog and CSDRECOV and CSDFRLOG are ignored. For this reason, the check for CSDFRLOG when CSDRECOV=ALL is not carried out when CSDRLS=YES.

System action: CICS initialization is terminated.

User response: You should specify CSDFRLOG=*nn* when you specify CSDRECOV=ALL together with CSDRLS=NO, where *nn* is a number between 1 and 99.

If you want to access the CSD in non-RLS mode, but also choose to specify the recovery attributes for the CSD in the VSAM catalog, the system initialization parameters relating to CSD recovery attributes are not used. However, you are still required to have a consistent set of these parameters.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPA1945 *applid sitname* **MUST BE LINKEDITED WITH THE NORENT OPTION. CICS IS TERMINATED.**

Explanation: The system initialization table *sitname* has been link-edited with the RENT option, which means CICS will not have write access to it.

System action: CICS initialization is terminated.

User response: You should re-link the system initialization table with the NORENT option.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHPADM

DFHPCxxxx messages

DFHPC0401 *applid* **Abend *abcode* issued by *yyy* task.**

Explanation: A CICS task has abnormally terminated with CICS transaction abend code *abcode*. *yyy* identifies the task, for example TCP (terminal control).

A task abend has been requested for a system task. CICS is abnormally terminated with a system dump.

System action: CICS terminates abnormally with a dump.

User response: See the description of abend *abcode* for further guidance.

Destination: Console

Modules: DFHABAB

XMEOUT Parameters: *applid, abcode,yyy*

User response: Investigate why abend *abcode1* occurred. It may be due to an error in CICS abend handling.

Destination: Console

Modules: DFHABAB

XMEOUT Parameters: *applid, abcode2,abcode1, tranid*

DFHPC0408 *applid* **Abend *abcode* has been issued during post commit processing, transaction *tranid*.**

Explanation: During post commit processing for transaction *tranid*, the transaction issued abend *abcode*. An abend during transaction post commit processing implies that a resource manager cannot syncpoint correctly, and thus that data integrity is at risk.

System action: CICS terminates abnormally with a system dump.

User response: See the description of abend *abcode* for further guidance.

Destination: Console

Modules: DFHABAB

XMEOUT Parameters: *applid, abcode,tranid*

DFHPC0409 *applid* **Abends *abcode2* and *abcode3* have been issued while processing abend *abcode1* for the same task, transaction *tranid*.**

Explanation: A task has abnormally terminated with abend code *abcode1*. While processing this abend, the task abnormally terminated twice more (in CICS code) with abends *abcode2* and *abcode3* in that sequence. This may be a permanent abend loop.

System action: CICS terminates abnormally with a system dump.

User response: See the description of abend *abcode1* for further guidance. You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHABAB

DFHPC0405 *applid* **Abend *abcode2* has been issued while processing abend *abcode1* for the same task, transaction *tranid*.**

Explanation: Transaction *tranid* has abnormally terminated with abend code *abcode1*. While CICS was backing out transaction *tranid*, another abend (namely *abcode2*) occurred. CICS was unable to process the original *abcode* abend correctly.

System action: CICS is terminated with a dump.

DFHPDxxxx messages

DFHPD0101 Pointer to *xxxxxxx* at offset *X'offset'* is invalid.

Explanation: A pointer to a block of type *xxxxxxx*, whose address is at offset *offset* in the block just formatted, is invalid.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: Either the pointer to the required area was corrupted, the pointer has not been initialized, or the address was valid but the area was not present in the dump. In the latter case, if the area is essential for diagnosing the problem, a fresh dump which includes the missing area has to be obtained.

It is possible that the storage is present in the dump, and the pointer has been initialized with its address, but the storage has not been referred to by CICS code. You can check this by browsing the storage in the dump at this address.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHDUFFT, DFHDUFUT, DFHXRDUF

DFHPD0102 Pointer to *xxxxxxx* at offset *X'offset'* is zero.

Explanation: A pointer to a block of type *xxxxxxx*, whose address is at offset *offset* in the block just formatted, is zero.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: The area may have been corrupted or not set up correctly. It is also possible that the zero value is valid. This depends on the circumstances or timing of the dumps collection; for example, a zero value is valid before the block is initialized.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHDUFFT, DFHDUFUT, DFHXRDUF

DFHPD0103 *xxxxxxx* address *X'address'* is invalid.

Explanation: The address *address* of a block of type *xxxxxxx* is invalid.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: Either the pointer to the required area

was corrupted, the pointer has not been initialized, or the address was valid but the area was not present in the dump. In the latter case, if the area is essential for diagnosing the problem, a fresh dump which includes the missing area has to be obtained.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHDUFFT, DFHDUFUT, DFHXRDUF

DFHPD0104 Address of *xxxxxxx* is zero.

Explanation: The address of a block of type *xxxxxxx* is zero.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: The area may have been corrupted or not set up correctly. It is also possible that the zero value is valid. This depends on the circumstances or timing of the dumps collection; for example, a zero value is valid before the block is initialized.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHDUFFT, DFHDUFUT, DFHXRDUF

DFHPD0105 A loop has been detected. *xxxxxxx* at address *X'address'* already encountered.

Explanation: The formatting program avoids loops resulting from corrupted control block chains by checking for duplicate addresses. The block *xxxxxxx* at address *address* has already been encountered and may already have been formatted.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: Check the chain fields in control blocks of the same type which have already been processed. Otherwise the problem may be caused by the timing of the dumps collection, if for example this occurs before the block is initialized.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHDUFFT, DFHDUFUT

DFHPD0106 An error has occurred while formatting *xxxxxxx*.

Explanation: An error has occurred during the formatting of a block of type `xxxxxxx`.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: If no data has been formatted for the block then the block address was probably invalid. In this case see message DFHPD0101.

If part of the block has been successfully formatted then it is possible that the length of the control block is incorrect. The length may have been overwritten which may provide a clue to the problem.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

| **Modules:** DFHDUFUT, DFHDUFFT

DFHPD0107 Eyecatcher for `xxxxxxx` at `X'address'` is invalid.

Explanation: The eyecatcher field of a control block of type `xxxxxxx` at address `address` has an incorrect value.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: Investigate why the eyecatcher has been overwritten or why the control block has not been set up correctly. For more information on how to solve storage overwrite problems, see the *CICS Problem Determination Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

| **Modules:** DFHDUFFT, DFHDUFUT

DFHPD0108 Unable to start browse of `xxxxxxx`.

Explanation: An error has occurred when attempting to start browsing a table of type `xxxxxxx`.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: This error may be due to the Table Manager Program (TMP) control blocks being invalid. Check the TMP control blocks for the table in question.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

| **Modules:** DFHDUFUT

DFHPD0109 Unable to get next entry in `xxxxxxx` table.

Explanation: An error has occurred when attempting to access the next entry in a table of type `xxxxxxx`.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: This error may be due to the Table Manager Program (TMP) control blocks being invalid. Check the TMP control blocks for the table in question.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

| **Modules:** DFHDUFUT

DFHPD0110 Unable to access data for `xxxxxxx`

Explanation: The Interactive Problem Control System (IPCS) service routine ADPLMEMA was unable to find the requested data for control block `xxxxxxx` in the dump.

System action: Dump formatting continues after skipping any sections impacted by the lack of data.

User response: Either the pointer to the required area was corrupted, which may in itself be a clue to the problem, or the address was valid but the area was not present in the dump. In the latter case, if the area is essential for diagnosing the problem obtain a fresh dump which includes the missing area.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHPDX1

DFHPD0111I Pointer to `xxxxxxx` at offset `X'offset'` is zero.

Explanation: A pointer to a block of type `xxxxxxx`, whose address is at offset `offset` in the block just formatted, is zero.

System action: Dump formatting continues after skipping any sections affected by the zero pointer.

User response: The message is informative, indicating that the area was zero at the time the dump was taken.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

| **Modules:** DFHDUFFT, DFHDUFUT, DFHXRDUF

DFHPD0112I Address of xxxxxxxx is zero.

Explanation: The address of a block of type xxxxxxxx is zero.

System action: Dump formatting continues after skipping any sections affected by the block.

User response: The message is informatory, indicating that the area did not contain an address at the time the dump was taken.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

| **Modules:** DFHDUFFT, DFHDUFUT, DFHXRDUF

DFHPD0113 This block has already been processed.

Explanation: The block whose heading line has just been printed has already been formatted in this section of the dump.

System action: The block is formatted again then any sections which may be impacted by the probable control block chain loop are skipped.

User response: Check the chain fields in the control blocks processed so far. This may provide a clue to the problem.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHPD640

DFHPD0114 Invalid keyword *keyword*

Explanation: The keyword *keyword* is not valid for the CICS640 verb.

System action: The keyword is ignored.

User response: Correct the keyword and retry.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHPDKW

DFHPD0115 CICS job not found during ASCB scan.

Explanation: The dump formatting program searched the dump for CICS jobs satisfying the specified JOB criterion (if any), but found none.

System action: There is only a severe problem when this message is followed by message DFHPD0120.

User response: If this is a severe error, ensure that the dump is the correct one, that the JOB keyword is

correctly specified, and that the dump contains the necessary MVS and CICS data areas.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHPDX1

DFHPD0116 Cannot access the AFCB.

Explanation: The formatting program was unable to access data for the AFCB.

System action: No formatting is performed.

User response: Ensure that the dump is the correct one, and that the dump contains the necessary MVS data areas.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHPDX1

DFHPD0117 An error has occurred while formatting xxxxxxxx.

Explanation: An error has occurred during the formatting of a block of type xxxxxxxx.

Either the user has performed a GETMAIN for the storage, but the storage has not been referenced. Unreferenced storage may not be present in the dump.

Or the block address is invalid,

Or the length of the control block is incorrect.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: If no data has been formatted for the block then either the storage has not been referenced, or the block address was invalid. If the block address was invalid, refer to message DFHPD0101.

If part of the block has been successfully formatted then it is possible that the length of the control block is incorrect. The length may have been overwritten which may provide a clue to the problem.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

| **Modules:** DFHDUFFT, DFHDUFUT

DFHPD0118 Invalid argument for JOB=, CURRENT assumed

Explanation: The argument for the JOB operand of the CICS640 verb is invalid.

System action: The keyword is ignored.

User response: Correct the invalid argument and retry.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHPDKW

DFHPD0119 Duplicate keyword *keyword* found. Value *value* accepted

Explanation: The CICS640 keyword *keyword* has already been encountered.

System action: The value *value* specified in the message overrides any value previously specified for keyword *keyword*. Processing continues with the new value *value*.

User response: Remove the duplicate keyword specified on the CICS640 verb.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHPDKW

DFHPD0120 CICS IPCS exit is terminating.

Explanation: The CICS exit is terminating.

System action: The exit is returning to the Interactive Problem Control System (IPCS) without performing the requested function. A previous message gives the reason for this.

User response: To determine what action is necessary, refer to the message immediately preceding this one on the dump.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHPDX1

DFHPD0121I Formatting control blocks for job *jobname*

Explanation: This shows the job name for the CICS system from which the dump was taken.

System action: Processing continues.

User response: None.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHPDX1

DFHPD0122I End of dump for job *jobname*

Explanation: This marks the end of the output from the CICS print dump exit.

System action: None. The formatting job has just completed.

User response: None.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHPDX1

DFHPD0123 A program check has occurred while processing keyword *keyword*

Explanation: A program check has occurred during processing of the keyword identified in the message.

System action: Dump formatting continues after skipping any sections affected by the error.

Note that the maximum possible number of occurrences of this message is five. If a sixth program check occurs, the dump formatting program terminates abnormally with a DFHPD640 abend code.

User response: A dump should accompany this message, but if no dump is produced, rerun the job with //DFHSNAP DD SYSOUT=A included in the JCL job stream.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Note:** This message cannot be changed with the
| message editing utility.

DFHPD0124 Storage violation detected at X'*address*'. Leading SAA is invalid.

Explanation: The Storage Accounting Area (SAA) in the first eight bytes of the user storage element at address X'*address*' has been found to be invalid. However, the trailing SAA is valid.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: Investigate why the storage has been overwritten or has not been set up correctly. For more

information on how to solve storage overwrite problems, refer to the *CICS Problem Determination Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

| **Modules:** DFHDUFUT

**DFHPD0125 Storage violation detected at X'address'.
Trailing SAA is invalid.**

Explanation: The Storage Accounting Area (SAA) in the first eight bytes of the user storage element at address X'address' has been found to be invalid. However, the leading SAA is valid.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: Investigate why the storage has been overwritten or has not been set up correctly. For more information on how to solve storage overwrite problems, refer to the *CICS Problem Determination Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

| **Modules:** DFHDUFUT

**DFHPD0126 Storage violation detected at X'address'.
Leading and trailing SAAs are invalid.**

Explanation: The Storage Accounting Areas (SAAs) in the first and last eight bytes of the user storage element at address X'address' are invalid.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: Investigate why the storage has been overwritten or has not been set up correctly. For more information on how to solve storage overwrite problems, refer to the *CICS Problem Determination Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

| **Modules:** DFHDUFUT

**DFHPD0127 Storage violation detected at X'address'.
Leading and trailing SAAs differ.**

Explanation: Although the Storage Accounting Areas (SAAs) in the first and last eight bytes of the user storage element at address X'address' are valid, they do not match.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: Investigate why the storage has been overwritten or has not been set up correctly. For more information on how to solve storage overwrite problems, refer to the *CICS Problem Determination Guide*.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

| **Modules:** DFHDUFUT

**DFHPD0128 Invalid data length X'length' specified
for address X'address'.**

Explanation: The offline utility DFHPD640 has detected a request for a block of data of invalid length X'length' while formatting a system dump.

System action: Dump formatting usually continues after skipping any sections affected by this error.

User response: This message indicates a probable error in CICS code. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

| **Modules:** DFHDUFUT, DFHDUFFT

**DFHPD0129 CICS Domain Anchor Blocks not found
for AFCB. Scan will continue.**

Explanation: The dump formatter has attempted to find a CICS dump in a TCB chain but has failed. The scan will continue. This is because DFHPD640 could not find the addresses of the CICS domain anchor blocks in the kernel global storage. Possible causes for this are:

- Scanning the wrong TCB on the TCB chain. The scan will continue.
- The kernel global storage being overwritten or freemained.
- The dump being taken so early on in CICS initialization that the kernel global storage has not yet been set up.

System action: There is only a severe problem when this message is followed by message DFHPD0120.

User response: If this is a severe error. Try to recreate the original error and produce a valid system dump against which the dump formatter can be rerun.

If the problem recurs, you will need further assistance from IBM. Collect the sysprint output from the dump formatter and note any relevant messages. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Modules:** DFHPDX1

DFHPD0130 Keyword *keyword1* is no longer valid.
Replace with keyword *keyword2*

Explanation: In CICS Transaction Server for z/OS, Version 3 Release 1 the keyword *keyword1* has been replaced by *keyword2* for the CICS640 verb.

For example, the keyword PCP has been replaced by PG.

System action: The keyword *keyword1* is ignored.

User response: Correct the keyword and retry.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHPDKW

DFHPD0131 CICS job *jobname* is for CICS version *version1*. CICS IPCS exit is for CICS version *version2*.

Explanation: The CICS job *jobname* being processed by the dump formatting program was executing under CICS version *version1*, but the dump formatting program was the one distributed with CICS version *version2*.

| **System action:** Dump formatting continues for the CICS job.

| **User response:** Unless formatting MRO control blocks, retry dump formatting for the CICS job using the dump formatting program for CICS version *version1*.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHPDX1

DFHPD0133 Specified task not found.

| **Explanation:** No transaction could be found for the task identifier specified in the taskid keyword parameter.

DFHPGxxxx messages

DFHPG0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies

| **System action:** Dump formatting continues after skipping any sections affected by the error.

| **User response:** Correct the invalid taskid and retry.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHPD640

| **DFHPD0134** Link to module CEEERRIP has failed.

| **Explanation:** While formatting dump data an attempt was made to link to the Language Environment IPCS Verbexit program CEEERRIP. The link failed.

| **System action:** Dump formatting continues after skipping any sections affected by the error.

| **User response:** CEEERRIP is supplied on SYS1.MIGLIB. Ensure that SYS1.MIGLIB is in the concatenation for the MVS linklist or LPA.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHPD640

| **DFHPD0135** Program check occurred with CEEERRIP in control.

| **Explanation:** While formatting dump data a program check occurred in the Language Environment IPCS verbexit module CEEERRIP.

| **System action:** Dump formatting continues after skipping any sections affected by the error.

| **User response:** A dump should accompany this message. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHPD640

that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS

code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHPGAI, DFHPGAQ, DFHPGDD, DFHPGDM, DFHPGEX, DFHPGHM, DFHPGIS, DFHPGLD, DFHPGLK, DFHPGLU, DFHPGPG, DFHPGRP, DFHPGST, DFHPGXM.

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*, *modname*

DFHPG0002 *applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is

taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHPGAI, DFHPGAQ, DFHPGDD, DFHPGDM, DFHPGEX, DFHPGHM, DFHPGIS, DFHPGLD, DFHPGLK, DFHPGLU, DFHPGPG, DFHPGRP, DFHPGST, DFHPGXM.

XMEOUT Parameters: *applid*, *X'code'*, *modname*

DFHPG0004 *applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset *X'offset'*. This is the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it is necessary to decide

whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* in the message is terminated and CICS continues.

If you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you need to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

XMEOUT Parameters: *applid, X'offset', modname*

DFHPG0101 *date time applid terminal userid tranid PPT entry for progname has been added.*

Explanation: This is an audit log message indicating that program entry *progname* has been added to the PPT using the INSTALL command. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Destination: CSPL

Modules: DFHPGDD

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, progname*

DFHPG0102 *date time applid terminal userid tranid PPT entry for progname has been deleted.*

Explanation: This is an audit log message indicating that program entry *progname* has been deleted from the PPT using the REMOVE command. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Destination: CSPL

Modules: DFHPGDD

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, progname*

DFHPG0103 *date time applid terminal userid tranid PPT entry for progname has been replaced.*

Explanation: This is an audit log message indicating that program entry *progname* has been replaced in the PPT using the INSTALL command. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Destination: CSPL

Modules: DFHPGDD

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, progname*

DFHPG0104 *date time applid Program progname is defined with DATALOCATION(ANY) but is linkedited with AMODE(24).*

Explanation: Program entry *progname* has been loaded. It is defined (using RDO or by program autoinstall) with DATALOCATION(ANY), but was linkedited with AMODE(24). Addresses returned to the program by EXEC CICS commands using the SET option may be above the 16MB line and not accessible by the AMODE(24) program.

The definition is accepted as the program can pass the storage on to another program which is linkedited with

AMODE(31). See the description of DATALOCATION in the *CICS Resource Definition Guide*.

This message is issued the first time the program is loaded, linked to or XCTLed to, after being defined.

System action: The system continues normally.

User response: None.

Destination: CSPL

Modules: DFHPGLD, DFHPGLE, DFHPGLK, DFHPGLU, DFHPGPG, DFHPGXE, DFHPGEX

XMEOUT Parameters: *date, time,applid, progname*

DFHPG0201 *date time applid terminal userid tranid*
Program autoinstall exit *urmmname*
indicated that program *progname* **should not be added to the PPT.**

Explanation: An attempt has been made to autoinstall a program during link, XCTL, load or exit processing but the autoinstall exit set a return code indicating that the program should not be installed. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: Control is returned to the caller with an error response. For EXEC commands, EIBRESP is set to PGMIDERR and EIBRESP2 is set to indicate the cause of the error.

User response: None

Destination: CSPL

Modules: DFHPGAI

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, urmmname, progname*

DFHPG0202 *date time applid terminal userid tranid*
Program autoinstall exit *urmmname* **has abended with code** *abcode*. **The program autoinstall function has been disabled.**

Explanation: An attempt has been made to autoinstall a program during link, XCTL, load or exit processing but the program autoinstall exit program abended with code *abcode*. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: Control is returned to the caller with an error response. For EXEC commands, EIBRESP is set to PGMIDERR and EIBRESP2 is set to indicate the cause of the error. The autoinstall function is disabled.

User response: Continue processing without program autoinstall or correct the error in the autoinstall exit program and reenable the autoinstall function using CEMT or the SPI.

Destination: Console, CSPL

Modules: DFHPGAI

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, urmmname, abcode*

DFHPG0203 *date time applid terminal userid tranid*
Program autoinstall exit *urmmname* **failed,**
reason: *reason*. **The program autoinstall function has been disabled.**

Explanation: An attempt has been made to autoinstall a program during link, XCTL, load, or exit processing but the program autoinstall exit program is incorrectly defined or cannot be found on the load libraries. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.
- *reason* is one of the following:
 - Program not defined
 - Program not enabled
 - Program not loadable
 - Remote program
 - AMODE error
 - Invalid COMMAREA
 - Recursion in autoinstall exit.

System action: Control is returned to the caller with an error response. For EXEC commands, EIBRESP is set to PGMIDERR and EIBRESP2 is set to indicate the cause of the error. The autoinstall function is disabled.

User response: Continue processing without program autoinstall or correct the problem and reenable the autoinstall function using CEMT or the SPI. Take the appropriate action to correct the problem:

Program not defined

Install the autoinstall exit program.

Program not enabled

Reset the status of the autoinstall exit program.

Program not loadable

Ensure that the autoinstall exit program is in the load libraries.

Remote program

Ensure that the autoinstall exit program is defined as a local program.

AMODE error

Ensure that the autoinstall exit program is AMODE 31.

Invalid COMMAREA

Ensure that if the program autoinstall exit program passes the COMMAREA to another program, the COMMAREA is correctly passed.

Recursion in autoinstall exit

The autoinstall user-replaceable module has attempted to link to XCTL or to load another program which is not defined. Autoinstall cannot be attempted with the autoinstall exit. Ensure that the program being referred to is defined using RDO.

Destination: Console, CSPL

Modules: DFHPGAI

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, urmname, reason*

DFHPG0204 *date time applid terminal userid tranid*
Autoinstall for program *progname* failed.
Program autoinstall model *modelname* is not defined.

Explanation: An attempt has been made to autoinstall a program during link, XCTL, load or exit processing but the model selected for the autoinstall is not defined. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: Control is returned to the caller with an error response. For EXEC commands, EIBRESP is set to PGMIDERR and EIBRESP2 is set to indicate the cause of the error.

User response: Ensure that all programs to be used as models for the autoinstall function have been defined.

Destination: CSPL

Modules: DFHPGAI

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, progname, modelname*

DFHPG0205 *date time applid terminal userid tranid*
Invalid value: *value* returned by program autoinstall exit *urmname* for field *fieldname*.

Explanation: An attempt has been made to autoinstall a program during link, XCTL, load, or exit processing but the program autoinstall exit returned an invalid value for a program definition field or the return code via the commarea. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.
- *value* is the returned value. This may be invalid or there may be a conflict between the load attribute specified and the load type of the model program. If the program type is shared, the load attribute must be resident.

System action: Control is returned to the caller with an error response. For EXEC commands, EIBRESP is set to PGMIDERR and EIBRESP2 is set to indicate the cause of the error.

User response: Ensure that the data returned by the autoinstall exit program is correct.

Destination: CSPL

Modules: DFHPGAI

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, value, urmname, fieldname*

DFHPG0206 *date time applid terminal userid tranid*
Autoinstall for program *progname* failed.
Programs starting with 'DFH' cannot be defined as remote programs.

Explanation: An attempt has been made to autoinstall a program during link, XCTL, load, or exit processing with remote attributes but the program starts with the characters 'DFH'. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: Control is returned to the caller with an error response. For EXEC commands, EIBRESP is set to PGMIDERR and EIBRESP2 is set to indicate the cause of the error.

User response: Ensure that the autoinstall model program selected for programs starting 'DFH' is

defined as a local program and that no remote attributes are specified by the program autoinstall exit program.

Destination: CSPL

Modules: DFHPGAI

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, progname*

DFHPG0207 *date time applid terminal userid tranid*
Autoinstall for program *progname* failed.
The program name is not valid.

Explanation: An attempt has been made to autoinstall a program during link, XCTL, load or exit processing but the program name includes invalid characters.

Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: Control is returned to the caller with an error response. For EXEC commands, EIBRESP is set to PGMIDERR and EIBRESP2 is set to indicate the cause of the error.

User response: Ensure that the program name is valid.

Destination: CSPL

Modules: DFHPGAI

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, progname*

DFHPG0208 *date time applid terminal userid tranid*
Autoinstall for program *progname* failed.

Explanation: An attempt has been made to autoinstall a program during link, XCTL, load, or exit processing but the install of the definition failed. Either the AMODE/RMODE combination is invalid or the load attribute and type combination is invalid. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: Control is returned to the caller with an error response. For EXEC commands, EIBRESP is set to PGMIDERR and EIBRESP2 is set to indicate the cause of the error.

User response: Ensure the AMODE and RMODE are compatible and the program attribute is specified as

resident if the program type is shared.

| **Modules:** DFHPIRM

| **XMEOUT Parameters:** *applid, X'offset', modname*

| **DFHPI0110** *date time applid* **An attempt to start transaction CPIH by something other than an attach request from web domain has been made. This is not allowed.**

| **Explanation:** An attempt has been made to start transaction CPIH by some method other than a transaction attach from web domain. Transaction CPIH is a system task and cannot be entered from a terminal.

| **System action:** The CPIH transaction has not been started.

| **User response:** Do not attempt to enter CPIH from a terminal or from any other device. CICS will start the transaction if a PIPELINE request is made via a TCP/IP attached client. No user action is required.

| **Destination:** CPIO

| **Modules:** DFHPIDSH

| **XMEOUT Parameters:** *date, time, applid*

| **DFHPI0111** *date time applid tranid* **Call to Websphere MQ function *function* returned with reason code *reason_code*. Transaction abended.**

| **Explanation:** A Websphere MQ function call issued by transaction CPIL was unsuccessful and has set a non-zero reason code. The transaction CPIL is used to start a PIPELINE for a message received from Websphere MQ.

| **System action:** The transaction is abended with abend code APIJ.

| **User response:** Check the Websphere MQ reason code in the MQ Messages and Codes manual, and examine the trace to determine why the MQ function call failed. You may need help from IBM to resolve this problem.

| **Destination:** CPIO

| **Modules:** DFHPILSQ

| **XMEOUT Parameters:** *date, time, applid, tranid, function, reason_code*

DFHPI0112 *date time applid tranid* **Unable to locate URIMAP to match HOST *hostname* and PATH *pathname*. Unable to process inbound MQ message.**

Explanation: A Websphere MQ message has been received on queue *hostname* and with targetService *pathname*, but no match was found when attempting to locate a URIMAP with this host and path. No pipeline processing can be done for this Websphere MQ message.

System action: The inbound message is placed on the Dead Letter Queue and a report message is sent to the ReplyTo queue.

User response: Define and install a suitable URIMAP to match this combination of host and path which will identify the PIPELINE (and optionally WEBSERVICE) to process requests using this combination of queue name and targetService.

Destination: CPIO

Modules: DFHPILSQ

XMEOUT Parameters: *date, time,applid, tranid, hostname, pathname*

DFHPI0113 *date time applid tranid* **URIMAP *urimapname* has been located for HOST *hostname* and PATH *pathname*, but does not have USAGE(PIPELINE). Unable to process inbound MQ message.**

Explanation: A Websphere MQ message has been received on queue *hostname* and with targetService *pathname*, and a matching URIMAP *urimapname* was found. However, this URIMAP was not defined with USAGE(PIPELINE). Therefore, no pipeline processing can be done for this Websphere MQ message.

System action: The inbound message is placed on the Dead Letter Queue and a report message is sent to the ReplyTo queue.

User response: Define and install a suitable URIMAP to match this combination of host and path with USAGE(PIPELINE) which will identify the PIPELINE (and optionally WEBSERVICE) to process requests using this combination of queue name and targetService.

Destination: CPIO

Modules: DFHPILSQ

XMEOUT Parameters: *date, time,applid, tranid, urimapname, hostname, pathname*

DFHPI0114 *date time applid tranid* **The pipeline MQ transport mechanism failed because a call to Websphere MQ function *function* returned with reason code *reason_code*.**

Explanation: A Websphere MQ function call issued by the pipeline MQ transport mechanism was unsuccessful and has set a non-zero reason code.

System action: The pipeline MQ transport mechanism returns an exception response to the pipeline manager which performs further error processing.

User response: Check the Websphere MQ reason code in the MQ Messages and Codes manual, and examine the trace to determine why the MQ function call failed. You may need help from IBM to resolve this problem.

Destination: CPIO

Modules: DFHPITQ1

XMEOUT Parameters: *date, time,applid, tranid, function, reason_code*

DFHPI0115 *date time applid tranid* **The service provider pipeline has returned a response message to the MQ transport, but the inbound request did not expect a response. The response message is ignored.**

Explanation: The Websphere MQ transport module has been called by a provider pipeline to return a response. However, the inbound request was one-way only and did not expect a response. Therefore, there is no reply-to queue on which to place the response. There is probably a mismatch between the service requester and the service provider definitions of the service, as the service requester specified that the request was a one-way request.

System action: The response is ignored by the Websphere MQ transport module. The transport module returns control to the pipeline manager with no error indication, and pipeline processing completes normally.

User response: Check the definitions of the web service in the service requester and service provider and ensure that both indicate one-way request, or both indicate a reply is expected.

Destination: CPIO

Modules: DFHPITQ1

XMEOUT Parameters:*date, time,applid, tranid .*

DFHPI0300 *date time applid* **CICS could not invoke WEBSERVICE *WebService* because it was unable to find container *container_name*.**

Explanation: The WEBSERVICE *WebService* could not be invoked because the container *container_name* was not found. An exception response from the program which gets the container was received.

System action: An exception response will be returned to the exec interface module which requested the INVOKE WEBSERVICE.

| **User response:** None.

| **Destination:** CPIO

| **Modules:** DFHPPIW

| **XMEOUT Parameters:** *date, time,applid, WebService, container_name*

| **DFHPI0301** *date time applid* **CICS was unable to link to program *program_name* while attempting to invoke webservice *WebService*. {The program abended. | The program was not defined. | The program was not enabled. | The program was not loadable. | No further details are available.}**

| **Explanation:** CICS was attempting to perform an INVOKE WEBSERVICE command for webservice *WebService* but was unable to link to the given program *program_name*, or the linked program *program_name* abended.

| **System action:** The link is abandoned and the INVOKE WEBSERVICE command returns appropriate EIBRESP and EIBRESP2 codes to the application program. Error processing will continue.

| **User response:** Ensure that the program definition for *program_name* is correct. Correct the problem identified in the message. If the message reports no further information is available then trace can be referred to.

| **Destination:** CPIO

| **Modules:** DFHPPIW

| **XMEOUT Parameters:** *date, time,applid, program_name, WebService,{1=The program abended., 2=The program was not defined., 3=The program was not enabled., 4=The program was not loadable., 5=No further details are available.}*

| **DFHPI0400** *date time applid tranid* **The CICS pipeline HTTP transport mechanism failed to send a request because {the request was using an invalid host codepage | there was a socket error | the URL was invalid}.**

Explanation: The CICS pipeline HTTP transport mechanism was unable to successfully handle the outbound request due to one of two reasons as indicated in the message. For instance, the transport may have encountered a socket error or it may have failed to write the request due to an invalid codepage or URL being used. If the message indicates that the URL being parsed was invalid, an invalid escape character may have been encountered on the URI specified as input.

| **System action:** The request is not sent. Error processing will continue.

User response: Depending on the error indicated in the message, ensure the host codepage you are using is

correct or check for any socket errors indicated by examining any exception trace entries issued from sockets (SO) domain, or check that the URI specified as input does not contain any invalid characters or null delimiters.

| **Destination:** CPIO

| **Modules:** DFHPITH

| **XMEOUT Parameters:** *date, time,applid, tranid, {1=the request was using an invalid host codepage, 2=there was a socket error, 3=the URL was invalid}*

| **DFHPI0401** *date time applid tranid* **The CICS pipeline HTTP transport mechanism failed to send a response or receive a request because {the codepage was not found | there was a socket error | the connection was closed | the client codepage was invalid} .**

Explanation: The CICS pipeline HTTP transport mechanism was unable to successfully handle the inbound request due to one of four reasons as indicated in the message. For instance, the transport may be unable to send a response due to the connection being closed or a sockets error. Also, the error could be caused by the request specifying a codepage which was either invalid or not found.

| **System action:** The response is not sent. Error processing will continue.

| **User response:** Depending on the error indicated in the message, ensure that the codepage you are using is correct, the connection being used is open, or check for any socket errors indicated by examining any exception trace entries issued from sockets (SO) domain.

| **Destination:** CPIO

| **Modules:** DFHPITH

| **XMEOUT Parameters:** *date, time,applid, tranid, {1=the codepage was not found, 2=there was a socket error, 3=the connection was closed, 4=the client codepage was invalid}*

| **DFHPI0402** *date time applid tranid* **The CICS pipeline HTTP transport mechanism failed to send a request because the URI specified an unknown host: *hostname*.**

| **Explanation:** The CICS pipeline HTTP transport mechanism was unable to successfully handle the outbound request because the host *hostname* from the URI is unknown.

| **System action:** The request is not sent. Error processing will continue.

| **User response:** Ensure that the URI specifies a host which is known and available.

| **Destination:** CPIO

| **Modules:** DFHPITH

| XMEOUT Parameters: *date, time,applid, tranid, hostname*

| DFHPI0500 *date time applid tranid* **The CICS Pipeline Manager DFHPIPIM encountered an error while trying to link to program *program_name*. {The program abended. | The program was not defined. | The program was not enabled. | The program was not loadable. | No further details are available.}** PIPELINE: *pipeline*.

| **Explanation:** The CICS Pipeline Manager, DFHPIPIM, was unable to link to the given program, or the linked program abended.

| **System action:** The link is abandoned. Error processing will continue.

| **User response:** Ensure that the program definition is correct. Correct the problem identified in the message. If the message reports no further information is available then trace can be referred to.

| **Destination:** CPIO

| **Modules:** DFHPIPIM

| XMEOUT Parameters: *date, time,applid, tranid, program_name,{1=The program abended., 2=The program was not defined., 3=The program was not enabled., 4=The program was not loadable., 5=No further details are available.}, pipeline*

| DFHPI0501 *date time applid tranid* **The CICS Pipeline Manager cannot proceed as the pipeline is unusable. {The pipeline was not found. | The pipeline is disabled. | The pipeline was of the wrong type.}** PIPELINE: *pipeline*.

| **Explanation:** The CICS Pipeline Manager DFHPIPIM was unable to begin processing as the pipeline it has been invoked for is unusable. If the message indicates that the pipeline is of the wrong type then this means that a Requester pipeline was used where a Provider pipeline was expected or a Provider pipeline was used in place of a Requester one.

| **System action:** In the requester case the transaction is abended with abend code APIB. In the provider case the transaction is abended with abend code API1.

| **User response:** Correct the problem identified in the message.

| **Destination:** CPIO

| **Modules:** DFHPIPIM

| XMEOUT Parameters: *date, time,applid, tranid, {1=The pipeline was not found., 2=The pipeline is disabled., 3=The pipeline was of the wrong type.}, pipeline*

| DFHPI0502 *date time applid tranid* **The CICS Pipeline Manager has failed to receive a request from the underlying transport.** TRANSPORT: *transport*, PIPELINE: *pipeline*.

| **Explanation:** The CICS Pipeline Manager DFHPIPIM was unable to receive a request from the underlying transport. This is due to an error in that transport.

| **System action:** The transaction is abended with abend code API2.

| **User response:** Check the previous messages issued by the transport to identify the cause of the problem.

| **Destination:** CPIO

| **Modules:** DFHPIPIM

| XMEOUT Parameters: *date, time,applid, tranid, transport, pipeline*

| DFHPI0503 *date time applid tranid* **The CICS Pipeline Manager has failed to send a response on the underlying transport.** TRANSPORT: *transport*, PIPELINE: *pipeline*.

| **Explanation:** The CICS Pipeline Manager DFHPIPIM was unable to send a response on the underlying transport. This is due to a previous error in that transport.

| **System action:** The transaction is abended with abend code API3.

| **User response:** Check the previous messages issued by the transport to identify the cause of the problem.

| **Destination:** CPIO

| **Modules:** DFHPIPIM

| XMEOUT Parameters: *date, time,applid, tranid, transport, pipeline*

| DFHPI0504 *date time applid tranid* **The CICS Pipeline Manager has failed to communicate with a remote server due to an error in the underlying transport.** TRANSPORT: *transport*, PIPELINE: *pipeline*.

| **Explanation:** The CICS Pipeline Manager DFHPIPIM failed to communicate with a remote server due to an error in the underlying transport.

| **System action:** The transaction is abended with abend code API3.

| **User response:** Check the previous messages issued by the transport to identify the cause of the problem.

| **Destination:** CPIO

| **Modules:** DFHPIPIM

| **XMEOUT Parameters:** *date, time,applid, tranid, transport, pipeline*

| **DFHPI0505** *date time applid tranid* **The CICS Pipeline Manager has failed to communicate with a remote server as no URI was provided. PIPELINE:** *pipeline.*

| **Explanation:** The CICS Pipeline Manager DFHPIPM failed to communicate with a remote server as no URI was provided. Before CICS can make and a request to a remote server it must be provided with a URI identifying that server. This URI must either be provided in the container 'DFHWS-URI' or in the Pipeline configuration file.

| **System action:** An exception trace entry is written. Error processing continues.

| **User response:** Correct either the application logic or the configuration file so that the URI is provided.

| **Destination:** CPIO

| **Modules:** DFHPIPM

| **XMEOUT Parameters:** *date, time,applid, tranid, pipeline*

| **DFHPI0506** *date time applid tranid* **The CICS Pipeline Manager has failed to communicate with a remote server due to an invalid URI scheme being specified. URI:** *uri, PIPELINE:* *pipeline.*

| **Explanation:** The CICS Pipeline Manager DFHPIPM failed to communicate with a remote server as a URI with an invalid scheme was provided. Before CICS can make and a request to a remote server it must be provided with a URI identifying that server.

| **System action:** An exception trace entry is written. Error processing continues.

| **User response:** Correct either the application logic or the configuration file so that a URI with a supported scheme is provided.

| **Destination:** CPIO

| **Modules:** DFHPIPM

| **XMEOUT Parameters:** *date, time,applid, tranid, uri, pipeline*

| **DFHPI0507** *date time applid tranid* **The CICS Pipeline Manager has failed to receive a response from an application handling task.***{The request timed out. | The application task abended. | The connection to the application task was closed.}* **PIPELINE:** *pipeline.*

| **Explanation:** The CICS Pipeline Manager DFHPIPM was unable to receive a response from an application task. A separate task was used for the application handler as a context switch was required. The message

| indicates the reason the response was not received.

| **System action:** The request will be treated as failed and error processing will continue.

| **User response:** Check the message logs for the region in which the application task was running to determine the detailed cause of the problem.

| **Destination:** CPIO

| **Modules:** DFHPIPM

| **XMEOUT Parameters:** *date, time,applid, tranid, {1=The request timed out., 2=The application task abended., 3=The connection to the application task was closed.}, pipeline*

| **DFHPI0508 E** *date time applid* **The pipeline manager is unable to create or join a request stream because it is unable to reach the target for transaction *tranid* with userid *userid*.**

| **Explanation:** The CICS pipeline manager attempted to create or join a request stream for transaction *tranid*. The transaction specifies a REMOTESYSTEM which cannot be contacted. This might be because IRC is not open or the target system is unavailable.

| **System action:** The SOAP Handler attempting to create this request stream will create a SOAP server fault to return to the client. Error processing continues.

| **User response:** Determine the remote system name from the *tranid* definition. Ensure that IRC is open and the IRC connection named is in service.

| **Destination:** CPIO

| **Modules:** DFHPIPM

| **XMEOUT Parameters:** *date, time,applid, tranid, userid*

| **DFHPI0509 E** *date time applid* **The pipeline manager is unable to create or join a request stream because transaction *tranid* is not installed.**

| **Explanation:** The CICS pipeline manager attempted to create or join a request stream for transaction *tranid* which is not installed.

| **System action:** The SOAP Handler that attempted to create the request stream will create a SOAP server fault to return to the client. Error processing continues.

| **User response:** Add an RDO definition for *tranid* with a program name of DFHPIAP.

| **Destination:** CPIO

| **Modules:** DFHPIPM

| **XMEOUT Parameters:** *date, time,applid, tranid*

DFHPI0510 E *date time applid* **The pipeline manager is unable to create or join a request stream because it has encountered a severe error for transaction *tranid* with userid *userid*.**

Explanation: The CICS pipeline manager attempted to create or join a request stream for transaction *tranid*. CICS encountered a severe error.

System action: A system dump is taken. The SOAP Handler attempting to create this request stream will create a SOAP server fault to return to the client. Error processing continues.

User response: None

Destination: CPIO

Modules: DFHPIPM

XMEOUT Parameters: *date, time, applid, tranid, userid*

DFHPI0600 *date time applid* **The CICS SOAP handler has been passed a container that is not DATATYPE(CHAR).**

Explanation: The CICS soap handler DFHPISN was unable to convert the container to UTF-8 as the container does not have a datatype of CHAR.

System action: The soap handler is unable to process the input and returns a SOAP fault to the client/sender.

User response: Ensure that the DFHREQUEST and DFHWS-BODY containers use the DATATYPE(CHAR) option on the EXEC CICS PUT CONTAINER call.

Destination: CPIO

Modules: DFHPISN

XMEOUT Parameters: *date, time, applid*

DFHPI0601 *date time applid* **The CICS SOAP handler has been passed data that does not begin with a '<' character.**

Explanation: The CICS soap handler DFHPISN has detected that the data in container DFHWS-BODY passed to it does not begin with a '<' character.

System action: The soap handler attempts to continue processing using the contents of the DFHWS-BODY container.

User response: If the contents of the DFHWS-BODY container is not expected to begin with a '<' character no further action is required. If the contents of the DFHWS-BODY container is expected to begin with a '<' character then check the data being put into it is correct and that the fromccsid parameter is set correctly.

Destination: CPIO

Modules: DFHPISN

XMEOUT Parameters: *date, time, applid*

DFHPI0602 *date time applid* **The CICS SOAP handler failed to parse a message. The parser error code is . The DFHPIEP return code is . The error was found at offset into the message.**

Explanation: The CICS SOAP handler DFHPISN has failed to parse a message.

System action: The SOAP handler stops processing the SOAP message and creates a SOAP fault to return to the requester.

User response: Look up the parser error code in the Enterprise PL/I Programming Guide to determine the type of parsing failure. If the parser error code is 0 the XML is valid but the SOAP is not. Use the offset into the SOAP message to determine the precise location of the failure.

XMEOUT Parameters: *date, time, applid,*

DFHPI0700 S *date time applid userid* **PIPELINE pipeline PL/I support is required in order to use pipelines.**

Explanation: The Pipeline *pipeline* installation has failed because PL/I support is not available in this region. PL/I language support is a pre-requisite for using pipelines.

System action: No pipeline is installed, but CICS continues normally.

User response: Add PL/I language support to your region and restart CICS. For instructions on how to do this, see *z/OS V1R4.0 Language Environment Customization*.

Destination: CPIO

Modules: DFHPIPL

XMEOUT Parameters: *date, time, applid, userid, pipeline*

DFHPI0701 I *date time applid userid* **PIPELINE pipeline has been created.**

Explanation: The Pipeline *pipeline* has been created. It now needs to undergo resolution processing. The CPIX transaction is attached automatically to do this. Once resolution is complete, the pipeline will become available for use.

System action: CICS continues normally.

User response: None.

Destination: CPIO

Modules: DFHPIPL

XMEOUT Parameters: *date, time, applid, userid, pipeline*

DFHPI0702 E *date time applid userid PIPELINE pipeline encountered an error in the configuration file filename for pipeline at offset X'offset'. The element name is elementname.*

Explanation: During the pipeline resolution process, the configuration file is parsed and control blocks are built. During this process, an error was encountered. The error is at the offset indicated and starts with the element name shown.

System action: The pipeline is set to a DISABLED state and normal processing continues.

User response: Correct the configuration file. Ensure that the corrected file has been validated before discarding the pipeline (*pipeline*) and then re-installing it.

Destination: CPIO

Modules: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline, filename, X'offset', elementname*

DFHPI0703 I *date time applid userid PIPELINE pipeline is about to scan the WSDIR directory.*

Explanation: A scan is about to begin for pipeline *pipeline*. This will cause a WebService to be created for each of any wsbind files found in the directory specified in the WSDIR parameter of the pipeline.

System action: The system continues normally.

User response: None.

Destination: CPIO

Modules: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline*

DFHPI0704 I *date time applid userid PIPELINE pipeline Implicit scan has completed. Number of wsbind files found in the WSDIR directory: num_files. Number of successful webservice creates: num_ok. Number of failed webservice creates: num_failed.*

Explanation: The scan for pipeline *pipeline* has completed. The number of wsbind files found in the directory specified for this pipeline by the WSDIR parameter is reported by *num_files*. The number that successfully created WebService resources is reported by *num_ok* and the number that failed WebService creation is reported by *num_failed*.

System action: CICS continues normally.

User response: If *num_failed* is non-zero, look for previous messages that may describe the errors. PI domain trace entries will also have been written to aid

in diagnosing the problem(s).

Destination: CPIO

Modules: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline, num_files, num_ok, num_failed*

DFHPI0705 E *date time applid userid PIPELINE pipeline encountered an error writing the configuration to the derived shelf derived-shelf. The response code from the HFS write was X'uss-response' and the reason code was 'X'uss-reason'.*

Explanation: While doing an HFS write for pipeline *pipeline*, a bad response code was received. The HFS filename is *hfs_file*. The response code was *hfs_rs* and the reason code was *hfs_rc*.

System action: The pipeline is disabled and CICS continues normally.

User response: See the z/OS UNIX System Services Messages and Codes manual for the specified response and reason codes.

Destination: CPIO

Modules: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline, derived-shelf, X'uss-response', X'uss-reason'*

DFHPI0706 E *date time applid userid PIPELINE pipeline resolution failed because it cannot be determined if this is a requester or provider pipeline.*

Explanation: After the pipeline has been created, it undergoes the resolution process in a separate transaction. CICS has been unable to determine if the pipeline is a requester or a provider. The first element name must be *requester_pipeline* or *provider_pipeline*.

System action: The pipeline is set to a DISABLED state and CICS continues normally.

User response: Correct the configuration file. Pipeline *pipeline_name* must be discarded and then re-installed.

Destination: CPIO

Modules: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline*

DFHPI0707 E *date time applid userid PIPELINE pipeline resolution failed because namespace prefixes are not supported in the XML configuration file.*

Explanation: An XML element was discovered that had a namespace prefix specified. This is not supported.

| **System action:** The pipeline is set to a DISABLED state and CICS continues normally.
| **User response:** Correct the configuration file. Pipeline *pipeline_name* must be discarded and then re-installed.
| **Destination:** CPIO
| **Modules:** DFHPIPL
| **XMEOUT Parameters:** *date, time,applid, userid, pipeline*

| **DFHPI0708 E** *date time applid userid PIPELINE pipeline*
| **resolution failed because the XML**
| **configuration file cannot be found.**

| **Explanation:** After the pipeline has been created, it undergoes the resolution process in a separate transaction. This transaction has been unable to find the file specified in the *cfgfile* parameter of the resource definition, or in the EXEC CICS CREATE PIPELINE command.

| **System action:** The pipeline is set to a DISABLED state.
| **User response:** Ensure that the HFS filename is being specified correctly. A fully-qualified name must be used. Usual HFS restrictions, such as case-sensitivity and access rights, apply to the filename.
| **Destination:** CPIO
| **Modules:** DFHPIPL
| **XMEOUT Parameters:** *date, time,applid, userid, pipeline*

| **DFHPI0709 E** *date time applid userid PIPELINE pipeline*
| **resolution failed because the XML**
| **configuration file cannot be copied to**
| **the derived shelf.**

| **Explanation:** After the pipeline has been created, it undergoes the resolution process in a separate transaction. Part of this transaction is to copy the XML configuration file to the derived shelf. The derived shelf is the shelf name with /<applid>/PIPELINE/<pipeline>/ appended to it.

| **System action:** The pipeline is set to a DISABLED state.
| **User response:** Determine the reason for this failure and correct it, before discarding and then re-installing the pipeline.
| **Destination:** CPIO
| **Modules:** DFHPIPL
| **XMEOUT Parameters:** *date, time,applid, userid, pipeline*

| **DFHPI0710 I** *date time applid userid PIPELINE pipeline*
| **was successfully discarded.**

| **Explanation:** The PIPELINE was successfully discarded and is no longer available for use.
| **System action:** Processing continues.
| **User response:** None.

| **Destination:** CPIO
| **Modules:** DFHPIPL
| **XMEOUT Parameters:** *date, time,applid, userid, pipeline*

| **DFHPI0711 E** *date time applid userid PIPELINE pipeline*
| **resolution failed because the SAX parser**
| **returned error code X'errcode'. The error**
| **was at offset X'offset' in the**
| **CONFIGFILE. The first eight bytes of**
| **data at this offset are: 'hexdata'.**

| **Explanation:** After the pipeline has been created, it undergoes the resolution process in a separate transaction. This transaction invokes a SAX parser. The parser has detected an error (*errcode*) at offset *offset* into the CONFIGFILE, as specified in RDO or in the EXEC CICS CREATE PIPELINE command. The first eight bytes of data (*hexdata*) are printed in hexadecimal to aid problem resolution.

| **System action:** The pipeline is set to a DISABLED state and CICS continues normally.
| **User response:** Refer to *Enterprise PL/I for z/OS Programming Guide* for the terminating exception code *errcode*. Correct the configuration file. Pipeline *pipeline_name* must be discarded and then re-installed.

| **Destination:** CPIO
| **Modules:** DFHPIPL
| **XMEOUT Parameters:** *date, time,applid, userid, pipeline, X'errcode', X'offset', hexdata*

| **DFHPI0712 E** *date time applid userid PIPELINE pipeline*
| **failed to install due to insufficient**
| **access rights to a HFS file.**

| **Explanation:** A NOTAUTH condition was raised when an attempt to read the configuration file (CONFIGFILE) for this pipeline was made.

| **System action:** The pipeline is disabled and CICS continues normally.
| **User response:** Correct the access for the userid or ensure the correct userid is used for the installation of this pipeline.

| **Destination:** CPIO
| **Modules:** DFHPIPL
| **XMEOUT Parameters:** *date, time,applid, userid, pipeline*

DFHPI0713 E *date time applid userid PIPELINE pipelinename* **The pipeline resolution transaction CPIR did not attach.**

Explanation: After the pipeline has been created, it undergoes the resolution process in a separate transaction. However, this transaction was not successfully attached. The pipeline is not installed.

System action: Processing continues.

User response: Examine the exception trace entry that shows the cause of the attachment error. Ensure that the CPIR transaction is defined and installed on your CICS system and that the program DFHPIITL is also defined and available.

Destination: CPIO

Modules: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipelinename*

DFHPI0714 E *date time applid userid PIPELINE pipeline* **failed to install. The directory specified in the WSDIR p arameter is invalid.**

Explanation: The HFS directory specified in the WSDIR parameter is invalid.

System action: The pipeline is NOT installed. CICS continues normally.

User response: Inspect the data specified and ensure that it is correct. Remember that case is important in specifying any HFS filename. Once correct, re-install the pipeline.

Destination: CPIO

Modules: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline*

DFHPI0715 I *date time applid userid PIPELINE pipeline* **Explicit scan has completed. Number of wsbind files found in the WSDIR directory: *num_files*. Webservices successful create/update: *num_ok*. Webservices not requiring update: *num_nun*. Webservices failed create/update: *num_failed*.**

Explanation: The explicit scan for pipeline *pipeline* has completed. The number of wsbind files found in the directory specified for this pipeline by the WSDIR parameter is reported by *num_files*. The number that successfully created or updated WebService resources is reported by *num_ok*, the number that did not require any update is reported by *num_nun* and the number that failed WebService creation is reported by *num_failed*.

System action: CICS continues normally.

User response: If *num_failed* is non-zero, look for previous messages that may describe the errors. PI domain trace entries will also have been written to aid in diagnosing the problem(s).

Destination: CPIO

Modules: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline, num_files, num_ok, num_nun, num_failed*

DFHPI0716 E *date time applid userid* **Unable to dynamically create a webservice for PIPELINE pipeline. The complete WSBIND file name is too long.**

Explanation: An attempt was made to dynamically create a webservice using the name of a wsbind file found in the WSDIR directory. The fully-qualified filename is longer than the maximum 255 characters.

System action: The webservice is NOT created. CICS continues normally.

User response: Use a shorter value for the WSDIR directory. The pipeline will need to be discarded and re-installed once the WSDIR parameter has been altered and any wsbind files either copied or re-generated to this new directory.

Destination: CPIO

Modules: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline*

DFHPI0720 E *date time applid userid PIPELINE pipeline* **encountered an error in the configuration file *filename* at offset *X'offset'*. Found : *element_found* yet expected : *element_expected*.**

Explanation: During the pipeline resolution process, the configuration file is parsed and control blocks are built. During this process, an error was encountered. The error was at offset *offset*. *element_found* was found when *element_expected* was expected.

System action: The pipeline is set to a DISABLED state and normal processing continues.

User response: Correct the configuration file. Ensure that the corrected file has been validated before discarding the pipeline (*pipeline*) and then re-installing it.

Destination: CPIO

Modules: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline, filename, X'offset', element_found, element_expected*

```

| _____
| DFHPI0730  date time applid An attempt to register a
|           remote webservice as a participant in
|           unit of work - X'uwoid' has failed.
|
| Explanation: An error has been encountered while
| attempting to register a remote webservice as a
| participant in an atomic transaction, under the
| coordination of a local unit of work.
|
| System action: The local unit of work, is not updated
| with a link for the remote webservice and a registration
| response is not sent to the remote webservice's
| registration end point. The remote webservice then
| times out and backs out any recoverable updates it has
| made.
|
| User response: The problem may be the result of the
| coordinating unit of work timing out before the
| registration message is delivered to the region where it
| ran. If this is the case then consider extending the
| coordinating transaction's DTIMOUT value if set, or the
| coordinating region's FTIMOUT setting if DTIMOUT is
| set to NO. If the problem persists then you need
| further assistance from IBM to resolve this problem.
|
| Destination: Console and Transient Data Queue CPIO

| XMEOUT Parameters: date, time,applid, X'uwoid'
|
| _____
# DFHPI0731  date time applid An attempt to register
#           unit of work - X'uwoid' with a remote
#           WSAT coordinating transaction has
#           failed.
#
# Explanation: An error has been encountered while
# attempting to register a local webservice as a
# participant in an atomic transaction, under the
# coordination of a remote unit of recovery.
#
# System action: The local unit of work is not updated
# with a link for the remote coordinating transaction, and
# the local webservice is not invoked. Instead a SOAP
# fault is returned to the coordinating transaction.
#
# User response: The problem may be the result of a
# configuration error for one of the pipeline resources
# that the local region uses. The DFHWSATR pipeline is
# used to send the registration request and the
# DFHWSATP pipeline is used to receive a registration
# response. If either of these are not installed, disabled or
# incorrectly configured then the message processing that
# they are intended for may not take place. Alternatively,
# the error may be caused by the participant transaction
# timing out before a registration response is received.
# This interval is controlled by the value of the
# wscorcontext that resulted in the registration attempt.
# Consider extending this time to allow registration to
# complete successfully. If the problem persists then you
# need further assistance from IBM to resolve this
# problem.
#

|
| XMEOUT Parameters: date, time,applid, X'uwoid'
|
| _____
# DFHPI0800 E  date time applid userid Atomic
|           Transaction processing failed because
|           the SAX parser returned error code
|           X'errcode'. The error was at offset X'offset'
|           in the SOAP message.
|
| Explanation: During processing for an Atomic
| Transaction, the SOAP message is parsed by a SAX
| parser. The parser has detected an error (errcode) at
| offset offset into the message. The first eight bytes of
| data (hexdata) are printed to aid problem resolution.
|
| System action: The transaction abends.
|
| User response: Obtain trace entries (level 2 for the PI
| domain is required) and pass these onto your IBM
| service representative. You will need further assistance
| from IBM to resolve this problem. See Part 4 of the
| CICS Problem Determination Guide for guidance on how
| to proceed.

| WebService, Pipeline
|
| _____
# DFHPI0902 I  date time applid userid WEBSERVICE
|           WebService is being updated during a
|           scan against PIPELINE Pipeline.
|
| Explanation: An update has been detected for a
| WEBSERVICE resource. CICS compares the last
| modification time of the WSBIND file on HFS with the
| last modification time stored in the WEBSERVICE
| resource definition. If the WSBIND file on HFS is
| newer than the currently installed resource, the
| WEBSERVICE resource is updated. This process
| involves discarding the existing definition and
| installing a new one.

```

| **System action:** If there is 'inflight' activity outstanding for this WEBSERVICE then the update will complete after that workload has ended.

| **User response:** None.

| **Destination:** CPIO

| **Modules:** DFHPISC

| **XMEOUT Parameters:** *date, time,applid, userid, WebService, Pipeline*

| **DFHPI0903 I** *date time applid userid* **New URIMAP UriMap is being created during a scan against PIPELINE Pipeline for WEBSERVICE WebService.**

| **Explanation:** A new URIMAP resource is being installed during a scan of a PIPELINE.

| **XMEOUT Parameters:** *date, time,applid, userid, UriMap, Pipeline, WebService*

| **DFHPI0904 I** *date time applid userid* **URIMAP UriMap could not be created for WEBSERVICE WebService in PIPELINE Pipeline. The URI that could not be allocated is: 'Uri'.**

| **Explanation:** An attempt to automatically create a URIMAP for a scanned WEBSERVICE failed. This is probably because the URI specified in the wsbind file is already in use by another URIMAP.

| **System action:** None.

| **User response:** None.

| **Destination:** CPIO

| **Modules:** DFHPISC

| **XMEOUT Parameters:** *date, time,applid, userid, UriMap, WebService, Pipeline, Uri*

| **DFHPI0910 I** *date time applid userid* **WEBSERVICE WebService within PIPELINE Pipeline has been created.**

| **Explanation:** A WEBSERVICE has been created and is now in the INITING state. It is not available for use until it has reached INSERVICE state.

| **System action:** Processing continues. The WEBSERVICE will complete installation shortly.

| **User response:** None.

| **Destination:** CPIO

| **Modules:** DFHPIWR

| **XMEOUT Parameters:** *date, time,applid, userid, WebService, Pipeline*

| **DFHPI0911 E** *date time applid userid* **WEBSERVICE WebService within PIPELINE Pipeline was not created because: {there is insufficient storage | there is a directory domain error | the specified PIPELINE is not installed | a lock cannot be obtained | there is a duplicate resource error}.**

| **Explanation:** WEBSERVICE WebService was not created. This error may be caused if the specified PIPELINE is not installed.

| **System action:** The WEBSERVICE is not created.

| **User response:** Ensure that the specified PIPELINE resource is installed and try again.

| **Destination:** CPIO

| **Modules:** DFHPIWR

| **XMEOUT Parameters:** *date, time,applid, userid, WebService, Pipeline, {1=there is insufficient storage, 2=there is a directory domain error, 3=the specified PIPELINE is not installed, 4=a lock cannot be obtained, 5=there is a duplicate resource error}*

| **DFHPI0912 I** *date time applid userid* **WEBSERVICE WebService was successfully discarded.**

| **Explanation:** The WEBSERVICE was successfully discarded and is no longer available for use.

| **System action:** Processing continues.

| **User response:** None.

| **Destination:** CPIO

| **Modules:** DFHPIWR

| **XMEOUT Parameters:** *date, time,applid, userid, WebService*

| **DFHPI0913 I** *date time applid userid* **WEBSERVICE WebService is being discarded.**

| **Explanation:** A discard of a WEBSERVICE has been started but cannot complete at this time as 'inflight' work is outstanding.

| **System action:** The WEBSERVICE discard will complete when the 'inflight' activity has ended.

| **User response:** None.

| **Destination:** CPIO

| **Modules:** DFHPIWR

| **XMEOUT Parameters:** *date, time,applid, userid, WebService*

DFHPI0914 E *date time applid userid* **WEBSERVICE**
WebService is UNUSABLE because: {the WSBind file was not found | CICS is not authorized to read the WSBind file | there is insufficient storage to load the WSBind file | the HFS read for the WSBind file failed | writing the WSBind file to the shelf failed | the PIPELINE is incompatible with this WEBSERVICE | the CPIR resolution transaction could not be attached | the direction of the PIPELINE can't be determined | the WSBind file is corrupt | the WSBind file has an invalid version number | the WSBind file has an out of date version number | the WSBind file product number was not recognised}.

Explanation: The WEBSERVICE failed to complete initialization.

System action: The WEBSERVICE has been put into the UNUSABLE state.

User response: Check that the CICS region id has permission to write to the HFS shelf directory structure. Check that the WSBind file exists and that CICS has read permission for it. Check that the WSDL file, if specified, exists and that CICS has read permission for it. Check how the WSBind file has been produced. It was not produced using either the CICS Web Services Assistant or a recognised vendor product. If there is a version error reported then regenerate the WSBind file using the correct version of the tools. Check that if the WEBSERVICE represents an application in CICS that is going to implement a WebService then the PIPELINE is also configured in provider mode. Conversely, if the WEBSERVICE represents a WebService running on a remote server then the PIPELINE is configured in requester mode. Check that the PIPELINE has been installed without errors.

A provider mode WEBSERVICE is one for which a PROGRAM has been specified. A requester mode WEBSERVICE is one for which no PROGRAM has been specified. The PROGRAM name (if needed) must be specified at the time that the WSBind file is generated.

Discard and reinstall the WEBSERVICE.

If the problem persists you may need to use the trace facility to determine the cause of the problem.

Destination: CPIO

Modules: DFHPIWR

XMEOUT Parameters: *date, time,applid, userid, WebService, {1=the WSBind file was not found, 2=CICS is not authorized to read the WSBind file, 3=there is insufficient storage to load the WSBind file, 4=the HFS read for the WSBind file failed, 5=writing the WSBind file to the shelf failed, 6=the PIPELINE is incompatible with this WEBSERVICE, 7=the CPIR resolution transaction could not be attached, 8=the direction of the PIPELINE can't be determined, 9=the WSBind file is corrupt, 10=the WSBind*

file has an invalid version number, 11=the WSBind file has an out of date version number, 12=the WSBind file product number was not recognised}

DFHPI0915 I *date time applid userid* **WEBSERVICE**
WebService is now INSERVICE and is ready for use.

Explanation: The WEBSERVICE has completed initialization and is ready for use.

System action: Processing continues.

User response: None.

Destination: CPIO

Modules: DFHPIWR

XMEOUT Parameters: *date, time,applid, userid, WebService*

DFHPI0916 E *date time applid userid* **WEBSERVICE**
WebService within PIPELINE Pipeline was not created because it clashes with another WEBSERVICE of the same name in PIPELINE Pipeline.

Explanation: WEBSERVICE *WebService* was not created. This error was caused by a name clash with an existing WEBSERVICE that is already installed. The clash can occur if the same wsbind file is installed in two different PIPELINES or if a wsbind file matches another wsbind file with a sufficiently similar name from any PIPELINE.

System action: The WEBSERVICE is not CREATED, the PIPELINE SCAN processing continues.

User response: Rename the wsbind file and retry the operation.

Destination: CPIO

Modules: DFHPISC

XMEOUT Parameters: *date, time,applid, userid, WebService, Pipeline, Pipeline*

DFHPI0998 *date time applid* **The Outbound Router program, DFHPIRT, has received a non-NORMAL response while attempting to get the pipeline name from the DFHWS-PIPELINE container. The resulting error code is X'code'.**

Explanation: The Outbound Router program, DFHPIRT, was unable to successfully start the pipeline as it was unable to obtain the pipeline name from the DFHWS-PIPELINE container. A non-NORMAL response was returned from the EXEC CICS GET CONTAINER call. If the *code* was '099D'X then a CONTAINERERR was returned. The *code* '099E'X indicates that a LENGERR was returned.

| **System action:** The program abends with an APIC abend.

| **User response:** Examine the trace to determine why the Outbound Router failed. Ensure that the DFHWS-PIPELINE container has been created correctly before linking to the Outbound Router program, DFHPIRT, and that the pipeline name placed in this container is not larger than eight characters.

| **Destination:** CPIO

| **Modules:** DFHPIRT

| **XMEOUT Parameters:** *date, time,applid, X'code'*

| **DFHPI0999** *date time applid* **The Outbound Router program, DFHPIRT, has received an error from the Pipeline Manager.**

| **Explanation:** The Outbound Router program, DFHPIRT, was unable to successfully start the Pipeline Manager.

| **Modules:** DFHPITL, DFHPPIW

| **XMEOUT Parameters:** *date, time,applid, {1=request, 2=response}, webservicename, operationname*

| **DFHPI1003** *date time applid* **No current channel located. Validation cannot occur.**

| **Explanation:** Validation was requested for a particular operation. This requires that a channel exists with containers present. No current channel could be found. Validation cannot occur in this situation.

| **System action:** Validation is not attempted. The application program is invoked as though validation had not been requested.

| **User response:** None.

| **Destination:** CPIO

| **Modules:** DFHPITL

| **XMEOUT Parameters:** *date, time,applid*

| **DFHPI1004** *date time applid* **The attempt to link to DFHPIVAL to perform validation failed.**

| **Explanation:** Validation was requested for a particular operation. This requires linking to program DFHPIVAL. The link to the program failed. Validation cannot occur without this program.

| **System action:** Validation is not attempted. Processing continues. The application program is invoked as though validation had not been requested.

| **User response:** Ensure that the CSD in use has the definition for DFHPIVAL included.

| **Destination:** CPIO

| **Modules:** DFHPITL, DFHPPIW

| **XMEOUT Parameters:** *date, time,applid*

| **DFHPI1005** *date time applid* **Attempt to link to program *progrname* failed. SOAP conversions cannot be performed. Module: *modname***

| **Explanation:** SOAP conversion to a format suitable for a CICS application failed. The link to a vendor supplied program *progrname* failed. The webservice cannot be used without this program.

| **System action:** The attempt to use the webservice is aborted. A soap fault is returned to the client. If the failure occurs during an INVOKE WEBSERVICE API

| command, i.e. the issuing module for this message is
| DFHPPIW, appropriate EIBRESP and EIBRESP2 codes
| are returned to the application program.

| **User response:** Ensure that the WEBSERVICE
| definition refers to the correct WSBIND file and that
| the vendor program *progrname* required is available to
| CICS.

| **Destination:** CPIO

| **Modules:** DFHPITL, DFHPPIW

| **XMEOUT Parameters:** *date, time,applid, progrname,*
| *modname*

| **DFHPI1006** *date time applid* **The WSBIND file used**
| **for WEBSERVICE *WebService* is not a**
| **type which CICS can use. Module:**
| *modname*

| **Explanation:** The product which produced the
| WSBIND file is not one which CICS knows how to
| handle. As such, it is not possible to invoke the
| webservice *WebService*.

| **System action:** The attempt to use the webservice is
| aborted. A soap fault is returned to the client. If the
| failure occurs during an INVOKE WEBSERVICE API
| command, i.e. the issuing module for this message is
| DFHPPIW, appropriate EIBRESP and EIBRESP2 codes
| are returned to the application program.

| **User response:** Ensure that the WEBSERVICE
| definition for *WebService* refers to the correct WSBIND
| file and that the file has been properly produced.

| **Destination:** CPIO

| **Modules:** DFHPITL, DFHPPIW

| **XMEOUT Parameters:** *date, time,applid, WebService,*
| *modname*

| **DFHPI1007** *date time applid* **SOAP message**
| **processing failed because of incorrect**
| **input: ({XML_FORMAT_ERROR |**
| **UNEXPECTED_CONTENT |**
| **HEADER_FORMAT_ERROR |**
| **UNDEFINED_ELEMENT |**
| **UNDEFINED_NAME_SPACE |**
| **ARRAY_OVERFLOW |**
| **NAME_TOO_LONG |**
| **PREFIX_TOO_LONG |**
| **NAME_SPACE_TOO_LONG}error_qualifier).**

| **Explanation:** CICS has failed to convert the body of a
| SOAP message received from a partner process. The
| reason for the failure is due to a problem with the
| content of the SOAP message. The message is either
| not well formed, invalid with respect to the XML
| schema or does not conform to one of the internal
| constraints of the CICS SOAP transformation service.
| An *error_qualifier* may be provided to help identify the

| source of the problem. In some cases the *error_qualifier*
| will be empty.

| The possible error codes and qualifiers associated with
| this message are:

| **XML_FORMAT_ERROR**

| The SOAP message is not well formed. See the
| trace for further details.

| **UNEXPECTED_CONTENT**

| Character data has been found between two
| XML tags at a place where such text was not
| expected.

| **HEADER_FORMAT_ERROR**

| There is a problem reading the namespace
| attributes from the SOAP Envelope.

| **UNDEFINED_ELEMENT** *element_name*

| The SOAP message includes an unexpected
| XML tag.

| **UNDEFINED_NAME_SPACE** *name_space*

| The SOAP message includes an XML
| namespace prefix that has not been defined.

| **ARRAY_OVERFLOW** *array_name*

| Too many instances of an array or list of tags
| has been found in the SOAP message.

| **NAME_TOO_LONG**

| An XML tag name longer than 255 characters
| has been found.

| **PREFIX_TOO_LONG**

| An XML namespace prefix longer than 255
| characters has been found.

| **NAME_SPACE_TOO_LONG**

| An XML namespace name longer than 255
| characters has been found.

| **System action:** The XML conversion process halts. If
| CICS is acting as the Web service provider then the
| task is terminated with an APIG abend. If CICS is the
| Web service requester then a response code of INVREQ
| is returned to the caller of the INVOKE WEBSERVICE
| API with a resp2 code of 14. An exception entry is
| written to the trace table.

| **User response:** Examine the exception trace entry for
| further information. Consider using the WEBSERVICE
| validation option to test the SOAP message for validity
| with respect to the XML schema.

| Correct or change the partner process to ensure that the
| SOAP message sent to CICS is appropriate to be
| consumed by CICS.

| If the SOAP message is changed by a handler program
| as part of the CICS PIPELINE processing then ensure
| that the handler has not introduced this problem.

| **Destination:** CPIO

| **Modules:** DFHPICC

| **XMEOUT Parameters:** *date, time,applid,*

1=XML_FOMAT_ERROR, 2=UNEXPECTED_CONTENT,
 3=HEADER_FORMAT_ERROR,
 4=UNDEFINED_ELEMENT,
 5=UNDEFINED_NAME_SPACE,
 6=ARRAY_OVERFLOW, 7=NAME_TOO_LONG,
 8=PREFIX_TOO_LONG,
 9=NAME_SPACE_TOO_LONG,error_qualifier

DFHPI1008 *date time applid* **SOAP message generation failed because of incorrect input:** (
 {ARRAY_CONTAINER_TOO_SMALL |
 INPUT_STRUCTURE_TOO_SMALL |
 INPUT_ARRAY_TOO_LARGE |
 INPUT_ARRAY_TOO_SMALL |
 CONTAINER_NOT_FOUND |
 CONTAINER_NOT_BIT | }error_qualifier).

Explanation: CICS has failed to generate a SOAP message due to a problem with the data received from the CICS application. An *error_qualifier* may be provided to help identify the source of the problem. In some cases the *error_qualifier* will be empty.

The possible error codes and qualifiers associated with this message are:

ARRAY_CONTAINER_TOO_SMALL *array_name*
 A CICS container does not hold sufficient data given the number of instances of the data expected and the length of one instance of the data.

INPUT_STRUCTURE_TOO_SMALL
 The container passed to CICS does not hold sufficient data given the length of the language structure.

INPUT_ARRAY_TOO_LARGE *array_name*
 Too many instances of a structure have been supplied in a container given the maximum value specified in the WSDL.

INPUT_ARRAY_TOO_SMALL *array_name*
 Too few instances of a structure have been supplied in a container given the minimum value specified in the WSDL.

CONTAINER_NOT_FOUND *container_name*
 A container named in the input structure cannot be found.

CONTAINER_NOT_BIT *container_name*
 A container named in the input structure exists but is of the wrong type. The container must be created in BIT mode rather than CHAR mode.

System action: The XML conversion process halts. If CICS is acting as the Web service provider then the task is terminated with an APIG abend. If CICS is the Web service requester then a response code of INVREQ is returned to the caller of the INVOKE WEBSERVICE API with a resp2 code of 14. An exception entry is written to the trace table.

User response: Examine the exception trace entry for further information.

Correct the CICS application to ensure that the data presented to CICS is appropriate to be converted into a SOAP message.

Destination: CPIO

Modules: DFHPHIII

XMEOUT Parameters: *date, time,applid,*
 1=ARRAY_CONTAINER_TOO_SMALL,
 2=INPUT_STRUCTURE_TOO_SMALL,
 3=INPUT_ARRAY_TOO_LARGE,
 4=INPUT_ARRAY_TOO_SMALL,
 5=CONTAINER_NOT_FOUND,
 6=CONTAINER_NOT_BIT, *error_qualifier*

DFHPI1009 *date time applid* **SOAP message processing failed. A conversion error { UNKNOWN_CONVERSION | INPUT_TOO_LONG | OUTPUT_OVERFLOW | NEGATIVE_UNSIGNED | NO_FRACTION_DIGITS | FRACTION_TOO_LONG | INVALID_CHARACTER | ODD_HEX_DIGITS | INVALID_BASE64 | NOT_PURE_DBCS | INVALID_FIELD_SIZE | EXPONENT_OVERFLOW | EXPONENT_UNDERFLOW } occurred when converting field** *fieldname*

Explanation: CICS has failed to convert the body of a SOAP message received from a partner process. The reason for the failure is due to a problem converting a value from the SOAP message.

The possible error codes and qualifiers associated with this message are:

INPUT_TOO_LONG
 The value of an XML tag that was declared as numeric contains more than 31 digits.

OUTPUT_OVERFLOW
 An XML tag contains a value that is too long to fit in the associated field of the commarea, or an XML tag contains a numeric value which is outside the permitted range for the associated field in the COMMAREA.

NEGATIVE_UNSIGNED
 A negative number has been found in an XML tag that was declared as unsigned.

NO_FRACTION_DIGITS
 An XML tag contains a number which contains a decimal point but is not followed by any valid fractional digits.

FRACTION_TOO_LONG
 An XML tag contains a number with more non-zero fractional digits than the WSDL allows.

INVALID_CHARACTER
 An XML tag contains a character that is inconsistent with the declared type of that tag. For example, a tag declared as hexBinary contains a value that is not in the range 0-9, a-f, A-F.

ODD_HEX_DIGITS
 An XML tag that was declared as hexBinary contains an odd number of hexadecimal characters.

INVALID_BASE64
 An XML tag that was declared as base64Binary contains a value that is not consistent with the base64 encoding.

NOT_PURE_DBCS
 An XML tag that maps to a pure DBCS language structure field contains a value that cannot be represented in pure DBCS.

INVALID_FIELD_SIZE
 A floating point type with an unsupported precision level has been discovered.

EXPONENT_OVERFLOW
 An overflow condition has been encountered whilst transforming a floating point value

EXPONENT_UNDERFLOW
 An underflow condition has been encountered whilst transforming a floating point value.

UNKNOWN_CONVERSION
 An unrecognized conversion type has been requested.

System action: The XML conversion process halts. If CICS is acting as the Web service provider then the task is terminated with an APIG abend. If CICS is the Web service requester then a response code of INVREQ is returned to the caller of the INVOKE WEBSERVICE API with a resp2 code of 14. An exception entry is written to the trace table.

User response: Examine the exception trace entry for further information.

Consider using the WEBSERVICE validation option to test the SOAP message for validity with respect to the XML schema.

Correct or change the partner process to ensure that the SOAP message sent to CICS is appropriate to be consumed by CICS.

If the SOAP message is changed by a handler program as part of the CICS PIPELINE processing then ensure that the handler has not introduced this problem.

 99=UNKNOWN_CONVERSION, 1=INPUT_TOO_LONG,
 2=OUTPUT_OVERFLOW, 3=NEGATIVE_UNSIGNED,
 4=NO_FRACTION_DIGITS, 5=FRACTION_TOO_LONG,
 6=INVALID_CHARACTER, 7=ODD_HEX_DIGITS,
 11=INVALID_BASE64, 12=NOT_PURE_DBCS,
 14=INVALID_FIELD_SIZE,
 15=EXPONENT_OVERFLOW,
 16=EXPONENT_UNDERFLOW, *fieldname*

DFHPI1010 *date time applid* **SOAP message generation failed. A conversion error { UNKNOWN_CONVERSION | NEGATIVE_UNSIGNED | NO_FRACTION_DIGITS | INVALID_CHARACTER | INVALID_PACKED_DEC | INVALID_ZONED_DEC | INCOMPLETE_DBCS | ODD_DBCS_BYTES | INVALID_FIELD_SIZE | EXPONENT_OVERFLOW | EXPONENT_UNDERFLOW} occurred when converting field *fieldname***

Explanation: CICS has failed to generate the body of a SOAP message using application supplied data. The reason for the failure is due to a problem converting a value from the application data.

The possible error codes and qualifiers associated with this message are:

NEGATIVE_UNSIGNED
 A negative number has been found in the application data that was declared as unsigned.

INVALID_CHARACTER
 An XML tag contains a character that is inconsistent with the declared type of that tag. For example, a tag declared as hexBinary contains a value that is not in the range 0-9, a-f, A-F.

INVALID_PACKED_DEC
 A packed decimal field in the application data contains an illegal value that can't be converted to XML.

INVALID_ZONED DEC
 A zoned decimal field in the application data contains an illegal value that can't be converted to XML.

INCOMPLETE_DBCS
 A DBCS sequence in the application data is missing a shift in (SI) character.

ODD_DBCS_BYTES
 A DBCS sequence in the application data is an odd number of bytes in length.

| **INVALID_FIELD_SIZE**
 | A floating point type with an unsupported
 | precision level has been discovered.

| **EXPONENT_OVERFLOW**
 | An overflow condition has been encountered
 | whilst transforming a floating point value

| **EXPONENT_UNDERFLOW**
 | An underflow condition has been encountered
 | whilst transforming a floating point value.

| **UNKNOWN_CONVERSION**
 | An unrecognized conversion type has been
 | requested.

| **System action:** The XML conversion process halts. If
 | CICS is acting as the Web service provider then the
 | task is terminated with an APIGabend. If CICS is the
 | Web service requester then a response code of INVREQ
 | is returned to the caller of the INVOKE WEBSERVICE
 | API with a resp2 code of 14. An exception entry is
 | written to the trace table.

| **User response:** Examine the exception trace entry for
 | further information.

| Correct the CICS application to ensure that the data
 | presented to CICS is appropriate to be converted into a
 | SOAP message.

| **Destination:** CPIO

| **Modules:** DFHPIII

| **XMEOUT Parameters:** *date, time,applid,*

 | 16=EXPONENT_UNDERFLOW, *fieldname*

DFHPI9000 ResourceBundle not found issuing
 # **message:** *value*

Explanation: The messages for the Web services
 # assistants cannot be located.

System action: The Web services assistant continues
 # processing but no other messages will be issued.

User response: Contact your IBM support
 # representative for further assistance.

Note: This message cannot be changed with the
 # message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9001 Message not found issuing message:
 # *value*

Explanation: A message number *value* is missing and
 # cannot be issued.

System action: The Web services assistant continues
 # processing.

User response: Contact your IBM support
 # representative for further assistance.

Note: This message cannot be changed with the
 # message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9002 A WSDL operation name is too long to
 # **be supported by CICS:** *value*

Explanation: CICS imposes a limit on the maximum
 # length of each operation name in a WSDL document.
 # This limit is 255 characters. Operation name *value* is too
 # long.

System action: The Web services assistant continues
 # processing.

User response: Edit the WSDL document and reduce
 # the length of the operation name. Resubmit the
 # DFHWS2LS job to reprocess the WSDL.

Note: This message cannot be changed with the
 # message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9003 A WSDL part name is too long to be
 # **supported by CICS:** *value*

Explanation: CICS imposes a limit on the maximum
 # length of each part name in a WSDL document. This
 # limit is 255 characters. Part name *value* is too long.

System action: The Web services assistant continues
 # processing.

User response: Edit the WSDL document and reduce
 # the length of the part name. Resubmit the DFHWS2LS
 # job to reprocess the WSDL.

Note: This message cannot be changed with the
 # message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9004 The WSDL specifies a style value of document and contains a part name that refers to an XML type. Document style WSDL must only refer to XML elements.

Explanation: There is an error in the WSDL document. The WSDL binding element specifies the use of 'document' style encoding but the associated message element points to an XML type. If document style bindings are used then the message elements may only point to XML elements.

System action: The Web services assistant continues processing.

User response: Correct the WSDL document and then resubmit the DFHWS2LS job to reprocess the WSDL.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9010 Simple data type *type:emv* is not atomic. List and union data types are not supported.

Explanation: DFHWS2LS only supports simple primitive XML data types. Type *type* is either a list or a union data type.

System action: The Web services assistant continues processing.

User response: Either redesign your WSDL to remove the content that is not supported by DFHWS2LS or consider implementing this Web service without the use of the Web services assistants. If the Web services assistant cannot be used then the following options are available:

1. If you are implementing a Web service provider application then you should consider writing your own XML capable SOAP 'apphandler'.
2. If you are implementing a Web service requester application then you should consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9011 Unsupported super type *super_type* found for type *base_type*

Explanation: XML data type *base_type* is derived from XML data type *super_type*. The super type is not supported by DFHWS2LS.

System action: The Web services assistant continues processing.

User response: Either redesign your WSDL to remove the content that is not supported by DFHWS2LS or consider implementing this Web service without the use of the Web services assistants. If the Web services assistant cannot be used then the following options are available:

1. If you are implementing a Web service provider application then you should consider writing your own XML capable SOAP 'apphandler'.
2. If you are implementing a Web service requester application then you should consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9012 Schema wild cards (<any> tags) are not supported.

Explanation: A XML schema referenced within WSDL document contains an 'any' tag. The 'any' tag is not supported by DFHWS2LS.

System action: The Web services assistant continues processing.

User response: Either redesign your WSDL to remove the content that is not supported by DFHWS2LS or consider implementing this Web service without the use of the Web services assistants. If the Web services assistant cannot be used then the following options are available:

1. If you are implementing a Web service provider application then you should consider writing your own XML capable SOAP 'apphandler'.
2. If you are implementing a Web service requester application then you should consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9013 Schema model groups with maxOccurs different from minOccurs are not supported. Problem found for type: *value*

Explanation: An XML model group has been found within the XML schema referenced from the WSDL document which specifies an unknown number of occurrences. The term 'model group' refers to one of

the following XML tags: 'all', 'sequence' or 'choice'.
DFHWS2LS only supports these tags where they repeat
a fixed number of times. This problem has been
identified for type *value*

System action: The Web services assistant continues
processing.

User response: Either redesign your WSDL to remove
the content that is not supported by DFHWS2LS or
consider implementing this Web service without the
use of the Web services assistants. If the Web services
assistant cannot be used then the following options are
available:

- # 1. If you are implementing a Web service provider
application then you should consider writing your
own XML capable SOAP 'apphandler'.
- # 2. If you are implementing a Web service requester
application then you should consider writing an
XML capable application that uses the DFHPIRT
channel linkable SOAP interface.

Note: This message cannot be changed with the
message editing utility.

**DFHPI9014 No model group found for model group
definition** *definition*

Explanation: There is an error in an XML schema
referenced from the WSDL document. A required
model group cannot be found for model group
definition *definition*

System action: The Web services assistant continues
processing.

User response: Correct the XML schema and then
resubmit the DFHWS2LS job to reprocess the WSDL.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

**DFHPI9015 A schema particle with unrecognized
content has been found:** *value*

Explanation: There is an error in an XML schema
referenced from the WSDL document. An XML particle
value has been found with unrecognized content.

System action: The Web services assistant continues
processing.

User response: Correct the XML schema and then
resubmit the DFHWS2LS job to reprocess the WSDL.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9016 Required schema element *element* **cannot
be found.**

Explanation: There is an error in an XML schema
referenced from the WSDL document. A schema
element referenced either from the WSDL or from
within the XML schema cannot be found. The missing
element is *element*

System action: The Web services assistant continues
processing.

User response: Correct the XML schema or the WSDL
and then resubmit the DFHWS2LS job to reprocess the
WSDL.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9017 Unsupported attribute *attribute* **found for
schema element** *element*

Explanation: An attribute that is not supported by
DFHWS2LS has been found in an XML schema
referenced from within the WSDL document.
DFHWS2LS does not support the following schema
attributes: 'substitutionGroup', 'abstract' and 'fixed'.
The unsupported attribute has been found in schema
element *element*

System action: The Web services assistant continues
processing.

User response: Either redesign your WSDL to remove
the content that is not supported by DFHWS2LS or
consider implementing this Web service without the
use of the Web services assistants. If the Web services
assistant cannot be used then the following options are
available:

- # 1. If you are implementing a Web service provider
application then you should consider writing your
own XML capable SOAP 'apphandler'.
- # 2. If you are implementing a Web service requester
application then you should consider writing an
XML capable application that uses the DFHPIRT
channel linkable SOAP interface.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9018 Schema element *element* is missing a type definition.

Explanation: There is an error in an XML schema referenced from the WSDL document. XML schema element *element* does not reference an XML type.

System action: The Web services assistant continues processing.

User response: Correct the XML schema and then resubmit the DFHWS2LS job to reprocess the WSDL.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9019 Schema type *type* is not supported.

Explanation: An XML schema referenced within the WSDL document contains an XML type that is not supported by DFHWS2LS. The unsupported XML type is *type*.

System action: The Web services assistant continues processing.

User response: Either redesign your WSDL to remove the content that is not supported by DFHWS2LS or consider implementing this Web service without the use of the Web services assistants. If the Web services assistant cannot be used then the following options are available:

1. If you are implementing a Web service provider application then you should consider writing your own XML capable SOAP 'apphandler'.
2. If you are implementing a Web service requester application then you should consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9020 Schema attribute *attribute* has been found and ignored for type *type*

Explanation: An XML schema referenced within the WSDL document contains an XML type definition with an attribute. DFHWS2LS does not support XML attributes though it does tolerate their presence.

System action: The Web services assistant continues processing. If the attribute is present in a SOAP message sent to CICS at runtime then it will be ignored.

User response: Consider whether or not this attribute

is important to your application. If it is acceptable that CICS ignores the attribute at runtime then you can safely ignore this message. If it is important that your application has access to the value of this attribute or that your application is able to set the value of this attribute then you will not be able to use the Web services assistants in the implementation of this Web service. The following options are available:

1. If you are implementing a Web service provider application then you should consider writing your own XML capable SOAP 'apphandler'.
2. If you are implementing a Web service requester application then you should consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9021 A schema type with unrecognized content has been found: *value*

Explanation: There is an error in an XML schema referenced from the WSDL document. An XML type *value* has been found with unrecognized content.

System action: The Web services assistant continues processing.

User response: Correct the XML schema and then resubmit the DFHWS2LS job to re-process the WSDL.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9022 Schema type *type* is being restricted to a total of *value* digits in the response message of operation *operation*

Explanation: An XML schema referenced from the WSDL document contains type definition *type*. This type specifies a total number of digits which is too large for the target programming language to support. DFHWS2LS is restricting the type definition to a total of *value* digits. This type appears in the response message for operation *operation*.

System action: The Web services assistant continues processing. If at runtime a SOAP message is received with a value which is too large for the target field in the language structure then a conversion error will be indicated.

User response: Consider whether you need to be able to support numbers which require more digits than are allowed in the DFHWS2LS mappings. If it is acceptable

for CICS to impose this maximum length then you may
safely ignore this message. Otherwise you will not be
able to use the Web services assistants in the
implementation of this Web service. The following
options are available:

- # 1. If you are implementing a Web service provider
application then you should consider writing your
own XML capable SOAP 'apphandler'.
- # 2. If you are implementing a Web service requester
application then you should consider writing an
XML capable application that uses the DFHPIRT
channel linkable SOAP interface.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

**DFHPI9023 Schema type *type* is being restricted to a
total of *value* digits for operation
operation**

Explanation: An XML schema referenced from the
WSDL document contains type definition *type* This type
specifies a total number of digits which is too large for
the target programming language to support.
DFHWS2LS is restricting the type definition to a total
of *value* digits. This type appears in the request
message for operation *operation*

System action: The Web services assistant continues
processing. If at runtime a SOAP message is received
with a value which is too large for the target field in
the language structure then a conversion error will be
indicated.

User response: Consider whether you need to be able
to support numbers which require more digits than are
allowed in the DFHWS2LS mappings. If it is acceptable
for CICS to impose this maximum length then you may
safely ignore this message. Otherwise will not be able
to use the Web services assistants in the
implementation of this Web service. The following
options are available:

- # 1. If you are implementing a Web service provider
application then you should consider writing your
own XML capable SOAP 'apphandler'.
- # 2. If you are implementing a Web service requester
application then you should consider writing an
XML capable application that uses the DFHPIRT
channel linkable SOAP interface.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

**DFHPI9024 Recursion within type *type* is not
supported.**

Explanation: An XML schema referenced from the
WSDL document contains a type definition which is
defined recursively. DFHWS2LS does not support
recursive definitions. The recursively defined type is
type

System action: The Web services assistant continues
processing.

User response: Either redesign your WSDL to remove
the content that is not supported by DFHWS2LS or
consider implementing this Web service without the
use of the Web services assistants. If the Web services
assistant cannot be used then the following options are
available:

- # 1. If you are implementing a Web service provider
application then you should consider writing your
own XML capable SOAP 'apphandler'.
- # 2. If you are implementing a Web service requester
application then you should consider writing an
XML capable application that uses the DFHPIRT
channel linkable SOAP interface.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

**DFHPI9025 Required schema type *type* cannot be
found.**

Explanation: There is an error in an XML schema
referenced from the WSDL document. A schema type
definition referenced either from the WSDL or from
within the XML schema cannot be found. The missing
type is *type*.

System action: The Web services assistant continues
processing.

User response: Correct the XML schema or the WSDL
and then resubmit the DFHWS2LS job to re-process the
WSDL.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

**DFHPI9026 URI *uri* cannot be resolved. Consider
checking that the HTTP Proxy is correct.**

Explanation: A namespace reference within either the
WSDL document or an XML schema referenced from
the WSDL document cannot be resolved. DFHWS2LS
has attempted to use the URI from the namespace to
resolve the reference but has not been able to do so.

This may be because a HTTP proxy service has not
been specified or because there is no content available
at the location implied by the URI. The URI is *uri*

System action: The Web services assistant continues
processing.

User response: Specify the location of the HTTP proxy
to use via the HTTPPROXY parameter. If the correct
proxy has already been specified or if there is
genuinely no content available at the location implied
by the URI then add a schemaLocation XML attribute
to the WSDL or schema in order to allow DFHWS2LS
to locate the included content.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9027 The XML parser error has found an
error: *value* at line *line* and column
column in document *document*

Explanation: The XML parser that is used to read the
WSDL document and the XML schemas referenced
from the WSDL document has encountered a problem.
The problem has been found in document *document* at
line *line* and column *column* The message issued by the
XML parser is: *value*

System action: The Web services assistant continues
processing.

User response: Correct the XML schema or the WSDL
and then resubmit the DFHWS2LS job to re-process the
WSDL.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9028 The length of schema element *element* is
set to *value* characters. CICS only
supports up to *value2* characters.

Explanation: An XML schema referenced from the
WSDL document contains element *element* This element
specifies a maximum size which is too large for
DFHWS2LS to support. The XML schema has requested
a length of up to *value* characters but the largest
number supported by DFHWS2LS is *value2* characters.

System action: The Web services assistant continues
processing.

User response: Either redesign your WSDL to remove
the content that is not supported by DFHWS2LS or
consider implementing this Web service without the
use of the Web services assistants. If the Web services

assistant cannot be used then the following options are
available:

- # 1. If you are implementing a Web service provider
application then you should consider writing your
own XML capable SOAP 'apphandler'.
- # 2. If you are implementing a Web service requester
application then you should consider writing an
XML capable application that uses the DFHPIRT
channel linkable SOAP interface.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9029 Implicit padding (slack bytes) are not
supported for PL/I. Please change the
language structure to ensure that all
slack bytes are explicitly referenced and
that top level structures start on a
double-word boundary. Slack bytes are
needed near or around field *field*

Explanation: DFHLS2WS is unable to correct
determine the location of where slack bytes (also
known as filler bytes) should be placed when PL/I is
used to define a language structure. DFHLS2WS has
determined that one or more slack bytes are needed
somewhere near to field *field* but is unsure of precisely
where.

System action: The Web services assistant continues
processing.

User response: Change the language structure to
ensure that every byte is explicitly referenced and so
that the first entry in the language structure starts on a
double word boundary. If you are unable to predict
precisely where filler fields must be placed to meet
these requirements you could consider marking the
fields as UNALIGNED and recompiling the application.

An alternative solution is to create a wrapper program.
A wrapper program is a program which accepts input
in a format that is suitable for use with DFHLS2WS
and maps that input to the format needed by the target
program. It then issues a LINK to the target program
before converting the response back to an output
format which is also suitable for use with DFHLS2WS.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9030 **Implicit padding (slack bytes) are not supported for PL/I. Please change the language structure to ensure that all slack bytes are explicitly referenced and that top level structures start on a double-word boundary. Slack bytes are needed near or around structure *structure***

Explanation: DFHLS2WS is unable to correct determine the location of where slack bytes (also known as filler bytes) should be placed when PL/I is used to define a language structure. DFHLS2WS has determined that one or more slack bytes are needed somewhere near to structure *structure* but is unsure of precisely where.

System action: The Web services assistant continues processing.

User response: Change the language structure to ensure that every byte is explicitly referenced and so that the first entry in the language structure starts on a double word boundary. If you are unable to predict precisely where filler fields must be placed to meet these requirements you could consider marking the fields as UNALIGNED and recompiling the application.

An alternative solution is to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9031 **A structure or array is unexpectedly empty.**

Explanation: An internal processing error has occurred. DFHLS2WS has not been able to correctly parse a language structure.

System action: The Web services assistant continues processing.

User response: Contact your IBM support representative for further assistance.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9032 **Schema attribute wild cards <anyAttribute> tags) are not supported.**

Explanation: An XML schema referenced from the WSDL document contains a schema attribute wild card (the <anyAttribute> XML schema tag). DFHWS2LS does not support attributes that are referenced in this way.

System action: The Web services assistant continues processing and the schema attribute wild card is ignored. If at run time a message containing unrecognized attributes is received these attributes are ignored.

User response: Consider whether the value of these attributes is important to your application. If it is acceptable for CICS to ignore these attributes then you may safely ignore this message. Otherwise you will not be able to use the Web services assistants in the implementation of this Web service. The following options are available:

- # 1. If you are implementing a Web service provider application then you should consider writing your own XML capable SOAP 'apphandler'.
- # 2. If you are implementing a Web service requester application then you should consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9500 **An internal error has occurred. Please contact IBM Support.**

Explanation: The Web services assistant has caught an unexpected exception.

System action: The Web services assistant continues processing.

User response: Contact your IBM support representative for further assistance.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9501 **The HTTPPROXY parameter is invalid. The correct format is proxy.hostname.com:8080 or similar.**

Explanation: The value of the HTTPPROXY parameter is invalid.

System action: The Web services assistant continues processing.

User response: Correct or remove the HTTPPROXY parameter.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9502 One or more incorrect parameters have been specified.

Explanation: The Web services assistant cannot continue as one or more errors have been detected in the input parameters.

System action: The Web services assistant fails with a return code of 8.

User response: Correct the errors in the input parameters details of which can be found in the previous messages issued.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9503 Required parameter *parameter* is missing.

Explanation: A required parameter is missing from the input parameters. The missing parameter is *parameter*

System action: The Web services assistant continues processing.

User response: Provide a value for the missing parameter.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9504 Parameter *parameter* has been specified but is not valid for program *program*

Explanation: A parameter has been specified that was not expected. For example, a value may have been provided for the BINDING parameter in DFHLS2WS. A BINDING is only valid as input to DFHWS2LS. The unexpected parameter is *parameter*

System action: The Web services assistant continues processing.

User response: Remove the unexpected parameter.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9505 E Invalid value specified for the LANG parameter. Valid values are: COBOL, PLI-ENTERPRISE, PLI-OTHER, C or CPP.

Explanation: An invalid value has been specified for the LANG parameter.

System action: The Web services assistant continues processing.

User response: Correct the value of the LANG parameter.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9506 E Parameter *parameter* exceeds the maximum valid length of *value* characters.

Explanation: The value of parameter *parameter* is too long.

System action: The Web services assistant continues processing.

User response: Change the value to be no longer than *value* characters long.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9507 Parameter *parameter* is not set therefore parameter *parameter2* is ignored.

Explanation: Parameter *parameter2* has been ignored because parameter *parameter* is not set. For example, a PGMINT value only makes sense if a PROGRAM value has also been supplied.

System action: The Web services assistant continues processing.

User response: Consider removing the unexpected parameter.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9508 Invalid value specified for the URI parameter. The URI specified must be relative.

Explanation: The value of the URI parameter is invalid. The value specified must be relative rather than absolute. For example, the following example URI is acceptable: '/ibm/cics/testURI'.

System action: The Web services assistant continues processing.

User response: Correct the value of the URI parameter.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9509 Parameter *parameter* contains invalid characters.

Explanation: One or more invalid characters have been found in parameter *parameter*

System action: The Web services assistant continues processing.

User response: Correct the value of the parameter.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9510 Invalid value specified for the PGMINT parameter. Valid values are: CHANNEL or COMMAREA. The default value of CHANNEL is assumed.

Explanation: An invalid value has been specified for the PGMINT parameter.

System action: The Web services assistant continues processing.

User response: Correct the value of the PGMINT parameter.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9511 Parameter PGMINT is set to CHANNEL but parameter CONTID is not set. The default value of *value* is assumed.

Explanation: The program interface has been defined as 'Channel' but a container name has not been provided to indicate the name of the container that CICS should populate at runtime. A default value of *value* has been assumed.

System action: The Web services assistant continues processing.

User response: Consider whether the default container name is acceptable. If you are enabling an existing channel based application as a Web service then it is likely that the default container name is incorrect. If the default container name is acceptable then you can safely ignore this message.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9512 Parameter CONTID is set but not needed for PGMINT=COMMAREA. Parameter CONTID is ignored.

Explanation: The CONTID input parameter has been specified but is ignored as the program interface has been defined to be a COMMAREA.

System action: The Web services assistant continues processing.

User response: Consider either removing the CONTID parameter or changing the PGMINT to CHANNEL.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9513 The value of parameter WSBIND is missing a file extension, .wsbind is assumed.

Explanation: A file extension has not been provided for the WSBIND file. If you wish to use the PIPELINE scan mechanism for automatically creating WEBSERVICE resources from WSBIND files then you must use an extension of '.wsbind'. This file extension has therefore been assumed.

System action: The Web services assistant continues processing.

User response: Consider adding '.wsbind' to the end of your WSBIND parameter value.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9514 The value of parameter **WSBIND**
specified a file extension other than
.wsbind.

Explanation: A file extension other than '.wsbind' has
been used for the WSBIND file. If you wish to use the
PIPELINE scan mechanism for automatically creating
WEBSERVICE resources from WSBIND files then you
must use an extension of '.wsbind'.

System action: The Web services assistant continues
processing.

User response: Consider changing the extension of the
WSBIND parameter to '.wsbind'.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9515 PDS library *library* cannot be found.

Explanation: The PDS library specified in the PDSLIB
input parameter cannot be found.

System action: The Web services assistant continues
processing.

User response: Correct the PDSLIB input parameter.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9516 PDS library *library* exists but cannot be
read.

Explanation: The PDS library specified in the PDSLIB
input parameter exists but cannot be read. This may be
because the userid under which the Web services
assistant is executing does not have permission to view
the PDS or because an exclusive lock is being held by
another process.

System action: The Web services assistant continues
processing.

User response: Ensure that permission is assigned to
allow the Web services assistant to read from the
PDSLIB. Ensure that no other process has a lock on the
PDSLIB.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9517 PDS library *library* exists but cannot be
written to.

Explanation: The PDS library specified in the PDSLIB
input parameter exists but cannot be written to. This
may be because the userid under which the Web
services assistant is executing does not have permission
to alter the PDS or because an exclusive lock is being
held by another process.

System action: The Web services assistant continues
processing.

User response: Ensure that permission is assigned to
allow the Web services assistant to alter the PDSLIB.
Ensure that no other process has a lock on the PDSLIB.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9518 PDS library *library* specifies a record
length less than 80 characters, output
may be truncated.

Explanation: The PDS library specified in the PDSLIB
input parameter specifies a record length less than 80
characters. DFHWS2LS requires 80 characters for the
creation of language structures, it is therefore likely that
truncation will occur.

System action: The Web services assistant continues
processing.

User response: Consider changing the PDSLIB to a
fixed record data set with a logical record length of 80
characters.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9519 Code page *codepage* is not recognized.

Explanation: The code page indicated in the PDSCP
input parameter is not recognized. The Web services
assistants use the code page support built in to Java,
Java does not recognize the named code page.

System action: The Web services assistant continues
processing.

User response: Remove or correct the PDSCP

parameter. If the PDSCP parameter is not set then the
same code page is used when reading from and writing
to the PDS library as is used when reading from and
writing to HFS. This code page is determined according
to the default code page configured for UNIX System
Services.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9520 Parameter RESPMEM and parameter
REQMEM must supply different values.

Explanation: The same language structure name has
been used for both the request and the response
messages. DFHWS2LS requires that these names be
unique even if it is likely that the generated language
structures will be identical.

System action: The Web services assistant continues
processing.

User response: Change one of the REQMEM and
RESPMEM input parameters in order to make them
unique.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9521 The record format of PDS member
member must be FB and have a record
length of 80.

Explanation: The location at which the language
structures are to be written to or read from is not a
fixed block PDS member.

System action: The Web services assistant continues
processing.

User response: Change the location of the PDSLIB
input parameter to indicate a FB data set.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9522 File *file* cannot be read.

Explanation: File *file* exists but cannot be read. This
may be because the userid under which DFHLS2WS is
executing does not have access permission to the
specified resource.

System action: The Web services assistant continues
processing.

User response: Correct the problem.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9523 An unexpected error occurred whilst
processing file *file* The problem is: *value*

Explanation: An exception was caught whilst
attempting to process file *file* The exception included a
message to identify the problem which is indicated in
value

DFHWS2LS requires an exclusive lock on the
partitioned data set to which it is writing language
structures. This message may be issued if an exclusive
lock is not currently available.

System action: The Web services assistant continues
processing.

User response: Correct the identified problem.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9524 File *file* cannot be written to.

Explanation: File *file* exists but cannot be written to.
This may be because the userid under which
DFHWS2LS is executing does not have alter permission
to the specified resource.

System action: The Web services assistant continues
processing.

User response: Correct the problem.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9525 Cannot write a file because directory
directory does not exist.

Explanation: Directory *directory* does not exist.
Therefore the Web services assistant is unable to create
an output file that should be written to that directory.

System action: The Web services assistant continues
processing.

User response: Either create the directory or change

the input parameters to indicate a different output
location.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9526 Cannot write a file because directory
directory is not writable.

Explanation: Directory *directory* exists but the userid
under which the Web services assistant is executing
does not have write permission to create a new file
within it.

System action: The Web services assistant continues
processing.

User response: Either change the permissions for the
directory or change the input parameters to indicate a
different output location. Note: This message cannot be
changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9527 Cannot write to the log file, file, is not
writable.

Explanation: File *file* exists but the userid under which
the Web services assistant is executing does not have
write permission to change it.

System action: The Web services assistant continues
processing.

User response: Either change the permissions for the
file or change the input parameters to indicate a
different output location.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9528 Cannot find or read file file

Explanation: File *file* either does not exist the userid
under which the Web services assistant is executing
does not have permission to read it.

System action: The Web services assistant continues
processing.

User response: Either change the permissions for the
file or correct the input parameters to indicate a
different input file.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9529 Characters beyond column column have
been truncated for line line

Explanation: The input parameters extend beyond
character 72. The problematic line identified is *line*

System action: The Web services assistant continues
processing.

User response: Change the indicated line to use less
than 72 characters of data.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9530 Parameter parameter is not recognized
and has been ignored.

Explanation: An unrecognized parameter has been
found amongst the input parameters.

System action: The Web services assistant continues
processing.

User response: Consider removing the named
parameter.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9531 Parameter STRUCTURE must only
contain (or) characters in the first or
last position.

Explanation: The STRUCTURE input parameter is not
well formed. It may only contain bracket characters at
the start and end of the value.

System action: The Web services assistant continues
processing.

User response: Correct the value of the STRUCTURE
input parameter.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

```

# DFHPI9532 Parameter STRUCTURE must be of the
# form
# STRUCTURE=(request_structure_name,
# response_structure_name).
# Explanation: The STRUCTURE input parameter is not
# well formed. It should contain two structure names
# separated by a comma and entirely enclosed within
# rounded brackets as in the following example:
# STRUCTURE=(request_structure_name,response_structure_name).
# System action: The Web services assistant continues
# processing.
# User response: Correct the value of the STRUCTURE
# input parameter.
# Note: This message cannot be changed with the
# message editing utility.
# Destination: SYSPRINT
# Modules: DFHWS2LS, DFHLS2WS

```

```

# DFHPI9533 Parameter parameter contains an invalid
# character character at position position in
# value value
# Explanation: An invalid character has been found in
# parameter character
# System action: The Web services assistant continues
# processing.
# User response: Correct the value of the named input
# parameter.
# Note: This message cannot be changed with the
# message editing utility.
# Destination: SYSPRINT
# Modules: DFHWS2LS, DFHLS2WS

```

```

# DFHPI9534 None unique operation signature found:
# value
# Explanation: No explanation is available for this
# message.
# System action: The Web services assistant continues
# processing.
# User response: Note: This message cannot be changed
# with the message editing utility.
# Destination: SYSPRINT
# Modules: DFHWS2LS, DFHLS2WS

```

```

# DFHPI9535 WSDL operation operation has an
# operation signature greater than value
# characters long and therefore is not
# supported by CICS.
# Explanation: Operation operation in the WSDL

```

```

# document has a wire signature that is longer than value
# characters. DFHWS2LS can not process this operation.
# The wire signature is used to determine the operation
# that is being invoked based on the sequence of XML
# child elements found within the SOAP:body element at
# run time. If there are a large number of such child
# elements or the child elements have unusually long
# names then the generated signature may be too large.
# System action: The Web services assistant continues
# processing.
# User response: Either redesign your WSDL to remove
# the content that is not supported by DFHWS2LS or
# consider implementing this Web service without the
# use of the Web services assistants. If the Web services
# assistant cannot be used then the following options are
# available:
# 1. If you are implementing a Web service provider
# application then you should consider writing your
# own XML capable SOAP 'apphandler'.
# 2. If you are implementing a Web service requester
# application then you should consider writing an
# XML capable application that uses the DFHPIRT
# channel linkable SOAP interface.
# Note: This message cannot be changed with the
# message editing utility.
# Destination: SYSPRINT
# Modules: DFHWS2LS

```

```

# DFHPI9536 User Defined Type type cannot be
# found.
# Explanation: DFHLS2WS is unable to locate a
# required user defined type with the C or C++ header
# file.
# System action: The Web services assistant continues
# processing.
# User response: Change the C header file to include
# the required user defined type.
# Note: This message cannot be changed with the
# message editing utility.
# Destination: SYSPRINT
# Modules: DFHLS2WS

```

```

# DFHPI9537 Compiler directive directive has been
# ignored.
# Explanation: DFHLS2WS has found a compiler
# directive within the C or C++ header file. Compiler
# directives are not supported.
# System action: The Web services assistant continues
# processing.
# User response: Consider removing the compiler
# directive from the header file. If the compiler directive

```

is important to how the compiler processes the
structures within the header file then it may be
necessary to change those structures in order to ensure
that DFHLS2WS interprets them correctly.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9538 **The required struct entry cannot be
found.**

Explanation: DFHLS2WS is unable to locate a
required structure which is referenced in the C or C++
header file.

System action: The Web services assistant continues
processing.

User response: Change the C header file to include
the required structure.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9539 **An invalid character *character* has been
found.**

Explanation: An invalid character has been found in
the C or C++ header file.

System action: The Web services assistant continues
processing.

User response: Correct the header file.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9540 **Unsupported keyword *keyword* has been
found.**

Explanation: DFHLS2WS has detected a keyword
keyword that is not currently supported.

System action: The Web services assistant continues
processing.

User response: Consider removing the unsupported
keyword from the input file. If the keyword is
important to the shape of the language structure in
memory then it may be necessary to create a wrapper
program. A wrapper program is a program which
accepts input in a format that is suitable for use with
DFHLS2WS and maps that input to the format needed

by the target program. It then issues a LINK to the
target program before converting the response back to
an output format which is also suitable for use with
DFHLS2WS.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9541 **Fixed point decimal types are not
supported.**

Explanation: DFHLS2WS has detected an
unsupported data type in a C or C++ header file.

System action: The Web services assistant continues
processing.

User response: Consider removing the unsupported
data type from the input file. If the data type is
important to the shape of the language structure in
memory then it may be necessary to create a wrapper
program. A wrapper program is a program which
accepts input in a format that is suitable for use with
DFHLS2WS and maps that input to the format needed
by the target program. It then issues a LINK to the
target program before converting the response back to
an output format which is also suitable for use with
DFHLS2WS.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9542 **Unsupported macro *macro* has been
found.**

Explanation: DFHLS2WS has found a macro within
the C or C++ header file. Macros are not supported.

System action: The Web services assistant continues
processing.

User response: Consider removing the unsupported
macro from the input file. If the macro is important to
the shape of the language structure in memory then it
may be necessary to create a wrapper program. A
wrapper program is a program which accepts input in
a format that is suitable for use with DFHLS2WS and
maps that input to the format needed by the target
program. It then issues a LINK to the target program
before converting the response back to an output
format which is also suitable for use with DFHLS2WS.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9543 Constant *constant* is not supported in array dimension.

Explanation: DFHLS2WS has found a constant within an array declaration. This is not supported.

System action: The Web services assistant continues processing.

User response: Consider removing the unsupported constant from the input file. If the constant is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9544 Unsupported keyword *keyword* has been found and ignored.

Explanation: DFHLS2WS has detected a keyword *keyword* that is not currently supported, it has been ignored.

System action: The Web services assistant continues processing.

User response: Consider whether it is acceptable that this keyword has been ignored. If it is acceptable then you can safely ignore this message. If it is not acceptable then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9545 Assignment operator detected and ignored.

Explanation: DFHLS2WS has detected and ignored an assignment operator within a C or C++ header file.

System action: The Web services assistant continues processing.

User response: Consider removing the assignment operator from the header file.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9546 Initialization operator detected and ignored.

Explanation: DFHLS2WS has detected and ignored an initialization operator within a C or C++ header file.

System action: The Web services assistant continues processing.

User response: Consider removing the initialization operator from the header file.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9547 Top level variables are not supported: *value*

Explanation: DFHLS2WS has encountered a variable *value* within a C or C++ header file that is not part of a structure or part of a type definition. This is not supported.

System action: The Web services assistant continues processing.

User response: Consider removing the named variable from the header file.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9548 Top-level structure *structure* must be named *value*

Explanation: DFHLS2WS has been unable to locate a requested structure within the C or C++ header file.

System action: The Web services assistant continues processing.

User response: Correct or supply a value for the STRUCTURE input parameter.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9549 A type definition has been found with
no instance and no label.

Explanation: DFHLS2WS has detected a type
definition in the C or C++ header file that is either
missing a label or is missing an instance name.

System action: The Web services assistant continues
processing.

User response: Correct the header file.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9550 Duplicate type name *name* found.

Explanation: DFHLS2WS has detected a duplicate
type definition in the C or C++ header file.

System action: The Web services assistant continues
processing.

User response: Correct the header file.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9551 Structure *structure* cannot be found.

Explanation: DFHLS2WS has been unable to locate
the main structure within the C or C++ header file.

System action: The Web services assistant continues
processing.

User response: Correct or supply a value for the
STRUCTURE input parameter.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9552 Value *value* is not a valid number.

Explanation: DFHLS2WS has encountered a value that
should be numeric but does not appear to be a valid
number. The problematic value is *value*

System action: The Web services assistant continues
processing.

User response: Correct the language structure.

Note: This message cannot be changed with the
message editing utility.

.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9553 PICTURE *picture* is not supported for
BINARY or DISPLAY types.

Explanation: DFHLS2WS has detected a PICTURE
clause that it does not currently support for BINARY or
DISPLAY data types.

System action: The Web services assistant continues
processing.

User response: Consider removing the unsupported
PICTURE from the input file. If the PICTURE is
important to the shape of the language structure in
memory then it may be necessary to create a wrapper
program. A wrapper program is a program which
accepts input in a format that is suitable for use with
DFHLS2WS and maps that input to the format needed
by the target program. It then issues a LINK to the
target program before converting the response back to
an output format which is also suitable for use with
DFHLS2WS.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9554 PICTURE *picture* is not supported.

Explanation: DFHLS2WS has detected a PICTURE
clause that it does not currently support.

System action: The Web services assistant continues
processing.

User response: Consider removing the unsupported
PICTURE from the input file. If the PICTURE is
important to the shape of the language structure in
memory then it may be necessary to create a wrapper
program. A wrapper program is a program which
accepts input in a format that is suitable for use with
DFHLS2WS and maps that input to the format needed
by the target program. It then issues a LINK to the
target program before converting the response back to
an output format which is also suitable for use with
DFHLS2WS.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9555 Top level structure found within the main structure.

Explanation: DFHLS2WS has detected an error in one of the language structures. 01 level identifiers should not be present within the main language structure.

System action: The Web services assistant continues processing.

User response: Remove the 01 level identifier from within the language structure.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9556 An unexpected error occurred whilst writing to file *file* The problem is: *value*

Explanation: An exception was caught whilst attempting to write to file *file* The exception included a message to identify the problem which is indicated in *value*

System action: The Web services assistant continues processing.

User response: Correct the identified problem.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9557 ERRORS and WARNINGS have been generated processing file *file*

Explanation: One or more error messages and one or more warning messages have been issued by the Web services assistant.

System action: The web services assistant fails with return code 12.

User response: Resolve the previously issued error messages and consider addressing the warning messages.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9558 ERRORS have been generated processing file *file*

Explanation: One or more error messages have been issued by the Web services assistant.

System action: The web services assistant fails with return code 12.

User response: Resolve the previously issued error messages.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

DFHPI9559 Illegal character *character* has been found at the start of a name and replaced with X.

Explanation: DFHLS2WS has found a character at the start of a field name in the language structure that is not valid in XML. It has been replaced with a substitute character.

System action: The Web services assistant continues processing.

User response: Consider whether the new name is appropriate to expose in the WSDL. If you are unhappy with the name chosen you can either change the language structure and rerun DFHLS2WS or change the WSDL and run DFHWS2LS.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9560 Illegal character *character* has been found in a name and replaced with X.

Explanation: DFHLS2WS has found a character in a field name in the language structure that is not valid in XML. It has been replaced with a substitute character.

System action: The Web services assistant continues processing.

User response: Consider whether the new name is appropriate to expose in the WSDL. If you are unhappy with the name chosen you can either change the language structure and rerun DFHLS2WS or change the WSDL and run

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9561 **Identifier *identifier* has generated a name-clash for operation *operation*. Subsequent declarations have been renamed to ensure their uniqueness.**

Explanation: DFHLS2WS has detected a field name in the language structure which will clash with another name when converted to XML. The name has been changed to ensure that this does not happen.

System action: The Web services assistant continues processing.

User response: Consider whether the new name is appropriate to expose in the WSDL. If you are unhappy with the name chosen you can either change the language structure and rerun DFHLS2WS or change the WSDL and run

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9562 **Parameter PGMINT is specified with value COMMAREA but there is too much data required for a COMMAREA.**

Explanation: DFHLS2WS has been asked to process language structures for a COMMAREA based PROGRAM. The language structures processed require more than 32K of data and therefore are too large for use with a COMMAREA.

System action: The Web services assistant continues processing.

User response: Consider changing the PGMINT input parameter to CHANNEL rather than COMMAREA.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9563 **Unsupported PL/I source code detected in line *line***

Explanation: DFHLS2WS has spotted a line of PL/I based code that it does not support at line *line*

System action: The Web services assistant continues processing.

User response: Consider removing the unsupported line from the input file. If the line is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It

then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9564 **A terminating ; is missing, it is assumed to be at the end of the file.**

Explanation: The termination character for a language structure is missing. It is assumed that the end of file indicates the end of the language structure.

System action: The Web services assistant continues processing.

User response: Correct the language structure.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9565 **ALIGNED and UNALIGNED keywords are not supported for an entire structure.**

Explanation: An ALIGNED keyword or an UNALIGNED keyword has been applied to a structure in a PL/I language structure. This is not supported in DFHLS2WS.

System action: The Web services assistant continues processing.

User response: Change each entry within the language structure to specify ALIGNED or UNALIGNED individually.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9566 **The default FLOAT attribute is not supported: *value***

Explanation: DFHLS2WS has determined that a DECIMAL or BINARY field in a PL/I language structure is of type FLOAT due to the absence of the FIXED keyword. The FLOAT data type is not supported.

System action: The Web services assistant continues processing.

User response: Consider changing the field to explicitly specify FIXED. If this is not possible then

consider writing a wrapper program. A wrapper
program is a program which accepts input in a format
that is suitable for use with DFHLS2WS and maps that
input to the format needed by the target program. It
then issues a LINK to the target program before
converting the response back to an output format
which is also suitable for use with DFHLS2WS.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9567 Too many digits have been specified for
a packed decimal field: *value*

Explanation: DFHLS2WS has spotted an error in a
PL/I language structure. A packed decimal field has
specified a greater number of digits than can be
supported for that language.

System action: The Web services assistant continues
processing.

User response: Correct the language structure.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9568 The UNSIGNED attribute is not
supported unless PLI-ENTERPRISE is
specified: *value*

Explanation: DFHLS2WS has spotted an error in a
PL/I language structure. The UNSIGNED keyword has
been used even though it is not available before
Enterprise level PL/I.

System action: The Web services assistant continues
processing.

User response: Either correct the language structure or
change the LANG input parameter to specify
PLI-ENTERPRISE.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9569 Unsupported PL/I source code detected
after line *line*

Explanation: DFHLS2WS has spotted a line of PL/I
based code that it does not support after line *line*

System action: The Web services assistant continues
processing.

User response: Consider removing the unsupported
line from the input file. If the line is important to the
shape of the language structure in memory then it may
be necessary to create a wrapper program. A wrapper
program is a program which accepts input in a format
that is suitable for use with DFHLS2WS and maps that
input to the format needed by the target program. It
then issues a LINK to the target program before
converting the response back to an output format
which is also suitable for use with DFHLS2WS.

Modules: DFHLS2WS

DFHPI9570 FIXED BINARY types with length
greater than 31 are not supported unless
PLI-ENTERPRISE is specified: *value*

Explanation: DFHLS2WS has detected an error in a
PL/I language structure. A FIXED BINARY length
greater than 31 has been specified. This is not allowed
for versions of PL/I prior to Enterprise PL/I.

System action: The Web services assistant continues
processing.

User response: Either correct the language structure or
change the LANG input parameter to specify
PLI-ENTERPRISE.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9571 ORDINAL references are always treated
as SIGNED FIXED BINARY (7) data
types. If this is incorrect then please
replace the ordinal reference with an
equivalent FIXED BINARY variable:
value

Explanation: DFHLS2WS has detected an Ordinal data
type in a PL/I language structure. These are always
treated as though they are SIGNED FIXED BINARY (7)
data types.

System action: The Web services assistant continues
processing.

User response: Consider whether or not this
assumption is appropriate. If it is not then you should
either change the language structure to replace the
ordinal data type with an equivalent data type or you
should write a wrapper program. A wrapper program
is a program which accepts input in a format that is
suitable for use with DFHLS2WS and maps that input
to the format needed by the target program. It then
issues a LINK to the target program before converting
the response back to an output format which is also
suitable for use with DFHLS2WS.

Note: This message cannot be changed with the
message editing utility.
Destination: SYSPRINT
Modules: DFHLS2WS

DFHPI9572 **ORDINAL types are only supported if
PLI-ENTERPRISE is specified: *value***

Explanation: DFHLS2WS has detected an error in a
PL/I language structure. An ordinal data type has been
specified. This is not allowed for versions of PL/I prior
to Enterprise PL/I.

System action: The Web services assistant continues
processing.

User response: Either correct the language structure or
change the LANG input parameter to specify
PLI-ENTERPRISE.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9573 **BIT fields are only supported if they are
in multiples of 8: *value***

Explanation: DFHLS2WS has detected a BIT field in a
PL/I language structure which specifies a number of
bits that are not exactly divisible by 8. This is not
supported by DFHLS2WS.

System action: The Web services assistant continues
processing.

User response: Consider changing the language
structure to remove this field or to change its length to
a multiple of 8. If this change is not appropriate then
consider writing a wrapper program. A wrapper
program is a program which accepts input in a format
that is suitable for use with DFHLS2WS and maps that
input to the format needed by the target program. It
then issues a LINK to the target program before
converting the response back to an output format
which is also suitable for use with DFHLS2WS.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9574 **Lengths of zero are not supported for
CHAR data types.**

Explanation: DFHLS2WS has detected a problem in a
PL/I language structure. A data type specifies a length
of 0.

System action: The Web services assistant continues
processing.

User response: Correct the problem.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9575 **The length of a PICTURE cannot be
found: *value***

Explanation: DFHLS2WS has detected a problem in a
PL/I language structure. The length of a PICTURE
clause can not be determined.

System action: The Web services assistant continues
processing.

User response: Correct the problem.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9576 **FIXED BINARY data types with a
scaling factor of the form (p,q) with q
not equal to 0 are not supported: *value***

Explanation: DFHLS2WS has detected an
unsupported data type in a PL/I language structure.
FIXED BINARY scaling factors are not supported.

System action: The Web services assistant continues
processing.

User response: Consider removing the unsupported
data type from the input file. If the data type is
important to the shape of the language structure in
memory then it may be necessary to create a wrapper
program. A wrapper program is a program which
accepts input in a format that is suitable for use with
DFHLS2WS and maps that input to the format needed
by the target program. It then issues a LINK to the
target program before converting the response back to
an output format which is also suitable for use with
DFHLS2WS.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHLS2WS

DFHPI9577 Precision factor *factor* is too large: *value*
Explanation: DFHLS2WS has detected an error in a
PL/I language structure. A precision factor which is too
large for PL/I has been specified.
System action: The Web services assistant continues
processing.
User response: Correct the problem.
Note: This message cannot be changed with the
message editing utility.
Destination: SYSPRINT
Modules: DFHLS2WS

DFHPI9578 FIXED DECIMAL data types with a
scaling factor of the form (p,q) with q
greater than p are not supported: *value*
Explanation: DFHLS2WS has detected an
unsupported data type in a PL/I language structure.
DFHLS2WS is unable to support scaling factors in the
form (p,q) where q is greater than p.
System action: The Web services assistant continues
processing.
User response: Consider removing the unsupported
data type from the input file. If the data type is
important to the shape of the language structure in
memory then it may be necessary to create a wrapper
program. A wrapper program is a program which
accepts input in a format that is suitable for use with
DFHLS2WS and maps that input to the format needed
by the target program. It then issues a LINK to the
target program before converting the response back to
an output format which is also suitable for use with
DFHLS2WS.
Note: This message cannot be changed with the
message editing utility.
Destination: SYSPRINT
Modules: DFHLS2WS

DFHPI9579 FIXED DECIMAL data types with a
scaling factor of the form (p,q) with q
less than 0 are not supported: *value*
Explanation: DFHLS2WS has detected an
unsupported data type in a PL/I language structure.
DFHLS2WS is unable to support scaling factors in the
form (p,q) where q is less than 0.
System action: The Web services assistant continues
processing.
User response: Consider removing the unsupported
data type from the input file. If the data type is
important to the shape of the language structure in
memory then it may be necessary to create a wrapper

program. A wrapper program is a program which
accepts input in a format that is suitable for use with
DFHLS2WS and maps that input to the format needed
by the target program. It then issues a LINK to the
target program before converting the response back to
an output format which is also suitable for use with
DFHLS2WS.

Modules: DFHLS2WS

DFHPI9580 PDS member *member* has been replaced.
Explanation: The Web services assistant as replaced
existing PDS member *member*.
System action: The Web services assistant continues
processing.
User response: No user action is required. You may
safely ignore this message.
Note: This message cannot be changed with the
message editing utility.
Destination: SYSPRINT
Modules: DFHWS2LS, DFHLS2WS

DFHPI9581 An unexpected exception occurred when
writing to the PDS.
Explanation: The Web services assistant has been
unable to write to the PDS library. This may be because
another process has a lock on the PDS.
System action: The Web services assistant continues
processing.
User response: Ensure that all other processes which
have locks on the PDS release those locks.
Note: This message cannot be changed with the
message editing utility.
Destination: SYSPRINT
Modules: DFHWS2LS, DFHLS2WS

DFHPI9582 File *file* has been replaced.
Explanation: The Web services assistant as replaced
existing file *file*
System action: The Web services assistant continues
processing.
User response: No user action is required. You may
safely ignore this message.
Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT
Modules: DFHWS2LS, DFHLS2WS

DFHPI9583 The supplied WSDL contains an element with different minOccurs and maxOccurs values. This is only supported when PGMINT is set to CHANNEL.

Explanation: DFHWS2LS has detected an XML element which will occur in a SOAP message an unknown number of times. This is only supported if the PGMINT input parameter is set to CHANNEL.

System action: The Web services assistant continues processing.

User response: Change the value of the PGMINT input parameter to CHANNEL.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT
Modules: DFHWS2LS

DFHPI9584 The WSDL file contains at least one request message but the REQMEM parameter has not been set.

Explanation: DFHWS2LS needs to generate one or more language structures for request messages but the REQMEM input parameter has not been set.

System action: The Web services assistant continues processing.

User response: Specify a value for the REQMEM input parameter.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT
Modules: DFHWS2LS

DFHPI9585 The WSDL file contains at least one response message but the RESPMEM parameter has not been set.

Explanation: DFHWS2LS needs to generate one or more language structures for response messages but the RESPMEM input parameter has not been set.

System action: The Web services assistant continues processing.

User response: Specify a value for the RESPMEM input parameter.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT
Modules: DFHWS2LS

DFHPI9586 A reserved word *word* has been detected in the WSDL, it has been changed to *value*

Explanation: DFHWS2LS has detected an element name in the WSDL document that is not valid as a keyword in the target programming language. It has been renamed as indicated.

System action: The Web services assistant continues processing.

User response: You may safely ignore this message.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT
Modules: DFHWS2LS

DFHPI9587 Program *program* has completed SUCCESSFULLY.

Explanation: The Web services assistant has completed processing. No error or warning messages have been issued.

System action: The Web services assistant ends with return code 0.

User response: You may safely ignore this message.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT
Modules: DFHWS2LS, DFHLS2WS

DFHPI9588 WSDL binding *binding* has no operation elements in the WSDL.

Explanation: DFHWS2LS has not found any WSDL operations associated with WSDL binding *binding*

System action: The Web services assistant continues processing.

User response: Either correct the WSDL document or supply a different value for the BINDING input parameter.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT
Modules: DFHWS2LS

DFHPI9589 The supplied WSDL requires too much data for a CICS Commarea. The PGMINT parameter must be set to CHANNEL.

#

Explanation: DFHWS2LS has been asked to generate language structures for a COMMAREA based PROGRAM. The language structures generated require more than 32K of data and therefore are too large for use with a COMMAREA.

System action: The Web services assistant continues processing.

User response: Consider changing the PGMINT input parameter to CHANNEL rather than COMMAREA.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9590 A style attribute has not been specified for WSDL operation *operation*

#

Explanation: DFHWS2LS has detected an error in the WSDL document. The binding for WSDL operation *operation* must have a 'style' specified. The style may be either 'rpc' or 'document'.

System action: The Web services assistant continues processing.

User response: Correct the WSDL.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9591 No input message has been found for WSDL operation *operation*

#

Explanation: DFHWS2LS has encountered a problem with the WSDL document. Operation *operation* is missing a WSDL input message. DFHWS2LS does not support response only Web services.

System action: The Web services assistant continues processing.

User response: Either correct the WSDL document or specify a different BINDING input parameter.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9592 An expected soapAction attribute is missing for WSDL operation *operation*

#

Explanation: DFHWS2LS has detected an error in the WSDL document. The WSDL binding is missing a soapAction attribute for operation *operation*

System action: The Web services assistant continues processing.

User response: Consider whether the absence of the soapAction is a problem. If your application does not require the soapAction attribute then you can safely ignore this message.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9593 W An unexpected soapAction attribute has been found for WSDL operation *operation* This can only be used with SOAP version 1.1.

#

Explanation: DFHWS2LS has detected an error in the WSDL document. The WSDL binding specifies a soapAction attribute for use with SOAP 1.2.

System action: The Web services assistant continues processing.

User response: Consider removing the soapAction attribute or changing the WSDL to indicate the use of SOAP 1.1.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9594 E An unexpected soapAction attribute has been found for WSDL operation *operation* This can only be used with a HTTP transport mechanism.

#

Explanation: DFHWS2LS has detected an error in the WSDL document. The WSDL binding specifies a soapAction attribute for a non-HTTP transport protocol.

System action: The Web services assistant continues processing.

User response: Remove the soapAction attribute.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9595 E A WSDL binding contains a mixture of
rpc and document style attributes. This
is not supported.

Explanation: DFHWS2LS has encountered a problem
processing the WSDL document. The WSDL binding
specifies a mixture of 'rpc' style messages and
'document' style messages. DFHWS2LS does not
support mixed styles within a binding.

System action: The Web services assistant continues
processing.

User response: Either redesign your WSDL to remove
the content that is not supported by DFHWS2LS or
consider implementing this Web service without the
use of the Web services assistants. If the Web services
assistant cannot be used then the following options are
available:

- # 1. If you are implementing a Web service provider
application then you should consider writing your
own XML capable SOAP 'apphandler'.
- # 2. If you are implementing a Web service requester
application then you should consider writing an
XML capable application that uses the DFHPIRT
channel linkable SOAP interface.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9596 The WSDL Binding for operation
operation is missing an input message.

Explanation: DFHWS2LS has encountered a problem
with the WSDL document. Binding *binding* for
operation *operation* is missing a WSDL input binding.
DFHWS2LS does not support response only Web
services.

System action: The Web services assistant continues
processing.

User response: Either correct the WSDL document or
specify a different BINDING input parameter.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9597 The WSDL file contains a soap:body tag
with a use attribute value of *value* Only
literal WSDL is supported.

Explanation: DFHWS2LS has encountered a problem
with the WSDL document. The WSDL binding specifies
a 'use' attribute value of *value* DFHWS2LS only
supports a value of 'literal'.

System action: The Web services assistant continues
processing.

User response: Either redesign your WSDL to remove
the content that is not supported by DFHWS2LS or
consider implementing this Web service without the
use of the Web services assistants. If the Web services
assistant cannot be used then the following options are
available:

- # 1. If you are implementing a Web service provider
application then you should consider writing your
own XML capable SOAP 'apphandler'.
- # 2. If you are implementing a Web service requester
application then you should consider writing an
XML capable application that uses the DFHPIRT
channel linkable SOAP interface.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9598 WSDL binding *binding* references more
than one transport protocol. Only one
protocol is supported.

Explanation: DFHWS2LS has encountered a problem
with the WSDL document. The WSDL binding specifies
more than one transport protocol. DFHWS2LS only
supports one transport protocol per binding.

System action: The Web services assistant continues
processing.

User response: Either redesign your WSDL to remove
the content that is not supported by DFHWS2LS or
consider implementing this Web service without the
use of the Web services assistants. If the Web services
assistant cannot be used then the following options are
available:

- # 1. If you are implementing a Web service provider
application then you should consider writing your
own XML capable SOAP 'apphandler'.
- # 2. If you are implementing a Web service requester
application then you should consider writing an
XML capable application that uses the DFHPIRT
channel linkable SOAP interface.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9599 WSDL binding *binding* is not associated
with a transport protocol.

Explanation: DFHWS2LS has encountered a problem
with the WSDL document. The WSDL binding specifies
no transport protocols. DFHWS2LS requires one

transport protocol per binding.

System action: The Web services assistant continues processing.

User response: Either redesign your WSDL to remove the content that is not supported by DFHWS2LS or consider implementing this Web service without the use of the Web services assistants. If the Web services assistant cannot be used then the following options are available:

1. If you are implementing a Web service provider application then you should consider writing your own XML capable SOAP 'apphandler'.
2. If you are implementing a Web service requester application then you should consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9600 **The WSDL file contains multiple binding elements. The BINDING parameter must be set to specify which one to use.**

Explanation: The WSDL document contains more than one binding element. The BINDING input parameter was not set therefore DFHWS2LS cannot determine which WSDL binding to process.

System action: The Web services assistant continues processing.

User response: Specify a value for the BINDING input parameter.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9601 **Binding element *element* cannot be found in the WSDL file. Only one of the following values may be specified:**
value

Explanation: The value of the BINDING input parameter does not identify a binding element in the WSDL document.

System action: The Web services assistant continues processing.

User response: Correct the value of the BINDING input parameter.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9602 **WSDL binding *binding* is not a SOAP binding.**

Explanation: DFHWS2LS has detected that the WSDL binding does not indicate the use of SOAP. DFHWS2LS only supports Web services that use SOAP.

System action: The Web services assistant continues processing.

User response: Either redesign your WSDL to remove the content that is not supported by DFHWS2LS or consider implementing this Web service without the use of the Web services assistants. If the Web services assistant cannot be used then the following options are available:

1. If you are implementing a Web service provider application then you should consider writing your own XML capable terminal node in place of the SOAP node used with most PIPELINES.
2. If you are implementing a Web service requester application then you should consider writing an XML capable application that uses the DFHPIRT channel linkable PIPELINE interface.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9603 **Multiple WSDL service elements exist for a single binding element. Only one is supported.**

Explanation: DFHWS2LS has encountered a problem processing the WSDL document. The WSDL specifies more than one WSDL service element for use with the specified binding element. DFHWS2LS only supports at most one service element per binding.

System action: The Web services assistant continues processing.

User response: Remove all but one of the service elements for the binding.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS

DFHPI9604 File *file* does not contain valid WSDL.
Explanation: The WSDL document does not appear to
contain WSDL. It may have been corrupted in transit or
it may not contain XML.
System action: The Web services assistant continues
processing.
User response: Ensure that the value of the WSDL
input parameter identifies the correct file. Ensure that
the WSDL document has been stored in the correct
code page.
Note: This message cannot be changed with the
message editing utility.
Destination: SYSPRINT
Modules: DFHWS2LS

DFHPI9605 The value of the XML encoding tag
must match that of the underlying file
system. For example, the value UTF-8
may be appropriate.
Explanation: The XML encoding pseudo-attribute in
the prolog of the WSDL document appears to be
incorrect. The value of this attribute must match the
encoding in which the WSDL document is stored in the
file system.
System action: The Web services assistant continues
processing.
User response: Either correct or remove the encoding
attribute. It is likely that the correct value should be
UTF-8.
Note: This message cannot be changed with the
message editing utility.
Destination: SYSPRINT
Modules: DFHWS2LS

DFHPI9606 The value of the XML encoding tag
must match that of the underlying file
system. For example, the value
EBCDIC-CP-US may be appropriate.
Explanation: The XML encoding pseudo-attribute in
the prolog of the WSDL document appears to be
incorrect. The value of this attribute must match the
encoding in which the WSDL document is stored in the
file system.
System action: The Web services assistant continues
processing.
User response: Either correct or remove the encoding
attribute. It is likely that the correct value should be
EBCDIC-CP-US.

Note: This message cannot be changed with the
message editing utility.
Destination: SYSPRINT
Modules: DFHWS2LS

DFHPI9607 An unexpected error occurred whilst
processing WSDL operation *operation*
The problem is: *value*
Explanation: DFHWS2LS has encountered a problem
whilst processing the WSDL document. An exception
has been caught which includes a message the details
of which are available in *value*
System action: The Web services assistant continues
processing.
User response: Correct the identified problem.

Note: This message cannot be changed with the
message editing utility.
Destination: SYSPRINT
Modules: DFHWS2LS

DFHPI9608 WARNINGS have been generated
processing file *file*
Explanation: The Web services assistant has completed
and has issued one or more warning messages.
System action: The Web services assistant ends with
return code 4.
User response: Read the previously issued warning
messages and decide on what if any actions must be
taken.

Note: This message cannot be changed with the
message editing utility.
Destination: SYSPRINT
Modules: DFHWS2LS, DFHLS2WS

DFHPI9609 Parameter *parameter* has value *value*
Explanation: The value of parameter *parameter* is *value*
System action: The Web services assistant continues
processing.
User response: You may safely ignore this message.
Note: This message cannot be changed with the
message editing utility.
Destination: SYSPRINT
Modules: DFHWS2LS, DFHLS2WS

DFHPI9610 Platform *platform* is not a supported platform for this API.

Explanation: The Web services assistant has detected that it is executing on a platform that is not currently supported. If you experience any problems whilst executing the Web services assistant on this platform you may receive a reduced level of support from IBM.
System action: The Web services assistant continues processing.
User response: Consider hosting the Web services assistant on a platform that is supported such as z/OS.
Note: This message cannot be changed with the message editing utility.
Destination: SYSPRINT
Modules: DFHWS2LS, DFHLS2WS

DFHPI9611 All content after the first ‘;’ for line *line* is ignored.

Explanation: DFHLS2WS has spotted a line termination character part way through what appears to be a line of PL/I code. DFHLS2WS does not process the remainder of the line.
System action: The Web services assistant continues processing.
User response: Consider whether DFHLS2WS is correct in ignoring the end of the line. If there is significant data still to be processed then edit the input file in order to supply the data in a format that DFHLS2WS can understand.
Note: This message cannot be changed with the message editing utility.
Destination: SYSPRINT
Modules: DFHLS2WS

DFHPI9612 Provider mode Web services with more than one operation must specify ‘PGMINT=CHANNEL’.

Explanation: DFHWS2LS has determined that there is more than one operation associated with the binding in the WSDL document. If there is more than one operation supported by a provider mode WEBSERVICE then the CICS application which implements the Web service will have to determine the operation invoked using the contents of the DFHWS-OPERATION container. This container is only available if the CICS application is linked to with a channel rather than a COMMAREA.
System action: The Web services assistant continues processing.
User response: Consider changing the PGMINT input

parameter to CHANNEL rather than COMMAREA.
Note: This message cannot be changed with the message editing utility.
Destination: SYSPRINT
Modules: DFHWS2LS

DFHPI9613 Mapping level *level* is not recognized.
Explanation: An invalid value has been specified for the MAPPING-LEVEL parameter.
System action: The Web services assistant continues processing.
User response: Correct the value of the MAPPING-LEVEL parameter.

Note: This message cannot be changed with the message editing utility.
Destination: SYSPRINT
Modules: DFHWS2LS, DFHLS2WS

DFHPI9614 Mapping level *old* has been requested. The most current mapping level available is *new*

Explanation: An old mapping level has been requested. More recent mapping levels have enhanced support for WSDL and language structures that may not be available at the mapping level requested.
System action: The Web services assistant continues processing.
User response: Consider switching to the most current mapping level.

Note: This message cannot be changed with the message editing utility.
Destination: SYSPRINT
Modules: DFHWS2LS, DFHLS2WS

DFHPI9615 The version of Java in use is *current* The minimum version of Java required is *required*

Explanation: The Web services assistants require a more recent version of Java in order to execute.
System action: The Web services assistant continues processing.
User response: Ensure you have the correct minimum version of Java installed. The ‘JAVADIR’ option of the JCL procedure used to launch the Web services assistant may be used to specify a version of Java other than the default.

Note: This message cannot be changed with the
message editing utility.

Destination: SYSPRINT

Modules: DFHWS2LS, DFHLS2WS

**DFHPI9616 National characters in COBOL are
assumed to be DBCS characters:** *line*

Explanation: A language structure processed by
DFHLS2WS contains fields which are declared to
contain National characters. National characters are
only partially supported. DFHLS2WS assumes that all
fields defined to contain National values do so using
DBCS.

System action: The Web services assistant continues
processing.

User response: Consider whether you intend these
fields to contain pure DBCS data. If this is expected
then you can safely ignore this message. If you intend
the field to contain UTF-16 data then you cannot make
use of the Web services assistants to expose your
application as a Web service. You should instead
consider writing your own XML capable SOAP
'apphandler'.

Note: This message cannot be changed with the
message editing utility.

DFHPRxxxx messages

DFHPR0101I *date time applid* **The table entry for
partner *ptnrname* has been replaced.**

Explanation: This is an informational message
indicating that the partner resource manager has
replaced the existing table entry for the *ptnrname*
partner, with a new table entry.

System action: The system continues normally.

User response: None.

Destination: CSRL

Modules: DFHPRPT

XMEOUT Parameters: *date, time,applid, ptnrname*

DFHPR0102I *date time applid* **The table entry for
partner *ptnrname* has been added.**

Explanation: This is an informational message
indicating that the partner resource manager has added
a new table entry for the *ptnrname* partner.

System action: The system continues normally.

User response: None.

Destination: CSRL

Modules: DFHPRPT

XMEOUT Parameters: *date, time,applid, ptnrname*

DFHPR0103I *date time applid* **The table entry for
partner *ptnrname* has been deleted.**

Explanation: This is an informational message
indicating that the partner resource manager has
deleted the table entry for the *ptnrname* partner.

System action: The system continues normally.

User response: None.

Destination: CSRL

Modules: DFHPRPT

XMEOUT Parameters: *date, time,applid, ptnrname*

DFHPR0104I *applid* **Partner resource manager
initialization has started.**

Explanation: This is an informational message
indicating that partner resource manager initialization
has started.

System action: Initialization continues.

User response: None.

Destination: Console

Modules: DFHPRIN1

XMEOUT Parameter: *applid*

DFHPR0105I *applid* **Partner resource manager
initialization has ended.**

Explanation: This is an informational message
indicating that partner resource manager initialization
has completed successfully.

System action: Initialization continues.

User response: None. You can suppress this message
with SIT parameter, MSGLVL=0.

Destination: Console

Modules: DFHPRIN1

XMEOUT Parameter: *applid*

DFHPR0106I *applid* **Partner resource manager
initialization has failed.**

Explanation: The partner resource manager has failed
to initialize successfully.

System action: Message DFHSI1522 is issued following this message. CICS terminates or continues initialization depending upon the operator's response to message DFHSI1522. An exception trace entry is written at the time the failure is detected. Other CICS components called by partner resource manager initialization may also issue messages or write trace entries.

User response: Decide whether CICS can continue execution without the partner resource manager, and

respond accordingly to message DFHSI1522. You should also investigate why the partner resource manager failed to initialize, starting from the data contained in the exception trace entry.

Destination: Console

Modules: DFHPRIN1

XMEOUT Parameter: *applid*

DFHPSxxxx messages

DFHPS5366 *applid* **The system spooling interface initialization program DFHPSIP is not present.**

Explanation: CICS attempted to link to DFHPSIP but the attempt failed because DFHPSIP was not in the CICS program library.

System action: CICS terminates system spooler initialization.

User response: Place DFHPSIP in the CICS program library.

Destination: Console

Modules: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: CSMT

Modules: DFHSPDW

XMEOUT Parameters: *date, time, applid, tranid*

DFHPS5394 *date time applid* **A storage error has occurred in JES interface subtask, the JES interface has been disabled.**

Explanation: An MVS FREEMAIN macro, issued by the CICS JES interface subtask, has failed. To keep dynamic storage area (DSA) storage usable, CICS has terminated the JES interface subtask with MVS user abend 0170.

System action: CICS rejects subsequent SPOOL commands with the NOSPOOL response.

User response: CICS will continue running normally (apart from the rejection of SPOOL commands), and you can let it continue unless your spooling requirements are critical. To reinitiate the JES interface, shut down CICS and perform a warm restart (START=AUTO in the SIT or as an initialization override). Use the MVS dump to find the source of the problem. In the dump, register 6 addresses the instruction before the ABEND. Normally, register 2 contains the address and register 0 the length of the area to be released.

Destination: CSMT

Modules: DFHSPST

XMEOUT Parameters: *date, time, applid*

DFHPS5393 *date time applid* **Transaction *tranid* ended without closing data set on system spool.**

Explanation: The transaction *tranid* did not close a JES interface data set. Since only one transaction at a time can use the JES input interface, other transactions may be unnecessarily delayed.

System action: CICS executes a default CLOSE with the KEEP option for an INPUT data set or the DELETE option for an output data set.

User response: Change the program so that the transaction issues a SPOOLCLOSE before it terminates, and preferably immediately after the ENDFILE condition occurs on an input data set.

DFHPTxxxx messages

DFHPT0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code.

Alternatively:

- Unexpected data has been input,
- Storage has been overwritten, or

- There has been a program check within a user program.

The code *aaa* is, if applicable, a 3-digit hexadecimal MVS system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The 4-digit code *bbbb*, which follows *aaa*, is a user abend code produced either by CICS or by another product on the user's system.

If *X'offset'* contains the value *X'FFFF'*, then module *modname* was in control at the time of the abend, but the program status word (PSW) was not addressing this module.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer.

Look up the MVS code *aaa*, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

If the *modname* insert contains the value *????*, then CICS was unable to determine which module has abnormally terminated. In this case, examine the system dump to determine which area of code has caused the program check.

The user should examine other messages to determine what the module which issued this message was doing at the time the abend occurred. From these messages they can deduce which product has produced the abend code *bbbb*. If *bbbb* is identified as a CICS code, it may be either alphameric or numeric.

- If the CICS code is alphameric (for example AKEA) then it is a CICS transaction abend code.
- If the CICS code is numeric (for example 1310), it refers to a CICS message (DFHTS1310 in our example).

If the user abend code is from another product (for example, IMS), refer to the appropriate messages and codes manual to determine the cause of the abend.

The entries in the appropriate manuals will give the user guidance regarding the nature of the error, and may also give some guidance concerning the appropriate user response.

Note: The program check may have occurred in a user program. If this is the case, the program check is usually followed by an ASRA or an ASRB transaction abend and a transaction dump.

If you want to suppress system dumps that precede ASRA and ASRB abends, you must specify this on an entry in the dump table, using either CEMT or an EXEC CICS command. Further guidance on suppressing system dumps can be found in the *CICS System Definition Guide*.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHPTDM, DFHPTTW

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHPT0002 *applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System action: An exception entry is made in the trace table (*X'code'* in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system administrator. This failure indicates a serious error in CICS. If you have not requested termination in the dump table, you may want to terminate CICS. For further information about CICS exception trace entries, see the *CICS Problem Determination Guide*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

DFHREGxx EJBROLE generator utility messages

The RACF EJBROLE generator utility (DFHREG) is a Java application program that extracts security role information from deployment descriptors, and generates a REXX program which can be used to define security roles to RACF. The utility may produce the following messages:

<p> DFHREG01 E Invalid option: <i>argument</i></p> <p> Explanation: One or more invalid options were specified for the RACF EJBROLE generator utility.</p> <p> System action: The utility terminates and does not generate an output file.</p> <p> User response: Use the correct options. Valid options are -secprfx, -out, -f, -force, -v, -verbose, -? and -help.</p> <hr/> <p> DFHREG02 E Unable to open file <i>fname</i></p> <p> Explanation: The input file does not exist.</p> <p> System action: The utility terminates and does not generate an output file.</p> <p> User response: Check that you have entered the file name correctly.</p> <hr/> <p> DFHREG03 E Deployment descriptor in file <i>fname</i> is missing or invalid</p> <p> Explanation: The deployment descriptor in the input file is either missing, or is invalid.</p> <p> System action: The utility terminates and does not generate an output file.</p> <p> User response: Check that the application assembler has provided a correctly constructed deployment descriptor in the input file.</p> <hr/> <p> DFHREG04 E An unexpected error occurred while processing file <i>fname</i></p> <p> Explanation: A class used by the RACF EJBROLE generator has thrown an unexpected Java exception.</p> <p> System action: The utility terminates and produces a</p>	<p> stack trace. It does not generate an output file.</p> <p> User response: Use the stack trace to determine possible causes of the problem.</p> <hr/> <p> DFHREG05 E EJBROLE prefix exceeds 16 characters</p> <p> Explanation: The prefix specified in the -secprfx option is longer than 16 characters.</p> <p> System action: The utility terminates and does not generate an output file.</p> <p> User response: Check that you have specified the correct EJBROLE prefix. The prefix must not exceed 16 characters in length, and must match the EJBROLEPRFX system initialization parameter for your CICS system.</p> <hr/> <p> DFHREG06 E Output file <i>fname</i> already exists</p> <p> Explanation: You have specified an output file that already exists.</p> <p> System action: The utility terminates and does not generate an output file.</p> <p> User response: If you wish to overwrite an existing file, use the -force option. If not, specify a different name for the output file.</p> <hr/> <p> DFHREG07 E Unable to write to file <i>fname</i></p> <p> Explanation: A class used by the RACF EJBROLE generator has thrown a Java exception when attempting to write to its output file</p> <p> System action: The utility terminates and produces a stack trace. It does not generate an output file.</p> <p> User response: Use the stack trace to determine possible causes of the problem.</p>
---	---

DFHRMxxxx messages

DFHRM0001 *applid* **An abend (code *code*) has occurred at offset *X'offset'* in module *module*.**

Explanation: An unexpected program check or abend occurred with abend code *aaa/bbbb*.

The program status word (PSW) at the time of the program check or abend indicated that CICS was executing at offset *X'offset'* in module *modname*. This may have been caused by corruption of CICS code or control blocks.

System action: A system dump is taken and the system attempts to continue operation unless otherwise directed by entries in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the cause of the program check or abend using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHRMDM, DFHRMCD, DFHRMCD1

XMEOUT Parameters: *applid, code, X'offset', module*

DFHRM0002 *applid* **A severe error (code *X'code'*) has occurred in module *module*.**

Explanation: The recovery manager domain has received an unexpected error response from some other part of CICS. The operation requested by recovery manager is described by code *X'code'*.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: A system dump is taken and the system attempts to continue operation unless specifically inhibited by dump table entries.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the cause of the problem as follows:

1. Determine if the problem can be explained by any previous messages issued from some other CICS component.
2. Examine the symptom string.
3. Examine the dump.

If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHRMDM, DFHRMCD1, DFHRMCD, DFHRMCI2, DFHRMCI3

XMEOUT Parameters: *applid, X'code', module*

DFHRM0104 *date time applid* **Intersystem communication failure. Resource updates are being committed. Local resources may be out of sync with those on the remote system. Failure date *mm/dd/yy* failure time *hh:mm:ss* remote system *name* transaction *tranid* task number *trannum* terminal *termid* user *userid* network *UOW netuowid* local *UOW X'localuowid'*.**

Explanation: Communication with the remote system has been interrupted. The remote system contains the coordinator of this unit of work and the notification of the outcome of the distributed unit of work has not been received.

The unit of work is unilaterally committing the local resource updates rather than waiting for the return of the coordinator system. The unit of work may not shunt for one of the following reasons:

- The transaction definition specifies WAIT(NO).
- The unit of work includes an MRO session to a back-level CICS system which does not support the WAIT(YES) option, and the role of the session in the unit of work is such that it cannot await the return of the coordinator system.
- The unit of work includes an LU6.1 session, and the role of the session in the unit of work is such that it cannot await the return of the coordinator system.
- The unit of work involves a task related user exit which is not enabled with the INDOUBTWAIT option.
- The unit of work has updated a recoverable transient data destination, which is defined with WAIT(NO).
- The unit of work involves the installation of CICS resource definitions from the CSD (CICS system definition) file.

Even if the unit of work was shunted, one of the following reasons will cause it to take unilateral action:

- The WAITTIME specified in the transaction definition has expired.
- Resynchronization has been preempted by either:
 - Setting the connection with the remote system NOTPENDING.
 - Setting the connection with the remote system NORECOVDATA.
 - The XLNACTION attribute of the connection definition of the remote system specifying FORCE.
 - Forcing the unit of work.

The local resource updates are being committed since either

- The unit of work has been explicitly forced to commit.
- The ACTION attribute of the definition of the locally executing transaction specified COMMIT.

One system may have committed its resource updates and the other backed out, leaving updates out of synchronization. This is checked for when communication is re-established, and one of the following messages is issued:

DFHRM0110
 DFHRM0111
 DFHRM0112
 DFHRM0113
 DFHRM0114
 DFHRM0115
 DFHRM0116
 DFHRM0117
 DFHRM0118
 DFHRM0119
 DFHRM0120
 DFHRM0121
 DFHRM0122
 DFHRM0123

The original failure information provides correlation between this message and its follow-up.

System action: The system commits the local resource updates and releases the locks associated with those updates.

User response: Take user-defined action, if any, to protect data integrity until the remote and the local data can be synchronized.

Destination: CSMT

Modules: DFHRMLSO

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

DFHRM0105 *date time applid Intersystem communication failure. Resource updates are being backed out. Local resources may be out of sync with those on the remote system. Failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been interrupted. The remote system contains the coordinator of this unit of work and the notification of the outcome of the distributed unit of work has not been received.

The unit of work is unilaterally backing out the local resource updates rather than waiting for the return of the coordinator system. The unit of work may not shunt for one of the following reasons:

- The transaction definition specifies WAIT(NO).
- The unit of work includes an MRO session to a back-level CICS system which does not support the WAIT(YES) option, and the role of the session in the unit of work is such that it cannot await the return of the coordinator system.
- The unit of work includes an LU6.1 session, and the role of the session in the unit of work is such that it cannot await the return of the coordinator system.
- The unit of work involves a task related user exit which is not enabled with the INDOUBTWAIT option.
- The unit of work has updated a recoverable transient data destination, which is defined with WAIT(NO).
- The unit of work involves the installation of CICS resource definitions from the CSD (CICS system definition) file.

Even if the unit of work was shunted, one of the following reasons will cause it to take unilateral action:

- The WAITTIME specified in the transaction definition has expired.
- Resynchronization has been preempted by either:
 - Setting the connection with the remote system NOTPENDING.
 - Setting the connection with the remote system NORECOVDATA.
 - The XLNACTION attribute of the connection definition of the remote system specifying FORCE.
 - Forcing the unit of work.

The local resource updates are being backed out since either

- The unit of work has been explicitly forced to backout.
- The ACTION attribute of the definition of the locally executing transaction specified BACKOUT.

One system might have committed its resource updates and the other backed out, leaving updates out of synchronization. This is checked for when communication is re-established, and one of the following messages is issued:

DFHRM0110
 DFHRM0111
 DFHRM0112
 DFHRM0113
 DFHRM0114
 DFHRM0115
 DFHRM0116
 DFHRM0117
 DFHRM0118

DFHRM0119
DFHRM0120
DFHRM0121
DFHRM0122
DFHRM0123

The original failure information provides correlation between this message and its follow-up.

System action: The system backs out the local resource updates and releases the locks associated with those updates.

User response: Take user-defined action, if any, to protect data integrity until the remote and the local data can be synchronized.

Destination: CSMT

Modules: DFHRMLSO

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0106 *date time applid Intersystem communication failure. Resource updates will not be committed or backed out until session recovery. Failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been interrupted. The remote system that contains the coordinator of this unit of work failed and the notification of the outcome of the distributed unit of work has not been received. The definition if the locally executing transaction specifies WAIT(YES) so the local resource updates are being held locked. When communication with the remote system is re-established, the resource updates will be committed or backed out, according to the actions of the other system, and one of the following messages is issued:

DFHRM0108
DFHRM0109
DFHRM0112
DFHRM0113
DFHRM0115
DFHRM0116
DFHRM0118
DFHRM0119
DFHRM0121
DFHRM0122

If the time specified by the WAITTIME in the transaction definition of the locally executing transaction expires before communication is

re-established then the resource updates are committed or backed out in accordance with the ACTION attribute and one of the following messages is issued:

DFHRM0104
DFHRM0105

If a decision to preempt resynchronization activity is taken at the local system by either:

- Setting the connection with the remote system NOTPENDING.
- Setting the connection with the remote system NORECOVDATA.
- The XLNACTION attribute of the connection definition of the remote system specifying FORCE.
- Forcing the unit of work.

then again the resource updates are committed or backed out accordingly and one of the following messages is issued:

DFHRM0125
DFHRM0126

System action: Processing continues. Locks associated with the resource updates are preserved.

User response: Re-establish communication with the remote system as soon as possible.

Destination: CSMT

Modules: DFHRMLSS

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0107 *date time applid Intersystem communication failure. Resource updates may be out of sync. Failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with a remote system has been interrupted. This may be due to the failure of a session to a remote system or the failure of a CFDT server system. The resource updates in the local system are committing or backing out. The notification of the outcome of the distributed unit of work might not reach the remote system or server. One system might commit its resource updates while the other backs them out leaving updates out of synchronization. This is checked for at session or server recovery, and one of the following messages is issued:

DFHRM0110
DFHRM0111
DFHRM0114
DFHRM0117
DFHRM0120

DFHRM0123

DFHRM0135

If a decision to preempt resynchronization activity is taken at the local system by either:

- Setting the connection with the remote system NOTPENDING.
- Setting the connection with the remote system NORECOVDATA.
- The XLNACTION attribute of the connection definition of the remote system specifying FORCE.
- Forcing the unit of work.

then again the resource updates are committed or backed out accordingly and DFHRM0127 is issued.

System action: The system commits or backs out the local resource updates and releases the locks associated with those updates. Information is retained to enable resynchronization with the remote system.

User response: Re-establish communication with the remote system as soon as possible.

Destination: CSMT

Modules: DFHRMLSO

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0108 *date time applid Intersystem communication recovery. Suspended resource updates now being committed. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: This message is issued during intersystem communication recovery as a follow up to message DFHRM0106. Communication with the remote system that is the coordinator of this unit of work has been re-established and resynchronization is taking place. It has now been established that the remote system completed the synchronization point. The local resource updates are being committed accordingly.

System action: The system commits the local resource updates and releases the locks associated with those updates.

User response: None.

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0109 *date time applid Intersystem communication recovery. Suspended resource updates now being backed out. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: This is an informative message issued during intersystem communication recovery as a follow up to message DFHRM0106. Communication with the remote system that is the coordinator of this unit of work has been re-established and resynchronization is taking place. It has now been established that the remote system did not complete the synchronization point. The local resource updates are being backed out accordingly.

System action: The system backs out the local resource updates and releases the locks associated with those updates.

User response: If required, restart the interrupted transaction.

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0110 *date time applid Intersystem communication recovery. Unit of work found to be synchronized. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Resynchronization with the remote system which is a subordinate in the unit of work has occurred following the resumption of communication, or the unshunting of the unit of work on the local system. It was found either the local or remote system (or both) had already taken a decision for their parts of the distributed unit of work. It has now been established that the decisions in the local and remote systems are synchronized.

System action: Processing continues.

User response: None

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0111 *date time applid Intersystem communication recovery. Distributed unit of work found to be not synchronized. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction trandid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Resynchronization with the remote system which is a subordinate in the unit of work has occurred following the resumption of communication, or the unshunting of the unit of work on the local system. It was found either the local or remote system (or both) had already taken a decision for their part of the distributed unit of work. It has now been established that the decisions of the local and remote systems are out of synchronization.

System action: Processing continues.

User response: Take user-defined action to resynchronize the resources in the local and remote systems if necessary.

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, trandid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0112 *date time applid Intersystem communication recovery. The remote system has reinitialized. The local unit of work is committed. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction trandid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been resumed. Resynchronization with the remote system was attempted. It was found that the remote system has reinitialized and now has no knowledge of the unit of work. The resource updates of the distributed unit of work in the remote system might have committed or backed out.

If the session is an MRO session to a pre-CICS Transaction Server system, this message may be issued even if the remote system was not reinitialized. This can only occur if the session failed during its first unit of work since connection.

The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. This will never be received.

The local unit of work is committed in accordance with the ACTION attribute in the transaction definition.

System action: The system commits the unit of work and releases the locks associated with any resource updates.

User response: Take user-defined action to resynchronize the resources in the local and remote systems if necessary.

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, trandid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0113 *date time applid Intersystem communication recovery. The remote system has reinitialized. The local unit of work is backed out. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been resumed. Resynchronization with the remote system was attempted. The local system detected a protocol violation during resynchronization. The resource updates in the local system had previously committed or backed out.

System action: Processing continues.

User response: Take user-defined action to resynchronize the resources in the local and remote systems.

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0124 *date time applid Intersystem communication recovery. Resource updates are out of sync. network UOW netuowid remote system name.*

Explanation: Intersystem communication recovery is in progress. The remote system has attempted to resynchronize a unit of work but the local system no longer has any knowledge of that unit of work. This is because the last agent or the presumed abort protocol is being used and the local system backed out the resource updates associated with the unit of work. The remote system has sent notification that the resource updates in the remote system did not back out.

System action: Processing continues.

User response: Take user-defined action to resynchronize the resources in the local and remote systems.

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time,applid, netuowid, name*

DFHRM0125 *date time applid Clear pending issued. The connection to the remote system has been set NOTPENDING. Resource updates will be committed. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: The connection with the remote system has been set NOTPENDING or NORECOVDATA, or the connection is defined with XLNACTION(FORCE). The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. Setting the connection with the remote system NOTPENDING or NORECOVDATA preempts the notification of the outcome from the remote system. The definition of the locally executing transaction is used to decide whether to commit or back out the local resource updates. The local resource updates are committed in accordance with the ACTION attribute in the transaction definition.

System action: The system commits the local resource

updates and releases the locks associated with those updates.

User response: Take user-defined action to resynchronize the resources in the local and remote systems.

Destination: CSMT

Modules: DFHRMLN,DFHRMLK4,DFHRMLSO,DFHRMLSS

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0126 *date time applid Clear pending issued. The connection to the remote system has been set NOTPENDING. Resource updates will be backed out. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: The connection with the remote system has been set NOTPENDING or NORECOVDATA, or the connection is defined with XLNACTION(FORCE). The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. Setting the connection with the remote system NOTPENDING or NORECOVDATA preempts the notification of the outcome from the remote system. The definition of the locally executing transaction is used to decide whether to commit or back out the local resource updates. The local resource updates are backed out in accordance with the ACTION attribute in the transaction definition.

System action: The system backs out the local resource updates and releases the locks associated with those updates.

User response: Take user-defined action to resynchronize the resources in the local and remote systems.

Destination: CSMT

Modules: DFHRMLN,DFHRMLK4,DFHRMLSO,DFHRMLSS

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0127 *date time applid Clear pending issued. The connection to the remote system has been set NOTPENDING. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid*

local UOW X'localuowid'.

Explanation: Communication between the systems had previously failed during a syncpoint. Resynchronization between the systems has been preempted. The connection with the remote system has been:

- Set NOTPENDING,
- Set NORECOVDATA,
- Reestablished and is defined with XLNACTION(FORCE).

If the unit of work in the local system was in-doubt about the outcome of the distributed unit of work, local resource updates are committed or backed out in accordance with the ACTION attribute in the transaction definition.

Since no resynchronization with the remote system is attempted, the resource updates in the local and remote systems might be out of synchronization.

System action: Processing continues.

User response: Take user-defined action to resynchronize the resources in the local and remote systems.

Destination: CSMT

Modules:
DFHRMLN,DFHRMLK4,DFHRMLSO,DFHRMLSS

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0128 *date time applid Intersystem communication failure. Resource updates are being committed. Local resources may be out of sync with those on the remote system. Failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has failed. The resource updates in the local system are committing. The notification of the outcome of the distributed unit of work might not reach the remote system. One system might commit its resource updates while the other backs them out leaving updates out of synchronization. There will be no resolution message when the local and remote systems resynchronize, because the remote system does not provide the local system with resynchronization information.

System action: The system commits the local resource updates and releases the locks associated with those updates. Information is retained to enable resynchronization with the remote system.

User response: Reestablish communication with the remote system as soon as possible. The local system is the coordinator, and will provide indoubt resolution information for the remote system when communication is reestablished. If the remote system has taken a heuristic decision regarding the unit of work, then it should have provided diagnostic information to indicate this.

Destination: CSMT

Modules: DFHRMLSO

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0129 *date time applid Intersystem communication failure. Resource updates are being backed out. Local resources may be out of sync with those on the remote system. Failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has failed. The resource updates in the local system are backing out. The notification of the outcome of the distributed unit of work might not reach the remote system. One system might commit its resource updates while the other backs them out leaving updates out of synchronization. There will be no resolution message when the local and remote systems resynchronize, because the remote system does not provide the local system with resynchronization information.

System action: The system backs out the local resource updates and releases the locks associated with those updates. Information is retained to enable resynchronization with the remote system.

User response: Reestablish communication with the remote system as soon as possible. The local system is the coordinator, and will provide indoubt resolution information for the remote system when communication is reestablished. If the remote system has taken a heuristic decision regarding the unit of work, then it should have provided diagnostic information to indicate this.

Destination: CSMT

Modules: DFHRMLSO

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0130 *applid* **Recovery manager has successfully quiesced.**

Explanation: The recovery manager has quiesced.

The warm keypoint has been taken.

System action: Shutdown continues.

User response: None.

Destination: Console

Modules: DFHRMDM

XMEOUT Parameter: *applid*

DFHRM0131 *applid* **Resynchronization required with protocol resources.**

Explanation: This system contained unquiesced state when shutdown was performed. The state may consist of units of work or lognames (lognames can exist for communications protocols IRC and APPC only). This system may need to perform resynchronization with other systems to resolve the outcome of any distributed units of work. This can be done as part of the work of a subsequent CICS system.

The systems with which resynchronization is necessary are reported in messages DFHRM0132 or DFHRM0133.

A subsequent CICS start which reinitializes the catalog and system log data would discard the units of work and/or lognames and cause a possible loss of data integrity.

System action: Shutdown continues.

User response: To maintain data integrity, perform an AUTO start and enable resynchronization with the appropriate systems.

Destination: Console

Modules: DFHRMNS2

XMEOUT Parameters: *applid, protocol*

DFHRM0132 *date time applid* **Resynchronization is required with protocol system system.**

Explanation: A unit of work active in the system at shutdown requires resynchronization with the named system. The unit of work was part of a distributed unit of work and resynchronization is necessary to resolve the outcome.

Resynchronization occurs after a subsequent start unless catalog and system log information is reinitialized.

System action: Shutdown continues.

User response: If necessary, take user-defined action to protect data integrity until the remote and the local data can be synchronized.

Destination: CSMT

Modules: DFHRMLKQ, DFHRMNS2

XMEOUT Parameters: *date, time,applid, protocol, system*

DFHRM0133 *date time applid* **Resynchronization may be required with protocol system system.**

Explanation: This system exchanged lognames with the remote system and so may require resynchronization with that system.

Resynchronization occurs after a subsequent CICS start unless catalog or system log information is reinitialized.

System action: Shutdown continues.

User response: If necessary, take user-defined action to protect data integrity until resynchronization takes place.

Destination: CSMT

Modules: DFHRMNS2

XMEOUT Parameters: *date, time,applid, protocol, system*

DFHRM0134 *applid* **Recovery manager domain failed reading the global catalog, or did not find its control record.**

Explanation: The recovery manager domain has failed while reading the global catalog. Either it was trying to establish the status of the system at the termination of the last execution of CICS and the control record was missing or invalid, or else it could not read the catalog successfully.

System action: CICS terminates abnormally with a dump.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the cause of the error using the dump or other diagnostic messages which have been issued (for example, from VSAM or MVS).

If the problem has been caused by an I/O error, see the description of the CICS message already issued from the catalog for guidance.

If the problem has been caused by an invalid data length, see the exception trace entry in the trace table.

If the problem has been caused by a missing control record, the catalog is not suitable for a recoverable start and you should perform an initial start.

Destination: Console

Modules: DFHRMDM

XMEOUT Parameter: *applid*

DFHRM0135 *date time applid Intersystem communication recovery. Resource updates found to be synchronized. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Resynchronization with the remote system which is a subordinate in the unit of work has occurred following the resumption of communication, or the unshunting of the unit of work on the local system. Either the remote system had already taken a decision for its local resource updates in the distributed unit of work, or the remote system was waiting for the decision from this system. In either case, it has now been established that the resource updates in the local and remote systems are synchronized.

System action: Processing continues.

User response: None

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

DFHRM0136 *applid The applid has changed from old_applid to new_applid. Recovery cannot continue.*

Explanation: Recovery is requested, but the applid recovered by the recovery manager domain from the CICS catalog is different from that specified for the system. This implies that the identity of the system on the network has changed. The system must maintain the same identity on the network for resynchronization to be performed with other systems.

System action: The system is terminated.

User response: If recovery and resynchronization is required, correct the applid in the SIT and restart the system. Do not reinitialize catalog or system log information unless you wish to change the identity of the CICS system.

Destination: Console

Modules: DFHRMDM

XMEOUT Parameters: *applid, old_applid, new_applid*

| **DFHRM0137** *applid Recovery of local logname failed.*
| **Recovery cannot continue.**

| **Explanation:** Recovery is requested, but the local logname could not be recovered by the Recovery Manager domain from the CICS catalog.

| **System action:** The system is terminated.

| **User response:** Investigate the possible causes of the failure to read the required data from the CICS catalog. Was the correct Catalog dataset being used? Could the Catalog dataset have been corrupted?

| **Destination:** Console

| **Modules:** DFHRMDM

| **XMEOUT Parameter:** *applid*

DFHRM0139 *date time applid UOWLINK deleted by user action. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: This message is issued to confirm the deletion of a UOW-link (UOWLINK) by a CEMT or EXEC CICS SET UOWLINK ACTION(DELETE) command. This command is used to delete links that were created by connections that have since been discarded.

System action: The system continues normally.

User response: None.

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

DFHRM0140 *applid Recovery manager autostart override found with value: 'autofield'.*

Explanation: Recovery manager has located an autostart override record in the global catalog data set which has one of the values AUTOINIT, AUTOCOLD, or AUTOASIS.

System action: The system continues. If this is an AUTO start, the autostart override value in the message is used to determine the type of start to be performed.

User response: No action is necessary.

Destination: Console

Modules: DFHRMDM

XMEOUT Parameters: *applid, autofield*

DFHRM0141 *applid Recovery manager autostart override record is not present. Normal processing continues.*

Explanation: There is no autostart override record in the global catalog data set. If you have not used the utility DFHRMUTL this message is normal for an AUTO start and does not represent a problem.

System action: The default auto start processing continues. This is equivalent to an AUTOASIS value in an autostart override record.

User response: No action is necessary.

Destination: Console

Modules: DFHRMDM

XMEOUT Parameter: *applid*

DFHRM0142 *applid* **Recovery manager autostart override record found to be: 'autofield', and this is not a valid value. AUTOASIS is assumed instead.**

Explanation: Recovery manager has located an autostart override record in the global catalog data set which does not have one of the values: AUTOINIT, AUTOCOLD, or AUTOASIS.

System action: AUTOASIS is assumed, a dump is taken, and the system continues. The override record will be removed at startup as usual.

User response: No action is necessary. To correctly set the autostart override record the utility DFHRMUTL should be used prior to starting CICS.

Destination: Console

Modules: DFHRMDM

XMEOUT Parameters: *applid, autofield*

DFHRM0143 *applid* **Recovery manager autostart override record is invalid. 'AUTOASIS' is assumed.**

Explanation: Recovery manager has found an autostart override record in the global catalog data set, but it has an invalid length or is in the wrong format.

System action: A dump is taken and the system continues. The autostart override value is assumed to be AUTOASIS. The autostart override record is removed from the catalog at startup as usual.

User response: Investigate why the global catalog data set should have been incorrectly modified. The DFHRMUTL utility is used to correctly set the autostart override record prior to starting CICS.

Destination: Console

Modules: DFHRMDM

XMEOUT Parameter: *applid*

DFHRM0144 *applid* **Recovery manager catalog record indicates that no recovery is possible. An initial start is required.**

Explanation: Recovery manager has read its catalog record from the global catalog data set and this indicates that no recovery is possible. The most likely

reason is that CICS detected a corrupted log before the last CICS shutdown. Startup cannot continue with these start parameters.

System action: CICS terminates abnormally with a dump.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Determine whether the CICS startup job correctly identifies the global catalog data set. If it does, the system log may be unusable and you must perform an initial start of CICS.

If the global catalog data set was incorrectly identified, retry the job with the correct global catalog data set.

Destination: Console

Modules: DFHRMDM

XMEOUT Parameter: *applid*

DFHRM0145 *applid* **Recovery manager does not recognize the form of start requested by SIT parameters and overrides.**

Explanation: Recovery manager cannot determine what sort of CICS start to perform. The parameters on the SIT and any settings read from the catalog data set are inconsistent with a valid start type.

System action: CICS terminates abnormally with a dump.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This failure is caused by an internal CICS inconsistency. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHRMDM

XMEOUT Parameter: *applid*

DFHRM0146D *applid* **Global catalog data set recovery data not found. System log data will be lost. Reply 'GO' or 'CANCEL'.**

Explanation: A cold start has been requested, and no recovery control record information was found in the global catalog data set. Either this is the first execution of CICS with this global catalog data set, the wrong global catalog data set is being used, or the global catalog data set has been initialized without information necessary for recovery.

System action: The system waits for a response.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If this is the first time CICS has been run with this global catalog data set, or if it is intended to delete all recovery information from the system log, reply 'GO'. This forces an initial start with no system log information retained from previous CICS executions. In particular, information used to resynchronize with remote CICS systems is cleared as well as all local recovery information.

If this is not the first time, or if you wish to retain system log information and try with another global catalog data set, reply 'CANCEL' to terminate this CICS execution. Nothing is discarded in this case. Check the global catalog data set and try again.

Destination: Console

Modules: DFHRMDM

XMEOUT Parameter: *applid*

DFHRM0147 *applid* Reply CANCEL was received.

Explanation: A reply of 'CANCEL' was received in response to message DFHRM0146.

System action: CICS terminates.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: None.

Destination: Console

Modules: DFHRMDM

XMEOUT Parameter: *applid*

DFHRM0148 *date time applid* Intersystem communication recovery. Resource updates are in sync. network UOW id *netuowid* remote system *name*.

Explanation: Intersystem communication recovery is in progress. The remote system has attempted to resynchronize a unit of work and the local system no longer has any knowledge of that unit of work. This is because the local system was the coordinator, and the last agent or presumed abort protocols were being used. Any local resource updates associated with the unit of work were backed out. The remote system has sent notification that the resource updates in the remote system are still indoubt (and will be backed out following resynchronization) or have already been backed out.

System action: Processing continues.

User response: None.

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time, applid, netuowid, name*

DFHRM0149I *applid* Recovery manager autostart override record will be deleted.

Explanation: Recovery manager has found an autostart override record in the global catalog data set. It is deleted after the correct startup type is determined unless this is a diagnostic run. If this is a diagnostic run the recovery manager global catalog records are not altered.

System action: Unless this is a diagnostic run the record is removed from the global catalog data set and will not influence subsequent starts.

User response: None.

Destination: Console

Modules: DFHRMDM

XMEOUT Parameter: *applid*

DFHRM0150 *applid* Diagnostic run due to AUTODIAG override is finished. CICS will now terminate.

Explanation: Recovery manager has performed a diagnostic run and now terminates with a dump. This is a result of an AUTODIAG override in the auto override record.

System action: The system terminates. A dump is taken.

User response: No further action is necessary.

Destination: Console

Modules: DFHRMDM

XMEOUT Parameter: *applid*

DFHRM0151 *applid* Diagnostic run is initiated. A simulated AUTO start is performed for diagnostic purposes only.

Explanation: Recovery manager has detected a diagnostic run override (AUTODIAG) on the global catalog. This run of CICS will not perform any application processing and is for diagnostic purposes only.

System action: The system continues. A dump is taken later prior to terminating.

User response: No further action is necessary at this time. See the *CICS Problem Determination Guide* for details of the reasons you might want to perform a diagnostic run, and for other diagnostics you may wish to preserve at the same time.

Destination: Console

Modules: DFHRMDM

XMEOUT Parameter: *applid*

| **DFHRM0152** *applid* **Recovery manager autostart**
| **override record is set to AUTODIAG.**

| **Explanation:** The recovery manager auto override
| record on the global catalog has been set to
| AUTODIAG to allow a diagnostic run before the next
| initial start.

| **System action:** Processing continues.

| **User response:** No action is necessary. See the *CICS*
| *Problem Determination Guide* for information about how
| to perform a diagnostic run.

| **Destination:** Console

| **Modules:** DFHRMDM

| **XMEOUT Parameter:** *applid*

| **DFHRM0154** *applid* **Uncommitted local resource**
| **updates found on the System Log.**
| **COLD start is NOT preserving data**
| **integrity.**

| **Explanation:** A cold start has been requested, but
| units of work containing uncommitted local resource
| updates have been found on the system log. The cold
| start will ignore this information and so data integrity
| will not be preserved for the affected resources.

| **System action:** The cold start continues.

| Message DFHME0116 is normally produced containing
| the symptom string for this problem.

| **Destination:** Console

| **Modules:** DFHRMU1E

| **XMEOUT Parameter:** *applid*

| **DFHRM0156** *applid* **This COLD start will NOT cause**
| **any damage to local resources.**

| **Explanation:** The recovery manager established that
| there were no uncommitted resource updates recorded
| on the system log from a previous execution of CICS.
| Thus there is no local recovery necessary.

| **System action:** System initialization continues.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHRMU1E

| **XMEOUT Parameter:** *applid*

DFHRM0200 *applid indoubt_uows* **indoubt UOWs were**
reconstructed.

Explanation: This message displays the number of
indoubt units of work (UOWs), *indoubt_uows*, which
were reconstructed on a warm or emergency restart.
It is issued only if there is at least one UOW which is

indoubt. It is issued before any of the reconstructed
UOWs are unshunted and processed in parallel.

System action: The system has performed the
backwards scan of the system log and is about to start
unshunting UOWs which need further processing.

The system commits or backs out UOWs which were
indoubt and for which either of the following
conditions apply:

- The transaction is defined with WAIT(NO)
- The transaction is defined with WAIT(YES) and the
WAITTIME has expired.

Note: A WAITTIME of zero implies an indefinite
wait.

Where communications with the coordinator systems is
possible, UOWs are unshunted and updates are
committed or backed out on the local system. These
updates are synchronized with the updates made on
the coordinator system.

Where communications with the coordinator systems is
not immediately possible, UOWs are preserved until
resynchronization with the coordinator system is
possible or until the WAITTIME expires. The
suspension of these indoubt UOWs causes updated
recoverable resources to remain locked against
subsequent updates.

User response: None.

If further investigation is required, use the CEMT
INQUIRE UOW INDOUBT and CEMT INQUIRE
UOWENQ RETAINED commands once CICS has
initialized. These commands detail the indoubt UOWs
and the associated retained enqueues.

Destination: Console

Modules: DFHRMU1E.

XMEOUT Parameters: *applid, indoubt_uows*

DFHRM0201 *date time applid bfail_uows* **backout-failed**
and cfail_uows commit-failed UOWs
were reconstructed.

Explanation: This message displays the number of
backout-failed units of work (UOWs), *bfail_uows*, and
the number of commit-failed UOWs, *cfail_uows*, which
were reconstructed on a warm or emergency restart.

This message is issued only if there is at least one such
UOW. It is issued before any of the reconstructed
UOWs are unshunted and processed in parallel.

Note: This message is issued before the commit-failed
and backout-failed UOWs are processed. Many
of these UOWs are likely to be resolved during
CICS initialization. Any true commit-failed or
backout-failed UOWs are highlighted by further
messages issued during CICS initialization. Also,
once CICS is fully initialized, the master terminal

transaction (CEMT) can be used to determine whether there are any outstanding commit-failed or backout-failed UOWs.

System action: The system has performed the backwards scan of the system log and is about to start unshunting UOWs which need further processing.

UOWs which have failed to back out locally or commit locally are retried.

User response: None.

Destination: CSMT

Modules: DFHRMU1E

XMEOUT Parameters: *date, time,applid, bfail_uows, cfail_uows*

DFHRM0202 *date time applid inflight_uows* **inflight UOWs were reconstructed.**

Explanation: This message displays the number of inflight units of work (UOWs), *inflight_uows*, which were reconstructed on an emergency restart.

It is issued only if there is at least one UOW which is inflight. It is issued before any of the reconstructed UOWs are unshunted and processed in parallel.

System action: The system has performed the backwards scan of the system log and is about to start unshunting UOWs which need further processing.

User response: None.

Destination: CSMT

Modules: DFHRMU1E.

XMEOUT Parameters: *date, time,applid, inflight_uows*

DFHRM0203 *applid* **There are *indoubt_uows* indoubt, *cfail_uows* commit-failed and *bfail_uows* backout-failed UOWs.**

Explanation: This message displays the numbers of indoubt units of work (UOWs) *indoubt_uows*, backout-failed UOWs *bfail_uows*, and commit-failed UOWs *cfail_uows* in the CICS system at the time of the normal shutdown.

It is issued only if there is at least one such UOW. If there are none, message DFHRM0204 is issued instead.

Messages DFHRM0203 and DFHRM0204 can be used to determine whether or not it is safe to cold start CICS following a normal shutdown without losing resynchronization information. See DFHRM0204 for more information.

System action: Shutdown processing continues.

User response: None.

Destination: Console

Modules: DFHRMU1K

XMEOUT Parameters: *applid, indoubt_uows, cfail_uows, bfail_uows*

DFHRM0204 *applid* **There are no indoubt, commit-failed or backout-failed UOWs.**

Explanation: There are no indoubt, commit-failed, or backout-failed units of work (UOWs) in the CICS system at the time of the normal shutdown.

If there are any such units of work, message DFHRM0203 is issued.

This message indicates that it safe to do a cold start of CICS without losing any resynchronization information.

System action: Shutdown processing continues.

User response: None.

Destination: Console

Modules: DFHRMU1K

XMEOUT Parameter: *applid*

DFHRM0205 *date time applid* **An activity keypoint has been successfully taken.**

Explanation: CICS has successfully taken an activity keypoint. This message is also issued for the shutdown keypoint.

System action: Normal processing continues..

User response: None.

Destination: CSMT

Modules: DFHRMR1K

XMEOUT Parameters: *date, time,applid*

DFHRM0208 *date time applid* **Intersystem communication recovery. A unit of work recovered only for remote resynchronization is now being committed. Local resources are not synchronized with the unit of work. Original failure date *mm/dd/yy* failure time *hh:mm:ss* remote system name *transaction tranid* task number *trannum* terminal *termid* user *userid* network UOW *netuowid* local UOW *X'localuowid'*.**

Explanation: This message is issued during intersystem communication recovery as a follow up to message DFHRM0106. Communication with the remote system that is the coordinator of this unit of work has been re-established and resynchronization is taking place. It has now been established that the remote system completed the synchronization point. Since this unit of work was recovered as part of a cold start, no local resources were locked pending this resynchronization and local resources are not synchronized with this decision.

System action: The system allows the unit of work to commit for the purposes of resynchronization with remote systems. No local resources are changed.

User response: None.

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0209 *date time applid Intersystem communication recovery. A unit of work recovered only for remote resynchronization is now being backed out. Local resources are not synchronized with the unit of work. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: This message is issued during intersystem communication recovery as a follow up to message DFHRM0106. Communication with the remote system that is the coordinator of this unit of work has been re-established and resynchronization is taking place. It has now been established that the remote system did not complete the synchronization point. Since this unit of work was recovered as part of a cold start, no local resources were locked pending this resynchronization and local resources are not synchronized with this decision.

System action: The system allows the unit of work to back out for resynchronization with remote systems. No local resources are changed.

User response: None.

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0212 *date time applid Intersystem communication recovery. The remote system has reinitialized. The unit of work is treated as committed. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been re-established. Resynchronization with the remote system was attempted. It was found that the

remote system has restarted and has no knowledge of the unit of work. The distributed unit of work in the remote system might have committed or backed out.

The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. This will never be received.

Since this unit of work was recovered only for remote resynchronization, no local resources were locked pending this decision and local resources are not synchronized with the distributed unit of work. The unit of work is treated as committed in accordance with the ACTION attribute in the transaction definition.

If communication was via an MRO session to a pre-CICS Transaction Server system, this message may be issued even if the remote system was not restarted. This can only occur if the session failed during its first unit of work since connection.

System action: The system continues. Further remote resynchronization treats this unit of work as committed.

User response: Take user-defined action to resynchronize the resources in the local and remote systems if necessary.

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0213 *date time applid Intersystem communication recovery. The remote system has reinitialized. The unit of work is treated as backed out. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been re-established. Resynchronization with the remote system was attempted. It was found that the remote system has restarted and has no knowledge of the unit of work. The distributed unit of work in the remote system might have committed or backed out. The unit of work in the local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. This will never be received.

Since the unit of work was recovered only for remote resynchronization no local resources were locked pending this outcome and local resources are not synchronized with the distributed unit of work.

The local unit of work is treated as backed out in

accordance with the ACTION attribute in the local transaction definition.

If communication was via an MRO session to a pre-CICS Transaction Server system, this message may be issued even if the remote system was not reinitialized. This can only occur if the session failed during its first UOW since connection.

System action: The system continues. Further remote resynchronization treats this unit of work as backed out.

User response: Take user-defined actions to resynchronize resources in local and remote systems if necessary.

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0214 *date time applid Intersystem communication recovery. The remote system has reinitialized. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been re-established. Resynchronization with the remote system was attempted. It was found that the remote system has restarted and has no knowledge of the unit of work. The distributed unit of work in the remote system might have committed or backed out.

Since this unit of work was recovered only for remote resynchronization, no local resources were locked pending a decision and so local resources are not synchronized with the distributed unit of work.

System action: Processing continues.

User response: Take user-defined actions to resynchronize resources in local and remote systems if necessary.

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0215 *date time applid Intersystem communication recovery. The remote system sent mixed heuristic outcome. The unit of work is treated as committed. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been re-established. Resynchronization with the remote system was attempted. It was found that some resource updates in the distributed unit of work committed and some backed out. The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. The notification received does not determine whether the unit of work should be committed or backed out. The unit of work is treated as committed in accordance with the ACTION attribute in the transaction definition.

Since this unit of work was recovered only for remote resynchronization, no local resources were locked pending this outcome and local resources are not synchronized with this decision.

System action: The system continues. Further remote resynchronization treats this unit of work as committed.

User response: Take user-defined action to resynchronize resources in local and remote systems if necessary.

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0216 *date time applid Intersystem communication recovery. The remote system sent mixed heuristic outcome. The unit of work is treated as backed out. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been re-established. Resynchronization with the remote system was attempted. It was found that some resource updates in the distributed unit of work committed and some backed out. The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. The notification

received does not determine whether to commit or back out the resource updates. The local unit of work is treated as backed out in accordance with the ACTION attribute in the transaction definition.

Since this unit of work was recovered only for remote resynchronization, no local resources were locked pending this decision and local resources are not synchronized with the distributed unit of work.

System action: The system continues. Further remote resynchronization treats this unit of work as backed out.

User response: Take user-defined actions to resynchronize resources in local and remote systems if necessary.

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

DFHRM0218 *date time applid Intersystem communication recovery.*
Resynchronization information from the remote system was not sufficient to determine the outcome of the unit of work. Local resources are not synchronized. The distributed unit of work is committed. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW uowid local UOW X'localuowid'.

Explanation: Communication with the remote system has been re-established. Resynchronization with the remote system was attempted. The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. Information received from the remote system did not determine whether to commit or back out the unit of work.

The unit of work is committed in accordance with the ACTION attribute in the local transaction definition.

Because this unit of work was recovered only for remote resynchronization, no local resources were locked pending resolution of the unit of work, and local resources are not synchronized with this commit.

Any further remote resynchronization treats this unit of work as committed.

System action: The system commits the unit of work for the purposes of remote resynchronization.

User response: Take user-defined actions to resynchronize resources in local and remote systems, if necessary.

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, uowid,X'localuowid'*

DFHRM0219 *date time applid Intersystem communication recovery.*
Resynchronization information from the remote system was not sufficient to determine the outcome of the unit of work. The distributed unit of work is backed out. Local resources are not synchronized. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.

Explanation: Communication with the remote system has been re-established. Resynchronization with the remote system was attempted. The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. Information received from the remote system did not determine whether to commit or back out the unit of work.

The unit of work is backed out in accordance with the ACTION attribute in the local transaction definition.

Because this unit of work was recovered only for remote resynchronization, no local resources were locked pending resolution of the unit of work, and local resources are not synchronized with this back out.

Any further remote resynchronization treats this unit of work as backed out.

System action: The system backs out the unit of work for the purposes of remote resynchronization.

User response: Take user-defined action to resynchronize resources in local and remote systems, if necessary.

DFHRM0228 *applid indoubt_uows* **indoubt UOWs have been recovered for the purpose of remote resynchronization. Local resources are not synchronized with these UOWs.**

Explanation: This message displays the number of indoubt units of work (UOWs), *indoubt_uows*, which have been recovered for resynchronization with remote systems. This message is only issued on cold starts. Local resources may not be kept synchronized with remote resources because CICS is cold starting.

It is issued only if there is at least one UOW which is indoubt. It is issued before any of the reconstructed UOWs are unshunted and processed in parallel.

System action: The system has performed the backwards scan of the system log and is about to start unshunting UOWs where resynchronization is possible.

Where communications with the remote system or systems is not immediately possible, UOWs are preserved until resynchronization is possible or until WAITTIME (defined on the transaction definition) expires.

This message is followed by message DFHRM0208 if

the UOW has been committed, or by DFHRM0209 if the UOW has been backed out on the remote system or systems.

User response: None.

Destination: Console

Modules: DFHRMU1E.

XMEOUT Parameters: *applid, indoubt_uows*

DFHRM0229 *date time applid bfail_uows* **backout-failed and cfail_uows commit-failed UOWs have been recovered for the purpose of remote resynchronization. Local resources are not synchro nized with these UOWs.**

Explanation: This message displays the number of backout-failed units of work (UOWs), *bfail_uows*, and the number of commit-failed UOWs, *cfail_uows*, which have been recovered for resynchronization with remote systems. These UOWs may now be in backout-waiting or commit-waiting states after cold start recovery processing. This message is only issued on cold starts. Local resources may not be kept synchronized with remote resources because CICS is cold starting.

This message is issued only if there is at least one such UOW. It is issued before any of the reconstructed UOWs are processed.

System action: The system has performed the backwards scan of the system log and is about to start resynchronization for UOWs that require this.

Where communications with the remote system or systems is not immediately possible, UOWs are preserved until resynchronization is possible or until WAITTIME (defined on the transaction definition) expires.

This message is followed by message DFHRM0208 if the UOW has been committed, or by DFHRM0209 if the UOW has been backed out on the remote system or systems.

User response: None.

Destination: CSMT

Modules: DFHRMU1E

DFHRM0230 *date time applid inflight_uows* **inflight UOWs have been recovered for the purpose of remote resynchronization. Local resources are not synchronized with these UOWs.**

Explanation: This message displays the number of inflight units of work (UOWs), *inflight_uows*, which have been recovered for resynchronization with remote

systems. This message is issued only on cold starts. Local resources may not be kept synchronized with remote resources because CICS is cold starting.

It is issued only if there is at least one UOW which is inflight. It is issued before any of the reconstructed UOWs are unshunted and processed in parallel.

System action: The system has performed the backwards scan of the system log and is about to start unshunting UOWs where resynchronization is possible.

Where communications with the remote system or systems is not immediately possible, UOWs are preserved until resynchronization is possible or until WAITTIME (defined on the transaction definition) expires.

This message is followed by message DFHRM0208 if the UOW has been committed, or by DFHRM0209 if the UOW has been backed out on the remote system or systems.

User response: None.

Destination: CSMT

Modules: DFHRMU1E.

XMEOUT Parameters: *date, time, applid, inflight_uows*

DFHRM0235 *date time applid Intersystem communication recovery. Local resources are not synchronized. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system that is a subordinate of this unit of work failed and has been re-established. Resynchronization with the remote system has occurred. Either the remote system has already taken a decision for its local resource updates in the distributed unit of work, or the remote system was waiting for the decision from this system. In either case, since this unit of work was recovered only for remote resynchronization, the local resources are not synchronized.

System action: Processing continues.

User response: Take action to resynchronize resources in the local and remote systems, if necessary.

Destination: CSMT

Modules: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

DFHRM0300 **KEYWORD** *'keyword'* **IS INVALID OR MISUSED.**

Explanation: The SYSIN data set for DFHRMUTL contains an unrecognized keyword or a keyword which is used incorrectly.

System action: The DFHRMUTL job terminates.

User response: Correct the invalid keyword and retry.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHRMUTL

DFHRM0301 *applid Force purge of transaction ID tranid task number taskno has been deferred because unit of work X'uowid' is in post commit syncpoint processing.*

Explanation: CICS has received a request to force purge task *taskno*. The unit of work, *uowid*, associated with the target of the force purge request is in a critical phase of syncpoint processing. The target task cannot be purged while it is in this state.

System action: CICS attempts to defer the purge until the target task is no longer protected against purge.

If the syncpoint occurs at the end of the task, the task is permanently protected against purge.

User response: Normally the task should remain in this critical phase of syncpoint for only a short time. If the target task still has not ended, investigate why unit of work *uowid* has still to complete syncpoint processing.

See the *CICS Problem Determination Guide* for guidance about diagnosing task waits.

Note: Because of the circumstances under which this message is issued, it can only be issued to the console. It should not be rerouted to a transient data queue.

Destination: Console

Modules: DFHRMU1N

XMEOUT Parameters: *applid, tranid, taskno, X'uowid'*

DFHRM0302 **ERROR** {*OPENING* | *READING* | *WRITING* | *CLOSING*} **THE** {*DFHGCD* | *NEWGCD*} **DATA SET RETURN CODE:** *X'vsam_retcode'*, **REASON:** *X'vsam_reason'*.

Explanation: An error occurred when processing a VSAM data set. The VSAM return and reason codes are *X'vsam_retcode'* and *X'vsam_reason'*.

System action: The DFHRMUTL job terminates.

User response: See the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets* manual for the meaning of the return and reason codes. Check the syslog for associated data services messages.

If the error is in opening the NEWGCD data set, ensure that the VSAM cluster:

- Has the REUSE attribute
- Has a DD card in the JCL
- Does not name the same data set as the DFHGCD DD card
- Is not currently open to another job.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHRMUTL

DFHRM0303 ERROR {OPENING | READING | WRITING} THE {SYSIN | SYSPRINT} DATA SET.

Explanation: An error occurred when processing a QSAM data set.

System action: The DFHRMUTL job terminates.

User response: Ensure that the data set DD card is properly defined. Look for associated syslog messages to identify the source of the problem.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHRMUTL

DFHRM0304 INVALID OR MISSING SET_AUTO_START PARAMETER.

Explanation: The SET_AUTO_START parameter in the SYSIN data set for DFHRMUTL is missing or incorrectly specified.

System action: The DFHRMUTL job terminates.

User response: Ensure that the parameter is in the *first* line of SYSIN, and the keywords are separated by commas without intervening blanks.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHRMUTL

DFHRM0305 SYSIN DATA SET CAN HAVE AT MOST ONE RECORD.

Explanation: The SYSIN data set should contain either no records or else a single record specifying the parameters for DFHRMUTL.

System action: The DFHRMUTL job terminates.

User response: Correct the records in the SYSIN data set and retry.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHRMUTL

DFHRM0306 CANNOT COPY A GCD WITH NO CONTROL INFORMATION.

Explanation: The COLD_COPY keyword has been specified for a global catalog data set which has no recovery manager control information in it. It is not possible to create a reduced new catalog from an empty catalog.

System action: The DFHRMUTL job terminates.

User response: You should use COLD_COPY only to copy a catalog that has been used by CICS. To initialize a catalog for an initial start, use DFHRMUTL with the SET_AUTO_START=AUTOINIT parameter without attempting to copy it with COLD_COPY.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHRMUTL

DFHRM0307 KEYWORD '*keyword*' IS REPEATED IN THE SYSIN DATA SET.

Explanation: Keyword *keyword* has been repeated in the first line of the SYSIN data set for DFHRMUTL.

System action: The DFHRMUTL job terminates.

User response: Remove the duplicate keyword and retry.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHRMUTL

**DFHRM0308 SET_AUTO_START=AUTOASIS
INVALID. GCD IS A COLD_COPY
AND HAS NOT BEEN USED BY CICS.**

Explanation: The keyword SET_AUTO_START specified AUTOASIS, but the global catalog supplied in data set DFHGCD has been copied with the DFHRMUTL COLD_COPY function and has not yet been used by CICS. This change is not allowed because the catalog no longer has the necessary records to allow an emergency or warm start.

System action: The DFHRMUTL job terminates.

User response: If you need to perform an emergency or warm start, use a restored copy of the global catalog taken before the run of DFHRMUTL which performed the COLD_COPY. If you do not need an emergency or warm start, change the parameter to AUTOINIT or AUTOCOLD and retry.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHRMUTL

**DFHRM0309 GCD HAS NOT BEEN USED BY CICS.
YOU MUST SPECIFY SET_AUTO_S
TART=AUTOINIT**

Explanation: The keyword SET_AUTO_START specified AUTOCOLD or AUTOINIT, but the global catalog supplied in data set DFHGCD has never been used by CICS.

System action: The DFHRMUTL job terminates.

User response: Change the SET_AUTO_START parameter to AUTOINIT and retry.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHRMUTL

**DFHRM0311 COLD_COPY KEYWORD INVALID
WITH SET_AUTO_START=AUTOASIS.**

Explanation: The input parameters specified keyword COLD_COPY, but also contained SET_AUTO_START=AUTOASIS. This combination is not supported because CICS can only perform a COLD or INITIAL start using a catalog data set that has been cold-copied, because all definitional records have been removed.

System action: The DFHRMUTL job terminates.

User response: Either specify AUTOCOLD or AUTOINIT as the SET_AUTO_START value, or remove the COLD_COPY keyword and retry.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHRMUTL

**DFHRM0312 AUTODIAG WITH COLD_COPY NOT
ALLOWED.**

Explanation: In the parameters for the DFHRMUTL job the option COLD_COPY was specified with SET_AUTO_START=AUTODIAG. This is not allowed.

System action: The DFHRMUTL job terminates.

User response: Resubmit the job with the correct parameters.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHRMUTL

DFHRM0313 AUTODIAG CANNOT BE USED.

Explanation: The keyword SET_AUTO_START specified AUTODIAG, but the global catalog supplied in data set DFHGCD has been copied with the DFHRMUTL COLD_COPY function and has not yet been used by CICS. This change is not allowed because the catalog no longer has the necessary records to allow a diagnostic run.

System action: The DFHRMUTL job terminates.

User response: If you need to perform a diagnostic run, use a restored copy of the global catalog taken before the run of DFHRMUTL which performed the COLD_COPY. If you do not need a diagnostic run then change the parameter to AUTOINIT or AUTOCOLD and retry.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHRMUTL

**DFHRM0315I AUTOCOLD OR AUTOINIT
SHOULD NOT BE USED.**

Explanation: This is an informational message.

The global catalog indicates that the previous shutdown of CICS was not controlled (i.e. not a Warm shutdown), or that log information that pertains to shunted Units Of Work (UOWs) is present on the system log. In either case, CICS should not be restarted Cold or Initial, since to do so would threaten data integrity. As such, AUTOCOLD or AUTOINIT should not be specified by the use of the SET_AUTO_START keyword.

| **System action:** The DFHRMUTL job continues.

| **User response:** None.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHRMUTL

DFHRM0400 *applid* **A unit of work was incompletely reconstructed from the system log.**

Explanation: A unit of work has been only partially reconstructed from the log records on the system log.

The first log record that the unit of work wrote to the system log was not browsed during CICS restart although processing of the unit of work has not completed its syncpoint processing.

The probable cause is that the primary system log stream has been truncated incorrectly or that the secondary system log stream has been truncated or deleted incorrectly. Alternatively, the data on either log stream may have been corrupted so that the chain representing the unit of work was not completely processed during CICS restart.

These effects may be due to the log stream being modified between CICS runs, problems in the MVS logger, or problems in CICS itself. The most likely cause is that the logstream was deleted or modified between CICS runs. If it was deleted, the CICS logger will have issued a message during the CICS restart reporting that it was creating the logstream.

System action: CICS makes an exception trace entry including the unit of work in which the problem was detected, issues this message, takes a dump, and then terminates abnormally.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Ensure that the primary and secondary system logstreams are valid. If a problem can be rectified, auto-start CICS again.

If the problem cannot be rectified, you should perform an initial start of CICS.

If you are certain that the system log streams have not been deleted or modified between CICS runs, there may be an error in the MVS logger or in CICS. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. It would be helpful to keep the failing logstream or a report of its contents.

Destination: Console

Modules: DFHRMU1E.

XMEOUT Parameter: *applid*

DFHRM0401 *applid* **There is no system log or an empty system log has been detected.**

Explanation: An empty system log has been detected on a CICS restart which requires the log for recovery processing. This is unexpected because there should always be one or more log records on the system log when CICS has started previously. Alternatively, there is no CICS system log because DUMMY has been specified in the definition of the log stream, and a start that requires a valid system log has been requested.

The probable cause is that the primary system log stream has been destroyed or cleared incorrectly. The data on the primary log stream may have been corrupted so that the CICS logger could not find any valid records on it. Alternatively, the system log has been defined as a DUMMY log inappropriately.

These effects may be due to the log stream being modified between CICS runs, problems in the MVS logger, or problems in CICS itself. The most likely cause is that the logstream was deleted or emptied between CICS runs. If it was deleted, the CICS logger will have issued a message during the CICS restart reporting that it was creating the logstream.

System action: CICS makes an exception trace entry including the unit of work in which the problem was detected, issues this message, takes a dump, and then terminates abnormally.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Ensure that the primary system logstream is valid, and that it is not defined as DUMMY. If the problem can be rectified, start CICS again in the same way.

If the problem cannot be rectified, perform an initial start of CICS.

If you are certain that the system log streams have not been deleted or modified between CICS runs, there may be an error in the MVS logger or in CICS. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. It would be helpful to keep the failing logstream or a report of its contents.

Destination: Console

Modules: DFHRMSL5

XMEOUT Parameter: *applid*

DFHRPxxxx (CICS ONC RPC) messages

DFHRP0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem. If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHRPRP

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*, *modname*

DFHRP0002 *applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point ID, which gives an indication of the cause of the error:

- 9F49—error in the C environment
- 9F4A—no storage for the RPC caller
- 9F4C—error from **socket** call to TCP/IP for MVS
- 9F4D—error from **gethostid** call to TCP/IP for MVS
- 9F4F—error from **select** call to TCP/IP for MVS
- 9F55—error from **svc_register** call to TCP/IP for MVS
- 9F58—error from **svcudp_create** call to TCP/IP for MVS
- 9F59—error from **svctcp_create** call to TCP/IP for MVS
- 9F5B—error from **svc_sendreply** call to TCP/IP for MVS
- 9F5C—invalid **aup_gids** from client
- 9F5D—machine name from client too long
- 9F5E—error from **svc_getargs** call to TCP/IP for MVS
- 9F5F—error from **svc_freeargs** call to TCP/IP for MVS
- 9F60—error from **getsockopt** call to TCP/IP for MVS
- 9F63—error from **maxdesc** call to TCP/IP for MVS (unknown error)
- 9F64—error from **maxdesc** call to TCP/IP for MVS (not enough sockets)
- 9F65—error from **maxdesc** call to TCP/IP for MVS (EFAULT)
- 9F66—error from **maxdesc** call to TCP/IP for MVS (EALREADY)
- 9F67—error from **maxdesc** call to TCP/IP for MVS (EINVAL)
- 9F68—error from **maxdesc** call to TCP/IP for MVS (EMFILE)
- 9F69—error from **maxdesc** call to TCP/IP for MVS (ENOMEM)
- 9F6A—error from **maxdesc** call to TCP/IP for MVS (EIBMIUCVERR)
- 9F6B—error from **svcerr_auth** call to TCP/IP for MVS
- 9F6C—error from **svcerr_decode** call to TCP/IP for MVS
- 9F6D—error from **svcerr_noproc** call to TCP/IP for MVS
- 9F6E—error from **svcerr_systemerr** call to TCP/IP for MVS
- 9F6F—error from **dfhsvc_getreqset**.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. If a client request is being processed, and the code is 9F4A, no reply is sent to the client.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response:

There are some specific user actions that can be taken for certain values of *code*:

- 9F4A—Retry the current action if possible. If the shortage of storage persists, reduce the number of tasks that can run concurrently, or increase the DSA limits.
- 9F49—Check that the C run-time environment is derived from the same product, version, and release as was used for link-editing at installation time.
- 9F5C—Check the TCP/IP for MVS configuration and release level.
- 9F5D—Check the TCP/IP for MVS configuration and release level.
- 9F6A—Check that TCP/IP for MVS has been started.

For other TCP/IP for MVS problems, look at the TCP/IP for MVS diagnostics.

You may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHRPRP

XMEOUT Parameters: *applid, X'code', modname*

DFHRP0102 *date time applid tranid* A CICS ONC RPC alias has received an incorrect response on a call made to CICS during alias initialization.

Explanation: The alias has received a response that indicates a logic error in the alias while calling CICS to establish its initialization information.

System action: The client request is abandoned, and no reply is sent to the client. A system dump is taken. The alias abends with abend code ARPK. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: See the associated CICS messages for problem diagnosis.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0103 *date time applid tranid* A CICS ONC RPC alias has been started incorrectly.

Explanation: The alias has been invoked by a means other than the server controller, possibly by a user at a terminal.

System action: There was no client request to process. The alias abends with abend code ARPF.

User response: Check that the alias was not started by a terminal user.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0104 *date time applid tranid* A CICS ONC RPC alias has received an incorrect response on a call made to CICS during alias initialization.

Explanation: The alias has received a response while calling CICS to establish its initialization information that indicates that the alias may not have been started by server controller.

System action: There is no client request to process. The alias abends with abend code ARPF.

User response: Check that the alias has not been started by a means other than the server controller.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0105 *date time applid tranid* A CICS ONC RPC alias has received an incorrect response on a call made to CICS during alias initialization.

Explanation: The alias has received a response that indicates that CICS has experienced a temporary error while trying to pass the alias its initialization information from temporary storage.

System action: The client request is abandoned, and no reply is sent to the client. The alias abends with abend code ARPJ.

User response: See the associated CICS messages for problem diagnosis.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0106 *date time applid tranid* A CICS ONC RPC alias has received an incorrect response on a call made to CICS during alias initialization.

Explanation: The alias cannot find its initialization information in CICS temporary storage. This is probably due to the retrieval of data from temporary storage by another application.

System action: The client request is abandoned, and no reply is sent to the client. The alias abends with abend code ARPF.

User response: Check that no other application is using the same temporary storage queue as the alias.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid*

DFHRP0107 *date time applid tranid* A CICS ONC RPC alias has received an incorrect response on a call made to CICS during alias initialization.

Explanation: The alias has received a response that indicates a logic error in the alias while calling CICS to establish its initialization information.

System action: The client request is abandoned, and no reply is sent to the client. A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: See the associated CICS messages for problem diagnosis.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid*

DFHRP0108 *date time applid tranid* A CICS ONC RPC alias has been started incorrectly.

Explanation: The alias has detected an error while validating its initialization information. This probably means that the alias has been started by a means other than the server controller.

System action: There was no client request to process. The alias abends with abend code ARPF.

User response: Check that the alias was not started by a transient data trigger level or by a CECI user.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid*

DFHRP0113 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing because the corresponding alias list entry has been deleted. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *X'port'* Socket: *X'socket'*.

Explanation: The alias has attempted to update its alias list entry to indicate that it has successfully started. The alias list component has returned a NOT FOUND response.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPF.

User response: This situation is almost certainly due to an alias starting after immediate disable of CICS ONC RPC or after its alias list entry has been explicitly deleted by the connection manager.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, X'port', X'socket'*

DFHRP0114 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing because it is unable to update the corresponding alias list entry. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *X'port'* Socket: *X'socket'*.

Explanation: The alias has attempted to update its alias list entry to indicate that it has successfully started. The alias list component has returned an error response other than NOT FOUND. This is due to an error in another component of CICS.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPJ.

User response: Proceed as indicated in the messages issued by the CICS component in error.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, X'port', X'socket'*

DFHRP0118 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias has detected that CICS ONC RPC may have been disabled since this client request was scheduled by the server controller. This is indicated by an incorrect reference to the GWA used by CICS ONC RPC.

System action: The client request is abandoned, and no reply is sent to the client. The alias abends with abend code ARPH.

User response: Check that CICS ONC RPC has not been disabled since this client request was first scheduled. This problem may arise when long-running CICS programs are being used. It may also occur if CICS ONC RPC is disabled and immediately re-enabled.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0119 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing because it cannot authenticate this client request. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has detected an error with the response returned from the external security manager while attempting to authenticate this client request.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPJ.

User response: Check that the external security manager is still available.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0120 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing because this client request is not authenticated. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has received a response while authenticating the userid and password associated with this client request which indicates that this client request is not authenticated to CICS.

System action: An `svcerr_auth` call with a why-value of AUTH_TOOWEAK is used to send a reply to the client. The alias abends with abend code ARPL.

User response: Check the userid/password combination associated with this client request. See the associated CICS messages relating to the security error for help with problem diagnosis.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0121 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing because it cannot authenticate this client request. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has received a response while authenticating the userid and password associated with this client request which indicates that the external security manager does not recognize the userid.

System action: An `svcerr_auth` call with a why-value of AUTH_TOOWEAK is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Check the userid associated with this client request. See the associated CICS messages relating to the security error for help with problem diagnosis.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0122 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has encountered an internal error while authenticating the userid and password associated with this client request.

System action: An `svcerr_systemerr` call is used to send a reply to the client. A system dump is taken. The alias abends with abend code ARPK. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0123 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias has detected a temporary error in the remote CICS region while communicating with the resource checker.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPJ.

User response: Investigate the error in the remote CICS region.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0124 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias has encountered an internal error while trying to link to the resource checker.

System action: An `svcerr_systemerr` call is used to send a reply to the client. A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0125 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing as it cannot link to the resource checker program. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias has received a response while trying to link to the resource checker which indicates that it is not defined to CICS.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Check that the resource checker is defined to CICS.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0126 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing as it cannot link to the resource checker program. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias has received a response while trying to link to the resource checker that indicates that the remote system on which the program resides is not defined or available to CICS.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Ensure that the remote CICS region in which the resource checker resides is defined to CICS. If it is, check that the connection is available for use by CICS.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0127 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol*

Port: *port* **Socket:** *socket*.

Explanation: The alias has detected a rollback in the resource checker in a remote CICS region.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPJ.

User response: Investigate the problem in the remote CICS region. You should consider changing the resource checker so that it does not update any CICS recoverable resources because this is not its primary design intent. Retry the client request.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0128 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing because it cannot link to the resource checker *program*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has received a response while trying to link to the resource checker that indicates that it is not authorized to do so. This error has occurred because either the local alias transaction has been defined with `RESSEC=YES`, or the resource checker is in a remote CICS region and the mirror transaction in the remote region is defined with `RESSEC=YES`.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: If the alias or mirror transaction must run with `RESSEC=YES`, add a profile to the external security manager that allows users to access the resource checker. If you do not require resource level security in the CICS program, set `RESSEC=NO` in the alias or mirror transaction definition.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0129 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol*

Port: *port* **Socket:** *socket*.

Explanation: The alias has received an incorrect response from CICS while trying to link to the resource checker.

System action: An `svcerr_systemerr` call is used to send a reply to the client. A system dump is taken. The alias abends with abend code ARPK. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0130 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing. The resource checker has rejected this client request. **Response:** *response* **Reason:** *reason*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The resource checker has returned the response and reason codes *response* and *reason*. This client request is not authorized to continue.

System action: An `svcerr_auth` call with a `why`-value of `AUTH_BADCRED` is used to send a reply to the client. The alias abends with abend code ARPL.

User response: Determine from the resource checker the meaning of the response and reason codes, and amend the program if necessary.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, response, reason, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0131 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request as it cannot query the authorization of the CICS program *program*. **EIBRESP2:** *eibresp2* **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'*

Protocol: *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias issued an EXEC CICS QUERY SECURITY command for the CICS program *program*, but received an INVREQ response.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Use the EIBRESP2 value to determine the exact cause of the problem.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, eibresp2, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0132 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request as it cannot query the authorization of the CICS program *program*. **EIBRESP2:** *eibresp2* **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias issued an EXEC CICS QUERY SECURITY command for the CICS program *program*, but received a NOTFND response.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Use the EIBRESP2 value to determine the exact cause of the problem.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, eibresp2, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0133 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has received an incorrect response on a call to CICS while trying to test the authorization level of the client.

System action: An `svcerr_systemerr` call is used to send a reply to the client. A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116 is normally produced containing the

symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Explanation: The alias has detected a temporary error in the remote CICS region while communicating with the CICS program.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPJ.

User response: Investigate the problem in the remote CICS region.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0137 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has encountered an internal error while trying to link to the CICS program.

System action: An `svcerr_systemerr` call is used to send a reply to the client. A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0138 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing as it cannot link to the CICS program *program*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has received a response while trying to link to the CICS program *program* that indicates that the program is not defined to CICS.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Check that the CICS program is defined to CICS.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0139 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing as it cannot link to the CICS program *program*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has received a response while trying to link to the CICS program *program* that indicates that the remote system in which the program resides is not defined or is not available to CICS.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Ensure that the remote CICS region in which the server program resides is defined to CICS. If it is, ensure that the connection is available for use by CICS.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0140 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias has detected a rollback in the CICS program in the remote CICS region.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPJ.

User response: Investigate why the CICS program rolled back.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0141 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing as it cannot link to the CICS program program. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias has received a response while trying to link to the CICS program *program* that indicates that it is not authorized to do so.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: If the CICS program must run with resource level security, add a profile to the external security manager that grants access to the CICS program to its clients. If you do not require resource level security in the CICS program, set `RESSEC=NO` in the alias or mirror transaction definition.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0142 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias has received an incorrect response from CICS while trying to link to the CICS program.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPJ. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0143 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias has encountered an internal error and cannot determine how to send a reply to the client. The CICS program has run successfully, and may have updated CICS resources.

System action: An `svcerr_systemerr` call is used to send a reply to the client. A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0144 *date time applid tranid* A CICS ONC RPC alias is unable to send a reply to the client because of a length error.

Explanation: The alias is unable to send a reply to client because the communication area length is zero,

but the client was expecting data to be sent in the reply.

System action: The client request is abandoned, and no reply is sent to the client. A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: See the associated CICS messages for problem diagnosis.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0145 *date time applid tranid* A CICS ONC RPC alias is unable to send a reply to the client due to an error in TCP/IP for MVS svc_sendreply processing. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias cannot send a reply to the client. A problem has occurred in the TCP/IP for MVS svc_sendreply processing.

System action: An *svcerr_systemerr* call is used to send a reply to the client. The alias abends with abend code ARPJ.

User response: Examine the diagnostics to determine the reason for the error. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0146 *date time applid tranid* A CICS ONC RPC alias is unable to send a reply to the client due to an error in send reply processing. The transport handle was invalid or was not found. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias cannot send a reply to the client. A problem has occurred in send reply processing. The transport handle was in error or was not found.

System action: The client request is abandoned, and no reply is sent to the client. The alias abends with abend code ARPJ.

User response: Examine the diagnostics to determine the reason for the error. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0147 *date time applid tranid* A CICS ONC RPC alias is unable to send a reply to the client because CICS ONC RPC is disabling. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias cannot send a reply back to the client because CICS ONC RPC is disabling.

System action: The client request is abandoned, and no reply is sent to the client. The alias abends with abend code ARPJ.

User response: Examine the diagnostics to determine the reason for the error.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0148 *date time applid tranid* A CICS ONC RPC alias is unable to send a reply to the client due to an error in send processing. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias cannot send a reply back to the client. The alias received an unexpected response from the RPC caller.

System action: An *svcerr_systemerr* call is used to send a reply to the client. The alias abends with abend code ARPI.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr,*

hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket

DFHRP0149 *date time applid tranid* A CICS ONC RPC alias is unable to send a reply to the client. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias cannot send a reply back to the client. The alias received an unexpected response from the RPC caller.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPI.

User response: If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. You may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0150 *date time applid tranid* A CICS ONC RPC alias is unable to send data to the client.

Explanation: The alias is unable to send reply to the client. An unexpected response was returned from RPC caller.

System action: The client request is abandoned, and no reply is sent to the client. The alias abends with abend code ARPJ.

User response: See the associated CICS messages for problem diagnosis.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid*

DFHRP0151 *date time applid tranid* A CICS ONC RPC alias has encountered a severe internal error while processing this client request. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias is unable to switch TCB modes

to allow it to send a reply to the client. The RP TCB is not active.

System action: The client request is abandoned, and no reply is sent to the client. A system dump is taken. The alias abends with abend code ARPN. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: See any associated CICS messages to help with problem diagnosis. If you cannot determine why the TCB mode could not be switched, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0155 *date time applid tranid* A CICS ONC RPC alias encountered an error while attempting to access the converter *converter_program_name*. Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket* Client IP address: *clientaddr*.

Explanation: An error has prevented the alias from accessing the converter *converter_program_name*.

System action: An `svcerr_systemerr` call is used to send a reply to the client. A system dump is taken. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket, clientaddr*

DFHRP0156 *date time applid tranid* A CICS ONC RPC alias could not link to converter *converter_program_name*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias used EXEC CICS LINK for converter *converter_program_name* to perform the **Encode** function, but received a PGMIDERR response.

System action: An *svcerr_systemerr* call is used to send a reply to the client.

User response: Use CEDA to check that you have defined your converter program correctly to CICS.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum',protocol, port, socket*

DFHRP0157 *date time applid tranid* A CICS ONC RPC alias could not link to converter *converter_program_name* because it is remote. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias cannot work with a converter located in a remote CICS region. Data pointers are passed to and from the converter, and the referenced data can only be used if the converter runs in the local CICS region.

System action: An *svcerr_systemerr* call is used to send a reply to the client. A system dump is taken.

User response: Install and define the converter in the same CICS region as CICS ONC RPC.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum',protocol, port, socket*

DFHRP0159 *date time applid tranid* A CICS ONC RPC alias is not authorized to link to converter *converter_program_name*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias cannot access the converter. An authorization error has occurred.

System action: An *svcerr_systemerr* call is used to send a reply to the client. A system dump is taken.

User response: Either redefine the alias transaction with RESSEC=NO, or change the external security manager to allow the user to access the converter.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum',protocol, port, socket*

DFHRP0160 *date time applid tranid* A CICS ONC RPC alias received an incorrect response from CICS when attempting to access the converter *converter_program_name*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias received an unexpected response when trying to link to the converter for **Encode** processing.

System action: An *svcerr_systemerr* call is used to send a reply to the client. A system dump is taken. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: See the associated messages issued by CICS for problem diagnosis.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum',protocol, port, socket*

DFHRP0161 *date time applid tranid* A CICS ONC RPC alias encountered an error during **Encode processing in the converter program**. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: **Encode** returned URP_EXCEPTION.

System action: An *svcerr_systemerr* call is used to send a reply to the client.

User response: Examine the diagnostics to determine the reason for the error.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0162 *date time applid tranid* A CICS ONC RPC alias encountered an error during Encode processing in the converter program. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: Encode returned URP_INVALID.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: Examine the diagnostics to determine the reason for the error.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0163 *date time applid tranid* A CICS ONC RPC alias encountered an error during Encode processing in the converter program. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: Encode returned an unexpected return code.

System action: An `svcerr_systemerr` call is used to send a reply to the client. A system dump is taken. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Examine the diagnostics to determine the reason for the error.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0164 *date time applid tranid* A CICS ONC RPC alias is unable to send an error reply to the client due to a logic error. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias cannot send an error reply to the client due to a logic error.

System action: No reply is sent to the client. A system dump is taken. The alias abends with abend code

ARPI. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0166 *date time applid tranid* A CICS ONC RPC alias is unable to send a reply to the client because the transport handle was invalid or was not found. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias cannot send a reply to the client. The transport handle was invalid or was not found.

System action: No reply is sent to the client. The alias abends with abend code ARPJ.

User response: If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. You may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0167 *date time applid tranid* A CICS ONC RPC alias is unable to send an error reply to the client. CICS ONC RPC is disabling. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias cannot send a reply to the client because CICS ONC RPC is disabling.

System action: No reply is sent to the client. The alias abends with abend code ARPJ.

User response: Examine the diagnostics to determine the reason for the error.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0168 *date time applid tranid* A CICS ONC RPC alias is unable to send an error reply to the client. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias cannot send a reply to the client. The alias received an error response from the RPC caller.

System action: No reply is sent to the client. The alias abends with abend code ARPI.

User response: If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. Examine the diagnostics to determine the reason for the error. You may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0169 *date time applid tranid* A CICS ONC RPC alias encountered an error during Encode processing in the converter program. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: Encode returned URP_DISASTER.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: Examine the diagnostics to determine the reason for the error.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0170 *date time applid tranid* A CICS ONC RPC alias has detected an error.

Explanation: The alias has detected an error.

System action: A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Examine the diagnostics to determine the reason for the error.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0171 *date time applid tranid* A CICS ONC RPC alias has detected a FREEMAIN error.

Explanation: The alias has detected a FREEMAIN error when freeing the communication area used by the CICS program. This FREEMAIN occurs after Encode processing.

System action: Processing continues.

User response: Examine the diagnostics to determine the reason for the error.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0172 *date time applid tranid* A CICS ONC RPC alias has detected a FREEMAIN error.

Explanation: The alias has detected an error while freeing the data area created by Encode processing. The FREEMAIN occurs after outbound XDR processing.

System action: Processing continues.

User response: Examine the diagnostics to determine the reason for the error.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0173 *date time applid tranid* A CICS ONC RPC alias cannot find its alias list entry for deletion at task end. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *X'port'* **Socket:** *X'socket'*.

Explanation: The alias has attempted to delete its alias list entry at task end. The alias list component has returned a NOT FOUND response. This is because either a connection manager user has started immediate

disable processing, or because a connection manager user has deleted the entry.

System action: The alias abends with abend code ARPJ.

User response: None.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, X'port', X'socket'*

DFHRP0174 *date time applid tranid* A CICS ONC RPC alias received an error response while attempting to delete its alias list entry. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *X'port'* **Socket:** *X'socket'*.

Explanation: The alias has attempted to delete its alias list entry at task end. It received a response that indicated a severe error had occurred.

System action: The alias abends with abend code ARPJ.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. response.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, X'port', X'socket'*

DFHRP0175 *date time applid tranid* A CICS ONC RPC alias sent an error reply to the client, but cannot free storage associated with the error call to the client. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias sent an error reply to the client. After this reply was sent, the alias received an error response when attempting to free storage associated with the error call to the client.

System action: The alias abends with abend code ARPJ.

User response: Examine the diagnostics to determine the reason for the error. If the problem persists, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part

4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0176 *date time applid tranid* A CICS ONC RPC alias sent a reply to the client, but cannot free storage associated with the **svc_sendreply** call. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias sent a reply back to the client. After this reply was sent, the alias received an error response when attempting to free storage associated with the **svc_sendreply** call.

System action: The alias abends with abend code ARPJ.

User response: Examine the diagnostics to determine the reason for the error. You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0180 *date time applid tranid* A CICS ONC RPC alias has detected an abend issued by the resource checker program. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has detected an abend by the resource checker.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPO.

User response: Examine the diagnostics to determine the reason for the error.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0181 *date time applid tranid* A CICS ONC RPC alias has detected an abend issued by the CICS program *program*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias has detected an abend by the CICS program that was servicing the client request.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPO.

User response: Examine the diagnostics to determine the reason for the error.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0182 *date time applid tranid* A CICS ONC RPC alias has detected an abend issued in the Encode function of the converter program. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias has detected an abend by the converter Encode function.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPO.

User response: Examine the diagnostics to determine the reason for the error.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0183 *date time applid tranid* A CICS ONC RPC alias has detected an abend. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias has detected an abend.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPO.

User response: Examine the diagnostics to determine the reason for the error.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0184 *date time applid tranid* A CICS ONC RPC alias has found that the resource checker has rejected this client request.

Response: *response* **Reason:** *reason*. Client

IP address: *clientaddr* **Host IP address:**

hostaddr **Program:** *X'prognum'* **Version:**

X'versnum' **Procedure:** *X'procnum'*

Protocol: *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The resource checker has returned the response *response* and reason *reason*. This client request is not authorized to continue.

System action: An `svcerr_auth` call with a why-value of AUTH_TOOWEAK is used to send a reply to the client. The alias abends with abend code ARPL.

User response: If you suspect an error in the resource checker, use the response and reason codes to debug it.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, response, reason, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0185 *date time applid tranid* A CICS ONC RPC alias has detected an error in the resource checker. **Response:** *response* **Reason:** *reason*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The resource checker has returned the response *response* and reason *reason*. This client request is not authorized to continue.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPM.

User response: If you suspect an error in the resource checker, use the response and reason codes to debug it.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, response, reason, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0186 *date time applid tranid* A CICS ONC RPC alias has detected an error in the resource checker program. **Response:** *response* **Reason:** *reason*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The resource checker has returned the response *response* and reason *reason*. This client request is not authorized to continue.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPM.

User response: If you suspect an error in the resource checker, use the response and reason codes to debug it.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, response, reason, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0187 *date time applid tranid* A CICS ONC RPC alias detected an error in the resource checker. **Response:** *response* **Reason:** *reason*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The resource checker has returned the response *response* and reason *reason*. This client request is not authorized to continue.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPM.

User response: If you suspect and error in the resource checker, use the response and reason codes to debug it.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, response, reason, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0188 *date time applid tranid* A CICS ONC RPC alias has detected an error in the resource checker. **Response:** *response* **Reason:** *reason*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The resource checker has returned the response *response* and reason *reason*. This client request is not authorized to continue.

System action: An `svcerr_systemerr` call is used to send a reply to the client. A system dump is taken. The alias abends with code abend ARPM. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If you suspect an error in the resource checker, use the response and reason codes to debug it.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, response, reason, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0189 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request as it cannot load the CICS program *program*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has received an INVREQ response while trying to EXEC CICS LOAD the CICS program *program* for security checking. This indicates that the program manager domain has not yet been initialized and may be due to this request having been made in a first stage PLT.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Ensure that the program manager domain is initialized.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0190 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request as it cannot load the CICS program *program*. **EIBRESP2:** *eibresp2* **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has received a PGMIDERR response while trying to EXEC CICS LOAD the CICS program *program* for security checking. This indicates

that the program cannot be found or cannot be autoinstalled.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Ensure that the load module is in the DFHRPL concatenation and can be autoinstalled.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, program, eibresp2, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0191 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request as it cannot load the CICS program *program*. **EIBRESP2:** *eibresp2* **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has received a PGMIDERR response while trying to EXEC CICS LOAD the CICS program *program* for security checking. This indicates that the program autoinstall control program has failed.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPJ.

User response: Use the EIBRESP2 value to determine why the program autoinstall control program failed and correct the problem.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, program, eibresp2, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0192 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request as it cannot load the CICS program *program*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has detected an internal error while trying to load the CICS program *program* for security checking.

System action: An `svcerr_systemerr` call is used to send a reply to the client. A system dump is taken. The alias abends with abend code ARPI.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0193 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request as it cannot load the CICS program *program*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has received a NOTAUTH response while trying to EXEC CICS LOAD the CICS program *program* for security checking. This indicates that it is not authorized to access this program. This error may have occurred because the local alias transaction has been defined with RESSEC=YES.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: If the alias transaction must run with RESSEC=YES, add a profile to the external security manager that allows users to access the program. If you do not require resource level security, set RESSEC=NO in the alias transaction definition.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0194 *date time applid tranid* A CICS ONC RPC alias is unable to continue processing this client request as it cannot load the CICS program *program*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has received an incorrect response while trying to load the CICS program *program* for security checking.

System action: An `svcerr_systemerr` call is used to send a reply to the client. A system dump is taken. The alias abends with abend code ARPI. Message

DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, program, clientaddr, hostaddr, X'prognum', X'oversnum', X'procnum', protocol, port, socket*

DFHRP0500 *date time applid tranid CICS ONC RPC enable processing is complete. Host IP address: hostaddr.*

Explanation: The enable process has completed successfully.

System action: Processing continues.

User response: None.

Destination: Console and Transient Data Queue CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP0501 *date time applid tranid CICS ONC RPC normal disable processing has started. Host IP address: hostaddr.*

Explanation: The server controller has started normal disable processing following a request by a connection manager user.

System action: Processing continues.

User response: None.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP0502 *date time applid tranid CICS ONC RPC immediate disable processing has started. Host IP address: hostaddr.*

Explanation: The server controller has started immediate disable processing following a request by a connection manager user.

System action: Processing continues.

User response: None.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP0503 *date time applid tranid CICS ONC RPC disable processing is complete.*

Explanation: The server controller has completed the disable processing.

System action: Processing continues.

User response: None.

Destination: Console and Transient Data Queue CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0508 *date time applid tranid The CICS ONC RPC task related user exit (DFHRPTRU) has been disabled before the server controller could start.*

Explanation: DFHRPTRU is enabled by the connection manager during enable processing. but DFHRPTRU was found to be disabled when the server controller started. This is probably caused by an operator manually disabling DFHRPTRU.

System action: The server controller abends with abend code ARP2. CICS ONC RPC remains disabled. A system dump is taken. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Reenable CICS ONC RPC. Consider taking steps to avoid future manual interference with the TRUE.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0509 *date time applid tranid CICS ONC RPC has received an incorrect response on a call made to CICS during server controller startup.*

Explanation: CICS ONC RPC has received a response indicating an error in CICS.

System action: The server controller abends with abend code ARP2. CICS ONC RPC remains disabled. A system dump is taken. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: See the associated CICS message or messages for problem diagnosis.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0510 *date time applid tranid* The CICS ONC RPC task related user exit (DFHRPTRU) has been deleted or disabled before the server controller could start.

Explanation: DFHRPTRU is enabled by the connection manager during enable processing, but the server controller received an indication that:

- DFHRPTRU is not defined to CICS, or
- it has no load module, or
- the load module is disabled.

This is probably caused by operator intervention.

System action: The server controller abends with abend code ARPQ. A system dump is taken.

User response: Reenable CICS ONC RPC. Consider taking steps to prevent future operator interference.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0513 *date time applid tranid* The CICS ONC RPC server controller could not link to the converter *converter_program_name*. **EIBRESP2:** *resp2val*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The server controller used EXEC CICS LINK for converter *converter_program_name* to perform Decode, but received a PGMIDERR response.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: If the converter name is wrong, use the connection manager to unregister and reregister the 4-tuple with the correct converter name.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, resp2val, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0516 *date time applid tranid* The CICS ONC RPC server controller obtained data length information from the Decode function of converter *converter_program_name* that gives a communication area length that is too great. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The communication area length calculated from the `decode_server_data_format`, `decode_server_input_data_len`, and `decode_server_output_data_len` parameters exceeds the permitted maximum. See the *CICS Application Programming Guide* for more information about the Decode function and its parameters.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: Correct and replace the erroneous converter.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0517 *date time applid tranid* The CICS ONC RPC server controller does not have resource-level security authorization to start alias transaction *alias-tranid*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The server controller cannot start the alias because it does not have the necessary resource-level security authorization.

System action: An `svcerr_auth` call with a why-value of AUTH_TOOWEAK is used to send a reply to the client.

User response: You should specify only the alias transaction IDs that server controller has resource-level security authorization to start. When CICS ONC RPC is next disabled, redefine the server controller transaction with RESSEC=NO.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, alias-tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0518 *date time applid tranid* CICS ONC RPC cannot process a client request because the associated terminal ID *alias_termid* is not in the terminal control table. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: A client request has arrived, and the corresponding 4-tuple refers to a terminal ID that is not in the terminal control table.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: Either define the missing terminal, or change the 4-tuple definition to refer to a terminal ID that is in the terminal control table.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, alias_termid,clientaddr, hostaddr, X'prognum',X'versnum', X'procnum', protocol,port, socket*

DFHRP0520 *date time applid tranid* A CICS ONC RPC internal error has occurred while the server controller was polling for client work. **Host IP address:** *hostaddr*.

Explanation: This is an internal error.

System action: CICS ONC RPC enters exception disable processing.

User response: If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. You may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP0521 *date time applid tranid* The CICS ONC RPC server controller detected an internal error while accessing an internal table. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*

Explanation: An internal error has occurred in the server controller while it was accessing an internal table.

System action: Processing continues.

User response: None.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0522 *date time applid tranid* The CICS ONC RPC server controller detected an internal error while accessing an internal table. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*

Explanation: An internal error has occurred in the server controller while accessing an internal table.

System action: Processing continues.

User response: None.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0528 *date time applid tranid* The CICS ONC RPC server controller detected an initialization error.

Explanation: This is an internal error.

System action: A system dump is taken. The server controller abends with abend code ARP2. CICS ONC RPC remains disabled. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0540 *date time applid* The CICS ONC RPC server controller received an error response from TCP/IP for MVS after an `svc_freeargs` call issued for XDR routine: *xdrname* **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'progname'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The server controller cannot free storage allocated by the inbound XDR routine. An `svc_freeargs` returned an error response. This may be because the client associated with the call has timed out and the storage has already been freed by TCP/IP for MVS.

System action: The server controller continues to

process this client request. If the message is not a result of client time-out, MVS storage associated with the request will not be freed; if errors of this kind occur frequently, they may lead to storage problems.

User response: Examine the diagnostics to determine the reason for the error. If a user-written XDR routine is being used, there may be an error in the code associated with the FREE function. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time, applid, xdrname, clientaddr, hostaddr, X'progname', X'versnum', X'procnum', protocol, port, socket*

DFHRP0545 *date time applid tranid* **The CICS ONC RPC server controller is unable to send an error reply to the client due to an error in reply processing. The transport handle was invalid or not found. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: The server controller cannot send an error reply to the client because the transport handle is not valid.

System action: The client request is abandoned, and no reply is sent to the client.

User response: Examine the diagnostics to determine the reason for the error. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. You may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0546 *date time applid tranid* **The CICS ONC RPC server controller is unable to send an error reply to the client because CICS ONC RPC is disabling. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: The server controller cannot send an error reply to the client. CICS ONC RPC is disabling.

System action: The client request is abandoned, and no reply is sent to the client.

User response: Examine the diagnostics to determine the reason for the disable request.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0547 *date time applid tranid* **The CICS ONC RPC server controller is unable to send an error reply to the client. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: The server controller cannot send a reply to the client, because it received an error response from the RPC caller.

System action: The client request is abandoned, and no reply is sent to the client. The server controller attempts to deal with requests from other clients, but may experience further RPC caller errors.

User response: Examine the exception trace to determine the reason for the error. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. You may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0548 *date time applid tranid* **The CICS ONC RPC server controller sent an error reply to the client but cannot free storage associated with the client call. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: The server controller sent an error reply to the client. After this reply was sent, the server controller received an error response when attempting to free storage associated with the client call.

System action: Processing continues as if the error had not occurred.

User response: Examine the diagnostics to determine

the reason for the error. You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0559 *date time applid tranid* **The CICS ONC RPC server controller has encountered an internal error while trying to disable its task related user exit.**

Explanation: An attempt to disable the task-related user exit during disable processing has failed because of an internal error.

System action: A system dump is taken. Disable processing continues. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0570 *date time applid tranid* **The CICS ONC RPC server controller found that the RP task control block is not available. Host IP address: hostaddr.**

Explanation: The RP TCB is not available.

System action: A system dump is taken. The server controller abends with abend code ARP2. CICS ONC RPC is disabled. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP0574 *date time applid tranid* **The CICS ONC RPC server controller has encountered an internal error while waiting for work. Host IP address: hostaddr.**

Explanation: CICS ONC RPC is unable to continue because of an internal error in the server controller.

System action: In some circumstances, a system dump is taken. CICS ONC RPC is disabled. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP0589 *date time applid tranid* **The CICS ONC RPC server controller cannot enable CICS ONC RPC because it is not defined with the authority to access the task-related user exit.**

Explanation: The server controller cannot access the task-related user exit. This error can arise only if the supplied definitions for the server controller have been changed.

System action: The server controller abends with abend code ARP2. CICS ONC RPC remains disabled.

User response: Ensure that the supplied definitions for the server controller are used, and reenable CICS ONC RPC.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0590 *date time applid tranid* **The CICS ONC RPC server controller has received an unexpected response on a call to CICS during CICS ONC RPC enable processing.**

Explanation: CICS ONC RPC enable processing cannot continue because of an error in CICS.

System action: A system dump is taken. The server controller abends with abend code ARP2. CICS ONC RPC remains disabled. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM

to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0591 *date time applid tranid* **CICS ONC RPC could not be enabled because of an internal error in the server controller.**

Explanation: The server controller cannot start because of an internal error.

System action: A system dump is taken. The server controller abends with abend code ARP2. CICS ONC RPC remains disabled. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0592 *date time applid tranid* **The CICS ONC RPC server controller detected an error while polling for client work. Host IP address: *hostaddr*.**

Explanation: The server controller cannot continue because of an internal error.

System action: CICS ONC RPC is disabled.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP0618 *date time applid tranid* **The CICS ONC RPC server controller cannot link to remote converter *converter_program_name*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: The server controller used EXEC CICS LINK to access the converter for **Decode** processing, but got an error response that indicated that the converter was defined as remote. Data pointers are passed to and from the converter, and the referenced data can only be used if the converter runs in the local CICS region.

System action: A system dump is taken. An **svcerr_systemerr** call is used to send a reply to the client. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Install and define the converter program in the same CICS region as CICS ONC RPC.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum',protocol, port, socket*

DFHRP0620 *date time applid tranid* **The CICS ONC RPC server controller received an unexpected response from CICS when attempting to access converter *converter_program_name*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: A client request has failed because of an error in CICS.

System action: A system dump is taken. An **svcerr_systemerr** call is used to send a reply to the client. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: See the associated diagnostics issued by CICS for problem determination.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum',protocol, port, socket*

DFHRP0621 *date time applid tranid* **The CICS ONC RPC server controller is not authorized to link to converter**
converter_program_name. Client IP address: clientaddr Host IP address: hostaddr Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket: socket.

Explanation: The server controller cannot access the converter. This error can arise only if the supplied definitions for the server controller have been changed.

System action: A system dump is taken. An **svcerr_systemerr** call is used to send a reply to the client. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Ensure that the supplied definitions for the server controller are used, and reenable CICS ONC RPC.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum',protocol, port, socket*

DFHRP0625 *date time applid tranid* **The CICS ONC RPC server controller encountered an error during Decode processing in converter**
converter_program_name. Client IP address: clientaddr Host IP address: hostaddr Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket: socket.

Explanation: Decode returned an unexpected response.

System action: An **svcerr_systemerr** call is used to send a reply to the client.

User response: Correct and replace the converter program in question.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum',protocol, port, socket*

DFHRP0626 *date time applid tranid* **The CICS ONC RPC server controller encountered an error during Decode processing in converter**
converter_program_name. Client IP address: clientaddr Host IP address: hostaddr Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket: socket.

Explanation: Decode returned URP_EXCEPTION with a reason of URP_CORRUPT_CLIENT_DATA.

System action: An **svcerr_decode** call is used to send a reply to the client.

User response: Compare the client program and the converter program and change one or the other to make the data formats consistent.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum',protocol, port, socket*

DFHRP0628 *date time applid tranid* **The CICS ONC RPC server controller encountered an error during Decode processing in converter**
converter_program_name. Client IP address: clientaddr Host IP address: hostaddr Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket: socket.

Explanation: Decode returned URP_EXCEPTION with a reason of URP_AUTH_BADCRED.

System action: An **svcerr_auth** call with a why-value of AUTH_BADCRED is used to send a reply to the client.

User response: If the client should be authorized to make this request, compare the client program and the converter, and change one or the other so that authentication requirements match.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum',protocol, port, socket*

DFHRP0629 *date time applid tranid* **The CICS ONC RPC server controller encountered an error during Decode processing in converter**
converter_program_name. Client IP address: clientaddr Host IP address: hostaddr Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket: socket.

Explanation: Decode returned URP_EXCEPTION with a reason of URP_AUTH_TOOWEAK.

System action: An **svcerr_auth** call with a why-value of AUTH_TOOWEAK is used to send a reply to the client.

User response: If the client should be authorized to make this request, compare the client program and the converter, and change one or the other so that

authentication requirements match.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum',protocol, port, socket*

DFHRP0631 *date time applid tranid* **The CICS ONC RPC server controller encountered an error in Decode processing in converter *converter_program_name*. The response was URP_EXCEPTION, but the reason *decode_reason* was not recognized. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: Decode returned URP_EXCEPTION with an unrecognized reason code.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: If the reason code returned has a user-defined meaning act accordingly. If the reason code does not have a user-defined meaning, fix the problem with the converter and replace it.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, decode_reason, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0632 *date time applid tranid* **The CICS ONC RPC server controller encountered an error during Decode processing in converter *converter_program_name*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: Decode returned URP_INVALID.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: The Decode parameter area will have been traced. If the values passed were correct, and the error is in the converter, correct and replace the converter. If the values passed were incorrect, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum',protocol, port, socket*

DFHRP0635 *date time applid tranid* **The CICS ONC RPC server controller encountered an error during Decode processing in converter *converter_program_name*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: Decode returned URP_DISASTER.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: Correct and replace the converter.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum',protocol, port, socket*

DFHRP0636 *date time applid tranid* **The CICS ONC RPC server controller was unable to process an incoming client request due to lack of storage. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: An incoming client request could not be processed because there was insufficient storage available.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: If this error occurs persistently, you may need to customize your CICS system to cure the lack of storage.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0637 *date time applid tranid* **The CICS ONC RPC server controller was unable to process an incoming client request due to an internal error.***clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: An internal error has forced CICS ONC RPC to abandon a client request.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: You need further assistance from IBM to resolve this problem.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0638 *date time applid tranid* **The CICS ONC RPC server controller was unable to process an incoming client request due to an unexpected error detected when acquiring storage.** *eibresp eibresp2 eibresp2* **Client IP address** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: An incoming client request could not be processed because an unexpected error occurred when obtaining storage to process the request.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: You need assistance from IBM to resolve this problem.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, eibresp, eibresp2, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0639 *date time applid tranid* **The CICS ONC RPC server controller received an incorrect response on a call made to CICS.**

Explanation: The server controller has received a response that indicates a logic error while calling CICS to establish its initialization information.

System action: The server controller abends with abend code ARP2. Message DFHME0116 is normally

produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid*

DFHRP0640 *date time applid tranid* **The CICS ONC RPC server controller has been started incorrectly.**

Explanation: The server controller transaction CRPM has been started by a means other than the connection manager program, possibly by a user at a terminal.

System action: The server controller abends with abend code ARP5.

User response: Check that the CRPM transaction id was not entered by a terminal user.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid*

DFHRP0663 *date time applid tranid* **The CICS ONC RPC server controller could not start alias transaction *alias_tranid*.** **Host IP address:** *hostaddr* **Program:** *prognum* **Version:** *versnum* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket* **Client IP address:** *clientaddr*

Explanation: An internal error has prevented the server controller from starting the alias transaction.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, alias_tranid, hostaddr, prognum, versnum, protocol, port, socket, clientaddr*

DFHRP0686 *date time applid tranid* The CICS ONC RPC server controller encountered an internal error while attempting to start an alias transaction. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: An internal error has prevented the server controller from starting an alias transaction.

System action: A system dump is taken. An `svcerr_systemerr` call is used to send a reply to the client. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0687 *date time applid tranid* The CICS ONC RPC server controller could not start alias transaction *alias_tranid* because the CICS default temporary storage data set is full. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The server controller cannot start the alias transaction because temporary storage is not available.

System action: A system dump is taken. An `svcerr_systemerr` call is used to send a reply to the client. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Determine why the CICS default temporary storage data set is full. Enlarge the data set, or alter your CICS load to free space on it.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, alias_tranid,clientaddr, hostaddr, X'prognum',X'versnum', X'procnum', protocol,port, socket*

DFHRP0688 *date time applid tranid* The CICS ONC RPC server controller detected an error while starting alias transaction *alias_tranid*. The error indicated that the transaction is remote. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias transaction is defined as remote, but aliases must run in the same CICS region as CICS ONC RPC.

System action: A system dump is taken. An `svcerr_systemerr` call is used to send a reply to the client. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Define the alias as a local transaction.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, alias_tranid,clientaddr, hostaddr, X'prognum',X'versnum', X'procnum', protocol,port, socket*

DFHRP0689 *date time applid tranid* The CICS ONC RPC server controller tried to start alias transaction *alias-tranid*, but the surrogate user security check failed. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: An attempt by a user ID to access an alias transaction failed because of a security check. This may not be an error as you may wish to prevent the client involved from accessing the alias transaction.

System action: An `svcerr_auth` call with a why-value of AUTH_TOOWEAK is used to send a reply to the client.

User response: If you wish the user ID to access the alias, reenable CICS ONC RPC with a different value for CRPM Userid, or alter your surrogate user ID tables.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, alias-tranid,clientaddr, hostaddr, X'prognum',X'versnum', X'procnum', protocol,port, socket*

DFHRP0690 *date time applid tranid* The CICS ONC RPC server controller received an unexpected response from CICS while starting alias transaction *alias-tranid*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: A client request has failed because of an error in CICS.

System action: A system dump is taken. An `svcerr_systemerr` call is used to send a reply to the client. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: See the associated diagnostics issued by CICS for problem determination.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, alias-tranid,clientaddr, hostaddr, X'prognum',X'versnum', X'procnum', protocol,port, socket*

DFHRP0691 *date time applid tranid* The CICS ONC RPC server controller found that the user ID attempting to access alias transaction *alias-tranid* is not known to the external security manager. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The server controller could not start the alias with the user ID because the user ID is not known to the external security manager.

System action: An `svcerr_auth` call with a why-value of `AUTH_TOOWEAK` is used to send a reply to the client.

User response: If you wish the alias to run under this user ID, define the userid to the external security manager, and change your surrogate user ID tables.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, alias-tranid,clientaddr, hostaddr, X'prognum',X'versnum', X'procnum', protocol,port, socket*

DFHRP0692 *date time applid tranid* The CICS ONC RPC server controller found that the external security manager cannot validate the user ID for alias transaction *alias-tranid*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: An attempt to start the alias with an alias user ID failed as the external security manager cannot determine whether the user ID is valid.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: Determine the reason why the external security manager was unable to perform the request.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, alias-tranid,clientaddr, hostaddr, X'prognum',X'versnum', X'procnum', protocol,port, socket*

DFHRP0694 *date time applid tranid* The CICS ONC RPC server controller could not start alias transaction *alias_tranid* because it is not defined. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: The alias transaction *alias_tranid* is missing or is not correctly defined.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: Define the alias transaction correctly, or change the definitions of the 4-tuples that refer to it.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, alias_tranid,clientaddr, hostaddr, X'prognum',X'versnum', X'procnum', protocol,port, socket*

DFHRP0697 *date time applid tranid* The CICS ONC RPC server controller has started exception disable of CICS ONC RPC. Host IP address: *hostaddr*.

Explanation: The server controller has started an exception disable of CICS ONC RPC following an error during its operation. The error has already been reported.

System action: Disable processing continues.

User response: See the associated diagnostics for further information about the error.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP0723 *date time applid tranid* **The CICS ONC RPC server controller has detected an error when attempting to shut down the RPC caller.**

Explanation: During CICS ONC RPC disable processing, the server controller shuts down the RPC Caller, but received an error response.

System action: Disable processing continues.

User response: If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0724 *date time applid tranid* **The CICS ONC RPC server controller has detected an error when attempting to issue a FREEMAIN for the RPC caller program.**

Explanation: During CICS ONC RPC disable processing, the server controller issues a FREEMAIN for the RPC caller program to remove it from storage, but received an error response. This could either be as a result of problems with CICS which will probably be reflected in CICS diagnostics, or as a result of problems with CICS ONC RPC, which will probably be reflected in other CICS ONC RPC diagnostics.

System action: Disable processing continues.

User response: It might not be possible to reenable CICS ONC RPC without restarting CICS. If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0725 *date time applid tranid* **The CICS ONC RPC server controller has detected an error when attempting to issue a RELEASE for the alias list program.**

Explanation: During CICS ONC RPC disable processing, the server controller releases the alias list program, but received an error response.

System action: Disable processing continues.

User response: It might not be possible to reenable CICS ONC RPC without restarting CICS. If this error is not associated with others, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0726 *date time applid tranid* **During disable processing, the CICS ONC RPC server controller found that the task-related user exit was already disabled.**

Explanation: During disable processing, the server controller found that the task-related user exit was already disabled or that it has not been defined as an exit. This is probably the result of operator intervention.

System action: Disable processing continues.

User response: Take steps to prevent operator interference with the task-related user exit.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0727 *date time applid tranid* **During disable processing, the CICS ONC RPC server controller found that the task-related user exit is in use by another task.**

Explanation: During disable processing, the server controller found that the task-related user exit is currently invoked by another task. This may be a temporary condition, or it may be that the task related user exit has already been disabled.

System action: Disable processing continues.

User response: Investigate whether the operator has disabled the task related user exit DFHRPTRU for any reason.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0728 *date time applid tranid* The CICS ONC RPC server controller received an unexpected response from CICS while disabling the task-related user exit.

Explanation: An error occurred in CICS when the server controller tried to disable the task-related user exit during CICS ONC RPC disable processing.

System action: A system dump is taken. Disable processing continues. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: See the associated diagnostics issued by CICS for problem determination.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0729 *date time applid tranid* The CICS ONC RPC server controller has detected an internal error during disable processing.

Explanation: CICS ONC RPC has detected an internal error during disable processing.

System action: Disable processing continues.

User response: If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0730 *date time applid tranid* The CICS ONC RPC server controller does not have authorization to access the task-related user exit.

Explanation: During disable processing, the server controller found that it did not have the authorization to access the task-related user exit. This problem arises if the supplied definitions of the server controller are changed. Changes to these definitions are not allowed.

System action: Disable processing continues.

User response: Ensure that the supplied definitions for the server controller are used, and reenable CICS ONC RPC.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0731 *date time applid tranid* The CICS ONC RPC server controller has detected an internal error during disable processing.

Explanation: CICS ONC RPC has detected an internal error during disable processing.

System action: Disable processing continues.

User response: If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0732 *date time applid tranid* The CICS ONC RPC server controller has detected an internal error during disable processing.

Explanation: During disable processing, the server controller attempted to unregister for problem determination, but received an error response.

System action: Disable processing continues.

User response: If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0735 *date time applid tranid* The CICS ONC RPC server controller HANDLE ABEND code was entered as a result of an error in the Decode function in converter *converter_program_name*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: An error has occurred in Decode in converter *converter_program_name*. Because the converter does not contain HANDLE ABEND logic, the error has percolated to the server controller.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: Correct the error in the converter. Add handle abend logic to the converter so that it can handle its own errors, and replace it.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0736 *date time applid tranid* **The CICS ONC RPC server controller has encountered an internal error while processing a client request. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: An internal error has forced CICS ONC RPC to abandon a client request.

System action: A system dump is taken. An `svcerr_systemerr` call is used to send a reply to the client. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

DFHRP0737 *date time applid tranid* **The CICS ONC RPC server controller has encountered an internal error. Host IP address: *hostaddr*.**

Explanation: The server controller has encountered an internal error and cannot continue.

System action: A system dump is taken. CICS ONC RPC is disabled. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP0741 *date time applid tranid* **The CICS ONC RPC server controller is abending with abend code ARP4.**

Explanation: The server controller encountered an error and cannot continue.

System action: CICS ONC RPC is disabled. CICS ONC RPC has already issued other diagnostics giving further information about the error. The server controller abends with abend code ARP4.

User response: See the associated diagnostics and the description of abend code ARP4 for further guidance.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0746 *date time applid tranid* **The CICS ONC RPC server controller is abending with abend code ARP2.**

Explanation: The server controller encountered an error and cannot continue.

System action: The server controller abends with abend code ARP2. CICS ONC RPC is disabled.

User response: See the associated diagnostics and the description of abend code ARP2 for further guidance.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0747 *date time applid tranid* **The CICS ONC RPC server controller is abending with abend code ARP2.**

Explanation: The server controller has encountered an error and cannot continue.

System action: The server controller abends with abend code ARP2. CICS ONC RPC is disabled.

User response: See the associated diagnostics and the description of abend code ARP2 for further guidance.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP0749 *date time applid tranid* **The CICS ONC RPC server controller has encountered an internal error when no client request was being processed. Host IP address: *hostaddr*.**

Explanation: An internal error has occurred in the server controller. No client requests are affected.

System action: A system dump is taken. The server controller continues. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP1000 *date time applid* **The CICS ONC RPC RPC caller is initializing.**

Explanation: The server controller has started initialization of the RPC caller.

System action: Processing continues.

User response: None.

Destination: CRPO

Modules: DFHRPRP

XMEOUT Parameters: *date, time,applid*

DFHRP1001 *date time applid* **The CICS ONC RPC RPC caller has been initialized successfully.**

Explanation: The RPC caller has been initialized, and it is now ready for use.

System action: Processing continues.

User response: None.

Destination: CRPO

Modules: DFHRPRP

XMEOUT Parameters: *date, time,applid*

DFHRP1002 *date time applid* **The CICS ONC RPC RPC caller is shutting down.**

Explanation: Termination of the RPC caller has started.

System action: Processing continues.

User response: None.

Destination: CRPO

Modules: DFHRPRP

XMEOUT Parameters: *date, time,applid*

DFHRP1003 *date time applid* **The CICS ONC RPC RPC caller has successfully shutdown.**

Explanation: Termination of the RPC caller has completed.

System action: Processing continues.

User response: None.

Destination: CRPO

Modules: DFHRPRP

XMEOUT Parameters: *date, time,applid*

DFHRP1500 *date time applid tranid* **Invalid data has been entered in field *fieldname*.**

Explanation: Invalid data was entered on a connection manager panel in field *fieldname*.

System action: The panel is redisplayed and the field in error is highlighted.

User response: Enter valid data in the field indicated. See the *CICS External Interfaces Guide* for further guidance.

Destination: Terminal End User

Modules: DFHRPC06, DFHRPC10, DFHRPC0A, DFHRPC1B

DFHRP1501 *date time applid tranid* **The value entered in field *fieldname* exceeds the maximum allowed.**

Explanation: The value entered on a connection manager panel in field *fieldname* exceeds the maximum allowed.

System action: The panel is redisplayed and the field in error is highlighted.

User response: Enter valid data in the field indicated. See the *CICS External Interfaces Guide* for further guidance.

Destination: Terminal End User

Modules: DFHRPC0B

DFHRP1505 *date time applid tranid* **The CICS ONC RPC connection manager has not been started correctly.**

Explanation: The connection manager has been started from a non-BMS terminal but is not being used to enable or disable CICS ONC RPC.

System action: The connection manager terminates.

User response: The connection manager can be used as follows from a non-BMS terminal:

- If CICS ONC RPC is disabled, the connection manager can be used for automatic enable, either by

setting automatic enable to YES on the CICS ONC RPC data set or by entering a fast path command with YES for automatic enable.

- If CICS ONC RPC is enabled, the connection manager can be used for disable by entering a valid disable fast path command.

See the *CICS External Interfaces Guide* for guidance on how to start the connection manager.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1506 *date time applid tranid* **The CICS ONC RPC connection manager detected an error attempting to retrieve any fast path data. EIBRESP: eibresp.**

Explanation: The connection manager was attempting to retrieve any fast path commands that may have been specified when it was initiated. The connection manager issued an EXEC CICS GETMAIN command, but received the response *eibresp*.

System action: A system dump is taken. The connection manager continues but any fast path commands are ignored. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid, eibresp*

DFHRP1507 *date time applid tranid* **An invalid CICS ONC RPC fast path command has been entered: fastpath_command**

Explanation: The connection manager was started by entering a fast path command, but the format of the command was invalid.

System action: The connection manager is started, but fast path commands are ignored.

User response: Enter a valid fast path command. See the *CICS External Interfaces Guide* for further guidance.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid, fastpath_command*

DFHRP1508 *date time applid tranid* **The CICS ONC RPC connection manager has not been started correctly.**

Explanation: The connection manager was attempting to retrieve any fast path commands that may have been specified when it was initiated, but detected an invalid STARTCODE indicator.

System action: The connection manager continues but any fast path commands are ignored.

User response: See the *CICS External Interfaces Guide* for guidance on how to start the connection manager. If the connection manager was started correctly, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1509 *date time applid tranid* **The CICS ONC RPC connection manager detected an error attempting to retrieve any fast path data. EIBRESP: eibresp.**

Explanation: The connection manager was attempting to retrieve any fast path commands that may have been specified when it was initiated using an EXEC CICS START command. The connection manager issued an EXEC CICS RETRIEVE command, but received the response *eibresp*.

System action: A system dump is taken. The connection manager continues but any fast path commands are ignored. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid, eibresp*

DFHRP1510 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file filename. EIBRESP: eibresp.**

Explanation: The connection manager could not access the CICS ONC RPC data set, CICS file *filename*. An

EXEC CICS READ was issued, but received the response *eibresp*. The data set has not been correctly defined to CICS for one of the following reasons:

- No file definition has been found for *filename*. CICS ONC RPC has therefore not been installed correctly.
- READ operations are not allowed on the file.
- The file is DISABLED, either due to an incorrect file definition, or due to operator intervention.
- The file cannot be opened because it has not been defined correctly, or because it has been closed by operator intervention.
- The connection manager transaction, or the user running it, does not have the necessary level of authority to access the file.

System action: The requested operation is not performed.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename, eibresp*

DFHRP1511 *date time applid tranid* **The CICS ONC RPC connection manager has detected a logic error accessing the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager received an unexpected error when accessing the CICS ONC RPC data set, CICS file *filename*. This is a logic error. The connection manager has received an unexpected response from CICS following an EXEC CICS command.

System action: A system dump is taken. The requested operation is not performed. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1512 *date time applid tranid* **The CICS ONC RPC connection manager cannot access the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager could not access the CICS ONC RPC data set, CICS file *filename*. The data set has not been correctly defined to CICS for one of the following reasons:

- No file definition has been found for *filename*. CICS ONC RPC has therefore not been installed correctly.
- READ operations are not allowed on the file.
- The file has been disabled, either due to an incorrect data set definition, or due to operator intervention.
- The file cannot be opened because it has not been defined correctly, or because it has been closed by operator intervention.
- The connection manager transaction, or the user running the connection manager, does not have the necessary level of authority to access the file.

System action: The message is displayed at the terminal.

User response: Ensure that all the CEDA groups for CICS ONC RPC have been installed correctly.

Investigate whether the operator has changed the status of the file for any reason.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1513 *date time applid tranid* **The CICS ONC RPC connection manager has detected invalid data in the definition record of the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager detected an error in the definition record in the CICS ONC RPC data set.

System action: A system dump is taken. CICS ONC RPC is disabled. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Ensure that the first record in the data set has been correctly initialized. You can do this by manually updating the record (see the *CICS External Interfaces Guide* for further guidance), or by deleting the first record in the data set, and rerunning the connection manager. This creates a new definition record using the default settings which can then be updated using the connection manager panels.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1514 *date time applid tranid* **The CICS ONC RPC connection manager has detected that the CICS ONC RPC global work area does not have the expected length.**

Explanation: The connection manager detected that the length of the associated global work area is not correct.

System action: A system dump is taken. CICS ONC RPC is disabled. It is not possible to enable CICS ONC RPC until the problem is resolved. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Make sure that no user-written version of program DFHRPTRU is being used. Only the CICS ONC RPC supplied program can be used with CICS ONC RPC. Similarly, the CICS ONC RPC supplied task-related user exit DFHRPTRU should only be enabled and disabled by the connection manager. It should not be necessary to enable or disable DFHRPTRU in any other way.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1515 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file *filename*.
EIBRESP: *eibresp*.**

Explanation: The connection manager could not access the CICS ONC RPC data set, CICS file *filename*. An EXEC CICS READ was issued, but received the response *eibresp*. The error can occur for one of the following reasons:

- The file is defined as remote, and there is an error on the connection to the owning system.
- VSAM has returned an unexpected response to CICS.
- An I/O error occurred on the READ.

System action: A system dump is taken. The requested operation is not performed. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename, eibresp*

DFHRP1516 *date time applid tranid* **The CICS ONC RPC connection manager cannot access the feature definition record in the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager found that the CICS ONC RPC definition record is missing from the CICS ONC RPC data set, CICS file *filename*, while processing a request to update this record.

System action: A system dump is taken. The connection manager panel is redisplayed. The CICS ONC RPC definition record cannot be updated. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the reason why this record does not exist. You must create a new CICS ONC RPC definition record with the connection manager.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1518 *date time applid tranid* **The CICS ONC RPC connection manager cannot find the global work area.**

Explanation: The connection manager cannot access its global work area.

System action: A system dump is taken. The connection manager continues, but CICS ONC RPC cannot be enabled. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: End the connection manager. Ensure that all the CEDA groups containing the CICS ONC RPC definitions have been correctly installed. Then try running the connection manager again.

Investigate whether the operator has disabled the task-related user exit DFHRPTRU.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1519 *date time applid tranid* **The CICS ONC RPC connection manager cannot find the task-related user exit.**

Explanation: The connection manager cannot access its task-related user exit for one of the following reasons:

- DFHRPTRU has not been defined to CICS
- DFHRPTRU is not in the CICS load library
- DFHRPTRU has been disabled

System action: A system dump is taken. CICS ONC RPC is disabled. Message DFHME0116 is normally

produced containing the symptom string for this problem.

User response: End the connection manager. Ensure that all the CEDA groups containing CICS ONC RPC definitions have been installed correctly. Then try running the connection manager again.

If CICS ONC RPC has been correctly installed, check that the operator has not disabled DFHRPTRU.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1520 *date time applid tranid* **The CICS ONC RPC connection manager is not authorized to access its task related user exit. EIBRESP2: eibresp2.**

Explanation: The connection manager used EXEC CICS EXTRACT EXIT to find the task-related user exit, but got a NOTAUTH response.

System action: A system dump is taken. CICS ONC RPC is disabled. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Use the EIBRESP2 value to identify the problem.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid, eibresp2*

DFHRP1521 *date time applid tranid* **The CICS ONC RPC connection manager cannot access its task related user exit.**

Explanation: The connection manager cannot access the task related user exit. It received an unexpected response to an EXEC CICS EXTRACT EXIT call.

System action: A system dump is taken. CICS ONC RPC is disabled. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1522 *date time applid tranid* **The CICS ONC RPC connection manager has been started against an invalid terminal.**

Explanation: The connection manager has been started against a terminal that is not supported, for example, an LUTYPE6 terminal.

System action: The connection manager abends with abend code ARPX.

User response: Start the connection manager against a valid terminal. See the *CICS External Interfaces Guide* for further guidance on starting the connection manager.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1523 *date time applid tranid* **CICS ONC RPC cannot be enabled because the connection manager cannot access the task-related user exit DFHRPTRU.**

Explanation: The connection manager could not enable CICS ONC RPC because an error occurred accessing the task related user exit DFHRPTRU.

System action: A system dump is taken. This instance of connection manager can only be used to inquire on, or update the CICS ONC RPC data set. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response:

See the CRPO transient data queue for messages indicating the nature of the error, and take the appropriate action. Then restart the connection manager transaction and select the enable option again.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1524 *date time applid tranid* **CICS ONC RPC cannot be enabled because the server controller is already running.**

Explanation: The connection manager detected that the task-related user exit DFHRPTRU is disabled, but the server controller transaction is still running.

System action: A system dump is taken. This instance of connection manager can only be used to inquire on, or update, the CICS ONC RPC data set. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate why the last attempt to disable CICS ONC RPC did not complete successfully. Investigate the possibility of operator intervention.

Once you have established that it is safe to continue, use CEMT SET TASK or EXEC CICS SET TASK to purge the server controller. Then run the connection manager again to enable CICS ONC RPC.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1525 *date time applid tranid* **The CICS ONC RPC connection manager received an unexpected response from CICS.**

Explanation: The connection manager detected a logic error. It received an unexpected response to a CICS command.

System action: A system dump is taken. Processing continues. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1526 *date time applid tranid* **The CICS ONC RPC connection manager found that the task-related user exit is enabled, but the server controller is not running.**

Explanation: The connection manager has detected that the task-related user exit DFHRPTRU is enabled, but the server controller is not running. This means that CICS ONC RPC is in an indeterminate state.

System action: This instance of connection manager can only be used to inquire on, or update, the CICS ONC RPC data set.

User response: Investigate whether the previous attempt to disable CICS ONC RPC completed successfully. Alternatively, the server controller task may have been forcepurged by the operator.

Once you have established that it is safe to continue, try running the connection manager again and enabling CICS ONC RPC.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1527 *date time applid tranid* **CICS ONC RPC cannot be enabled because disable processing has not completed.**

Explanation: CICS ONC RPC is being disabled.

System action: The current instance of CICS ONC RPC is disabled.

User response: Wait for disable to complete before attempting to enable the CICS ONC RPC again.

Destination: CRPO and Terminal End User

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1528 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while initializing the RPC caller component during CICS ONC RPC enable processing.**

Explanation: The RPC caller could not be started.

System action: The enable attempt is abandoned.

User response: If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO and Terminal End User

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1529 *date time applid tranid* **The CICS ONC RPC connection manager detected an error in enable processing. Host IP address *hostaddr*.**

Explanation: The connection manager discovered a storage problem while trying to enable CICS ONC RPC.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: See the associated diagnostics issued by CICS for problem determination.

See the *CICS Problem Determination Guide* for guidance on dealing with storage problems.

Destination: CRPO and Terminal End User

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP1530 *date time applid tranid* The CICS ONC RPC connection manager detected a CICS short on storage condition during initialization of the RPC caller component. Host IP address *hostaddr*.

Explanation: The connection manager detected a short on storage condition.

System action: The enable attempt is abandoned.

User response: See the associated diagnostics issued by CICS for problem determination. See the *CICS Problem Determination Guide* for guidance on dealing with storage problems.

When the short on storage problem has been resolved, try to enable CICS ONC RPC again.

Destination: CRPO and Terminal End User

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP1531 *date time applid tranid* The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file *filename*.
EIBRESP: *eibresp*.

Explanation: The connection manager could not access the CICS ONC RPC data set, CICS file *filename*. An EXEC CICS WRITE was issued, but received the response *eibresp*. The error can occur for one of the following reasons:

- No file definition has been found for the file, implying that CICS ONC RPC has not been installed correctly.
- Write operations are not allowed, implying that CICS ONC RPC has not been installed correctly.
- The file is DISABLED, either due to an incorrect file definition, or due to operator intervention.
- The file is NOTOPEN, either due to an incorrect file definition or due to operator intervention.
- Write operations are not authorized, implying that security has not been set up correctly.

System action: The requested operation is not performed.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename, eibresp*

DFHRP1532 *date time applid tranid* The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file *filename*.
EIBRESP: *eibresp*.

Explanation: The connection manager could not access the CICS ONC RPC data set, CICS file *filename*. An EXEC CICS WRITE was issued, but received the response *eibresp*. The error can occur for one of the following reasons:

- The file is defined as remote, and there is an error on the connection to the owning system.
- VSAM has returned an unexpected response to CICS.
- An I/O error occurred on the WRITE.
- There is insufficient space available on the DASD device containing the data set.

System action: A system dump is taken. The requested operation is not performed. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename, eibresp*

DFHRP1533 *date time applid tranid* The CICS ONC RPC connection manager has detected a logic error while accessing the CICS ONC RPC data set, CICS file *filename*.

Explanation: The connection manager used EXEC CICS WRITE to update the CICS ONC RPC data set, but received an unexpected response. This is a logic error.

System action: A system dump is taken. The requested operation is not performed. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1534 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file *filename*.**
EIBRESP: *eibresp*.

Explanation: The connection manager could not access the CICS ONC RPC data set, CICS file *filename*. An EXEC CICS WRITE was issued, but received the response *eibresp*. The error can occur for one of the following reasons:

- The file is defined as remote, and there is an error on the connection to the owning system.
- VSAM has returned an unexpected response to CICS.
- An I/O error occurred on the WRITE.
- There is insufficient space available on the DASD device containing this file.

System action: A system dump is taken. The 4-tuple definition is not saved in the data set. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename, eibresp*

DFHRP1536 *date time applid tranid* **There was no entry for this 4-tuple in the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager did not find this 4-tuple in the CICS ONC RPC data set.

System action: None.

User response: Enter a 4-tuple that has already been saved in the data set.

Destination: Terminal End User

Modules: DFHRPC09

DFHRP1537 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while registering 4-tuples from the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager detected an internal error while processing a request to register 4-tuples from the CICS ONC RPC data set.

System action: A system dump is taken. No 4-tuples are registered. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1538 *date time applid tranid* **The CICS ONC RPC connection manager found no records on the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager was processing a request to register 4-tuples, but found no records on the CICS ONC RPC data set. The CICS ONC RPC definition record is missing.

System action: A system dump is taken. No 4-tuples are registered. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the reason why there are no records. You must use the connection manager to create a new one.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1539 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file *filename*, while registering 4-tuples from the data set.**
EIBRESP: *eibresp*.

Explanation: The connection manager could not access the CICS ONC RPC data set.

The error occurred while processing a request to register 4-tuples from the data set. Associated message DFHRP1545 may have been issued to indicate the number of 4-tuples that were registered.

An EXEC CICS STARTBR, EXEC CICS READNEXT, or EXEC CICS ENDBR was issued, but received the response *eibresp*. The error can occur for one of the following reasons:

- No file definition has been found for the file, implying that CICS ONC RPC has not been installed correctly.
- BROWSE or READ operations are not allowed, implying that CICS ONC RPC has not been installed correctly.
- The file is DISABLED, either due to an incorrect file definition, or due to operator intervention.

- The file is NOTOPEN, either due to an incorrect file definition, or due to operator intervention.
- BROWSE or READ operations are not authorized, implying that security has not been set up correctly.

System action: A system dump is taken. The connection manager cannot register 4-tuples from the data set. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename, eibresp*

DFHRP1540 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error.**

Explanation: The connection manager received an unexpected response from CICS following an EXEC CICS command.

System action: A system dump is taken. The connection manager abends with abend code ARPV. The other components of CICS ONC RPC continue. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1541 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error.**

Explanation: The connection manager received an unexpected response from CICS following an EXEC CICS command.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the

details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1542 *date time applid tranid* **CICS ONC RPC detected an error while accessing the CICS ONC RPC data set, CICS file filename, while registering 4-tuples from the data set. EIBRESP: eibresp.**

Explanation: The connection manager could not access the CICS ONC RPC data set.

The error occurred while processing a request to register 4-tuples from the data set. Associated message DFHRP1545 may have been issued to indicate the number of 4-tuples that were registered.

An EXEC CICS STARTBR, EXEC CICS READNEXT or EXEC CICS ENDBR was issued, but received the response *eibresp*. The error can occur for one of the following reasons:

- The file is defined as remote, and there is an error on the connection to the owning system.
- VSAM has returned an unexpected response to CICS.
- An I/O error occurred on the BROWSE or READ command.

System action: A system dump is taken. The connection manager cannot register 4-tuples from the data set. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename, eibresp*

DFHRP1543 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error while accessing the CICS ONC RPC data set, CICS file filename, while registering 4-tuples from the data set.**

Explanation: The connection manager has detected an error while accessing the CICS ONC RPC data set. This is a logic error since connection manager has received an unexpected response from CICS following an EXEC CICS STARTBR, EXEC CICS READNEXT or EXEC CICS ENDBR command.

The error occurred while processing a request to register 4-tuples from the data set. Associated message DFHRP1545 may have been issued to indicate the number of 4-tuples that were registered.

System action: A system dump is taken. The connection manager cannot register 4-tuples from the data set. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1544 *date time applid tranid* **The CICS ONC RPC connection manager found no records in the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager was processing a request to register 4-tuples, but found no records in the CICS ONC RPC data set. This indicates that the CICS ONC RPC definition record is missing.

System action: A system dump is taken. No 4-tuples are registered. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the reason why there are no records. You must use the connection manager to create a new CICS ONC RPC definition record.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1545 *date time applid tranid* **The CICS ONC RPC connection manager has completed registration of 4-tuples from the CICS ONC RPC data set, CICS file *filename*. Successful registers: *count1*. Unsuccessful registers: *count2*.**

Explanation: The connection manager has finished registering 4-tuples from the CICS ONC RPC data set, CICS file *filename*. *count1* indicates the number of 4-tuples that have been successfully registered. *count2* indicates the number of 4-tuples that were not registered.

System action: No further action.

User response: No further action.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename, count1, count2*

DFHRP1546 *date time applid tranid* **The CICS ONC RPC connection manager found no 4-tuple records on the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager was processing a request to register 4-tuples from the CICS ONC RPC data, but found no 4-tuple records in it.

System action: No 4-tuples are registered.

User response: Store some 4-tuple definitions in the data set before requesting this option.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1547 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while registering 4-tuples from the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager detected an internal error while processing a request to register 4-tuple from the CICS ONC RPC data set. Associated message DFHRP1545 indicates how many 4-tuples were registered.

System action: A system dump is taken. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1548 *date time applid tranid* **The CICS ONC RPC connection manager detected an error attempting to retrieve any fast path data. EIBRESP: *eibresp*.**

Explanation: The connection manager was attempting to retrieve any fast path commands that may have been specified when it was initiated from a terminal. The connection manager issued an EXEC CICS RECEIVE command, but received a response in field *eibresp*.

System action: A system dump is taken. Start up of

CICS ONC RPC continues but any fast path commands are ignored. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid, eibresp*

DFHRP1549 *date time applid tranid* **The CICS ONC RPC connection manager received an error response while registering with CICS for problem determination.**

Explanation: The connection manager received an unexpected response from CICS when attempting to register for problem determination.

System action: A system dump is taken. CICS feature tracing and dump formatting cannot be used for CICS ONC RPC. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1550 *date time applid tranid* **The CICS ONC RPC connection manager received an error response while registering with CICS for problem determination.**

Explanation: The connection manager received an unexpected response from CICS when attempting to register for problem determination.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1551 *date time applid tranid* **The CICS ONC RPC connection manager could not enable CICS ONC RPC because of a CICS short on storage condition.**

Explanation: The connection manager has made a request for storage during enable processing, but has received a reply indicating that CICS is short on storage.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: See the associated diagnostics issued by CICS for problem determination. You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1552 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error during enable processing.**

Explanation: An internal error detected during enable processing has prevented the connection manager from enabling CICS ONC RPC.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1554 *date time applid tranid* **The CICS ONC RPC connection manager is not authorized to use the CICS SPI.**

Explanation: The connection manager has not been defined with the authorization necessary to execute CICS system programming interface commands. It cannot function without this authorization.

System action: A system dump is taken. The enable attempt is abandoned.

User response: Message DFHME0116 is normally produced containing the symptom string for this problem. Redefine the connection manager transaction and its associated program DFHRPC00 with the appropriate level of security to be able to use the CICS SPI.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1555 *date time applid tranid* **The CICS ONC RPC connection manager is not authorized to use the program DFHRPTRU.**

Explanation: The connection manager used the EXEC CICS ENABLE PROGRAM command for DFHRPTRU, but it has not been defined with the authorization necessary to use DFHRPTRU. It cannot function without this authorization.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Redefine the connection manager and its associated programs with the appropriate level of security to be able to use the CICS ONC RPC supplied task-related user exit DFHRPTRU.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1556 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error during enable processing.**

Explanation: An internal error detected by the connection manager during enable processing has prevented CICS ONC RPC from being enabled.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1557 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error during enable processing.**

Explanation: An internal error detected by the connection manager during enable processing has prevented CICS ONC RPC from being enabled.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1558 *date time applid tranid* **The CICS ONC RPC connection manager could not find the task-related user exit, program DFHRPTRU.**

Explanation: The connection manager cannot find the task-related user exit, DFHRPTRU, for one of the following reasons:

- DFHRPTRU has not been defined to CICS
- DFHRPTRU is not in the CICS load library
- DFHRPTRU has been disabled

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Ensure that all the CEDA groups for CICS ONC RPC have been installed correctly, then try the enable request again.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1559 *date time applid tranid* **The CICS ONC RPC connection manager could not enable CICS ONC RPC because of a CICS short on storage condition.**

Explanation: The connection manager has made a request for storage during enable processing, but has received a reply indicating that CICS is short on storage.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: See the associated diagnostics issued by CICS for problem determination. See the dfhtm001. for guidance on dealing with CICS storage problems.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1560 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error during enable processing.**

Explanation: An internal error detected by the connection manager during enable processing has prevented CICS ONC RPC from being enabled.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1561 *date time applid tranid* **The CICS ONC RPC connection manager found that the task-related user exit, program DFHRPTRU, is already enabled.**

Explanation: The connection manager found that the task-related user exit, DFHRPTRU, is already enabled.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Take steps to prevent operator

intervention with the task related user exit, then try the enable request again.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1564 *date time applid tranid* **CICS ONC RPC could not be enabled due to an internal error while starting the server controller. Host IP address: *hostaddr*.**

Explanation: The connection manager attempted to start the server controller by issuing an EXEC CICS START command, but could not determine the response that was returned.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP1565 *date time applid tranid* **CICS ONC RPC cannot be enabled because the connection manager is not authorized to start the server controller. EIBRESP: *eibresp*. Host IP address: *hostaddr*.**

Explanation: The connection manager attempted to start the server controller by issuing an EXEC CICS START command, but the NOTAUTH response was returned.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: See the *CICS System Programming Reference* for the meaning of the value returned in *eibresp*. Use CEDA to ensure that the resource definitions for the CICS ONC RPC supplied programs and transactions have been defined with the correct levels of security. The connection manager must have the correct level of authority to start the server controller in order for CICS ONC RPC to be enabled successfully.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, eibresp, hostaddr*

DFHRP1566 *date time applid tranid CICS ONC RPC could not be enabled due to an error starting the server controller. EIBRESP: eibresp. Host IP address: hostaddr.*

Explanation: The connection manager attempted to start the server controller by issuing an EXEC CICS START USERID command, but the TRANSIDERR response was returned.

See the *CICS System Programming Reference* for the meaning of the value returned in *eibresp*.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Use CEDA to ensure that the resource definitions for the CICS ONC RPC supplied programs and transactions have been defined with the correct levels of security. In order to enable CICS ONC RPC, the connection manager must have the correct level of authority to start the server controller.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, eibresp, hostaddr*

DFHRP1567 *date time applid tranid CICS ONC RPC could not be enabled due to a security error starting the server controller. User ID userid is unknown. Host IP address: hostaddr.*

Explanation: The connection manager attempted to start the server controller by issuing an EXEC CICS START USERID command, but the USERIDERR response was returned.

The user ID specified for the server controller is not known to the external security manager.

System action: The enable attempt is abandoned.

User response: Ensure that a valid user ID is specified for CRPM Userid.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, userid, hostaddr*

DFHRP1568 *date time applid tranid CICS ONC RPC could not be enabled due to a security error starting the server controller. Host IP address: hostaddr.*

Explanation: The connection manager attempted to start the server controller by issuing an EXEC CICS START USERID command, but the USERIDERR response was returned.

The external security manager is in a state such that it cannot validate the user ID specified for the server controller.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the reason why the external security manager cannot perform this request.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP1569 *date time applid tranid The CICS ONC RPC connection manager has detected an internal error during enable processing.*

Explanation: An internal error detected by the connection manager during enable processing has prevented CICS ONC RPC from being enabled.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1570 *date time applid tranid CICS ONC RPC storage subpool token not saved.*

Explanation: The connection manager has detected an error while saving the storage subpool token.

System action: A system dump is taken. CICS ONC RPC continues normally. However if CICS ONC RPC abends, it may not be possible to reenab CICS ONC RPC without restarting CICS. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: See the associated diagnostics issued

by CICS for problem determination.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1571 *date time applid tranid* **The CICS ONC RPC connection manager is not authorized to load module *module*.**

Explanation: The connection manager has not been defined with the authorization necessary to issue an EXEC CICS LOAD command for the named module.

System action: The enable attempt is abandoned.

User response: Redefine the connection manager and its associated programs with the appropriate level of security to be able to issue EXEC CICS LOAD commands for the named CICS ONC RPC program.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, module*

DFHRP1572 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while loading *module*.**

Explanation: The connection manager tried to load the module, but the response to EXEC CICS LOAD was PGMIDERR.

System action: The enable attempt is abandoned.

User response: Use the CEDA transaction to ensure that the connection manager (program DFHRPC00) and the named program are correctly defined. See the *CICS External Interfaces Guide* for the correct program definitions.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, module*

DFHRP1574 *date time applid tranid* **The CICS ONC RPC connection manager load for *module* returned an unexpected response.**

Explanation: The connection manager has not been able to load the module into storage. A response other than NOTAUTH or PGMIDERR was returned to the EXEC CICS LOAD command.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Use the system dump to determine why the LOAD could not work.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, module*

DFHRP1575 *date time applid tranid* **CICS ONC RPC could not be enabled due to an internal error starting the server controller. Host IP address: *hostaddr*.**

Explanation: The connection manager attempted to start the server controller by issuing an EXEC CICS START command, but received an unexpected response.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP1576 *date time applid tranid* **CICS ONC RPC could not be enabled due to an internal error starting the server controller. EIBRESP: *eibresp*. Host IP address: *hostaddr*.**

Explanation: The connection manager attempted to start the server controller by issuing an EXEC CICS START command, but the INVREQ response was returned.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, eibresp, hostaddr*

DFHRP1577 *date time applid tranid* **The CICS ONC RPC connection manager cannot access its task-related user exit DFHRPTRU.**

Explanation: The connection manager was unable to access its task-related user exit DFHRPTRU during enable processing.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Check that the task-related user exit has not been disabled by operator intervention. See the associated diagnostics issued by CICS for problem determination.

Destination: CRPO

Modules: DFHRPC42

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1579 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while registering 4-tuples from the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager has detected an internal error while processing a request to register 4-tuples from the CICS ONC RPC data set. Associated message DFHRP1545 may have been issued to indicate the number of 4-tuples that were successfully registered.

System action: A system dump is taken. Registration of 4-tuples from the data set does not continue. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1580 *date time applid tranid* **The CICS ONC RPC connection manager cannot establish whether security is active or obtain the default CICS user ID.**
EIBRESP: *eibresp*.

Explanation: The connection manager was unable to retrieve status information about CICS, and therefore cannot establish whether security is active, or obtain the default CICS user ID.

An EXEC CICS INQUIRE SYSTEM was issued but received the response shown in the message.

System action: Processing continues under the assumption that there is no security active.

Panel DFHRP02 is displayed with no user ID in field CRPM Userid, unless a user ID was saved in the CICS ONC RPC data set.

User response: Ensure that the connection manager has the correct level of security to use CICS system programming interface commands.

Destination: CRPO

Modules: DFHRPC42

XMEOUT Parameters: *date, time,applid, tranid, eibresp*

DFHRP1581 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while accessing the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager has detected an internal error while accessing the CICS ONC RPC data set.

System action: A system dump is taken. The panel is redisplayed. No records can be updated. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC03, DFHRPC05

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1582 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while accessing the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager has detected an internal error while accessing the CICS ONC RPC data set.

System action: A system dump is taken. The connection manager panel is redisplayed. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC03, DFHRPC05

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1583 *date time applid tranid* **The CICS ONC RPC connection manager found no entry for this 4-tuple in the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager has not found this 4-tuple in the CICS ONC RPC data set *filename*.

System action: None.

User response: Enter a 4-tuple that has already been saved in the data set.

Destination: Terminal End User

Modules: DFHRPC09

DFHRP1584 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file *filename*.**
EIBRESP: *eibresp*.

Explanation: The connection manager could not access the CICS ONC RPC data set. An EXEC CICS DELETE was issued, but received the response *eibresp*. The data set has not been correctly defined to CICS for one of the following reasons:

- No file definition has been found for *filename*. CICS ONC RPC has therefore not been installed correctly.
- DELETE operations are not allowed on the file.
- The file has been disabled, either due to an incorrect file definition, or due to operator intervention.
- The file cannot be opened because it has not been defined correctly, or because it has been closed by operator intervention.
- The connection manager, or the user running it, does not have the necessary level of authority to access the file.

System action: The requested operation is not performed. The connection manager cannot perform any operation requiring access to the data set.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Investigate whether the operator has changed the status of the data set for any reason.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename, eibresp*

DFHRP1585 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file *filename*.**
EIBRESP: *eibresp*.

Explanation: The connection manager could not access CICS ONC RPC data set, CICS file *filename*. An EXEC CICS DELETE was issued, but received the response *eibresp*. The error can occur for one of the following reasons:

- The file is defined as remote, and there is an error on the connection to the owning system.
- VSAM has returned an unexpected response to CICS.
- An I/O error occurred on the DELETE.

System action: A system dump is taken. The requested operation is not performed. The connection manager cannot perform any function requiring access to the data set. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename, eibresp*

DFHRP1586 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error accessing the CICS ONC RPC data set *filename*.**

Explanation: The connection manager detected an unexpected error when accessing the CICS ONC RPC data set. This is a logic error. The connection manager has received an unexpected response from CICS following an EXEC CICS command.

System action: A system dump is taken. The connection manager cannot perform any function requiring access to the CICS ONC RPC data set. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1596 *date time applid tranid* **The CICS ONC RPC connection manager cannot continue enable processing because it cannot determine the status of CICS ONC RPC.**

Explanation: The connection manager was trying to enable CICS ONC RPC, but detected an invalid global work area address, or found that CICS ONC RPC was enabled.

System action: The enable attempt is abandoned.

User response: Investigate whether CICS ONC RPC has been disabled. Investigate whether operator command have been issued against the task-related user DFHRPTRU.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1600 *date time applid tranid* **The CICS ONC RPC connection manager has completed backout of enable processing.**

Explanation: CICS ONC RPC cannot be enabled. This may be the result of an error detected by the connection manager during enable processing or it may be due to CICS shutdown. The connection manager has completed backout of enable processing.

System action: Processing continues.

User response: See associated messages for the reason why the enable request failed.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1601 *date time applid tranid* **The CICS ONC RPC connection manager cannot continue enable processing because it has detected that CICS is shutting down.**

Explanation: CICS ONC RPC cannot be enabled when CICS is in shutdown.

System action: The connection manager initiates backout of enable processing. If this is an immediate CICS shutdown, then transaction CRPC terminates.

User response: Exit transaction CRPC to enable CICS shutdown to continue.

Destination: CRPO

Modules: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1602 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error during backout of enable processing.**

Explanation: The connection manager has detected an error attempting to shut down the RPC caller. This is during backout of enable processing initiated by the connection manager in response to a failed enable request. This could either be as a result of problems with CICS ONC RPC, which will probably be reflected in other CICS ONC RPC diagnostics, or as a result of problems with CICS which will probably be reflected in CICS diagnostics.

System action: CICS ONC RPC continues backout of enable processing.

User response: See associated messages for the reason why the enable request failed. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Explanation: The connection manager cannot complete the unregister operation because it has detected an invalid global work area address. CICS ONC RPC might have been disabled by another connection manager transaction.

System action: The connection manager continues, but the unregister operation is not completed.

User response: If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

Destination: CRPO

Modules: DFHRPC06

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol*

DFHRP1760 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while unregistering a program-version pair with TCP/IP for MVS. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The connection manager detected an error while unregistering a program-version pair with TCP/IP for MVS, and is unable to complete the current unregister operation.

System action: The connection manager continues, but the unregister operation is not completed.

User response: See the associated diagnostics issued by CICS and TCP/IP for MVS for problem determination. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

Destination: CRPO

Modules: DFHRPC06

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1761 *date time applid tranid* **The CICS ONC RPC connection manager could not unregister a 4-tuple as it was not registered Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The 4-tuple cannot be unregistered as it is not registered.

System action: Processing continues.

User response: None.

Destination: CRPO

Modules: DFHRPC06

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1762 *date time applid tranid* **Enter the Program Number, Version Number, Procedure Number and Protocol for the 4-tuple to be unregistered.**

Explanation: You have not entered all the information needed to identify the 4-tuple to be unregistered.

System action: Processing continues.

User response: Enter the required data.

Destination: Terminal End User

Modules: DFHRPC06

DFHRP1763 *date time applid tranid* **The CICS ONC RPC connection manager cannot display the requested 4-tuple because it is not registered with CICS ONC RPC. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The 4-tuple is not displayed.

System action: Processing continues.

User response: None.

Destination: CRPO

Modules: DFHRPC06

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1764 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while processing 4-tuple definitions on the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager detected an internal error while accessing 4-tuples on the data set.

System action: A system dump is taken. The connection manager panel is redisplayed. The requested operation is not performed. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1765 *date time applid tranid* **The CICS ONC RPC connection manager found no records in the CICS ONC RPC data set, CICS file *filename*, when processing a request to access 4-tuple definitions.**

Explanation: The connection manager found no records on the data set while processing a request to access 4-tuple definitions. This indicates that the CICS ONC RPC definition record is missing.

System action: A system dump is taken. The connection manager panel is displayed. No 4-tuples are displayed. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the reason why there are no records. You must use the connection manager to create a new CICS ONC RPC definition record.

Destination: CRPO

Modules: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1766 *date time applid tranid* **The CICS ONC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file *filename*. EIBRESP: *eibresp*.**

Explanation: The connection manager could not access the CICS ONC RPC data set.

The error occurred while processing a request to display 4-tuple definitions from the data set.

An EXEC CICS STARTBR, EXEC CICS READNEXT or EXEC CICS ENDBR was issued, but received the response *eibresp*. The error can occur for one of the following reasons:

- No file definition has been found for DFHRPCD, implying that CICS ONC RPC has not been installed correctly.
- BROWSE or READ operations are not allowed, implying that CICS ONC RPC has not been installed correctly.
- The file is DISABLED, either due to an incorrect file definition, or due to operator intervention.
- The file is NOTOPEN, either due to an incorrect file definition, or due to operator intervention.
- BROWSE or READ operations are not authorized, implying that security has not been set up correctly.

System action: A system dump is taken. Without access to the data set, CICS ONC RPC cannot display 4-tuple definitions. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Destination: CRPO

Modules: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid, filename, eibresp*

DFHRP1767 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file *filename*. EIBRESP: *eibresp*.**

Explanation: The connection manager cannot access the CICS ONC RPC data set.

The error occurred while processing a request to display 4-tuple definitions from the data set.

An EXEC CICS STARTBR, EXEC CICS READNEXT or EXEC CICS ENDBR was issued, but received the response *eibresp*. The error can occur for one of the following reasons:

- The file is defined as remote, and there is an error on the connection to the owning system.
- VSAM has returned an unexpected response to CICS.
- An I/O error occurred on the BROWSE or READ command.

System action: A system dump is taken. Without access to the data set, CICS ONC RPC cannot display 4-tuple definitions. Message DFHME0116 is normally

produced containing the symptom string for this problem.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Destination: CRPO

Modules: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid, filename, eibresp*

DFHRP1768 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error while accessing the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager could not access the CICS ONC RPC data set. This is a logic error since the connection manager has received an unexpected response from CICS following an EXEC CICS STARTBR, EXEC CICS READNEXT or EXEC CICS ENDBR command.

The error occurred while processing a request to display 4-tuple definitions from the data set.

Without access to the data set, the connection manager cannot process requests to display information from it.

System action: A system dump is taken. The connection manager panel is redisplayed. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1769 *date time applid tranid* **The CICS ONC RPC connection manager found no records on the CICS ONC RPC data set, CICS file *filename*, when processing a request to access 4-tuple information.**

Explanation: The connection manager has found no records on the CICS ONC RPC data set when processing a request to access 4-tuple definitions.

System action: A system dump is taken. The connection manager panel is redisplayed. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the reason why there are no records. You must use the connection manager to

create a new CICS ONC RPC definition record.

Destination: CRPO

Modules: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1770 *date time applid tranid* **The CICS ONC RPC connection manager found no 4-tuple definitions in the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager has found no 4-tuple definitions in the CICS ONC RPC data set while processing a request to access 4-tuple definitions.

System action: The connection manager panel is redisplayed. No 4-tuple definitions are displayed.

User response: Use the connection manager to save 4-tuple definitions in the data set.

Destination: CRPO

Modules: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1771 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while accessing 4-tuple definitions in the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager has detected an internal error while processing a request to access 4-tuple definitions in the CICS ONC RPC data set.

System action: A system dump is taken. The connection manager panel is redisplayed. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid, filename*

DFHRP1772 *date time applid tranid* **The CICS ONC RPC connection manager could not complete the requested operation. It could not obtain the required CICS storage.**

Explanation: A GETMAIN issued by the connection manager when attempting to build a list of 4-tuples defined in the CICS ONC RPC data set returned an error response.

System action: A system dump is taken. Processing continues. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: CICS may be temporarily short on storage. Retry the operation. If the condition persists, contact your system administrator to see if there are problems with CICS storage. If CICS is not short on storage, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1773 *date time applid tranid* **The CICS ONC RPC connection manager detected an error when freeing storage.**

Explanation: A FREEMAIN issued by connection manager returned an error response. The connection manager was trying to free storage used to build a list of 4-tuples defined in the CICS ONC RPC data set.

System action: A system dump is taken. Processing continues. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1774 *date time applid tranid* **The CICS ONC RPC connection manager cannot display the requested 4-tuple because it is not saved to the CICS ONC RPC data set. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol.**

Explanation: The 4-tuple is not displayed.

System action: Processing continues.

User response: None.

Destination: CRPO

Modules: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol*

DFHRP1775 *date time applid tranid* **The CICS ONC RPC connection manager cannot register 4-tuples because CICS ONC RPC is disabled.**

Explanation: A request to register a 4-tuple cannot be performed because CICS ONC RPC was not enabled when the request was made.

System action: Processing continues.

User response: Enable CICS ONC RPC.

Destination: CRPO

Modules: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1800 *date time applid tranid* **The CICS ONC RPC connection manager has purged an alias task. Task status: status Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The alias for the 4-tuple has been purged by the connection manager.

System action: *Status* indicates the status of the alias task when the purge request was issued. The following actions are taken:

- *Running* indicates that the alias task was running. The connection manager removes the entry from the alias list. The alias abends with abend code ARPJ and message DFHRP0173 is issued.
- *Scheduled* indicates that the alias task was scheduled to run and may still do so. The connection manager removes the entry from the alias list. The alias abends with abend code ARPJ and messages DFHRP0113 and DFHRP0173 are issued.

User response: None.

Modules: DFHRPC08

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP1869 *date time applid tranid* **The CICS ONC RPC connection manager detected an error when freeing storage. Host IP address: *hostaddr*.**

Explanation: A FREEMAIN issued by connection manager when attempting to free storage used to build a list of registered 4-tuples returned an error response.

System action: Processing continues.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPC08

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP1879 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error while accessing an internal table. Host IP address: *hostaddr*.**

Explanation: An internal error has occurred in the connection manager while accessing an internal table.

System action: A system dump is taken. Processing continues. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC08

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

DFHRP1900 *date time applid tranid* **The CICS ONC RPC connection manager could not find the global work area.**

Explanation: The connection manager could not find the global work area. The task related user exit DFHRPTRU has been wrongly defined.

System action: A system dump is taken. CICS ONC RPC remains disabled. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Ensure that all the CEDA groups for CICS ONC RPC have been installed correctly, then try to enable CICS ONC RPC again.

Investigate whether the operator has disabled DFHRPTRU for any reason.

Destination: CRPO

Modules: DFHRPC0B

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1901 *date time applid tranid* **The CICS ONC RPC connection manager could not find the task-related user exit, program DFHRPTRU.**

Explanation: The connection manager cannot find the task-related user exit, DFHRPTRU, for one of the following reasons:

- DFHRPTRU has not been defined to CICS
- DFHRPTRU is not in the CICS load library
- DFHRPTRU has been disabled

System action: A system dump is taken. CICS ONC RPC remains disabled. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Ensure that all the CEDA groups for CICS ONC RPC have been installed correctly, then try the enable request again.

Destination: CRPO

Modules: DFHRPC0B

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1902 *date time applid tranid* **The CICS ONC RPC connection manager does not have sufficient authority to issue the EXEC CICS EXTRACT EXIT command. EIBRESP2: *eibresp2*.**

Explanation: The connection manager does not have the correct authority to issue the privileged EXEC CICS EXTRACT EXIT command. It cannot function without this authority.

System action: A system dump is taken. The connection manager abends with abend code ARPZ. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Use the EIBRESP2 value to identify the problem. Ensure that the connection manager and its associated program DFHRPC00 have the necessary level of security to issue the EXEC CICS EXTRACT EXIT command for the CICS ONC RPC task related user exit DFHRPTRU.

Destination: CRPO

Modules: DFHRPC0B

XMEOUT Parameters: *date, time,applid, tranid, eibresp2*

DFHRP1903 *date time applid tranid* **The CICS ONC RPC connection manager has received an unexpected response from CICS.**

Explanation: The connection manager received an unexpected response from CICS to an EXEC CICS command.

This is a logic error.

System action: A system dump is taken. CICS ONC RPC is disabled. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPC0B

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1906 *date time applid tranid* **The CICS ONC RPC connection manager found an error in the length of the CICS ONC RPC global work area.**

Explanation: The connection manager found that the length of its global work area is not correct.

System action: A system dump is taken. CICS ONC RPC is disabled. It is not possible to enable CICS ONC RPC until DFHRPTRU has been correctly defined to CICS. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Ensure that DFHRPTRU has not been enabled by an operator command.

Destination: CRPO

Modules: DFHRPC0B

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1907 *date time applid tranid* **The CICS ONC RPC connection manager found invalid data in the global work area.**

Explanation: The connection manager found invalid data in the global work area. This is probably caused by a storage overwrite.

System action: A system dump is taken. CICS ONC RPC is disabled. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Investigate the reason for the storage overwrite

Destination: CRPO

Modules: DFHRPC0B

XMEOUT Parameters: *date, time,applid, tranid*

DFHRP1950 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The connection manager has received an unexpected response from CICS following an EXEC CICS command.

System action: A system dump is taken. Registration of the 4-tuple currently being processed is not possible. The 4-tuple is not registered. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1951 *date time applid tranid* **The CICS ONC RPC connection manager could not load the requested XDR program *xdrname*. EIBRESP: *eibresp* EIBRESP2: *eibresp2* Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: *hostaddr*.**

Explanation: The connection manager used EXEC CICS LOAD for the CICS program *xdrname*, which has been requested as the XDR routine for the 4-tuple being processed, but received an error response.

System action: The 4-tuple is not registered.

User response: The problem is probably due to an error in defining the requested program *xdrname* to CICS, or to wrongly defining an XDR routine name for the 4-tuple. Use the values provided in *eibresp* and *eibresp2* to identify the reason for the error in the LOAD, and use the CICS CEDA transaction or the connection manager to rectify the problem.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, xdrname, eibresp, eibresp2, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1952 *date time applid tranid* **The CICS ONC RPC connection manager could not load the XDR routine *xdrname*. EIBRESP: *eibresp* EIBRESP2: *eibresp2* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol*. Host IP address: *hostaddr*.**

Explanation: The connection manager used EXEC CICS LOAD for CICS program with name *xdrname*, which has been requested as the XDR routine for the 4-tuple being processed, but received an error response.

System action: The 4-tuple is not registered.

User response: Use the values provided in EIBRESP and EIBRESP2 to identify the reason for the error in the LOAD.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, xdrname, eibresp, eibresp2, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1953 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error when loading XDR routine *xdrname*. EIBRESP: *eibresp* EIBRESP2: *eibresp2* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol*. Host IP address: *hostaddr*.**

Explanation: The connection manager used EXEC CICS LOAD for the CICS program *xdrname*, which has been requested as the XDR routine for the 4-tuple being processed, but it received an unexpected response.

System action: A system dump is taken. The 4-tuple is not registered. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, xdrname, eibresp, eibresp2, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1954 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error detected while registering a 4-tuple. Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol*. Host IP address: *hostaddr*.**

Explanation: The connection manager has received an unexpected response from CICS following an EXEC CICS command.

System action: A system dump is taken. The connection manager abends with abend code ARPV. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1955 *date time applid tranid* **The CICS ONC RPC connection manager could not register a 4-tuple because of an internal error. Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol*. Host IP address: *hostaddr*.**

Explanation: The connection manager could not add an XDR routine name to an internal table.

System action: The 4-tuple is not registered.

User response: Try to register the 4-tuple again. If the condition persists, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1956 *date time applid tranid* **CICS ONC RPC is being disabled. Requested operation not performed. Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol*. Host IP address: *hostaddr*.**

Explanation: The connection manager is unable to

complete the current register operation because CICS ONC RPC is in disable processing.

System action: The 4-tuple is not registered.

User response: Once CICS ONC RPC has completed disable processing, enable it again using the connection manager, and try the register operation again.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1957 *date time applid tranid* **CICS ONC RPC is not enabled, so the register operation could not be performed. Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol*. **Host IP address:** *hostaddr*.

Explanation: The connection manager is unable to complete the current register operation because CICS ONC RPC is not currently enabled. It may have been disabled by another connection manager transaction.

System action: The 4-tuple is not registered.

User response: Use the connection manager to enable CICS ONC RPC, and try the register operation again.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1958 *date time applid tranid* **The CICS ONC RPC connection manager could not register the 4-tuple because it was already registered. Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol*. **Host IP address:** *hostaddr*.

Explanation: The connection manager is unable to complete the current register operation because the requested 4-tuple is already registered.

System action: The connection manager continues, but the 4-tuple is not registered.

User response: This may be a temporary condition, so try the register again. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. If the condition persists, see the *CICS External Interfaces Guide* for further guidance on how to proceed.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1959 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while registering a 3-tuple with TCP/IP for MVS. Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol*. **Host IP address:** *hostaddr*.

Explanation: The connection manager is unable to complete the current register operation because an error was returned by TCP/IP for MVS.

System action: The connection manager continues, but the 4-tuple is not registered.

User response: See the associated diagnostics issued by CICS and TCP/IP for MVS for problem determination. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1960 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while registering a 3-tuple with TCP/IP for MVS. Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol*. **Host IP address:** *hostaddr*.

Explanation: The connection manager is unable to complete the current register operation because an error was returned by TCP/IP for MVS. This may be on an `svcudp_create` or `svctcp_create` operation.

System action: The connection manager continues, but the 4-tuple is not registered.

User response: See the associated diagnostics issued by CICS and TCP/IP for MVS for problem determination. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1961 *date time applid tranid* **Data entered in field *fieldname1* is incompatible with data entered in field *fieldname2*.**

Explanation: Data was entered on a connection manager panel in *fieldname1* that is incompatible with data entered in *fieldname2*.

System action: The connection manager panel is

redisplayed and the field in error is highlighted.

User response: Enter compatible data in the fields indicated.

Destination: Terminal End User

Modules: DFHRPC0D, DFHRPC05

DFHRP1962 *date time applid tranid* **Enter the Program Number, Version Number, Procedure Number and Protocol for the 4-tuple to be displayed.**

Explanation: To retrieve information about a 4-tuple in the CICS ONC RPC data set you must supply the program number, version number, procedure number, and protocol.

System action: None.

User response: Enter the required data.

Destination: Terminal End User

Modules: DFHRPC0D, DFHRPC03

DFHRP1963 *date time applid tranid* **Enter the following fields before register or save to data set: Program Number, Version Number, Procedure Number, XDR Routines, and Program Name.**

Explanation: The following fields are required before registration or saving of the 4-tuple: the Program Number, Version Number, Procedure Number, Inbound XDR Routine, Outbound XDR Routine (if RPC Call Type of blocking), and Program Name.

System action: The connection manager panel is redisplayed.

User response: Enter valid data in the field(s) indicated.

Destination: Terminal End User

Modules: DFHRPC0D, DFHRPC05

DFHRP1964 *date time applid tranid* **Data entered in the Getlengths field is incompatible with data entered in the Server Input Length or Server Output Length fields.**

Explanation: Either you have specified YES for Getlengths and put information in Server Input Length or Server Output Length, or you have specified NO for Getlengths but put no information in Server Input Length and Server Output Length.

System action: The connection manager panel is redisplayed.

User response: Decide whether the lengths are to be specified on this panel, or to be supplied by the **Getlengths** function of the converter for this 4-tuple.

Destination: Terminal End User

Modules: DFHRPC0D, DFHRPC05

DFHRP1965 *date time applid tranid* **With Server Data Format of CONTIGUOUS, the Server Input Length and Server Output Length together must not exceed 32767 Bytes.**

Explanation: An invalid server data length has been detected on a CRPC panel. The maximum total data length which can pass between the alias and the CICS program that services the client request is 32767. If server data format of CONTIGUOUS is specified, the Server Input Length and the Server Output Length added together must not exceed this value.

System action: The connection manager panel is redisplayed.

User response: Enter valid data in the fields.

Destination: Terminal End User

Modules: DFHRPC0D, DFHRPC05

DFHRP1966 *date time applid tranid* **Procedure Number of 0 is not allowed.**

Explanation: A value of zero has been entered in the Procedure Number field. This is not allowed.

System action: The connection manager panel is redisplayed, and the field in error is highlighted.

User response: Enter valid data in the field indicated.

Destination: Terminal End User

Modules: DFHRPC0D, DFHRPC05, DFHRPC06

DFHRP1967 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while trying to register a 4-tuple. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The connection manager detected an internal error while trying to register a 4-tuple.

System action: A system dump is taken. The connection manager continues. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: See associated messages to find out whether the 4-tuple was registered. You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1968 *date time applid tranid* **The CICS ONC RPC connection manager has not performed a register operation because it detected an invalid global work area. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The connection manager is unable to complete the current register operation because it has detected an invalid global work area address. CICS ONC RPC may have been disabled by another connection manager transaction.

System action: The connection manager continues, but the 4-tuple is not registered.

User response: Use the connection manager to enable CICS ONC RPC, and try the register operation again. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1969 *date time applid tranid* **The CICS ONC RPC connection manager detected an abend in converter *progrname* during Getlengths processing. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The connection manager is unable to complete the current register operation because it has detected an abend in the converter when invoking it for the **Getlengths** function.

System action: The connection manager continues, but the 4-tuple is not registered.

User response: Use CICS diagnostics to correct the converter.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, progrname, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1970 *date time applid tranid* **The CICS ONC RPC connection manager has registered the 4-tuple. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The 4-tuple has been registered.

System action: None.

User response: None.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1980 *date time applid tranid* **The CICS ONC RPC connection manager cannot register the 4-tuple because it has already been registered. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The 4-tuple has already been registered.

System action: The connection manager panel is redisplayed.

User response: Enter a new 4-tuple for registration.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1981 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while registering a 4-tuple. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The connection manager has detected an internal error while registering the 4-tuple.

System action: The 4-tuple is not registered.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1982 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error detected while registering a 4-tuple. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The connection manager has detected an internal error while registering the 4-tuple.

System action: Processing continues.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1983 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while linking to the converter converter_program_name. EIBRESP: eibresp EIBRESP2: resp2val Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The connection manager used EXEC CICS LINK for the converter to perform **Getlengths** processing for the 4-tuple. The response was PGMIDERR.

System action: The 4-tuple is not registered.

User response: Use the EIBRESP2 value to identify the problem.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, eibresp, resp2val,X'prognum', X'versnum', X'procnum',protocol, hostaddr*

DFHRP1984 *date time applid tranid* **The CICS ONC RPC connection manager cannot link to converter converter_program_name because it is remote. EIBRESP: eibresp EIBRESP2: resp2val Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The connection manager used EXEC CICS LINK for the converter to perform **Getlengths** processing, but the response was TERMERR or SYSIDERR. The connection manager passes pointers to

the converter, so the converter must be in the same CICS region as CICS ONC RPC.

System action: The 4-tuple is not registered.

User response: Install and define the converter program in the same CICS region as CICS ONC RPC.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, eibresp, resp2val,X'prognum', X'versnum', X'procnum',protocol, hostaddr*

DFHRP1985 *date time applid tranid* **The CICS ONC RPC connection manager received an unexpected response from CICS while linking to converter converter_program_name. EIBRESP: eibresp EIBRESP2: resp2val Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The connection manager used EXEC CICS LINK for the converter to perform **Getlengths** processing, but received an unexpected response.

System action: The 4-tuple is not registered.

User response: See the associated diagnostics issued by CICS for problem determination.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, eibresp, resp2val,X'prognum', X'versnum', X'procnum',protocol, hostaddr*

DFHRP1986 *date time applid tranid* **The CICS ONC RPC connection manager is not authorized to link to converter converter_program_name. EIBRESP: eibresp EIBRESP2: resp2val Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The connection manager used EXEC CICS LINK for the converter to perform **Getlengths** processing, but received a NOTAUTH response.

System action: The 4-tuple is not registered.

User response: When CICS ONC RPC is next disabled, redefine connection manager with RESSEC=NO.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, eibresp, resp2val,X'prognum',*

X'versnum', X'procnum', protocol, hostaddr

DFHRP1988 *date time applid tranid* **The CICS ONC RPC connection manager encountered an error in Getlengths processing in converter** *converter_program_name*.
Program: *X'prognum'* **Version:** *X'versnum'*
Procedure: *X'procnum'* **Protocol:** *protocol*.
Host IP address: *hostaddr*.

Explanation: Getlengths returned URP_EXCEPTION.

System action: The Getlengths parameter area is traced. The 4-tuple is not registered.

User response: Use the trace information to correct the converter.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1989 *date time applid tranid* **The CICS ONC RPC connection manager encountered an error in Getlengths processing in converter** *converter_program_name*.
Program: *X'prognum'* **Version:** *X'versnum'*
Procedure: *X'procnum'* **Protocol:** *protocol*.
Host IP address: *hostaddr*.

Explanation: Getlengths returned URP_INVALID.

System action: The Getlengths parameter area is traced. The 4-tuple is not registered.

User response: Use the trace information to correct the converter.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1990 *date time applid tranid* **The CICS ONC RPC connection manager encountered an error during Getlengths processing in converter** *converter_program_name*.
Program: *X'prognum'* **Version:** *X'versnum'*
Procedure: *X'procnum'* **Protocol:** *protocol*.
Host IP address: *hostaddr*.

Explanation: Getlengths returned URP_DISASTER.

System action: The Getlengths parameter area is traced. The 4-tuple is not registered.

User response: Use the trace information to correct the converter.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1991 *date time applid tranid* **The CICS ONC RPC connection manager has detected an invalid server data length returned by the Getlengths function of converter** *converter_program_name*.
Program: *X'prognum'* **Version:** *X'versnum'*
Procedure: *X'procnum'* **Protocol:** *protocol*.
Host IP address: *hostaddr*.

Explanation: The communication area length calculated from the **glength_server_data_format**, **glength_server_input_data_len**, and **glength_server_output_data_len** parameters exceeds 32 767.

System action: The Getlengths parameter area is traced. The 4-tuple is not registered.

User response: Use the trace information to correct the converter.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP1992 *date time applid tranid* **The CICS ONC RPC connection manager has detected an invalid server data format returned by the Getlengths function of converter** *converter_program_name*.
Program: *X'prognum'* **Version:** *X'versnum'*
Procedure: *X'procnum'* **Protocol:** *protocol*.
Host IP address: *hostaddr*.

Explanation: The **glength_server_data_format** returned must have a value of URP_CONTIGUOUS or URP_OVERLAID.

System action: The Getlengths parameter area is traced. The 4-tuple is not registered.

User response: The **glength_server_data_format** must be set to URP_CONTIGUOUS or URP_OVERLAID, or left unaltered, in which case the value specified on panel DFHRP5 when the 4-tuple was registered will be used.

Destination: CRPO

Modules: DFHRPC0E

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

DFHRP2000 *date time applid tranid* **A browse of the CICS ONC RPC alias list could not be performed because another browse is active.**

Explanation: Only one task can browse the alias list at a time. This is enforced by use of an ENQ in the connection manager. However, the alias list component has been called to start a browse and has found that there is already a browse active. This is due either to a logic error in CICS ONC RPC code, or to a storage overwrite.

System action: A system dump is taken. The browse request is rejected. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If the problem is due to a storage overwrite, it is almost certain that there are errors in other CICS functions for no apparent reason. If this is not the case, you may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CRPO

Modules: DFHRPAL

XMEOUT Parameters: *date, time,applid, tranid*

DFHRSxxxx messages

DFHRS2110 *date time applid* **Abnormal reply to exchange log name request received from system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: An abnormal reply has been received in response to an exchange log name request sent either following a session failure or at first session initiation after system restart. The abnormal reply may indicate that:

- The remote system detected a warm or cold mismatch, or a log name mismatch.
- The remote system failed to interpret the exchange log name data sent to it.

System action: For APPC protocol, any synclevel 2 attaches are inhibited. This prevents recoverable activity between the two systems.

For IRC protocol, the message indicates that resynchronization was attempted and failed.

User response: The most likely cause of the message is an initial start (as opposed to emergency restart or its equivalent) of this system when the remote system has resynchronization work outstanding. If it is a cold or warm mismatch or log name mismatch, other diagnostic messages on the local system may indicate the reason for the error. If it is not, examine the log of the remote system which should have generated diagnostic information describing the reason for the abnormal response.

For APPC protocol where a logname mismatch is suspected, override the error situation by issuing the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection.

Note: If this command is issued, CICS unilaterally commits any resources which may be waiting for APPC resynchronization. In addition, CICS does

not carry out any APPC resynchronization activity with the remote system.

For IRC, the message may indicate an initial start of one system when the other has resynchronization outstanding; the resynchronization was started before the initial start occurred and becomes invalid. The associated unit of work may need to be committed by using CEMT SET UOW. The message should not recur.

Destination: Console and Transient Data Queue CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sysid, netname, protocol*

DFHRS2111 *date time applid* **Cold/Warm restart mismatch with system *sysid*,netname *netname*,protocol *protocol*.**

Explanation: A cold start indication was received from the remote system during an exchange log names sequence. However, this system has units of work that need resynchronizing from the previous run. An exchange log names sequence is started either following a session failure or at first session initiation after system restart; both the local and remote systems may initiate the sequence at the same time.

System action: Any synclevel 2 attaches are inhibited. This means that recovery activity between the two systems is prevented.

User response: Override the error by issuing CEMT SET CONN(*sysid*) NOTPENDING commands for the failing connection.

Note: If this command is issued, CICS unilaterally commits any resources which may be waiting for APPC resynchronization. In addition CICS does not carry out any APPC resynchronization with the remote system.

Destination: Console and Transient Data Queue
CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sysid, netname, protocol*

DFHRS2112 *date time applid* **Log name mismatch with system *sysid*, netname *netname*, protocol *protocol*. Expected LUNAME.LOGNAME *local_logname* Received LUNAME.LOGNAME *remote_logname* .**

Explanation: A failure has occurred in the exchange log names process which is carried out either following a session failure or at first session initiation after system restart. This system's memory of the remote system's log name conflicts with the log name sent by the remote system.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

For APPC protocol, any synclevel 2 attaches are inhibited. This means that recoverable activity between the two systems is prevented.

For IRC protocol, resynchronization was attempted and failed.

User response: For APPC, override the error by issuing the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection.

Note: If this command is issued, CICS unilaterally commits any resources which may be waiting for APPC resynchronization. In addition CICS does not carry out any APPC resynchronization activity with the remote system. The message may indicate a logic error in CICS or the remote system, and you may need assistance from IBM to prevent a recurrence. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

For IRC, the message may indicate the initial start of one system when the other has resynchronization outstanding; the resynchronization was started before the initial start occurred and becomes invalid. The associated unit of work may need to be committed by using CEMT SET UOW. The message should not recur.

Destination: Console and Transient Data Queue
CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sysid, netname, protocol, local_logname, remote_logname*

DFHRS2113 *date time applid* **Log name mismatch with system *sysid*, netname *netname*, protocol *protocol*, local LOGNAME *local_logname* , received LOGNAME *remote_logname* .**

Explanation: This message is issued when a failure has occurred in the exchange log names process which is carried out prior to resynchronization following an earlier session failure. System *sysid* has sent an exchange log names request which contains the remote system's memory (*remote_logname*) of this system's log name (*local_logname*).

This system has detected a log name mismatch. This indicates that system *sysid* and this system do not have the correct logs for resynchronization.

System action: For APPC protocol, any synclevel 2 attaches are inhibited. This means that recoverable activity between the two systems is prevented.

For IRC protocol, the message indicates that resynchronization was attempted and failed.

User response: For APPC, override the error by issuing the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection.

Note: If this command is issued, CICS unilaterally commits any resources which may be waiting for APPC resynchronization. In addition CICS does not carry out any APPC resynchronization activity with the remote system. The message may indicate a logic error in CICS or the remote system, and you may need assistance from IBM to prevent a recurrence. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

For IRC, the message may indicate the initial start of one system when the other has resynchronization outstanding; the resynchronization was started before the initial start occurred and becomes invalid. The associated unit of work may need to be committed by using CEMT SET UOW. The message should not recur.

Destination: Console and Transient Data Queue
CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sysid, netname, protocol, local_logname, remote_logname*

DFHRS2114 *date time applid* **Abnormal termination of exchange log names sequence received from system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: This message is issued when an FMH7 has been received in response to an exchange log name reply. An exchange log names sequence is sent either

following a session failure or at first session initiation after system restart. The remote system started the sequence, and the FMH7 reply indicates that the remote system failed to interpret the exchange log name reply data sent to it.

System action: For APPC protocol, any synclevel 2 attaches are inhibited. This means that recoverable activity between the two systems is prevented.

For IRC protocol, the message indicates that resynchronization was attempted and failed. Communication continues.

User response: Investigate the cause of the error using the system dump. Format the control blocks for the trace domain and the terminal control program. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this exchange log names conversation.

The APPC send and receive buffers for a session are clearly labelled in the dump and are printed below the TCTTE for the session to which they belong. For IRC, the TIOA contains the equivalent data. Check the data against the format of the exchange log names reply GDS variable. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

Examine the log of the remote system. If a protocol violation was detected, the remote system may have generated diagnostic information itself which may help to diagnose the cause.

Destination: Console and Transient Data Queue CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sysid, netname, protocol*

DFHRS2115 *date time applid protocol* **protocol support mismatch with system *sysid*, netname *netname*. Expected support byte *X'ww'*, received support byte *X'xx'*, expected extended support bytes *X'yyyy'*, received extended support bytes *X'zzzz'*.**

Explanation: This system's memory of the protocols previously negotiated with the remote system conflicts with the indicators sent in an exchange log names variable.

System action: For APPC protocol, any synclevel 2 attaches are inhibited. This means that recoverable activity between the two systems is prevented.

For IRC protocols, resynchronization fails. Communications continue normally.

User response: For APPC protocols, the indicators expected from a CICS Transaction Server system are: basic support, *X'70'*; extended support, *X'C000'*. For

CICS/ESA 4.1 the expected indicators are: basic support, *X'40'*; extended support, *X'0000'*. If this combination of the four indicator fields appears in the message, first check that you have Initial started the partner system at the CICS Transaction Server level during a migration from CICS/ESA 4.1, or Cold started a CICS/ESA 4.1 system after running CICS Transaction Server. If this possibility can be ruled out, the message may indicate a logic error in CICS or in the remote system and you may need assistance from IBM to prevent a recurrence. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

You can override the error situation by issuing CEMT SET CONN(*sysid*) NORECOVDATA commands for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection.

Note: If this command is issued, CICS unilaterally commits any resources which may be waiting for APPC resynchronization. In addition CICS does not carry out any APPC resynchronization activity with the remote system.

For IRC protocols, you may need to use the CEMT SET UOW command to resolve the state of any units or work which cannot be resolved by the normal resynchronization process.

Destination: Console and Transient Data Queue CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time, applid, protocol, sysid, netname, X'ww', X'xx', X'yyyy', X'zzzz'*

DFHRS2116 *date time applid* **Abnormal termination of exchange log names sequence received from system *sysid*, netname *netname*, protocol *protocol*. The connection was in a cold state.**

Explanation: An FMH7 has been received in response to an exchange log names reply. An exchange log names sequence is sent either following a session failure or at first session initiation after system startup. This system was either started with the SIT parameter START=INITIAL or CEMT SET CONN(*sysid*) NORECOVDATA has been issued, both of which reset the state of the connection. This means that no log name is stored for the remote system.

For APPC protocols, the FMH7 reply may indicate one of two causes:

- The remote system has resynchronization work outstanding following a previous failure of a conversation during sync point processing and has detected a cold/warm mismatch.
- The remote system failed to interpret the exchange log names reply data sent to it.

For IRC protocol, the problem is caused by the failure of the remote system to interpret the exchange log names reply data.

System action: For APPC protocol, any synclevel 2 attaches are inhibited. This means that recoverable activity between the two systems is prevented.

For IRC protocol, the message indicates that resynchronization was attempted and failed. Communication continues.

User response: The most likely cause of the message is an initial start (as opposed to emergency restart or its equivalent) of this system when the other has resynchronization work outstanding. This can be confirmed by examining the message log of the remote system.

For APPC protocol, the connection on the remote system may need to be reset by issuing the CEMT SET CONN(sysid) NOTPENDING command against the connection entry for this system.

Note: If this command is issued, CICS unilaterally commits any resources which may be waiting for APPC resynchronization.

For IRC protocol, a protocol violation or logic error is the only possible cause.

If a cold/warm mismatch is eliminated as the cause of the error, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sysid, netname, protocol*

DFHRS2117 *date time applid* **Abnormal reply to exchange log names received from system *sysid*, netname *netname*, protocol *protocol*. The connection on this system was in a cold state.**

Explanation: This message is issued when an abnormal reply has been received in response to an exchange log name request. An exchange log names sequence is sent either following a session failure or at first session initiation after system startup. This system was either started with the SIT parameter START=INITIAL, or CEMT SET CONN(*sysid*) NORECOVDATA has been issued, and no log name is stored for the remote system. The abnormal reply may indicate one of two causes in the case of APPC protocol.

- The remote system has resynchronization work outstanding following a previous failure of a

conversation during sync point processing and has detected a cold/warm mismatch.

- The remote system failed to interpret the exchange log name data sent to it.

For IRC protocol, the problem is caused by the failure of the remote system to interpret the exchange log name data.

System action: For APPC protocol, any synclevel 2 attaches are inhibited. This means that recoverable activity between the two systems is prevented.

For IRC protocol, the message indicates that resynchronization was attempted and failed. Communication continues.

User response: The most likely cause of the message is an initial start (as opposed to emergency restart or its equivalent) of this system when the other has resynchronization work outstanding. This can be confirmed by examining the message log of the remote system.

For APPC protocol, the connection on the remote system may need to be reset by issuing the CEMT SET CONN(sysid) NOTPENDING command against the connection entry for this system.

Note: If this command is issued, CICS unilaterally commits any resources waiting for APPC resynchronization.

For IRC protocol, a protocol violation or logic error is the only possible cause.

If a cold/warm mismatch is eliminated as the cause of the error, you need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sysid, netname, protocol*

DFHRS2118 *date time applid* **Abnormal termination of exchange log names sequence received from system *sysid*, netname *netname*, protocol *protocol*. There has been previous contact with that system.**

Explanation: This message is issued when an FMH7 has been received in response to an exchange log name reply.

An exchange log names sequence is sent either following a session failure or at first session initiation after system startup. Both systems have records of previous contact and have log names stored which were being verified by the exchange log names

protocol, which was initiated by the remote system.

The FMH7 may indicate one of two causes:

- The remote system has detected a mismatch in the log names or protocol support indicated in the exchange log name reply sent to it.
- The remote system failed to interpret the exchange log name reply data sent to it.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

For LU6.2 protocol, any synclevel 2 attaches are inhibited. This means that recoverable activity between the two systems is prevented.

For IRC protocol, the message indicates that resynchronization was attempted and failed. Communication continues.

User response: For APPC protocol, the connection may need to be reset by issuing the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection.

Note: If this command is issued, CICS unilaterally commits any resources which may be waiting for APPC resynchronization. In addition, CICS does not carry out any APPC resynchronization activity with the remote system.

The cause of the error may be indicated by diagnostic information produced by the remote system. The system dump taken by local system can be used to investigate the possibility of an error in the exchange log names reply GDS.

Format the control blocks for the trace domain and the terminal control program. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this exchange log names conversation.

The APPC send and receive buffers for a session are clearly labelled in the dump and are printed below the TCTTE for the session to which they belong. For IRC, the TIOA contains the equivalent data. Check that the data against the format of the exchange log names reply GDS variable. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

Destination: Console and Transient Data Queue CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sysid, netname, protocol*

DFHRS2134 *date time applid* **An error has occurred while sending an exchange log names request on session *sessid* to remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: An error has occurred during the transmission of an exchange log names request to a remote system. CICS was attempting to establish the connection on first contact with the partner, or to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

This message implies a failure of the session used to carry the transmission.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

In many cases CICS continues to operate normally, and the resynchronization or connection establishment is retried in an attempt to overcome the session failure. However for APPC protocol, a repeated failure may have resulted in exchange log names flows being unsuccessful preventing any synclevel 2 attaches between the local system and the remote system.

For IRC protocol, resynchronization has failed but the connection continues to operate normally.

User response: Issue CEMT INQUIRE CONN(*sysid*) and look at the XOK field. If exchange log names has not been done, the exchange log names process can be retried by issuing the CEMT SET CONN(*sysid*) RESYNC command.

Investigate the cause of the error using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system, and examine the log of the remote system. If a protocol violation was detected, the remote system may have generated diagnostic information itself.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this exchange log names conversation.

If the internal trace table is available, use it to track the commands issued against that session and check that the state transitions of the User state machine are correct. If any of the state transitions are not valid, it is possible that there has been a CICS logic error.

Destination: Console and Transient Data Queue CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sessid, sysid, netname, protocol*

DFHRS2135 *date time applid* **An error has occurred while sending a compare states request on session *sessid* to remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: An error has occurred during the transmission of a compare states request to a remote system. CICS was attempting to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

This implies one of the following:

- The remote system has detected a protocol violation in the local system's exchange log names GDS variable.
- Some other error in communications has occurred.

System action: For APPC protocol connections (but not IRC protocol), the failure may have prevented the completion of the exchange log names protocol and this prevents any synclevel 2 attaches between the local system and the remote system.

A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: For APPC protocol, investigate the state of the connection. Issue CEMT INQUIRE CONN(*sysid*) and look at the XOK field. If exchange log names has not been done, the exchange log names process can be retried by issuing the CEMT SET CONN(*sysid*) RESYNC command. If there has been previous successful contact between the systems the connection can be reset to its original state and retried. The state can be reset by issuing CEMT SET CONN(*sysid*) NORECOVDATA. It may be necessary to issue this command on both sides of the connection.

Note: If this command is issued, CICS unilaterally commits any resources which may be waiting for APPC resynchronization. In addition, CICS does not carry out any APPC resynchronization activity with the remote system.

The cause of the error may be indicated by diagnostic information produced by the remote system. Use the system dump taken by the local system to investigate the possibility of an error in the GDS variables.

Format the control blocks for the trace domain and the terminal control program. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this exchange log names conversation.

The APPC send and receive buffers for a session are clearly labelled in the dump and are printed below the TCTTE for the session to which they belong. For IRC, the TIOA contains the equivalent data. Check that the data against the format of the exchange log names and compare states GDS variables. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

Destination: Console and Transient Data Queue CSMT

XMEOUT Parameters: *date, time,applid, sessid, sysid, netname, protocol*

DFHRS2136 *date time applid* **An error has occurred while receiving an exchange log names reply on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: An error has occurred during an attempt to receive exchange log names reply data from a remote system. CICS was attempting to initialize the connection, or to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

The message means that:

- The remote system has detected a protocol violation in the local system's exchange log names GDS variable or compare states GDS variable and sent an FMH7 to indicate the error.
- Some other error in communication has occurred in either the local or the remote system.

System action: For APPC protocol the failure of exchange log names may mean that any synclevel 2 attaches are inhibited. This means that recoverable activity between the two systems is prevented.

For IRC protocol, the message indicates that resynchronization was attempted and failed. Communication continues.

A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: For APPC protocol, investigate the state of the connection. Issue CEMT INQUIRE CONN(*sysid*) and look at the XOK field. If exchange log names has not been done, the exchange log names process can be retried by issuing the CEMT SET CONN(*sysid*) RESYNC command. If there has been previous successful contact between the systems the connection may be reset to its original state and retried. The state can be reset by issuing CEMT SET CONN(*sysid*) NORECOVDATA. It may be necessary to issue this command (or its equivalent) on both sides of the connection.

Note: If this command is issued, CICS unilaterally commits any resources which may be waiting for APPC resynchronization. In addition CICS does not carry out any APPC resynchronization activity with the remote system.

The cause of the error may be indicated by diagnostic information produced by the remote system. Use the system dump taken by the local system to investigate the possibility of an error in the GDS variables.

Format the control blocks for the trace domain and the terminal control program. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this exchange log names conversation.

The APPC send and receive buffers for a session are clearly labelled in the dump and are printed below the TCTTE for the session to which they belong. For IRC, the TIOA contains the equivalent data. Check the data against the format of the exchange log names and compare states GDS variables. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

Destination: Console and Transient Data Queue
CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

DFHRS2137 *date time applid* **An error has occurred while receiving a compare states reply on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: An error has occurred during the receipt of a compare states reply from a remote system. CICS was attempting to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

This implies one of the following:

- The remote system has detected a protocol violation in the local system's compare states GDS variable.
- There has been an internal error in CICS APPC processing.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

CICS continues to operate normally and the resynchronization attempt is retried at the next opportunity.

User response: Investigate the cause of the error first by examining the log of the remote system which may

have produced diagnostic information about the data it received. The problem can be investigated locally using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

Format the system dump to show the control blocks belonging to the trace domain and the terminal control program. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this resynchronization conversation.

If the internal trace table is available, use this to track the commands issued against that session and check that the state transitions of the user state machine are correct. If any of the state transitions are not valid, it is possible that there has been a CICS logic error.

The APPC send and receive buffers for a session are clearly labelled in the dump and are printed below the TCTTE for the session to which they belong. Similar information is contained in the TIOA for IRC sessions. Locate the data for the session in question, and check that the contents of the buffer are correct. The buffer contains the compare states GDS variable. The correct format of this SNA defined data can be found in the *SNA Formats* manual.

Destination: Console and Transient Data Queue
CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

DFHRS2138 *date time applid* **Invalid exchange log names reply data has been received on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: The local system has received data which it attempted to parse using the exchange log names reply GDS format. Either the data could not be parsed, or invalid data was detected.

This system was attempting to initialize the connection for synclevel 2 work, or to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing. Exchange log names was sent and an invalid reply received.

This failure implies an error in the remote system or a CICS logic error.

System action: If resynchronization was being attempted it has failed and is retried at the next opportunity.

For APPC protocol connections (but not IRC protocol) the failure prevents the completion of the exchange log names protocol and this may prevent any synclevel 2 attaches between the local system and the remote system.

A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: For APPC protocol, investigate the state of the connection. Issue CEMT INQUIRE CONN(*sysid*) and look at the XOK field. If exchange log names has not been done, the exchange log names process can be retried by issuing the CEMT SET CONN(*sysid*) RESYNC command. If there has been previous successful contact between the systems the connection may be reset to its original state and retried. The state can be reset by issuing CEMT SET CONN(*sysid*) NORECOVDATA. It may be necessary to issue this command (or its equivalent) on both sides of the connection.

Note: If this command is issued, CICS unilaterally commits any resources which may be waiting for APPC resynchronization. In addition, CICS does not carry out any APPC resynchronization activity with the remote system.

Investigate the cause of the error using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

An exception trace entry contains the received data, and the reason for the failure is interpreted. Check the format of the exchange log names reply GDS variable. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

Destination: Console and Transient Data Queue CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

DFHRS2139 *date time applid* **Invalid compare states reply data has been received on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: The local system has received data which it attempted to parse using the compare states reply GDS format. Either the data could not be parsed or invalid data was detected.

The local system was attempting to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing. Data from the remote system received in reply to the compare states was invalid.

This failure implies an error in the remote system or a CICS logic error.

System action: A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

The failure prevents the completion of the resynchronization of distributed resources.

User response: Investigate any units of work for which resynchronization is outstanding using the CEMT INQUIRE UOWLINK SYSID(*sysid*) command. Use the same command on the remote system to determine whether to commit or backout the unit of work. Alternatively, for APPC connections, resynchronization can be overridden by issuing the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection.

Note: If this command is issued, CICS unilaterally commits any resources which may be waiting for resynchronization. Also, CICS does not carry out any resynchronization activity with the remote system.

Investigate the cause of the error using the system dump. Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

An exception trace entry contains the received data, and the reason for the failure is interpreted. Check the format of the compare states reply GDS variable. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

Destination: Console and Transient Data Queue CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

DFHRS2140 *date time applid* **A protocol violation has occurred while resynchronizing with remote system *sysid*, netname *netname*, protocol *protocol*, via session *sessid*. The resynchronization was initiated by the local system.**

Explanation: The local system has detected a protocol violation while resynchronizing with the remote system. CICS was attempting to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing. The resynchronization was initiated by the local system.

This implies one of the following:

- An error was detected by the remote system and the resynchronization sequence was abnormally terminated.
- A logic error exists in the remote system which caused it to send invalid data.
- A CICS logic error.

System action: CICS continues to operate normally and the resynchronization attempt is retried at the next opportunity.

A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Diagnostics may have been output by the local CICS system, the access methods, or the operating system. Also, investigate the cause of the error in the remote system. It may have produced diagnostic messages indicating why the resynchronization sequence was terminated.

The resynchronization sequence can be analyzed locally by formatting the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this resynchronization conversation.

The trace entries for the DFHCRRSY program show the state of the conversation which was being used and the data received. At the point of failure a confirmation was expected from the remote system as the final flow in the sequence but was not received.

Compare the resynchronization flows with those documented in the *SNA LU6.2 Reference: Peer Protocols manual*, (SC30-6808). A possible cause of this error is that the remote system did not observe the correct protocols. Investigation at the remote system may be necessary.

Destination: Console and Transient Data Queue
CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sysid, netname, protocol, sessid*

DFHRS2141 *date time applid* **A protocol violation has occurred while resynchronizing with remote system *sysid*, netname *netname*, protocol *protocol*, via session *sessid*. The resynchronization was initiated by the remote system.**

Explanation: The local system has detected a protocol violation while resynchronizing with the remote system. CICS was attempting to resynchronize

distributed resources following an earlier failure of a protected conversation during sync point processing. The resynchronization was initiated by the remote system.

This implies one of the following:

- An error was detected by the remote system and the resynchronization sequence was abnormally terminated.
- A logic error exists in the remote system which caused it to send invalid data.
- A CICS logic error.

System action: CICS continues to operate normally and the resynchronization attempt is retried at the next opportunity.

A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: See any diagnostics output by the local CICS system, the access methods, or the operating system. Also, investigate the cause of the error in the remote system; it may have produced diagnostic messages indicating why the resynchronization sequence was terminated.

The resynchronization sequence can be analyzed locally by formatting the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this resynchronization conversation.

The trace entries for the DFHCRRSY program show the state of the conversation which was being used and the data received. At the point of failure a request confirmation message was expected from the remote system as the third flow in the sequence but was not received.

Compare the resynchronization flows with those documented in the *SNA LU6.2 Reference: Peer Protocols manual*, (SC30-6808). A possible cause of this error is that the remote system did not observe the correct protocols; investigation at the remote system may be necessary.

Destination: Console and Transient Data Queue
CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sysid, netname, protocol, sessid*

DFHRS2142 *date time applid Compare states request data could not be received on session sessid from remote system sysid, netname netname, protocol protocol.*

Explanation: The local system has received an exchange log names request from the remote system but failed while attempting to receive subsequent data which was assumed to be a compare states GDS variable. The remote system was probably attempting to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

This implies one of the following:

- An error in the remote system
- A session failure during the resynchronization
- A CICS logic error.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

The resynchronization attempt should be retried at the next opportunity by the remote system. However, for APPC protocol connections, the failure may have resulted in exchange log names flows being unsuccessful and this prevents any synclevel 2 attaches between the local system and the remote system.

User response: Issue CEMT INQUIRE CONN(*sysid*) and look at the XOK field. If exchange log names has not been done, the error situation may be correctable by issuing CEMT SET CONN(*sysid*) RESYNC. If this fails to cure the problem, resynchronization can be canceled for an APPC connection by issuing the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection.

Note: If this command is issued, CICS unilaterally commits any resources which may be waiting for resynchronization. In addition, CICS does not carry out any resynchronization activity with the remote system.

Investigate the cause of the error using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Locate the exception trace entries for the DFHCRRSY program and examine any data sent by the remote system. Also examine the state of the conversation at the point of failure. It should have been in receive state.

A possible cause is that the remote system did not send valid data or failed to follow the protocol for compare states. Compare the resynchronization flows with those documented in the *SNA LU6.2 Reference: Peer Protocols manual*, (SC30-6808). Investigation at the remote system may be necessary.

Destination: Console and Transient Data Queue
CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

DFHRS2143 *date time applid Do_know confirmation was not received on session sessid from remote system sysid, netname netname, protocol protocol.*

Explanation: The local system sent a Do_know GDS variable to the remote system but did not receive a valid reply. This indicates an earlier failure of a protected conversation during sync point processing and the resolution of the unit of work. This system was using the Do_know GDS variable to cause resynchronization to be started by the remote system.

This implies an error in the remote system or a CICS logic error.

System action: The resynchronization attempt should be retried at the next opportunity by the remote system.

A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Issue CEMT SET CONN(*sysid*) RESYNC to cause resynchronization to be retried.

Investigate the cause of the error using the system dump and any previously output diagnostic information provided by CICS, the access methods or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Locate the exception trace entries for the DFHCRRSY program and examine any data sent by the remote system. Also examine the state of the conversation at the point of failure.

A possible cause is that the remote system did not send valid data, or failed to follow the protocol for Do_Know in which case it may be necessary to obtain further diagnostic material from the remote system.

Destination: Console and Transient Data Queue
CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

DFHRS2144 *date time applid* **System_restart confirmation was not received on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: The local system sent a System_restart GDS variable to the remote system but did not receive a valid reply. This indicates that the local system has restarted and not previously contacted the remote system as part of the initiation of resynchronization protocols.

This indicates an error in the remote system or a CICS logic error.

System action: The transmission of the message is retried the next time the connection is initialized.

A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Issue CEMT SET CONN(*sysid*) RESYNC to cause transmission to be retried.

Investigate the cause of the error using the system dump and any diagnostic information provided by CICS, the access methods, or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Locate the exception trace entries for the DFHCRRSY program and examine any data sent by the remote system. Also examine the state of the conversation at the point of failure.

A possible cause is that the remote system did not send valid data or failed to follow the protocol for the System_restart message. In this case it may be necessary to obtain further diagnostic material from the remote system.

Destination: Console and Transient Data Queue CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

DFHRS2145 *date time applid* **Invalid exchange log names data has been received on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: The local system has received data which it attempted to parse using the exchange log names GDS format. Either the data could not be parsed or invalid data was detected.

The remote system was attempting to initialize the connection for synclevel 2 work or to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing. Exchange log names is sent in both of these cases.

This failure indicates either an error in the remote system or a CICS logic error.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

If resynchronization was being attempted, it has failed and is retried at the next opportunity.

For APPC protocol connections (but not IRC protocol), the failure prevents the completion of the exchange log names protocol. This prevents any synclevel 2 attaches between the local system and the remote system.

User response: For APPC protocol connections, issue CEMT INQUIRE CONN(*sysid*) and look at the XOK field. If exchange log names has not been done but there has been previous contact between the systems, the error can be overridden by resetting the state of the connection. To do this, issue CEMT SET CONN(*sysid*) NORECOVDATA commands for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection.

Note: If this command is issued, CICS unilaterally commits any resources waiting for APPC resynchronization. Also CICS does not carry out any APPC resynchronization activity with the remote system.

Investigate the cause of the error using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

An exception trace entry contains the received data, and the reason for the failure is interpreted. Check the format of the exchange log names GDS variable. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

The format of the GDS variable is incorrect and the cause of the error should be located. A likely cause is that the remote system did not send a valid GDS variable in which case it may be necessary to obtain further diagnostic material from the remote system.

Destination: Console and Transient Data Queue CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sessid, sysid, netname, protocol*

DFHRS2146 *date time applid* **Invalid compare states data has been received on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: The local system has received data which it attempted to parse using the compare states GDS format. Either the data could not be parsed or invalid data was detected.

The remote system was attempting to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

This failure indicates either an error in the remote system or a CICS logic error.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

The failure prevents the completion of the resynchronization of distributed resources.

User response: Investigate any units of work for which resynchronization is outstanding using the command CEMT INQUIRE UOWLINK SYSID(*sysid*). Use the same command on the remote system to determine whether to commit or backout the unit of work. Alternatively, resynchronization can be overridden by issuing the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection.

Note: If this command is issued, CICS unilaterally commits any resources which may be waiting for resynchronization. In addition CICS does not carry out any resynchronization activity with the remote system.

Investigate the cause of the error using the system dump and any diagnostic information provided by CICS, the access methods, or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

An exception trace entry contains the received data, and the reason for the failure is interpreted. Check the format of the compare states GDS variable. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

The format of the GDS variable is incorrect and the cause of the error should be located. A possible cause is that the remote system did not send a valid GDS

variable, in which case it may be necessary to obtain further diagnostic material from the remote system.

Destination: Console and Transient Data Queue CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sessid, sysid, netname, protocol*

DFHRS2147 *date time applid* **Unrecognized data was received following transmission of an exchange log names reply on session *sessid* to remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: An exchange log names request was received from another system and a reply was sent. More data was expected from the other system but this was not recognized as part of the exchange log names protocol.

This implies one of the following:

- The remote system has detected a protocol violation in the local system's exchange log names reply GDS variable.
- There has been an internal error in CICS processing.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

For APPC protocol, the failure may have resulted in no exchange log name flows being successful preventing any synclevel 2 attaches between the local system and the remote system.

For IRC protocol, resynchronization may fail but communications links remain active.

User response: For links using APPC protocol, issue CEMT INQUIRE CONN(*sysid*) and look at the XOK field. If exchange log names has not been done, the error situation can be overridden by issuing the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection.

Note: If this command is issued, CICS unilaterally commits any resources which may be waiting for APPC resynchronization. In addition, CICS does not carry out any APPC resynchronization activity with the remote system.

Investigate the cause of the error using the system dump and any diagnostic information provided by CICS, the access methods, or the operating system. The remote system may also have created diagnostic messages if it detected an error in the data it received.

The data sent by the local system can be investigated by formatting the system dump to show the control blocks belonging to the trace domain and the terminal control program. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this exchange log names conversation.

If the internal trace table is available, use it to track the commands issued against that session and check that the state transitions of the user state machine are correct. If any of the state transitions are not valid, it is possible that there has been a CICS logic error.

The APPC send and receive buffers for a session are clearly labelled in the dump and are printed below the TCTTE for the session to which they belong. The TIOA contains similar information for IRC. Locate the send/receive buffer for the session in question and check that the contents of the buffer are correct. The buffer should contain a valid exchange log names GDS reply variable. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

Destination: Console and Transient Data Queue
CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sessid, sysid, netname, protocol*

DFHRS2148 *date time applid* **Resynchronization with system *sysid*, netname *netname*, protocol *protocol* was attempted but was terminated because no partner log name was found.**

Explanation: CICS has initiated a resynchronization sequence following the failure of a protected conversation during syncpoint processing. No valid log name was found for the partner system. The resynchronization could not continue.

This message indicates that a CEMT SET CONNECTION NORECOVDATA command was issued before the resynchronization with the partner system could be completed. The UOW and UOWLINK describing the outstanding work have also been deleted.

System action: None

User response: None. This message is issued for information only.

Destination: CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sysid, netname, protocol*

DFHRS2149 *date time applid* **Resynchronization/Exchange log names with system *netname* (protocol *protocol*) could not be executed because no suitable connection entry was found.**

Explanation: CICS has initiated a resynchronization sequence following the failure of a protected conversation during syncpoint processing. Data exists describing the conversation but no suitable connection definition was found for the partner system. The resynchronization could not continue because communications could not be established.

System action: Processing continues.

User response: The condition may be due to the discarding of the connection definition or to a cold start which has caused a connection definition to be deleted by CICS; the definition may have been autoinstalled. An autoinstalled definition may be reinstalled by subsequent activity in the system. Alternatively, a suitable definition can be installed manually using CEDA.

Destination: CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, netname, protocol*

DFHRS2150 *date time applid* **Invalid data has been received during the resynchronization sequence on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: The local system has received data which it attempted to parse as one of the following types of SNA GDS data:

Exchange log names
Do_know
System_restart

The data could not be recognized.

The remote system was attempting to initialize the connection for synclevel 2 work, or to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

This failure implies one of the following:

- An error was detected by the remote system and it sent an error indication in an FMH7.
- An error has occurred in the remote system.
- A CICS logic error has occurred.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

If resynchronization was being attempted, it has failed and is retried at the next opportunity.

For APPC protocol connections (but not IRC protocol), the failure prevents the completion of the exchange log names protocol and this prevents any synclevel 2 attaches between the local system and the remote system.

User response: For APPC protocol connections, issue CEMT INQUIRE CONN(*sysid*), and examine the XOK field. If exchange log names has not been done but there has been previous contact between the systems, the error can be overridden by resetting the state of the connection. To do this, issue the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection.

Note: If this command is issued, CICS unilaterally commits any resources which may be waiting for APPC resynchronization. In addition, CICS does not carry out any APPC resynchronization activity with the remote system.

Investigate the cause of the error using the system dump and any diagnostic information provided by CICS, the access methods, or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on this, see the *CICS Problem Determination Guide*.)

An trace entry contains the received data. Check the format of this data. The correct format of the SNA defined field can be found in the *SNA Formats* manual.

A possible cause is that the remote system did not send a valid GDS variable. In this case, it may be necessary to obtain further diagnostic material from the remote system.

Destination: Console and Transient Data Queue CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sessid, sysid, netname, protocol*

DFHRS2151 *date time applid* **Invalid data has been received during the resynchronization sequence on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: The local system was attempting to receive data as part of a resynchronization sequence but the conversation was in the wrong state or an error FMH was received.

The remote system was attempting to initialize the

connection for synclevel 2 work or to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

The failure implies one of the following:

- An error was detected by the remote system and it sent an error indication in an FMH7.
- An error occurred in the remote system
- A CICS logic error has occurred.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

If resynchronization was being attempted, it has failed and will be retried at the next opportunity.

User response: The sequence of resynchronization can be retried by issuing CEMT SET CONN(*sysid*) RESYNC.

Investigate the cause of the error using the system dump and any diagnostic information already issued by CICS, the access methods or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

The trace entries show the state of the conversation with the remote system and the arrival of any error FMH indicating an error detected in the remote system. If necessary, obtain further diagnostic material from the remote system.

Destination: Console and Transient Data Queue CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sessid, sysid, netname, protocol*

DFHRS2152 *date time applid* **A conversation error has occurred during resynchronization sequence on session *sessid* initiated to remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: The local system has initiated a sequence of resynchronization exchanges with the partner system and has completed one or more of them. The conversation is not in the right state to continue the process.

The failure indicates either an error in the remote system or a CICS logic error.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

If resynchronization was being attempted, it has failed

and is retried at the next opportunity.

User response: The sequence of resynchronization can be retried by issuing CEMT SET CONN(*sysid*) RESYNC.

Investigate the cause of the error using the system dump and any diagnostic information provided by CICS, the access methods, or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

The trace entries show the state of the conversation with the remote system. The arrival of any error FMH indicates an error in the remote system. In this case it may be necessary to obtain further diagnostic material from the remote system.

Destination: Console and Transient Data Queue CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sessid, sysid, netname, protocol*

DFHRS2153 *date time applid* **An error has occurred while sending a system_restart request on session *sessid* to remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: An error has occurred during the transmission of a System_restart request to a remote system. CICS was attempting to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

This implies one of the following:

- The remote system has detected a protocol violation during the preceding exchange log names sequence.
- Some other error in communications has occurred.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: The cause of the error may be indicated by diagnostic information produced by the remote system. Diagnostics issued by the local system, the access method, or the operating system may indicate a reason for the failure. Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this exchange log names conversation.

If the internal trace table is available, use it to track the commands issued against the session reported in the message. Check that the state transitions of the user state machine are correct and that the conversation was

in send state at the time of the error. If any of the state transitions are not valid, there may have been a CICS logic error.

Destination: Console and Transient Data Queue CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sessid, sysid, netname, protocol*

DFHRS2154 *date time applid* **A logic error has occurred during resynchronization with system *sysid*, netname *netname*.**

Explanation: A logic error has occurred during resynchronization with the partner system.

The local data associated with the resynchronization was locked at the start of processing but could not be unlocked at the end.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

An ASQL abend is subsequently issued by the transaction processing the resynchronization, and a transaction dump is taken.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sysid, netname*

DFHRS2155 *date time applid* **Affinity changed by partner resource known as connection *sysid*, netname *netname*. Old LUNAME was *old-luname*, new LUNAME is *new-luname*.**

Explanation: A change in the generic resource member associated with the partner system has occurred but the local system has resynchronization work to complete.

The local system has previously made contact with the generic resource known as connection *sysid* (netname *netname*), and synclevel(2) work has been exchanged with the assigned member, identified by *old-luname*. Since that time, the affinity with *old-luname* has been changed to *new-luname* by action in the remote system. Resynchronization of the synclevel(2) work cannot take place.

System action: No system action is taken, but subsequent messages may indicate an exchange log names failure which could prevent the connection being used for synclevel(2) work. Alternatively, messages may indicate that resynchronization work has

subsequently been erased by CICS as a result of the XLNACTON setting on the connection definition.

Destination: CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sysid, netname, old-luname, new-luname*

DFHRS2156 *date time applid* **A logic error occurred during resynchronization with system *sysid*, netname *netname*.**

Explanation: The CLS2 transaction was processing exchange lognames or resynchronization for a connected partner identified by a netname *netname*. The connection entry associated with this netname is *sysid*, and was located and locked, but could not be unlocked in subsequent processing. This indicates a CICS internal logic error.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

An ASQK abend is subsequently issued by the transaction processing the resynchronization, and a transaction dump is taken.

User response: The condition indicates an error in the CICS table manager (which may have produced its own exception trace records), or in the resynchronization program itself. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sysid, netname*

DFHRS2157 *date time applid* **A logic error has occurred during resynchronization with system *sysid*, netname *netname*.**

Explanation: The CLS2 transaction was executing

DFHRTxxxx messages

DFHRT0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS

exchange log names and attempted to save a log name received from system *sysid* (netname *netname*) by invoking the CICS recovery manager domain. This operation failed because of a CICS internal error in the recovery manager domain or in the resynchronization program.

System action: The transaction is terminated with a transaction dump. A system dump is taken unless you have specifically suppressed dumps in the dump table. Abend ASQI is subsequently issued.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sysid, netname*

DFHRS2158 *date time applid* **A logic error has occurred during resynchronization with system *sysid*, netname *netname*.**

Explanation: The CLS2 transaction was executing exchange log names or resynchronization with system *sysid* (netname *netname*). A CICS internal error prevented the successful completion of the operation.

System action: The transaction is terminated with a transaction dump. A system dump is taken unless you have specifically suppressed dumps in the dump table. Abend ASQB may subsequently be issued.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Modules: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sysid, netname*

code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump

table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the *OS/390 MVS System Codes* manual.

Next, look up the CICS abend code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

For further information about *code*, see the *CICS Problem Determination Guide*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHRTSU

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHRT002 *applid* **A severe error (code X'code') has occurred in module *modname*.**

Explanation: An error has been detected in module *modname*. The code X'code' is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code X'code' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS

code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHRTSU

XMEOUT Parameters: *applid, X'code', modname*

DFHRT4401 *time applid* **No transaction identification specified. Please try again.**

Explanation: The terminal operator has not entered an identifier for this transaction.

System action: CICS processing continues.

User response: Enter a valid transaction identifier.

Destination: Terminal End User

Modules: DFHRTE

DFHRT4402 *time applid* **You cannot use a Program Function key to start transactions on other systems.**

Explanation: Program function keys cannot be used to initiate a transaction on another system using the routing transaction (CRTE).

System action: CICS processing continues.

User response: Enter a valid transaction identifier.

Destination: Terminal End User

Modules: DFHRTE

DFHRT4403 *time applid* **The routing session to system *sysid* has been terminated. Further transactions will not be routed to the connected system.**

Explanation: The routing session has been terminated. Subsequent transaction identifiers will not be shipped to the connected system.

System action: CICS processing continues without the connection to system *sysid*.

User response: If you need to use system *sysid*, investigate why the routing session has terminated.

Destination: Terminal End User

Modules: DFHRTE

DFHRT4404 *time applid* **Please change format of request to CRTE
SYSID=XXXX,TRPROF=YYYYYYYY.**

Explanation: The request to the routing transaction CRTE contained incorrect syntax.

System action: CICS processing continues.

User response: Reenter the request to the routing transaction CRTE using the correct syntax.

Destination: Terminal End User

Modules: DFHRTE

DFHRT4405 *time applid* **System sysid cannot be found.
Please check that you have used the correct system name.**

Explanation: System *sysid* is not defined to CICS.

System action: CICS processing continues.

User response: Check that you have used the correct system name. Either reenter the request specifying the correct system name, or define system *sysid* to CICS.

Destination: Terminal End User

Modules: DFHRTE

DFHRT4406 *time applid* **System sysid is not in service or is released.**

Explanation: The system *sysid* is not currently in service, or is released.

System action: CICS processing continues. If a routing session had been established before the connection became unavailable, it remains in force until the user enters CANCEL. If the connection becomes usable before this, transactions are again routed. If this message is in response to the initial CRTE command, no routing session is in force and no routing is attempted for subsequent terminal input.

User response: Wait until system *sysid* becomes available. Enter CANCEL to terminate an existing routing session.

Destination: Terminal End User

Modules: DFHRTE

DFHRT4407 *time applid* **This system does not include support of Intersystem Communication.**

Explanation: The system has not been generated with support for intersystem communication.

System action: CICS processing continues without support for intersystem communication.

User response: Generate the system with support for intersystem communication.

Destination: Terminal End User

Modules: DFHRTE

DFHRT4408 *time applid* **Terminal termid is not of the type supported by routing transaction tranid.**

Explanation: The routing transaction does not support the type of terminal being used.

System action: CICS processing continues without support for terminal *termid*.

User response: Use a terminal of the type supported by the routing transaction, that is, a 3270 display terminal or a console.

Destination: Terminal End User

Modules: DFHRTE

DFHRT4409 *time applid* **The routing session to system sysid has been started.**

Explanation: The routing session has been started.

System action: CICS processing continues.

User response: None.

Destination: Terminal End User

Modules: DFHRTE

DFHRT4410 *time applid* **System sysid is unavailable.
The routing session to it is terminated.**

Explanation: The routing transaction has been terminated because the system became unavailable. Subsequent transaction identifiers will not be shipped to the connected system.

System action: CICS processing continues.

User response: If appropriate, re-enter the transaction when the routing session to system *sysid* becomes available.

Destination: Terminal End User

Modules: DFHRTE

DFHRT4411 *time applid* **The Communication Profile cannot be found.**

Explanation: The profile, specified for a transaction invoked from the terminal to which the message is directed, is not defined to CICS.

System action: CICS stops initialization of the transaction.

User response: Define the communication profile to CICS and reinvoked the transaction. For further

information on how to define the profile, refer to the *CICS Distributed Transaction Programming Guide*.

Destination: Terminal End User

Modules: DFHRTE

DFHRT4412 *time applid* **The transaction code is not defined on the remote system.**

Explanation: A transaction identification, routed to a remote CICS system, is not an installed transaction definition in the remote system. CICS directs this message to the terminal at which the transaction identification was entered.

This message is similar to DFHAC2001 in a local system.

System action: CICS stops initialization of the transaction.

User response: Enter a valid transaction ID, or install the transaction on the remote system.

Destination: Terminal End User

Modules: DFHZTSP

DFHRT4413 *time applid* **The transaction has been disabled on the remote system.**

Explanation: A transaction, routed to a remote CICS system, is disabled in the installed transaction definition of the remote system. CICS directs this message to the terminal at which the transaction identification was entered.

This message is similar to DFHAC2008 in a local system.

System action: CICS stops initialization of the transaction.

User response: Enable the transaction on the remote system.

Destination: Terminal End User

Modules: DFHZTSP

DFHRT4414 *time applid* **Transaction *tranid* cannot run. CICS shutdown is in progress in the remote system.**

Explanation: A transaction *tranid* was routed to a remote CICS system that was being quiesced. CICS directs this message to the terminal at which the transaction identification was entered.

This message is similar to DFHAC2007 in a local system.

System action: The remote CICS system continues quiescing.

User response: Reenter the transaction when the remote CICS system is in normal execution mode.

Destination: Terminal End User

Modules: DFHZTSP

DFHRT4415 *time applid* **Transaction CXRT was invoked directly by terminal input. This is not allowed.**

Explanation: The transaction code CXRT, which is reserved for an internal CICS transaction, was entered from a terminal.

System action: The transaction is run with no effect.

User response: Do not enter transaction code CXRT at a terminal.

Destination: Terminal End User

Modules: DFHCRT

DFHRT4416 *date time applid* **Abend *abcode* has occurred in the {*Dynamic* | *Distributed*} Routing Program. Module name: *modname*.**

Explanation: Either the dynamic routing program or the distributed routing program has abnormally terminated with abend code *abcode*.

System action:

1. Transaction Routing - normal transaction abend processing continues.
2. Dynamic Distributed Program Link - a PGMIDERR condition is returned to the program issuing the Link command.
3. Non-terminal dynamically routed start requests - normal transaction abend processing continues unless the abend is during task termination. In this case message DFHRT4423 is issued.

User response: See the description of abend code *abcode* for further guidance.

If the code is not a CICS transaction abend code, it is a user abend code. Request an explanation from the programmer responsible for this area.

Destination: CSMT

Modules: DFHAPRT, DFHEIIC, DFHEPC, DFHICXM

XMEOUT Parameters: *date, time, applid, abcode, {1=Dynamic, 2=Distributed}, modname*

DFHRT4417 *date time applid* **Abend *abcode* in *modname* - {*Dynamic* | *Distributed*} routing program must be AMODE=31.**

Explanation: CICS has failed to link to EITHER the dynamic routing program OR the distributed routing program because it is not AMODE 31.

System action:

1. Transaction Routing - normal transaction abend processing continues.
2. Dynamic Distributed Program Link - a PGMIDERR condition is returned to the program issuing the Link command.
3. Non-terminal dynamically routed start requests - normal transaction abend processing continues unless the abend is during task termination. In this case message DFHRT4423 is issued.

User response: Recompile, reassemble, and link edit the dynamic routing program to AMODE 31.

Destination: CSMT

Modules: DFHAPRT, DFHEIIC, DFHEPC, DFHICXM

XMEOUT Parameters: *date, time,applid, abcode, modname, {1=Dynamic, 2=Distributed}*

DFHRT4418 *date time applid* **Abend abcode in modname**
- {Dynamic | Distributed} **routing program**
PPT entry not found.

Explanation: CICS was unable to find a PPT entry for EITHER the dynamic routing program OR the distributed routing program.

System action:

1. Transaction Routing - normal transaction abend processing continues.
2. Dynamic Distributed Program Link - a PGMIDERR condition is returned to the program issuing the Link command.
3. Non-terminal dynamically routed start requests - normal transaction abend processing continues unless the abend is during task termination. In this case message DFHRT4423 is issued.

User response: Ensure that EITHER

1. the dynamic routing program specified by the system initialization parameter DTRPGM=*program name*, or specified via the EXEC CICS SET SYSTEM DTRPROGRAM(*program name*) has been correctly defined to CICS
2. the distributed routing program specified by the system initialization parameter DSRTPGM=*program name*, or specified via the EXEC CICS SET SYSTEM DSRTPROGRAM(*program name*) has been correctly defined to CICS

Destination: CSMT

Modules: DFHAPRT, DFHEIIC, DFHEPC, DFHICXM

XMEOUT Parameters: *date, time,applid, abcode, modname, {1=Dynamic, 2=Distributed}*

DFHRT4419 *date time applid* **Abend abcode in modname**
- Fetch for {dynamic | distributed} **routing**
program failed.

Explanation: CICS was unable to load EITHER the dynamic routing program or. the distributed routing program.

System action:

1. Transaction Routing - normal transaction abend processing continues.
2. Dynamic Distributed Program Link - a PGMIDERR condition is returned to the program issuing the Link command.
3. Non-terminal dynamically routed start requests - normal transaction abend processing continues unless the abend is during task termination. In this case message DFHRT4423 is issued.

User response: Ensure that EITHER

1. the dynamic routing program specified by the system initialization parameter DTRPGM=*program name*, or specified via the EXEC CICS SET SYSTEM DTRPROGRAM(*program name*) has been correctly defined. Ensure that it is also in a load library accessible to CICS.
2. the distributed routing program specified by the system initialization parameter DSRTPGM=*program name*, or specified via the EXEC CICS SET SYSTEM DSRTPROGRAM(*program name*) has been correctly defined. Ensure that it is also in a load library accessible to CICS.

Destination: CSMT

Modules: DFHAPRT, DFHEIIC, DFHEPC, DFHICXM

XMEOUT Parameters: *date, time,applid, abcode, modname, {1=dynamic, 2=distributed}*

DFHRT4420 *date time applid* **Abend abcode in modname**
- Link to the {dynamic | distributed}
routing program failed.

Explanation: An unexpected return code was returned from the link to the dynamic routing program.

System action:

1. Transaction Routing - normal transaction abend processing continues.
2. Dynamic Distributed Program Link - a PGMIDERR condition is returned to the program issuing the Link command.
3. Non-terminal dynamically routed start requests - normal transaction abend processing continues unless the abend is during task termination. In this case message DFHRT4423 is issued.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Destination:** CSMT
| **Modules:** DFHAPRT, DFHEIIC, DFHEPC, DFHICXM
| **XMEOUT Parameters:** *date, time,applid, abcode, modname,*
| *{1=dynamic, 2=distributed}*

DFHRT4421 *date time applid* **Unable to Delete remote Terminal *termid* that is connected to system *sysid*.**

Explanation: A transaction could not be started because the remote terminal definition for *termid*, system *sysid* was flagged for deletion but the DELETE failed. This might indicate a transaction looping on the terminal.

System action: The user transaction abends with abend code AZTI.

User response: See the associated DFHZCxxxx messages for further guidance. Once corrected, you can attempt to run the transaction again.

Destination: Console and Transient Data Queue
CSMT

Modules: DFHZTSP

XMEOUT Parameters: *date, time,applid, termid, sysid*

DFHRT4422 *time applid* **The connection to system *sysid* does not support transaction routing. Please check that you have used the correct system name.**

Explanation: The connection to system *sysid* is not an MRO or APPC connection.

System action: CICS processing continues.

User response: Check that you have used the correct system name. Either reenter the request specifying the correct system name, or define the connection to

DFHRUxxxx messages

DFHRU2816 *applid* **Exit program *progrname* is not available**

Explanation: The user-defined global exit program, *progrname*, is

- not defined, or
- disabled, or
- missing from the program library.

System action: CICS abnormally terminates the

DFHRXxxxx messages

| **DFHRX0001** *applid* **An abend (code *aaa/bbbb*) has**
| **occurred at offset *X'offset'* in module**
| ***modname*.**

| **Explanation:** An abnormal end (abend) or program
| check has occurred in module *modname*. This implies

system *sysid* as an MRO or APPC connection.

Destination: Terminal End User

Modules: DFHRTE

| **DFHRT4423** *date time applid* **An error has occurred**
| **while attempting to invoke the**
| **distributed routing program.**

| **Explanation:** An error has been detected while
| attempting to invoke the distributed routing program
| for a non-terminal start request. This error would
| normally result in a transaction abend but in this case
| no abend is issued because doing so would result in
| the task being suspended indefinitely.

| **System action:** None

| **User response:** See the preceding DFHRTxxxx
| messages for further guidance.

| **Destination:** Console and Transient Data Queue
| CSMT

| **Modules:** DFHICXM

| **XMEOUT Parameters:** *date, time,applid*

DFHRT4480 *time applid* **The CSSF transaction is no longer supported. Please use CESF.**

Explanation: A user has attempted to run the CSSF transaction. The CSSF transaction is only invoked internally by CICS for CRTE cancel processing.

System action: The transaction terminates.

User response: Use the CESF transaction to sign off.

Destination: Terminal End User

Modules: DFHRTE

recovery control restart task with transaction abend ARCB. CICS then terminates abnormally.

User response: Make program *progrname* available.

Destination: Console

Modules: DFHRCEX

XMEOUT Parameters: *applid, progrname*

| that there may be an error in the CICS code.
| Alternatively, unexpected data has been input, or
| storage has been overwritten.

| The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if
| applicable), followed by a 4-digit alphanumeric CICS

| code. The MVS code is a system completion code (for
| example, 0C1 or D37). If an MVS code is not applicable,
| this field is filled with three hyphens. The CICS code is
| an abend code or a number referring to a CICS
| message (for example, AKEA is a CICS abend code;
| 1310 refers to message DFHTS1310).

| **System action:** An exception entry is made in the
| trace table. A system dump is taken, unless you have
| specifically suppressed dumps in the dump table.

| CICS continues unless you have specified in the dump
| table that CICS should terminate. If appropriate, an
| error return code is sent to the caller of this domain. In
| this case CICS could be terminated by the caller (for
| example, the domain manager, DFHDMDM). A
| message is issued to this effect.

| Message DFHME0116 is normally produced containing
| the symptom string for this problem.

| **User response:** Notify the system programmer. If
| CICS is still running, it is necessary to decide whether
| to terminate CICS.

| Look up the MVS code, if there is one, in the relevant
| MVS codes manual.

| Next, look up the CICS alphanumeric code. This tells
| you, for example, whether the error was a program
| check, an abend, or a runaway, and may give you some
| guidance concerning user response.

| If module *modname* is not crucial to the running of your
| CICS system, you may decide to continue to run and
| bring CICS down at a convenient time to resolve the
| problem.

| If you cannot run without the full use of module
| *modname* you should bring CICS down in a controlled
| shutdown.

| You need further assistance from IBM to resolve this
| problem. See Part 4 of the *CICS Problem Determination
| Guide* for guidance on how to proceed.

| **Destination:** Console

| **Modules:** DFHRXDM

| **XMEOUT Parameters:** *applid, aaa/bbbb,X'offset', modname*

| **DFHRX0002** *applid* **A severe error (code X'code')** has
| occurred in module *modname*.

| **Explanation:** An error has been detected in module
| *modname*. The code X'code' is the exception trace point
| ID which uniquely identifies what the error is and
| where the error was detected.

| **System action:** An exception entry (code X'code' in the
| message) is made in the trace table. A system dump is
| taken, unless you have specifically suppressed dumps
| in the dump table.

| CICS continues unless you have specified in the dump
| table that CICS should terminate. If appropriate, an

| error return code is sent to the caller of this domain. In
| this case, CICS could be terminated by the caller (for
| example, the domain manager, DFHDMDM). A
| message is issued to this effect.

| Message DFHME0116 is normally produced containing
| the symptom string for this problem.

| **User response:** This indicates a possible error in CICS
| code. The severity of its impact depends on the
| importance of the function being executed at the time
| of the error.

| CICS may not have been terminated. If the message
| occurs once and module *modname* is not crucial to the
| running of your CICS system, you may decide to
| continue to run and bring CICS down at a convenient
| time to resolve the problem.

| If the message recurs or if you cannot run without the
| full use of module *modname*, you should bring CICS
| down in a controlled shutdown.

| You need further assistance from IBM to resolve this
| problem. See Part 4 of the *CICS Problem Determination
| Guide* for guidance on how to proceed.

| **Destination:** Console

| **Modules:** DFHRXDM

| **XMEOUT Parameters:** *applid, X'code', modname*

| **DFHRX0100I** *applid* **RX domain initialization has
| started.**

| **Explanation:** This is an informational message
| indicating the start of RX domain initialization.

| **System action:** Initialization continues.

| **User response:** None. You can suppress this message
| with the system initialization parameter, MSGLVL=0.

| **Destination:** Console

| **Modules:** DFHRXDM

| **XMEOUT Parameter:** *applid*

| **DFHRX0101I** *applid* **RX domain initialization has
| ended.**

| **Explanation:** RX domain initialization has completed
| successfully.

| **System action:** Initialization continues.

| **User response:** None. You can suppress this message
| with the system initialization parameter, MSGLVL=0.

| **Destination:** Console

| **Modules:** DFHRXDM

| **XMEOUT Parameter:** *applid*

| **DFHRX0102** *applid* **Errors were encountered during initialization of the RX domain. Domain initialization has ended.**

| **Explanation:** Errors have been detected by the Resource Recovery Services (RX) domain during CICS initialization. Accompanying messages describe the nature of the errors.

| **System action:** A system dump is taken, unless you have specifically suppressed dumps in the dump table.

| CICS continues unless you have specified in the dump table that CICS should terminate.

| **User response:** If your CICS system will not use any services that depend on Resource Recovery Services, no action is necessary. Otherwise, you will need to shut CICS down, and restart it once the problems identified by the earlier messages have been corrected.

| **Destination:** Console

| **Modules:** DFHRXDM

| **XMEOUT Parameter:** *applid*

| **DFHRX0103** *applid* **An unexpected return code X'rc' was received from RRMS service xxxxxxxx.**

| **Explanation:** An unexpected return code was received when CICS issued a request to Recoverable Resource Management Services (RRMS). The name of the RRMS service included in the message indicates the component of RRMS as follows:

| **CRGxxxx**
| Registration Services

| **CTXxxxx**
| Context Services

| **ATRxxxx**
| Resource Recovery Services (RRS)

| This message may indicate a problem with RRMS.

| **System action:** CICS continues, but - depending on the service and the return code - CICS services that depend on RRMS may not be available. Further messages will provide more information.

| **User response:** Record the name of the RRMS service and the return code. RRMS return codes are documented in *GC28-1793 OS/390 MVS Programming: Resource Recovery*.

| If you are unable to determine the cause of the problem from this information, you may need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Destination:** Console

| **Modules:** DFHRXDM, DFHRXUW

| **XMEOUT Parameters:** *applid, X'rc',xxxxxxx*

| **DFHRX0104I** *applid* **The Resource Recovery Services (RRS) exit manager aaaaaaaaaaaaaaaaaa is now available.**

| **Explanation:** This message is issued when CICS discovers that a Resource Recovery Services (RRS) exit manager is available. The insert aaaaaaaaaaaaaaaaaa is the name of the exit manager.

| **System action:** CICS begins restart processing with RRS.

| **User response:** None. You can suppress this message with the system initialization parameter, MSGLVL=0.

| **Destination:** Console

| **Modules:** DFHRXDM

| **XMEOUT Parameters:** *applid, aaaaaaaaaaaaaaaaaa*

| **DFHRX0105I** *applid* **The Resource Recovery Services (RRS) exit manager aaaaaaaaaaaaaaaaaa is now unavailable.**

| **Explanation:** This message is issued when CICS discovers that a Resource Recovery Services (RRS) exit manager is unavailable. The insert aaaaaaaaaaaaaaaaaa is the name of the exit manager. Transactions which use RRS to coordinate their updates cannot be successfully executed.

| **System action:** CICS continues. Message DFHRX0104 will be issued when the exit manager becomes available once more.

| **User response:** None. You can suppress this message with the system initialization parameter, MSGLVL=0.

| **Destination:** Console

| **Modules:** DFHRXDM

| **XMEOUT Parameters:** *applid, aaaaaaaaaaaaaaaaaa*

| **DFHRX0106I** *applid* **Restart processing with Resource Recovery Services (RRS) is beginning.**

| **Explanation:** This message is issued when CICS begins restart processing with Resource Recovery Services (RRS).

| **System action:** CICS continues.

| **User response:** None. You can suppress this message with the system initialization parameter, MSGLVL=0.

| **Destination:** Console

| **Modules:** DFHRXDM

| **XMEOUT Parameter:** *applid*

| **DFHRX0107I** *applid* **Restart processing with Resource Recovery Services (RRS) has ended.**

| **Explanation:** This message is issued when restart processing with Resource Recovery Services (RRS) ends. If RRS has become unavailable during restart processing (indicated by message DFHRX0105) restart processing may be incomplete.

| **System action:** CICS continues. If RRS has become unavailable, CICS will resume restart processing when RRS becomes available once more.

| **User response:** None. You can suppress this message with the system initialization parameter, MSGLVL=0.

| **Destination:** Console

| **Modules:** DFHRXDM

| **XMEOUT Parameter:** *applid*

| **DFHRX0108** *date time applid* **Log name mismatch with Resource Recovery Services. Expected Log name *logname*. Received Log name *logname*.**

| **Explanation:** During the exchange of log names with Resource Recovery Services (RRS), which occurred when RRS restarted, this system's memory of RRS's log name did not match the log name retrieved from RRS. RRS may have performed a cold start.

| **System action:** CICS execution continues. Units of work that are awaiting resynchronization with RRS will not be resolved automatically.

| **User response:** The associated units of work may need to be resolved by using CEMT SET UOW. The message should not recur.

| **Destination:** Console and Transient Data Queue CSMT

| **Modules:** DFHRXDM

| **XMEOUT Parameters:** *date, time,applid, logname, logname*

| **DFHRX0109** *date time applid* **Invalid pass token received on connection *sysid* session *termid*.**

| **Explanation:** A batch program using the extended External CICS Interface (EXCI) has issued a DPL request which does not include the SYNCONRETURN option. However, the value of the pass token received from the batch region does not match that which was lodged with Recoverable Resource Management Services (RRMS) in the batch region.

| **System action:** DFHRXUW provides console message DFHRX0002, and possibly a system dump (depending on the options in the dump table). The transactional DPL request will not be processed, and the batch job which issued the request may be suspended until it times out.

| **User response:** Investigate why the pass token was incorrect. It is possible that an unauthorized user has attempted to guess the value of the pass token in order to influence the outcome of a Unit of Work that has expressed interest in an RRMS Unit of Recovery.

| If you are satisfied that there has been no attempt to interfere with the pass token, you may need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Destination:** Console and Transient Data Queue CSCS

| **Modules:** DFHRXUW

| **XMEOUT Parameters:** *date, time,applid, sysid, termid*

| **DFHRX0110** *applid* **Restart processing with Resource Recovery Services (RRS) was attempted on the wrong system.**

| **Explanation:** Resource Recovery Services (RRS) has rejected a request to begin restart processing because there is incomplete recoverable work associated with this CICS applid on another system in the sysplex.

| **System action:** CICS execution continues, but CICS services that depend upon RRS will not be available until the problem is corrected.

| **User response:** If your CICS system will not use any services that depend on RRS, no action is necessary. Otherwise, close CICS down and restart it on the correct system in the sysplex. Use the RRS ISPF panels to scan the RRS Resource Manager Data log in order to find the correct system on which to restart CICS.

| If, for some reason, you cannot restart CICS on another system in the sysplex, you can take the following steps. However, if you do so, resources may be out of synchronization:

- | 1. Use the RRS Unit of Recovery list panels to force completion of the incomplete recoverable work
- | 2. Restart CICS or RRS
- | 3. Force any CICS units of work that are awaiting resolution from RRS.

| **Destination:** Console

| **Modules:** DFHRXDM

| **XMEOUT Parameter:** *applid*

| **DFHRX0111** *applid* **Resource Recovery Services (RRS) has lost logged data. Resynchronization information may be missing.**

| **Explanation:** While attempting to recover resynchronization information from its logs, Resource Recovery Services (RRS) has discovered that some data is missing. This is due to a problem with the RRS log streams.

| **System action:** CICS restart processing with RRS continues, but RRS may not be able to provide a decision for all indoubt units or work. In these cases,

updates to local resources will be committed or backed out according to the ACTION attribute in the corresponding transaction definition.

The Recovery Manager domain will issue one of the following messages for each unit of work affected, indicating the outcome:

DFHRM0112
DFHRM0113

User response: Use the information provided in the

Recovery Manager message to decide what action is needed. You may need to take steps to resynchronize resources in local and remote systems.

Destination: Console

Modules: DFHRXDM

XMEOUT Parameter: *applid*

DFHRZxxxx messages

DFHRZ0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code.

Alternatively:

- Unexpected data has been input,
- Storage has been overwritten, or
- There has been a program check within a user program.

The code *aaa* is, if applicable, a 3-digit hexadecimal MVS system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The 4-digit code *bbbb*, which follows *aaa*, is a user abend code produced either by CICS or by another product on the user's system.

If *X'offset'* contains the value *X'FFFF'*, then module *modname* was in control at the time of the abend, but the program status word (PSW) was not addressing this module.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer.

Look up the MVS code *aaa*, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

If the *modname* insert contains the value *????*, then CICS was unable to determine which module has abnormally terminated. In this case, examine the system dump to determine which area of code has caused the program check.

The user should examine other messages to determine

what the module which issued this message was doing at the time the abend occurred. From these messages they can deduce which product has produced the abend code *bbbb*. If *bbbb* is identified as a CICS code, it may be either alphameric or numeric.

- If the CICS code is alphameric (for example AKEA) then it is a CICS transaction abend code.
- If the CICS code is numeric (for example 1310), it refers to a CICS message (DFHTS1310 in our example).

If the user abend code is from another product (for example, IMS), refer to the appropriate messages and codes manual to determine the cause of the abend.

The entries in the appropriate manuals will give the user guidance regarding the nature of the error, and may also give some guidance concerning the appropriate user response.

Note: The program check may have occurred in a user program. If this is the case, the program check is usually followed by an ASRA or an ASRB transaction abend and a transaction dump.

If you want to suppress system dumps that precede ASRA and ASRB abends, you must specify this on an entry in the dump table, using either CEMT or an EXEC CICS command. Further guidance on suppressing system dumps can be found in the *CICS System Definition Guide*.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHRZxx

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHRZ0002 *applid* A severe error (code *X'code'*) has occurred in module *module*.

Explanation: The RZ domain has received an unexpected error response from some other part of CICS. The operation requested by recovery manager is described by code *X'code'*.

| For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

| **System action:** A system dump is taken and the system attempts to continue operation unless specifically inhibited by dump table entries.

| Message DFHME0116 is normally produced containing the symptom string for this problem.

| **User response:** Investigate the cause of the problem as follows:

- | 1. Determine if the problem can be explained by any previous messages issued from some other CICS component.
- | 2. Examine the symptom string.
- | 3. Examine the dump.

| If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Destination:** Console

| **Modules:** DFHRZRT1, DFHRZRT2, DFHRZDM, DFHRZRM, DFHRZRG2

| **XMEOUT Parameters:** *applid, X'code', module*

| **DFHRZ0201** *date time applid* **The call to invoke the Distributed Routing Program, *program*, has failed. The program was not defined.**

| **Explanation:** An error occurred when attempting to link to the Distributed Routing Program, identified by the DSRTPGM SIT parameter.

| **System action:** A ARZU dump may be produced depending on type of failure.

| **User response:** Ensure that the Distributed Routing Program is available to the system. It must be defined to Program Manager and it must be present in the DFHRPL library concatenation. Alternatively, name a new Distributed Routing Program using SET SYSTEM DSRTPROGRAM or from CEMT.

| **Destination:** CSSH

| **Modules:** DFHRZRT2

| **XMEOUT Parameters:** *date, time, applid, program*

| **DFHRZ0202** *date time applid* **The Distributed Routing Program, *program*, has returned a bad response.**

| **Explanation:** The Distributed Routing Program, identified by the DSRTPGM SIT parameter, has returned a bad response. The request will not be serviced.

| **System action:** No dumps are taken.

| **User response:** None

| **Destination:** CSSH

| **Modules:** DFHRZRT2

| **XMEOUT Parameters:** *date, time, applid, program*

| **DFHRZ0203** *date time applid* **The call to invoke the Distributed Routing Program, *program*, has failed. The Distributed Routing Program has abnormally terminated with abend Code *abcode*.**

| **Explanation:** The Distributed Routing Program has abnormally terminated with abend code *abcode*.

| **System action:**

- | 1. Transaction Routing - normal transaction abend processing continues.
- | 2. Dynamic Distributed Program Link - an abended condition is returned to the calling program.

| **User response:** See the description of abend code *abcode* for further guidance.

| If the code is not a CICS transaction abend code, it is a user abend code. Request an explanation from the programmer responsible for this area.

| **Destination:** CSSH

| **Modules:** DFHRZRT2

| **XMEOUT Parameters:** *date, time, applid, program, abcode*

| **DFHRZ0204** *date time applid* **The call to invoke the Distributed Routing Program, *program*, has failed due to an invalid AMODE.**

| **Explanation:** An error occurred when attempting to link to the Distributed Routing Program, identified by the DSRTPGM SIT parameter. The program has an invalid AMODE specified.

| **System action:** No dumps are taken.

| **User response:** Ensure that the Distributed Routing Program definition is correct.

| **Destination:** CSSH

| **Modules:** DFHRZRT2

| **XMEOUT Parameters:** *date, time, applid, program*

| **DFHRZ0205** *date time applid* **The call to invoke the Distributed Routing Program, *program*, has failed. The program was not loadable.**

| **Explanation:** An error occurred when attempting to link to the Distributed Routing Program, identified by the DSRTPGM SIT parameter.

| **System action:** An ARZU dump may be produced depending on type of failure.

| **User response:** Ensure that the Distributed Routing Program is available to the system. It must be defined to Program Manager and it must be present in the DFHRPL library concatenation. Alternatively, name a new Distributed Routing Program using SET SYSTEM DSRTPROGRAM or from CEMT.

| **Destination:** CSSH
| **Modules:** DFHRZRT2
| **XMEOUT Parameters:** *date, time,applid, program*

DFHSHxxxx messages

| **DFHSH0001** *applid* **An abend (code *code*) has occurred at offset X'offset' in module *module*.**

| **Explanation:** An unexpected program check or abend occurred with abend code *aaa/bbbb*.

| The program status word (PSW) at the time of the program check or abend indicated that CICS was executing at offset X'offset' in module *modname*. This may have been caused by corruption of CICS code or control blocks.

| **System action:** A system dump is taken and the system attempts to continue operation unless otherwise directed by entries in the dump table.

| Message DFHME0116 is normally produced containing the symptom string for this problem.

| **User response:** Investigate the cause of the program check or abend using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

| If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Destination:** Console

| **Modules:** DFHSHRT1, DFHSHRT2, DFHSHDM, DFHSHPR, DFHSHRQ, DFHSHSY

| **XMEOUT Parameters:** *applid, code,X'offset', module*

| **DFHSH0002** *applid* **A severe error (code X'code') has occurred in module *module*.**

| **Explanation:** The SH domain has received an unexpected error response from some other part of CICS. The operation requested by recovery manager is described by code X'code'.

| For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

| **System action:** A system dump is taken and the system attempts to continue operation unless specifically inhibited by dump table entries.

| Message DFHME0116 is normally produced containing the symptom string for this problem.

| **User response:** Investigate the cause of the problem as follows:

| 1. Determine if the problem can be explained by any previous messages issued from some other CICS component.

| 2. Examine the symptom string.

| 3. Examine the dump.

| If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Destination:** Console

| **Modules:** DFHSHRT1, DFHSHRT2, DFHSHDM, DFHSHPR, DFHSHSY, DFHSHRE

| **XMEOUT Parameters:** *applid, X'code',module*

| **DFHSH0101** *date time applid* **The call to invoke the Distributed Routing Program, *program*, has failed. Refer to message DFHSH0105.**

| **Explanation:** An error occurred when attempting to link to the Distributed Routing Program, identified by the DSRTPGM SIT parameter.

| **System action:** A ASHU dump may be produced depending on type of failure.

| **User response:** Ensure that the Distributed Routing Program is available to the system. It must be defined to Program Manager and it must be present in the DFHRPL library concatenation. Alternatively, name a new Distributed Routing Program using SET SYSTEM DSRTPROGRAM or from CEMT.

| **Destination:** CSSH

| **Modules:** DFHSHRT2

| **XMEOUT Parameters:** *date, time,applid, program*

| **DFHSH0102** *date time applid* **The Distributed Routing Program, *program*, has returned a bad response. See following message DFHSH0105.**

| **Explanation:** The Distributed Routing Program, identified by the DSRTPGM SIT parameter, has returned a bad response. The request may not be serviced immediately.

| **System action:** No dumps are taken.

| **User response:** None

| **Destination:** CSSH
| **Modules:** DFHSHRE
| **XMEOUT Parameters:** *date, time,applid, program*

| **DFHSH0103** *date time applid* **The call to invoke the Distributed Routing Program, *program*, has failed. The Distributed Routing Program has abnormally terminated with abend Code *abcode*.**

| **Explanation:** The Distributed Routing Program has abnormally terminated with abend code *abcode*.

| **System action:**

- | 1. Transaction Routing - normal transaction abend processing continues.
- | 2. Dynamic Distributed Program Link - an abended condition is returned to the calling program.

| **User response:** See the description of abend code *abcode* for further guidance.

| If the code is not a CICS transaction abend code, it is a user abend code. Request an explanation from the programmer responsible for this area.

| **Destination:** CSSH

| **Modules:** DFHSHRT2

| **XMEOUT Parameters:** *date, time,applid, program, abcode*

| **DFHSH0104** *date time applid* **The call to invoke the Distributed Routing Program, *program*, has failed due to an invalid AMODE.**

| **Explanation:** An error occurred when attempting to link to the Distributed Routing Program, identified by the DSRTPGM SIT parameter. The program has an invalid AMODE specified.

| **System action:** No dumps are taken.

| **User response:** Ensure that the Distributed Routing Program definition is correct.

| **Destination:** CSSH

| **Modules:** DFHSHRT2

| **XMEOUT Parameters:** *date, time,applid, program*

| **DFHSH0105** *date time applid* **Request (Id: *requestid*, Processtype: *processtype*, Processname: *processname*, Activityname: *activityname*, Transaction: *tranid*) cannot be serviced. It will be retried every minute and will be purged after 24 hours if not serviced then.**

| **Explanation:** A request cannot be serviced immediately. This is either because the Distributed Routing Program, identified by the DSRTPGM SIT parameter, has returned a response which indicates that

| it is unable to route a request, or a temporary error occurred during an attempt to service the request locally.

| The request is identified by the request id *id* (the key of the request on the Local Request Queue data set (DFHLRQ)), the process type *processtype*, the process name *processname*, the activity name *activityname*, and the transaction id *tranid*.

| **System action:** No dumps are taken. The request is marked unserviceable, and is then retried every minute until it is either serviced, or 24 hours have elapsed in which case the request is purged and message DFHSH0107 issued.

| Message DFHSH0106 is issued once every hour while the request cannot be serviced. If the request is serviced successfully, message DFHSH0108 is issued.

| **User response:** Investigate why the request cannot be serviced. This may be caused by one of the following:

- | • The local request queue is unavailable.
- | • The request refers to a resource (activity or process) which is unavailable.
- | • The system to which the request is to be routed is down, or the link is down.
- | • The Distributed Routing Program is failing or is returning an invalid target system.

| **Destination:** Console and Transient Data Queue CSSH

| **Modules:** DFHSHRM

| **XMEOUT Parameters:** *date, time,applid, requestid, processtype,processname, activityname, tranid*

| **DFHSH0106** *date time applid* **Request (Id: *requestid*, Processtype: *processtype*, Processname: *processname*, Activityname: *activityname*, Transaction: *tranid*) still cannot be serviced. It will be retried every minute and will be purged after *hours* hours if not serviced successfully.**

| **Explanation:** Following message DFHSH0105, this message is issued every hour while a request cannot be successfully serviced.

| The request is identified by the request id *requestid* (the key of the request on the Local Request Queue data set (DFHLRQ)), the process type *processtype*, the process name *processname*, the activity name *activityname*, and the transaction id *tranid*.

| **System action:** No dumps are taken. The request continues to be retried every minute until it is either serviced successfully, or 24 hours have elapsed since message DFHSH0105 was issued, in which case the request is purged and message DFHSH0107 is issued.

| **User response:** See message DFHSH0105.

| **Destination:** Console and Transient Data Queue CSSH

| **Modules:** DFHSHRM

| **XMEOUT Parameters:** *date, time,applid, requestid, processtype,processname, activityname, tranid,hours*

| **DFHSH0107** *date time applid* **Request (Id: requestid, Processtype: processtype, Processname: processname, Activityname: activityname, Transaction: tranid) has remained unserviceable for 24 hours and has now been purged.**

| **Explanation:** A request has been unserviceable for 24 hours and has now been purged. This message will have been preceded by message DFHSH0105 and several occurrences of message DFHSH0106.

| The request is identified by the request id *requestid* (the key of the request on the Local Request Queue data set (DFHLRQ)), the process type *processtype*, the process name *processname*, the activity name *activityname*, and the transaction id *tranid*.

| **System action:** No dumps are taken. The request is deleted.

| **User response:** See message DFHSH0105.

| **Destination:** Console and Transient Data Queue CSSH

| **Modules:** DFHSHRQ

| **XMEOUT Parameters:** *date, time,applid, requestid, processtype,processname, activityname, tranid*

| **DFHSH0108** *date time applid* **Previously unserviceable request (Id: requestid, Processtype: processtype, Processname: processname, Activityname: activityname, Transaction: tranid) has now been successfully serviced.**

| **Explanation:** A request which was previously unserviceable has now been successfully serviced. This message will have been preceded by message DFHSH0105 and possibly one or more occurrences of message DFHSH0106.

| The request is identified by the request id *requestid* (the key of the request on the Local Request Queue data set (DFHLRQ)), the process type *processtype*, the process name *processname*, the activity name *activityname*, and the transaction id *tranid*.

| **System action:** No dumps are taken.

| **User response:** None.

| **Destination:** Console and Transient Data Queue CSSH

| **Modules:** DFHSHRM

| **XMEOUT Parameters:** *date, time,applid, requestid, processtype,processname, activityname, tranid*

| **DFHSH0109** *date time applid* **An error has occurred when attempting to access the Local Request Queue data set (DFHLRQ). (The file could not be found. | The file was closed. | The file was disabled. | There was insufficient space. | An I/O error occurred. | The data set is being copied.) The Local Request Queue is now unavailable.**

| **Explanation:** One of the following errors was detected when attempting to access the Local Request Queue data set (DFHLRQ):

- | • The file could not be found.
- | • The file was closed.
- | • The file was disabled.
- | • There was insufficient space.
- | • An I/O error occurred.
- | • The dataset is being copied.

| **System action:** The Local Request Queue is made unavailable. CICS then attempts to access the data set every minute. If successful, message DFHSH0110 is issued to indicate the data set is now available.

| **User response:** Investigate the error which caused the Local Request Queue to be made unavailable.

| **Destination:** Console and Transient Data Queue CSSH

| **Modules:** DFHSHRE, DFHSHRQ, DFHSHSY

| **XMEOUT Parameters:** *date, time,applid, {1=The file could not be found., 2=The file was closed., 3=The file was disabled.,4=There was insufficient space., 5=An I/O error occurred., 6=The data set is being copied.}*

| **DFHSH0110** *date time applid* **The Local Request Queue data set (DFHLRQ) is now available.**

| **Explanation:** The Local Request Queue data set (DFHLRQ), which was previously unavailable, is now available. See message DFHSH0109.

| **System action:** None.

| **User response:** None.

| **Destination:** Console and Transient Data Queue CSSH

| **Modules:** DFHSHSY

| **XMEOUT Parameters:** *date, time,applid*

| **DFHSH0111** *date time applid tranid trannum userid* **An error has occurred in Scheduler Services during the prepare phase of syncpoint.**

| **Explanation:** Scheduler Services domain encountered an error during the prepare phase of syncpoint.

| **System action:** Scheduler Services returns a NO vote to the Recovery Manager. The transaction will be abended with an ASP7 abend.

| **User response:** Check for other Scheduler Services

| messages that may indicate the cause of the error. For
| example, message DFHSH0109 indicates problems with
| the Local Request Queue.
| **Destination:** Console and Transient Data Queue CSSH

| **Modules:** DFHSHRM
| **XMEOUT Parameters:** *date, time,applid, tranid, trannum,*
| *userid*

DFHSIxxxx messages

DFHSI0914I *applid* **Unable to initiate transaction CSFU. Files will not be opened at initialization.**

Explanation: Module DFHSIJ1 could not start transaction CSFU. Execution of the DFHIC TYPE=INITIATE macro failed. Either CSFU is not an installed transaction definition, or DFHFCU is not an installed program definition.

System action: CICS does not open any files at initialization time. If a file is defined in the file control table (FCT) to be opened at initialization time, CICS will open it on first reference.

User response: Make transaction CSFU and program DFHFCU available for execution. Group DFHOPCLS in DFHLIST contains all of the definitions needed for file opening and closing (dynamically as well as at initialization time).

Destination: Console

Modules: DFHSIJ1

XMEOUT Parameter: *applid*

DFHSI1250 *applid* **VSAM error processing SHOWCAT for intrapartition data set dsetname R15=xxxx.**

Explanation: During SHOWCAT processing for the intrapartition data set, *dsetname*, VSAM detected an error and issued return code *xxxx*.

System action: CICS writes a dump and terminates abnormally.

Message DFHMEO116 is normally produced containing the symptom string for this problem.

User response: Check the return code in the *OS/VS VSAM Programmer's Guide*, and restart CICS.

Destination: Console

Modules: DFHSID1

XMEOUT Parameters: *applid, dsetname, xxxx*

DFHSI1499 *applid* **Unable to acquire special storage.**

Explanation: As part of CICS initialization, an attempt is made to acquire an area of storage from the fetch-protected subpool. The attempt has been unsuccessful.

System action: CICS terminates abnormally with a dump.

User response: This error indicates a severe problem with your operating system. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSIB1

XMEOUT Parameter: *applid*

DFHSI1500 *applid element* **startup is in progress for CICS Transaction Server Version *version***

Explanation: This is an informative message indicating that *element* startup is in progress.

| *Element* is part of CICS Transaction Server Version
| *version*.

| *Element* = CICS Version = 1.3.0

System action: System initialization continues.

User response: None. This message cannot be suppressed.

Destination: Console

Modules: DFHAPSIP

XMEOUT Parameters: *applid, element,version*

DFHSI1501I *applid* **Loading CICS nucleus.**

Explanation: This is an informative message indicating that the CICS nucleus is being loaded.

System action: System initialization continues.

User response: None.

Destination: Console

Modules: DFHSIB1

XMEOUT Parameter: *applid*

DFHSI1502I *applid* **CICS startup is {Cold | Warm | Emergency | Initial}.**

Explanation: During CICS initialization, the type of restart is determined and the operator notified by this message.

System action: System initialization continues.

User response: None.

Destination: Console

Modules: DFHSIC1, DFHSII1

XMEOUT Parameters: *applid*, {1=Cold, 2=Warm, 3=Emergency, 4=Initial}

DFHSI1503I *applid* Terminal data sets are being opened.

Explanation: This is an informatory message indicating that the terminal data sets are being opened.

System action: System initialization continues.

User response: None.

Destination: Console

Modules: DFHSIF1

XMEOUT Parameter: *applid*

DFHSI1506 *applid* Unable to OPEN the global catalog.

Explanation: During initialization, CICS issued an OPEN for the global catalog DFHGCD data set, but the OPEN failed.

System action: CICS terminates abnormally with a dump.

User response: Examine the preceding VSAM message for the reason for the OPEN failure. Note that if you specify START=AUTO, or if you define your system with journal support, you must supply a global catalog data set in the JCL.

Destination: Console

Modules: DFHSIC1

XMEOUT Parameter: *applid*

DFHSI1511I *applid* Installing group list *grplist*.

Explanation: Group list *grplist* is being installed.

System action: System initialization continues.

User response: None.

Destination: Console

Modules: DFHAMPIL

XMEOUT Parameters: *applid*, *grplist*

DFHSI1517 *applid* Control is being given to CICS.

Explanation: This is an informatory message indicating that control is being given to CICS.

applid is the VTAM APPLID of the CICS system issuing the message.

System action: System initialization continues.

User response: None.

Destination: Console

Modules: DFHSIJ1

XMEOUT Parameter: *applid*

DFHSI1519I *applid* The interregion communication session was successfully started.

Explanation: This is an informatory message indicating that the interregion communication (IRC) session has been successfully started.

System action: System initialization continues.

User response: None.

Destination: Console

Modules: DFHSIJ1

XMEOUT Parameter: *applid*

DFHSI1521 *applid* CICS unable to continue for reasons given above.

Explanation: CICS initialization cannot continue because of one or more serious errors. One or more preceding messages describe these errors.

System action: CICS terminates with a dump.

User response: Refer to any preceding messages for further guidance on what the problems may be and how to solve them. Correct the errors and restart CICS.

Destination: Console

Modules: DFHSII1

XMEOUT Parameter: *applid*

DFHSI1522D *applid* Restart errors reported above. Reply 'GO' or 'CANCEL'.

Explanation: One or more error messages precede this message. CICS can continue initialization but only in degraded mode.

System action: Depending on your response to this message, CICS terminates or continues initialization in degraded mode.

User response: Consider the reported errors and their effects, and decide if you want CICS to continue in degraded mode. If you do, reply 'GO'. If you do not, then reply 'CANCEL'. Correct the errors and restart CICS.

Destination: Console

Modules: DFHSII1

XMEOUT Parameter: *applid*

DFHSI1530 *applid* **Purge of non-executable ATI request inoperative.**

Explanation: CICS is unable to initiate the CRSQ task to delete automatic transaction initiation (ATI) requests from the system when those requests are not honored for longer than the ATI purge delay interval.

System action: System initialization continues.

User response: If ATI purge is required, ensure that the CRSQ task is available next time CICS is initialized.

Destination: Console

Modules: DFHSIJ1

XMEOUT Parameter: *applid*

DFHSI1531 *applid* **Terminal control incompatibility. macro VTAM return code: *retcode* error code: *errcode* (modname: DFHZRPL).**

Explanation: CICS found an inconsistency during the initialization of terminal control. *macro* is the name of the failing VTAM macro. *retcode* is the VTAM hexadecimal return code in Register 15. *errcode* contains the contents of Register 0, which is the associated error code in hexadecimal. Refer to the *ACF/VTAM Programmer's Reference* manual for a complete description of the VTAM return code *retcode* and the VTAM error code *errcode*.

The probable cause of this inconsistency is that VTAM=YES was specified (perhaps by default) in the SIT, but the VTAM macros GENCB and SHOWCB are not available.

System action: After issuing this message, CICS system initialization abnormally terminates with a system dump.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Use the VTAM return code and error code to determine the cause of failure in the VTAM macro *macro*. Correct the error using the *ACF/VTAM Programmer's Reference* manual, and restart CICS.

Destination: Console

Modules: DFHZRPL

XMEOUT Parameters: *applid, macro,retcode, errcode*

DFHSI1533 *applid modname* **loaded at X'address'.**

Explanation: This is an informative message indicating that CICS has loaded module *modname* at address *address*.

System action: System initialization continues.

User response: None.

Destination: Console

Modules: DFHAPSIP

XMEOUT Parameters: *applid, modname,address*

DFHSI1534 *applid* **Unable to link to program DFHAMP - GRPLIST parameter ignored.**

Explanation: The DFHAMP program cannot be found on the load library. The GRPLIST parameter cannot be processed and so is ignored.

System action: System initialization continues.

User response: Ensure that the DFHAMP program is on the load library.

Destination: Console

Modules: DFHSII1

XMEOUT Parameter: *applid*

DFHSI1535 *applid* **Severe error detected in DFHAMP - CICS is terminating.**

Explanation: A severe error was detected while the GRPLIST parameter was being processed.

System action: A dump is provided and CICS is terminated.

User response: This is most probably a logic error in DFHAMP. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSII1

XMEOUT Parameter: *applid*

DFHSI1536D *applid* **GRPLIST *grplist* does not exist. Enter alternative name, 'GO' or 'CANCEL'.**

Explanation: Group list *grplist* cannot be found on the CSD file.

System action: CICS waits for a reply. If you reply CANCEL, CICS terminates. If you reply GO, CICS ignores the specified GRPLIST and tries to install the next one. If you specify a valid list name, CICS initialization continues and the list is installed.

User response: Enter 'GO', 'CANCEL' or a valid GRPLIST.

Destination: Console

Modules: DFHAMPIL

XMEOUT Parameters: *applid, grplist*

DFHSI1537D *applid* GRPLIST *grplist* does not exist.
Enter alternative name or 'CANCEL'.

Explanation: Group list *grplist* cannot be found on the CSD file.

System action: CICS waits for a reply. If you reply CANCEL, CICS terminates. If you specify a valid list name, CICS initialization continues and the list is installed.

User response: Enter 'CANCEL' or a valid GRPLIST.

Destination: Console

Modules: DFHAMPIL

XMEOUT Parameters: *applid*, *grplist*

DFHSI1538D *applid* Install GRPLIST Errors. Is startup to be continued - Enter 'GO' or 'CANCEL'.

Explanation: Errors have been detected in DFHAMP while installing GRPLIST during CICS initialization. Accompanying messages describe the nature of the errors.

System action: CICS waits for a reply. If you reply CANCEL, CICS terminates. If you reply GO, CICS initialization continues.

User response: See the associated messages for further information about these errors. Reply with GO or CANCEL.

Destination: Console

Modules: DFHSII1

XMEOUT Parameter: *applid*

DFHSI1539 *applid* Error attaching the CESC (Terminal Timeout) transaction.

Explanation: The CESC transaction failed to start during initialization of an alternate XRF region. Although CICS continues to initialize, terminals left signed on after the takeover are not timed out.

System action: A dump is produced and CICS continues initialization.

User response: Use the dump to investigate why the transaction could not be started. It may be that the system was short on storage or that the transaction has been disabled.

Destination: Console

Modules: DFHSIJ1

XMEOUT Parameter: *applid*

DFHSI1542 *applid* Takeover by the CICS alternate system has failed. Emergency restart could not be performed.

Explanation: This CICS alternate system is attempting to take over from its associated active CICS system but the recovery manager component has indicated that an initial start is required because of a system log failure.

System action: CICS is abnormally terminated and a dump is provided.

User response: Look for console messages issued by the active CICS system which indicate the nature of the log failure. If no such messages have been issued, an internal CICS error may have occurred. In this case you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSII1

XMEOUT Parameter: *applid*

DFHSI1543 *applid* Time-Of-Day clock inoperative.

Explanation: System initialization was unable to establish the time-of-day clock values for CICS.

System action: CICS is abnormally terminated and a dump is provided.

User response: The time-of-day clock is external to CICS execution and may have been disabled. Enable the time-of-day clock and restart CICS.

Destination: Console

Modules: DFHSII1

XMEOUT Parameter: *applid*

DFHSI1547 *applid* Notification of a default qualified LUNAME to the recovery manager domain has failed.

Explanation: CICS is running with VTAM=NO, or an attempt to open the VTAM ACB has failed.

If VTAM=NO is specified, CICS uses the UOWNETQL system initialization parameter to form a default qualified LUNAME to pass to the recovery manager. If the VTAM ACB failed to open, CICS uses UOWNETQL to form the default qualified LUNAME. If UOWNETQL has not been specified, CICS sets UOWNETQL to the invalid value '9UNKNOWN' to highlight the problem.

An attempt was then made to transfer the default qualified LUNAME of the system to the recovery manager domain for use in constructing unit of work (UOW) identifiers. The attempt failed, indicating a serious error.

System action: CICS continues. UOW identifiers

constructed by the recovery manager domain do not contain a qualified luname.

User response: Keep the exception trace data produced by the recovery manager domain. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSIF1

XMEOUT Parameter: *applid*

DFHSI1548 *applid* After opening the VTAM ACB, CICS has failed to transfer the fully qualified LUNAME to the recovery manager domain.

Explanation: The VTAM ACB was opened by CICS to allow communication via VTAM. An attempt was then made to transfer the fully qualified LUNAME of the system. The LUNAME is provided to the recovery manager domain by VTAM for use in constructing unit of work (UOW) identifiers. The attempt failed, indicating a serious error.

System action: CICS continues. Unit of work identifiers constructed by the recovery manager domain do not contain a fully qualified LUNAME.

User response: Keep the exception trace data produced by the recovery manager domain. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHZSLS

XMEOUT Parameter: *applid*

DFHSI1549 *applid* Logic error when building TCT module list.

Explanation: Either the format of the modules DFHZCA, ZCB, ZCP, ZCW, ZCX, ZCY, ZCZ and ZCXR was not as expected, or the TCT was generated incorrectly.

System action: CICS is abnormally terminated and a dump is provided.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Possible reasons for this message are:

1. The modules listed were generated without VTAM facilities, but the system initialization table (SIT) specifies VTAM=YES.
2. The TCT does not include ACCESSMETHOD=VTAM, but the system initialization table (SIT) specifies VTAM=YES.
3. The entry points of the listed modules are incorrect.

4. The module list in each of the listed modules is incorrect.

If reason 1 or 2 applies, correct the error. Otherwise, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSIF1

XMEOUT Parameter: *applid*

DFHSI1550 *applid* A severe error has occurred while making a domain domain call with response (X'response') and reason (X'reason').

Explanation: An unexpected error was returned from the specified domain. The response and reason codes are given.

System action: A system dump is taken, unless the failing domain has previously taken diagnostics.

This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system administrator. This failure indicates a serious error in CICS.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSII1

XMEOUT Parameters: *applid, domain, X'response', X'reason'*

DFHSI1551 *applid* The CICS region userid *userid* is not authorized to use the PLTPIUSR parameter *userid* *userid*. Initialization cannot continue, so CICS is terminated.

Explanation: The userid specified in the job control statements for the CICS region is not authorized to use the userid specified in the PLTPIUSR system initialization parameter.

System action: CICS initialization terminates.

User response: Ensure that the correct userid is specified for PLT processing.

Ensure that the userid for the CICS region has the necessary authorization. This may require the assistance of a security administrator.

When the necessary corrections have been made rerun the CICS job.

Destination: Console

Modules: DFHSIII

XMEOUT Parameters: *applid, userid,userid*

DFHSI1552 *applid* **Userid *userid* specified for the PLTPIUSR parameter has not been defined correctly to the external security manager (ESM). SAF codes are (X'safresp',X'safreas'). ESM codes are (X'esmresp',X'esmreas').**

Explanation: The userid specified for the PLTPIUSR initialization parameter has been defined incorrectly.

System action: CICS terminates abnormally with a dump.

User response: Ensure that the desired userid is specified for PLT processing and that external security manager (ESM) definitions have been specified correctly.

The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the *OS/390 MVS Programming: Authorized Assembler Services Guide* and in *External Security Interface (RACROUTE) Macro Reference for MVS and VM (SC28-1366)*. See these manuals for an explanation of the codes.

There may be further messages produced by CICS or the external security manager (ESM) which provide more information.

Correct the errors and restart CICS.

Destination: Console

Modules: DFHSII1

XMEOUT Parameters: *applid, userid,X'safresp', X'safreas', X'esmresp',X'esmreas'*

DFHSI1553 *applid* **The unit of work network qualifier specified via the UOWNETQL parameter contains invalid characters or begins with a number. A dummy qualifier is substituted.**

Explanation: The UOWNETQL system initialization parameter has been specified incorrectly. The UOWNETQL parameter must consist of uppercase letters (A through Z), or numbers in the range 0 through 9. The first character must be a letter.

CICS is running with VTAM=NO, or an attempt to open the VTAM ACB has failed.

When VTAM=NO is specified, CICS uses UOWNETQL

to form a default qualified LUNAME to pass to the recovery manager.

If the VTAM ACB fails to open, CICS uses UOWNETQL to form the default qualified LUNAME.

System action: CICS continues but with the UOWNETQL deliberately set to the invalid value '9UNKNOWN' to highlight the problem.

User response: Correct the UOWNETQL system initialization parameter.

Destination: Console

Modules: DFHSIF1

XMEOUT Parameter: *applid*

DFHSI1556 *applid* **SKRP {A | F}x disabled due to extension of PGRET value.**

Explanation: The new PGRET value supplied as an initialization option has caused all the single-key retrieval values to be rebuilt. The value shown in the message exceeds 16 bytes. *x* can be a value 1 through 3 for A and 1 through 12 for F.

System action: The key given in the message (PA1-PA3 and PF1-PF12 respectively) is disabled.

User response: If it has been specified (by PARM) that initialization overrides can be entered by means of the console, the opportunity will be given to re-enter the PGRET and/or the SKRxxxxx initialization option.

Destination: Console

Modules: DFHPASY

XMEOUT Parameters: *applid, {1=A, 2=F}, x*

DFHSI1558 *applid* **Program *programe* cannot be found.**

Explanation: Program *programe* is essential for CICS to initialize correctly, but was not defined in a group referenced by the group list specified in the startup job stream.

System action: A dump is provided and CICS is terminated.

User response: Ensure that the program is defined in a group referenced by the group list specified in the startup job stream.

Destination: Console

Modules: DFHSIJ1

XMEOUT Parameters: *applid, programe*

DFHSI1559 *applid* Profile DFHCICSE cannot be found.

Explanation: The DFHCICSE profile is essential for CICS to initialize correctly. However it was not defined in the group list specified in the startup job stream.

System action: A dump is provided and CICS is terminated.

User response: Ensure that the DFHCICSE profile is defined in the group list specified in the startup job stream. A definition of DFHCICSE is provided in the DFHSTAND group on the CICS system definition (CSD) file.

Destination: Console

Modules: DFHXCPA, DFHSIJ1

XMEOUT Parameter: *applid*

DFHSI1562 *applid* Unable to initialize application domain statistics.

Explanation: During CICS initialization, an error was detected while the application domain (AP) statistics control module, DFHSII1, was being initialized. This could indicate a problem with the AP component of CICS.

System action: An exception trace entry is made in the trace table and CICS terminates abnormally with a system dump.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This error may have occurred because of an earlier error detected by the kernel (KE) domain of CICS. Look for earlier messages from the KE domain beginning DFHKExxxx, CICS trace table entries with the prefix KE and a dump. These indicate the type of error and the action that should be taken.

If no earlier error is detected by the KE component, DFHSII1 makes an exception entry in the trace table (id=X'0700') and terminates CICS abnormally with code=1562 and with a system dump. In this case you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSII1

XMEOUT Parameter: *applid*

DFHSI1572 *applid* Unable to OPEN VTAM ACB - RC=xxxxxxx ACB Code=yy.

Explanation: An error was encountered during system initialization while attempting to open the VTAM ACB. RC=xxxxxxx is the VTAM error code found in Register 15. yy is the hexadecimal contents of the ACB.

System action: CICS initialization continues.

User response: Refer to the *OS/390 IBM Communications Server: SNA Programming* for a complete description of the values of the ACB error field and the return code.

Use the values and the return code to determine the cause of the problem.

Decide whether to cancel or to continue. (This message appears if you bring up CICS before you bring up VTAM.)

If you want to use VTAM terminals in this CICS run, you must activate VTAM. You can open the VTAM ACB with the CEMT SET VTAM OPEN command.

Destination: Console

Modules: DFHSIF1

XMEOUT Parameters: *applid, xxxxxxxx, yy*

DFHSI1573 *date time applid* Terminal Control is unavailable due to an unsupported access method.

Explanation: ACB/TCAM, and releases of VTAM prior to version 3, are not supported by this release of CICS.

System action: CICS terminates with a system dump.

User response: Update your access method.

Destination: Console

Modules: DFHZSLS

XMEOUT Parameters: *date, time,applid*

DFHSI1574 *applid* TCTUA Subpool not added in DFHZRPL. CICS initialization cannot continue.

Explanation: An attempt to add a subpool by the storage manager has failed. Module DFHZRPL has failed in an attempt to add a subpool for use by the TCTUA's associated with non-VTAM terminals. Since it is necessary to have the subpool present for use when needed, this is a serious error.

System action: The initialization of the CICS system which tried to perform the addition of the subpool abends. If it was not able to add the subpool, then CICS is not able to execute properly.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHZRPL

XMEOUT Parameter: *applid*

DFHSI1575 *applid* Getmain failed for TCTUA subpool in module DFHZRPL. CICS initialization cannot continue.

Explanation: The module DFHZRPL has failed in an attempt to GETMAIN an area of storage for use by the TCTUA subpool. This subpool has already been added but no storage yet exists for it. This is a serious error.

System action: As a result of the GETMAIN failure so early in the initialization sequence, it is not possible to continue the CICS initialization. The CICS system which tried and failed to perform the GETMAIN terminates.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHZRPL

XMEOUT Parameter: *applid*

DFHSI1576 *applid* Unable to find VTAM ACB.

Explanation: An error was encountered during system initialization while attempting to find the VTAM ACB.

System action: CICS continues to initialize, but VTAM is not available.

User response: If you do not require VTAM support, this message can be ignored.

If you have VTAM installed on your system, check that VTAM=NO has not been specified as a system initialization parameter. If VTAM=YES is specified, investigate why VTAM is not currently available on your system.

Destination: Console

Modules: DFHSIF1

XMEOUT Parameter: *applid*

DFHSI1578D *applid* PLTPI specified cannot be found. Reply 'GO' or 'CANCEL'.

Explanation: The post-initialization program list table (PLTPI) cannot be found because the PLT does not exist in the CICS program library.

System action: If the response is 'CANCEL', CICS is terminated. If the response is 'GO', processing continues without PLT processing.

User response: Respond 'GO' or 'CANCEL'.

Destination: Console

Modules: DFHSIPLT

XMEOUT Parameter: *applid*

DFHSI1579D *applid* Module *modname*{ PLT | connection }program *programe* not found. Reply 'GO' or 'CANCEL'.

Explanation: This message indicates that either a program defined in the post-initialization program list table (PLTPI) cannot be found, or a connection program used when connecting to CICSplex SM, DBCTL, DB2 or MQ cannot be found. The attempt to invoke a connection program results from coding CPSMCONN=CMAS, or CPSMCONN=LMA, or CPSMCONN=WUI, or DBCTLCON=YES, or DB2CONN=YES, or MQCONN=YES in the SIT.

For PLT programs, if the message is issued during the first PLT phase in initialization, the program does not exist in the CICS program library. If the message is produced during the post-initialization PLT phase, the program did not have an installed program entry or was not found in the CICS program library.

For connection programs, the program did not have an installed program entry or was not found in the CICS program library.

modname indicates which of the modules issued the message. *programe* is the name of the program which cannot be found.

System action: If the response is 'CANCEL', CICS is terminated. If the response is 'GO', the program is bypassed.

User response: Reply 'CANCEL' or 'GO'.

Destination: Console

Modules: DFHSIPLT

XMEOUT Parameters: *applid*, *modname*, {1= PLT , 2= connection }, *programe*

DFHSI1580D *applid*{ PLT | Connection }program *program-name* has abended, code *abcode*. Reply 'GO' or 'CANCEL'.

Explanation: CICS was processing either the initialization program list table (PLT) when the PLT program *program-name* abended with abend code *abcode*, or was processing connection program *program-name* and it abended with abend code *abcode*.

System action: If the response is 'CANCEL', CICS is terminated. If the response is 'GO', the program is bypassed.

User response: Reply 'CANCEL' or 'GO'.

Destination: Console

Modules: DFHSIPLT

XMEOUT Parameters: *applid*, {1=PLT, 2= Connection },
program-name,abcode

DFHFSI1582 *applid* Local DLI PSBs present in the PDIR. CICS does not support local DLI.

Explanation: CICS has detected that local PSBs are present in the user specified PDIR. CICS no longer supports local DLI. A PDIR is only required for remote DLI, and must contain only remote PSB definitions. A PDIR is not required for DBCTL.

System action: A CICS abend dump is produced, and CICS is terminated.

User response: If remote DLI is required, correct the PDIR by removing the local PSBs. Then reassemble and relinkedit the PDIR, and resubmit the CICS job.

If remote DLI support is not required, change the system initialization table (SIT) to specify PDIR=NO.

Destination: Console

Modules: DFHFSIH1

XMEOUT Parameter: *applid*

DFHFSI1589 *applid* VTAM is not currently active.

Explanation: CICS initialization cannot OPEN the VTAM access method control block (ACB) because VTAM is not active.

System action: If this is an alternate system, CICS waits for 15 seconds and retries the OPEN indefinitely.

If this is not an alternate system, CICS proceeds with the rest of initialization. The Open VTAM Retry transaction COVR is attached, and retries the OPEN every 5 seconds for ten minutes.

User response: In the case of an alternate, check that VTAM is on its way up. If it is not, you can cancel this alternate.

Destination: Console

Modules: DFHFSIF1

XMEOUT Parameter: *applid*

DFHFSI1590 *applid* XRF alternate cannot proceed without VTAM.

Explanation: CICS initialization cannot OPEN the VTAM access method control block (ACB). The ACB error code may be found in the preceding message DFHFSI1572.

System action: CICS is terminated with a dump.

User response: Refer to DFHFSI1572 and use the information to try and resolve the causes of the errors.

Destination: Console

Modules: DFHFSIF1

XMEOUT Parameter: *applid*

DFHFSI1592 *applid* CICS *applid* not (yet) active to VTAM.

Explanation: CICS initialization cannot OPEN the VTAM access method control block (ACB) because VTAM does not recognize the APPLID (VTAM error X'5A'). There may be a user error in the value of APPLID (for example, on a SIT override) or the application subarea containing APPLID may not be active in VTAM. Alternatively, it may be possible that VTAM is still coming up. If so, the problem may correct itself when VTAM completes its initialization.

System action: If this is an alternate CICS, wait for 15 seconds and retry the OPEN indefinitely. If this is not an alternate, CICS proceeds with the rest of initialization.

User response: In the case of an alternate, check that VTAM is on its way up. If it is, check that the required application sub-area is active in VTAM. If it is, you may cancel this alternate. If this is not an alternate, you can use CEMT to retry the OPEN when CICS has initialized.

Destination: Console

Modules: DFHFSIF1

XMEOUT Parameter: *applid*

DFHFSI1594 *applid* A *xxxx* level of module *progrname* is being loaded.

Explanation: The system is loading a level of module *progrname* that was not assembled against the current level of CICS in the CICS Transaction Server product. The level *xxxx* shows the level of the module being used.

System action: System initialization continues.

User response: Ensure that it is valid to use an old level of module *progrname*. Usually, it will be necessary to reassemble the module for the current level of CICS being used.

Destination: Console

Modules: DFHAPSIP

XMEOUT Parameters: *applid, xxxx,progrname*

DFHFSI1596 *applid* Nucleus module *progrname* cannot be located.

Explanation: Nucleus module *progrname* was not found in the CICS library while loading the nucleus.

System action: The AP domain initialization routines continue to attempt to load the remaining nucleus modules. After trying to load all the nucleus modules, CICS is terminated.

User response: Add the missing module *progrname* to the appropriate library and restart CICS.

Destination: Console

Modules: DFHAPSIP, DFHSID1

XMEOUT Parameters: *applid, progrname*

DFHSI1597 *applid* **VTAM=YES invalid with a non VTAM TCT - VTAM=NO forced.**

Explanation: The TCT loaded has not been assembled with ACCESSMETHOD=VTAM but VTAM=YES was specified on the SIT.

System action: CICS continues but without VTAM support.

User response: To use VTAM, assemble the TCT with ACCESSMETHOD=VTAM or use the CICS supplied TCT which has a suffix of DY.

Destination: Console

Modules: DFHZINT

XMEOUT Parameter: *applid*

DFHSI1599 *applid* **Region/Partition size insufficient to initialize transient data.**

Explanation: Transient data initialization failed, either because an attempt to create Storage Manager subpool failed or because an attempt to get storage failed.

System action: A system dump is produced, and CICS is abnormally terminated.

User response: Increase the region size available to CICS.

Destination: Console

Modules: DFHSID1

XMEOUT Parameter: *applid*

DFHSI1784 *applid* **The user shutdown assist transaction *transid* has not been defined as a shutdown enabled local transaction.**

Explanation: This message is issued during CICS initialization and indicates that the user shutdown assist transaction specified on the system initialization table (SIT) has not been defined as a shutdown enabled local transaction.

System action: No action is taken. A TRANSIDERR may be returned on PERFORM SHUTDOWN.

User response: Do one of the following:

- Correct the shutdown transaction definition.
- Change or remove the SIT SDTRAN option.
- Use the CEMT or EXEC CICS PERFORM SHUTDOWN SDTRAN option.

Destination: Console

Modules: DFHSIJ1

XMEOUT Parameters: *applid, transid*

DFHSI2810 *applid* **CANCEL reply received. CICS is terminating.**

Explanation: A CANCEL reply has been received.

System action: CICS terminates.

User response: Refer to previous messages to determine what action to take.

Destination: Console

Modules: DFHSII1, DFHSIPLT, DFHAMPIL

XMEOUT Parameter: *applid*

DFHSI2813 *applid* **Program DFHRCEX cannot be found.**

Explanation: CICS cannot find DFHRCEX in any data set concatenated in the DFHRPL DD statement in the CICS startup job stream.

System action: CICS initialization terminates with a dump.

User response: To correct this error, place DFHRCEX in a partitioned data set in the DFHRPL DD statement.

Destination: Console

Modules: DFHSIJ1

XMEOUT Parameter: *applid*

DFHSI8420I *applid* **About to link to PLT programs during the second stage of initialization.**

Explanation: CICS is about to link to the user PLT programs defined in the PLTPI system initialization parameter during the second stage of initialization.

System action: Control is passed to the user PLT programs.

User response: None. This message can be suppressed with the system initialization parameter MSGLVL=0.

Destination: Console

Modules: DFHSIPLT

XMEOUT Parameter: *applid*

DFHSI8424I *applid* **Control returned from PLT programs during the second stage of initialization.**

Explanation: Control is returned to CICS to continue system initialization.

System action: Control is returned to CICS.

| **User response:** None. This message can be suppressed
| with the system initialization parameter MSGLVL=0.

Destination: Console

Modules: DFHSIPLT

XMEOUT Parameter: *applid*

DFHSI8430I *applid* **About to link to PLT programs
during the third stage of initialization.**

Explanation: CICS is about to link to the user PLT
programs defined in the PLTPI SIT parameter during
the third stage of initialization.

System action: Control is passed to the user PLT
programs.

| **User response:** None. This message can be suppressed
| with the system initialization parameter MSGLVL=0.

Destination: Console

Modules: DFHSIPLT

XMEOUT Parameter: *applid*

DFHSI8434I *applid* **Control returned from PLT
programs during the third stage of
initialization.**

Explanation: Control is returned to CICS to continue
system initialization.

System action: Control is returned to CICS.

| **User response:** None. This message can be suppressed
| with the system initialization parameter MSGLVL=0.

Destination: Console

Modules: DFHSIPLT

XMEOUT Parameter: *applid*

| **DFHSI8440I** *applid* **Initiating connection to *resmanager*.**

| **Explanation:** CICS is about to connect to the specified
| resource manager immediately prior to running PLT
| programs during the third stage of initialization. The
| resource manager is CICSplex SM, DBCTL, DB2 or MQ.
| Connection is initiated because CPSMCONN=CMAS, or
| CPSMCONN=LMA, or CPSMCONN=WUI, or
| DBCTLCON=YES, or DB2CONN=YES, or
| MQCONN=YES was specified in the SIT.

| **System action:** Control is passed to the resource
| manager connect program.

| **User response:** None. This message can be suppressed
| with the system initialization parameter MSGLVL=0.

Destination: Console

Modules: DFHSIPLT

| **XMEOUT Parameters:** *applid, resmanager*

DFHSI8441I *applid* **Connection to *resmanager* qualifier
successfully completed.**

| **Explanation:** CICS has successfully connected to the
| specified resource manager immediately prior to
| running PLT programs during the third stage of
| initialization. The resource manager name is shown
| along with the resource manager qualifier.

System action: CICS processing continues.

User response: None. This message can be suppressed
with the system initialization parameter MSGLVL=0.

Destination: Console

Modules: DFHSIPLT

XMEOUT Parameters: *applid, resmanager, qualifier*

| **DFHSI8442** *applid* **Connection to *resmanager* has
failed.**

| **Explanation:** CICS was unable to connect to resource
| manager *resmanager* immediately prior to running PLT
| programs during the third stage of initialization. The
| resource manager is DBCTL, DB2 or MQ. Connection
| was initiated because DBCTLCON=YES, or
| DB2CONN=YES, or MQCONN=YES was specified in
| the SIT.

| **System action:** CICS processing continues.

| **User response:** Refer to previous messages issued by
| CICS or the resource manager adapter to determine
| why the connection attempt failed.

| **Destination:** Console

| **Modules:** DFHSIPLT

| **XMEOUT Parameters:** *applid, resmanager*

| **DFHSI8443** *applid* **Connection to *resmanager* not
completed. Adapter is awaiting
initialization of *resmanager*.**

| **Explanation:** CICS was unable to complete connection
| to resource manager *resmanager* immediately prior to
| running PLT programs during the third stage of
| initialization. The resource manager is DBCTL, DB2 or
| MQ. Connection was initiated because
| DBCTLCON=YES, or DB2CONN=YES, or
| MQCONN=YES was specified in the SIT.

| The resource manager adapter is waiting for the
| resource manager to be initialized.

| **System action:** CICS processing continues. The
| connection is completed when the resource manager is
| initialized.

| **User response:** Refer to messages issued by the
| relevant resource manager adapter to determine when
| connection is completed.

| **Destination:** Console

| **Modules:** DFHSIPLT
| **XMEOUT Parameters:** *applid, resmanager, resmanager*

| **DFHSI8444** *applid* **Unable to initiate the Enterprise
Java Resolution transaction CEJR. EJ
resolution will not occur.**

| **Explanation:** Enterprise Java domain processing uses
transaction CEJR to resolve CorbaServers and DJar.
This processing cannot occur before a given point in
CICS processing. However, resolution can occur for
CorbaServers and DJar created as part of RDO
processing. Consequently, CEJR is initiated to execute
EJ Resolution. Module DFHSIJ1 could not start
transaction CEJR. Execution of the DFHIC
TYPE=INITIATE macro failed. Either CEJR is not an
installed transaction definition, or DFHEJITL is not an
installed program definition.

| **System action:** CICS processing continues. When a
CorbaServer or a DJar is installed resolution will not
occur.

| **User response:** Ensure that transaction CEJR and
program DFHEJITL are available for execution. Group
DFHSTAND in DFHLIST contains the definitions

#

DFHSJxxxx messages

| **DFHSJ0001** *applid* **An abend (code *aaa/bbbb*) has
occurred at offset *X'offset'* in module
modname.**

| **Explanation:** An unexpected program check or abend
occurred with abend code *aaa/bbbb*.

| The program status word (PSW) at the time of the
program check or abend indicated that CICS was
executing at offset *X'offset'* in module *modname*. This
may have been caused by corruption of CICS code or
control blocks.

| **System action:** A system dump is taken and the
system attempts to continue operation unless otherwise
directed by entries in the dump table.

| Message DFHME0116 is normally produced containing
the symptom string for this problem.

| **User response:** Investigate the cause of the program
check or abend using the system dump and any
previously output diagnostic information provided by
CICS, the access methods, or the operating system.

| If you cannot resolve the problem, you will need
further assistance from IBM. See Part 4 of the *CICS
Problem Determination Guide* for guidance on how to
proceed.

| **Destination:** Console

| **Modules:** DFHSJDM, DFHSJIN, DFHSJIS

| **XMEOUT Parameters:** *applid, aaa/bbbb, X'offset', modname*

| needed for EJ resource resolution processing.

| Use CECI to initiate CEJR as a non-terminal
transaction. After CEJR has run once, the installation of
CorbaServers and DJar should proceed.

| **Destination:** Console

| **Modules:** DFHSIJ1

| **XMEOUT Parameter:** *applid*

DFHSI8445 *applid* **An attempt to getmain storage
intended for the Language Interface
work area failed.**

Explanation: An attempt to getmain storage intended
for the Language Interface work area failed.

System action: CICS terminates with a system dump.

User response: Increase below the line storage
available to CICS.

Destination: Console

Modules: DFHSIJ1

XMEOUT Parameter: *applid*

| **DFHSJ0002** *applid* **A severe error (code *X'code'*) has
occurred in module *module*.**

| **Explanation:** The recovery manager domain has
received an unexpected error response from some other
part of CICS. The operation requested by recovery
manager is described by code *X'code'*.

| For further information about CICS exception trace
entries, refer to the *CICS Problem Determination Guide*.

| **System action:** A system dump is taken and the
system attempts to continue operation unless
specifically inhibited by dump table entries.

| Message DFHME0116 is normally produced containing
the symptom string for this problem.

| **User response:** Investigate the cause of the problem as
follows:

- | 1. Determine if the problem can be explained by any
| previous messages issued from some other CICS
| component.
- | 2. Examine the symptom string.
- | 3. Examine the dump.

| If you cannot resolve the problem, you will need
further assistance from IBM. See Part 4 of the *CICS
Problem Determination Guide* for guidance on how to
proceed.

| **Destination:** Console

| **Modules:** DFHSJDM, DFHSJIN, DFHSJIS

| **XMEOUT Parameters:** *applid, X'code',module*

| **DFHSJ0201** *date time applid* **A call to CEEPIPI with function code INIT_SUB_DP has failed. (Return code was - X'rc').**

| **Explanation:** The CICS-JVM interface attempted to initialize a Language Environment enclave using the pre-initialized interface. This failed with return code *rc*.

| This message may be generated when a JVM in CICS abends.

| **System action:** CICS takes a system dump and abends the transaction with abend code AEXZ.

| **User response:** Look at SYSOUT or CESE destination for Language Environment messages. Look in *Language Environment Programmers Guide (SC28-1939)* for the CEEPIPI function and find the explanation of the return code (Register 15) for that function.

| Ensure that the SDFJAUTH PDSE is included in the APF authourized STEPLIB concatenation and that both SCEERUN2, SCEERUN and SDFJLOAD are in the RPL concatenation.

| If the JVM abended there will probably be a JAVADUMP file in the working directory of the HFS file system.

| **Explanation:** The CICS-JVM interface attempted to initialize an Language Environment enclave using the pre-initialized interface. This failed with return code *rc*.

| This message may be generated when a JVM in CICS abends.

| **System action:** CICS takes a system dump and abends the transaction with abend code AEXZ.

| **User response:** Look at SYSOUT or CESE destination for Language Environment messages. Look in *Language Environment Programmers Guide (SC28-1939)* for the CEEPIPI function and find the explanation of the return code (Register 15) for that function.

| If the JVM abended there will probably be a JAVADUMP file in the working directory of the HFS file system.

| If the problem persists you may need to contact your IBM support representative.

| **Destination:** CSMT

| **Modules:** DFHSJIN

| **XMEOUT Parameters:** *date, time,applid, X'rc'*

DFHSJ0205 *date time applid* A call to CEEPIPI with function code CALL_SUB has failed. (Return code was - X'rc').

Explanation: The CICS-JVM interface attempted to initialize an Language Environment enclave using the pre-initialized interface. This failed with return code rc.

This message may be generated when a JVM in CICS abends.

System action: CICS takes a system dump and abends the transaction with abend code AEXZ.

User response: Look at SYSOUT or CESE destination for Language Environment messages. Look in *Language Environment Programmers Guide (SC28-1939)* for the CEEPIPI function and find the explanation of the return code (Register 15) for that function.

If the JVM abended there will probably be a JAVADUMP file in the working directory of the HFS file system.

If the problem persists you may need to contact your IBM support representative.

Destination: CSMT

Modules: DFHSJIN

XMEOUT Parameters: *date, time,applid, X'rc'*

DFHSJ0206 *date time applid* The runtime options specified in DFHJVMRO are too long. The Language Environment enclave cannot be initialized. The JVM was not started.

Explanation: The Language Environment runtime options specified in DFHJVMRO are too long. The options specified in DFHJVMRO are concatenated with runtime options required by CICS for use when initializing the Language Environment enclave. The total length of the runtime options that may be specified cannot exceed 255 characters.

System action: The JVM is not started. Exception trace point SJ 0225 is issued.

User response: Data 1 in the exception trace shows the Language Environment runtime options from DFHJVMRO. Data 2 shows the Language Environment runtime options provided by CICS.

Examine the options from DFHJVMRO. Remove any unnecessary options and if possible abbreviate any Language Environment runtime options in your source for DFHJVMRO. Assemble and re-link DFHJVMRO after making your changes.

If CICS has not been restarted since the failure you will need to use CEMT SET PROGRAM(DFHJVMRO) NEWCOPY before attempting to restart the JVM.

Destination: CSMT

Module(s): DFHSJIN

XMEOUT Parameters: *date, time,applid*

DFHSJ0299 *date time applid* The resettable mode of the JVM is deprecated. It will be removed in a future release of CICS.

Explanation: The resettable mode of the JVM will be withdrawn in a future release of CICS.

System action: Processing continues.

User response: Plan to change Java applications currently running in a resettable JVM to run in a continuous JVM instead.

Destination: CDEP

Module(s): DFHSJIN

XMEOUT Parameters: *date, time,applid*

DFHSJ0501 *date time applid* An attempt to obtain the CICS Wrapper class *wrapper_name* using the JNI function 'FindClass' has failed.

Explanation: The CICS-JVM interface attempted to obtain a reference to the the CICS Wrapper class *wrapper*, but was unsuccessful. This may be because:

- CICS is unable to load and initialize the CICS jar file (*dfjcics.jar*)
- the JVM's security policy does not permit CICS to load a required interface module.

System action: The CICS transaction is abended with abend code ASJE.

User response: Verify the location and attributes of the CICS jar file in the classpath.

Check the contents of the STDERR file (as defined in the JVMPROFILE) for the following Java security exception:

```
java.security.AccessControlException:  
access denied (java.lang.RuntimePermission  
loadLibrary.com_ibm_cics_server_DTC)
```

If the JVM's security manager is active (i.e the system property *java.security.manager* is specified in the JVM system properties file), check that the security policy grants permission to the CICS codebase. For further information about the JVM security policy see *Java Applications in CICS*

Destination: CSMT

Modules: DFHSJCS

XMEOUT Parameters: *date, time,applid, wrapper_name*

<hr/> <p>DFHSJ0502 <i>date time applid</i> Attempt to change the HFS working directory to <i>pathname</i> has failed. ---	--

| **User response:** The maximum number of JVM options
| CICS can pass to the JVM has been exceeded. Review
| the options specified in member *JVMProf* and the
| associated JVM properties file *filename*. Remove any
| that are not required.

| **Destination:** CSMT

| **Modules:** DFHSJJPJ

| **XMEOUT Parameters:** *date, time,applid, option*

| **DFHSJ0509** *date time applid* **Attempt to open JVM**
| **system properties file *filename* has failed.**
| **Runtime error message is *errmsg***

| **Explanation:** The CICS-JVM interface attempted to
| open the jvm system properties file *filename* held on
| HFS. The open command failed and the runtime
| message *errmsg* appended to the end of this message
| documents why the command failed.

| **System action:** CICS transaction is aborted with the
| INVREQ exception.

| **User response:** Examine *errmsg* to determine why the
| open command failed.

| **Destination:** CSMT

| **Modules:** DFHSJJPJ

| **XMEOUT Parameters:** *date, time,applid, filename, errmsg*

| **DFHSJ0510** *date time applid* **Attempt to fetch**
| **user-replaceable module DFHJVMAT**
| **has failed.**

| **Explanation:** The CICS-JVM interface attempted to
| load the user-replaceable module DFHJVMAT and
| failed.

| **System action:** The CICS transaction is abended with
| abend code ASJG.

| **User response:** Verify that DFHJVMAT is included in
| SDFHAUTH.

| **Destination:** CSMT

| **Modules:** DFHSJIN

| **XMEOUT Parameters:** *date, time,applid*

| **DFHSJ0511** *date time applid* **Attempt to open *filename***
| **in work directory *dirname* for output has**
| **failed. Runtime error message is *errmsg***

| **Explanation:** The CICS-JVM interface attempted to
| open for output the stdout or stderr file specified or
| defaulted in the JVM profile for the Java program. The
| open failed and the runtime message *errmsg* appended
| to the end of this message documents why.

| **System action:** The CICS-JVM interface is unable to
| open the specified file. Execution of the transaction
| continues.

| **User response:** Examine *errmsg* to determine why the
| open failed. The most likely reason is that the CICS job
| only has read access to the directory specified in
| environment variable WORK_DIR in this program's
| JVM profile. If necessary, change WORK_DIR to a
| directory to which CICS has write access.

| **Destination:** CSMT

| **Modules:** DFHSJCS

| **XMEOUT Parameters:** *date, time,applid, filename,*
| *dirname, errmsg*

| **DFHSJ0512** *date time applid* **Unexpected end of file**
| **while concatenating lines in system**
| **properties file.**

| **Explanation:** CICS was attempting to process the
| system properties file specified by the user in the JVM
| profile for the Java program. It unexpectedly
| encountered a line concatenation character on the last
| line of the file.

| **System action:** CICS ignores the erroneous line
| concatenation character and processing continues,
| setting the property it had so far constructed.

| **User response:** Remove the erroneous line
| concatenation character from the final line of the
| system properties file.

| **Destination:** CSMT

| **Modules:** DFHSJCS

| **XMEOUT Parameters:** *date, time,applid*

| **DFHSJ0513** *date time applid* **Unable to build trusted**
| **middleware classpath: {Either**
| **CICS_DIRECTORY or JAVA_HOME too**
| **long | CICS_DIRECTORY or JAVA_HOME**
| **or TMPPREFIX too long |**
| **CICS_DIRECTORY not specified in JVM**
| **profile | JAVA_HOME not specified in JVM**
| **profile | Cannot add TMSUFFIX as tm**
| **classpath would be too long}.**

| **Explanation:** CICS was unable to build the trusted
| middleware classpath because of the reason specified.

| **System action:** None.

| **User response:** This may occur if a environment
| variable CICS relies on to construct the trusted
| middleware classpath was not specified. The missing
| environment variable will be specified in the message,
| and it should be added to the JVM profile.

| Alternatively, the length of the TMPPREFIX plus the
| constructed trusted middleware classpath plus the
| TMSUFFIX produces a string that is too long for CICS
| to deal with, either the TMPPREFIX or TMSUFFIX
| should be shortened or HFS softlinks used to shorten
| the CICS_DIRECTORY and JAVA_HOME locations so

| that the constructed portion of the trusted middleware
| classpath will be shorter.

| **Destination:** CSMT

| **Modules:** DFHSJPPJ

| **XMEOUT Parameters:** *date, time,applid, {1=Either
| CICS_DIRECTORY or JAVA_HOME too long,
| 2=CICS_DIRECTORY or JAVA_HOME or TMPREFIX too
| long, 3=CICS_DIRECTORY not specified in JVM profile,
| 4=JAVA_HOME not specified in JVM profile, 5=Cannot add
| TMSUFFIX as tm classpath would be too long}*

| **DFHSJ0514** *date time applid* **Problem encountered on
| line *line_number* of the JVM profile:**
| *{Unexpected EOF while concatenating lines |
| Concatenation too long}.*

| **Explanation:** CICS encountered problems processing
| the JVM profile named by the CICS program definition.
| The line number where the problem occurred within
| the file is given, together with a reason why CICS had
| problems.

| **System action:** None.

| **User response:** Rectify the problem described in the
| message.

| **Destination:** CSMT

| **Modules:** DFHSJPPJ

| **XMEOUT Parameters:** *date, time,applid, line_number,
| {1=Unexpected EOF while concatenating lines,
| 2=Concatenation too long}*

| **DFHSJ0515** *date time applid* **Problem encountered on
| line *line_number* of the JVM system
| properties file:** *{Unexpected EOF while
| concatenating lines | Concatenation too long
| | CICS ignoring this tm classpath setting |
| CICS ignoring this java.class.path setting}.*

| **Explanation:** CICS encountered problems processing
| the JVM system properties file specified in the JVM
| profile. The line number where the problem occurred
| within the file is given, together with a reason why
| CICS had problems. Some combination of options are
| only valid when a JVM is started in a particular mode.
| For example, a worker JVM is not allowed to specify a
| shareable application class path. If it attempts to do so
| this message is issued.

| **System action:** None.

| **User response:** Rectify the problem described in the
| message.

| **Destination:** CSMT

| **Modules:** DFHSJPPJ

| **XMEOUT Parameters:** *date, time,applid, line_number,
| {1=Unexpected EOF while concatenating lines,
| 2=Concatenation too long, 3=CICS ignoring this tm*

| *classpath setting, 4=CICS ignoring this java.class.path
| setting}*

| **DFHSJ0516** *date time applid* **An attempt to create a
| Java Virtual Machine using the JNI has
| failed.**

| **Explanation:** A CICS request to create a Java Virtual
| Machine (JVM) using the Java Native Interface (JNI)
| has failed.

| **System action:** SJ domain requests a system dump,
| which may or may not appear depending on the
| system dump table settings for code SJ0516. The CICS
| transaction is abended with abend code ASJ1.

| **User response:** See the actions described for the ASJ1
| abend.

| **Destination:** CSMT

| **Modules:** DFHSJCS

| **XMEOUT Parameters:** *date, time,applid*

| **DFHSJ0517** *date time applid* **Required environment
| variable *env_var* is missing from JVM
| Profile *JVMprof*.**

| **Explanation:** CICS is attempting to execute a java
| program whose definition specified JVM profile
| *JVMProf*. Environment variable *env_var* is required for
| successful execution of this program but is missing
| from this JVM profile.

| **System action:** The attempt to run the java program
| fails.

| **User response:** Add the environment variable to the
| failing JVM profile.

| **Destination:** CSMT

| **Modules:** DFHSJCS

| **XMEOUT Parameters:** *date, time,applid, env_var, JVMprof*

| **DFHSJ0518** *date time applid* **An attempt to obtain the
| JNI extension interface pointer for a
| JVM, has failed. A CICS request to get a
| pointer to the Java Native Interface (JNI)
| Extension Interface for a Java Virtual
| Machine (JVM) has failed.**

| **System action:** SJ domain requests a system dump,
| which may or may not appear depending on the
| system dump table settings for code SJ0518. The CICS
| transaction is abended with abend code ASJ1.

| **User response:** See the actions described for the ASJ1
| abend.

| **Destination:** CSMT

| **Modules:** DFHSJCS

| **XMEOUT Parameters:** *date, time,applid*

DFHSJ0519 *date time applid* **The setting for environment variable *env_var1* conflicts with that for *env_var2* in JVM Profile *JVMprof*. The value of environment variable *env_var3* is assumed.**

Explanation: CICS is attempting to execute a Java program whose definition specified JVM profile *JVMProf*. In this profile, environment variables *env_var1* and *env_var2* have been found with settings which contradict each other.

System action: The attempt to run the java program will go ahead using the value of environment variable *env_var3*.

User response: Remove or change one of these environment variables from the JVM Profile to correct the problem for future requests.

Destination: CSMT

Modules: DFHSJCS

XMEOUT Parameters: *date, time,applid, env_var1, env_var2, JVMprof, env_var3*

DFHSJ0520 *date time applid* **The setting for environment variable *env_var1* in JVM Profile *JVMprof* is not valid for a Master JVM.**

Explanation: CICS is attempting to start the Classcache using definitions specified JVM profile *JVMProf*. In this Profile, environment variable *env_var1* has been specified with a setting which is not allowed for the Master JVM.

System action: The attempt to start the Classcache continues. An alternative environment setting will be used if present. If no alternative is found, then the default setting will be used. The default setting is Xresettable=YES which is equivalent to REUSE=RESET.

User response: Change this environment variable's setting or remove it from the JVM Profile to correct the problem for future requests.

Destination: CSMT

Modules: DFHSJCS

XMEOUT Parameters: *date, time,applid, env_var1, JVMprof*

DFHSJ0701 *date time applid* **Transaction *transid* can only be initiated by CICS. *transid* will terminate.**

Explanation: Transaction *transid* is a CICS system transaction used to run the master JVM of a JVMSet, and should only be ATTACHED by CICS. It must not be started by the user, either by keying in through the terminal or by a START from a user program.

System action: *transid* terminates.

User response: None

Destination: CSNE

Modules: DFHSJJM

XMEOUT Parameters: *date, time,applid, transid, transid*

DFHSJ0702 *date time applid* **Transaction *transid* unsuccessfully attempted to create a JM TCB. *transid* will terminate.**

Explanation: Transaction *transid* unsuccessfully attempted to create a JM TCB on which to run a master JVM.

System action: *transid* terminates.

User response: None

Destination: CSNE

Modules: DFHSJJM

XMEOUT Parameters: *date, time,applid, transid, transid*

DFHSJ0703 *date time applid* **Transaction *transid* unsuccessfully attempted to change TCB mode. *transid* will terminate.**

Explanation: Transaction *transid* unsuccessfully attempted to change mode to a JM TCB on which to run a master JVM.

System action: *transid* terminates.

User response: None

Destination: CSNE

Modules: DFHSJJM

XMEOUT Parameters: *date, time,applid, transid, transid*

DFHSJ0704 *date time applid* **Transaction *transid* unsuccessfully attempted to restore its TCB mode. *transid* will terminate.**

Explanation: Transaction *transid* unsuccessfully attempted to change mode to its original TCB mode from JM.

System action: *transid* terminates.

User response: None

Destination: CSNE

Modules: DFHSJJM

XMEOUT Parameters: *date, time,applid, transid, transid*

DFHSJ0705 *date time applid* **Transaction *transid* unsuccessfully attempted to delete a JM TCB. *transid* will terminate.**

Explanation: Transaction *transid* unsuccessfully attempted to delete a JM TCB on which to a master JVM has been running.

| **System action:** *transid* terminates.
| **User response:** None
| **Destination:** CSNE
| **Modules:** DFHSJJM
| **XMEOUT Parameters:** *date, time,applid, transid, transid*

| **DFHSJ0706** *date time applid* **During processing of transaction *tranid*, a call to CEEPIPI with function code INIT_SUB_DP has failed. (Return code was - X'rc').**

| **Explanation:** The CICS-JVM interface attempted to initialize an Language Environment enclave using the pre-initialized interface. This failed with return code *rc*.
| This message may be generated when a JVM in CICS abends.

| **System action:** CICS takes a system dump and abends the transaction with abend code AEXZ.

| **User response:** Look at SYSOUT or CESE destination for Language Environment messages. Look in *Language Environment Programmers Guide (SC28-1939)* for the CEEPIPI function and find the explanation of the return code (Register 15) for that function.

| If the JVM abended there will probably be a JAVADUMP file in the working directory of the HFS file system.

| If the problem persists you may need to contact your IBM support representative.

| **Destination:** CSMT

| **Modules:** DFHSJJM

| **XMEOUT Parameters:** *date, time,applid, tranid, X'rc'*

| **DFHSJ0707** *date time applid* **During processing of transaction *tranid*, a call to CEEPIPI with function code CALL_SUB has failed. (Return code was - X'rc' , sub-routine return code was - X'subrc').**

| **Explanation:** The CICS-JVM interface attempted to use an Language Environment CALL_SUB function to call DFHSJJL to start a master JVM. Either this operation failed with return code *rc* and sub-routine return code *subrc*, or the JVM abended. If the JVM abends the Language Environment CALL_SUB return code is likely to be 0.

| **System action:** CICS takes a system dump and abends the transaction with abend code AEXZ.

| **User response:**

| If the return code is non-zero then look at SYSOUT or CESE destination for Language Environment messages. Look in *Language Environment Programmers Guide (SC28-1939)* for the CEEPIPI function and find the

| explanation of the return code (Register 15) for that function.

| If the JVM abended there will probably be a JAVADUMP file in the working directory of the HFS file system.

| If the sub-routine return code is non-zero it may have one of the following values:

| '00000005'x

| A dllload call for the JVM DLL has failed. Determine the reason the DLL could not be loaded from accompanying messages.

| '00000006'x

| An asynchronous abend has occurred in the master JVM. This may be accompanied by a system dump indicating the reason the master JVM failed.

| '000003E6'x

| An unexpected response was received from a CICS domain call issued by DFHSJJL. Use the CICS trace to determine the nature of the unexpected response.

| If the problem persists you may need to contact your IBM support representative.

| **Destination:** CSMT

| **Modules:** DFHSJJM

| **XMEOUT Parameters:** *date, time,applid, tranid, X'rc', X'subrc'*

| **DFHSJ0708** *date time applid* **During processing of transaction *tranid*, a call to CEEPIPI with function code TERM has failed. (Return code was - X'rc').**

| **Explanation:** The CICS-JVM interface attempted to terminate an Language Environment enclave using the pre-initialized interface. This failed with return code *rc*.

| This message may be generated when a JVM in CICS abends.

| **System action:** CICS takes a system dump and abends the transaction with abend code AEXZ.

| **User response:** Look at SYSOUT or CESE destination for Language Environment messages. Look in *Language Environment Programmers Guide (SC28-1939)* for the CEEPIPI function and find the explanation of the return code (Register 15) for that function.

| If the JVM abended there will probably be a JAVADUMP file in the working directory of the HFS file system.

| **Explanation:** A CICS request to create a Java Virtual Machine (JVM) using the Java Native Interface (JNI) has failed.

| **System action:** SJ domain requests a system dump, which may or may not appear depending on the system dump table settings for code SJ0801. The CICS transaction is abended with abend code ASJ1.

| **User response:** See the actions described for the ASJ1 abend.

| **Destination:** CSMT

| **Modules:** DFHSJL

| XMEOUT Parameters: *date, time,applid*

| **DFHSJ0802** *date time applid* **Attempt to load DLL *dllname* has failed. Runtime error message is *errmsg***

| **Explanation:** The CICS-JVM interface attempted to load DLL *dllname*. The dllload command failed and the runtime message *errmsg* appended to the end of this message documents why the command failed.

| **System action:** The CICS transaction is abended with abend code ASJD.

| **User response:** Examine *errmsg* to determine why the load command failed.

| **Destination:** CSMT

| **Modules:** DFHSJJM

| XMEOUT Parameters: *date, time,applid, dllname, errmsg*

| **DFHSJ0803** *date time applid* **Attempt to change the HFS working directory to *pathname* has failed. Runtime error message is *errmsg***

| **Explanation:** CICS was in the process of invoking a Java program. The CICS-JVM interface attempted to change the working directory to *pathname* as specified in the WORK_DIR environment variable contained in the JVM profile that was specified in the program definition. The change directory command failed and the runtime message *errmsg* appended to the end of this message documents why the command failed.

| **System action:** The CICS-JVM interface is unable to change to the specified directory to open the stdin, stdout and stderr streams. The CICS transaction is abended with abend code ASJF.

| **User response:** Examine *errmsg* to determine why the change directory command failed. If necessary correct the setting of environment variable WORK_DIR in the JVM profile.

| **Destination:** CSMT

| **Modules:** DFHSJL

| XMEOUT Parameters: *date, time,applid, pathname, errmsg*

| **DFHSJ0900** *date time applid* **Illegal Java version. CICS requires at least Java version *min_ver* but has found Java version *current_ver* .**

| **Explanation:** CICS started a JVM which does not meet the minimum version requirement for this version of CICS. The minimum version of Java required is *min_ver*. The version found at runtime is *current_ver*.

| **System action:** The task is abended with abend code ASJJ.

| **User response:** Reconfigure the CICS JVM profile to point to a newer version of Java.

| **Destination:** CSMT

Modules: com.ibm.cics.server.Wrapper
XMEOUT Parameters: *date, time,applid, min_ver, current_ver*

DFHSJ0901 I *date time applid* **Current version of Java is: *current_ver* .**

Explanation: The current version of Java is displayed for informational purposes only. This message can be suppressed by setting the following property in the CICS JVM properties file:
com.ibm.cics.showJavaVersion=false .

System action: Processing continues.

User response: No action required.

Destination: CSMT

Modules: com.ibm.cics.server.Wrapper
XMEOUT Parameters: *date, time,applid, current_ver*

DFHSJ0902 *date time applid userid termid tranid program name* **Uncaught exception from application.**

Explanation: The jcics Wrapper class has caught an InvocationTargetException. This occurs when the application throws, or doesn't catch, an exception. Details of the application exception are given in accompanying message DFHCZ0358.

System action: The system writes this message to the TD queue CCZM.

User response: Correct the problem and rerun the task.

Destination: CCZM

Modules: DFJCICS (com.ibm.cics.server.Wrapper.java)

XMEOUT Parameters: *date, time,applid, userid, termid, tranid, program name*

DFHSJ0903 *date time applid userid termid tranid program name* **Exception *exception* occurred invoking main method in class *className*.**

Explanation: The jcics Wrapper class caught exception *exception* trying to invoke the main method in class *className*.

System action: An exception trace entry is made and the task is abnormally terminated.

User response: Correct the problem and rerun the task.

Destination: CCZM

Modules: DFJCICS (com.ibm.cics.server.Wrapper.java)

XMEOUT Parameters: *date, time,applid, userid, termid, tranid, program name, exception, className*

DFHSJ0904 *date time applid userid termid tranid program name* **Exception *exception* occurred creating object reference for class *className*.**

Explanation: An unexpected RuntimeException or Error was thrown that has been caught in the CICS Java Wrapper class.

System action: An exception trace entry is made and the task is abnormally terminated.

User response: Correct the problem and reissue the task.

Destination: CCZM

Modules: com.ibm.cics.server.Wrapper
XMEOUT Parameters: *date, time,applid, userid, termid, tranid, program name, exception, className*

DFHSJ0905 *date time applid userid termid tranid program name* **Class name *className* is invalid.**

Explanation: The class name *className* is invalid. This is often caused by an erroneous leading '.' or '/' character.

System action: An exception trace entry is made and the task is abnormally terminated.

User response: Correct the problem and rerun the task.

Destination: CCZM

Modules: com.ibm.cics.server.Wrapper
XMEOUT Parameters: *date, time,applid, userid, termid, tranid, program name, className*

DFHSJ0906 *date time applid* **The CICS Java Wrapper class failed to find the requested plugin *plugin*.**

Explanation: The CICS JVM attempted to instantiate the requested plugin class *plugin* but the JVM could not find this class on the trusted middleware classpath.

System action: The plugin is not installed.

User response: Examine the value set for the TMSUFFIX in the JVM profile being used by the current program. The path to the requested plugin must be present as part of the TMSUFFIX.

Destination: CSMT

Modules: com.ibm.cics.server.Wrapper
XMEOUT Parameters: *date, time,applid, plugin*

DFHSJ0907 *date time applid tranidprogram name trannum userid termid* **The CICS Java Wrapper plugin *plugin* has thrown exception *exception*.**

Explanation: The CICS JVM Java Wrapper class caught an exception thrown from plugin *plugin*.

System action: The JVM attempts to continue processing the user application.

User response: Either contact the *plugin* vendor for further assistance or catch the exception in the body of your plugin.

Destination: CSMT

Modules: com.ibm.cics.server.Wrapper

XMEOUT Parameters: *date, time, applid, tranid, program name, trannum, userid, termid, plugin, exception*

DFHSKxxxx messages

DFHSK1101 *applid* **General purpose subtask terminated abnormally - system completion code = X'xxxx'**

Explanation: A subtask attached by DFHSKP has completed abnormally.

System action: CICS continues in degraded mode.

User response: Find out why the subtask failed. *xxxx* is the operating system completion code.

Destination: Console

Modules: DFHSKP

XMEOUT Parameters: *applid, X'xxxx'*

DFHSK1104I *applid* **General purpose subtask terminated because error threshold has been reached**

Explanation: A general purpose subtask has failed several times while executing its own code. CICS has terminated the task.

System action: CICS continues in degraded mode.

User response: Find out why the subtask failed.

Destination: Console

Modules: DFHSKP

XMEOUT Parameter: *applid*

DFHSK1102 *applid* **Unable to attach general purpose subtask - system return code = X'xxxx'**

Explanation: DFHSKP has attempted to attach an operating system subtask. The ATTACH has failed.

System action: CICS continues in degraded mode.

User response: Find out why the attach failed. *xxxx* is the operating system completion code.

Destination: Console

Modules: DFHSKP

XMEOUT Parameters: *applid, X'xxxx'*

DFHSK1106I *applid* **Unable to authorize a general purpose subtask - RC=*nn***

Explanation: The CICS subtask program issued the CICS SVC to CICS authorize the TCB of an MVS subtask. The SVC returned the error response code *nn*. The possible values of *nn* and their meanings are:

nn	Meaning
01	SVC service is not authorized.
02	Load of DFHASV failed.
03	Internal error in CICS SVC.
04	Internal error in CICS SVC. RB check failed.
10	DFHAUTH TYPE=CHECK macro failed.
14	Invalid TCB address passed to DFHASV.
18	DFHAUTH TYPE=subtask AFCB storage failed.
1C	GETMAIN for subtask AFCB storage failed.
20	Main task AFCB version is pre-CICS 1.7.
24	Main task AFCB version is too large for the SVC version in use.

Other The SVC has not been defined and installed as described in the *CICS Transaction Server for z/OS Installation Guide*.

System action: CICS continues. The CICS SVC may fail again if reinvoked by a general purpose subtask.

DFHSK1103 *applid* **ESTAE macro failed in general purpose subtask - system return code = X'xxxx'**

Explanation: A general purpose subtask issued an MVS ESTAE macro. *xxxx* is the nonzero response from MVS.

System action: CICS continues in degraded mode.

User response: Find out why the macro failed (this is a failure in MVS). Response code is output with the message.

Destination: Console

Modules: DFHSKP

XMEOUT Parameters: *applid, X'xxxx'*

User response: Use the response code in the message to determine the cause of the failure.

Destination: Console

Modules: DFHSKP

XMEOUT Parameters: *applid, nn*

DFHSMxxxx messages

DFHSM0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem. If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSMAD, DFHSMAR, DFHSMCK, DFHSMMDM, DFHSMGF, DFHSMCI, DFHSMC2,

DFHSMME, DFHSMMG, DFHSMQP, DFHSMPP, DFHSMR, DFHSMST, DFHSMU, DFHSMY

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHSM0002 *applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

| See the *CICS Trace Entries* for a description of the
| exception trace point ID, *X'code'* and the data it
| contains.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSMAD, DFHSMAR, DFHSMCK, DFHSMGF, DFHSMC2, DFHSMME, DFHSMMG, DFHSMQP, DFHSMPP, DFHSMSCP, DFHSMR, DFHSMST, DFHSMU, DFHSMY

XMEOUT Parameters: *applid, X'code', modname*

DFHSM0004 *applid* **A possible loop has been detected at offset X'offset' in module modname.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'offset'. This is the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* in the message is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSMCI, DFHSMST

XMEOUT Parameters: *applid*, X'offset', *modname*

DFHSM0006 *applid* **Insufficient storage to satisfy Getmain (code X'code') in module modname. MVS code mvscode.**

Explanation: An MVS GETMAIN was issued by module *modname*, but there was insufficient storage

available to satisfy the request.

The code X'code' is the exception trace point ID which uniquely identifies the place where the error was detected.

The code *mvscode* is the MVS GETMAIN return code.

System action: An exception entry is made in the trace table (code X'code'). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the user response suggested for these messages.

If CICS is still running, the problem may be a temporary one which rights itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

| See the *CICS Trace Entries* for a description of the
| exception trace point ID, X'code' and the data it
| contains.

You can get diagnostic information about the MVS return code by consulting the relevant MVS codes manual.

Try decreasing the limits of the CICS dynamic storage areas (DSAs), or increasing the MVS region size. You can vary the CICS DSAs dynamically using the DSALIM and EDSALIM parameters on the CEMT master terminal command. To increase the MVS region size you must bring CICS down and change the MVS JCL REGION parameter.

Destination: Console

Modules: DFHSMMDM

XMEOUT Parameters: *applid*, X'code', *modname*, *mvscode*

DFHSM0102 *applid* **A storage violation (code X'code') has been detected by module modname.**

Explanation: A storage violation has been detected by module *modname*. The code X'code' is the exception

trace point ID which uniquely identifies the type of storage violation.

| **System action:** An exception entry (*X'code'* in the message) is made in the trace table. Use the exception trace point ID, *X'code'*, to investigate the cause of the storage violation. A description of the exception trace point ID, and the data it contains, is in the *CICS Trace Entries*. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

If you have enabled storage recovery (by specifying the system initialization parameter STGRCVY=YES), CICS attempts to repair the storage violation. Otherwise, the storage is left unchanged.

Message DFHME0116 is normally produced containing the symptom string for this problem.

| **User response:** Use the exception trace point ID, *X'code'*, to investigate the cause of the storage violation. See the *CICS Trace Entries* for a description of the exception trace point ID and the data it contains.

Destination: Console

Modules: DFHSMAR, DFHSMCK, DFHSMGF, DFHSMMC2, DFHSMMF

XMEOUT Parameters: *applid, X'code', modname*

DFHSM0103 *applid* **A storage violation (code *X'code'*) has been detected by the storage violation trap. Trap is now inactive.**

Explanation: A storage violation has been detected by the storage violation trap, which may be enabled via the CHKSTSK or the CHKSTRM system initialization parameters or via the CSFE transaction. The code *X'code'* is the exception trace point ID which uniquely identifies the type of storage violation detected.

System action: CICS disables the storage violation trap. An exception entry (*X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

If you have enabled storage recovery (by specifying the system initialization parameter STGRCVY=YES), CICS attempts to repair the storage violation. Otherwise, the storage is left unchanged.

Message DFHME0116 is normally produced containing the symptom string for this problem.

Note: Even if CICS is able to repair the storage, the storage violation trap still remains inactive.

| **User response:** Use the exception trace point ID, *X'code'*, to investigate the cause of the storage violation.

| See the *CICS Trace Entries* for a description of the exception trace point ID and the data it contains.

Destination: Console

Modules: DFHSMCK

XMEOUT Parameters: *applid, X'code'*

DFHSM0113I *applid* **Storage protection is not active.**

Explanation: This is an informatory message stating that storage protection has not been requested (STGPROT=NO) and is not in effect for this execution of CICS.

System action: CICS continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0. Storage protection can be enabled by specifying the system initialization parameter STGPROT=YES.

Destination: Console

Modules: DFHSMMDM

XMEOUT Parameter: *applid*

DFHSM0114 *applid* **Storage protection was requested but the support is not available. Storage protection is not active.**

Explanation: This is an informatory message stating that although storage protection was requested, it is not in effect for this execution of CICS because the necessary hardware and/or operating system support is not available.

System action: CICS continues.

User response: None.

Destination: Console

Modules: DFHSMMDM

XMEOUT Parameter: *applid*

DFHSM0115I *applid* **Storage protection is active.**

Explanation: This is an informatory message stating that storage protection is requested (STGPROT=YES) and is in effect for this execution of CICS.

System action: CICS continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Modules: DFHSMMDM

XMEOUT Parameter: *applid*

DFHSM0120I *applid* **Reentrant programs will not be loaded into read-only storage.**

Explanation: This is an informatory message stating that read-only programs will not be loaded into read-only storage for this execution of CICS. This is because RENTPGM=NOPROTECT was specified as a system initialization parameter.

System action: CICS continues.

User response: None.

You should not specify RENTPGM=NOPROTECT unless you wish to deliberately overwrite programs (to set breakpoints while testing, for example).

Destination: Console

Modules: DFHSMMDM

XMEOUT Parameter: *applid*

DFHSM0122I *applid* **Limit of DSA storage below 16MB is *dsalimitK*.**

Explanation: This message gives the limit *dsalimit* of the dynamic storage area (DSA) below 16MB.

System action: CICS continues.

User response: None. You can suppress this message with the message level system initialization parameter, MSGLVL=0.

Destination: Console

Modules: DFHSMMDM

XMEOUT Parameters: *applid, dsalimit*

DFHSM0123I *applid* **Limit of DSA storage above 16MB is *edsalimitM*.**

Explanation: This message gives the limit *edsalimit* of the dynamic storage area (DSA) above 16MB.

System action: CICS continues.

User response: None. You can suppress this message with the message level system initialization parameter, MSGLVL=0.

Destination: Console

Modules: DFHSMMDM

XMEOUT Parameters: *applid, edsalimit*

DFHSM0124 *applid* **Transaction isolation was requested but the support is not available or storage protection is not active. Transaction isolation is not active.**

Explanation: The combination of system initialization parameters STGPROT(NO) and TRANISO(YES) is invalid. During a warm or emergency start of CICS, the

catalogued system initialization parameters are incompatible with a SIT override. Although transaction isolation was requested, it is not in effect for this execution of CICS because the necessary hardware and/or operating system support is not available, and/or storage protection is not active.

System action: CICS continues.

User response: None.

Destination: Console

Modules: DFHSMMDM

XMEOUT Parameter: *applid*

DFHSM0125I *applid* **Transaction isolation is active.**

Explanation: Transaction isolation is requested (TRANISO=YES) and is in effect for this execution of CICS.

System action: CICS continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Modules: DFHSMMDM

XMEOUT Parameter: *applid*

DFHSM0126I *applid* **Transaction isolation is not active.**

Explanation: Transaction isolation has not been requested (TRANISO=NO) and is not in effect for this execution of CICS.

System action: CICS continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0. Transaction isolation can be enabled by specifying TRANISO=YES as a system initialization parameter.

Destination: Console

Modules: DFHSMMDM

XMEOUT Parameter: *applid*

DFHSM0127 *applid* **Insufficient storage to allocate requested size for DSA limit storage below 16MB (*dsalimitK*).**

Explanation: CICS has issued an MVS GETMAIN for the requested limit *dsalimit* of DSA storage below 16MB, but the GETMAIN request failed.

System action: If the requested size is greater than the default, CICS reissues the MVS GETMAIN request using the default size for the DSALIM parameter.

If the requested size is not greater than the default, the storage manager makes an exception entry in the trace table. An error return code is sent to the domain

manager DFHDMDM (the caller of the storage manager). The domain manager might then terminate CICS, in which case a message to this effect is issued.

User response: Ensure that the DSALIM system initialization parameter is specified correctly.

Ensure that the REGION parameter for the CICS job is large enough.

See the *OS/390 MVS JCL Reference* for further information about specifying storage on the REGION parameter.

Destination: Console

Modules: DFHSMMDM

XMEOUT Parameters: *applid, dsalimit*

DFHSM0128 *applid* **Insufficient storage to allocate requested size for DSA limit storage above 16MB (dsalimitM).**

Explanation: CICS has issued an MVS GETMAIN for the requested limit *dsalimit* of DSA storage above 16MB, but the GETMAIN request failed.

System action: If the requested size is greater than the default, CICS reissues the MVS GETMAIN request using the default size for the EDSALIM parameter.

If the requested size is not greater than the default, the storage manager makes an exception entry in the trace table. An error return code is sent to the domain manager DFHDMDM (the caller of the storage manager). The domain manager might then terminate CICS, in which case a message to this effect is issued.

User response: Ensure that the EDSALIM parameter is specified correctly.

Ensure that the REGION parameter for the CICS job is large enough.

See the *OS/390 MVS JCL Reference* for more information about specifying storage on the REGION parameter.

Destination: Console

Modules: DFHSMMDM

XMEOUT Parameters: *applid, dsalimit*

DFHSM0129 *applid* **Insufficient storage to allocate default size for DSA limit storage below 16MB (dsalimitK).**

Explanation: Following message DFHSM0127, CICS has reduced the MVS GETMAIN request to the default size for the DSALIM system initialization parameter but the GETMAIN request has still failed.

System action: The storage manager makes an exception entry in the trace table.

An error return code is sent to the domain manager, DFHDMDM, (the caller of storage manager). The

domain manager might then terminate CICS, in which case a message to this effect is issued.

User response: See DFHSM0127 for further information.

Ensure that the REGION parameter for the CICS job is large enough.

See the *OS/390 MVS JCL Reference* for more information about specifying storage on the REGION parameter.

Destination: Console

Modules: DFHSMMDM

XMEOUT Parameters: *applid, dsalimit*

DFHSM0130 *applid* **Insufficient storage to allocate default size for DSA limit storage above 16MB (dsalimitM).**

Explanation: Following message DFHSM0128, CICS has reduced the MVS GETMAIN request to the default size for the EDSALIM system initialization parameter but the GETMAIN request has still failed.

System action: The storage manager makes an exception entry in the trace table.

An error return code is sent to the domain manager, DFHDMDM, (the caller of storage manager). The domain manager might then terminate CICS, in which case a message to this effect is issued.

User response: See DFHSM0128 for further information.

Ensure that the REGION parameter for the CICS job is large enough.

See the *OS/390 MVS JCL Reference* for more information about specifying storage on the REGION parameter.

Destination: Console

Modules: DFHSMMDM

XMEOUT Parameters: *applid, dsalimit*

DFHSM0131 *applid* **CICS is under stress (short on storage below 16MB).**

Explanation: This message is produced when there is a shortage of storage in any of the dynamic storage areas (DSAs) below 16MB. Either the largest free area in one of the DSAs is less than the size of the internally defined cushion for that DSA, or there is at least one transaction suspended due to insufficient contiguous free storage.

System action: An exception entry is made in the trace table to record the event.

CICS continues to operate but takes steps to alleviate the situation by, for example, slowing down the rate at which new tasks are started and by releasing storage occupied by programs which are not currently in use.

User response: No immediate action is required. However, if the problem persists you could increase the value of the DSALIMIT parameter, if possible, or reduce the storage requirements below 16MB of your CICS system. For more information about how to do this, see the *CICS Performance Guide*.

Destination: Console

Modules: DFHSMYSY

XMEOUT Parameter: *applid*

DFHSM0132 *applid* CICS is no longer short on storage below 16MB.

Explanation: The short on storage condition reported by message DFHSM0131 has ceased.

System action: CICS continues.

User response: None.

Destination: Console

Modules: DFHSMYSY

XMEOUT Parameter: *applid*

DFHSM0133 *applid* CICS is under stress (short on storage above 16MB).

Explanation: There is a shortage of storage in one of the dynamic storage areas (DSAs) above 16MB. Either the largest free area in one of the DSAs is less than the size of the internally defined cushion for that DSA, or there is at least one transaction suspended due to insufficient contiguous free storage.

System action: An exception entry is made in the trace table to record the event.

CICS continues to operate but takes steps to alleviate the situation by, for example, slowing down the rate at which new tasks are started and by releasing storage occupied by programs which are not currently in use.

User response: No immediate action is required. However, if the problem persists you could, if possible, increase the value of the EDSALIMIT parameter, or reduce the storage requirements of your CICS system above 16MB. For guidance on how to do this, see the *CICS Performance Guide*.

Destination: Console

Modules: DFHSMYSY

XMEOUT Parameter: *applid*

DFHSM0134 *applid* CICS is no longer short on storage above 16MB.

Explanation: The short on storage condition reported by message DFHSM0133 has ceased.

System action: CICS continues.

User response: None.

Destination: Console

Modules: DFHSMYSY

XMEOUT Parameter: *applid*

| **DFHSM0135** *applid* Insufficient storage to allocate the requested size of *dsasizeK* for the *dsaname*.

| **Explanation:** CICS has attempted to allocate the requested size of *dsasize* for the dynamic storage area *dsaname* but there is insufficient storage to satisfy the request.

| **Note:** The size of a dynamic storage area (DSA) below 16MB specified via the SIT override is rounded up to a multiple of 256KB (or 1MB for the UDSA if transaction isolation is in effect). The size of a DSA above 16MB specified via the SIT override is rounded up to a multiple of 1MB.

| **System action:** An error return code is sent to the domain manager, DFHDMDM (the caller of storage manager). The domain manager might then terminate CICS, in which case a message to this effect is issued.

| **User response:** Either reduce the value specified in the DSASZE parameter, or increase the value specified in the DSALIM parameter.

| **Destination:** Console

| **Modules:** DFHSMMDM

| **XMEOUT Parameters:** *applid, dsasize, dsaname*

| **DFHSM0136I** *applid* The size of the *dsaname* was specified as *dsasizeK*.

| **Explanation:** This is an informatory message giving the size *dsasize* of the dynamic storage area (DSA) *dsaname*.

| **System action:** CICS continues.

| **User response:** None. You can suppress this message with the message level system initialization parameter, MSGLVL=0.

| **Destination:** Console

| **Modules:** DFHSMMDM

| **XMEOUT Parameters:** *applid, dsaname, dsasize*

| **DFHSM0137** *applid* The amount of MVS storage available to CICS is low.

| **Explanation:** When MVS storage is requested by a JVM from Language Environment, CICS intercepts the request. This message is produced when the size of the largest contiguous unallocated block of storage above 16MB that is available for use by MVS has fallen below a system-defined threshold.

| **System action:** An exception entry is made in the trace table to record the event.

| CICS continues to operate but takes steps to alleviate the situation by deleting any JVMs that are currently inactive. This will have the effect of freeing any MVS storage that the inactive JVMs are holding.

| **User response:** No immediate action is required. However, if the problem persists and if you are a user of Java transactions you could reduce the value of the MAXJVMTCBs parameter. This would reduce the number of JVMs which exist concurrently within CICS. For more information about how to do this, see the *CICS Performance Guide*.

| **Destination:** Console

| **Modules:** DFHSMVN

| **XMEOUT Parameter:** *applid*

| **DFHSM0138** *applid* **The amount of MVS storage available to CICS is no longer low.**

| **Explanation:** The MVS storage shortage reported by message DFHSM0137 has ceased.

| **System action:** CICS continues.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHSMVN

| **XMEOUT Parameter:** *applid*

| **DFHSM0139** *applid* **The amount of MVS storage available to CICS is critically low.**

| **Explanation:** This message is produced when there is no unallocated block of storage large enough to satisfy an MVS request for storage. When MVS storage is requested by a JVM from Language Environment, CICS will intercept these requests. The message means that insufficient contiguous storage was available to satisfy the MVS storage request. Either CICS has been forced to attempt to satisfy the request by releasing storage from an MVS storage cushion that it keeps in reserve or there is at least one transaction suspended due to insufficient contiguous free storage.

| **System action:** An exception entry is made in the trace table to record the event.

| CICS continues to operate but takes steps to alleviate the situation by deleting JVMs as the programs that own them complete and not starting new JVMs until the storage shortage is relieved.

| **User response:** No immediate action is required. However, if the problem persists and if you run Java transactions you could decrease the MAXJVMTCBS parameter. For more information about how to do this, see the *CICS Performance Guide*.

| **Destination:** Console

| **Modules:** DFHSMVN

| **XMEOUT Parameter:** *applid*

| **DFHSM0140** *applid* **The amount of MVS storage available to CICS is no longer critically low.**

| **Explanation:** The MVS storage shortage reported by message DFHSM0139 has ceased.

| **System action:** CICS continues.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHSMVN

| **XMEOUT Parameter:** *applid*

DFHSM0300 DFHSMUTL ERROR REPORT

Explanation: This is the report from the local catalog storage manager domain subpool record manipulation program, DFHSMUTL. A number of lines may be written to the report: DFHSM0300 DFHSMUTL REPORT Report header. ADD SUBPOOL=xxxxxxx PROCESSED SUCCESSFULLY ADD SUBPOOL=xxxxxxx has been processed successfully. DEL SUBPOOL=xxxxxxx PROCESSED SUCCESSFULLY DEL SUBPOOL=xxxxxxx has been processed successfully. FOUND DFHLCD RECORD SMSUBPOL=xxxxxxx Subpool record found by the LST command. ERROR OPENING DFHLCD An error has occurred opening the local catalog data set. The program is terminated. UNRECOGNISED VERB xxx IN INPUT Only ADD, DEL and LST are allowed. The statement is ignored. UNRECOGNISED OPERAND xxxxxx IN INPUT Only ADD SUBPOOL=xxxxxxx or DEL SUBPOOL=xxxxxxx are allowed. The statement is ignored. ERROR PROCESSING 'ADD SUBPOOL=xxxxxxx'. R15 = X'yy'. RPL FEEDBACK CODE = X'zz'. SEE DFSMS/MVS MACRO INSTRUCTIONS FOR DATA SETS A VSAM error has occurred whilst processing an ADD SUBPOOL=xxxxxxx command. For the meaning of the VSAM codes, refer to *DFSMS/MVS Macro Instructions for Data Sets*, SC26-4913. The program is terminated. ERROR PROCESSING 'DEL SUBPOOL=xxxxxxx'. R15 = X'yy'. RPL FEEDBACK CODE = X'zz'. SEE DFSMS/MVS MACRO INSTRUCTIONS FOR DATA SETS A VSAM error has occurred whilst processing a DEL SUBPOOL=xxxxxxx command. For the meaning of the VSAM codes, refer to *DFSMS/MVS Macro Instructions for Data Sets*, SC26-4913. The program is terminated. END OF DFHSMUTL REPORT Report trailer.

System action: See Explanation.

User response: If an error is reported, correct the cause and retry.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

DFHSNxxxx messages

DFHSN0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Next, look up the description of the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSMUTL

Modules: DFHSNUS, DFHSNAS, DFHSNPU, DFHSNSU, DFHSNTU, DFHSNXR,

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*, *modname*

DFHSN0002 *applid* **A severe error (code *X'code'*) has occurred in program *programe*.**

Explanation: CICS has detected a severe error while running module *programe*. This error is associated with exception trace point ID *code*. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: The task issuing the signon abends.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSNUS, DFHSNAS, DFHSNPU, DFHSNSU, DFHSNTU, DFHSNXR

XMEOUT Parameters: *applid*, *X'code'*, *programe*

DFHSN0004 *applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset *X'offset'*. This is the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor

time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* in the message is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSNUS, DFHSNAS, DFHSNPU, DFHSNSU, DFHSNTU, DFHSNXR

XMEOUT Parameters: *applid, X'offset', modname*

DFHSN1100 *date time applid* **Signon at {netname | console | terminal }portname by user userid in group groupid is complete.**

Explanation: Terminal *portname* has been signed on. It now has the security attributes for userid *userid* in group *groupid*.

System action: Processing continues.

User response: The user at terminal *portname* can now use those CICS transactions permitted for this userid in group *groupid*.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid,groupid*

DFHSN1101 *date time applid* **Signon at {netname | console | terminal }portname has failed. User userid not recognized.**

Explanation: A signon has been issued from terminal *portname* which specified a userid *userid* that is not known to the ESM.

System action: The signon request is rejected.

User response: Unless this implies a breach of security that needs investigating, contact your security administrator so that the userid can be made known to the ESM.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

DFHSN1102 *date time applid* **Signon at {netname | console | terminal }portname by user userid has failed. Password not recognized.**

Explanation: A signon has been issued from terminal *portname* which specified an incorrect password.

This was probably caused by a misspelling of the password or because the password is not valid for this userid.

System action: The signon request is rejected.

User response: None, unless this implies a breach of security that needs investigating.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

DFHSN1103 *date time applid* **Signon at {netname | console | terminal }portname by user userid has failed. OID card damaged or not authorized.**

Explanation: A signon has been issued from terminal *portname* which used an unauthorized or damaged operator identification (OID) card.

System action: The signon request is rejected.

User response: None, unless this implies a breach of security that needs investigating.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

DFHSN1104 *date time applid* **Signon at {netname | console | terminal }portname by user userid has failed. New password not allowed.**

Explanation: A signon has been issued from terminal *portname* which attempted to change the password to a value that the external security manager (ESM) does not allow.

System action: The signon request is rejected.

User response: None, unless this implies a breach of security that needs investigating.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

DFHSN1105 *date time applid* **Signon at {netname | console | terminal }portname by user userid requires a password.**

Explanation: A signon has been issued from terminal *portname* which did not specify a password. The signon has been rejected because user *userid* requires a password.

System action: The signon request is rejected.

User response: None, unless this implies a breach of security that needs investigating.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

DFHSN1106 *date time applid* **Signon at {netname | console | terminal }portname by user userid requires a new password.**

Explanation: A signon has been issued from terminal *portname* for which the external security manager (ESM) indicates the password has expired.

This does not imply a security breach. It is a normal response indicating that the ESM password has expired.

System action: The signon request is rejected.

User response: None.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

DFHSN1107 *date time applid* **Signon at {netname | console | terminal }portname by user userid requires an OID card.**

Explanation: A signon has been issued from terminal *portname* which did not use an operator identification (OID) card when the external security manager (ESM) indicates that one should have been used.

System action: The signon request is rejected.

User response: None, unless this implies a breach of security which needs investigating.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

846 CICS TS for z/OS: CICS Messages and Codes

DFHSN1108 *date time applid* **Signon at {netname | console | terminal }portname by user userid has failed. SAF codes are (X'safresp',X'safreas'). ESM codes are (X'esmresp',X'esmreas').**

Explanation: A signon has been issued from terminal *portname* and has been rejected by the external security manager (ESM).

System action: The signon request is rejected.

User response: The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the *OS/390 MVS Programming: Authorized Assembler Services Guide* and in *External Security Interface (RACROUTE) Macro Reference for MVS and VM (SC28-1366)*. See these manuals for an explanation of the codes.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid,X'safresp', X'safreas', X'esmresp',X'esmreas'*

DFHSN1112 *date time applid* **Signon at {netname | console | terminal }portname by user userid has failed because the terminal has preset security.**

Explanation: A signon has been issued from terminal *portname*. This terminal has been defined to CICS with fixed security attributes. It does NOT support signon.

System action: The signon request is rejected.

User response: None, unless this implies a breach of security that needs investigating.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

DFHSN1113 *date time applid* **Signon at {netname | console | terminal }portname by user userid has failed because the terminal was already signed on.**

Explanation: A signon has been issued from terminal *portname* while a previous signon was still in effect for this terminal.

System action: The signon request is rejected.

User response: None, unless this implies a breach of

security which needs investigating.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

DFHSN1114 *date time applid* **Signon by user *userid* has failed because there is no terminal associated with the requesting task.**

Explanation: A signon has been issued by user *userid* from a task that had been started without a terminal.

System action: The signon request is rejected.

User response: Investigate why a signon has been issued from a task that is not associated with a terminal.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, userid*

DFHSN1115 *date time applid* **Signon at {*netname* | *console* | *terminal* }*portname* by user *userid* has failed. Signon is not allowed at a surrogate terminal except by use of the CRTE transaction.**

Explanation: CICS does not support the signing-on of surrogate terminals, except when done during a CRTE routing session.

System action: Processing continues.

User response: Investigate how and why users are attempting to use signon via transaction routing.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

DFHSN1116 *date time applid* **Signon at {*netname* | *console* | *terminal* }*portname* by user *userid* has failed because the national language to be used is not supported in this run of CICS.**

Explanation: The national language specified has been recognized as a valid IBM national language. However, either this language cannot be specified as a valid national language for CICS initialization, or CICS has not been initialized with this language in the current run of CICS.

See the *CICS Application Programming Reference* for a list of national languages that CICS can be initialized to use.

System action: Signon fails.

User response: Retry signon with a national language that CICS has been initialized to use.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

DFHSN1117 *date time applid* **Signon at {*netname* | *console* | *terminal* }*portname* by user *userid* has failed because an invalid national language was selected.**

Explanation: Signon failed because the language specified was not recognized as an IBM national language.

System action: Signon fails.

User response: Retry signon with a correct language value.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

DFHSN1118 *date time applid* **Signon at {*netname* | *console* | *terminal* }*portname* by user *userid* has failed because the user is not authorized to use the terminal.**

Explanation: A signon has been issued from terminal *portname* which has failed. The user is not authorized to use the terminal.

System action: The signon request is rejected.

User response: Contact your security administrator, who should check if the user should be authorized to use terminal *portname*.

In particular, check if the user should be able to access the system on this particular day and time and whether the terminal may be used on this day and time.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

DFHSN1119 *date time applid* **Signon at {*netname* | *console* | *terminal* }*portname* by user *userid* has failed because the user is not authorized to use application *applname*.**

Explanation: A signon has been issued from terminal *portname* which has failed. The user is not authorized to use the application *applname*.

- If you are using the VTAM generic resource function, *applname* is the generic resource name specified in the GRNAME system initialization parameter.
- If you are using XRF, *applname* is the generic applid specified as the first operand of the APPLID system initialization parameter.
- Otherwise, *applname* is the application identifier specified as the single operand of the APPLID system initialization parameter.

System action: The signon request is rejected.

User response: Contact your security administrator, who should check whether the user should have authorization to use application *applid*.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid,applname*

DFHSN1120 *date time applid Signon at {netname | console | terminal }portname by user userid has failed because the {userid | group access} has been revoked.*

Explanation: Either the userid, or the user's access to the ESM group containing it, has been revoked by the ESM. This is usually the result of repeated attempts to signon with an invalid password.

System action: The signon request is rejected.

User response: For revoked userids, contact your security administrator who can reauthorize the revoked userid by issuing the ALTUSER RESUME function. For revoked group access, contact your security administrator who can restore the user's access to the group by issuing the CONNECT RESUME function.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid,{1=userid, 2=group access}*

DFHSN1129 *date time applid Signon at {netname | console | terminal }portname by user userid has failed because the user is already signed on elsewhere.*

Explanation: A signon has been issued from terminal *portname* while the user is already signed on under the restrictions imposed by the current setting of the SNSCOPE system initialization parameter.

System action: The signon request is rejected.

User response: Investigate why users are attempting to signon twice within the current signon scope.

See the *CICS System Definition Guide* for more

information about the SNSCOPE parameter.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

DFHSN1130 *date time applid Signon at {netname | console | terminal }portname by user userid failed because the userid was not found in the specified group.*

Explanation: A signon has been issued from terminal *portname* which has failed. Either the userid is not in the specified group, or the group specified for this user to be associated with after signon is not known to the ESM.

System action: The signon request is rejected.

User response: Check that the groupid specified is correct. If it is, contact your security administrator to ensure that this group is defined properly, and that the user is connected to this group.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

DFHSN1131 *date time applid Signon at {netname | console | terminal }portname by user userid has failed because security is not active in this CICS region.*

Explanation: A signon has been issued from terminal *portname* which has failed. This is because this CICS region is running without security active.

System action: The signon request is rejected.

User response: None.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

DFHSN1132 *date time applid Signon at terminal termid by user userid has failed because the terminal is a session.*

Explanation: A signon has been issued from terminal *termid* which is a session. The security attributes of a session can only be changed on receipt of a valid FMH-5 attach header.

System action: The signon request is rejected.

User response: Investigate how and why users are attempting to use signon for a session.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, termid, userid*

DFHSN1133 *date time applid* **Signon at {netname | console | terminal }portname by user userid has failed because of an error during SNSCOPE checking.**

Explanation: A signon has been issued from terminal *portname*. The SNSCOPE initialization parameter disallows signon to more than one terminal at a time. An internal failure during SNSCOPE checking means that CICS is unable to confirm if the user is already signed on elsewhere. The failure has occurred because the limit of concurrent MVS ENQ requests has been reached.

System action: The signon request is rejected. Message DFHUS0120 will have been written to the console. See the explanation of this message for further information.

User response: Please report this problem to your CICS systems programmer.

See the *CICS System Definition Guide* for more information about the SNSCOPE parameter.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname, 2=console, 3=terminal }, portname, userid*

DFHSN1150 *date time applid* **Signon at TCAM pool by user userid in group groupid is complete.**

Explanation: A TCAM pool of terminals has been signed on by user *userid*. All terminals in this TCAM pool now have the security attributes for user *userid* in group *groupid*.

System action: Processing continues.

User response: The user at any of these TCAM terminals can now use those CICS transactions permitted for this *userid* in group *groupid*.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, userid, groupid*

DFHSN1200 *date time applid* **Signoff at {netname | console | terminal }portname by user userid is complete. tt transactions entered with nn errors.**

Explanation: Terminal *portname* has been signed off. It now has the default security attributes.

nn indicates the number of errors which have occurred.

System action: Processing continues.

User response: None.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname, 2=console, 3=terminal }, portname, userid,tt, nn*

DFHSN1211 *date time applid* **Signoff at terminal termid has failed because the terminal is a session.**

Explanation: A signoff has been issued from terminal *termid* which is a session. The security attributes of a session can only be changed on receipt of a valid FMH-5 attach header.

System action: The signoff request is rejected.

User response: Investigate how and why users are attempting to use signoff for a session.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, termid*

DFHSN1212 *date time applid* **Signoff at {netname | console | terminal }portname has failed because the terminal has preset security.**

Explanation: A signoff has been issued from terminal *portname* which has been defined to CICS with fixed security attributes and so does not support signoff.

System action: The signoff request is rejected.

User response: None, unless this implies a breach of security which needs investigating.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname, 2=console, 3=terminal }, portname*

DFHSN1213 *date time applid* **Signoff at {netname | console | terminal }portname has failed because the terminal was not signed on.**

Explanation: A signoff has been issued from terminal *portname* while no previous signon was in effect.

System action: The signoff request is rejected.

User response: None, unless this implies a breach of security which needs investigating.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname, 2=console, 3=terminal }, portname*

DFHSN1214 *date time applid* **An attempted signoff by transaction *tranid* has failed because there was no terminal associated with the requesting task.**

Explanation: A signoff has been issued from a task that had been started without a terminal.

System action: The signoff request is rejected.

User response: Investigate why a signoff has been issued from a task that is not associated with a terminal.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, tranid*

DFHSN1215 *date time applid* **Signoff at {*netname* | *console* | *terminal* }*portname* has failed. Signoff is not allowed at a surrogate terminal except by use of the CRTE transaction.**

Explanation: CICS does not support the signing off of surrogate terminals, except when done during a CRTE routing session.

System action: Processing continues.

User response: Investigate how and why users are attempting to use signoff via transaction routing.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=*netname* , 2=*console* , 3=*terminal* }, portname*

DFHSN1250 *date time applid* **Signoff at TCAM pool is complete.**

Explanation: A TCAM pool of terminals has been signed off. All terminals in this TCAM pool now have default security attributes.

System action: Processing continues.

User response: None.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid*

DFHSN1300 *date time applid* **An attempt to reschedule BMS pages for operator *opid* at {*netname* | *console* | *terminal* }*portname* has failed following a timeout. Pages on temporary storage queue *X'hexqueueid'* may require cleanup.**

Explanation: Operator *opid* has been timed out on terminal *netname* while viewing BMS pages. CICS has

attempted to reschedule the pages so that they are available when the operator signs on again, but the reschedule has failed.

The pages are available on temporary storage queue *hexqueueid*. This queue continues to exist until it is explicitly disposed of.

System action: Processing continues.

User response: If you still need to view this data, repeat the processing which created the BMS pages.

Destination: CSCS

Modules: DFHSNTU

XMEOUT Parameters: *date, time,applid, opid, {1=*netname* ,2=*console* , 3=*terminal* }, portname, X'hexqueueid'*

DFHSN1400 *date time applid* **Session signon for session *session* by user *userid* is complete.**

Explanation: The two CICS systems are connected and the MRO/ISC session is given the security authority of user *userid*.

System action: The MRO/ISC sessions are signed on.

User response: None.

Destination: CSCS

Modules: DFHSNSU

XMEOUT Parameters: *date, time,applid, session, userid*

DFHSN1401 *date time applid* **Session signon for session *session* by user *userid* has failed. SAF codes are (*X'safresp'*,*X'safreas'*). ESM codes are (*X'esmresp'*,*X'esmreas'*).**

Explanation: An MRO/ISC signon is attempted by user *userid* but the signon has failed for the reason given.

System action: The session is not signed on.

User response: The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the *OS/390 MVS Programming: Authorized Assembler Services Guide*, and in *External Security Interface (RACROUTE) Macro Reference for MVS and VM (SC28-1366)*. Consult the manuals to find the cause of the codes.

Destination: CSCS

Modules: DFHSNSU

XMEOUT Parameters: *date, time,applid, session, userid, X'safresp', X'safreas', X'esmresp', X'esmreas'*

DFHSN1410 *date time applid* **Session signon for session *session* with default security attributes is complete.**

Explanation: The two CICS systems are connected and the MRO/ISC session is given the security authority of the default user.

System action: The MRO/ISC sessions are signed on.

User response: None.

Destination: CSCS

Modules: DFHSNSU

XMEOUT Parameters: *date, time,applid, session*

DFHSN1500 *date time applid* **Session signoff for session *session* is complete. *tt* transactions entered with *nn* errors.**

Explanation: An MRO/ISC session is signed-off.

nn indicates the number of abends which have occurred.

System action: The security authority is removed from the session.

User response: None.

Destination: CSCS

Modules: DFHSNSU

XMEOUT Parameters: *date, time,applid, session, tt, nn*

DFHSN1501 *date time applid* **Session signoff for session *session* has failed. SAF codes are (*X'safresp'*,*X'safreas'*). ESM codes are (*X'esmresp'*,*X'esmreas'*).**

Explanation: An MRO/ISC signoff is attempted but the signoff has failed for the reason given.

System action: Processing continues.

User response: The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the *OS/390 MVS Programming: Authorized Assembler Services Guide*, and in *External Security Interface (RACROUTE) Macro Reference for MVS and VM (SC28-1366)*. Consult the manuals to find the cause of the codes.

Destination: CSCS

DFHSOxxxx messages

DFHSO0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem. If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSOCK

XMEOUT Parameters: *applid, aaa/bbbb,X'offset', modname*

DFHSO0002 *applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

If the exception entry made in the trace table has a trace ID with a value of *X'0425'*, message DFHKE0501 was issued by the CICS Kernel earlier during CICS initialization.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

If the exception entry made in the trace table has a trace ID with a value of *X'0425'*, further information can be found in message DFHKE0501 issued by the CICS Kernel earlier during CICS initialization.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSODM, DFHSOL, DFHSOCK, DFHSORD, DFHSOIS.

XMEOUT Parameters: *applid, X'code',modname*

DFHSO0004 *applid* A possible loop has been detected at offset *X'offset'* in module *modname*.

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been

| detected in module *modname* at offset *X'offset'*. This is
| the offset of the instruction which happened to be
| executing at the time when the error was detected.

| **System action:** An exception entry is made in the
| trace table.

| A system dump is taken unless you have specifically
| suppressed the dump (by a user exit program at the
| XDUREQ exit, in the dump table or by global system
| dump suppression). CICS processing continues unless
| you have specified in the dump table that CICS should
| terminate.

| Message DFHME0116 is normally produced containing
| the symptom string for this problem.

| **User response:** If CICS has not been terminated, it is
| necessary to decide whether the problem is serious
| enough to bring CICS down.

| Since some CICS functions can use a lot of CPU time,
| this message may have been caused by a long-running
| function, and there may not be an error. Usually, CICS
| purges a CICS function which exceeds the runaway
| task time interval that you have specified in the ICVR
| system initialization parameter. This means that
| execution of module *modname* is terminated and CICS
| continues.

| If you have specified system initialization parameter
| ICVR=0 and you consider that module *modname* is
| looping, you must terminate CICS in order to terminate
| the runaway function.

| If CICS has terminated module *modname*, and you
| consider that it was not a runaway, you should increase
| the value of the ICVR system initialization parameter.
| You have to close down CICS at a suitable time to do
| this permanently. You can change the ICVR time
| interval temporarily online using the CEMT
| transaction.

| If raising the ICVR time does not solve the problem,
| you may need further assistance from IBM to resolve
| the problem. See Part 4 of the *CICS Problem
| Determination Guide* for guidance on how to proceed.

| **Destination:** Console

| **Modules:** DFH SOCK, DFH SOSE

| **XMEOUT Parameters:** *applid*, *X'offset'*, *modname*

| **DFHSO0100I** *applid* **Sockets domain initialization has
| started.**

| **Explanation:** This is an informational message
| indicating that sockets domain initialization has started.

| **System action:** System initialization continues.

| **User response:** None. The message can be suppressed
| with the system initialization parameter MSGLVL=0.

| **Destination:** Console

| **Modules:** DFHSODM

| **XMEOUT Parameter:** *applid*

| **DFHSO0101I** *applid* **Sockets domain initialization has
| ended.**

| **Explanation:** This is an informational message
| indicating that sockets domain initialization has
| completed successfully.

| **System action:** System initialization continues.

| **User response:** None. The message can be suppressed
| with the system initialization parameter MSGLVL=0.

| **Destination:** Console

| **Modules:** DFHSODM

| **XMEOUT Parameter:** *applid*

| **DFHSO0102** *date time applid* **An OpenEdition
| Assembler Callable Service error (code
| X'code') has occurred on receipt of a
| severe TCP/IP return code; the
| TCPIP SERVICE *tcpip service* on port
| *portnumber* at IP address *ipaddress* will be
| closed.**

| **Explanation:** An error has been detected in DFHSOLS.
| The error has been caused by a severe return code
| received from TCP/IP.

| **System action:** An exception entry *X'code'* is made in
| the trace table. No system dump is taken, unless you
| have specifically requested a dump in the dump table.

| CICS continues unless you have specified in the dump
| table that CICS should terminate.

| The TCPIP SERVICE *tcpip service* on port *portnumber* at
| the specified IP address will be shutdown. When this is
| complete then message DFHSO0108 will be issued.

| **User response:** This error could have been returned if
| TCP/IP had been shutdown, for example. The
| exception trace entry will tell you which service routine
| was called and the return values that were returned.
| Refer to the OS/390 OpenEdition Messages and Codes
| book to determine the cause of the error.

| The TCPIP SERVICE *tcpip service* will be closed, and after
| the TCP/IP region has been restarted the closed
| TCPIP SERVICE should be reopened. At this point
| normal work can resume on the TCPIP SERVICE.

| **Destination:** Console and Transient Data Queue
| CSOO

| **Modules:** DFHSOLS

| **XMEOUT Parameters:** *date*, *time*, *applid*, *X'code'*,
| *tcpip service*, *portnumber*, *ipaddress*

DFHSO0103 *applid* ENCRYPTION=*level* is not available on this system.

Explanation: The ENCRYPTION=*level* system initialization parameter was specified, where *level* may be STRONG or NORMAL, but the necessary feature to implement it was not installed on your system.

System action: Sockets Domain initialization fails, and CICS terminates.

User response: If you wish to use STRONG encryption with the secure sockets layer, you must order and install the North American Secure Encryption feature. This OS/390 feature is only available in the United States of America and Canada. If the feature is unavailable, you must specify ENCRYPTION=NORMAL, which is the default. In France, you must specify ENCRYPTION=WEAK unless you have ordered and installed the standard encryption feature for OS/390, when you may specify ENCRYPTION=NORMAL.

Destination: Console Routecodes 2, 9, 10 and 11

Modules: DFHSODM

XMEOUT Parameters: *applid, level*

DFHSO0104 *applid* Secure sockets program *pgmname* could not be loaded. Secure Sockets Layer is not available.

Explanation: The program module *pgmname*, which is required to implement the secure sockets layer, could not be loaded.

If *pgmname* is GSKCMS, GSKSSL, or GSKX509, the System SSL component of OS/390 is not available in your release of OS/390, or it has not been installed properly. (This component is only available in OS/390 Version 2 Release 7 and later releases.)

System action: System initialization continues, but support for the secure sockets layer is not enabled.

User response: If this message is preceded by message DFHSO0103, try restarting CICS with ENCRYPTION=NORMAL.

If *pgmname* is GSKCMS, GSKSSL, or GSKX509, ensure that the System SSL library is available to CICS. This library is *prefix*..SGSKLOAD, where *prefix* is defined by the installation. You should ensure that it is installed in the system linklist or referenced in the STEPLIB concatenation in the CICS JCL. If it is included in the CICS STEPLIB the library must be APF-authorized.

Destination: Console Routecodes 2, 9, 10 and 11

Modules: DFHSODM

XMEOUT Parameters: *applid, pgmname*

DFHSO0105 *applid* ENCRYPTION=*level* is not available on this system. ENCRYPTION=WEAK is used instead.

Explanation: The ENCRYPTION=NORMAL system initialization parameter was specified, but the necessary feature to implement it was not installed on your system, and is not available to be ordered at your level of operating system.

System action: The lower level of encryption corresponding to ENCRYPTION=WEAK is used instead.

User response: None. The encryption support required for ENCRYPTION=NORMAL will be available in OS/390 Version 2 Release 8. With that level of operating system, the system initialization parameter will be honored and this message will not appear.

Destination: Console Routecodes 2, 9, 10 and 11

Modules: DFHSODM

XMEOUT Parameters: *applid, level*

DFHSO0106 *date time applid* An OpenEdition Assembler Callable Service error (code *X'code'*) has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code or the called Assembler Callable Service routine. The exception trace entry will tell you which service routine was called and the return values that were returned. Refer to the OS/390 OpenEdition Messages and Codes book to determine the cause of the error. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

| If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

| **Destination:** Console and Transient Data Queue
| CSOO

| **Modules:** DFH SOCK

| **XMEOUT Parameters:** *date, time, applid, X'code', modname*

| **DFH SO0107** *date time applid* **TCPIP SERVICE**
| *tcpip service* **has been opened on port**
| *portnumber* **at IP address** *ipaddress*.

| **Explanation:** The TCPIP SERVICE *tcpip service* has been opened on port *portnumber* at the IP address specified.

| **System action:** CICS continues.

| **User response:** None.

| **Destination:** CSOO

| **Modules:** DFH SOCK

| **XMEOUT Parameters:** *date, time, applid, tcpip service, portnumber, ipaddress*

| **DFH SO0108** *date time applid* **TCPIP SERVICE**
| *tcpip service* **on port** *portnumber* **at IP**
| **address** *ipaddress* **has been closed.**

| **Explanation:** The TCPIP SERVICE *tcpip service* on port *portnumber* on the specified IP address has been closed.

| **System action:** CICS continues.

| **User response:** None.

| **Destination:** CSOO

| **Modules:** DFH SOCK

| **XMEOUT Parameters:** *date, time, applid, tcpip service, portnumber, ipaddress*

| **DFH SO0109** *date time applid* **The TCPIP SERVICE**
| *tcpip service* **could not be opened because**
| **the port** *portnumber* **is already in use on**
| **the IP address** *ipaddress* .

| **Explanation:** This message is issued when the open of a TCPIP SERVICE cannot be completed. The port number specified is already in use in combination with the IP address. By default, TCP/IP only allows one server to be listening on a port at any one time.

| Specifically, this message is issued when the TCP/IP bind call fails with a return code of EADDRINUSE.

| **System action:** The TCPIP SERVICE does not open, but remains closed. An exception trace entry is written detailing the return values from the TCP/IP bind call. An application using the EXEC API to set the TCPIP SERVICE open receives an RESP(INVREQ) RESP2(9).

| **User response:** Check that there are no other TCPIP SERVICES open using the same port number and IP address as the failing one. If there is another TCPIP SERVICE open using the port, it must be closed before the new one can be opened.

| If no TCPIP SERVICES are using the requested port, there may be another OS/390 application acting as a TCP/IP server already listening on the port. For example, the Lotus Go for OS/390 web server may be installed and running on port 80 on the same TCP/IP stack as CICS. Attempting to open a TCPIP SERVICE on port 80 will fail. Use the TSO command NETSTAT to display TCP/IP servers on the system. Choose an unused port for the TCPIP SERVICE.

| If your OS/390 system has more than one TCP/IP stack you may specify another stack's IP address on the TCPIP SERVICE definition. This will allow you to install multiple TCPIP SERVICES each using the same port number. You may also configure support in TCP/IP for virtual IP addresses on a single system. This will also allow more than one TCPIP SERVICE to share the same port.

| Finally, TCP/IP for OS/390 can be configured with port sharing. This allows multiple servers (TCPIP SERVICES) to use the same port with TCP/IP using load balancing to direct incoming connections to the set of servers on the port. With this enabled, multiple TCPIP SERVICES can each be opened on the same IP address with the same port.

| **Destination:** CSOO

| **Modules:** DFH SOCK

| **XMEOUT Parameters:** *date, time, applid, tcpip service, portnumber, ipaddress*

| **DFH SO0110** *date time applid* **The TCPIP SERVICE**
| *tcpip service* **cannot be opened on the IP**
| **address** *ipaddress* **because the address is**
| **unknown to TCP/IP.**

| **Explanation:** Opening the TCPIP SERVICE has failed because the IP address specified on the definition is not known to TCP/IP.

| This message is issued when the TCP/IP bind call fails with the return value of EADDRNOTAVAIL.

| **System action:** The IP address must be a valid address known to TCP/IP. It is possible to configure multiple TCP/IP stacks for a single OS/390 system, or to have virtual IP addresses on a single stack. If the system only has one IP address then the IP address field of the TCPIP SERVICE definition can be left blank, or specified as ANY. This causes the bind to use the default IP address for the system. To use an alternative, a valid address must be specified.

| **User response:** Check that the address specified on the TCPIP SERVICE definition is known to TCP/IP on the system. If it is not, then consult the OS/390 TCP/IP

| OpenEdition: Configuration Guide for information on
| defining IP address.

| **Destination:** CSOO

| **Modules:** DFH SOCK

| **XMEOUT Parameters:** *date, time, applid, tcpipservice,*
| *ipaddress*

| **DFH SO0111** *date time applid* **Opening the**
| **TCPIP SERVICE** *tcpipservice* **has failed**
| **because the region jobname is not**
| **authorized to bind to port** *portnumber*.

| **Explanation:** Opening the TCPIP SERVICE has failed
| because the jobname of the region is not authorized to
| use the port number specified.

| Binding to port numbers below 1024 requires TCP/IP
| configuration directives specifying the CICS jobname to
| TCP/IP and associating it with the specified port. This
| may also be done for ports greater than 1024, thus a
| CICS region may also fail to open a port greater than
| 1024 if the port has been associated with another job.

| This message is issued when the TCP/IP bind call fails
| with a return value of EPERM.

| **System action:** The TCPIP SERVICE is not opened. If
| an application has used the EXEC API to open the
| TCPIP SERVICE, it receives RESP(INVREQ) RESP2(3)
| values.

| **User response:** The CICS region's jobname must be
| authorized to open the specified port. Consult the
| OS/390 TCP/IP OpenEdition: Configuration Guide for
| details on how to do this.

| **Destination:** CSOO

| **Modules:** DFH SOCK

| **XMEOUT Parameters:** *date, time, applid, tcpipservice,*
| *portnumber*

| **DFH SO0112** *date time applid* **TCPIP SERVICE**
| *tcpipservice* **cannot be opened because**
| **TCPIP status is not OPEN.**

| **Explanation:** Opening the TCPIP SERVICE has failed
| because TCPIP is currently not open. Either TCPIP=NO
| has been specified in the SIT or TCPIP has been
| dynamically closed using CEMT or an SPI command.

| **System action:** The TCPIP SERVICE is not opened. If
| an application has used the EXEC API to open the
| TCPIP SERVICE, it receives RESP(INVREQ) RESP2(4)
| values.

| **User response:** Open TCPIP and re-open the
| TCPIP SERVICE.

| **Destination:** CSOO

| **Modules:** DFH SORD

| **XMEOUT Parameters:** *date, time, applid, tcpipservice*

| **DFH SO0113** *applid* **The IP address** *ip_address* **cannot**
| **be resolved to a host name by the**
| **gethostbyaddr function.**

| **Explanation:** CICS has issued the TCP/IP function
| gethostbyaddr to resolve the IP address *ip_address* to a
| host name, but the call failed.

| **System action:** An exception trace entry is made.
| CICS will continue to attempt to access the name server
| for subsequent requests.

| **User response:** The gethostbyaddr function will
| usually perform a name server reverse lookup to
| resolve the IP address into a host name. This can fail if
| CICS is unable to contact a name server, or the name
| server does not know the correct host name to IP
| address mapping.

| Check that the name server defined to TCP/IP in the
| /etc/resolv.conf file is valid and responding correctly.
| You can issue the TSO NSLOOKUP command to query
| the name server. If a SYSTCPD DD name has been
| defined in the CICS job, check that the file it references
| correctly defines the name server. If the name server is
| defined correctly to CICS then contact the administrator
| to determine why the IP address lookup has failed.

| **DFH SO0114** *date time applid* **The socket listener**
| **cannot attach the transaction** *transaction,*
| **the TCPIP SERVICE** *tcpipservice* **will be**
| **closed.**

| **Explanation:** The TCP/IP listener task has received a
| connection from a client but the attach for the
| transaction associated with the TCPIP SERVICE
| definition has failed. The associated transaction may
| not have been installed or the TCPIP SERVICE
| definition could have specified the wrong transaction.

| **System action:** The TCPIP SERVICE that is defined on
| the port that the connection arrived on is closed. The
| socket accepted for the client is closed.

| **User response:** Determine why the attach for the
| transaction has failed. Correct the error and re-open the
| TCPIP SERVICE.

| **Destination:** CSOO

| **Modules:** DFH SOCK

| **XMEOUT Parameters:** *date, time, applid, transaction,*
| *tcpipservice*

DFHSO0115 *date time applid* CICS has registered the group name *groupname* with Work Load Manager. The TCP/IP host name *genericname* will become available for DNS connection optimization.

Explanation: The group name has been registered with Work Load Manager for Domain Name Service (DNS) connection optimization. This occurs when a TCPIP SERVICE is opened where its name begins with the character 'D'. The new generic TCP/IP host name becomes available for clients to use to access the CICS system, and any others that have registered with the named group name.

System action: CICS has issued the Work Load Manager macro IWMSRSRG to register the specified group name for DNS connection optimization. This only occurs when the name of the TCPIP SERVICE begins with a 'D'. Work Load manager registration only occurs once for a given group name. If multiple TCPIP SERVICES define the same group name, then registration will only occur once.

The group name registered is taken from a combination of part of the name of the TCPIP SERVICE and the transaction defined for the TCPIP SERVICE. Any characters of the name following a dot '.' are concatenated with the transaction identifier to form the group name. For example, a TCPIP SERVICE has the name D1.CICS and is defined with the transaction IIOP (the IIOP transaction being an alias of the CICS-supplied CIRR transaction). The group name generated is 'CICSIIOPIOP'. If the TCPIP SERVICE name does not contain a dot, then only the transaction identifier is used. For example, a TCPIP SERVICE with a name of 'DYNWEB' and a transaction of WWW will generate a registration for the group 'WWW'.

The group name registered effectively becomes a new name in the sysplex TCP/IP domain. When multiple CICS systems in a sysplex each register with the same group name, the DNS server uses Work Load Manager to resolve the group name into one of the IP addresses of the associated systems. The IP address returned is that of the system that is most eligible according to Work Load Manager's load balancing rules. For example, two OS/390 systems in a sysplex are mvs1.plex.hursley.ibm.com and mvs2.plex.hursley.ibm.com; and on each system, CICS registers with the group name cicsiiop. The new name cicsiiop.plex.hursley.ibm.com is dynamically added to the DNS name server's tables. Client TCP/IP applications can use this name instead of the name of one of the specific OS/390 images. When a client resolves the name to an IP address using the DNS, it will get the IP address of the most eligible system. Since the DNS dynamically knows when systems register and deregister, additional CICS systems can be registered as required to expand the list of available IP addresses returned for a group name. If a system fails, its IP address will be removed from the DNS server's

list of associated addresses for any groups with which it was registered.

User response: No user action is necessary.

Destination: CSOO

Modules: DFHSOCK

XMEOUT Parameters: *date, time, applid, groupname, genericname*

DFHSO0116 *date time applid* CICS has deregistered the group name *groupname* with Work Load Manager.

Explanation: The group name has been deregistered from Work Load Manager. This CICS system will no longer participate in connection optimization in the group specified. This occurs when a TCPIP SERVICE is closed where its name begins with a 'D'.

System action: The Work Load Manager IWMSRDRS call is made to deregister the group name. This will remove the IP address of the system from the DNS server's table associated with the group name.

If more than one open TCPIP SERVICE share the same group name, then the WLM deregistration only occurs when the last one is closed.

User response: Check the availability of the name server.

Destination: CSOO

Modules: DFHSOCK

XMEOUT Parameters: *date, time, applid, groupname*

DFHSO0117 *applid* Unable to determine the TCP/IP host name. OpenEdition return code *X'retcode'*, reason code *X'rc'*.

Explanation: OpenEdition has returned a non-zero return code/reason code to a gethostname call during Listener initialization or has returned a blank hostname.

System action: Listener initialization continues.

User response: Determine the reason for the gethostname failure. The return code and reason code included in the message text are described in the z/OS UNIX System Services Messages and Codes manual.

Destination: Console

Modules: DFHSOLS

XMEOUT Parameters: *applid, X'retcode', X'rc'*

DFHSO0119 *applid* Unable to register service *servicename* for WLM DDNS on host *hostname*.

Explanation: During activation of a TCPIP SERVICE, the Sockets Domain was unable to locate a TCP/IP

| hostname. Without a hostname, CICS cannot obtain the
| information necessary for registration with WLM
| DDNS.

| **System action:** TCPIPSERVICE activation continues,
| but this service is not registered with WLM DDNS.

| **User response:** Determine why no hostname was
| returned. Message DFHSO0113 may have preceded this
| message. Once the problem has been rectified, re-install
| the TCPIPSERVICE.

| **Destination:** Console

| **Modules:** DFHSOLS

| **XMEOUT Parameters:** *applid, servicename, hostname*

| **DFHSO0120** *applid numtcbs* **TCBs are initialized for**
| **SSL processing.**

| **Explanation:** The specified number (*numtcbs*) of TCBs
| have been attached and initialized to perform Secure
| Sockets Layer processing for CICS.

| **System action:** CICS can handle *numtcbs* simultaneous
| SSL sessions.

| **User response:** None.

| **Destination:** Console Routecodes 2 and 10

| **Modules:** DFHSOSE

| **XMEOUT Parameters:** *applid, numtcbs*

| **DFHSO0121** *applid* **No TCBs have been initialized for**
| **SSL processing. Secure Sockets Layer**
| **has been deactivated.**

| **Explanation:** CICS requires at least one TCB to be
| successfully initialized to handle the TCP/IP Secure
| Sockets Layer, but it has been unable to initialize any.

| **System action:** CICS cannot handle any SSL sessions,
| so attempts to open TCPIPSEVICES which specify
| SSL(YES) or SSL(CLIENTAUTH) will fail.

| **User response:** The REGION size of the CICS
| address-space is probably too small to allow CICS
| Secure Sockets Layer to be initialized. Restart CICS
| with a larger REGION size. None.

| **Destination:** Console Routecodes 2 and 10

| **Modules:** DFHSOSE

| **XMEOUT Parameter:** *applid*

| **DFHSO0122** *date time applid* **SSL request from** *ipaddr*
| **on TCPIPSERVICE(*service*) rejected**
| **because of insufficient TCBs.**

| **Explanation:** An Secure Sockets Layer connection from
| a client with address *ipaddr* was received on
| TCPIPSERVICE(*service*), but there were no available
| TCBs to process the request.

| **System action:** The socket for the connection is closed.
| No message is sent to the client because the client
| expects the response to be encrypted by SSL, but SSL
| services cannot be provided.

| **User response:** If this message occurs frequently,
| consider raising the value of the MAXSSLTCBS system
| initialization parameter.

| **Destination:** CSOO

| **Modules:** DFHSOSE

| **XMEOUT Parameters:** *date, time, applid, ipaddr, service*

DFHSO0123 *date time applid* **Return code rc received**
from function '{unknown |
gsk_environment_init
| *gsk_environment_open* |
gsk_environment_close |

System SSL. Reason: {Unrecognized return
code | Key database not found | Key
database access not authorized | Invalid
password for key database | Expired
password for key database | Stashed
password file not found | Session timeout
value is invalid | An I/O error occurred |
An unknown error occurred | Invalid
distinguished name | No common ciphers
negotiated | No certificate available | Server
certificate rejected by client | Root certificate
authority not supported | Unsupported
operation | Invalid certificate signature |
SSL protocol violation | Not authorized |
Self-signed certificate | Invalid session state
| Handle creation failed | No private key
| Untrusted Certificate Authority |
Certificate date invalid | Invalid cipher suite
| Handshake abandoned by client | Cannot
open key database | Host certificate not yet
valid | Certificate parsing error | Certificate
is revoked | LDAP server is inactive}. **Client:**
clientaddr, **TCPIPSERVICE:** *tcipSERVICE*.

| **Explanation:** A non-zero return code *rc* was received
| from the specified function of the OS/390 System SSL
| service. A brief interpretation of the return code is
| shown. The service was processing a connection from a
| client at IP address *clientaddr* to TCPIPSERVICE
| *tcipSERVICE*.

| **System action:** The secure sockets operation is
| abandoned. A sockets domain severe error message,
| DFHSO0002, may be produced with error code X'080C'.

| **User response:** If this message is not accompanied by message DFHSO0002, the error is probably due to some unexpected action by the connected client, and this message is for information only. If this message is accompanied by message DFHSO0002, the error is probably due to some sort of configuration error. Use the description in the message to determine what is wrong. For descriptions of the return code *rc*, see the *OS/390 System SSL Programming Guide and Reference*, SC24-5877. For further guidance see the *CICS Internet Guide*.

Note: If the brief interpretation of the return code is
 # *Certificate date invalid* the certificate may either
 # have expired or be not yet valid, and may refer
 # to either the host or client certificate.

| **DFHSO0124** *applid* **The MAXSOCKETS system
 | initialization parameter has a value of
 | mmmmmm which exceeds the
 | MAXFILEPROC value of nnnnn. The
 | MAXSOCKETS value has been set to
 | the lower value.**

| **Explanation:** The value specified in the
 | MAXSOCKETS system initialization parameter is
 | greater than the value specified in the z/OS UNIX
 | System Services MAXFILEPROC option.

| CICS has attempted to set the MAXSOCKETS value
 | higher than the MAXFILEPROC value, but has been
 | unable to do so because the userid under which CICS
 | is running does not have superuser authority.

| **System action:** CICS continues execution with the

| MAXSOCKETS value set equal to the MAXFILEPROC
 | value.

| **User response:** You may:

- | • Restart CICS with a value of MAXSOCKETS that
 | does not exceed MAXFILEPROC. This will limit the
 | number of sockets that CICS can have active at one
 | time.
- | • Increase the MAXFILEPROC value and then restart
 | CICS. This will affect all z/OS UNIX System Services
 | processes in this system.
- | • Restart CICS with a userid that has superuser
 | authority.

| **Destination:** Console

| **Modules:** DFHSOIS

| **XMEOUT Parameters:** *applid, mmmmmm,nnnnn*

| **DFHSO0125** *applid* **The MAXSOCKETS parameter
 | retrieved from the catalog has a value of
 | mmmmmm which exceeds the
 | MAXFILEPROC value of nnnnn. The
 | MAXSOCKETS value has been set to
 | the lower value.**

| **Explanation:** The value of the MAXSOCKETS system
 | initialization parameter retrieved from the catalog
 | during a warm or emergency restart is greater than the
 | value specified in the z/OS UNIX System Services
 | MAXFILEPROC option.

| CICS has attempted to set the MAXSOCKETS value
 | higher than the MAXFILEPROC value, but has been
 | unable to do so, because the userid under which CICS
 | is running does not have superuser authority.

| This situation may arise when:

- | • CICS was previously running under a userid that
 | had superuser authority, but has restarted under a
 | different userid
- | • CICS was previously running under a userid that
 | had superuser authority, but the authority was
 | changed before CICS restarted
- | • CICS was previously running under a userid that did
 | not have superuser authority, and the value of
 | MAXFILEPROC was reduced before CICS restarted.

| **System action:** CICS continues execution with the
 | MAXSOCKETS value set equal to the MAXFILEPROC
 | value.

| **User response:** You may:

- | • Restart CICS with a value of MAXSOCKETS that
 | does not exceed MAXFILEPROC. This will limit the
 | number of sockets that CICS can have active at one
 | time.
- | • Increase the MAXFILEPROC value and then restart
 | CICS. This will affect all z/OS UNIX System Services
 | processes in this system.

| • Restart CICS with a userid that has superuser
| authority.

| **Destination:** Console

| **Modules:** DFHSOIS

| **XMEOUT Parameters:** *applid, mmmmm,nnnnn*

DFHSO0126 W *applid* **An attempt to create a socket
has failed because the MAXSOCKETS
limit has been reached.**

Explanation: An attempt to create a tcpip socket has failed as the number of open sockets in the system would exceed the current MAXSOCKETS value.

System action: The socket is not opened and failure is reported.

| **User response:** If this behaviour is undesirable, use
| CEMT SET TCPIP to increase the number of sockets in
| the system.

Destination: Console

Modules: DFHSOMG

XMEOUT Parameter: *applid*

DFHSO0128A *applid* **Information to specify a bind to
an LDAP server cannot be obtained
from the PROXY segment of
CRLPROFILE profile.**

Explanation: The CRLPROFILE system initialization
parameter has been specified, but the information
required by CICS and System SSL to perform a bind to
an LDAP server cannot be obtained from the profile
that it identifies.

CICS has attempted to extract the following
information from the PROXY segment of the profile
profile in the LDAPBIND class of the external security
manager's database:

LDAPHOST

The Uniform Resource Locator (URL) of an
LDAP server that contains certificate
revocation information

BINDDN

The LDAP distinguished name of a user who
is authorized to access certificate revocation
lists in the specified LDAP server

BINDPW

The password used to authenticate the user
specified by BINDDN.

#

DFHSRxxxx messages

DFHSR0001 *applid* **An abend (code *aaa/bbbb*) has
occurred at offset *X'offset'* in program
progname.**

Either the specified profile does not exist, or CICS does
not have authority to access the profile, or one or more
of the required components are missing from the
profile.

System action: The CICS SSL function cannot retrieve
certificate revocation lists to determine whether
certificates have been revoked. To prevent further error
messages, the CRLPROFILE function has been disabled.
Therefore CICS will be unable to check whether SSL
certificates are revoked.

User response: Ensure that the *profile* profile in the
LDAPBIND class of the security manager is defined
with a PROXY segment that contains all three required
components. Also ensure that the CICS region userid
had READ access to the profile, then restart CICS.

Destination: Console Routecodes 2, 9 and 10

Modules: DFHSOSE

XMEOUT Parameters: *applid, profile*

#

DFHSO0129A *applid* **The LDAP server whose name
was obtained from CRLPROFILE is
inactive. Certificate revocation checks
have been disabled.**

Explanation: The LDAP server, whose name was
obtained from the PROXY segment of the external
security manager's profile specified by the
CRLPROFILE system initialization parameter, cannot be
accessed.

System action: The CICS SSL function cannot retrieve
certificate revocation lists to determine whether
certificates have been revoked. To prevent further error
messages, the CRLPROFILE function has been disabled.
CICS will not make any further attempts to acquire
certificate revocation lists from the LDAP server.
Therefore CICS will be unable to check whether SSL
certificates are revoked.

User response: To re-enable certificate revocation list
checking, the LDAP server specified within the
CRLPROFILE must be restarted. All CICS systems, that
specify a CRLPROFILE definition that references this
server, must then also be restarted.

Destination: Console Routecodes 2, 9 and 10

Modules: DFHSOSE

XMEOUT Parameter: *applid*

Explanation: An abnormal end (abend) or program
check has occurred in program *progname*. Storage
protection is active, and CICS was executing in USER
key at the time of the abend or program check.

The code *aaa* is a three digit hexadecimal MVS system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The four digit code *bbbb*, which follows *aaa*, is a user abend code, produced either by CICS or by another product on the user's system. Message DFHME0116 is normally produced containing the symptom string for this problem.

System action: An exception trace entry is made giving details of the error. System dump SR0001 is taken unless you have specifically suppressed dumps for that dumpcode in the dump table.

CICS continues and abends the transaction, unless you have specified in the dump table that CICS should terminate. The transaction abend code is ASRA, ASRB, ASRD or ASRE.

User response: As the execution key was USER key, *modname* is probably a customer application program. Review this program and correct the error.

Note that if the error was an 0C4 program check caused by an attempt to overwrite a CICS DSA, the exception trace entry indicates which DSA the program attempted to overwrite. If this is the case, also refer to the explanation for message DFHSR0622.

For advice on problem determination, refer to the *CICS Problem Determination Guide*.

Report the details of the symptom string given in message DFHME0116.

If you want to suppress system dumps that precede ASRA, ASRB, ASRD or ASRE abends when the execution key is USER, you must specify this on an entry in the dump table for system dumpcode SR0001. Use either CEMT or an EXEC CICS command. Further guidance on this can be found in the *CICS System Definition Guide*.

Destination: Console

Modules: DFHSRP

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', progname*

DFHSR0601 *applid* Program interrupt occurred with system task *taskid* in control

Explanation: A program check has been detected in a system task. *taskid* is the system task identifier (for example, TCP, III) as set in field TCAKCTTA.

System action: CICS abnormally terminates with system dump SR0601 and an exception trace entry which gives the kernel error data for the program check.

User response: Use the dump to determine the cause of the program check. The most likely causes are either an error in a CICS module, or an error in a user-written PLT program.

For advice on problem determination, refer to the *CICS Problem Determination Guide*.

Destination: Console

Modules: DFHSRP

XMEOUT Parameters: *applid, taskid*

DFHSR0602 *applid* Program interrupt routine has been entered while processing program interrupt for same task

Explanation: A program check occurred. CICS started to abend the task with an abend code of ASRA when another program check occurred. As this is a potentially recursive situation, DFHSRP terminates CICS.

System action: CICS abnormally terminates with system dump SR0602 and exception trace entries giving the kernel error data for each program check.

User response: Try to discover where and why the first program check occurred. The most likely cause is an error in the application program. The second program check may be due to a CICS error while terminating the task.

For advice on problem determination, refer to the *CICS Problem Determination Guide*.

Destination: Console

Modules: DFHSRP

XMEOUT Parameter: *applid*

DFHSR0603 *applid* Program interrupt has occurred

Explanation: A program check occurred, and CICS did not attempt to recover, because SRT=NO was specified in the system initialization table or by the operator at start-up time.

System action: CICS abnormally terminates with system dump SR0603 and an exception trace entry giving the kernel error data for the program check.

User response: Initially, check that the specification of SRT=NO is correct. If it is incorrect, change it as described in the *CICS System Definition Guide*.

For advice on problem determination, refer to the *CICS Problem Determination Guide*.

Destination: Console

Modules: DFHSRP

XMEOUT Parameter: *applid*

DFHSR0605 *applid* Error from KE Domain - DFHSRP initialization

Explanation: Module DFHSRP has detected a severe error during the initialization phase of CICS. It is unlikely that any recovery functions can run until the

error is found and corrected.

System action: CICS abnormally terminates with system dump SR0605.

User response: Use the dump to determine, if possible, the cause of the problem and what must be done to correct it.

For advice on problem determination, refer to the *CICS Problem Determination Guide*

Destination: Console

Modules: DFHSRP

XMEOUT Parameter: *applid*

DFHSR0606 *applid* **Abend (code *aaa/bbbb*) has been detected.**

Explanation: DFHSRP has detected an abnormal termination which CICS is not able to handle fully (for example, the abend code cannot be found in the SRT). In this instance it is the CICS system and not merely a transaction, that has abnormally terminated.

The code *aaa* is a three digit hexadecimal MVS system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The four digit code *bbbb*, which follows *aaa*, is a user abend code produced either by CICS or by another product on the user's system.

System action: CICS abnormally terminates. A system dump (dumpcode SR0606) can be taken with this message depending on the abend code. An exception trace entry is produced giving the kernel error data for the abend.

User response: Use the dump to determine the abnormal termination, and to investigate its cause.

Destination: Console

Modules: DFHSRP

XMEOUT Parameters: *applid, aaa/bbbb*

DFHSR0612 *applid* **Abend recovery has been entered by same task**

Explanation: An operating system abnormal termination occurred. CICS started to abend the task with abend code ASRB when another operating system abnormal termination occurred. As this is a potentially recursive situation, DFHSRP terminates CICS.

System action: CICS abnormally terminates with system dump SR0612 and exception trace entries giving the kernel error data for each operating system abend.

User response: The most likely cause of the second operating system abend is an error in a global user exit program running at the XSRAB exit. This is the global user exit that can be invoked when an abend code is found in the SRT. If such a program was running,

determine the cause of the second abend and take steps to prevent a recurrence.

Note that this message will also be issued if a global user exit program running at the XSRAB exit gets into a loop (runaway), or issues an unknown XPI call (kernerror). The second exception trace entry should help to diagnose this.

For advice on problem determination, see the *CICS Problem Determination Guide*.

Destination: Console

Modules: DFHSRP

XMEOUT Parameter: *applid*

DFHSR0613 *applid* **Abend has occurred with system task *taskid* in control**

Explanation: An operating system abnormal termination has been detected in a system task. *taskid* is the system task identifier (for example, TCP, III) as set in field TCAKCTTA.

System action: CICS abnormally terminates with system dump SR0613 and an exception trace entry giving the kernel error data for the operating system abend.

User response: Use the dump to determine the cause of the abend, and take action to correct it.

For advice on problem determination, see the *CICS Problem Determination Guide*.

Destination: Console

Modules: DFHSRP

XMEOUT Parameters: *applid, taskid*

DFHSR0615 *applid* **Program interrupt has occurred in recovery task**

Explanation: An operating system abnormal termination occurred. CICS started to abend the task with an abend code of ASRB when a program check occurred. DFHSRP terminates CICS.

System action: CICS abnormally terminates with system dump SR0615 and exception trace entries giving the kernel error data for the operating system abend and the program check.

User response: The most likely cause of the program check is an error in a global user exit program running at the XSRAB exit. This is the global user exit that can be invoked when an abend code is found in the SRT. If such a program was running, determine the cause of the program check and correct it.

For advice on problem determination, refer to the *CICS Problem Determination Guide*.

Destination: Console

Modules: DFHSRP

XMEOUT Parameter: *applid*

DFHSR0618 *applid* **An illegal macro call or reference to the CSA or TCA has caused the abend which follows**

Explanation: A user program was executing which either contains an assembler macro which is no longer supported, or refers illegally to the CICS TCA or CSA. This error appears as an 0C4 program check.

System action: Either The transaction abends with abend code ASRD. This message is followed by message DFHAP0001 or DFHSR0001 which gives the name of the program in error and the offset into that program at which the error occurred.

Or This is a critical error and CICS is terminated. This message is followed by a DFHSR06xx message giving the reason for the termination.

User response: Review the program and correct the error.

If the error is in the module DFHUEHC, ensure that UEPCSA and UEPTCA are not being used because these reference fetch-protected storage.

For advice on problem determination, refer to the *CICS Problem Determination Guide*.

Destination: Console

Modules: DFHSRP

XMEOUT Parameter: *applid*

| **DFHSR0619** *date time applid* **An illegal reference to the RCT has caused the abend which follows.**

| **Explanation:** A user program was executing and referred illegally to the RCT. This error appears as an 0C4 program check.

| **System action:**

| The transaction abends with abend code ASRE. This message is followed by message DFHAP0001 or DFHSR0001 which gives the name of the program in error and the offset into that program at which the error occurred.

| **User response:** Review the program and correct the error by using the CICS supplied SPI commands to retrieve data from the RCT.

| For advice on problem determination, refer to the *CICS Problem Determination Guide*.

| **Destination:** Console and Transient Data Queue CDB2

| Modules: DFHSRP

| XMEOUT Parameters: *date, time,applid*

DFHSR0622 *applid* **An attempt to {overwrite |access} the dsaname has caused the abend which follows**

Explanation: An 0C4 program interrupt (protection exception) has occurred. CICS has diagnosed the cause of the 0C4 as an attempt to either *access* or *overwrite* storage in DSA *dsaname*. The DSA is one of CDSA, RDSA, UDSA, ECDSA, ERDSA or EUDSA for *overwrite*, or either UDSA or EUDSA for *access*.

If dsaname is CDSA or ECDSA:

CICS is running with storage protection active. Both the CDSA and the ECDSA therefore contain CICS key storage. They are write protected from user programs executing in User key. The most likely causes of the 0C4 are:

- A program executing in CICS key passed the address of CICS key storage in the CDSA or ECDSA to a user program executing in User key and this user program attempted to write to this storage.
- A user program executing in User key contains an error and accidentally attempted to write to CICS key storage in the CDSA or ECDSA.
- A user program executing in User key deliberately attempted to write to CICS key storage in the CDSA or ECDSA.

If dsaname is ERDSA or RDSA:

CICS may be running with or without storage protection active. The ERDSA or RDSA contains only reentrant CICS and user programs. If RENTPGM=PROTECT was specified as a system initialization parameter, the ERDSA or RDSA is write protected from programs executing in both CICS key and User key. If RENTPGM=NOPROTECT, the ERDSA or RDSA is only protected from user programs executing in User key. The most likely causes of the 0C4 are:

- A user program residing in the ERDSA or RDSA has attempted to modify its own storage, (that is, the program is not reentrant).
- A user program contains an error and accidentally attempted to overwrite program storage in the ERDSA or RDSA.

If dsaname is EUDSA or UDSA:

CICS is running with both storage protection and transaction isolation active. The EUDSA and UDSA contain only USER key non-shared storage. The most likely causes of the 0C4 are:

- If the action is *overwrite*, a program has attempted to modify the non-shared storage belonging to another transaction.

- If the action is *access*, a program has attempted to either read storage or execute an instruction within another transaction's non-shared storage.

System action: Either, the transaction abends with abend code ASRA. This message is followed by message DFHAP0001 or DFHSR0001 which gives the name of the program in error and the offset into that program at which the error occurred. Additionally, an exception trace entry is taken which gives program, offset, execution key and the DSA in question.

Or, this is a critical error and CICS is terminated. This message is followed by a DFHSR06xx message giving the reason for the termination.

User response: Depending on the cause and *dsaname*, do one of the following:

- Correct any error in the program.
- Redefine transactions with ISOLATE(NO) where they have to share storage.
- Change the program resource definition so that it executes in CICS key (and the basespace).
- Ensure that the program is not loaded into the ERDSA by not link-editing it with the RENT option.

Destination: Console

Modules: DFHSRP

XMEOUT Parameters: *applid*, {1=*overwrite*, 2=*access*}, *dsaname*

DFHSTxxxx messages

DFHST0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code.

Alternatively, unexpected data has been input, or storage has been overwritten.

Note: There is NO *applid* for DFHSTUP modules.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table.

For modules DFHSTST and DFHSTTI, a dump is taken and the collection interval is set to 24 hours. Message DFHST0101 is also issued.

For module DFHSTDM, the action depends on the initialization error action value which is used by the domain (DM) manager. The usual action is to terminate CICS with a dump.

For module DFHSTUE, processing continues.

For modules DFHSTWR, DFHSTRD, and DFHSTUx (modules within DFHSTUP), the job step is terminated with a dump.

For ALL modules, a system dump is taken, unless you have specifically suppressed dumps in the dump table. Message DFHME0116 is normally produced containing

the symptom string for this problem.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the *OS/390 MVS System Codes* manual. Then look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, a runaway or a recovery percolation, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSTST, DFHSTDM, DFHSTTI, DFHSTUE, DFHSTUx (Modules within DFHSTUP), DFHSTWR, DFHSTRD

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*, *modname*

DFHST0002 *applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is

taken, unless you have specifically suppressed dumps in the dump table.

CICS will continue unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Inform the system programmer. This indicates a possible error in CICS code. The severity of its impact will depend on the importance of the function being executed at the time of the error.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSTST, DFHSTDM, DFHSTTI, DFHSTUE

XMEOUT Parameters: *applid, X'code', modname*

DFHST0003 *applid* **Insufficient storage to satisfy GETMAIN (code X'code') in module *modname*.**

Explanation: A CICS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request. The code X'code' is the exception trace point id which uniquely identifies the place where the error was detected. This error has occurred above the 16MB line.

System action: An exception entry is made in the trace table (code X'code' in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Inform the system programmer. If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the user response suggested for these messages.

If CICS is still running, the problem may be a temporary one which will right itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

Try increasing the size limits of the DSAs or EDSAs. If CICS is not already terminated, you need to bring CICS down to do this. See the *CICS System Definition Guide* or the *CICS Performance Guide* for further information on CICS storage.

Destination: Console

Modules: DFHSTDM

XMEOUT Parameters: *applid, X'code', modname*

DFHST0004 *applid* **A possible loop has been detected at offset X'offset' in module *modname*.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'offset'. This is the offset of the instruction which was executing at the time the error was detected.

Note that no *applid* is included for DFHSTUP modules.

System action: An exception entry is made in the trace table.

For modules DFHSTST and DFHSTTI, a system dump is taken and the collection interval is set to 24 hours. Message DFHST0101 will also be issued.

For module DFHSTDM, the action depends on the initialization error action value which is used by the domain (DM) manager. The usual action will be to terminate CICS with a dump.

For module DFHSTUE, processing continues.

For modules DFHSTWR, DFHSTRD, and DFHSTUx (modules within DFHSTUP), the job step is terminated with a dump.

For ALL modules, a system dump is taken, unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time,

this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSTST, DFHSTDM, DFHSTTI, DFHSTUE, DFHSTUx (Modules within DFHSTUP), DFHSTWR, DFHSTRD

XMEOUT Parameters: *applid*, *X'offset'*, *modname*

DFHST0005 *applid* **A hardware error has occurred (module *modname*, code *X'code'*). The Time-of-Day clock is invalid.**

Explanation: Execution of the STCK machine instruction resulted in a non-zero condition code.

System action: A system dump is taken and interval collections are cancelled. Message DFHST0102 is also issued.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. This is in all probability a hardware error and you should in the first instance investigate the MVS Store Clock and find out whether it is working properly. If this is the cause, you should take the appropriate action to have it repaired or replaced.

In the unlikely event that this is not a hardware problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSTST, DFHSTDM

XMEOUT Parameters: *applid*, *modname*, *X'code'*

DFHST0101I *applid* **The Statistics Domain has set the collection interval to 24 hours.**

Explanation: A problem has been detected by, or has been passed back to, the statistics (ST) domain. As a result, the collection interval has been set to the maximum value. The end-of-day collection time is unchanged.

A message explaining the problem has already been issued by the module in error.

System action: Other processing continues.

User response: Refer to the associated message for guidance on resolving the original problem.

Use CEMT SET STATISTICS to reset the interval when the problem has been resolved.

Destination: Console

Modules: DFHSTST, DFHSTDM, DFHSTTI

XMEOUT Parameter: *applid*

DFHST0102I *applid* **The Statistics Domain has cancelled interval collections.**

Explanation: A problem has been detected by, or has been passed back to, the statistics (ST) domain. A message explaining the problem may have already been issued by the module in error.

To reduce the occurrence of this problem, the interval collections have been cancelled. The end-of-day collection time is unchanged.

System action: Other processing continues.

| **User response:** Refer to any associated message for
| guidance on resolving the original problem.

| If no associated message has been issued, you will need
| further assistance from IBM. See Part 4 of the *CICS
| Problem Determination Guide* for guidance on how to
| proceed.

| **Destination:** Console

| **Modules:** DFHSTST, DFHSTDM, DFHSTTI

| **XMEOUT Parameter:** *applid*

DFHST0103 *applid* **An SMF error has occurred with return code *X'rc'*.**

| **Explanation:** SMF has returned to the statistics (ST)
| domain with an error return code *X'rc'* from the
| SMFEWTM macro.

| **System action:** Other CICS processing continues.

| **User response:** Refer to the *OS/390 MVS System
| Management Facility (SMF)* manual for a detailed
| explanation of the meaning of the return code.

| **Destination:** Console

| **Modules:** DFHSTST
| **XMEOUT Parameters:** *applid, X'rc'*

| **DFHST0201 S An attempt to open the statistics data set has failed.**

| **Explanation:** DFHSTUP has tried to open the unloaded SMF data set but has failed.

| **System action:** A dump is taken and the job step is terminated.

| **User response:** Ensure that the JCL for the job is correct. A sample set of JCL to execute the DFHSTUP utility is contained in the *CICS Operations and Utilities Guide*.

| If incorrect JCL is not the cause of the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Destination:** SYSPRINT

| **Modules:** DFHSTRD

| **DFHST0202 S A read error on the statistics data set has occurred**

| **Explanation:** A read error was encountered on the unloaded SMF data set.

| **System action:** A dump is taken and the job step is terminated.

| **User response:** Inform the system programmer. First check that the JCL for the job is correct. A sample set of JCL to execute the DFHSTUP utility is contained in the *CICS Operations and Utilities Guide*. Resubmit the job.

| **Destination:** SYSPRINT

| **Modules:** DFHSTRD

| **DFHST0203 W The statistics data set is empty.**

| **Explanation:** An end-of-file condition was detected during the first attempt to read the unloaded SMF data set, or the unloaded SMF dataset contained no CICS statistics from any CICS system.

| **System action:** The job step is terminated.

| **User response:** The most likely cause is an error in the JCL which unloads the SMF dataset. First check that the JCL is correct. A sample set of JCL to unload the SMF dataset is contained in the *CICS Operations and Utilities Guide*. Also check that you have unloaded the correct SMF dataset. Resubmit the job.

| **Destination:** SYSPRINT

| **Modules:** DFHSTIN

| **DFHST0204 S Invalid record id encountered on the statistics data set.**

| **Explanation:** An invalid record identifier *recid* has been encountered in the unloaded SMF data set.

| **System action:** A dump is taken and the job step is terminated.

| **User response:** Check that the unloaded SMF data set contains statistics records. CICS statistics records are of SMF record type 110, sub-type 2. For further information, see the *CICS Data Areas*.

| If the SMF data set does contain statistics records, the most likely cause of the problem is a corrupted SMF dataset. Unload the SMF dataset again and rerun the DFHSTUP utility. If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Destination:** SYSPRINT

| **Modules:** DFHSTUx (modules within DFHSTUP)

| **DFHST0206 S An invalid parameter () has been specified for the DFHSTUP utility.**

| **Explanation:** One or more of the parameters specified in the SYSIN data set were incorrect.

| **System action:** The job step is terminated.

| **User response:** Correct the erroneous parameter as identified in the message and resubmit the job.

| **Destination:** SYSPRINT

| **Modules:** DFHSTUP1

| **DFHST0207 W An incomplete data record has been encountered on the statistics data set.**

| **Explanation:** A record input from the unloaded SMF data set specifies that the data it contains is incomplete.

| **System action:** Processing continues.

| **User response:** For an incomplete data record to have been encountered, there must have been an error in the running of CICS. This should result in an exception trace and perhaps a dump being issued.

| You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Destination:** SYSPRINT

| **Modules:** DFHSTUx (modules within DFHSTUP)

DFHST0208 S An attempt to open the SYSIN data set has failed.

Explanation: DFHSTUP has tried to open the SYSIN data set but has failed.

System action: A dump is taken and the job step is terminated.

User response: Ensure that the JCL for the job is correct. A sample set of JCL to execute the DFHSTUP utility is contained in the *CICS Operations and Utilities Guide*.

If incorrect JCL is not the cause of the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: SYSPRINT

Modules: DFHSTRD

DFHST0209 S A read error on the SYSIN data set has occurred.

Explanation: A read error was encountered on the SYSIN data set.

System action: A dump is taken and the job step is terminated.

User response: Inform the system programmer.

To resolve the problem, collect the dumps and any relevant messages and determine why the read failed. Resubmit the job.

Destination: SYSPRINT

Modules: DFHSTRD

DFHST0210 I No statistics are available for applid *applid*.

Explanation: No statistics data records exist for applid *applid* in the unloaded SMF data set. This is because

- Applid *applid* is unknown, or
- You have unloaded the wrong SMF data set, or
- You have specified a COLLECTION TYPE= parameter for which applid *applid* has no statistics, or
- No CICS statistics records were written for applid *applid*.

System action: The job step continues.

User response: Check that you have specified the correct applid. If necessary, respecify the correct applid. Check that you have unloaded the correct SMF data set. If necessary, unload the correct SMF data set. If you have specified the correct applid and unloaded the correct SMF data set, then there are no statistics data records for applid *applid*.

Destination: SYSPRINT

Modules: DFHSTUP1

DFHST0211 S Processing terminated. Getmain failed with a short on storage condition.

Explanation: The DFHSTUP utility detected an error from a GETMAIN macro while obtaining working storage. This was because DFHSTUP had exhausted the available storage.

System action: A dump is taken and the job step terminates.

User response: Check that you have specified the correct REGION size on the EXEC JCL command used to execute the DFHSTUP utility. A sample set of JCL to execute the DFHSTUP utility is contained in the *CICS Operations and Utilities Guide*.

If you have specified the correct REGION size, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: SYSPRINT

Modules: All DFHSTUP modules

DFHST0212 S Processing terminated. DFSORT message dataset (DD=SYSOUT) is missing.

Explanation: The dataset used by the DFSORT utility to output its messages is missing.

System action: A dump is taken and the job step is terminated.

User response: Check the JCL used to execute the DFHSTUP utility to ensure that the SYSOUT DD was correctly specified. A sample set of JCL to execute the DFHSTUP utility is contained in the *CICS Operations and Utilities Guide*.

If you have specified the correct SYSOUT DD statement, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: SYSPRINT

Modules: DFHSTUP1

DFHST0213 S Processing terminated. Error detected by DFSORT. Check DFSORT messages.

Explanation: An error was detected by the DFSORT utility and the DFHSTUP utility terminated.

System action: A dump is taken and the job step is terminated.

User response: The user must inspect the DFSORT message dataset and search for messages indicating the reason for the failure of the DFSORT utility. A detailed explanation of the messages produced by DFSORT can be found in the *DFSORT Application Programming Guide* (SC33-4035).

| After analyzing the DFSORT error message, take the
| appropriate corrective actions and resubmit the job.

| **Destination:** SYSPRINT

| **Modules:** DFHSTUP1

| **DFHST0214 S Processing terminated. Failure to
| obtain system time and date.**

| **Explanation:** The DFHSTUP utility was unable to
| obtain the system time and date from the CICS kernel.

| **System action:** A dump is taken and the job step is
| terminated.

| **User response:** You need further assistance from IBM
| to resolve this problem. See Part 4 of the *CICS Problem
| Determination Guide* for guidance on how to proceed.

| **Destination:** SYSPRINT

| **Modules:** DFHSTUP1

| **DFHST0216 W An incompatible statistics record
| version number , was detected by
| module .**

| **Explanation:** The statistics utility program has
| detected that a statistics record has a version number
| which is incompatible with the version number
| expected by the DFHSTUP utility.

| **System action:** The statistics record containing the
| invalid version number is ignored. Statistics records
| immediately following which are of the same type and
| which also contain an invalid version number are also
| ignored. Processing continues.

| **User response:** Obtain a dump of the SMF data set.
| You need further assistance from IBM to resolve this
| problem. See Part 4 of the *CICS Problem Determination
| Guide* for guidance on how to proceed.

| **Destination:** SYSPRINT

| **Modules:** All DFHSTUP modules.

| **DFHST0217 S An attempt to open the DFHSTWRK
| data set has failed.**

| **Explanation:** The statistics utility program has
| detected an error while attempting to open the
| DFHSTWRK data set during non-summary statistics
| processing.

| **System action:** The statistics utility program ends
| abnormally.

| **User response:** Ensure that the DFHSTWRK data set
| has been specified on the job, and that the attributes of
| the data set are correct.

| **Destination:** SYSPRINT

| **Modules:** DFHSTU17

| **DFHST0218 S A write error has occurred on the
| DFHSTWRK data set.**

| **Explanation:** The statistics utility program has
| detected an error while attempting to write to the
| DFHSTWRK data set during non-summary statistics
| processing.

| **System action:** The statistics utility program ends
| abnormally.

| **User response:** Ensure that the DFHSTWRK data set
| has been specified on the job, that the attributes of the
| data set are correct, and that the data set is large
| enough.

| **Destination:** SYSPRINT

| **Modules:** DFHSTU17

| **DFHST0219 S A read error has occurred on the
| DFHSTWRK data set.**

| **Explanation:** The statistics utility program has
| detected an error while attempting to read from the
| DFHSTWRK data set during non-summary statistics
| processing.

| **System action:** The statistics utility program ends
| abnormally.

| **User response:** Check that the DFHSTWRK data set
| has been specified on the job, that the attributes of the
| data set are correct, and that the data set is large
| enough.

| **Destination:** SYSPRINT

| **Modules:** DFHSTU17

| **DFHST0220 S An attempt to open the DFHSTWRK
| data set has failed.**

| **Explanation:** The statistics utility program has
| detected an error while attempting to open the
| DFHSTWRK data set while processing summary
| statistics.

| **System action:** The statistics utility program ends
| abnormally.

| **User response:** Check that the DFHSTWRK data set
| has been specified on the job, and that the attributes of
| the data set are correct.

| **Destination:** SYSPRINT

| **Modules:** DFHST17X

| **DFHST0221 S A write error has occurred on the
| DFHSTWRK data set.**

| **Explanation:** The statistics utility program has
| detected an error while attempting to write to the
| DFHSTWRK data set during summary statistics
| processing.

| **System action:** The statistics utility program ends abnormally.
| **User response:** Check that the DFHSTWRK data set has been specified on the job, that the attributes of the data set are correct, and that the data set is large enough.
| **Destination:** SYSPRINT
| **Modules:** DFHST17X

| **DFHST0222 S A read error has occurred on the DFHSTWRK data set.**

| **Explanation:** The statistics utility program has detected an error while attempting to read from the DFHSTWRK data set during summary statistics processing.
| **System action:** The statistics utility program ends abnormally.
| **User response:** Check that the DFHSTWRK data set has been specified on the job, that the attributes of the data set are correct, and that the data set is large enough.
| **Destination:** SYSPRINT
| **Modules:** DFHST17X

| **DFHST0223 I There are no data table statistics to report.**

| **Explanation:** The file subsection of the DFHSTUP report entitled 'Data Table Requests Information' only contains formatted information if the data currently being processed contains statistics records for files accessed as data tables. This message is written to the DFHSTUP report, when the utility program detects that there are no data table statistics in this section of the statistics report.
| **System action:** Processing continues normally.
| **User response:** Take no action unless you expect data table statistics in the DFHSTUP report. In this case, ensure that the data tables feature is in use during the time period covered by the statistics being processed.
| **Destination:** SYSPRINT
| **Modules:** DFHSTU17, DFHST17X

| **DFHST0224 I There are no intrapartition queues to report.**

| **Explanation:** The transient data subsection of the DFHSTUP report entitled 'Transient Data - Intrapartition' contains no data.
| **System action:** Processing continues normally.
| **User response:** Take no action unless you expect TD intrapartition statistics in the DFHSTUP report.

| **Destination:** SYSPRINT
| **Modules:** DFHSTUTQ, DFHSTTQX

| **DFHST0225 I There are no extrapartition queues to report.**

| **Explanation:** The transient data subsection of the DFHSTUP report entitled 'Transient Data - Extrapartition' contains no data.
| **System action:** Processing continues normally.
| **User response:** Take no action unless you expect TD extrapartition statistics in the DFHSTUP report.
| **Destination:** SYSPRINT
| **Modules:** DFHSTUTQ, DFHSTTQX

| **DFHST0226 I There are no indirect queues to report.**

| **Explanation:** The transient data subsection of the DFHSTUP report entitled 'Transient Data - Indirect' contains no data.
| **System action:** Processing continues normally.
| **User response:** Take no action unless you expect TD indirect statistics in the DFHSTUP report.
| **Destination:** SYSPRINT
| **Modules:** DFHSTUTQ, DFHSTTQX

| **DFHST0227 I There are no remote queues to report.**

| **Explanation:** The transient data subsection of the DFHSTUP report entitled 'Transient Data - Remote' contains no data.
| **System action:** Processing continues normally.
| **User response:** Take no action unless you expect TD remote statistics in the DFHSTUP report.
| **Destination:** SYSPRINT
| **Modules:** DFHSTUTQ, DFHSTTQX

| **DFHST0228 S An invalid extract parameter () has been specified for the DFHSTUP utility.**

| **Explanation:** One or more of the parameters on the extract command specified in the SYSIN data set were incorrect.
| **System action:** The job step is terminated.
| **User response:** Correct the erroneous parameter as identified in the message and resubmit the job.
| **Destination:** SYSPRINT
| **Modules:** DFHSTUP1

DFHST0229 W A duplicate extract command has been detected. Command ignored.

Explanation: A duplicate EXTRACT USERPROGRAM command has been detected.

System action: The duplicate command is ignored and the extract exit program specified on the first command is used. Processing continues.

User response: Remove the erroneous command.

Destination: SYSPRINT

Modules: DFHSTUP1

DFHST0230 E Unable to locate the extract library member *member*.

Explanation: The member is not in the libraries named in the JCL.

System action: The utility terminates processing of the command that required access to library member *member*.

User response: Ensure that the member is correctly link-edited into the library and resubmit the job.

Destination: SYSPRINT

Modules: DFHSTUP

DFHST0231 E Unable to load the extract library member *member*.

Explanation: DFHSTUP could not load the extract library member *member*.

System action: The utility terminates processing of the command that required access to the library member.

User response: Ensure that the member is correctly link-edited into the library and resubmit the job.

Destination: SYSPRINT

Modules: DFHSTUP

DFHST0232 S An abend (code *aaa/bbbb*) has occurred in extract exit program *modname*. Extract exit processing has been terminated.

Explanation: During processing of an EXTRACT command, a program check or abend *aaa/bbbb* has occurred in extract exit program *modname*.

The code *aaa/bbbb* is, if applicable, a 3-digit hexadecimal MVS system completion code *aaa* (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The 4-digit code *bbbb*, which follows *aaa* is, if applicable, a user abend code produced by the extract exit program. If the user abend code is not applicable, this field is filled with four hyphens.

System action: The EXTRACT command is terminated.

User response: For a program check, refer to prior messages to resolve the error in the extract exit program. For a user abend code consult the relevant documentation of the user exit program to determine the error.

Destination: SYSPRINT

Modules: DFHSTUP

DFHST0233 I DFHSTUP report suppressed. Report options requested only an EXTRACT userprogram to be invoked.

Explanation: No report was produced by DFHSTUP due to the fact that an EXTRACT exit program was specified and no other report options. DFHSTUP invokes the exit program to process the statistics records and suppresses all its reporting

System action: EXTRACT processing continues.

User response: If a DFHSTUP report is required in addition to the report produced from the specified EXTRACT exit, specify the necessary DFHSTUP reporting options.

Destination: SYSPRINT

Modules: DFHSTUP

DFHST0234 S EXTRACT terminated at user's request RC=*retcode*.

Explanation: A batch job has issued a DFHSTUP utility EXTRACT command. The EXTRACT command has been terminated because of a non-zero value in register 15 on return from an extract user exit program.

System action: Execution of the utility EXTRACT command is terminated.

User response: Determine the cause of the error detected by the user exit program using the return code *retcode* provided and the relevant documentation of the user exit program.

Destination: SYSPRINT

Modules: DFHSTUP

DFHST0235 S An abend (code *aaa/bbbb*) has occurred in program *modname*.

Explanation: During processing of an DFHSTUP command, a program check or abend *aaa/bbbb* has occurred in module *modname*.

The code *aaa/bbbb* is, if applicable, a 3-digit hexadecimal MVS system completion code *aaa* (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The 4-digit code *bbbb*, which follows *aaa* is, if applicable, an Language Environment

| abend code. If the abend code is not applicable, this field is filled with four hyphens.

| **System action:** The DFHSTUP command is terminated.

| **User response:** Look up the MVS code, if there is one, in the *OS/390 MVS System Codes* manual. Look up the Language Environment abend code in the *Language*

| *Environment Debugging and Run-Time Messages* manual.

| You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Modules:** DFHSTUP

DFHSZxxxx (FEPI) messages

DFHSZ4001 I *date time applid* **FEPI initialization has started.**

Explanation: The Front End Programming Interface (FEPI) is being initialized.

This means the CSZI transaction - FEPI - has started its processing. CSZI is started as part of CICS system initialization, if the system initialization parameter FEPI is set to YES.

If you specified FEPI=YES and this message does not appear during CICS initialization, CSZI failed to start; the most common reason for this is that group DFHFEPI is not included in the list specified by the GRPLIST system initialization parameter.

If message DFHSZ4001 is not followed by message DFHSZ4002, FEPI failed to start. In this case, a DFHSZnnnn message is issued to indicate the error.

System action: FEPI initialization proceeds.

User response: None.

Destination: Console and Transient Data Queue CSZL

Modules: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time,applid*

DFHSZ4002 I *date time applid* **FEPI initialization has ended.**

Explanation: The Front End Programming Interface (FEPI) has finished initialization.

System action: EXEC CICS FEPI commands are made available.

User response: None.

Destination: Console and Transient Data Queue CSZL

Modules: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time,applid*

DFHSZ4003 I *date time applid* **FEPI termination complete.**

Explanation: The Front End Programming Interface (FEPI) has ended.

A DFHSZnnnn message may precede message DFHSZ4003 to indicate what caused FEPI to terminate.

System action: EXEC CICS FEPI commands are made unavailable.

User response: Resolve the problem indicated by the messages, then restart CICS.

Destination: Console and Transient Data Queue CSZL

Modules: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time,applid*

DFHSZ4004 E *date time applid* **FEPI cannot be started: FEPI=YES not specified in the SIT.**

Explanation: The Front End Programming Interface (FEPI) cannot be started because the FEPI system initialization parameter was set to NO indicating that FEPI is not required.

This message usually means that you attempted to start the FEPI transaction (CSZI) manually, but did not set up the correct environment for it to run.

System action: The FEPI transaction is not run.

User response: If you require FEPI in the CICS system, restart CICS specifying the system initialization parameter FEPI=YES. You do not need to start the FEPI transaction manually.

Destination: Console and Transient Data Queue CSZL

Modules: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time,applid*

DFHSZ4005 E *date time applid* **FEPI cannot be started: FEPI is already active, in state X'sssssss'.**

Explanation: The Front End Programming Interface (FEPI) cannot be started because FEPI is already active in the system.

This message usually means that you attempted to start a new instance of FEPI manually by running the FEPI transaction (CSZI), but the previous instance of FEPI failed in some way that caused an 'active' indication to be left in error.

The possible FEPI states (X'sssssss') are:

State **Meaning**

X'0000002'

FEPI is being initialized

X'00000003'
FEPI is active

X'00000004'
FEPI is terminating as CICS is undergoing a normal shutdown

X'00000005'
FEPI is terminating as CICS is undergoing an immediate shutdown

X'00000006'
FEPI is terminating as CICS is undergoing an abnormal shutdown

System action: The request to start a new instance of FEPI is rejected.

User response: If the state suggests that a previous instance of FEPI failed, you must restart CICS to resolve the problem. You do not need to start the FEPI transaction manually.

Destination: Console and Transient Data Queue CSZL

Modules: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time, applid, X'sssssss'*

DFHSZ4006 E *date time applid* **FEPI initialization failed: enqueue failure, code X'rr'.**

Explanation: The Front End Programming Interface (FEPI) cannot be initialized because an attempt to enqueue on the FEPI enqueue name SZENQRMI failed, indicating that FEPI is already active in the system. FEPI initialization issues this enqueue to prevent a second instance of FEPI being present in the system.

This message usually means that you attempted to start the FEPI transaction (CSZI) manually, but there is a previous instance of CSZI still running.

The possible values of X'rr', the reason for failure, are:

Code	Meaning
X'31'	Duplicate enqueue on SZENQRMI attempted.
X'32'	Failure during enqueue processing.

System action: The request to start a second instance of FEPI is rejected.

User response: None.

Destination: Console and Transient Data Queue CSZL

Modules: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time, applid, X'rr'*

DFHSZ4007 E *date time applid* **FEPI initialization failed: storage ADD_SUBPOOL failure for subpool pppppppp, reason X'rr' response X'ee'.**

Explanation: The Front End Programming Interface (FEPI) cannot be initialized because creating the named

storage subpool for FEPI use failed.

The values of X'rr', the reason for failure, are:

Reason	Meaning
X'01'	Insufficient storage available for the subpool
X'03'	Subpool requested with an invalid fixed length
X'04'	Subpool requested with an invalid boundary alignment
X'05'	Subpool requested with an invalid initial number of elements
X'06'	Subpool requested with an invalid name
X'08'	Subpool requested already exists
X'11'	Access to the Storage Manager was denied

The values of X'ee', the response to the failed request, are:

Response	Meaning
X'01'	Request completed successfully
X'02'	Exception response generated
X'03'	Disaster response generated
X'04'	Invalid response generated
X'05'	A kernel error was detected
X'06'	The request was purged

System action: FEPI initialization ends, and EXEC CICS FEPI commands are unavailable. An exception trace entry is generated.

User response: The only action you can take is when there is insufficient storage, in which case you can increase the storage available to CICS on restart.

All other errors are system failures, and you should consult the system programmer. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSZL

Modules: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time, applid, pppppppp, X'rr', X'ee'*

DFHSZ4008 E *date time applid* **FEPI initialization failed: Non-runaway task setting failure, reason X'rr' response X'ee'.**

Explanation: The Front End Programming Interface (FEPI) cannot be initialized. Because FEPI is a long-running transaction (CSZI), it must not be subject to a runaway task time out. The request to prevent this failed.

The value of *X'rr'*, the reason for failure, is always *X'00'*.

The values of *X'ee'*, the response to the failed request, are:

Response

Meaning

- X'01'* Request completed successfully
- X'02'* Exception response generated
- X'03'* Disaster response generated
- X'04'* Invalid response generated

System action: FEPI initialization ends, and EXEC CICS FEPI commands are made unavailable. An exception trace entry is generated.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSZL

Modules: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time,applid, X'rr', X'ee'*

DFHSZ4009 E *date time applid* **FEPI initialization failed: change-priority failure, response *X'ee'*.**

Explanation: The Front End Programming Interface (FEPI) cannot be initialized because changing the dispatching priority of the FEPI transaction (CSZI) failed.

Because FEPI runs as a transaction, a high priority is required. The request to set this dispatching priority failed.

The values of *X'ee'*, the response to the failed request, are:

Response

Meaning

- X'01'* Request completed successfully
- X'03'* Disaster response generated
- X'04'* Invalid response generated
- X'05'* A Kernel error was detected

System action: FEPI initialization ends, and EXEC CICS FEPI commands are made unavailable. An exception trace entry is generated.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSZL

Modules: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time,applid, X'ee'*

DFHSZ4010 E *date time applid* **FEPI initialization failed: SZ TCB swap failure, response *X'ee'*.**

Explanation: The Front End Programming Interface (FEPI) usually runs under the CICS SZ TCB. Transferring the FEPI transaction (CSZI) from running under the QR TCB to the SZ TCB failed.

The values of *X'ee'*, the response to the failed request, are:

Response

Meaning

- X'01'* Request completed successfully
- X'02'* Exception response generated
- X'03'* Disaster response generated
- X'04'* Invalid response generated
- X'05'* A kernel error was detected

System action: FEPI initialization ends, and EXEC CICS FEPI commands are made unavailable. An exception trace entry is generated.

User response: The SZ TCB is created as part of the early CICS initialization and you should examine the console log to see if any messages were generated indicating a TCB creation failure.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSZL

Modules: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time,applid, X'ee'*

DFHSZ4011 E *date time applid* **FEPI storage GETMAIN failed in subpool NB, reason *X'rr'* response *X'ee'*.**

Explanation: The Front End Programming Interface (FEPI) issued a GETMAIN storage request in the SZSPFCNB storage subpool for NIB usage which failed.

The values of *X'rr'*, the reason for failure, are:

Reason Meaning

- X'01'* Insufficient storage for the request
- X'02'* Invalid subpool token given
- X'04'* Invalid length of element requested
- X'05'* Length of element not specified
- X'08'* Access was denied to the storage subpool
- X'11'* Invalid initial image supplied
- X'12'* An abnormal end occurred in the storage manager

X'13' A loop was detected in the storage manager

The values of X'ee', the response to the failed request, are:

Response

Meaning

X'01' Request completed successfully.

X'02' Exception response generated.

X'03' Disaster response generated.

X'04' Invalid response generated.

X'05' A Kernel error was detected.

X'06' The request was purged.

All these responses indicate that a system error has occurred.

System action: An exception trace entry is generated.

FEPI tries to recover from this error by retrying the request. However, no action is taken to prevent multiple occurrences.

User response: If this message occurs frequently, you should take a dump of the CICS system before restarting it. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSZL

Modules: DFHSZRMP(DFHSZZNG)

XMEOUT Parameters: *date, time,applid, X'rr', X'ee'*

DFHSZ4012 E *date time applid* FEPI storage
GETMAIN failed in subpool DA, reason
X'rr' response X'ee'.

Explanation: The Front End Programming Interface (FEPI) issued a GETMAIN storage request in the SZSPVCDA storage subpool for general usage which failed.

The values of X'rr', the reason for failure, are:

Reason Meaning

X'01' Insufficient storage for the request.

X'02' Invalid subpool token given.

X'04' Invalid length of element requested.

X'05' Length of element not specified.

X'08' Access was denied to the storage subpool.

X'11' Invalid initial image supplied.

X'12' An abnormal end occurred in the storage manager.

X'13' A loop was detected in the storage manager.

The values of X'ee', the response to the failed request, are:

Response

Meaning

X'01' Request completed successfully.

X'02' Exception response generated.

X'03' Disaster response generated.

X'04' Invalid response generated.

X'05' A kernel error was detected.

X'06' The request was purged.

All of these responses indicate that a system error occurred.

System action: An exception trace entry is generated.

FEPI tries to recover from this error by retrying the request. However, no action is taken to prevent multiple occurrences.

User response: If this message occurs frequently, you should take a dump of the CICS system before restarting it.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSZL

Modules: DFHSZRMP(DFHSZZAG)

XMEOUT Parameters: *date, time,applid, X'rr', X'ee'*

DFHSZ4013 E *date time applid* FEPI storage
GETMAIN failed in subpool RP, reason
X'rr' response X'ee'.

Explanation: The Front End Programming Interface (FEPI) issued a GETMAIN storage request in the SZSPPCRCP storage subpool for RPL usage. The request failed.

The values of X'rr', the reason for failure, are:

Reason Meaning

X'01' Insufficient storage for the request.

X'02' Invalid subpool token given.

X'04' Invalid length of element requested.

X'05' Length of element not specified.

X'08' Access was denied to the storage subpool.

X'11' Invalid initial image supplied.

X'12' An abnormal end occurred in the storage manager.

X'13' A loop was detected in the storage manager.

The values of *X'ee'*, the response to the failed request, are:

Response	Meaning
X'01'	Request completed successfully.
X'02'	Exception response generated.
X'03'	Disaster response generated.
X'04'	Invalid response generated.
X'05'	A kernel error was detected.
X'06'	The request was purged.

All of these responses indicate that a system error occurred.

System action: An exception trace entry is generated.

FEPI tries to recover from this error by retrying the request. However, no action is taken to prevent multiple occurrences.

User response: If this message occurs frequently, you should take a dump of the CICS system before restarting it.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSZL

Modules: DFHSZRMP(DFHSZZRG)

XMEOUT Parameters: *date, time, applid, X'rr', X'ee'*

DFHSZ4014 E *date time applid* **FEPI storage FREEMAIN failed in subpool DA|NB|RP, reason X'rr' response X'ee'.**

Explanation: The Front End Programming Interface (FEPI) issued a FREEMAIN storage request in an SZSPxxxx storage subpool. The request failed.

The values of *X'rr'*, the reason for failure, are:

Reason	Meaning
X'02'	Invalid subpool token given.
X'03'	The address of the element to be freed is invalid.
X'06'	Invalid length of element specified.
X'07'	Length of element not specified.
X'08'	Access was denied to the storage subpool.
X'10'	The specified storage subpool was empty.
X'12'	An abnormal end occurred in the storage manager.
X'13'	A loop was detected in the storage manager.

The values of *X'ee'*, the response to the failed request, are:

Response	Meaning
X'01'	Request completed successfully.
X'02'	Exception response generated.
X'03'	Disaster response generated.
X'04'	Invalid response generated.
X'05'	A kernel error was detected.
X'06'	The request was purged.

All of these responses indicate that a system error occurred.

System action: The request is rejected, and a retry is not attempted (perhaps leaving storage that is never subsequently accessible). An exception trace entry is generated.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSZL

Modules: DFHSZRMP(DFHSZZFR)

XMEOUT Parameters: *date, time, applid, X'rr', X'ee'*

DFHSZ4015 I *date time applid* **FEPI {normal | immediate | forced} termination has started.**

Explanation: The Front End Programming Interface (FEPI) has acknowledged a shutdown request and is starting to terminate.

Message DFHSZ4003 is issued when FEPI completes termination.

FEPI terminates only in response to a CICS shutdown request (such as CEMT PERFORM SHUTDOWN). Some types of CICS shutdown can result in more than one DFHSZ4015 message being issued.

System action: Certain EXEC CICS FEPI commands are made unavailable during FEPI termination.

Normal termination allows all transactions using FEPI resources to end before FEPI itself ends. However, no new usage of FEPI resources is permitted.

Immediate termination stops usage of FEPI facilities immediately but does a controlled shutdown of communication functions.

Forced termination stops usage of FEPI facilities immediately, and does the quickest possible shutdown of communication functions (which may lead to many VTAM messages being issued).

User response: None.

Destination: Console and Transient Data Queue CSZL

Modules: DFHSZRMP(DFHSZRDP)

XMEOUT Parameters: *date, time,applid, {1=normal, 2=immediate, 3=forced}*

DFHSZ4099 E *date time applid* **FEPI ended abnormally.**

Explanation: The Front End Programming Interface (FEPI) has ended abnormally.

System action: A system dump is taken. All EXEC CICS FEPI commands are made unavailable.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue CSZL

Modules: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time,applid*

DFHSZ4101 I *date time applid* **FEPI node** *nnnnnnnn*
installed, for transaction *xxxx*.

Explanation: The Front End Programming Interface (FEPI) has successfully installed the named node.

System action: Processing continues.

User response: None.

Destination: CSZL

Modules: DFHSZRMP(DFHSZRII)

XMEOUT Parameters: *date, time,applid, nnnnnnnn, xxxx*

DFHSZ4102 W *date time applid* **FEPI node** *nnnnnnnn*
installation failed, code *rrr*, **for**
transaction *xxxx*.

Explanation: The Front End Programming Interface (FEPI) cannot install the named node. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI INSTALL NODE command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Destination: CSZL

Modules: DFHSZRMP(DFHSZRII)

XMEOUT Parameters: *date, time,applid, nnnnnnnn, rrr, xxxx*

DFHSZ4103 I *date time applid* **FEPI node** *nnnnnnnn*
discarded, for transaction *xxxx*.

Explanation: The Front End Programming Interface (FEPI) has successfully discarded the named node.

System action: Processing continues.

User response: None.

Destination: CSZL

Modules: DFHSZRMP(DFHSZRDN)

XMEOUT Parameters: *date, time,applid, nnnnnnnn, xxxx*

DFHSZ4104 I *date time applid* **FEPI node** *nnnnnnnn*
discard scheduled, for transaction *xxxx*.

Explanation: The Front End Programming Interface (FEPI) has scheduled the discard operation for the named node.

System action: Processing continues. The node is discarded when it becomes inactive.

User response: None.

Destination: CSZL

Modules: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time,applid, nnnnnnnn, xxxx*

DFHSZ4105 W *date time applid* **FEPI node** *nnnnnnnn*
discard failed, code *rrr*, **for transaction**
xxxx.

Explanation: The Front End Programming Interface (FEPI) cannot discard the named node. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI DISCARD NODE command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Destination: CSZL

Modules: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time,applid, nnnnnnnn, rrr, xxxx*

DFHSZ4106 I *date time applid* **FEPI pool** *pppppppp*
(with property set *yyyyyyyy***) installed,**
for transaction *xxxx*.

Explanation: The Front End Programming Interface (FEPI) has successfully installed the named pool which has the characteristics of the named property set.

System action: Processing continues.

User response: None.

Destination: CSZL

Modules: DFHSZRMP(DFHSZRII)

XMEOUT Parameters: *date, time,applid, pppppppp, yyyyyyyy, xxxx*

DFHSZ4107 W *date time applid* **FEPI pool** *pppppppp*
(with property set *yyyyyyyy***) installation**
failed, code *rrr*, **for transaction** *xxxx*.

Explanation: The Front End Programming Interface

(FEPI) cannot install the named pool, which has the characteristics of the named property set. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI INSTALL POOL command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Destination: CSZL

Modules: DFHSZRMP(DFHSZRII)

XMEOUT Parameters: *date, time,applid, pppppppp, yyyyyyyy, rrr, xxxx*

DFHSZ4108 I *date time applid FEPI pool pppppppp discarded, for transaction xxxx.*

XMEOUT Parameters: *date, time,applid, nnnnnnnn,*
pppppppp, xxxx

DFHSZ4121 W *date time applid FEPI node nnnnnnnn*
not added to pool pppppppp, code rrr, for
transaction xxxx.

Explanation: The Front End Programming Interface (FEPI) cannot add the named node to the named pool. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI ADD POOL command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Destination: CSZL

Modules: DFHSZRMP(DFHSZRII)

XMEOUT Parameters: *date, time,applid, nnnnnnnn,*
pppppppp, rrr, xxxx

DFHSZ4122 I *date time applid FEPI node nnnnnnnnnn deleted from pool ppppppppp, for transaction xxxx.*

Explanation: The Front End Programming Interface (FEPI) has successfully deleted the named node from the named pool.

System action: Processing continues.

User response: None.

Destination: CSZL

Modules: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time,applid, nnnnnnnnn, ppppppppp, xxxx*

DFHSZ4123 W *date time applid FEPI node nnnnnnnnnn not deleted from pool ppppppppp, code rrr, for transaction xxxx.*

Explanation: The Front End Programming Interface (FEPI) cannot delete the named node from the named pool. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI DELETE POOL command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Destination: CSZL

Modules: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time,applid, nnnnnnnnn, ppppppppp, rrr, xxxx*

DFHSZ4124 I *date time applid FEPI target tttttttt added to pool ppppppppp, for transaction xxxx.*

Explanation: The Front End Programming Interface (FEPI) has successfully added the named target to the named pool.

System action: Processing continues.

User response: None.

Destination: CSZL

Modules: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time,applid, tttttttt, ppppppppp, xxxx*

DFHSZ4125 W *date time applid FEPI target tttttttt not added to pool ppppppppp, code rrr, for transaction xxxx.*

Explanation: The Front End Programming Interface (FEPI) cannot add the named target to the named pool. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI ADD POOL command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Destination: CSZL

Modules: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time,applid, tttttttt, ppppppppp, rrr, xxxx*

DFHSZ4126 I *date time applid FEPI target tttttttt deleted from pool ppppppppp, for transaction xxxx.*

Explanation: The Front End Programming Interface (FEPI) has successfully deleted the named target from the named pool.

System action: Processing continues.

User response: None.

Destination: CSZL

Modules: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time,applid, tttttttt, ppppppppp, xxxx*

DFHSZ4127 W *date time applid FEPI target tttttttt not deleted from pool ppppppppp, code rrr, for transaction xxxx.*

Explanation: The Front End Programming Interface (FEPI) cannot delete the named target from the named pool. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI DELETE POOL command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Destination: CSZL

Modules: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time,applid, tttttttt, ppppppppp, rrr, xxxx*

DFHSZ4128 W *date time applid FEPI delete from pool ppppppppp failed, code rrr, for transaction xxxx.*

Explanation: The Front End Programming Interface (FEPI) cannot do a delete operation on the named pool. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI DELETE POOL command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Destination: CSZL

Modules: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time,applid, pppppppp, rrr, xxxx*

DFHSZ4151 I *date time applid* **Unsolicited data received for FEPI pool *pppppppp* target *ttttttt* node *nnnnnnnn*. Transaction *xxxx* started.**

Explanation: The Front End Programming Interface (FEPI) received some unsolicited data for the named pool-target-node connection, and started the named transaction to process this data.

System action: Processing continues.

User response: None.

Destination: CSZL

Modules: DFHSZRMP(DFHSZBUN)

XMEOUT Parameters: *date, time,applid, pppppppp, ttttttt, nnnnnnnn, xxxx*

DFHSZ4152 I *date time applid* **Begin-session processing required for FEPI pool *pppppppp* target *ttttttt* node *nnnnnnnn*. Transaction *xxxx* started.**

Explanation: The Front End Programming Interface (FEPI) invoked begin-session processing for the named pool-target-node connection, by starting the named transaction.

System action: Processing continues.

User response: None.

Destination: CSZL

Modules: DFHSZRMP(DFHSZBSI)

XMEOUT Parameters: *date, time,applid, pppppppp, ttttttt, nnnnnnnn, xxxx*

DFHSZ4153 I *date time applid* **STSN processing required for FEPI pool *pppppppp* target *ttttttt* node *nnnnnnnn*. Transaction *xxxx* started.**

Explanation: The Front End Programming Interface (FEPI) invoked STSN processing for the named pool-target-node connection, by starting the named transaction.

System action: Processing continues.

User response: None.

Destination: CSZL

Modules: DFHSZRMP(DFHSZBST)

XMEOUT Parameters: *date, time,applid, pppppppp, ttttttt, nnnnnnnn, xxxx*

DFHSZ4154 W *date time applid* **FEPI session setup in pool *pppppppp* to target *ttttttt* and node *nnnnnnnn* failed with a reason code of *X'rrrrrrrr'*. Setup will be retried later.**

Explanation: The Front End Programming Interface (FEPI) has detected an error during session setup for the named pool-target-node connection. Refer to *VTAM Messages and Codes* or to *SNA Formats* for a description of the reason code (error code or sense code) that describes this error.

System action: Processing continues; the session setup is tried again after a short interval, using a different node if one is available.

User response: None.

Destination: CSZL

Modules: DFHSZRMP(DFHSZBLO)

XMEOUT Parameters: *date, time,applid, pppppppp, ttttttt, nnnnnnnn, X'rrrrrrrr'*

DFHSZ4155 W *date time applid* **FEPI session in pool *pppppppp* to target *ttttttt* and node *nnnnnnnn* ended with a reason code of *X'rrrrrrrr'*.**

Explanation: The Front End Programming Interface (FEPI) has detected this VTAM event for the named pool-target-node connection. Refer to *VTAM Messages and Codes* or to *SNA Formats* for a description of the reason code (error code or sense code) that describes this event.

System action: Processing continues.

User response: None. This message can have a reason code of zero. If a message with a reason code of zero is not wanted, we recommend the use of the XMEOUT global user exit to suppress it.

Destination: CSZL

Modules: DFHSZRMP(DFHSZBLO)

XMEOUT Parameters: *date, time,applid, pppppppp, ttttttt, nnnnnnnn, X'rrrrrrrr'*

DFHSZ4156 I *date time applid* **End-session processing required for FEPI pool *pppppppp* target *ttttttt* node *nnnnnnnn*. Transaction *xxxx* started.**

Explanation: The Front End Programming Interface (FEPI) invoked end-session processing for the named pool-target-node connection, by starting the named transaction.

System action: Processing continues.

User response: None.

Destination: CSZL

Modules: DFHSZRMP(DFHSZBFT)

XMEOUT Parameters: *date, time,applid, pppppppp, ttttttt, nnnnnnnn, xxxxx*

DFHSZ4157 W *date time applid* **FEPI session setup in pool pppppppp to target ttttttt and node nnnnnnnn failed with a reason code of X'rrrrrrrr'. Setup will not be retried.**

Explanation: The Front End Programming Interface (FEPI) has detected an error during session setup for the named pool-target-node connection. Refer to *VTAM Messages and Codes* or to *SNA Formats* for a description of the reason code (error code or sense code) that describes this error. Setting up a session for this connection has failed several times.

System action: Processing continues; the session setup for this connection is not tried again.

User response: None; operator intervention may be needed to make the connection available.

Destination: CSZL

Modules: DFHSZRMP(DFHSZBLO)

XMEOUT Parameters: *date, time,applid, pppppppp, ttttttt, nnnnnnnn, X'rrrrrrrr'*

DFHSZ4158 W *date time applid* **The VTAM OPEN request for FEPI node nnnnnnnn failed with a reason code of X'rrrrrrrr'. This operation will be retried.**

Explanation: The Front End Programming Interface (FEPI) has detected an error during VTAM OPEN processing for the named node.

The possible values of X'rrrrrrrr', the reason for failure, are:

Code **Meaning**

X'00000000'
VTAM TPEND occurred with error code 0.

X'00000004'
VTAM TPEND occurred with error code 4.

X'00000008'
VTAM TPEND occurred with error code 8.

X'0000000C'
VTAM SETLOGON failed.

other values
VTAM OPEN failed with error code given.

Refer to *VTAM Programming* for a description of these error codes.

System action: Processing continues; the VTAM OPEN for the node is repeated after a short interval.

User response: None.

Destination: CSZL

Modules: DFHSZRMP(DFHSZRIO)

XMEOUT Parameters: *date, time,applid, nnnnnnnn, X'rrrrrrrr'*

DFHSZ4159 W *date time applid* **The VTAM OPEN request for FEPI node nnnnnnnn failed with a reason code of X'rrrrrrrr'. This operation will not be retried.**

Explanation: The Front End Programming Interface (FEPI) has detected an error during VTAM OPEN processing for the named node. The reason code is the error code returned by the VTAM OPEN operation. Refer to *VTAM Programming* for a description of these error codes.

System action: Processing continues; the VTAM OPEN for the node is not repeated.

User response: None; operator intervention may be needed to make the node available.

Destination: CSZL

Modules: DFHSZRMP(DFHSZRIO)

XMEOUT Parameters: *date, time,applid, nnnnnnnn, X'rrrrrrrr'*

DFHSZ4201 I *date time applid* **FEPI node nnnnnnnn now has status {INSERVICE | OUTSERVICE | GOINGOUT}, {ACQUIRED | RELEASED | ACQUIRING | RELEASING}.**

Explanation: The status of a Front End Programming Interface (FEPI) node has been changed by an EXEC CICS FEPI SET NODE or a CEMT SET FENODE command, and is now as described.

System action: Processing continues.

User response: None

Destination: CSZL

Modules: DFHSZRMP(DFHSZRIO)

XMEOUT Parameters: *date, time,applid, nnnnnnnn, {1=INSERVICE, 2=OUTSERVICE, 3=GOINGOUT}, {4=ACQUIRED, 5=RELEASED, 6=ACQUIRING, 7=RELEASING}*

DFHSZ4202 I *date time applid* **FEPI pool pppppppp now has status {INSERVICE | OUTSERVICE | GOINGOUT}.**

Explanation: The status of a Front End Programming Interface (FEPI) pool has been changed by an EXEC CICS FEPI SET POOL or a CEMT SET FEPOOL command, and is now as described.

System action: Processing continues.

User response: None

Destination: CSZL

Modules: DFHSZRMP(DFHSZRIW)

XMEOUT Parameters: *date, time,applid, pppppppp,*
{1=INSERVICE, 2=OUTSERVICE, 3=GOINGOUT}

DFHSZ4203 I *date time applid FEPI target ttttttt now*
has status {INSERVICE | OUTSERVICE |
GOINGOUT}.

Explanation: The status of a Front End Programming

DFHTCxxxx messages

DFHTC1001 *applid* **Terminal control initialization**
failed (*modname*).

Explanation: The CICS terminal control restart task could not complete because a necessary step failed. The task has done some essential recovery operations and has abnormally terminated itself with code ATC1.

System action: CICS writes a transaction dump for the terminal control restart task. CICS sends two messages to the console, one to identify the error detected by the terminal control restart task, and one, DFHTC1001, to say that the task has failed. A third message follows, either to say that CICS has terminated abnormally with a dump or to ask you to reply GO or CANCEL. Depending on the nature of the original error, you may see messages from some other system component (for example, an access method).

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: First, if CICS has requested a response, you must reply. If you reply 'GO', CICS continues processing, but without terminal control. If you reply 'CANCEL', CICS terminates abnormally with a dump. Use the messages and dumps to find out the cause of the failure. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSII1, DFHTCRP

XMEOUT Parameters: *applid, modname*

DFHTC1002 *applid* **Unable to link to program**
DFHTCRP.

Explanation: The CICS terminal control recovery program, DFHTCRP, is unavailable. CICS cannot find DFHTCRP in any data set concatenated in the DFHRPL DD statement in the CICS startup job stream.

System action: CICS terminates abnormally with a dump.

User response: To correct this error, place DFHTCRP

Interface (FEPI) target has been changed by an EXEC CICS FEPI SET TARGET or a CEMT SET FETARGET command, and is now as described.

System action: Processing continues.

User response: None

Destination: CSZL

Modules: DFHSZRMP(DFHSZRIW)

XMEOUT Parameters: *date, time,applid, ttttttt,*
{1=INSERVICE, 2=OUTSERVICE, 3=GOINGOUT}

in a partitioned data set in the DFHRPL DD statement.

Destination: Console

Modules: DFHSII1

XMEOUT Parameter: *applid*

DFHTC1004 *applid* **Program DFHTORP cannot be**
found. Typeterms cannot be initialized

Explanation: The CICS terminal object resolution program, DFHTORP, is not available. CICS cannot find DFHTORP in any data set concatenated in the DFHRPL DD statement in the CICS startup job stream.

System action: CICS terminates abnormally with a dump.

User response: To correct this error, place DFHTORP in a partitioned data set in the DFHRPL DD statement.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameter: *applid*

DFHTC1011 *applid* **Unable to load xxxxxx During a**
CICS cold or initial start, CICS could
not PC LOAD the CICS module,
DFHxxxxxx, probably because it is
missing from the library.

System action: CICS initialization continues, but, even if it completes, VTAM resource initialization will be incorrect in some respect, depending on the function of module DFHxxxxxx.

User response: If CICS completes initialization, processing of VTAM resources will be invalid. You should cancel CICS, make module DFHxxxxxx available and then restart CICS.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameters: *applid, xxxxxx*

DFHTC1012 *applid* **Failure in installing VTAM resources**

Explanation: During a cold or initial start, CICS could not install all the VTAM resources defined by TCT macros. CICS has issued other message(s) identifying which resources could not be installed.

System action: CICS initialization continues.

User response: If any of the uninstalled resources is essential, use RDO to make it available, or cancel CICS. The most likely reasons for this message are:

- The output of the DFHTCT assembly was corrupted, or
- A previous CICS message such as DFHTC1011, or
- CICS code contains a logic error.

If you suspect an error in CICS, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameter: *applid*

DFHTC1013 *applid* **Restore failed for xxxxxx**

Explanation: During a warm or emergency restart, CICS could not restore the resource xxxxxx.

System action: CICS continues initialization.

User response: If resource xxxxxx is essential to your system, cancel CICS. This problem is probably caused by a CICS logic error. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameters: *applid, xxxxxx*

DFHTC1014 *date time applid* **Communication resource definition for (*resname*) was not restored from the catalog because the resource definition for (*highname*) was not installed.**

Explanation: During an emergency restart, CICS could not restore the resource *resname* from the catalog, because the definition for another resource *highname* that it depends on is not present. Usually *resname* is a session or modegroup and *highname* is a connection.

System action: CICS continues restart, and deletes this resource from the CICS catalog. If the definition referred to was being installed when the previous CICS failed, both definitions are restored from the system log later in the restart.

User response: If resource *resname* is essential to your

system and is not restored later in initialization you can reinstall the resource having first installed the resource that it depends on. This message can be caused by:

- An install which was not complete when CICS failed, in which case it is forward recovered from the system log later, and no action is needed.
- A failure during warm shutdown in the previous run. In this case messages are produced for connections that were autoinstalled and were not uncataloged by the warm shutdown. In this case some auto-installed connections which would have been removed from the catalog if the warm shutdown had completed are recovered, but those which cause these messages are not.
- A corrupted CICS catalog. If large numbers of unrelated resources are missing, and the preceding CICS run was not warm keypointing at the time of failure, the catalog may have been corrupted. CICS continues, but you may want to initial start in order to get your definitions to a known state.
- A CICS logic error. In this case you need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Modules: DFHTCRP

XMEOUT Parameters: *date, time, applid, resname, highname*

DFHTC1015 *applid* **TCT load module contains obsolete entries**

Explanation: During CICS initialization, the TCT load module DFHTCTxx (*xx* being the suffix) was found to contain entries not generated by the assembly macros for this release of CICS. This table cannot be used.

System action: The bring-up is abandoned.

User response: Either the incorrect TCT suffix was specified or implied, or the TCT has been assembled against the wrong level of CICS macros. Retry the bring-up, specifying a different suffix, or using a TCT assembled against the correct macros, as appropriate.

Destination: Console

Modules: DFHAPSIP

XMEOUT Parameter: *applid*

DFHTC1022 *applid* **Error for XRF tracking record - Type: *type* - Key: *key***

Explanation: An error during XRF tracking prevented a change to a resource from being tracked. The resource is of type *type* and is associated with key *key*.

type is the tracking record type. This is one of the following:

TCT CONTENTS

key is the location of an object in the TCTTE hierarchy.

System action: The associated resource is in an incorrect state, missing, or not deleted at the end of takeover.

User response: Decide whether the named resource is critical and see if you can resolve the problem.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameters: *applid, type, key*

DFHTC1023 *applid* Logic error in tracking condition

Explanation: During XRF tracking, a condition was detected which is not possible within the intended design. The insert indicates which of the checked conditions has been detected:

1. No broadcast message accepted outside tracking. The GETMSG routine in DFHTCRP should only accept broadcast messages and those whose id matches that in field GETMSPEC. This field should only be set during tracking.
2. Broadcast message with null key. A null-key record indicates that the catch-up stream that it arrives in is complete. This can only happen to the broadcast tracking stream if the active has just done a normal (warm) shut-down.

System action: The message in question is ignored

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameters: *applid, condition*

DFHTC1024I *applid* XRF takeover while catching up.

Explanation: The alternate CICS that issued this message has only just started. Apparently the active CICS failed before the alternate could obtain all the information about TCT resources in the active. Please refer to messages DFHTC1034-DFHTC1036 for details of the types of information which may be missing or may be incomplete.

System action: Takeover continues.

User response: Watch for further messages.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameter: *applid*

DFHTC1034I *applid* TCT contents incomplete. Will read catalog.

Explanation: DFHTC1024 provides background information for this message. Apparently, the active CICS failed before the alternate CICS could obtain the definitions for all the trackable resources in the active's TCT. Definitions may be missing at this point. However, the CICS catalog in the active may contain a more complete set of definitions in the restart data set. These will now be read as for a warm or emergency restart.

System action: Takeover continues.

User response: Look out for any errors while reading the CICS catalog.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameter: *applid*

DFHTC1035E *applid* Session states may be incorrect

Explanation: DFHTC1024 provides background information for this message. Apparently, the active CICS failed before the alternate CICS could obtain the session-state for all the trackable resources in the active's TCT. States may be incorrect at this point.

System action: Takeover continues.

User response: Be prepared for some logical units (LUs) that were ACQUIRED in the old active not to be after the takeover.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameter: *applid*

DFHTC1036I *applid* Unimplemented tracking-type incomplete: *xxxx*

Explanation: DFHTC1024 provides background information for this message. Apparently, the active CICS failed before the alternate CICS had been sent all the information regarding a type of resource which has not been implemented. This does not have any serious consequences as the information would have been thrown away. However, it does indicate a level of incompatibility between the old active system and this system.

System action: Takeover continues.

User response: Decide whether the implied level incompatibility exists and is expected. DFHTCRP

XMEOUT Parameters: *applid, xxxx*

DFHTC1040I *applid nnnn* Terminal control tracking records received.

Explanation: An alternate is standing by and has received *nnnn* terminal control tracking messages from the active.

System action: Tracking continues.

User response: None.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameters: *applid, nnnn*

DFHTC1041I *applid* Terminal control tracking started.

Explanation: An alternate is initializing, and is now about to start accepting messages from the active. Message DFHTC1044 should appear shortly.

System action: Initialization continues.

User response: None.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameter: *applid*

DFHTC1042I *applid* Waiting for terminal control tracking to drain.

Explanation: An alternate is taking over and is processing the remaining few tracking records from the active. This message is issued every 15 seconds while the takeover is held up for processing to complete. This is potentially an error, especially if it is repeated an unusual number of times. The likely causes include a delay in STANDBY BIND or UNBIND processing in VTAM, or a CICS logic error. The system issues this message twice and then flushes the outstanding tracking activity as described in message DFHTC1046.

User response: Look for message DFHTC1046.

Destination: Console

Modules: DFHZXQO

XMEOUT Parameter: *applid*

DFHTC1043I *applid* Terminal control tracking ended - *nnn* records received.

Explanation: An XRF alternate system is taking over. The last of the terminal control tracking records from the failing active system has been received and is being processed.

System action: Takeover continues.

User response: None.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameters: *applid, nnn*

DFHTC1044I *applid* Terminal control catch-up started.

Explanation: An XRF alternate system is preparing to standby and has received the first message from the active containing information about terminal control resources installed and/or bound before this alternate was started.

System action: Initialization continues.

User response: None.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameter: *applid*

DFHTC1045I *applid* Terminal control catch-up complete.

Explanation: An XRF alternate system is standing by, and has now received all the terminal control information it needs about terminal control resources installed and/or bound in the active before this alternate was started.

System action: Normal tracking continues.

User response: None.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameter: *applid*

DFHTC1046I *applid* Flushing terminal control tracking.

Explanation: An alternate is taking over and is processing the remaining few tracking records from the active. Message DFHTC1042 has been issued twice. DFHZXQO is now doing a controlled flush of the outstanding activity.

System action: CICS posts one outstanding action every 2 seconds in an attempt to free the hold-up. A system dump is taken for the first action only.

User response: This processing only occurs when an error or unforeseen circumstance arises. If the problem can be reproduced, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHZXQO

XMEOUT Parameter: *applid*

DFHTC10471 *applid* **Higher node missing. Record dropped for key**

Explanation: An XRF alternate has received a tracking message from the active CICS, but either the associated system entry for this terminal is not present, or the ordering of terminal catalog records on the restart data set is incorrect (in that the terminal in error comes before the associated system entry).

key is the location of an object in the TCTTE hierarchy. This situation occurs if the active CICS was unable to send all of its tracking messages. This sometimes results in the system entry not being sent.

System action: The tracking message is discarded and so the associated action (an INSTALL or LOGON) is not performed.

User response: Ensure the CAVM message data set is large enough and restart the alternate. Check that the active CICS job is referring to the correct restart data set.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameters: *applid, key*

DFHTC1060 *applid* **Insufficient storage - code('code') in module DFHTCRP.**

Explanation: A request for storage could not be satisfied in module DFHTCRP. The specific error is identified by the 'code' in the message. This implies that the dynamic storage area (DSA) size is too small. The 'code' identifies an exception trace record.

System action: Terminal control initialization is terminated with a system dump and message DFHTC1001 is issued.

User response: Since sufficient storage should be obtainable from within the minimum size DSA, this may imply a logic error within CICS. Try to increase the CDSASZE parameter in the system initialization table (SIT). You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameters: *applid, 'code'*

DFHTC1575 *applid* **No TCT entry for termid**

Explanation: This message is issued when system initialization reads a warm start record for which there is no matching terminal control table (TCT) entry. *termid* is the TCT name that is missing.

System action: The record is ignored.

User response: If TCT *termid* is required, system

initialization should be canceled. Ensure that a matching TCT entry for terminal *termid* exists and retry.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameters: *applid, termid*

DFHTC1600 *applid* **The value for SYSIDNT, *sysid1*, does not match the one specified in the last cold or initial start, *sysid2*. CICS normal operation may be affected.**

Explanation: SYSIDNT has been specified in the SIT or as a system initialization parameter override on a warm or emergency start of CICS. The value of SYSIDNT does not match that specified on the last cold or initial start. SYSIDNT should be updated only on a cold or initial start.

System action: System initialization continues.

User response: For an emergency or warm start of CICS, ensure that SYSIDNT has the same value as in the last cold or initial start. It is recommended that CICS is re-initialized with the appropriate value specified for the SYSIDNT parameter for the correct operation of CICS.

Destination: Console

Modules: DFHTCRP

XMEOUT Parameters: *applid, sysid1, sysid2*

DFHTC2500 *date time applid* {Line | CU | Terminal }out of service {Term | W/Term }termid

Explanation: This message indicates the OUT-OF-SERVICE conditions on completion of error processing in DFHTACP. It is possible that some of these conditions were true before the error was detected.

System action: Other processing continues.

User response: None.

Destination: CSMT

Modules: DFHTACP

XMEOUT Parameters: *date, time, applid, {1=Line, 2=CU, 3=Terminal }, {1=Term, 2=W/Term }, termid*

DFHTC2501 **Msg too long, please resubmit**

Explanation: The terminal operator has keyed in more data than was expected for this READ.

System action: The transaction in progress is terminated.

User response: Reset the terminal and restart the transaction after the message TRANSACTION HAS BEEN ABENDED has been received.

Destination: Terminal End User

Modules: DFHTACP

DFHTC2502 *date time applid TCT search error {on line w/term | at term }termid{, trans | , dest }trandid | destid{, rel line=}rr,time*

Explanation: An invalid terminal address was received on the line identified by terminal *termid*. This error can normally occur only on control unit devices such as a 2980 or a 3270. This is because CICS uses general polling and not all terminals on the control unit may be defined to CICS. All other conditions are undefined. The optional part of the message “*destdestid*” applies only to TCAM. The destination *destid* is given when it does not match any of the network names (netnames) specified on the TCTTE generation.

System action: The control unit is placed out of service or, if it is not a general polled device, the line is placed out of service.

User response: Ensure that all terminals on the failing control unit are defined in the terminal control table (TCT).

Where applicable, ensure that the TCAM MCP terminal generation names match the CICS DFHTCT TYPE=TERMINAL NETNAME parameter.

Destination: CSMT

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term , 2=at term }, termid, {1=, trans ,2=, dest }, trandid | destid, {1=, rel line=}, rr, time*

DFHTC2506 *date time applid Output event rejected return code zz {on line w/term | at term }termid{, trans }trandid{, rel line=}rr,time*

Explanation: An output operation was attempted but was halted by the I/O routines and resulted in the SAM return code *zz*. If an abnormal condition is detected after a READ or WRITE macro, the operation is not started, and control is returned to the user program at the instruction following the READ or WRITE macro.

System action: The line is placed out of service.

User response: Ensure that the system is dumped at shutdown time in order to document the failure. For an explanation of the SAM return codes, *zz*, refer to the *OS/VS SAM* manual, (GC27-6980).

Destination: CSMT

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, zz, {1=on line w/term , 2=at term }, termid, {1=, trans },trandid, {1=, rel line=}, rr, time*

DFHTC2507 *date time applid Input event rejected return code zz {on line w/term | at term }termid{, trans }trandid{, rel line=}rr,time*

Explanation: An input operation was attempted but was halted by the I/O routines, and resulted in the SAM return code *zz*. If an abnormal condition is detected after a READ or WRITE macro instruction, the operation is not started, and control is returned to your program at the instruction following the READ or WRITE macro instruction.

System action: The line is placed out of service.

User response: Ensure the system is dumped at shutdown time in order to document the failure.

Destination: CSMT

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, zz, {1=on line w/term , 2=at term }, termid, {1=, trans },trandid, {1=, rel line=}, rr, time*

DFHTC2511 *date time applid Invalid write request {on line w/term | at term }termid{, trans }trandid{, rel line=}rr,time*

Explanation: This message is issued when one of the following has occurred.

1. A transaction has issued a write to its terminal facility that currently has a terminal status of input.
2. A transaction has issued a write to a 3735 during batch transmission prior to receipt of the end-of-file (EOF) condition.

System action: The write request is not executed, and the transaction terminates abnormally. CICS processing continues.

User response: The user response depends on the condition that has occurred. For condition

1. ensure that transactions do not issue write requests to terminals in input status.
2. ensure that the 3735 batch transaction does not issue its first write request before it has received the EOF condition.

Destination: CSTL

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term , 2=at term }, termid, {1=, trans }, trandid, {1=, rel line=}, rr,time*

DFHTC2513 *date time applid Output length zero {on line w/term | at term }termid{, trans }trandid{, rel line=}rr,time*

Explanation: The data length in TIOATDL was not positive for a write operation.

System action: The transaction is abnormally terminated.

User response: Correct the zero or negative data length specification in the application program.

Destination: CSMT

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term, 2=at term }, termid, {1=, trans }, tranid, {1=, rel line=}, rr,time*

DFHTC2514 *date time applid* **No output area provided** {on line w/term | at term }termid{, trans }tranid{, rel line=}rr,time

Explanation: A write was requested on terminal *termid* by transaction *tranid*. However, the TCTTEDA field was not initialized.

System action: The write request is not executed, and the transaction terminates abnormally. CICS processing continues.

User response: Ensure that transaction *tranid* obtains the required storage and initializes the TCTTEDA field.

Destination: CSTL

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term, 2=at term }, termid, {1=, trans }, tranid, {1=, rel line=}, rr,time*

DFHTC2515 *date time applid* **Output area exceeded** {on line w/term | at term }termid{, trans }tranid{, rel line=}rr,time

Explanation: One of the following has occurred:

- The terminal I/O area (TIOA) is not large enough to contain both the data and carrier control characters.
- The TIOA data length is greater than the TCAM block size specified in the DFHTCT TYPE=SDSCI macro.
- The application requires a TIOA larger than 32767 bytes.

System action: The write request is not executed, the terminal write storage is freed (if possible), and the transaction terminates abnormally. CICS processing continues.

User response: Ensure that application programs do not set the value of TIOATDL greater than the TIOA GETMAIN size, and that the TIOA data length is not greater than the TCAM blocksize. Also ensure that the application program does not require a TIOA larger than 32767 bytes.

Destination: CSTL

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term, 2=at term }, termid, {1=, trans }, tranid, {1=, rel line=}, rr,time*

DFHTC2516 *date time applid* **Unit check SNS=ss** {on line w/term | at term }termid{, trans }tranid{, rel line=}rr,time

Explanation: A unit check error has occurred on the line defined by terminal *termid*. The sense (SNS=ss) is provided. D/T 3275 dialed gives an automatic two-minute time out if there is no activity on the line.

System action: The line is placed out of service on SAM lines.

Intervention on a switched line causes the task to be abnormally terminated and the line to be logically disconnected. Intervention on a non-switched line with a dummy (unidentified) terminal causes the line to be placed out of service. With a real terminal, intervention causes the terminal to be placed out of service and the transaction to be abnormally terminated.

A data check with a dummy terminal causes the line to be placed out of service. With a real terminal, it causes the terminal to be placed out of service and the transaction to be abnormally terminated.

Lost data on a READ,TEXT command causes a MESSAGE TOO LONG response to be sent to the terminal. The transaction is abnormally terminated.

Time-out on a READ,TEXT command causes a MESSAGE TOO LONG response to be sent to the terminal. Time-out with a dummy terminal causes the line to be placed out of service. With a real terminal, it causes the terminal to be placed out of service and the transaction to be abnormally terminated.

User response: Examine the system console log message generated by SAM for this error and have the unit error corrected.

Destination: CSMT

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, ss, {1=on line w/term, 2=at term }, termid, {1=, trans },tranid, {1=, rel line=}, rr, time*

DFHTC2517 *date time applid* **Unit check SNS=ss, S.N.O.** {on line w/term | at term }termid{, trans }tranid{, rel line=}rr,time

Explanation: A unit check error has occurred on the line defined by terminal *termid*. SAM indicates this error as undefined - S.N.O (should not occur). The sense (SNS=ss) is provided.

System action: The line is placed out of service on SAM lines.

Intervention on a switched line causes the task to be abnormally terminated and the line to be logically disconnected. Intervention on a nonswitched line with a dummy (unidentified) terminal causes the terminal to be placed out of service and the transaction (task) to be abnormally terminated. With a real terminal,

intervention causes the terminal to be placed out of service and the transaction to be abnormally terminated.

A data check with a dummy terminal causes the line to be placed out of service. With a real terminal, it causes the terminal to be placed out of service and the transaction to be abnormally terminated.

A time-out on a READ,TEXT command causes a MESSAGE TOO LONG response to be sent to the terminal. Time-out with a dummy terminal causes the line to be placed out of service. With a real terminal, it causes the terminal to be placed out of service and the transaction to be abnormally terminated.

User response: Examine the system console log message generated by SAM for this error and have the unit error corrected.

Destination: CSMT

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, ss, {1=on line w/term, 2=at term }, termid, {1=, trans },trandid, {1=, rel line=}, rr, time*

DFHTC2518 *date time applid* **Unit exception on** *{on line w/term | at term }termid{, trans }trandid{, rel line=}rr,time*

Explanation: A unit exception error occurred on the line defined by terminal *termid*.

System action: With a:

- Switched line, the transaction is abnormally terminated and the line is logically disconnected.
- Dummy terminal, the line is placed out of service.
- Real terminal, the terminal is placed out of service and the transaction is abnormally terminated.

User response: Examine the system console log message generated by SAM for this error and have the unit error corrected.

Destination: CSMT

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term, 2=at term }, termid, {1=, trans }, trandid, {1=, rel line=}, rr,time*

DFHTC2519 *date time applid* **Unit exception S.N.O.** *{on line w/term | at term }termid{, trans }trandid{, rel line=}rr,time*

Explanation: A unit exception error has occurred on the line defined by terminal *termid*. SAM indicates this error as undefined - S.N.O (should not occur).

System action: With a:

- Switched line, the transaction is abnormally terminated and the line is logically disconnected.
- Dummy terminal, the line is placed out of service.

- Real terminal, the terminal is placed out of service and the transaction is abnormally terminated.

User response: Examine the system console log message generated by SAM for this error. Have the unit error corrected.

Destination: CSMT

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term, 2=at term }, termid, {1=, trans }, trandid, {1=, rel line=}, rr,time*

DFHTC2521 *date time applid* **Undetermined unit error** *{on line w/term | at term }termid{, trans }trandid{, rel line=}rr,time*

Explanation: An I/O error (that was *not* a unit check, a unit exception, or a negative response) occurred on the line defined by terminal *termid*.

System action: The line associated with terminal *termid* is placed out of service.

User response: Examine the system console log message generated by SAM for this error. Have the unit error corrected.

Destination: CSMT

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term, 2=at term }, termid, {1=, trans }, trandid, {1=, rel line=}, rr,time*

DFHTC2522 *date time applid* **Intercept Required for terminal** *termid{ transaction }trandid,time*

Explanation: The task associated with terminal *termid* and transaction *trandid* was to have been abnormally terminated, but TPURGE(NO) was specified in the CSD definition for this task.

System action: The terminal is placed out of service.

User response: Use the master terminal facility to intercept or terminate the task.

Destination: CSMT

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, termid, {1= transaction },trandid, time*

DFHTC2529 *date time applid* **Unsolicited input** *{on line w/term | at term }termid{, trans }trandid{, rel line=}rr,time*

Explanation: Input has occurred on a control unit (general poll) for which terminal *termid* is out of service or has a task that has not issued a DFHTC TYPE=READ macro.

System action: No action is performed by CICS.

Control is given to a user-written terminal error program, DFHTEP.

User response: Code DFHTEP as dictated by environmental needs.

Destination: CSMT

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term, 2=at term }, termid, {1=, trans }, tranid, {1=, rel line=}, rr,time*

DFHTC2534 *date time applid* **Invalid destination at term** *termid, trans }tranid,time*

Explanation: An invalid destination was passed to TCAM from terminal *termid*.

System action: The write is halted and the task is abnormally terminated with a dump.

User response: Ensure that the destination is defined in the TCAM message control program (MCP).

Destination: CSMT

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, termid, {1=, trans }, tranid, time*

DFHTC2536 *date time applid* **Link to DFHTEP from DFHTACP failed because** *{module DFHTEP is not AMODE 31 | module DFHTEP could not be loaded | there is no PPT entry for program DFHTEP}*.

Explanation: While processing an error for a non-VTAM terminal, CICS attempted to link to user replaceable module DFHTEP. The link failed. One or more of the default actions described in message DFHTC2538 have been taken.

System action: The default action(s) set by DFHTACP are taken.

User response: Refer to message DFHTC2538 for an explanation of the default action(s) that have been taken.

Possible solutions are:

- Ensure that DFHTEP is linked with AMODE 31.
- Ensure that DFHTEP is contained in one of the data sets concatenated in the DFHRPL DD statement and has the correct name.
- Ensure that the PPT entry for module DFHTEP exists and is valid.

Destination: CSMT

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=module DFHTEP is not AMODE 31, 2=module DFHTEP could not be loaded, 3=there is no PPT entry for program DFHTEP}*

DFHTC2537 *date time applid* **Abend abcode has occurred in module DFHTEP.**

Explanation: While processing an error for a non-VTAM terminal, user replaceable module DFHTEP was linked to and the program has abended with abend code *abcode*. One or more of the default actions described in message DFHTC2538 have been taken.

System action: Control is passed back to the calling module DFHTACP. DFHTACP reinstates the default action(s) set before DFHTEP was called. The action(s) are then taken.

User response: Refer to message DFHTC2538 for an explanation of the default action(s) that have been taken. Refer to abend code *abcode* for details of the original error. Follow the user response given in abend code *abcode* to solve the problem.

Destination: CSMT

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, abcode*

DFHTC2538 *date time applid* **Default actions actions have been taken for message number** *relatedmessage*.

Explanation: A problem has arisen during the processing of an error for a non-VTAM terminal and message *msgno* has been issued. The explanations for all possible default actions are as follows:

Action Meaning

LINEOS

Place line out of service

NONPRGT

Non purgeable task

TERMOS

Place terminal out of service

ABENDT

Abend task on terminal

ABORTWR

Abort write and free terminal storage

RELTIOA

Release TCAM incoming message

SIGNOFF

Call the signoff program for terminal in error

System action: The system action is stated in message *related message*.

User response: Follow the guidance given in the user response section of message *related message*.

Destination: CSMT

Modules: DFHTACP

XMEOUT Parameters: *date, time,applid, actions, relatedmessage*

DFHTC8510 *date time applid SNA protocol violation detected in query response at termid termid*

Explanation: CICS has detected a violation of SNA protocols in a query response from device *termid*.

System action: DFHQRY runs without effect.

User response: Find out why an invalid query response is being sent to CICS.

Destination: CSMT

Modules: DFHQRY

XMEOUT Parameters: *date, time,applid, termid*

DFHTDxxxx messages

DFHTD0001 *applid An abend (code aaa/bbbb) has occurred at offset X'offset' in module modname.*

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a three 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; TS1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the *OS/390 MVS System Codes* manual. Then look up the CICS alphanumeric code. This tells you, for example, whether the error is a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDA, DFHTDB, DFHTDRM, DFHTDOC

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHTD0002 *applid A severe error (code X'code') has occurred in module modname.*

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point id which uniquely identifies what the error is and where the error was detected. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: The severity of this error depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDA, DFHTDB, DFHTDRM, DFHTDOC

XMEOUT Parameters: *applid, X'code', modname*

DFHTD0100I *applid* **Transient Data initialization has started.**

Explanation: This is an informational message indicating that transient data initialization has started.

System action: System initialization continues.

User response: None. The message can be suppressed with the system initialization parameter MSGLVL=0.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameter: *applid*

DFHTD0101I *applid* **Transient Data initialization has ended.**

Explanation: This is an informational message indicating that transient data initialization has completed successfully.

System action: System initialization continues.

User response: None. The message can be suppressed with the system initialization parameter MSGLVL=0.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP, DFHTDRM

XMEOUT Parameter: *applid*

DFHTD0102 *applid* **Transient Data initialization has failed.**

Explanation: Transient data initialization has failed.

The SETXIT routine in DFHTDRP has been entered following abnormal termination of the transient data initialization task.

Alternatively an attempt to open the intrapartition data set failed.

System action: Provided there are no subsequent serious errors which prevent further initialization of CICS, CICS issues one of two messages depending on what other errors, if any, have occurred during initialization.

If DFHSI1521 is issued, CICS initialization is terminated. If DFHSI1522 is issued, decide if CICS initialization is to be continued in degraded mode or to be terminated.

If, as part of a restart of CICS rather than during an initial start or a cold start, the intrapartition data set fails to open successfully when it was successfully opened on the previous CICS run, message DFHSI1521 is issued and CICS is terminated.

User response: Check previous console messages, one of which should explain why transient data initialization has failed.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameter: *applid*

DFHTD0103I *applid* **Transient Data initialization has been suspended pending takeover.**

Explanation: This is an informational message indicating that transient data initialization has been suspended pending takeover. Some transient data initialization can be performed while CICS is operating in standby mode. However the remaining initialization can not be performed until takeover is complete because transient data sets, with the exception of the DFHCXRF data set, are assumed to be passively shared.

System action: System initialization continues.

User response: None. The message can be suppressed with the SIT parameter MSGLVL=0.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameter: *applid*

DFHTD0104I *applid* **Transient Data initialization has been resumed following takeover.**

Explanation: This is an informational message indicating that transient data initialization has been resumed following takeover.

System action: System initialization continues.

User response: None. This message can be suppressed with the system initialization parameter MSGLVL=0.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameter: *applid*

DFHTD0105I *applid* **Transient Data intrapartition queues will be initialized empty as EMPTY was specified on the TDINTRA SIT parameter.**

Explanation: This is an informational message indicating that transient data is being initialized with TDINTRA=EMPTY specified on the SIT. This has the effect of initializing all intrapartition TD queues in an empty state. The TDINTRA SIT parameter is ignored during a cold or initial start.

System action: System initialization continues.

User response: None. The message can be suppressed with the system initialization parameter MSGVLV=0.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameter: *applid*

DFHTD0170 *applid* **The intrapartition data set has been corrupted.**

Explanation: During a warm or emergency restart, CICS has found that the contents of the intrapartition data set are not consistent with that in the DCTEs. The intrapartition data set could have been corrupted.

System action: CICS terminates after producing a dump and writing an exception trace.

A system dump with dumpcode TD0170 is taken unless you have specifically suppressed dumps in the dump table.

User response: Reinitialize the intrapartition data set.

Perform a cold start or an initial start of CICS.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRM

XMEOUT Parameter: *applid*

DFHTD0180 *applid* **Unexpected response (code X'response') and reason (code X'reason') from a dfhxxym call.**

Explanation: A transient data module cannot continue processing following the failure of a *dfhxxym* call to domain *xx*.

The response (code *X'response'*) and reason (code

X'reason') are those returned from the domain call (that is, *xxyy_response* and *xxyy_reason*).

System action: This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

A system dump with dumpcode TD0180 is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDA, DFHTDB, DFHTDOC, DFHTDRM

XMEOUT Parameters: *applid*, *X'response'*, *X'reason'*, *dfhxxym*

DFHTD0182 *applid* **Unexpected response (code X'response') and reason (code X'reason') from a dfhxxym call.**

Explanation: Module DFHTDRP cannot continue processing following the failure of a *dfhxxym* call to domain *xx*.

The response (code *X'response'*) and reason (code *X'reason'*) are those returned from the domain call (that is, *xxyy_response* and *xxyy_reason*).

System action: This is a critical error.

CICS writes a dump and terminates abnormally.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameters: *applid*, *X'response'*, *X'reason'*, *dfhxxym*

DFHTD0183 *applid* **Unexpected response (code X'response') and reason (code X'reason') from a dfhxxym call during processing of intrapartition queue *queue*.**

Explanation: The trigger level has been reached for

intrapartition transient data queue *queue*.

Module DFHTDB or DFHTDRM could not initiate the associated transaction following the response of a *dfhxyym* call to domain *xx*.

The response (code *X'response'*) and reason (code *X'reason'*) are those returned from the domain call (that is, *xyy_response* and *xyy_reason*).

Initiation of the associated transaction has failed.

System action: This is probably a CICS logic error.

Each subsequent write to the transient data queue causes another attempt to initiate the transaction, which will fail. However, this message is only issued the first time the error is detected.

CICS writes a dump and continues processing. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, X'response', X'reason', dfhxyym, queue*

DFHTD0240 *applid* **Queue *queue* (DD name *ddname*) is full.**

Explanation: No more data can be written to extrapartition queue *queue*.

A system abend, MVS code *X'37'*, has occurred during processing on the data set with *ddname ddname*.

System action: If the system abend occurs during processing of an EXEC CICS WRITEQ TD command, the NOSPACE condition is returned.

If the system abend occurs during processing of an EXEC CICS SET TDQUEUE CLOSED command, the data set is not closed and the IOERR condition is returned.

Note that a second attempt to close the data set succeeds.

User response: Consider allocating more space to the data set before you bring CICS up again.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDA, DFHTDOC

XMEOUT Parameters: *applid, queue,ddname*

DFHTD0242 *applid* **Abend *abcode* has been detected during processing for queue *queue* (DD name *ddname*).**

Explanation: A system abend, MVS code *abcode*, has occurred during processing on the extrapartition queue *queue* (that is, the data set with *ddname ddname*).

System action: A system dump with dumpcode TD0242 is taken unless you have specifically suppressed dumps in the dump table.

Since this may not be a critical error, CICS is not terminated, and the IOERROR condition is returned.

User response: Examine the CICS job log. QSAM issues a message explaining the reason for the system abend. See *OS/390 MVS System Messages* for a description of this message.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDA, DFHTDOC

XMEOUT Parameters: *applid, abcode,queue, ddname*

DFHTD0244 *applid* **An I/O error has occurred during an output operation to an extrapartition dataset for queue *queue*. (DD name = *ddname*).**

Explanation: An I/O error has occurred during the processing of an output operation to the extrapartition data set *ddname* on queue *queue*.

System action: An IOERR condition is returned. Subsequent put requests are returned IOERR.

User response: Close data set *ddname* via CEMT. If the I/O errors persist after a subsequent open, you probably need to reallocate this data set on a different volume.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDA, DFHTDOC

XMEOUT Parameters: *applid, queue,ddname*

DFHTD0245 *applid* **NOSPACE condition on a PUT to the intrapartition data set (DD name *ddname*). The RBA of the next CI would have exceeded 2 gigabytes.**

Explanation: An attempt to write to intrapartition transient data set with *ddname ddname* has failed due to a NOSPACE condition. CICS did attempt to extend the data set but the relative byte address (RBA) of the next control interval (CI), if it were added, would have exceeded 2 gigabytes (*x'7FFFFFFF'*).

System action: The system continues normally.

User response: Delete unwanted transient data queues from the intrapartition data set.

| **Note:** Do not attempt to reroute this message to a transient data queue.

| **Destination:** Console

| **Modules:** DFHTDB

| **XMEOUT Parameters:** *applid, ddname*

DFHTD0246 *applid* **An I/O error has occurred during an input operation to an extrapartition dataset for queue *queue*. (DD name = *ddname*).**

Explanation: An I/O error has occurred during the processing of an input operation to the extrapartition data set *ddname* on queue *queue*.

System action: An IOERR condition is returned. Subsequent put requests are returned IOERR.

User response: Close data set *ddname* via CEMT. If the I/O errors persist after a subsequent open, you probably need to reallocate this data set on a different volume.

Check the definition of the extrapartition transient data queue. The specification of an invalid blocksize or recordsize may have caused the I/O error.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDA, DFHTDOC

XMEOUT Parameters: *applid, queue, ddname*

DFHTD0247 *applid* **NOSPACE condition on a PUT to the intrapartition data set (DD name *ddname*). The data set is full.**

Explanation: An attempt to write to intrapartition transient data set with *ddname* has failed due to a NOSPACE condition. CICS did attempt to extend the data set but no secondary space was defined or available.

System action: The system continues normally.

User response: Delete unwanted transient data queues from the intrapartition data set, or consider redefining the intrapartition data set with additional secondary storage allocation.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDB

XMEOUT Parameters: *applid, ddname*

DFHTD0250 *applid* **Dynamic allocation of queue *queue* failed. Return code X'rrrr', X'cccc' in module *module*.**

Explanation: While dynamically allocating queue *queue*, CICS transient data issued an MVS DYNALLOC macro. The DYNALLOC failed with return code *cccc*. *rrrr* is the additional return code in register 15.

System action: CICS continues with queue *queue* closed.

User response: For the meaning of the DYNALLOC return codes, see the *OS/390 MVS Programming: Authorized Assembler Services Guide*.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDOC

XMEOUT Parameters: *applid, queue, X'rrrr', X'cccc', module*

DFHTD0251 *applid* **Dynamic deallocation of queue *queue* failed. Return code - X'rrrr', X'cccc' in module *module*.**

Explanation: While closing queue *queue*, CICS transient data issued the MVS macro, DYNALLOC, to dynamically deallocate the queue. Deallocation failed with the MVS return code, *cccc*. *rrrr* is the return code in register 15.

System action: CICS continues with the queue closed, but still allocated.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If you change the DSNAME in the DCTE, and then reopen the queue in the same CICS run, CICS may open the original data set. For an explanation of the MVS return code, see the *OS/390 MVS Programming: Authorized Assembler Services Guide*.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDOC

XMEOUT Parameters: *applid, queue, X'rrrr', X'cccc', module*

DFHTD0252 *applid* **Open of queue *queue* failed. DSNAME not available from JCL or DCTE. Module *module*.**

Explanation: An attempt by CICS to open queue *queue*

failed because neither the JCL nor the DCTE specified the data set name.

CICS transient data has not opened queue *queue*, for the following reasons:

- At initialization time, the startup JCL did not include a DD statement.
- No user-submitted routine allocated the queue dynamically.
- The DCTE does not contain a DSNAME parameter to enable CICS to allocate the file dynamically.

System action: CICS continues processing with queue *queue* closed.

User response: Before resubmitting the transaction, supply the data set name in the JCL or the DCTE. You can set the name in the DCTE while CICS is running by using CEDA to correct and reinstall the DCT entry.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDOC

XMEOUT Parameters: *applid, queue,module*

DFHTD0340 *applid* Transaction *tranid* initiated when the trigger level is reached for Transient Data queue *queue* is defined as REMOTE. The transaction initiation has failed.

Explanation: The trigger level has been reached for the transient data queue *queue*. The transaction associated with the queue is remote, which is invalid for trigger transactions. The initiation of the transaction has, therefore, failed.

System action: Until the error is corrected, each subsequent write to the transient data queue causes another attempt to initiate the transaction, which fails. However, in order to avoid filling the log with messages, this message is only issued the first time the error is detected.

User response: Perform one of the following, as appropriate:

- If the transid in the DCT is incorrect:
 - Amend the DCT, replacing the transid for the queue with a transid that is local, and reassemble, or
 - Use EXEC CICS SET TDQUEUE(*queue*) ATITRANID(*tranid*) to replace the transid for the queue with a local transid. See the *CICS System Programming Reference* for more information.
- If the transaction definition is incorrect, amend the transaction definition using CEDA to make the transaction local.
- Use CEDA to alter the DCTE definition and reinstall.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDXM

XMEOUT Parameters: *applid, tranid,queue*

DFHTD0341 *applid* Transaction *tranid* associated with the trigger level for Transient Data queue *queue* has not been initiated.

Explanation: The trigger level has been reached for transient data queue *queue*. Initiation of the associated transaction has failed due to an error in system set up.

System action: Until the error is corrected, each subsequent write to the transient data queue causes another unsuccessful attempt to initiate the transaction. However, in order to avoid filling the log with messages, this message is only issued the first time the error is detected.

User response: Check the definition for the queue in the DCT. The queue must have a transaction associated with it that exists, is defined as local, and is installed.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, tranid,queue*

DFHTD0342 *applid* Transaction *tranid* associated with the trigger level for Transient Data queue *queue* has not been scheduled.

Explanation: The trigger level has been reached for the transient data queue *queue*. The schedule of the associated transaction has failed due to an error in system set up.

System action: Until the error is corrected, each subsequent write to the transient data queue causes another attempt to schedule the transaction, which fails. However, in order to avoid filling the log with messages, this message is only issued the first time the error is detected.

User response: Check the following and amend if necessary:

- The queue must have a transaction associated with it that exists, is defined as local, and is installed. The transaction was local since the Remote attributes were not set in the transaction definition, yet the dynamic parm indicated that it could be remote.
- For DESTFAC (destination facility) of SYSTEM or TERMINAL, the named facility must exist, and any required system links must be installed and in service.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, tranid,queue*

DFHTD0343 *date time applid* **Automatic transaction restart for transaction *tranid* processing TD queue *queue-name* has failed.**

Explanation: A transaction that was attached when a TD trigger level was reached is ending abnormally and automatic transaction restart was requested for this transaction via the user replaceable module DFHREST. A severe error occurred when CICS attempted to restart the transaction.

System action: Message DFHAP0002 is issued with a dump for the severe error that caused the restart to fail. Abnormal termination of the transaction for which restart was requested continues. The transaction is not automatically restarted.

The system attempts to reattach the trigger level transaction when the next TD request is received for this TD queue and the trigger level has been reached or exceeded.

User response: Investigate the reason for the earlier severe error. See message DFHAP0002 for further guidance.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDXM

XMEOUT Parameters: *date, time,applid, tranid, queue-name*

DFHTD0360 *applid* **Logical I/O error occurred during a GET request to the intrapartition data set (DD name *ddname*); VSAM return codes are R15=X'*retcode*', FDBK=X'*fdbkcode*'.**

Explanation: An attempt to read a control interval from the intrapartition data set with *ddname ddname* has failed due to a logical I/O error. *retcode* is the return code in register 15 and *fdbkcode* is the value of the feedback field in the request parameter list (RPL).

System action: This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate. A system dump with dumpcode TD0360 is taken unless you have specifically suppressed dumps in the dump table.

User response: Message DFHME0116 is normally produced containing the symptom string for this problem. For the meaning of the codes in the message,

refer to the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, ddname,X'*retcode*', X'*fdbkcode*'*

DFHTD0361 *applid* **Logical I/O error occurred during a PUT request to the intrapartition data set (DD name *ddname*); VSAM return codes are R15=X'*retcode*', FDBK=X'*fdbkcode*'.**

Explanation: An attempt to write or rewrite a control interval to the intrapartition data set with *ddname ddname* has failed due to a logical I/O error. *retcode* is the return code in register 15 and *fdbkcode* is the value of the feedback field in the request parameter list (RPL).

System action: This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

A system dump with dumpcode TD0361 is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: For the meaning of the codes in the message, refer to the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, ddname,X'*retcode*', X'*fdbkcode*'*

DFHTD0362 *applid* **Physical I/O error occurred during a GET request to the intrapartition data set (DD name *ddname*); VSAM return codes are R15=X'*retcode*', FDBK=X'*fdbkcode*'.**

Explanation: An attempt to read a control interval

from the intrapartition data set with ddname *ddname* has failed due to a physical I/O error. *retcode* is the return code in register 15 and *fdbkcode* is the value of the feedback field in the request parameter list (RPL).

System action: A system dump with dumpcode TD0362 is taken unless you have specifically suppressed dumps in the dump table.

This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

User response: For the meaning of the codes in the message, refer to the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

A copy of the physical error message produced by VSAM appears in (one of) the transient data VSAM error message area(s) in the system dump.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, ddname,X'retcode', X'fdbkcode'*

DFHTD0363 *applid* Physical I/O error occurred during a PUT request to the intrapartition data set (DD name *ddname*); VSAM return codes are R15=*X'retcode'*, FDBK=*X'fdbkcode'*.

Explanation: An attempt to write or rewrite a control interval to the intrapartition data set with ddname *ddname* has failed due to a physical I/O error. *retcode* is the return code in register 15 and *fdbkcode* is the value of the feedback field in the request parameter list (RPL).

System action: A system dump with dumpcode TD0363 is taken unless you have specifically suppressed dumps in the dump table.

This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

User response: For the meaning of the codes in the message, refer to the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

A copy of the physical error message produced by VSAM will appear in (one of) the transient data VSAM error message area(s) in the system dump.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, ddname,X'retcode', X'fdbkcode'*

DFHTD0380 *applid* Illegal attempt to read control interval 0 for the intrapartition data set (DD name *ddname*).

Explanation: Control interval 0 in the intrapartition data set is reserved for transient data control information. The remaining control intervals are allocated to hold data for queues as determined by transient data processing on behalf of application program requests.

An invalid attempt has been made to read control interval 0 for the intrapartition data set with ddname *ddname*.

System action: This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

A system dump with dumpcode TD0380 is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Each intrapartition DCTE contains pointers which, if the queue is not empty, are relative byte addresses (RBAs) associated with the intrapartition data set with *ddname*.

Furthermore each allocated control interval, apart from the first, contains one or more user records as well as a queue control record. This latter record, the first in the control interval, contains the forward chain pointer or RBA for the next control interval containing data for the queue.

In each case, transient data assumes that RBAs address record boundaries within the intrapartition data set.

The assumption can be violated in several ways. The type of violation may be determined from:

- a control interval print of the intrapartition data set, or
- using Access Method Services, or
- using the system dump.

Violations include:

- THE WRONG INTRAPARTITION DATA SET WAS USED If the wrong data set has been used, that is, the data set used for this CICS start up was not used for the previous CICS start up, then it is highly probable that most of the RBAs in the DCTEs will not address record boundaries in the intrapartition data set. A cold start or an initial start of CICS must be carried out.
- THE INTRAPARTITION DATA SET WAS ALTERED If the records have been moved, possibly through data set compression, then it is highly probable that control interval 0 will contain more than one record

and that most of the RBAs in the DCTEs will not address record boundaries in the intrapartition data set. A cold start or an initial start of CICS must be carried out.

- **A DCTE WAS CORRUPTED** If a DCTE has been corrupted, it is highly probable that just one or two RBAs will not address record boundaries in the intrapartition data set. A specialized trap may be required to identify the offending program.

CICS may be restarted. An emergency restart for transient data will result in the RBAs being reconstructed from the system log and the intrapartition data set.

If an activity keypoint was taken between the occurrence of the error and its detection, it may prove necessary for a cold start or an initial start of CICS to be carried out.

- **AN I/O BUFFER WAS CORRUPTED** If an I/O buffer has been corrupted, it is highly probable one of the RBAs in the DCTE will not address record boundaries in the I/O buffer. A specialized trap may be required to identify the offending program.

CICS may be restarted. An emergency restart for transient data results in the RBAs being reconstructed from the system log and the intrapartition data set.

Note: If the contents of the I/O buffer were written to the intrapartition data set between the occurrence of the error and its detection, it may prove necessary to perform a cold start or an initial start of CICS.

- **A CICS LOGIC ERROR OCCURRED** You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, ddname*

DFHTD0381 *applid* Invalid attempt to (re)write control interval 0 for the intrapartition data set (DD name *ddname*).

Explanation: Control interval 0 in the intrapartition data set is reserved for transient data control information; the remaining control intervals are allocated to hold data for queues as determined by transient data processing on behalf of application program requests.

An invalid attempt has been made to (re)write control interval 0 for the intrapartition data set with *ddname*.

System action: This is a critical error and CICS is terminated, even if you have specified in the dump

table that CICS should not terminate.

A system dump with dumpcode TD0381 is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Refer to message DFHTD0380.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, ddname*

DFHTD0382 *applid* The output pointer for queue *qqqq* does not match the contents of the intrapartition data set (DD name *ddname*).

Explanation: The output pointer for queue *qqqq* does not address a record boundary within the intrapartition data set with *ddname ddname*.

System action: This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate. A system dump with dumpcode TD0382 is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Refer to message DFHTD0380.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, qqqq, ddname*

DFHTD0383 *applid* The input pointer for queue *qqqq* does not match the contents of the intrapartition data set (DD name *ddname*).

Explanation: The input pointer for queue *qqqq* does not address a record boundary within the intrapartition data set with *ddname ddname*.

System action: This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

A system dump with dumpcode TD0383 is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Refer to message DFHTD0380.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, qqqq, ddname*

DFHTD0384 *applid* **A forward chain pointer for queue *qqqq* does not match the contents of the intrapartition data set (DD name *ddname*).**

Explanation: A forward chain pointer for queue *qqqq* is invalid with respect to the intrapartition data set with *ddname ddname*.

System action: This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate. A system dump with dumpcode TD0384 is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Refer to message DFHTD0380.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, qqqq, ddname*

DFHTD0385 *applid* **Invalid attempt to allocate/deallocate CI 0 for the intrapartition data set (DD name *ddname*).**

Explanation: Control interval (CI) 0 in the intrapartition data set, *ddname*, is reserved for transient data control information. The remaining control intervals are allocated to hold data for queues as determined by transient data processing on behalf of application program requests.

System action: System dump TD0385 is taken unless you have specifically suppressed dumps in the dump table.

This is a critical error. CICS is terminated even if you have specified in the dump table that CICS should not terminate.

User response: Refer to the **User Response** of message DFHTD0380.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

902 CICS TS for z/OS: CICS Messages and Codes

Modules: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, ddname*

DFHTD0401 *date time applid terminal userid tranid*
TDQUEUE entry for *queue*name has been deleted.

Explanation: This is an audit log message indicating that transient data queue entry *tdqueue*name has been deleted from the DCT using the DISCARD command. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Destination: CSQL

Modules: DFHTDTM

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, queue*name

DFHTD0402 *date time applid terminal userid tranid*
TDQUEUE entry for *tdqueue*name has been added.

Explanation: This is an audit log message indicating that transient data queue entry *tdqueue*name has been added to the DCT using the INSTALL command. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Destination: CSQL

Modules: DFHTDTM

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, tdqueue*name

DFHTD0403 *date time applid terminal userid tranid*
TDQUEUE entry for *tdqueue*name has been replaced.

Explanation: This is an audit log message indicating that transient data queue entry *tdqueue*name has been

replaced in the DCT using the INSTALL command.
Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Destination: CSQL

Modules: DFHTDTM

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, tdqueuename*

DFHTD1210 *applid* DCT index in error, *xxxx* failed

Explanation: While carrying out operation *xxxx* (INSTALL) CICS found an error in the destination control table (DCT) index. This message is issued on warm or emergency restarts when transient data is installing entries from the global catalog. The most likely reasons for this error are:

1. Storage violation.
An application program has overwritten the index,
or
2. CICS logic error
The CICS Directory Domain created the index incorrectly. **or**
3. Corrupt global catalog entries
The global catalog has been corrupted.

System action: CICS writes a dump. The transaction abnormally terminates with abend code ATDY and message DFHSI1522 is issued.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Respond GO or CANCEL to message DFHSI1522.

Look at the contents of the global catalog, to determine if the catalog entry has been corrupted for the DCTE that is failing to install.

Assuming that the error is a storage violation, and that you have activated the trace facility, find in the trace the unsuccessful attempt to access the DCT by DFHTDP. Then find the last preceding successful access. You have now narrowed the search to programs that were running between these two accesses. Examine these programs for an error that could cause a storage violation.

If you have not activated trace, but you can recreate the error, activate trace, recreate the error, and proceed as in the previous paragraph.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameters: *applid, xxxx*

DFHTD1217 *applid* Unable to install entry *xxxx* into the DCT.

Explanation: During a warm or emergency restart, CICS was unable to add a particular entry to the destination control table (DCT) for destination *xxxx*.

System action: CICS ignores the definition and continues initialization.

User response: The cause of this install failure may be indicated in earlier messages issued from the transient data (TD) component. It may be the result of a failure to open the DFHINTRA data set, or a security error associated with any userid included in the definition. In the latter case, it is possible to create an RDO definition for the entry, with the correct userid, once CICS has initialized, and then to install it using the CEDA transaction.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameters: *applid, xxxx*

DFHTD1221 *applid* DCT not restored, *xxxx* failed

Explanation: During a warm start, while carrying out operation *xxxx* (STARTBROWSE, GETNEXT or ENDBROWSE), the transient data recovery program (DFHTDRP) found an error in the destination control table (DCT) catalog.

The most likely reasons for this error are I/O errors in the catalog data set, or a logic error in the CICS module, DFHCCCC.

System action: CICS writes a dump. The transaction abnormally terminates with abend code ATDY and message DFHSI1522 is issued.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Respond GO or CANCEL to message DFHSI1522.

Determine and correct the I/O errors on the catalog data set. If you cannot restore the catalog data set, or suspect that there might be a CICS logic error in DFHCCCC, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameters: *applid, xxxx*

DFHTD1260 *applid* **No DD statement for intrapartition data set *ddname***

Explanation: CICS is unable to open the intrapartition data set *ddname* because no DD statement has been provided.

System action: During a cold or initial start, TD initialization continues until any DCT macro entries have been processed. Any intrapartition entries found are not installed and message DFHTD1217 is issued for each install failure encountered. At the end of TD initialization, message DFHTD0102 is issued. If no other initialization errors occur, message DFHSI1522 is issued.

For all other starts, TD checks the catalog to see if DFHINTRA had opened successfully on the previous CICS run. If it did, initialization is terminated. If it did not, TD initialization continues normally.

User response: During a cold or initial start, respond GO or CANCEL to message DFHSI1522.

Modify the CICS JCL to add a DD statement defining the intrapartition data set (DFHINTRA).

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameters: *applid, ddname*

DFHTD1261 *applid* **Intrapartition data set *ddname* not defined as VSAM ESDS**

Explanation: CICS is unable to open the intrapartition data set *ddname* because it is not defined as VSAM ESDS.

System action: During a cold or initial start, TD initialization continues until any DCT macro entries have been processed. Any intrapartition entries found are not installed and message DFHTD1217 is issued for each install failure encountered. At the end of TD initialization, message DFHTD0102 is issued. If no other initialization errors occur, message DFHSI1522 is issued.

For all other starts, TD checks the catalog to see if DFHINTRA had opened successfully on the previous CICS run. If it did, initialization is terminated. If it did not, TD initialization continues normally.

User response: On a cold or initial start, respond GO

or CANCEL to message DFHSI1522.

Recreate the intrapartition data set as a VSAM ESDS and restart CICS.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameters: *applid, ddname*

DFHTD1262 *applid* **Intrapartition data set *ddname* not formatted**

Explanation: The intrapartition data set *ddname* is not formatted (it is empty). Initial formatting is done (if necessary) when CICS is cold or initial started.

System action: CICS continue to initialize until the destination control table has been completed. Any intrapartition definitions being read from the global catalogue will fail to install because of the original failure. When DFHTDRP completes its processing, CICS writes a dump. The transaction abnormally terminates with abend code ATDY and message DFHSI1522 is issued.

User response: Respond GO or CANCEL to message DFHSI1522.

Perform a cold or initial start when CICS is next brought up.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameters: *applid, ddname*

DFHTD1263 *applid* **Invalid control record for Intrapartition data set *ddname***

Explanation: The intrapartition data set *ddname* was not initialized for intrapartition transient data. The most likely reason for this is data corruption by:

- VSAM export and import
- DFHSM migration and recall.

System action: CICS writes a dump. The transaction abnormally terminates with abend code ATDY and message DFHSI1522 is issued.

User response: Respond GO or CANCEL to message DFHSI1522.

Reinitialize the intrapartition data set.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameters: *applid, ddname*

DFHTD1271 *applid* VSAM error processing SHOWCB for intrapartition data set *ddname*, R15=*retcode*

Explanation: VSAM has detected an error during SHOWCB processing for the intrapartition data set *ddname* with VSAM return code *retcode*.

System action: CICS writes a dump. The transaction abnormally terminates with abend code ATDY and message DFHSI1522 is issued.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Respond GO or CANCEL to message DFHSI1522.

Check the return code in the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameters: *applid, ddname,retcode*

DFHTD1272 *applid* VSAM error processing OPEN for Intrapartition data set *ddname*, R15=*retcode*, RC=*errorcode*

Explanation: VSAM has detected an error during OPEN processing for the intrapartition data set *ddname*. *retcode* is the VSAM return code and *errorcode* is the VSAM error code.

System action: CICS writes a dump, then attempts to continue with initialization. If a cold or initial start is taking place, any entries found in a DCT load module are installed, except for any intrapartition entries. If any of these are found, message DFHTD1217 is issued for each install failure. When TDRP completes its processing message DFHTD0102 is issued followed by message DFHSI1522.

For all other types of start, if DFHINTRA had failed during the previous run of CICS, processing continues as normal. If DFHINTRA was open on the previous run, CICS terminates.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: On a cold or initial start, respond GO or CANCEL to message DFHSI1522.

Check the return code and error code in the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameters: *applid, ddname,retcode, errorcode*

DFHTD1273 *applid* VSAM error processing CLOSE for intrapartition data set *ddname*, R15=*retcode*

Explanation: VSAM has detected an error during CLOSE processing for the intrapartition data set *ddname*. *retcode* is the VSAM return code.

System action: CICS writes a dump, then attempts to continue with initialization. If a cold or initial start is taking place, any entries found in a DCT load module are installed, except for any intrapartition entries. If any of these are found, message DFHTD1217 is issued for each install failure. When TDRP completes its processing message DFHTD0102 is issued followed by message DFHSI1522.

For all other types of start, if DFHINTRA had failed during the previous run of CICS, processing continues as normal. If DFHINTRA was open on the previous run, CICS terminates.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: For a cold or initial start, respond GO or CANCEL to message DFHSI1522.

Check the return code in the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameters: *applid, ddname,retcode*

DFHTD1274 *applid* VSAM error processing PUT for intrapartition data set *ddname*, R15=*retcode*, RC=*errorcode*

Explanation: VSAM has detected an error during PUT processing for the intrapartition data set *ddname*. *retcode* is the VSAM return code and *errorcode* is the VSAM error code.

System action: CICS writes a dump. The transaction abnormally terminates with abend code ATDY and message DFHSI1522 is issued.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Respond GO or CANCEL to message DFHSI1522.

Check the return code and error code in the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameters: *applid, ddname, retcode, errorcode*

DFHTD1275 *applid* VSAM error processing GET for intrapartition data set *ddname*, R15=*retcode*, RC=*errorcode*

Explanation: VSAM has detected an error during GET processing for the intrapartition data set *ddname*. *retcode* is the VSAM return code and *errorcode* is the VSAM error code.

System action: CICS writes a dump. The transaction abnormally terminates with abend code ATDY and message DFHSI1522 is issued.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Respond GO or CANCEL to message DFHSI1522.

Check the return code and error code in the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDRP

XMEOUT Parameters: *applid, ddname, retcode, errorcode*

DFHTD1278 *applid* An error occurred during initialization of intrapartition queue *queuename* for userid *userid*. The queue has not been added to the Destination Control Table.

Explanation: Transient data initialization detected an error with userid *userid* during installation of the intrapartition queue for automatic transaction initiation.

The specified userid is not valid for use by this CICS job for non-terminal transactions initiated by the transient data trigger.

There may be a previous message which gives the cause of this error.

System action: Transient data initialization continues.

The intrapartition queue definition is not added to the destination control table.

User response: Notify the system programmer.

If the userid is invalid, correct the userid specified in

the resource definition for the intrapartition queue.

If the userid is valid, ensure that it can be used by non-terminal transactions that are initiated by trigger for the intrapartition queue. See the *CICS RACF Security Guide* for guidance.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDTM

XMEOUT Parameters: *applid, queuename, userid*

DFHTD1279 *applid* Unexpected response (code X'*response*') and reason (code X'*reason*') from a *dfhxxym* call.

Explanation: Module DFHTDTM detected the failure of a *dfhxxym* call to domain *xx* while attempting to install an intrapartition entry containing a USERID.

The response (code X'*response*') and reason (code X'*reason*') are those returned from the domain call (that is, *xxyy_response* and *xxyy_reason*).

This can be due to a CICS logic error.

System action: If the error occurred during transient data initialization, this process will continue if possible. If processing cannot continue then a dump will be taken and an abend ATDY is issued.

User response: Refer to earlier messages and the dump produced by domain *xx*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDTM

XMEOUT Parameters: *applid, X'response', X'reason', dfhxxym*

DFHTD1280 *applid* An attempt to establish security has failed for userid *userid*. SAF codes are (X'*safresp*', X'*safreas*'). ESM codes are (X'*esmresp*', X'*esmreas*').

Explanation: An attempt was made to establish security for userid *userid*. The attempt was rejected by the external security manager (ESM).

System action: Security has not been established for the userid.

User response: The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes

(*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the *OS/390 MVS Programming: Authorized Assembler Services Guide* and in *External Security Interface (RACROUTE) Macro Reference for MVS and VM (SC28-1366)*. See these manuals for an explanation of the codes.

There may be further messages produced by CICS or the external security manager (ESM) which provide more information.

DFHTFxxxx messages

DFHTF0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. In some circumstances CICS is terminated directly if the error occurred in a crucial XM domain module.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Next, look up the CICS alphanumeric code in this manual.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHTDTM

XMEOUT Parameters: *applid*, *userid*, *X'safresp'*, *X'safreas'*, *X'esmresp'*, *X'esmreas'*

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

| **Modules:** DFHTFIQ, DFHZSUP, DFHTFRE, DFHTFAL,
| DFHTFXM

| **XMEOUT Parameters:** *applid*, *aaa/bbbb*, *X'offset'*,
| *modname*

DFHTF0002 *applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. In some circumstances CICS is terminated directly if the error is critical.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination*

Guide for guidance on how to proceed.

DFHTlxxx messages

DFHTI0001 *applid An abend (code aaa/bbbb) has occurred at offset X'offset' in module modname.*

Explanation: An abnormal end (abend) or program check has occurred in module *module*. This implies that there may be an error in CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a three digit hexadecimal MVS code (if applicable), followed by a four digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

Message DFHME0116 is normally produced containing the symptom string for this problem.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example the domain manager, DFHDMDM). A message is issued to this effect.

User response: Notify the system programmer. If

XMEOUT Parameters: *date, time, applid, nnnn, termid, nnnn*

DFHTF0101 *date time applid nnnn AIDs {canceled | force-canceled} for connection conname. nnnn AIDs remain.*

Explanation: AIDs queuing for connection *conname* have been canceled or force-canceled. This could be due to connection reinstall, or as a result of a SPI or CEMT SET CONNECTION(*conname*) CANCEL or FORCECANCEL command. Any AIDs remaining after this operation are also enumerated in this message. See the *CICS System Programming Reference* for more information.

System action: Requests represented as AIDs queuing for the connection will have been purged from the system.

User response: None.

Destination: CSMT

Modules: DFHALP

XMEOUT Parameters: *date, time, applid, nnnn, {1=canceled, 2=force-canceled}, conname, nnnn*

CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual. Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHTISR, DFHTIDM

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHTI0004 *applid A possible loop has been detected at offset X'offset' in module modname.*

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset *X'offset'*. This is the offset of the instruction which was executing at the time when the error was detected.

Message DFHME0116 is normally produced containing the symptom string for this problem.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example the domain manager, DFHDMDM). A message is issued to this effect.

User response: If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname* and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

DFHTMxxxx messages

DFHTM1703 *applid product is being terminated by userid userid in transaction tranid{at netname | at terminal }terminal.*

Explanation: This message is issued after a PERFORM SHUT IMMEDIATE request.

System action: The termination process continues.

User response: None.

Destination: Console and Terminal End User

Modules: DFHSTP

Destination: Console

Modules: DFHTISR, DFHTIDM

XMEOUT Parameters: *applid, X'offset', modname*

DFHTI0005 *applid A hardware error has occurred (module modname, code X'code'). The Time-of-Day clock is invalid.*

Explanation: An error has occurred during the running of module *modname*. The MVS Store Clock facility is the timing mechanism for the operating system.

The code *X'code'* is the exception trace point id which uniquely identifies the place where the error was detected.

Message DFHME0116 is normally produced containing the symptom string for this problem.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues if possible, unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example the domain manager, DFHDMDM). A message is issued to this effect.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS. First, investigate the MVS Store Clock and find out whether it is working properly. If this is the cause, you should take the appropriate action to have it repaired or replaced.

In the unlikely event that this is not a hardware problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHTISR, DFHTIDM

Modules: DFHSTP

XMEOUT Parameter: *applid*

DFHTM1709I *applid* About to link to PLT programs.

Explanation: DFHSTP is about to link to the user PLT program PLTSD parameter in the system initialization table. Note that this message may be issued even if PLTSD=NO is used. This occurs if the implied PLT program, EYU9VKIT, is executed because CPSMCONN=WUI is specified.

System action: Control is passed to the user PLT programs.

User response: None.

Destination: Console

Modules: DFHSTP

XMEOUT Parameter: *applid*

DFHTM1710I *applid* Control returned from PLT programs.

Explanation: Control is returned to DFHSTP to continue system termination. Note that this message may be issued even if PLTSD=NO is used. This occurs if the implied PLT program, EYU9VKIT, is executed because CPSMCONN=WUI is specified.

System action: Control is returned to DFHSTP.

User response: None.

Destination: Console

Modules: DFHSTP

XMEOUT Parameter: *applid*

DFHTM1711I *applid* About to link to phase 2 PLT programs.

Explanation: DFHSTP is about to link to the phase 2 PLT programs as defined by the PLTSD parameter in the system initialization table.

System action: CICS passes control to the phase 2 user PLT programs.

User response: None.

Destination: Console

Modules: DFHSTP

XMEOUT Parameter: *applid*

DFHTM1712I *applid* Control returned from phase 2 PLT programs.

Explanation: CICS returns control to DFHSTP so that system shutdown may continue.

System action: CICS returns control to DFHSTP.

User response: None.

Destination: Console

Modules: DFHSTP

XMEOUT Parameter: *applid*

DFHTM1715 *applid product* is being quiesced by **userid** *userid* in transaction *transid*{*at netname* | *at terminal* }*terminal*.

Explanation: This message is issued after a PERFORM SHUT request.

System action: Quiesce of CICS continues.

User response: None.

Destination: Console and Terminal End User

Modules: DFHSTP

XMEOUT Parameters: *applid, product,userid, transid, {1= at netname , 2= at terminal } , terminal*

DFHTM1752 *applid* PLT - program *progrname* not available.

Explanation: The program list table (PLT) specified for shutdown contains program *progrname*, but CICS is unable to link to the program because one of the following has occurred:

- An executable copy of the program could not be brought into storage.
- The installed definition for the program is disabled.
- There is no installed definition for the program.

Note that this message may be issued even if PLTSD=NO is used. This occurs if the implied PLT program, EYU9VKIT, is executed because CPSMCONN=WUI is specified.

System action: CICS termination continues without executing program *progrname*.

User response: In the next execution, check that each program specified in the PLT is contained as a data set concatenated to the DFHRPL DD statement in the startup job stream, and ensure that the program is defined and enabled.

Destination: Console

Modules: DFHSTP

XMEOUT Parameters: *applid, progrname*

DFHTM1780 *applid* **Abend has occurred while processing program *progrname* during termination, code=*abcode*.**

Explanation: Program *progrname* specified in the program list table (PLT) for shutdown has abnormally terminated. *abcode* is the abend code. Note that this message may be issued even if PLTSD=NO is used. This occurs if the implied PLT program, EYU9VKIT, is executed because CPSMCONN=WUI is specified.

System action: Control is passed to the next program specified in the PLT and a CICS dump is supplied for review.

User response: Refer to abend code *abcode* for further information about the error. Try and correct program *progrname*.

Destination: Console

Modules: DFHSTP

XMEOUT Parameters: *applid, progrname, abcode*

DFHTM1781 *applid* **CICS shutdown cannot complete because some non-system user tasks have not terminated.**

Explanation: This message is issued during shutdown of the CICS session and indicates that one or more CICS tasks are still active, thereby delaying the successful termination of CICS.

System action: CICS shutdown waits until the active task or tasks are successfully terminated.

If the default shutdown transaction (CESD) is active, it attempts, after a delay, to purge and backout all active tasks. This usually leads to a successful termination of CICS within a few minutes without operator intervention.

User response: If the default shutdown transaction (CESD) is not active, determine which CICS tasks are still running, using the CEMT INQUIRE TASK command, and take whatever steps are necessary to terminate them.

Destination: Console

Modules: DFHSTP

XMEOUT Parameter: *applid*

DFHTM1782I *applid* **All non-system tasks have been successfully terminated.**

Explanation: This message is issued during shutdown of the CICS session after successful termination by the user of any active tasks which had previously prevented termination.

System action: CICS shutdown continues normally.

User response: None

Destination: Console

Modules: DFHSTP

XMEOUT Parameter: *applid*

DFHTM1783 *applid* **CICS shutdown cannot complete because a system task which prevents normal shutdown has not terminated.**

Explanation: This message is issued during shutdown of the CICS session and indicates that CICS system transaction CLS1 is still active, thereby preventing the successful termination of CICS.

System action: CICS shutdown waits until the active task is successfully terminated.

User response: Determine, what is delaying the CLS1 transaction (for example the other CICS job or system being hung), and take whatever steps are necessary to resolve the situation.

Destination: Console

Modules: DFHSTP

XMEOUT Parameter: *applid*

DFHTM1784 *applid* **The user shutdown assist transaction *transid* cannot be started.**

Explanation: This message is issued during CICS shutdown and indicates that the user shutdown assist transaction specified on the system initialization table (SIT), or on the CEMT or EXEC CICS PERFORM SHUTDOWN SDTRAN option could not be started.

System action: CICS shutdown continues without starting a shutdown assist transaction.

User response: Do one of the following:

- Determine why the shutdown transaction could not start.
- Change or remove the SIT SDTRAN option.
- Change or remove the CEMT or EXEC CICS PERFORM SHUTDOWN SDTRAN option.

Destination: Console and Terminal End User

Modules: DFHSTP

XMEOUT Parameters: *applid, transid*

DFHTM1785 *date time applid* **The user shutdown assist transaction *transid* cannot be started.**

Explanation: This message is issued during CICS shutdown and indicates that the user shutdown assist transaction specified on the system initialization table (SIT), or on the CEMT or EXEC CICS PERFORM SHUTDOWN SDTRAN option could not be started.

System action: A TRANIDERR is returned and CICS shutdown is not performed.

User response: Do one of the following:

- Correct the shutdown transaction definition.
- Change or remove the SIT SDTRAN option.
- Change or remove the CEMT or EXEC CICS PERFORM SHUTDOWN SDTRAN option.

Modules: DFHTOR

XMEOUT Parameters: *date, time,applid, sesdef, condef*

DFHTO6010 E *date time applid* **The definition for SESSIONs *sesdef* must specify PROTOCOL LU61 as it refers to an MRO CONNECTION *condef*.**

Explanation: While installing a GRPLIST during initialization, or while executing a CEDA CHECK, a CEDA INSTALL, or an EXEC CICS CREATE command, CICS detected a SESSIONS definition (*sesdef*), specified without LU61, which referred to a CONNECTION definition (*condef*) that specified ACCESSMETHOD={IRC | XM} (MRO).

System action: The SESSIONS definition is not installed.

User response: Correct the SESSIONS or CONNECTION definition.

Destination: CSMT

Modules: DFHTOR

XMEOUT Parameters: *date, time,applid, sesdef, condef*

DFHTO6011 E *date time applid* **SESSIONs *sesdef* must specify both SENDCOUNT and RECEIVECOUNT as it refers to an MRO CONNECTION *condef*.**

Explanation: While installing a GRPLIST during initialization, or while executing a CEDA CHECK, a CEDA INSTALL, or an EXEC CICS CREATE command, CICS detected a SESSIONS definition (*sesdef*), specified with either SENDCOUNT=0 or RECEIVECOUNT=0, which referred to a CONNECTION definition (*condef*) that specified ACCESSMETHOD={IRC | XM} (MRO).

System action: The SESSIONS definition is not installed.

User response: Correct the SESSIONS or CONNECTION definition.

Destination: CSMT

Modules: DFHTOR

XMEOUT Parameters: *date, time,applid, sesdef, condef*

DFHTO6012 *date time applid* **The catalog dataset is not available. RDO function is restricted.**

Explanation: During initialization for a cold or initial start, CICS could not find the global catalog data set.

System action: CICS continues, but with the following restrictions to RDO function:

- A TYPETERM definition must be in the same group as the TERMINAL definitions that refer to it.
- AUTOINSTALL is not available, because the MODEL definitions cannot be stored.

User response: If you wish to avoid the above restrictions to RDO function in future CICS runs, create a global catalog data set and make it available to CICS in the DFHGCD DD statement of the CICS startup job stream.

Destination: CSMT

Modules: DFHTORP

XMEOUT Parameters: *date, time,applid*

DFHTO6013 E *date time applid* **No SESSIONs definition refers to CONNECTION *condef*.**

Explanation: During installation of a GRPLIST at initialization time, during CEDA INSTALL of a GROUP, a CHECK, or an EXEC CICS CREATE command, a CONNECTION definition was detected that had no valid SESSIONS definitions. This is valid only for INDIRECT or REMOTE connections.

System action: The CONNECTION is not installed.

If the reason for the failure is one or more invalid SESSIONS definitions, CICS issues another message which identifies the incorrect definition(s). If the reason was a missing SESSIONS definition, this is the only message.

User response: Correct the CONNECTION definition, create a SESSIONS definition, or correct existing SESSIONS definition(s), as appropriate.

Destination: CSMT

Modules: DFHTOR

XMEOUT Parameters: *date, time,applid, condef*

DFHTO6014 E *date time applid* **POOL is required for TERMINAL *termdef* as it refers to TYPETERM *typedef* which specifies SESSIONTYPE=PIPELINE.**

Explanation: An attempt has been made to install a terminal whose TYPETERM specified SESSIONTYPE=PIPELINE, but whose terminal definition did not specify POOL.

System action: CICS initialization continues, but TERMINAL *termdef* is not installed.

User response: Correct the TERMINAL definition, or the TYPETERM definition.

Destination: CSMT

Modules: DFHTOR

XMEOUT Parameters: *date, time,applid, termdef, typedef*

DFHTO6015 E *date time applid* **TRANSACTION for TERMINAL *termdef* is invalid for the DEVICE specified in TYPETERM *typedef*.**

Explanation: An attempt has been made to install a TERMINAL definition which specified TRANSACTION, but referred to a TYPETERM specifying device APPC.

System action: CICS initialization continues, but TERMINAL *termdef* is not installed.

User response: Correct the TERMINAL definition, or the TYPETERM definition.

Destination: CSMT

Modules: DFHTOR

XMEOUT Parameters: *date, time,applid, termdef, typedef*

DFHTO6016 E *date time applid* **The MRO CONNECTION *condef* is referenced by more than one SESSIONs definition, including *sesdef*.**

Explanation: When installing a GRPLIST during initialization, or while executing a CEDA CHECK, a CEDA INSTALL, or an EXEC CICS CREATE command, CICS has detected a CONNECTION definition *condef* that specified ACCESSMETHOD=(IRC|XM), which implies that it is an MRO connection. This CONNECTION was then referenced by more than one SESSIONS definition, one of which was *sesdef*. An MRO connection must only have one SESSIONS definition referencing it. Other SESSION definition names that reference this CONNECTION are listed in further occurrences of this message.

System action: The CONNECTION definition is not installed.

User response: Correct the CONNECTION definition or the SESSIONS definitions.

Destination: CSMT

Modules: DFHTOR

XMEOUT Parameters: *date, time,applid, condef, sesdef*

DFHTO6017 E *date time applid* **REMOTESYSTEM for TERMINAL '*termid*' is invalid for the DEVICE specified in TYPETERM '*typeterm*'.**

Explanation: When installing a GRPLIST during

initialization, or while executing a CEDA CHECK, a CEDA INSTALL, or an EXEC CICS CREATE command, CICS detected a CONSOLE that was defined as remote. This is an invalid option.

System action: The CONSOLE is not installed.

User response: Correct the CONSOLE that is defined as remote.

Destination: CSMT

Modules: DFHTOR

XMEOUT Parameters: *date, time,applid, termid, typeterm*

DFHTO6018 E *date time applid* **TERMINAL '*termid*' refers to TYPETERM '*typeterm*' which has an invalid ALTSCREEN.**

Explanation: A TYPETERM definition includes an invalid ALTSCREEN. ALTSCREEN has two components; width and height. One of these components is zero while the other is nonzero. This is an invalid combination. CICS has detected this problem in a TERMINAL definition while installing a GRPLIST during initialization, or while executing a CEDA CHECK, a CEDA INSTALL, or an EXEC CICS CREATE command.8

System action: The TERMINAL definition is not installed.

User response: Correct the TYPETERM that is referenced or reference a different TYPETERM in the TERMINAL definition. See the *CICS Resource Definition Guide* for details of valid ALTSCREEN values.

Destination: CSMT

Modules: DFHTOR

XMEOUT Parameters: *date, time,applid, termid, typeterm*

DFHTO6019 E *date time applid* **User *userid* is not authorized to install TERMINAL *tttt* with preset security.**

Explanation: User *userid* was attempting to install TERMINAL *tttt* but the *userid* does not have sufficient authority. This is because the TERMINAL has preset security (the definition for TERMINAL *tttt* specifies a USERID value). Installing a resource with preset security requires special authorization.

System action: Resource security violation messages are logged to the CISC transient data queue and to the system console. The resource is not installed. CICS continues.

User response: In order to install this resource, do one of the following:

- Use the CESN transaction to sign on with a *userid* that is permitted to install TERMINALs with preset security.

- Ask your security administrator to authorize user *userid* to install terminals with preset security.
- Remove the USERID specification from the resource definition and install the resource without preset security.

Destination: CSMT

Modules: DFHTOATM

XMEOUT Parameters: *date, time,applid, userid, tttt*

DFHTO6020 E *date time applid* **SESSIONS** *sesdef* **refers to single-session CONNECTION** *condef* **but has an invalid MAXIMUM option specified.**

Explanation: The value specified for the MAXIMUM option in the SESSIONS definition *sesdef* is incompatible with the CONNECTION definition *condef* because *condef* is defined as single-session. This was detected when *sesdef* referred to *condef* during installation of a GRPLIST at initialization, during CEDA INSTALL of a GROUP, or following a CHECK command, or during an EXEC CICS CREATE.

When a SESSION definition refers to a single-session CONNECTION definition, the value of the MAXIMUM option should be (1,0).

System action: The SESSIONS definition is not installed.

User response: There are two ways to solve this problem:

- Correct the SESSIONS definition by specifying MAXIMUM(1,0) using either CEDA or the CSD batch update utility DFHCSDUP.
- Redefine the CONNECTION definition so that it is no longer single-session by specifying SINGLESESS=NO.

Destination: CSMT

Modules: DFHTOR

XMEOUT Parameters: *date, time,applid, sesdef, condef*

DFHTO6023 E *date time applid* **Connection definition @BCH detected. Batch shared database**

DFHTPxxxx messages

DFHTP4101 Cannot reset from temporary paging to autopaging.

Explanation: A terminal requested that it be reset from temporary paging status to autopaging status. However, the terminal is defined as a paging terminal, or the message is marked to state that the operator must purge it.

System action: Other processing continues.

User response: If the terminal is defined as a purging

connections are not supported.

Explanation: While installing a GRPLIST during initialization, or while executing a CEDA CHECK, a CEDA INSTALL, or an EXEC CICS CREATE command, CICS detected a CONNECTION definition named @BCH. In previous releases this connection definition was reserved for use with batch shared database support, and allowed zero send sessions to be defined for an IRC connection. CICS Transaction Server for z/OS, Version 3 Release 1 does not support batch shared database and does not allow the associated sessions definition to specify zero send sessions.

System action: Installation of @BCH sessions fails.

User response: Remove the SESSIONS and CONNECTION definitions for batch shared database.

Destination: CSMT

Modules: DFHTOR

XMEOUT Parameters: *date, time,applid*

DFHTO6025 E *date time applid* **The definition for LU6.1 SESSIONS** *sesdef* **specifies a send or receive count with no prefix.**

Explanation: While installing a GRPLIST during initialization, or while executing a CEDA CHECK, a CEDA INSTALL, or an EXEC CICS CREATE command, CICS detected an LU6.1 SESSIONS definition (*sesdef*) that specified a send count with no send prefix or a receive count with no receive prefix. Prefixes must be specified for LU6.1.

System action: The SESSIONS definition is not installed.

User response: Correct the definition referred to in the message.

Destination: CSMT

Modules: DFHTOR

XMEOUT Parameters: *date, time,applid, sesdef*

terminal, use the master terminal program to change the status of the terminal.

If the message is so marked, the operator must purge the message. The system then automatically resets the status to autopaging.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4102 *nnnn* messages are queued for immediate delivery.

Explanation: The operator requested the *nnnn* messages to be delivered via the page retrieve command queue.

System action: The count of messages queued for this operator or terminal is displayed.

User response: None.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4103 Attempting to PURGE, COPY or CHAIN, but no pages are currently connected to this terminal.

Explanation: There are currently no tasks attached to this terminal.

System action: Other processing continues.

User response: None.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4104 A paging request was received but there are no pages for display.

Explanation: The CICS paging command (CSPG) or a request for paging was entered from a terminal in transaction status, but there are no pages to be displayed at the terminal.

System action: Other processing continues.

User response: None.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4105 The specified message is not recognized.

Explanation: The terminal operator tried to retrieve or purge a specific message using a message identifier (rather than the current or next available message). However, the specified message does not exist, or is not destined for this terminal.

System action: Other processing continues.

User response: None.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4106 You are not allowed to RETRIEVE or PURGE this message.

Explanation: The terminal operator tried to retrieve or purge a specific message using a message identifier (rather than the current or next available message). However, the specified message is not destined for this operator identifier.

System action: Other processing continues.

User response: None.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4107 Chain value *chain* is less than 1 or greater than the level of chaining allowed.

Explanation: The chain value, *chain*, as indicated by the page retrieval command, is either less than one or is greater than the level of chaining at that terminal.

System action: Other processing continues.

User response: None.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4108 Requested page *pageno* does not exist (it is less than 1 or more than the number of pages in the message).

Explanation: The page *pageno*, as indicated by the page retrieval command, is either less than one or is greater than the number of pages in the message. This can be caused, for example, by requesting the previous page after the first page, or the next page after the last page.

System action: Other processing continues.

User response: The paging session can be continued with a valid page value. The last valid page displayed is still the current page. For example, to recall the last valid page displayed, execute the page retrieval command used to get a current page.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4109 The requested command *command* was not recognized. Check that you have the correct value.

Explanation: Transaction CSPG was entered at the terminal, but what follows cannot be identified as a paging command. *command* represents the first four nonblank characters after CSPG.

System action: Other processing continues.

User response: None.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4110 *function is not valid. Page RETRIEVE function must be A, C, L, N, P, Q, or a number.*

Explanation: The page retrieve function represented by *function* is not one of the following: A, C, L, N, P, Q, or a number that may be preceded by a + (plus) or a - (minus) sign, where:

Function

Meaning

- | | |
|----------|--|
| A | All logical messages destined for and being displayed on that terminal. |
| C | The current (level) logical message. |
| L | The last page. |
| N | The next page. |
| P | The previous page. |
| Q | (Query) display the identifier of all logical messages destined for this terminal. If the message is security protected, its identifier is displayed only if the operator identifier and class for the signed-on operator match those in the message. The identifier consists of 1-to-6-digit hexadecimal number, and optionally, a message title. |

System action: Other processing continues.

User response: Use a valid page retrieve function.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4111 *function is not valid. Page PURGE function must be A, B, C, H, or R.*

Explanation: The page purge function represented by *function* is not A, B, C, H, or R. The functions have the following meanings.

Function

Meaning

- | | |
|----------|--|
| A | All logical messages destined for and being displayed on that terminal. |
| B | The logical message being displayed on that terminal and all logical messages chained to it. |
| C | The current (level) logical message. |
| H | All logical messages chained to the base logical message being displayed on that terminal. |
| R | All logical messages queued for immediate delivery (routed) to the terminal. |

System action: Other processing continues.

User response: Use a valid page purge function.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4112 *The terminal identifier termid is unknown or is not supported.*

Explanation: The terminal identifier represented by *termid* does not exist or is not supported under basic mapping support (BMS).

System action: Other processing continues.

User response: Use a valid terminal identifier.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4113 *date time applid msgno termtype pageno I/O error on MCR or Page (MODULE NAME: modname).*

Explanation: While attempting to retrieve a message control record (MCR) or page of a message, a temporary storage I/O error occurred. *msgno* represents the message number in hexadecimal; *termtype* is the terminal type; *pageno* is zero if the error occurred for the MCR, or is the page number. The message or page noted may be lost for this and/or other terminals.

System action: If pages are being displayed at an autopaging terminal, the next page if any is displayed. Otherwise no action takes place.

User response: None.

Destination: CSMT

Modules: DFHTPQ

XMEOUT Parameters: *date, time, applid, msgno, termtype, pageno, modname*

DFHTP4114 *You must purge messages from the terminal before issuing a new transaction.*

Explanation: While messages were being displayed at the terminal, the operator entered data that was not a paging command, either in error or to initiate a new transaction. However, at least one of the messages on the terminal is marked that the operator must specifically purge it before initiating a new transaction.

System action: Other processing continues.

User response: Purge all messages being displayed at this terminal (T/A), or chain the desired transaction using the chaining command.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4115 You must purge the message from your terminal to continue.

Explanation: A transaction is displaying pages at the terminal. Before the operator can continue with the transaction, the message must be purged.

System action: Other processing continues.

User response: Purge the current message (T/C).

Destination: Terminal End User

Modules: DFHTPR

DFHTP4116 Your message request cannot be done while another message is being displayed.

Explanation: While viewing a message, the operator entered a request for a specific message (for example, P/1,xxx) or requested the message identifiers of messages waiting to be displayed (P/Q). CICS cannot service this request while another message is being displayed. xxx is the message identifier of one of the messages waiting to be displayed.

System action: Other processing continues.

User response: If desired, reenter the request when there are no messages being displayed at the terminal.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4117 Purge display % after viewing.

Explanation: The operator at a 3270 has requested a display of message identifiers waiting to be displayed. The reply is constructed as one or more pages stored in temporary storage and can be viewed like any page message. % is the page number indicator.

System action: Other processing continues.

User response: Purge the message when viewing is complete.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4118 An ID error occurred while retrieving a Message Control Record (MCR) or Message Page. Message *bmsid*, terminal type *termtype*, page *pageno*.

Explanation: CICS was trying to retrieve page *pageno* of a message from temporary storage when an identifier error was received.

Alternatively, if page *pageno* is equal to zero, CICS could have been trying to retrieve a message control record (MCR) when the identifier error was received. The probable cause of the error is that temporary storage was cold started after the message was

scheduled or after the message was saved. Otherwise the message had already been purged.

The insert *bmsid* is the BMS logical message identifier, which is a unique hexadecimal identifier used in the generation of a TS key for saving this page or message. The insert *termtype* identifies the terminal type.

System action: The message or page may be lost. Other processing continues.

User response: None.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4119 An invalid request on Message Control Record (MCR) or Page Retrieval has occurred. Message *bmsid*, terminal type *termtype*, page *pageno*.

Explanation: CICS was trying to store or retrieve page *pageno* of a message when a temporary storage invalid request occurred. Alternatively, CICS could have been trying to store or retrieve a message control record (MCR) if the page *pageno* equaled zero when the temporary storage invalid error was received.

The message or page may be lost. The probable cause is that temporary storage was not loaded. *bmsid* is the BMS logical message identifier, which is a unique hexadecimal identifier used in the generation of a TS key for saving this page or message. *termtype* is the terminal type.

System action: Other processing continues.

User response: Ensure that the temporary storage program is loaded.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4120 Unable to interpret input. Please try again.

Explanation: The operator entered data that could not be interpreted.

System action: Input is discarded.

User response: Verify that input is valid under existing conditions.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4121 An I/O error occurred while retrieving a message control record or message page. Message *bmsid*, terminal type *termtype*, page *pageno*.

Explanation: CICS was trying to retrieve page *pageno* of a message when a temporary storage I/O error

occurred. Alternatively, CICS could have been trying to store or retrieve a message control record (MCR) if the page *pageno* equaled zero when the temporary storage I/O error occurred.

The message or page may be lost. *bmsid* is the BMS logical message identifier, which is a unique hexadecimal identifier used in the generation of a TS key for saving this page or message. *termtype* is the terminal type.

System action: If pages are being displayed at an autopaging terminal, the next page, if any, is displayed. Otherwise no action takes place.

User response: None.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4122 Requested purge completed successfully.

Explanation: CICS has completed a page purge function requested from the terminal.

System action: Processing continues.

User response: None.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4123 Terminal is now Autopaging.

Explanation: The terminal operator has requested that CICS reset a terminal that is temporarily in paging status, to autopaging status.

System action: The rest of the pages in the message are displayed. If there are none left and the message can be purged automatically, it is purged.

User response: None.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4124 Page copied from terminal *termid* (Message number *msgno*).

Explanation: This message appears in the display of messages waiting to be displayed (P/Q) and identifies a copied page. *msgno* is the message number of the copied page and *termid* is the terminal for which it is queued.

System action: Processing continues.

User response: None.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4126 *msgno* has been copied.

Explanation: This message is issued in response to a request to copy to another terminal. *msgno* is the message number of the message being displayed.

System action: Processing continues.

User response: None.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4127 *nnnn* must be a number. Please try again.

Explanation: The characters *nnnn* are not valid. The system expected a decimal value for a page or chain number, or a hexadecimal value for a message number.

System action: Other processing continues.

User response: Reenter the paging command. Use a valid number.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4128 *command* is undefined for page retrieval.

Explanation: After a page retrieval (PR) session had been started, the operator pressed a PA or PF key for which no PR command had been defined in the SIT.

System action: The command is ignored. The display status bit is not altered.

User response: Ensure that the PR command in question is defined in the SIT.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4130 You have used an unrecognized logical device. The valid names are *xxx,yyy*.

Explanation: A paging command containing an invalid logical device mnemonic was entered. *xxx,yyy,...* indicates the valid logical device mnemonics for the requested logical message.

System action: Input is discarded and other processing continues.

User response: Reenter the paging command with a logical device mnemonic chosen from those listed in the message.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4131 Requested page cannot be copied to that terminal.

Explanation: The operator has tried to copy a page that refers to an outboard format:

- To a terminal that does not support outboard formats, or
- To a terminal that does support outboard formats, but which has a different page width or a smaller page depth than the source terminal.

System action: The paging request is ignored.

User response: Carry out whichever one of the following is appropriate:

- Copy the offending page to a terminal that supports outboard formatting
- Make the referenced format nonoutboard
- Copy the offending page to a terminal that does support outboard formatting and which has a page size the same as that of the source terminal.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4132 No pages have been built for this partition.

Explanation: This an information message issued during a page retrieval session. It appears in a screen partition for which no pages have been built.

System action: Processing continues.

User response: None, unless a display was expected in the affected partition. In this case, check for an operator or application error.

Destination: Terminal End User

Modules: DFHTPR

DFHTP4133 *date time applid bmsid termtyp pageno* ID error on MCR or page.

Explanation: CICS was trying to retrieve page *pageno* of a message when an identifier error was received. Alternatively, CICS could have been trying retrieve a message control record (MCR) if the page *pageno* equaled zero when the identifier error was received. The message or page may be lost.

The probable cause is that temporary storage was cold-started after the message was scheduled or saved, or the message has already been purged.

bmsid is the BMS logical message identifier, which is a unique hexadecimal identifier used in the generation of a TS key for saving this page/message. *termtyp* is the terminal type.

System action: Other processing continues.

User response: None.

Destination: CSMT

Modules: DFHTPQ

XMEOUT Parameters: *date, time,applid, bmsid, termtyp, pageno*

DFHTP4134 *date time applid bmsid termtyp pageno* Invalid request on MCR or page.

Explanation: CICS was trying to store or retrieve page *pageno* of a message when a temporary storage invalid request error occurred. Alternatively, CICS could have been trying to store or retrieve a message control record (MCR) if the page *pageno* equaled zero when the temporary storage invalid request error occurred. The message or page may be lost.

The probable cause is that temporary storage was not loaded.

bmsid is the BMS logical message identifier, which is a unique hexadecimal identifier used in the generation of a TS key for saving this page/message. *termtyp* is the terminal type.

System action: Other processing continues.

User response: Ensure that the temporary storage program is loaded.

Destination: CSMT

Modules: DFHTPQ

XMEOUT Parameters: *date, time,applid, bmsid, termtyp, pageno*

DFHTP4150 *date time applid* ID error on MCR.

Explanation: During processing of a delayed delivery message a temporary storage identification error occurred. The message is lost for all destination terminals. Temporary storage was probably cold started after the message was originally scheduled.

System action: Other processing continues.

User response: None.

Destination: CSMT

Modules: DFHTPS

XMEOUT Parameters: *date, time,applid*

DFHTP4151 *date time applid* I/O error on MCR.

Explanation: During processing of a delayed delivery message a temporary storage I/O error occurred. The message is lost for all destination terminals.

System action: Other processing continues.

User response: None.

Destination: CSMT

Modules: DFHTPS

XMEOUT Parameters: *date, time,applid*

DFHTP4152 *date time applid* Invalid request on MCR.

Explanation: During processing of a delayed delivery message, a temporary storage invalid request error occurred. The message is lost for all destination terminals. The system was probably initialized without temporary storage.

System action: Other processing continues.

User response: Ensure that the system is initialized with temporary storage.

Destination: CSMT

Modules: DFHTPS

XMEOUT Parameters: *date, time,applid*

DFHTP4160 *date time applid* Message *msgno* purged as undeliverable from *nnnn* terminal(s).

Explanation: The message numbered *msgno* has been waiting for display at a terminal, but *nnnn* of these terminals are unable to display the message because they are out of service. This message is sent to the master terminal operator.

System action: To avoid affecting system performance, messages waiting longer than a time specified by the installation are purged.

User response: None.

Destination: CSMT

Modules: DFHTPQ

XMEOUT Parameters: *date, time,applid, msgno, nnnn*

DFHTP4161 Message *msgno* was not delivered. It was purged from terminal(s) *termid*. Message title was *title*.

Explanation: The message numbered *msgno* has been purged because it was not delivered within the system-defined time limit.

title is the title of message *msgno* and appears in this message only if one exists. *termid* is the terminal from which the message was purged.

System action: The message is purged from the system. No further attempt is made to deliver the message.

User response: None.

Destination: Terminal End User

Modules: DFHTPQ

DFHTP4162 *date time applid nnnn* BMS system messages purged as undeliverable from error notification terminal.

Explanation: Basic mapping support (BMS) system messages (for example, DFHTP4161) have been waiting to be displayed at the error notification terminal, but the terminal is unable to display them because its status is not consistent with their status, or because traffic is too heavy.

nnnn is the number of BMS system messages purged and *termid* is the error notification terminal's identifier.

System action: To avoid affecting system performance, messages waiting longer than a time specified by the installation, are purged.

User response: Either alter the status of the terminal to allow messages to be displayed or increase purge delay time at CICS system initialization.

Destination: CSMT

Modules: DFHTPQ

XMEOUT Parameters: *date, time,applid, nnnn*

DFHTP4164 *date time applid termid* cannot accept message DFHTP4161. It is undefined or does not support paging.

Explanation: *termid* is the identifier of a terminal specified to receive notification if a message could not be delivered. However, *termid* is not now in the TCT or is not defined as a terminal supported by BMS. This message is followed by DFHTP4161, which contains the error notification.

System action: Other processing continues.

User response: Notify terminal *termid* of the contents of message DFHTP4161, which is issued following this message.

Destination: CSMT

Modules: DFHTPQ

XMEOUT Parameters: *date, time,applid, termid*

DFHTP4165 Undeliverable messages are being purged. The terminal is available for use.

Explanation: This message is sent to destination CSMT. It is also sent to the originating terminal if transaction CSPQ is entered from the terminal. Program DFHTPQ has been time-initiated to purge any messages that are considered undeliverable.

System action: A non-terminal task is initiated to purge undeliverable messages.

User response: None. The message is displayed at the terminal to indicate that the terminal is available for use.

Destination: Terminal End User

Modules: DFHTPQ

DFHTP4166 *date time applid* **BMS has received an error return code *retcode* from CICS macro {*TS PURGE* | *BMS TEXTBLD* | *BMS PAGEOUT* | *TS PUT*}.**

Explanation: BMS received an error return code after issuing a CICS system macro request. *retcode* is the return code and *macro* is the macro request.

System action: Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CSMT

Modules: DFHTPQ

DFHTP4170 *date time applid* **Request from system *sysid* to route message number *msgno* to terminal *termid* was not executed.**

Explanation: BMS received a request from system *sysid* to route message *msgno* to terminal *termid*. The request could not be executed.

System action: Processing continues.

User response: Ensure that the TCTs for the two systems are consistent.

Destination: CSMT

Modules: DFHTPS

XMEOUT Parameters: *date, time,applid, sysid, msgno, termid*

DFHTP4171 *date time applid* **Request from system *sysid* to route message number *msgno* to terminal *termid* was not executed. Terminal not valid.**

Explanation: BMS received a request from system *sysid* to route message *msgno* to terminal *termid*. The request could not be executed because terminal *termid* is not defined on this system.

System action: Processing continues.

User response: Ensure that the TCTs for the two systems are consistent.

Destination: CSMT

Modules: DFHTPS

XMEOUT Parameters: *date, time,applid, sysid, msgno, termid*

DFHTP4172 *date time applid* **Request from system *sysid* to route message number *msgno* to terminal *termid* was not executed. Terminal not supported by BMS.**

Explanation: BMS received a request from system *sysid* to route message *msgno* to terminal *termid*. The request could not be executed because terminal *termid* is of a type not supported by BMS.

System action: Processing continues.

User response: Ensure that the TCTs for the two systems are consistent.

Destination: CSMT

Modules: DFHTPS

XMEOUT Parameters: *date, time,applid, sysid, msgno, termid*

DFHTP4173 *date time applid* **Request from system *sysid* to route message number *msgno* to terminal *termid* was not executed. Invalid LDC specified.**

Explanation: BMS has received a request from system *sysid* to route message *msgno* to terminal *termid*. The request could not be executed because the LDC specification was invalid.

System action: Processing continues.

User response: Ensure that the TCTs for the two systems are consistent.

Destination: CSMT

Modules: DFHTPS

XMEOUT Parameters: *date, time,applid, sysid, msgno, termid*

DFHTP4174 *date time applid* **Message routing has failed for terminal *termid*. The *termid* was invalid or could not be located.**

Explanation: BMS has received a request to route a message to terminal *termid*. The request could not be executed because *termid* is invalid or could not be located.

This message is produced if an attempt is made to route to some of the terminals for which CICS supplies default or sample definitions, perhaps by using the ALL option on CMSG. An example of this is the default 3270 bridge template terminal CBRE, which fails for routing because it is defined with REMOTESYSTEM(CBR), for which no definition is supplied.

System action: Processing continues.

| **User response:** There are several possible courses of
| action, depending on the cause of the message.

- | • Remove or correct the terminal definition.
- | • Remove the terminal from the routing list.
- | • Ignore the message if the terminal is a sample or
| default definition.

| **Destination:** CSMT

| **Modules:** DFHTPS

| **XMEOUT Parameters:** *date, time,applid, termid*

DFHTP4180 *date time applid* **Terminal *termid* specified
as error terminal for message *msgno*
from system *sysid* invalid and ignored.**

Explanation: BMS has received a request from system *sysid* to route message *msgno*, specifying terminal *termid* to be notified in the event of the message not being delivered. Terminal *termid* is not defined in the terminal control table.

System action: Processing continues.

User response: Ensure that the TCTs for the two systems are consistent.

DFHTRxxxx messages

DFHTR0001 *applid* **An abend (code *abcode*) has
occurred at offset *X'offset'* in module
modname.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code.

Alternatively, unexpected data has been input, or storage has been overwritten.

The code *abcode* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Destination: CSMT

Modules: DFHTPS

XMEOUT Parameters: *date, time,applid, termid, msgno, sysid*

DFHTP4190 **Please enter your data again in the
partition containing the cursor.**

Explanation: The terminal operator entered data from a partition other than the expected input partition. The expected input partition is activated (that is, the cursor is moved into it), and the terminal operator should reenter data in this partition.

System action: Processing continues.

User response: Ensure that the terminal operator enters data in the correct partition.

Destination: Terminal End User

Modules: DFHPHP

Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHTRSR, DFHTRPT, DFHTRDM ,
DFHTRFT

XMEOUT Parameters: *applid, abcode,X'offset', modname*

DFHTR0002 *applid* **A severe error (code *X'code'*) has
occurred in module *modname*.**

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point id which uniquely identifies what the error is and where the error was detected. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: An exception entry (code *X'code'*) is

made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: There may be an error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHTRSR

XMEOUT Parameters: *applid, X'code', modname*

DFHTR0004 *applid* **A possible loop has been detected at offset X'offset' in module *modname*.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'offset'. This is the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured

in milliseconds). This means that module *modname* is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname* and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHTRSR, DFHTRPT, DFHTRDM, DFHTRFT

XMEOUT Parameters: *applid, X'offset', modname*

DFHTR0101 STORAGE FOR INTERNAL TRACE TABLE NOT AVAILABLE -TRACE INOPERATIVE.

Explanation: During CICS initialization, there was insufficient storage for even the minimum allowable internal trace table size (16KB).

System action: CICS terminates with a system dump.

User response: The failure to get even 16KB from MVS at this early stage of initialization almost certainly means that other areas of CICS and other system functions will not be able to acquire the storage they require to operate, so the system is unlikely to initialize completely. A possible solution is to increase the value for the REGION keyword on the EXEC statement for the CICS job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHTRDM

DFHTR0102 REQUESTED TRACE TABLE SIZE NOT AVAILABLE.

Explanation: CICS issues a variable-type GETMAIN to MVS for the internal trace table storage. This message indicates that the upper limit specified (on the TRTABSZ keyword) was not available, but that at least the lower limit of 16K was obtained.

Message DFHTR0103 which follows this message gives the actual size acquired.

System action: CICS continues with an internal trace

table of the size given by message DFHTR0103.

User response: There are three possible courses of action:

- Allow CICS to run with the decreased table size if this is thought to be adequate.
- Terminate the system and reinitialize after increasing the region size available to CICS.
- Once the system is initialized, use CETR to increase the table size to the required value.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHTRDM

DFHTR0103 TRACE TABLE SIZE IS *nn*K.

Explanation: The internal trace table acquired during CICS initialization has a table size *nn*KB.

This is either the same as that specified on the TRTABSZ keyword of the SIT or message DFHTR0101 or DFHTR0102 has preceded this on the console.

System action: CICS continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHTRDM

DFHTR0104 *applid* No buffer storage available for auxiliary trace data set. Auxiliary trace is inoperative.

Explanation: An attempt to start auxiliary trace failed because there was insufficient storage available from MVS for the 4KB output buffer.

System action: A CICS system dump with dump code TR0104 is taken. CICS then continues with auxiliary trace inactive.

User response: Determine why so little MVS storage is available and retry if possible.

Destination: Console

Modules: DFHTRDM

XMEOUT Parameter: *applid*

DFHTR0105 AUXILIARY TRACE DATA SET *dataset* COULD NOT BE OPENED - AUXILIARY TRACE INOPERATIVE.

Explanation: An attempt to start auxiliary trace or to switch auxiliary trace extents has failed because the request to BSAM to open data set *dataset* failed.

System action: There are two cases:

- If the error occurs after an explicit request to start auxiliary trace (as opposed to switching extents), a CICS system dump with dump code TR0105 is taken. CICS then continues with auxiliary trace inactive.
- If the error occurs when auxiliary trace is already active, that is, an explicit switch request when auxiliary trace starts or an end-of-extent with autoswitching active, an SDUMP with dump code KERNDUMP is taken. This type of dump is not subject to suppression or modification by use of the dump table.

User response: Check that the DD statement for data set *dataset* is present.

If it is, format the system dump and examine the TR domain information. The DCB for the auxiliary trace data set should be present. Use this to determine the reason for the open failure.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHTRSR, DFHTRSU

DFHTR0106 *applid* DFHTRAO could not be loaded. Auxiliary trace is inoperative.

Explanation: An attempt to start auxiliary trace failed because the CICS module, DFHTRAO, which is used to write to the auxiliary trace data set, could not be loaded.

System action: The loader domain (LD) will have issued messages and dumps as necessary. CICS continues with auxiliary trace inactive.

User response: Refer to the associated loader domain messages for further information and guidance.

Destination: Console

Modules: DFHTRSR

XMEOUT Parameter: *applid*

DFHTR0107 ABEND X'abcode' ON AUXILIARY TRACE DATA SET *dataset* - AUXILIARY TRACE STOPPED.

Explanation: The DCB abend exit for named auxiliary trace data set *dataset* was driven after a request to BSAM.

The 3-digit abend code is indicated as X'abcode'

System action: CICS continues with auxiliary trace inactive.

User response: Refer to the *OS/390 MVS System Codes* manual for an explanation of the abend code, X'abcode'.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHTRAO

DFHTR0108 I/O ERROR ON AUXILIARY TRACE DATA SET *dataset* - AUXILIARY TRACE STOPPED.

Explanation: The SYNAD exit for the auxiliary trace data set *dataset* was driven after a request to BSAM.

System action: CICS will continue with auxiliary trace inactive.

User response: Use this message and any BSAM messages to determine the source of the error.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHTRAO

DFHTR0109 AUXILIARY TRACE DATA SET *dataset* FULL -AUXILIARY TRACE HAS BEEN STOPPED.

Explanation: The auxiliary trace data set *dataset* is full. Auxiliary trace has been stopped because autoswitch is not active.

System action: CICS continues with auxiliary trace inactive.

User response: The auxiliary trace data set *dataset* can now be processed by the print routine DFHTU640.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHTRSU

DFHTR0110 AUXILIARY TRACE DATA SET *dataset1* FULL - SWITCHING TO *dataset2*.

Explanation: The auxiliary trace data set *dataset1* is full. Auxiliary trace is continuing on data set *dataset2* because autoswitching was requested.

System action: CICS continues with auxiliary trace active on the data set *dataset2*.

User response: Process the full data set if required.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHTRSU

DFHTR0111 *applid* Unable to acquire storage for GTF buffer - GTF trace inoperative.

Explanation: An attempt to start CICS tracing to the MVS Generalized Trace Facility (GTF) failed because there was insufficient storage available from MVS for the 256-byte buffer required.

This message can be issued by DFHTRDM during CICS initialization if GTFTR=ON is specified on the SIT or start-up overrides, or by DFHTRSU if the request to start GTF was made after CICS was up and running.

System action: CICS continues with GTF tracing inactive.

User response: The failure to acquire even 256 bytes of storage indicates that the CICS region is probably in a stall condition. This can only be relieved by removing some of the users of MVS storage or by restarting CICS, possibly with a larger region size.

Destination: Console

Modules: DFHTRDM, DFHTRSU

XMEOUT Parameter: *applid*

DFHTR0112 *applid* Bad data passed for tracing to module *modname*.

Explanation: Some data passed to the trace (TR) domain for addition to the internal trace table, auxiliary trace data set or GTF trace caused a program check when an attempt was made to access it.

This could either be as a result of a request made by CICS system code or a request made by a user program through the API or XPI.

If transaction isolation is active, this message can be issued if a transaction passes another transaction's storage to CICS. A program check occurs when CICS attempts to trace this storage because the storage is fetch protected.

System action: A system dump with dump code TR0112 is taken.

If the message was issued by DFHTRPT the dump contains an exception trace entry (point ID TR0102) that includes the erroneous parameter list passed to DFHTRPT.

If the message was issued by DFHTRFT the dump contains an exception trace entry (point ID TR0402) that includes the erroneous parameter list passed to DFHTRFT.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Examine the interpreted exception trace entry to determine the domain that issued the call and the ID of the entry. Then look at the specified addresses and lengths in the *data*n** fields to see if they contain reasonable values. The fault is in the module

that set up these fields for the trace call.

If transaction isolation is active, examine the calling domain's parameter list, *data2*, for storage that belongs to another transaction. Correct the offending application program. It should not be passing another transaction's storage. Alternatively, alter the definition of the application so that it can validly access another transaction's storage. See the *CICS Resource Definition Guide* for more information on how to alter the definition.

Destination: Console

Modules: DFHTRPT, DFHTRFT

XMEOUT Parameters: *applid, modname*

DFHTR0113 *applid* Auxiliary trace is being started on data set *dataset*.

Explanation: A request to start auxiliary trace has been successfully processed. The trace records are being written to data set *dataset*.

System action: CICS continues with auxiliary trace active.

User response: None.

Destination: Console

Modules: DFHTRSR

XMEOUT Parameters: *applid, dataset*

DFHTR0114 AN ABEND HAS OCCURRED DURING INITIALIZATION OF TRACE IN MODULE *modname*.

Explanation: Module *modname*'s recovery routine received control during pre-initialization of the trace (TR) domain. This indicates that a program check has occurred in module *modname*.

There are three possible causes of this condition.

1. The module has been overwritten in main storage.
2. The module is at an incompatible level with the rest of the CICS modules.
3. There is an error in the module.

System action: A system dump with dump code KERNDUMP is taken.

User response: Inform the system programmer.

There may be an error in CICS code. The severity of its impact will depend on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the

full use of module *modname* you should bring CICS down in a controlled shutdown.

Use the dump to determine the cause of the condition.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHTRDM , DFHTRSR

DFHTR0115 AN ABEND HAS OCCURRED IN THE AUXILIARY TRACE MODULE DFHTRAO.

Explanation: Module DFHTRAO's recovery routine has received control.

This indicates a program check or MVS abend has occurred in DFHTRAO.

There are three possible causes of this condition:

- DFHTRAO has been overwritten in main storage
- DFHTRAO is at an incompatible level with the rest of the CICS modules
- There is an error in DFHTRAO.

System action: A system dump with dump code KERNDUMP is taken.

User response: There may be an error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module DFHTRAO is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module DFHTRAO, you should bring CICS down in a controlled shutdown.

Use the dump to determine the cause of the condition.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHTRAO

DFHTR0116 AN ABEND HAS OCCURRED IN THE TRACE SUBROUTINES MODULE DFHTRSU.

Explanation: The recovery routine belonging to the trace domain module DFHTRSU has received control.

This indicates a program check or MVS abend has occurred in that module.

There are three possible causes of this condition:

- DFHTRSU has been overwritten in main storage.

- DFHTRSU is at an incompatible level with the rest of the CICS modules.
- There is an error in DFHTRSU.

System action: A system dump with dump code KERNDUMP is taken.

User response: There may be an error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module DFHTRSU is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module DFHTRSU, bring CICS down in a controlled shutdown.

Use the dump to determine the cause of the condition.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHTRSU

DFHTR0117 *applid* **Auxiliary trace on data set *dataset* has been stopped.**

Explanation: An operator or application program request, to stop CICS tracing to the auxiliary trace data set *dataset*, has been successfully processed.

System action: CICS continues with auxiliary trace inactive.

User response: The auxiliary trace data set *dataset* can now be processed by the print routine DFHTU640.

Destination: Console

Modules: DFHTRSR

XMEOUT Parameters: *applid, dataset*

DFHTR0118 *applid* **Auxiliary trace is being switched from *dataset1* to *dataset2*.**

Explanation: An operator or application program request to switch extents on the auxiliary trace data set while auxiliary trace is active is being processed.

System action: CICS stops tracing on the first named data set *dataset1*, and resumes tracing on the second named data set *dataset2*.

User response: The first named auxiliary trace data set *dataset1* can now be processed by the print routine DFHTU640.

Destination: Console

Modules: DFHTRSR

XMEOUT Parameters: *applid, dataset1, dataset2*

DFHTR1000 *applid* **CICS abend requested by global trap exit DFHTRAP in module *modname*.**

Explanation: The field engineering global trap exit program (DFHTRAP) requested termination of CICS.

System action: CICS disables the trap exit so that it will not be reentered, and terminates CICS.

User response: Determine why DFHTRAP has requested system termination and act accordingly. **You should use the global trap exit only in consultation with an IBM support representative.**

Destination: Console

Modules: DFHTRPT, DFHTRFT

XMEOUT Parameters: *applid, modname*

DFHTR1001 *applid* **Program check occurred within global trap exit - DFHTRAP now marked unusable by module *modname*.**

Explanation: After making a trace entry, the CICS trace domain (TR) called the field engineering global trap exit program (DFHTRAP). A program check occurred during execution of DFHTRAP.

System action: CICS marks the currently active version of DFHTRAP unusable, and will ignore it on future calls to TR domain. CICS then takes a dump with system dump code TR1001, and continues execution.

User response: Use the dump to find the cause of the program check. To replace the currently active but unusable DFHTRAP by a new version in the CICS program library, issue the following commands in the sequence shown:

CSFE DEBUG,TRAP=OFF (to deactivate the current trap)

CEMT SET PROGRAM(DFHTRAP) NEWCOPY (to update the trap disk address known to CICS)

CSFE DEBUG,TRAP=ON (to activate the new version of the trap)

You should use the global trap exit only in consultation with an IBM support representative.

Destination: Console

Modules: DFHTRPT, DFHTRFT

XMEOUT Parameters: *applid, modname*

DFHTR1002 *applid* **Program DFHTRAP is not available - global trap not activated**

Explanation: CICS could not activate the field engineering global trap exit program, DFHTRAP, during processing of the TRAP=ON SIT keyword or override in CICS initialization. This is almost certainly

because DFHTRAP is not present in the program library.

System action: CICS takes a system dump with dump code TR1002 and continues with the global trap not activated.

User response: Ensure that DFHTRAP is defined to RDO and made available in the program library.

You should use the global trap exit only in consultation with an IBM support representative.

Destination: Console

Modules: DFHTRDM

XMEOUT Parameter: *applid*

DFHTR1003 *applid* CICS system dump requested by global trap exit DFHTRAP in module *modname*.

Explanation: The user-coded global trap exit program (DFHTRAP) has requested a system dump in its return action settings.

System action: CICS takes a system dump with dump code TR1003 and continues with the global trap still active.

User response: Analyze the requested dump.

You should use the global trap exit only in consultation with an IBM support representative.

Destination: Console

Modules: DFHTRPT, DFHTRFT

XMEOUT Parameters: *applid, modname*

DFHTR2000 INCOMPLETE ENTRY IGNORED.

Explanation: CICS trace entries longer than 256 bytes have to be split into multiple Generalized Trace Facility (GTF) entries because of GTF's length restriction. The CICS entry becomes a header entry followed by one or more continuation entries. This message in the GTF printout indicates that a CICS entry on GTF longer than 256 bytes has not been printed because a new header entry from the same MVS TCB was encountered before all of the continuation entries from a previous split entry were received.

System action: The incomplete entry is ignored.

User response: This situation can arise in one of two ways:

- The MVS TCB making the first split trace entry abnormally terminated while writing the continuation entries.

This results in messages and a system dump during the CICS run.

Refer to the associated messages for further information and guidance. Use the dump to determine and solve the problem.

- GTF has failed to record one or more of the continuation entries because of an internal error. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHTRPRG

DFHTR2001 INSUFFICIENT STORAGE FOR RECONSTRUCTION BUFFER.

Explanation: A CICS entry longer than 256 bytes has been split into a header record and one or more continuation records on the generalized trace facility (GTF). It cannot be formatted because MVS could not allocate sufficient working storage for a buffer to allow reconstruction of the segmented entry.

System action: The entry is printed in hexadecimal and the print job continues.

User response: Rerun the GTF print job with a larger region size.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHTRPRG

DFHTR2002 INVALID ENTRY PASSED FOR FORMATTING.

Explanation: A GTF entry with the CICS format identifier (X'EF') has been passed to the CICS GTF print routine but the data it contains is not part of a valid CICS trace entry.

System action: The invalid entry is printed in hexadecimal and the print job continues.

User response: Examine the entry for clues to its origin.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHTRPRG

DFHTR2003 UNEXPECTED CONTINUATION ENTRY ENCOUNTERED.

Explanation: CICS trace entries longer than 256 bytes have to be split into multiple GTF entries because of GTF's length restriction. The CICS entry becomes a header entry followed by one or more continuation entries. This message in the GTF printout indicates that a GTF entry has been passed to the CICS GTF print routine that is not the start of a CICS segmented entry and the entry type is not one for which a continuation is currently expected.

System action: The invalid entry is printed in hexadecimal and the print job continues.

User response: This situation could arise if the header record for a segmented entry is overwritten because of GTF's normal cyclic re-use of space in its data set. In this case the invalid entries would be very close to the start of the printout.

If this is not so, examine the entry for clues to its origin.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHTRPRG

DFHTR2004 THE MAXIMUM NUMBER OF BUFFERS (*nn*) HAVE BEEN ALLOCATED. NONE ARE FREE FOR REUSE.

Explanation: A CICS trace entry longer than 256 bytes has been split into a header record and one or more continuation records on the generalized trace facility (GTF). However, it cannot be formatted because the maximum number of buffers allowed for reconstruction of segmented entries for a specific type has been reached. This maximum is currently set to *nn*. The number of buffers for a specific type relates directly to the number of regions or systems writing trace entries to the GTF trace data set. During writing, the segmented entries for some of the different regions or systems could become interleaved in the data set. To ensure that the entries are formatted completely and correctly, it is necessary to have a buffer available for each region or system whose trace entries have become interleaved in this way. For further information on trace types and segmented entries see the section on trace formatting in the *CICS Diagnosis Reference*.

System action: The entry is printed in hexadecimal and the print job continues.

User response: None, but if the situation occurs regularly, contact your IBM Support Center to discuss whether the maximum value set is too low.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHTRPRG

DFHTR2005 THE LOAD FAILED FOR LOAD MODULE *modname*. PLACE MODULE IN THE LINK LIST AND TRY AGAIN.

Explanation: The generalized trace facility (GTF) trace formatter tried to load the correct release of trace formatter for the trace entry being processed.

System action: The job continues printing trace entries in hexadecimal only.

User response: Place the named trace formatter load module into the link list and rerun the job. If the named trace formatter is not available, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHTRPRG

DFHTR2006 UNKNOWN ENTRY PASSED FOR FORMATTING.

Explanation: An unknown CICS GTF trace entry has been passed to the CICS GTF print routine. The probable reason for this is that the CICS GTF formatting routine being used is from a previous CICS release and therefore does not recognize entries from the current release.

System action: The unknown entry is printed in hexadecimal and the print job continues.

User response: Examine the entry for clues to its origin. Ensure you are running GTF formatting routine DFHTGxxx where xxx is the current CICS release level.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHTRPRG

DFHTR3001 ERROR IN OPENING DFHAXPRT FILE.

Explanation: The auxiliary trace print program DFHTU640 could not open the data set defined to receive the print output.

System action: The print job terminates with a return code of 8.

User response: Ensure that the DD statement for DFHAXPRT is present and correct in the DFHTU640 job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHTRPRA

DFHTR3002 ERROR IN OPENING DFHAUXT FILE.

Explanation: The auxiliary trace print program DFHTU640 could not open the auxiliary trace data set to be processed.

System action: The print job terminates with a return code of 8.

User response: Ensure that the DD statement for DFHAUXT is present and correct in the DFHTU640 job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHTRPRA

DFHTR3003 ERROR IN OPENING DFHAXPRM FILE.

Explanation: The auxiliary trace print program DFHTU640 could not open the parameter input data set DFHAXPRM.

System action: The print job terminates with a return code of 8.

User response: Ensure that the DD statement for DFHAXPRM is present and correct in the DFHTU640 job, or specify your input parameters on the PARM keyword of the EXEC statement.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHTRPRA

DFHTR3010 ERROR IN TRACE DATA - ENTRIES MAY HAVE BEEN LOST.

Explanation: The trace block being formatted contains invalid length and/or pointer fields. This can happen if the trace table is accidentally overwritten.

DFHTSxxxx messages

DFHTS0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

System action: The trace formatting code scans the block to try and find valid entries. Any that are found are printed. The rest of the data is ignored.

User response: Try and determine what caused the overwriting of the internal trace table.

The trace entries immediately before and after this message in the print out should be viewed with suspicion. They may contain incorrect data, or there may be one or more entries missing altogether at this point.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHTRFPB

DFHTR5001 THE LOAD FOR A FEATURE PROGRAM HAS FAILED.

Explanation: The load for a feature formatting program has failed. This can happen if the program text is not included in one of the named datasets for the job.

System action: The trace formatting continues without feature tracing.

User response: Try and determine what caused the load error.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHTRFFE

DFHTR5002 FEATURE FORMATTING PROGRAM HAS FAILED.

Explanation: A feature formatting program has failed.

System action: The trace formatting continues without feature tracing.

User response: Refer to the documentation provided with your feature.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHTRFFE

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or

storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHTSAM, DFHTSBR, DFHTSDM, DFHTSPT, DFHTSQR, DFHTSRM, DFHTSSH, DFHTSSR, DFHTSST, DFHTSWQ.

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHTS0002 *applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHTSAM, DFHTSBR, DFHTSDM, DFHTSPT, DFHTSQR, DFHTSRM, DFHTSSH, DFHTSSR, DFHTSST, DFHTSWQ.

XMEOUT Parameters: *applid, X'code', modname*

DFHTS0100I *applid* **Temporary Storage initialization has started.**

Explanation: This is an informational message indicating the start of temporary storage domain initialization.

System action: Initialization continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Modules: DFHTSDM

XMEOUT Parameter: *applid*

DFHTS0101I *applid* **Temporary Storage initialization has ended.**

Explanation: Temporary storage domain initialization has completed successfully

System action: Initialization continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Destination: Console

Modules: DFHTSDM

XMEOUT Parameter: *applid*

DFHTS0102I *applid* **About to format the temporary storage data set (*numcis* control intervals).**

Explanation: Temporary storage has been cold-started with a new data set. This message is issued when formatting of the data set commences, and indicates the number *numcis* of control intervals which will be formatted.

System action: CICS continues. Message DFHTS0101 is issued when temporary storage initialization has been completed. Note that formatting can take a significant time if the data set is large.

User response: None. You can suppress this message with the message level system initialization parameter, MSGLVL=0.

Destination: Console

Modules: DFHTSDM.

XMEOUT Parameters: *applid, numcis*

DFHTS0103 *applid* **Invalid attempt to switch between a TST and RDO for Temporary Storage. The attempt is ignored.**

Explanation: Temporary storage has detected an implicit attempt to switch between using a TST and RDO for TS queues, but CICS has not been COLD started.

Switching from using a TST to RDO for TS (or vice versa) is permitted only on a COLD or INITIAL start of CICS.

System action: CICS continues. The attempt to switch is ignored. CICS will use a TST (if specified) or RDO models for TS queues, as for the previous CICS run.

User response: You may wish to restart CICS specifying an INITIAL or COLD start in order to complete the switch.

Destination: Console

Modules: DFHTSAD

XMEOUT Parameter: *applid*

DFHTS0104 *date time applid terminal userid tranid* **TSMODEL entry for *tsmodelname* has been added.**

Explanation: This is an audit log message indicating that temporary storage model *tsmodelname* has been

added to the system using the INSTALL command
Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Destination: CSMT

Modules: DFHTSAD

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, tsmodelname*

DFHTS0105 *date time applid terminal userid tranid* **TSMODEL entry for *tsmodelname* has been replaced.**

Explanation: This is an audit log message indicating that temporary storage model entry *tsmodelname* has been replaced in the system using the INSTALL command. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Destination: CSMT

Modules: DFHTSAD

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, tsmodelname*

DFHTS0106 *date time applid terminal userid tranid* **TSMODEL entry for *tsmodelname* has been discarded.**

Explanation: This is an audit log message indicating that temporary storage model *tsmodelname* has been deleted from the system using the DISCARD command. Where:

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

| **System action:** The system continues normally.
| **User response:** None.
| **Destination:** CSMT
| **Modules:** DFHTSAD
| **XMEOUT Parameters:** *date, time,applid, terminal, userid, tranid, tsmodelname*

DFHTS1301 *applid* {READ | WRITE} **Error detected by temporary storage. RPL feedback area is X'yyyyyy'.**

Explanation: An I/O error has been detected by temporary storage. Either:

- A hardware error occurred while a task was accessing the temporary storage data set, or
- VSAM detected a logic error in the request. The most likely cause of this is that the data set was defined incorrectly.

System action: An abend ATSD or ATSU is returned
to the application program.

User response: Ensure that the definition of the temporary storage data set is correct. For logic errors see the OS/390 DFSMS Macro Instructions for Data Sets manual for assistance in interpreting RPL feedback codes.

See the *CICS Problem Determination Guide* for more guidance in dealing with temporary storage problems.

Destination: Console

Modules: DFHTSAM

XMEOUT Parameters: *applid, {1=READ, 2=WRITE}, X'yyyyyy'*

DFHTS1310 *applid* **Temporary storage data set does not match bit map**

Explanation: The temporary storage domain has detected an inconsistency between its control blocks. The inconsistency was detected either during compression of an I/O buffer or by the TS control block checking which is enabled via TS trace level 3.

Possible causes of the inconsistency are:

- An incorrect temporary storage data set (DFHTEMP) was used.
- The control interval size (CISIZE) of the temporary storage data set was changed between CICS runs.
- A storage overlay has occurred.
- An internal error has occurred within the TS domain.

System action: CICS is abnormally terminated with a dump.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: To determine the cause of the error, check that:

- The correct data set was used.
- The CISIZE of DFHTEMP was not altered between CICS runs (if CISIZE **was** altered, temporary storage should have been cold started).

Whatever the cause of the error, temporary storage must now be cold started.

See the *CICS Problem Determination Guide* for more guidance in dealing with temporary storage problems. If an overlay has occurred, you will need further assistance from IBM.

See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHTSAM

XMEOUT Parameter: *applid*

DFHTS1311 *applid* **Temporary storage data set is full and cannot be extended**

Explanation: The temporary storage data set is full. CICS has failed in an attempt to extend it.

System action: Processing continues.

User response: Consider whether you need to increase the space allocation for the temporary storage data set.

Destination: Console

Modules: DFHTSAM

XMEOUT Parameter: *applid*

DFHTS1315 *applid* **The temporary storage data set has exceeded the maximum number of control intervals supported.**

Explanation: During a temporary storage write request, an attempt has been made to add a new control interval to the temporary storage data set. The temporary storage data set already contains the maximum number of supported control intervals and cannot be extended.

System action: Processing continues.

User response: Consider whether you need to increase the control interval size for the temporary storage data set. See the *CICS System Definition Guide* for guidance on defining the temporary storage data set.

Destination: Console

Modules: DFHTSAM

XMEOUT Parameter: *applid*

DFHTS1340 *applid* **No DD statement provided for temporary storage data set.**

Explanation: CICS is unable to open the auxiliary temporary storage data set because no DD statement has been provided.

System action: A dump is provided and CICS is terminated.

User response: Correct the error and restart CICS.

Destination: Console

Modules: DFHTSDM

XMEOUT Parameter: *applid*

DFHTS1341 *applid* **VSAM error processing SHOWCAT for temporary storage data set.**

Explanation: VSAM has detected an error during SHOWCAT processing for the auxiliary temporary storage data set.

System action: A dump is provided and CICS is terminated.

User response: Correct the error and restart CICS.

Destination: Console

Modules: DFHTSDM

XMEOUT Parameter: *applid*

DFHTS1342 *applid* **Invalid VSAM definition for temporary storage data set.**

Explanation: CICS is unable to open the auxiliary temporary storage data set because it is not defined as VSAM ESDS.

System action: A dump is provided and CICS is terminated.

User response: Correct the error and restart CICS.

Destination: Console

Modules: DFHTSDM

XMEOUT Parameter: *applid*

DFHTS1362 *applid* **Temporary storage data set not formatted**

Explanation: The auxiliary temporary storage data set is not formatted. It is empty. If initial formatting is necessary, it is performed when temporary storage is cold started.

System action: The temporary storage initialization task is abnormally terminated.

User response: Correct the error and restart CICS.

Destination: Console

Modules: DFHTSDM

XMEOUT Parameter: *applid*

DFHTS1363 *applid* **Invalid control record for temporary storage data set**

Explanation: The auxiliary temporary storage data set was not initialized for temporary storage.

System action: The temporary storage initialization task is abnormally terminated.

User response: Correct the error and restart CICS.

Destination: Console

Modules: DFHTSDM

XMEOUT Parameter: *applid*

DFHTS1371 *applid* **VSAM error processing SHOWCB for temporary storage data set, RC=X'retcode'**

Explanation: VSAM has detected an error during SHOWCB processing for the auxiliary temporary storage data set.

System action: The temporary storage initialization task is abnormally terminated.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response:

Check the return code in the appropriate VSAM publication.

Destination: Console

Modules: DFHTSDM

XMEOUT Parameters: *applid, X'retcode'*

DFHTS1372 *applid* **VSAM error processing OPEN for temporary storage data set, R15=X'retcode', RC=X'errorcode'**

Explanation: VSAM has detected an error during OPEN processing for the auxiliary temporary storage data set. The inserts identify the return code and the error code.

System action: The temporary storage initialization task is abnormally terminated.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response:

Check the return code and error code in the appropriate VSAM publication.

Destination: Console

Modules: DFHTSDM

XMEOUT Parameters: *applid, X'retcode', X'errorcode'*

DFHTS1373 *applid* VSAM error processing CLOSE for temporary storage data set, R15=X'retcode', RC=X'errorcode'

Explanation: VSAM has detected an error during CLOSE processing for the auxiliary temporary storage data set. The inserts identify the return code and the error code.

System action: The temporary storage initialization task is abnormally terminated.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response:

Check the return code and error code in the appropriate VSAM publication.

Destination: Console

Modules: DFHTSDM

XMEOUT Parameters: *applid, X'retcode', X'errorcode'*

DFHTS1374 *applid* VSAM error processing PUT for temporary storage data set, R15=X'retcode', RC=X'errorcode'

Explanation: VSAM has detected an error during PUT processing for the auxiliary temporary storage data set. The inserts identify the return code and the error code.

System action: The temporary storage initialization task is abnormally terminated.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response:

Check the return code and error code in the appropriate VSAM publication.

Destination: Console

Modules: DFHTSDM

XMEOUT Parameters: *applid, X'retcode', X'errorcode'*

DFHTS1375 *applid* VSAM error processing GET for temporary storage data set, R15=X'retcode', RC=X'errorcode'

Explanation: VSAM has detected an error during GET processing for the auxiliary temporary storage data set. The inserts identify the return code and the error code.

System action: The temporary storage initialization task is abnormally terminated.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response:

Check the return code and error code in the appropriate VSAM publication.

Destination: Console

Modules: DFHTSDM

XMEOUT Parameters: *applid, X'retcode', X'errorcode'*

DFHTS1376 *applid* VSAM error processing MODCB for temporary storage data set, R15=X'retcode'

Explanation: VSAM has detected an error during MODCB processing for the auxiliary temporary storage data set. The insert identifies the return code.

System action: The temporary storage initialization task is abnormally terminated.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response:

Check the return code and error code in the appropriate VSAM publication.

Destination: Console

Modules: DFHTSDM

XMEOUT Parameters: *applid, X'retcode'*

DFHTS1390 *date time applid TSQUEUE name (X'hexval')* not recovered. Time last referenced: *hh:mm:ss mm/dd/yy*. TSAGE: *tsage*

Explanation: During an emergency start, the recoverable temporary storage queue (TSQUEUE) *name* was not recovered. This is because the time elapsed since it was last referenced exceeded the aging limit of temporary storage data as specified in the value of TSAGE *tsage* in the DFHTST macro.

System action: The queue is not recovered and processing continues.

User response: Ensure that the value of TSAGE specified in the DFHTST macro is adequate.

Destination: CSMT

Modules: DFHTSRM

XMEOUT Parameters: *date, time, applid, name, X'hexval', hh:mm:ss, mm/dd/yy, tsage*

DFHTS1576 *applid* Temporary storage format error

Explanation: A nonzero return code was received from the VSAM macro GENCB when CICS was attempting to build a VSAM request parameter list (RPL).

System action: CICS terminates abnormally with a system dump. Message DFHME0116 is normally

produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHTSDM

DFHUSxxxx messages

DFHUS0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module

modname you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHUSAD, DFHUSDM, DFHUSFL, DFHUSIS, DFHUSST, DFHUSXM

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*, *modname*

DFHUS0002 *applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point ID which uniquely identifies what the error is and where it was detected.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHUSAD, DFHUSDM, DFHUSFL, DFHUSIS, DFHUSST, DFHUSXM

XMEOUT Parameters: *applid, X'code', modname*

DFHUS0004 *applid* **A possible loop has been detected at offset X'offset' in module modname.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'offset'. This is the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* in the message is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. However you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4

of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHUSAD, DFHUSDM, DFHUSFL, DFHUSIS, DFHUSST, DFHUSXM

XMEOUT Parameters: *applid, X'offset', modname*

DFHUS0006 *applid* **Insufficient storage to satisfy Getmain (code X'code') in module modname. MVS code mvscode.**

Explanation: An MVS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request.

The code X'code' is the exception trace point ID which uniquely identifies the place where the error was detected.

The code *mvscode* is the MVS GETMAIN return code.

System action: An exception entry is made in the trace table (code X'code'). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the User Response for these messages.

If CICS is still running, the problem may be a temporary one which rights itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

You can get diagnostic information about the MVS return code by consulting the relevant MVS codes manual.

Try decreasing the size limits of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. See the *CICS System Definition Guide* or the *CICS Performance Guide* for more information on CICS storage.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHUSDM, DFHUSAD

XMEOUT Parameters: *applid, X'code', modname, mvscode*

| **DFHUS0050** *applid* **The default userid *userid1* cannot be used by this CICS job with region userid *userid2*.**

| **Explanation:** The default userid specified in the system initialization parameter DFLTUSER cannot be used by this CICS job.

| The region userid for this CICS job is not authorized to use the userid specified in the DFLTUSER system initialization parameter.

Consult the *CICS RACF Security Guide* for more information.

| **System action:** CICS initialization terminates.

| **User response:** Ensure the default userid and the userid for the CICS region are correct.

| If the two userids are correct, obtain the necessary authorization for the default userid to be used by the CICS region userid. This may require the assistance of a security administrator.

| Previous messages may have been produced by the job giving additional information.

| **Destination:** Console

| **Modules:** DFHUSDM

| **XMEOUT Parameters:** *applid, userid1,userid2*

DFHUS0070 *applid* **Security check for CICS region userid (*userid*) has failed. SAF codes are (*X'safresp',X'safreas'*). ESM codes are (*X'esmresp',X'esmreas'*). USAD reason code is (*reason*).**

Explanation: An attempt was made to establish security for the CICS region userid but this was rejected by the external security manager (ESM).

System action: CICS initialization terminates.

User response: The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. For the meaning of the response and reason codes in the message see *z/OS MVS Programming: Authorized Assembler Services Guide* (SA22-7608) and *z/OS Security Server Racroute Macro Reference* (SA22-7692).

There may be further messages produced by CICS or

the external security manager (ESM) which provide more information.

If the ESM and SAF codes are not sufficient to explain the problem, then the USAD response code can be analyzed by IBM support. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHUSDM

XMEOUT Parameters: *applid, userid,X'safresp', X'safreas', X'esmresp',X'esmreas', reason*

| **DFHUS0120** *applid* **An error occurred when performing SNSCOPE checking for a signon request.**

| **Explanation:** The MVS ENQ issued as part of SNSCOPE checking has failed. The return code indicates that the CICS job has reached the limit of concurrent resource requests.

| **System action:** A system dump is suppressed, unless you have specifically enabled dumps for this dumpcode in the dump table. The request to signon is rejected.

| **User response:** See the *OS/390 MVS Programming Authorized Assembler Services Guide* for guidance on increasing the MVS ENQ limit. The MVS ENQ is issued by CICS in an unauthorized state.

| **Note:** Do not attempt to reroute this message to a transient data queue.

| **Destination:** Console

| **Modules:** DFHUSAD, DFHUSFL

| **XMEOUT Parameter:** *applid*

DFHUS0150 *applid* **An attempt to establish security has failed for userid *userid* in group *groupid*, {no terminal, | netname | console }*portname* applid *applid*. Unable to initialize the transaction *transid*. SAF codes are (*X'safresp',X'safreas'*). ESM codes are (*X'esmresp',X'esmreas'*).**

Explanation: An attempt was made to establish security for userid *userid* in group *groupid* with access to resources allowed for the terminal or console *portname* and the application *applid*. The attempt was rejected by the external security manager (ESM).

The transaction *transid* cannot be initialized.

System action: Security has not been established for the userid. The attempt to initialize the transaction has failed.

User response: The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the *OS/390 MVS Programming: Authorized Assembler Services Guide* and in *External Security Interface (RACROUTE) Macro Reference for MVS and VM (SC28-1366)*. See these manuals for an explanation of the codes.

There may be further messages produced by CICS or the external security manager (ESM) which provide more information.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHUSXM

XMEOUT Parameters: *applid, userid,groupid, {99=no*

terminal, , 1=netname , 2=console }, portname, applid, tranid, X'safresp', X'safreas', X'esmresp', X'esmreas'

DFHUS0200 *date time applid* **User** *userid in group groupid{ at netname | at console }portname* **has been timed out.**

Explanation: User *userid* in group *groupid* (at terminal *portname* if appropriate) has been removed from this CICS system because the *userid* has been unused for a period longer than that specified in the *USRDELAY* system initialization parameter.

System action: Processing continues.

User response: See the *CICS System Definition Guide* for more information about *USRDELAY*.

Destination: CSCS

Modules: DFHUSDM

XMEOUT Parameters: *date, time,applid, userid, groupid, {1= at netname , 2= at console }, portname*

DFHWBxxxx CICS Web Interface messages

Messages in the range 7001-7009 are issued by the CICS-supplied ICAPI (Internet Connection Application Programming Interface) DLL program, which executes under control of the ICSS/390 (Internet Connection Secure Server for OS/390) Web server program.

The messages appear in the log file of the ICSS/390 job.

DFHWB0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem. If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHWBWB

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*,
modname

DFHWB0002 *applid* A severe error (code *X'code'*) has occurred in module *modname*.

| **Explanation:** An error has been detected in module
| *modname*. The code *X'code'* is the exception trace point
| ID which uniquely identifies what the error is and
| where the error was detected.

| **System action:** An exception entry (code *X'code'* in the
| message) is made in the trace table. A system dump is
| taken, unless you have specifically suppressed dumps
| in the dump table.

| CICS continues unless you have specified in the dump
| table that CICS should terminate. If appropriate, an
| error return code is sent to the caller of this domain. In
| this case, CICS could be terminated by the caller (for
| example, the domain manager, DFHDMDM). A
| message is issued to this effect.

| Message DFHME0116 is normally produced containing
| the symptom string for this problem.

| **User response:** This indicates a possible error in CICS
| code. The severity of its impact depends on the
| importance of the function being executed at the time
| of the error.

| CICS may not have been terminated. If the message
| occurs once and module *modname* is not crucial to the
| running of your CICS system, you may decide to
| continue to run and bring CICS down at a convenient
| time to resolve the problem.

| If the message recurs or if you cannot run without the
| full use of module *modname*, you should bring CICS
| down in a controlled shutdown.

| You need further assistance from IBM to resolve this
| problem. See Part 4 of the *CICS Problem Determination
| Guide* for guidance on how to proceed.

| **Destination:** Console

| **Modules:** DFHWBST, DFHWBTC, DFHWBDM,
| DFHWBQM, DFHWBSR, DFHWBXM

| **XMEOUT Parameters:** *applid*, *X'code'*, *modname*

DFHWB0004 *applid* A possible loop has been detected
at offset *X'offset'* in module *modname*.

| **Explanation:** A CICS function is taking more time to
| process than CICS expects. A possible loop has been
| detected in module *modname* at offset *X'offset'*. This is
| the offset of the instruction that was executing at the
| time the error was detected.

| **System action:** An exception entry is made in the
| trace table. A system dump is taken, unless you have
| specifically suppressed dumps in the dump table.

| **Either** this is a critical error and CICS is terminated,

| even if you have specified in the dump table that CICS
| should not terminate.

| **Or** CICS will continue unless you have specified in the
| dump table that CICS should terminate. Message
| DFHME0116 is normally produced containing the
| symptom string for this problem.

| **User response:** Notify the system programmer. If
| CICS has not been terminated, it will be necessary to
| decide whether the problem is serious enough to bring
| CICS down.

| Because some CICS functions can use a lot of processor
| time, this message may have been caused by a
| long-running function. So there may not be an error
| here. Usually, CICS will purge a CICS function that
| exceeds the runaway task time interval that you have
| specified in the SIT (this is the ICVR which is measured
| in milliseconds). This means that the module *modname*
| will be terminated and CICS will continue.

| If you have declared ICVR=0 in the SIT and you
| consider that module *modname* has gone into a loop,
| you will have to terminate CICS in order to terminate
| the runaway function.

| If CICS has terminated module *modname*, and you
| consider that it was not a runaway, you should increase
| the ICVR time interval in the SIT. You will have to
| bring CICS down at a suitable time to do this
| permanently. However, you can change the ICVR time
| interval temporarily online, using the CEMT
| transaction.

| If raising the ICVR time does not solve the problem,
| you may need further assistance from IBM to resolve
| this problem. See Part 4 of the *CICS Problem
| Determination Guide* for guidance on how to proceed.

| **Destination:** Console

| **Modules:** DFHWBST, DFHWBTC

| **XMEOUT Parameters:** *applid*, *X'offset'*, *modname*

DFHWB0006 *applid* Insufficient storage to satisfy
Getmain (code *X'code'*) in module
modname. MVS code *mvscode*.

| **Explanation:** An MVS GETMAIN was issued by
| module *modname* but there was insufficient storage
| available to satisfy the request.

| The code *X'code'* is the exception trace point ID which
| uniquely identifies the place where the error was
| detected.

| The code *mvscode* is the MVS GETMAIN return code.

| During initialization, CICS may not have access to the
| user's *applid* coded in the SIT. If CICS produces this
| message in these circumstances, it uses the default
| *applid* value DBDCCICS.

| **System action:** CICS will terminate with a system

| dump. An exception entry is made in the trace table
 | (code *code* in the message).

| Message DFHME0116 is normally produced containing
 | the symptom string for this problem.

| **User response:** Inform the system programmer.

| You can get diagnostic information about the MVS
 | return code by consulting the relevant MVS codes
 | manual which is listed in the book list at the front of
 | this book.

| Try decreasing the overall size limit of the DSAs or
 | EDSAs. Or, try increasing the size of the whole region,
 | if it is not already at maximum size. If CICS is not
 | already terminated, you will need to bring CICS down
 | to do this. See the *CICS System Definition Guide* or the
 | *CICS Performance Guide* for further information on CICS
 | storage.

| **Destination:** Console

| **Modules:** DFHWBST

| **XMEOUT Parameters:** *applid, X'code', modname, mvscode*

DFHWB0100 *date time applid tranid* **The CICS Web
 Interface program cannot link to
 program DFHWBBLI. EIBRESP: eibresp.
 EIBRESP2: resp2val. Host IP address:
 hostaddr. Client IP address: clientaddr. |
 TCPIPService: tcpipservice**

Explanation: The alias program used EXEC CICS
 LINK but was unable to link to program DFHWBBLI.

System action: The link is abandoned. An HTTP
 response code of 500 (internal server error) is returned
 to the Web Browser. The alias abends with abend code
 AWBL.

| **User response:** Use the CEDA transaction to ensure
 | that program DFHWBBLI has been correctly defined
 | and installed.

Destination: CWBO

Modules: DFHWBA

XMEOUT Parameters: *date, time, applid, tranid, eibresp,
 resp2val, hostaddr, clientaddr, {1= , 2= TCPIPService: },
 tcpipservice*

DFHWB0101 *date time applid tranid* **The CICS Web
 Interface alias program DFHWBA
 detected a failure in program
 DFHWBBLI. Host IP address: hostaddr.
 Client IP address: clientaddr. |
 TCPIPService: tcpipservice**

| **Explanation:** Program DFHWBBLI has returned an
 | error response to the alias.

| **System action:** The request is abandoned. The error
 | response returned by program DFHWBBLI is returned
 | to the Web Browser in an HTTP response:

403 The userid associated with the request is not
 authorized to invoke the requested converter
 program, or the requested server program.

404 A link to the converter program or to the
 server program failed because CICS could not
 locate the requested program.

500 A link to the converter program or to the
 server program failed with an unexpected
 error.

503 A link to the converter program or to the
 server program failed for one of the following
 reasons:

- The server program is defined as remote,
 but the link to this program failed with a
 SYSID error, so the remote connection is
 either not defined correctly, or not active.
- The link to the converter or the server
 program failed with the ROLLEDBACK
 response.

| The alias abends with abend code AWBM unless
 | suppressed by the URM DFHWBEP.

User response: Check program DFHWBBLI and the
 programs which it calls.

Destination: CWBO

Modules: DFHWBA

XMEOUT Parameters: *date, time, applid, tranid, hostaddr,
 clientaddr, {1= , 2= TCPIPService: }, tcpipservice*

DFHWB0102 *date time applid tranid* **The CICS Web
 Interface alias program has received an
 incorrect response on a call made to
 CICS during alias initialization.
 EIBRESP: eibresp EIBRESP2: resp2val. |
 TCPIPService: tcpipservice**

Explanation: The alias program has received an
 unexpected response on a call made to CICS during
 alias initialization.

System action: The alias abends with abend code
 AWBI.

User response: You may need further assistance from
 IBM to resolve this problem. See the *CICS External
 Interfaces Guide* and Part 4 of the *CICS Problem
 Determination Guide* for guidance on how to proceed.

Destination: CWBO

Modules: DFHWBA

XMEOUT Parameters: *date, time, applid, tranid, eibresp,
 resp2val, {1=, 2= TCPIPService: }, tcpipservice*

DFHWB0103 *date time applid tranid* **The CICS Web Interface alias program has received an error response (code X'code') on a call made to CICS during alias initialization.** | *TCPIPSERVICE: tcpipservice*

| **Explanation:** The alias program was unable to locate the START data for this request, or the START data was invalid. The error response code X'code' is the exception trace point id that uniquely identifies which error has occurred. A code of '4565'X means that the START data was missing, and '4566'X means that the START data was invalid.

| **System action:** The alias abends with abend code AWBF and a trace entry is made in the trace table.

| **User response:** The alias program DFHWBA is only to be used for alias transactions started by the CICS Web Interface. User-written applications should not be starting alias transactions, as data passed to the alias will not be in the expected format.

Destination: CWBO

Modules: DFHWBA

XMEOUT Parameters: *date, time, applid, tranid, X'code', {1= , 2= TCPIPSERVICE: }, tcpipservice*

DFHWB0106 *date time applid tranid* **The CICS Web Interface program DFHWBA has detected an error.** | *TCPIPSERVICE: tcpipservice*

| **Explanation:** The alias had detected an error.

| **System action:** A system dump is taken. The alias abends with abend code AWBH. Message DFHME0116 is normally produced containing the symptom string for this problem.

| **User response:** Examine the diagnostics to determine the reason for the error.

| **Destination:** CWBO

| **Modules:** DFHWBA

| **XMEOUT Parameters:** *date, time, applid, tranid, {1= , 2= TCPIPSERVICE: }, tcpipservice*

DFHWB0108 *date time applid tranid* **The CICS Web Interface alias program has detected an abend. Host IP address: *hostaddr*. Client IP address: *clientaddr*.** | *TCPIPSERVICE: tcpipservice*

| **Explanation:** The alias has detected an abend.

| **System action:** The alias abends with abend code AWBK.

| **User response:** Examine the diagnostics to determine the reason for the error.

Destination: CWBO

Modules: DFHWBA

XMEOUT Parameters: *date, time, applid, tranid, hostaddr, clientaddr, {1= , 2= TCPIPSERVICE: }, tcpipservice*

| **DFHWB0109I** *applid* **Web domain initialization has started.**

| **Explanation:** This is an informational message indicating the start of Web domain initialization.

| **System action:** CICS initialization continues.

| **User response:** None. You can suppress this message with the system initialization parameter, MSGLVL=0.

| **Destination:** Console

| **Modules:** DFHWBDM

| **XMEOUT Parameter:** *applid*

| **DFHWB0110I** *applid* **Web domain initialization has ended.**

| **Explanation:** Web domain initialization has completed successfully.

| **System action:** CICS initialization continues.

| **User response:** None. You can suppress this message with the system initialization parameter, MSGLVL=0.

| **Destination:** Console

| **Modules:** DFHWBDM

| **XMEOUT Parameter:** *applid*

| **DFHWB0111** *applid* **WB Domain initialization failed. Reason Code: X'rc'.**

| **Explanation:** The CICS Web domain initialization failed with reason code *rc*.

| **System action:** CICS initialization continues. Subsequent calls to the components of the CICS Web environment may fail.

| **User response:** Use the reason code *rc* to determine why initialization failed. The possible reasons are:

- | 1 Storage for the Web anchor block could not be obtained.
- | 5 Storage for the State Manager anchor block could not be obtained.
- | 6 The creation of the State Token Directory failed.
- | 7 The subpool required for state management could not be added.
- | 8 The subpool required for HTTP buffers could not be added.

| 9 The addition of the Web State Manager lock failed.

| A The subpool required for 3270 buffers could not be added.

| B The initialization of the webrequest class failed.

| **Destination:** Console

| **Modules:** DFHWBDM

| **XMEOUT Parameters:** *applid, X'rc'*

| **DFHWB0114** *date time applid tranid* **A non-HTTP request has been received by an HTTP service. The request has been rejected. Host IP address: *hostaddr*. Client IP address: *clientaddr*.** | *TCPIPSERVICE: }tcpiptservice*

| **Explanation:** CICS Web Support has received a non-HTTP request or a SSL request for a HTTP TCPIPSERVICE.

| **System action:** The request is rejected.

| **User response:** Correct the TCPIPSERVICE definition to suit the type of request being sent.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, hostaddr, clientaddr, {1= , 2= TCPIPSERVICE: }, tcpiptservice*

| **Explanation:** Program DFHWBBLI has detected an error.

| **System action:** A system dump is taken. The transaction abends with abend code AWBR. Message DFHME0116 is normally produced containing the symptom string for this problem.

| **User response:** Examine the diagnostics to determine the reason for the error.

| **Destination:** CWBO

| **Modules:** DFHWBBLI

| **XMEOUT Parameters:** *date, time,applid, tranid, {1= , 2= TCPIPSERVICE: }, tcpiptservice*

| **DFHWB0119** *date time applid tranid* **The CICS Web Interface program DFHWBBLI has been started incorrectly.** | *TCPIPSERVICE: }tcpiptservice*

| **Explanation:** Program DFHWBBLI has detected an error while validating initialization information. This probably means that the program has been started incorrectly.

| **System action:** The transaction abends with abend code AWBQ.

| **User response:** Check that the program was not started by a transient data trigger level or by a CECI user.

| **Destination:** CWBO

| **Modules:** DFHWBBLI

| **XMEOUT Parameters:** *date, time,applid, tranid, {1= , 2= TCPIPSERVICE: }, tcpiptservice*

| **DFHWB0120** *date time applid tranid* **The CICS Web Interface program DFHWBBLI cannot link to program *program_name*. EIBRESP: *eibresp* EIBRESP2: *resp2val*.** | *TCPIPSERVICE: }tcpiptservice*

| **Explanation:** Program DFHWBBLI used an EXEC CICS LINK but was unable to link to the given program and an EIB response was returned.

| **System action:** The link is abandoned.

| **User response:** Ensure that the program definition is correct.

| **Destination:** CWBO

| **Modules:** DFHWBBLI

| **XMEOUT Parameters:** *date, time,applid, tranid,*

| *program_name,eibresp, resp2val, {1= ,2= TCPIPSERVICE: },*
| *tcpiptservice*

DFHWB0121 *date time applid tranid* **The CICS Web Interface program DFHWBBLI encountered an error during Decode processing in the converter program.**
Response code: *respcode*, **reason code:** *reasoncode.*{ | *TCPIPSERVICE: }tcpiptservice*

Explanation: The Decode function of the converter has returned an error.

System action: An error message is sent to the client.

| **User response:** The response code insert gives the
| RESPONSE code returned by the converter program.
| The reason code insert gives the REASON code
| returned by the converter program.

| The values defined by CICS for these fields are defined
| in copybook DFHWBUCD. The CICS defined values for
| the RESPONSE code are:

| 0 OK
| 4 Exception
| 8 Invalid data supplied
| 16 Disaster

| The CICS defined values for the REASON code are:

| 1 Security failure
| 2 Corrupt client data

| Users can architect their own response and reason code
| values to be returned by the analyzer, but they should
| use values other than those defined in the CICS
| supplied copybook DFHWBUCD.

| Examine the response and reason codes returned to
| determine the cause of the error.

| **Destination:** CWBO

| **Modules:** DFHWBBLI

| **XMEOUT Parameters:** *date, time,applid, tranid, program,*
| *respcode, reasoncode, {1= , 2=TCPIPSERVICE: },*

DFHWB0122 *date time applid tranid* **The CICS Web Interface program DFHWBBLI encountered an error during Encode processing in the converter program.**
Response code: *respcode*, **reason code:** *reasoncode.*{ | *TCPIPSERVICE: }tcpiptservice*

Explanation: The Encode function of the converter program has returned an error.

System action: An error message is sent to the client.

| **User response:** The response code insert gives the

| RESPONSE code returned by the converter program.
| The reason code insert gives the REASON code
| returned by the converter program.

| The values defined by CICS for these fields are defined
| in copybook DFHWBUCD. The CICS defined values for
| the RESPONSE code are:

| 0 OK
| 4 Exception
| 8 Invalid data supplied
| 16 Disaster

| The CICS defined values for the REASON code are:

| 1 Security failure
| 2 Corrupt client data

| Users can architect their own response and reason code
| values to be returned by the analyzer, but they should
| use values other than those defined in the CICS
| supplied copybook DFHWBUCD.

| Examine the response and reason codes returned to
| determine the cause of the error.

| **Destination:** CWBO

| **Modules:** DFHWBBLI

| **XMEOUT Parameters:** *date, time,applid, tranid, program,*
| *respcode, reasoncode, {1= , 2=TCPIPSERVICE: },*
| *tcpiptservice*

DFHWB0123 *date time applid tranid* **The CICS Web Interface program DFHWBA1 has detected an error.**{ | *TCPIPSERVICE: }tcpiptservice*

| **Explanation:** Program DFHWBA1 has detected an
| error.

| **System action:** A system dump is taken. The
| transaction abends with abend code AWBR. Message
| DFHME0116 is normally produced containing the
| symptom string for this problem.

| **User response:** Examine the diagnostics to determine
| the reason for the error.

| **Destination:** CWBO

| **Modules:** DFHWBA1

| **XMEOUT Parameters:** *date, time,applid, tranid, {1= , 2=*
| *TCPIPSERVICE: }, tcpiptservice*

DFHWB0124 *date time applid tranid* **The CICS Web Interface program DFHWBA1 has been started incorrectly.**{ | *TCPIPSERVICE: }tcpiptservice*

Explanation: Program DFHWBA1 has detected an

error while validating initialization information. This probably means that the program has been started incorrectly.

System action: The transaction abends with abend code AWBQ.

User response: Check that the program was not started by a transient data trigger level or by a CECI user.

Destination: CWBO

Modules: DFHWBA1

XMEOUT Parameters: *date, time,applid, tranid, {1= , 2= TCPIPSERVICE: }, tcpipSERVICE*

DFHWB0125 *date time applid tranid* **The CICS Web Interface program DFHWBBLI has detected an abend issued by the program *program.f* | TCPIPSERVICE: *tcpipSERVICE***

| **Explanation:** Program DFHWBBLI has detected an abend by the program that was servicing the request.

| **System action:** The alias returns control to the caller.

| **User response:** Examine the diagnostics to determine the reason for the error.

| **Destination:** CWBO

| **Modules:** DFHWBBLI

| **XMEOUT Parameters:** *date, time,applid, tranid, program, {1= , 2= TCPIPSERVICE: }, tcpipSERVICE*

DFHWB0126 *date time applid tranid* **The CICS Web Interface program DFHWBBLI has detected an abend issued by Encode in converter program *program.f* | TCPIPSERVICE: *tcpipSERVICE***

| **Explanation:** Program DFHWBBLI has detected an abend by the program that was servicing the request during Encode processing.

| **System action:** The alias returns control to the caller.

| **User response:** Examine the diagnostics to determine the reason for the error.

| **Destination:** CWBO

| **Modules:** DFHWBBLI

| **XMEOUT Parameters:** *date, time,applid, tranid, program, {1= , 2= TCPIPSERVICE: }, tcpipSERVICE*

DFHWB0127 *date time applid tranid* **The CICS Web Interface program DFHWBBLI has detected an abend issued by Decode in converter program *program.f* | TCPIPSERVICE: *tcpipSERVICE***

| **Explanation:** Program DFHWBBLI has detected an

| abend by the converter that was servicing the request during Decode processing.

| **System action:** The alias returns control to the caller.

| **User response:** Examine the diagnostics to determine the reason for the error.

| **Destination:** CWBO

| **Modules:** DFHWBBLI

| **XMEOUT Parameters:** *date, time,applid, tranid, program, {1= , 2= TCPIPSERVICE: }, tcpipSERVICE*

DFHWB0128 *date time applid tranid* **An error has been detected by program *program.f* | TCPIPSERVICE: *tcpipSERVICE***

| **Explanation:** Program DFHWBBLI has detected an error.

| **System action:** The alias returns control to the caller.

| **User response:** Examine the diagnostics to determine the reason for the error.

| **Destination:** CWBO

| **Modules:** DFHWBBLI

| **XMEOUT Parameters:** *date, time,applid, tranid, program, {1= , 2= TCPIPSERVICE: }, tcpipSERVICE*

DFHWB0130 *date time applid tranid* **No state token passed to program DFHWBLT. | TCPIPSERVICE: *tcpipSERVICE***

| **Explanation:** Program DFHWBLT was not passed the expected state token.

| **System action:** The transaction abends with code AWC2, and an exception trace entry 410C is written.

| **User response:** You may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Destination:** CWBO

| **Modules:** DFHWBLT

| **XMEOUT Parameters:** *date, time,applid, tranid, {1= , 2= TCPIPSERVICE: }, tcpipSERVICE*

DFHWB0131 *date time applid tranid* **An error code X'code' occurred in DFHWBLT while accessing the Web state data for this transaction. | TCPIPSERVICE: *tcpipSERVICE***

| **Explanation:** The Web Bridge Exit program, DFHWBLT, has detected an error when attempting to access the Web state data held for this transaction.

| **System action:** An exception trace entry is made in the trace table using code X'code'. The transaction

| abends with abend code AWC1 if the Bridge Exit was
| trying to establish a partnership with the CICS Web
| Interface alias transaction.

| **User response:**

| Use the error code *code* to determine the reason for the
| failure:

- | **4106** Unable to establish a partnership with the
| associated CICS Web Interface alias
| transaction.
- | **4107** A call to terminate the partnership between
| this instance of DFHWBLT and its associated
| CICS Web Interface alias transaction failed.
- | **4108** A call to wait for the CICS Web Interface alias
| transaction associated with this instance of
| DFHWBLT failed.
- | **4109** A call to reactivate the CICS Web Interface
| alias transaction associated with this instance
| of DFHWBLT failed.
- | **4112** A call to update the state data for this
| transaction failed.
- | **4113** A call to retrieve the state data for this
| transaction failed.
- | **4114** The alias task associated with this instance of
| DFHWBLT was not in the required state.
- | **4116** A call to break the partnership between this
| instance of DFHWBLT and its associated CICS
| Web Interface alias transaction failed.
- | **411B** A call to destroy the state data for this instance
| of DFHWBLT failed.

| The most likely cause of the error is that the timeout
| interval for the Web state data has been exceeded, and
| the relevant state data has been deleted. Check that the
| timeout interval for the state data is set to a suitable
| value. You may need further assistance from IBM to
| resolve this problem. See the *CICS External Interfaces
| Guide* and Part 4 of the *CICS Problem Determination
| Guide* for guidance on how to proceed.

| **Destination:** CWBO

| **Modules:** DFHWBLT

| **XMEOUT Parameters:** *date, time,applid, tranid, X'code'*,
| {1= , 2= TCPIPSERVICE: }, *tcpipservice*

| **DFHWB0132** *date time applid tranid* **Program**
| **DFHWBLT terminated due to storage**
| **problems.**{ | *TCPIPSERVICE: }*tcpipservice**

| **Explanation:** A getmain for storage issued by
| DFHWBLT failed. Without the storage, processing
| cannot continue.

| **System action:** The transaction abends with code
| AWC5, and an exception trace entry 410D is written.

| **User response:** If this error occurs repeatedly, you
| may need to examine the storage setup of your CICS
| system. Refer to the *CICS Customization Guide* for
| further information on controlling CICS storage.

| **Destination:** CWBO

| **Modules:** DFHWBLT

| **XMEOUT Parameters:** *date, time,applid, tranid, {1= , 2=*
| *TCPIPSERVICE: }, tcpipservice*

| **DFHWB0133** *date time applid tranid* **Error X'code'**
| **occurred during CICS Web 3270**
| **transaction processing.**{ |
| *TCPIPSERVICE: }*tcpipservice**

| **Explanation:** Program DFHWBTTA detected an error
| when attempting to attach the Web bridge transaction
| or the Web 3270 Bridge exit program DFHWBLT
| encountered an internal error.

| **System action:** The transaction returns an internal
| server error (HTTP response 500) to the HTTP client.

| **User response:** The error code *code* identifies the CICS
| trace entry that corresponds to the failure. You may
| determine the transaction identifier of the Web bridge
| transaction from this entry and its significant
| characteristics.

| Collect the CICS trace output. You may need further
| assistance from IBM to resolve this problem. See the
| *CICS External Interfaces Guide* and Part 4 of the *CICS
| Problem Determination Guide* for guidance on how to
| proceed.

| **Destination:** CWBO

| **Modules:** DFHWBTTA, DFHWBLT

| **XMEOUT Parameters:** *date, time,applid, tranid, X'code'*,
| {1= , 2= TCPIPSERVICE: }, *tcpipservice*

| **DFHWB0134** *date time applid tranid* **Error X'code'**
| **occurred resolving the AID from HTTP**
| **forms data in the CICS Web terminal**
| **translation application.**{ |
| *TCPIPSERVICE: }*tcpipservice**

| **Explanation:** Program DFHWBTTA is unable to
| resolve an attention identifier from the HTTP forms
| data returned from a web browser. DFHWBTTA
| translates the HTTP forms data into the correct 3270
| format required by the CICS terminal-oriented
| transaction that is the target of this request. The
| attention identifier or AID is a mandatory part of this
| format. DFHWBTTA cannot locate a name=value pair in
| the HTTP forms data that adheres to the naming
| convention defined by the CICS Web Interface to
| represent an AID, and so cannot return an AID value to
| the terminal-oriented transaction.

| **System action:** DFHWBTTA returns an internal server
| error (HTTP response 500) to the HTTP client, and

| terminates the exchange with the terminal-oriented
| transaction.

| **User response:** The error code *code* identifies the CICS
| trace entry that corresponds to the failure. The HTTP
| forms data is produced as trace data. Collect the CICS
| trace output. Examine the HTTP forms data to
| determine what was returned from the web browser.
| Identify what HTML input type caused the web
| browser to submit the HTML form. Corruption of the
| HTTP forms data may be the cause of the problem. You
| may need further assistance from IBM to resolve this
| problem. See the *CICS External Interfaces Guide* and Part
| 4 of the *CICS Problem Determination Guide* for guidance
| on how to proceed.

| **Destination:** CWBO

| **Modules:** DFHWBTTA

| **XMEOUT Parameters:** *date, time,applid, tranid, X'code'*,
| {1= , 2= TCPIPSERVICE: }, *tcpipservice*

| **DFHWB0135** *date time applid tranid* **Error X'code'**
| **occurred resolving the next transaction**
| **identifier from HTTP forms data in the**
| **CICS Web terminal translation**
| **application.** | *TCPIPSERVICE:*
| *tcpipservice*

| **Explanation:** Program DFHWBTTA is unable to
| resolve the next transaction identifier from the HTTP
| forms data returned from a web browser. DFHWBTTA
| translates the HTTP forms data and extracts the
| identifier of the next transaction to be executed.
| DFHWBTTA cannot locate a name=value pair in the
| HTTP forms data that adheres to the naming
| convention defined by CICS to represent the next
| transaction identifier and so it cannot determine which
| terminal-oriented transaction to start.

| **System action:** DFHWBTTA returns an internal server
| error (HTTP response 500) to the HTTP client.

| **User response:** The error code *code* identifies the CICS
| trace entry that corresponds to the failure. The HTTP
| forms data is produced as trace data. Collect the CICS
| trace output. Examine the HTTP forms data to
| determine what was returned from the web browser.
| Corruption of the HTTP forms data may be the cause
| of the problem. You may need further assistance from
| IBM to resolve this problem. See the *CICS External*
| *Interfaces Guide* and Part 4 of the *CICS Problem*
| *Determination Guide* for guidance on how to proceed.

| **Destination:** CWBO

| **Modules:** DFHWBTTA

| **XMEOUT Parameters:** *date, time,applid, tranid, X'code'*,
| {1= , 2= TCPIPSERVICE: }, *tcpipservice*

| **DFHWB0136** *date time applid tranid* **An error code**
| **X'code' has occurred as a result of the**
| **Web State Garbage Collection process.** |
| *TCPIPSERVICE: tcpipservice*

| **Explanation:** Program DFHWBLT detected an error
| when attempting to access the Web state data held for
| this transaction. The transaction wait time has exceeded
| the garbage collection limit and the state block has
| been deleted by the garbage collection process.

| **System action:** If the error occurs in DFHWBLT, a
| TERMERR condition is returned to the application and
| processing continues. If the error occurs in
| DFHWBTTA, an error response is sent to the browser
| and processing continues.

| **User response:**

| Use the error code *code* to determine which module
| received the error:

| **4108** The error occurred in DFHWBLT.

| **420B** The error occurred in DFHWBTTA.

| The cause of the error is that the garbage collection
| interval for the Web state data has been exceeded, and
| the relevant state data has been deleted. Check that the
| garbage collection interval for the state data is set to a
| suitable value. See the *CICS External Interfaces Guide*
| and Part 4 of the *CICS Problem Determination Guide* for
| guidance on how to proceed.

| **Destination:** CWBO

| **Modules:** DFHWBLT, DFHWBTTA

| **XMEOUT Parameters:** *date, time,applid, tranid, X'code'*,
| {1= , 2= TCPIPSERVICE: }, *tcpipservice*

| **DFHWB0137** *date time applid tranid* **An error code**
| **X'code' occurred in DFHWBTTA while**
| **accessing the Web state data for this**
| **transaction.** | *TCPIPSERVICE:*
| *tcpipservice*

| **Explanation:** The Web Terminal Translation
| Application program, DFHWBTTA, has detected an
| error when attempting to access the Web state data
| held for this transaction.

| **System action:** An exception trace entry is made in
| the trace table using code *X'code*.

| **User response:**

| Use the error code *code* to determine the reason for the
| failure:

| **4203** Unable to establish a partnership with the
| associated CICS Web Interface alias
| transaction.

| **4204** Unable to initialize a partnership with the
| associated CICS Web Interface alias
| transaction.

- | 4205 The alias task associated with this instance of DFHWBTTA was not in the required state.
- | 4206 A call to create the state data for this instance of DFHWBTTA failed.
- | 4207 A call to destroy the state data for this instance of DFHWBTTA failed.
- | 4208 A call to retrieve the state data for this instance of DFHWBTTA failed.
- | 4209 A call to break the established partnership between the associated transaction and DFHWBTTA has failed.
- | 420A A call to reactivate the CICS Web Interface alias transaction associated with this instance of DFHWBTTA failed.
- | 420B A call to wait for the CICS Web Interface alias transaction associated with this instance of DFHWBTTA failed.
- | 420C A call to terminate the partnership between this instance of DFHWBTTA and its associated CICS Web Interface alias transaction failed.
- | 4213 A call to update the state data for this transaction failed.

| The most likely cause of the error is that the timeout interval for the Web state data has been exceeded, and the relevant state data has been deleted. Check that the timeout interval for the state data is set to a suitable value. You may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Destination:** CWBO
 | **Modules:** DFHWBTTA

| **XMEOUT Parameters:** *date, time,applid, tranid, X'code'*,
 | {1= , 2= TCPIPSERVICE: }, *tcpipservice*

| **DFHWB0150** *date time applid tranid* **The CICS HTML template manager could not locate template *template_name* in the HTML template data set.** | *TCPIPSERVICE: tcpipservice*

| **Explanation:** The CICS HTML template manager DFHWBTL could not find template name *template_name* in the HTML data set.

| **System action:** Because 3270 / HTML conversion cannot be performed without the template, CICS returns a TERMERR condition to the application. Message DFHME0116 is normally produced containing the symptom string for this problem.

| **User response:** Make sure that the template exists in the template library. See the *CICS External Interfaces Guide* for guidance on how to create HTML templates.

| Report the details of the symptom string given in message DFHME0116.

| **Destination:** CWBO
 | **Modules:** DFHWBTC

| **XMEOUT Parameters:** *date, time,applid, tranid, template_name,{1= , 2= TCPIPSERVICE: }, tcpipservice*

| **DFHWB0151** *date time applid tranid* **The CICS Web Interface 3270 emulation code was unable to process the data it was passed.** | *TCPIPSERVICE: tcpipservice*

| **Explanation:** The CICS Web Interface routine that converts 3270 data streams to HTML, and vice versa, has detected an error. This is probably because it has been passed an invalid 3270 data stream on an EXEC CICS SEND command, or because the browser has returned some data that it is incapable of handling in response to an EXEC CICS RECEIVE command.

| **System action:** The transaction is abended with code AEIP (INVREQ). There will be subsequent messages from the web state management code as it tidies up for the abending task. Message DFHME0116 is normally produced containing the symptom string for this problem.

| **User response:** Use CEDX or trace to look at the data that was in error and then correct the sending application. Report the details of the symptom string given in message DFHME0116.

| **Destination:** CWBO
 | **Modules:** DFHWBTC

| **XMEOUT Parameters:** *date, time,applid, tranid, {1= , 2= TCPIPSERVICE: }, tcpipservice*

| **DFHWB0152 E** *date time applid client_ip_addr tcpipservice* **The request receiver SOCB notify gate is unable to attach transaction *transaction*.**

| **Explanation:** The socket domain received a request for a TCPIP service which specified PROTOCOL(HTTP). However, the socket notify gate in module DFHWBSO was unable to attach the transaction specified in the TCPIP service definition.

| **System action:** Exception trace point 0907 is issued.

| **User response:** Check the definitions in the TCPIP service and the specified transaction.

| **Destination:** CWBO
 | **Modules:** DFHWBSO

| **XMEOUT Parameters:** *date, time,applid, client_ip_addr, tcpipservice, transaction*

DFHWB0153 E *date time applid client_ip_addr tcpipSERVICE* The web asynchronous socket receive failed with an IO error.

Explanation: The Web socket notify gate was driven with an action code of ERROR because an outstanding asynchronous socket receive request ended with an IO error.

System action: Exception trace point 0906 is issued. The socket is closed and the request is terminated.

User response: Determine why an IO error occurred on this port.

Destination: CWBO

Modules: DFHWB50

XMEOUT Parameters: *date, time,applid, client_ip_addr, tcpipSERVICE*

DFHWB0360 *date time applid* An attempt to establish security for userid *userid* has failed. Transaction *transid* cannot be started. SAF codes are (X'safresp',X'safreas'). ESM codes are (X'esmresp',X'esmreas'). Host IP address: *hostaddr*. Client IP address: *clientaddr*. TCPIPSERVICE: *tcpipSERVICE*.

Explanation: An attempt was made to establish security for userid *userid* but it was rejected by the external security manager (ESM).

In order to start transaction *transid* CICS Web attach processing requires security to be established for userid *userid*, as selected for this transaction by the Analyzer URM specified for TCPIPSERVICE *tcpipSERVICE*

System action: Security has not been established for the userid. The attempt to start the transaction has failed.

User response: The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the *OS/390 MVS Programming: Authorized Assembler Services Guide*, and in *External Security Interface (RACROUTE) Macro Reference for MVS and VM (SC28-1366)*. See these manuals for an explanation of the codes.

There may be further messages produced by CICS or the external security manager (ESM) which provide more information.

Destination: CWBO

Modules: DFHWBXM

XMEOUT Parameters: *date, time,applid, userid, transid,*

X'safresp', X'safreas', X'esmresp', X'esmreas', hostaddr, clientaddr, tcpipSERVICE

DFHWB0361 *date time applid* An attempt to attach a CICS Web alias transaction for userid *userid* has failed because the user is not authorized to execute transaction *transid*. Host IP address: *hostaddr*. Client IP address: *clientaddr*. TCPIPSERVICE: *tcpipSERVICE*.

Explanation: An attempt was made to start transaction *transid* by userid *userid* but it was rejected.

CICS Web attach processing could not start *transid* processing because userid *userid* is not authorized to execute transaction *transid*, which was selected for this HTTP Request by the Analyzer URM specified for TCPIPSERVICE *tcpipSERVICE*

System action: The attach for transaction *transid* fails, then processing continues.

User response: Either determine why the Analyzer URM selected transaction *transid*, or modify the Analyzer URM to select an authorized transaction identifier.

Destination: CWBO

Modules: DFHWBXM

XMEOUT Parameters: *date, time,applid, userid, transid, hostaddr, clientaddr, tcpipSERVICE*

DFHWB0362 *date time applid* CICS Web alias transaction *transid* could not be started due to an unexpected error. Host IP address: *hostaddr*. Client IP address: *clientaddr*. TCPIPSERVICE: *tcpipSERVICE*.

Explanation: An attempt was made to start transaction *transid* but the attach failed due to an unexpected error.

CICS Web attach processing could not start *transid* processing due to an unexpected error.

System action: The attach for transaction *transid* fails, then processing continues.

User response: you may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: CWBO

Modules: DFHWBXM

XMEOUT Parameters: *date, time,applid, transid, hostaddr, clientaddr, tcpipSERVICE*

DFHWB0363 *date time applid tranid* **A client certificate that maps to a valid userid is required.**
Host IP address: *hostaddr*. **Client IP address:** *clientaddr*. **TCPIPSERVICE:** *tcpipservice*.

Explanation: The client at IP address *clientaddr* has tried to connect to CICS on a TCPIPSERVICE that has the option AUTHENTICATE(CERTIFICATE), but the client has not provided a client certificate that maps to a valid userid in the external security manager. This may be for one of the following reasons:

- The client has not provided any certificate
- The client's certificate is not installed in the external security manager's database
- The client's certificate is not marked as TRUSTED in the external security manager's database

System action: The connection is rejected with an HTTP 403 (forbidden) response.

User response: Ensure that the client has a valid certificate. Install the certificate in the external security manager with the TRUSTED attribute and mapping to a valid userid. If the security manager is the IBM Security Server for OS/390 (RACF), this can be done with the RACDCERT command, or by using a TCPIPSERVICE defined with AUTHENTICATE(AUTOMATIC).

Destination: CWBO

Modules: DFHWBXN

XMEOUT Parameters: *date, time, applid, tranid, hostaddr, clientaddr, tcpipservice*

DFHWB0500I *date time applid tranid* **CICS Web Interface enable processing is complete.**
Host IP address: *hostaddr*.

Explanation: The enable process has completed successfully.

System action: Processing continues.

User response: None.

Destination: Console and Transient Data Queue
CWBO

Modules: DFHWBWM

XMEOUT Parameters: *date, time, applid, tranid, hostaddr*

DFHWB0551 *date time applid tranid* **The CICS Web Interface server controller detected an abend ACN1 processing a request from client *clientaddr*. Host IP address:** *hostaddr*.

Explanation: The HTTP caller detected an error after invoking program DFHCCNV to perform data conversion on incoming data.

System action: If there is no DFHCNV table defined, the CICS Web Interface cannot perform data conversion on incoming data. An exception disable of the CICS Web Interface is initiated. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: Ensure that there is a valid DFHCNV table link-edited into one of the libraries in the DFHRPL library concatenation.

Destination: CWBO

Modules: DFHWBWM

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr*

DFHWB0723 *date time applid tranid* **The CICS Web analyzer program returned an error response. Program name:** *progrname*.
RESPONSE: *response*. **REASON:** *reason*.
Host IP address: *hostaddr*. **Client IP address:** *clientaddr*. | **TCPIPSERVICE:** *tcpipservice*

Explanation: As part of its normal processing of a request, CICS Web attach processing invokes the user replaceable analyzer to tailor the required actions. This program returns RESPONSE and REASON values. If a CICS supplied sample analyzer is being used, possible RESPONSE code values are:

- 0 OK
- 4 Exception
- 8 Invalid
- 12. Disaster

possible REASON code values are:

- 1 URL of incoming HTTP request is too short
- 2 No "/" character in the URI of the HTTP request
- 3. There is more data to be received for this request
- 4 Converter program name is less than 1 or greater than 8 bytes long
- 5 Alias transaction ID is less than 1 or greater than 4 bytes long
- 6 Server program name is less than 1 or greater than 8 bytes long
- 7 User token passed as query string data on this request is not valid
- 8 URL passed on this request is not valid

Users can also architect their own response and reason code values to be returned by the analyzer, but they

| should use values other than those defined in the CICS
| supplied copybook DFHWBUCD.

| If the host IP address and the client IP address are not
| available when this error occurred, these addresses will
| be displayed as "UNKNOWN" in the message.

| **System action:** An error response is sent to the client
| and processing of the request is terminated.

| **User response:** Examine the RESPONSE and REASON
| code values in the message to determine the cause of
| the error.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, progname,*
| *response, reason, hostaddr, clientaddr, {1= , 2=*
| *TCPIPSERVICE: }, tcpipservice*

| **DFHWB0724** *date time applid tranid CICS Web attach*
| **processing detected an error linking to**
| **the codepage conversion module**
| **DFHCCNV. Host IP address:** *hostaddr.*
| **Client IP address:** *clientaddr.{* |
| *TCPIPSERVICE: }tcpipservice*

| **Explanation:** An error linking to program DFHCCNV
| has forced CICS Web attach processing to abandon a
| client request. If the host IP address and the client IP
| address are not available when this error occurred,
| these addresses will be displayed as "UNKNOWN".

| **System action:** A system dump is taken. An error
| response is sent to the client and the request is
| terminated. Message DFHME0116 is normally produced
| containing the symptom string for this problem.

| **User response:** You may need further assistance from
| IBM to resolve this problem. See the *CICS External*
| *Interfaces Guide* and Part 4 of the *CICS Problem*
| *Determination Guide* for guidance on how to proceed.
| Report the details of the symptom string given in
| message DFHME0116.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, hostaddr,*
| *clientaddr, {1= , 2= TCPIPSERVICE: }, tcpipservice*

| **DFHWB0725** *date time applid tranid CICS Web attach*
| **processing detected an error linking to**
| **the analyzer user replaceable module**
| *progname. Host IP address:* *hostaddr.*
| **Client IP address:** *clientaddr.{* |
| *TCPIPSERVICE: }tcpipservice*

| **Explanation:** An error linking to the analyzer user
| replaceable module forced CICS Web attach processing
| to abandon a client request. If the host IP address and
| the client IP address are not available when this error

occurred, these addresses will be displayed as
"UNKNOWN".

| **System action:** An error response is sent to the client
| and the request is terminated. The tcpipservice remains
| open but unusable.

| **User response:** Ensure that the program specified has
| been correctly installed and defined to CICS. If the user
| replaceable module (URM) has been set dynamically
| using CEMT or the SPI command, then ensure that the
| module is defined to CICS and enabled, or available in
| the library if autoinstall is active.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, progname,*
| *hostaddr, clientaddr, {1= , 2=TCPIPSERVICE: }, tcpipservice*

| **DFHWB0726** *date time applid tranid CICS Web attach*
| **processing cannot link to the analyzer**
| **user replaceable program. No analyzer**
| **specified. Host IP address:** *hostaddr.*
| **Client IP address:** *clientaddr.{* |
| *TCPIPSERVICE: }tcpipservice*

| **Explanation:** CICS Web attach processing cannot
| invoke the analyzer user replaceable module because
| none was specified for the TCPIPSERVICE associated
| with the request being processed. If the host IP address
| and the client IP address are not available when this
| error occurred, these addresses will be displayed as
| "UNKNOWN".

| **System action:** An error response is sent to the client
| and the request is terminated. Message DFHME0116 is
| normally produced containing the symptom string for
| this problem.

| **User response:** Use CEMT SET TCPIPSERVICE to
| specify an analyzer name on the URM parameter.
| CEDA can be used to alter the stored definitions. The
| URM name for CICS Web TCPIPSEVICES (those
| TCPIPSEVICES which have CWXN specified as the
| transaction ID) MUST specify a valid analyzer program
| name for the URM keyword.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, hostaddr,*
| *clientaddr, {1= , 2= TCPIPSERVICE: }, tcpipservice*

| **DFHWB0727** *date time applid tranid CICS Web Interface*
| **attach processing could not attach the**
| **requested alias transaction tranid.**
| **Userid:** *userid. Host IP address:* *hostaddr.*
| **Client IP address:** *clientaddr.{* |
| *TCPIPSERVICE: }tcpipservice*

| **Explanation:** Web attach processing could not attach a
| new task with the requested alias transaction ID *tranid*.

| An error response is sent to the client and processing of
| the request is terminated with abend code AWB2. If the
| host IP address and the client IP address are not
| available when this error occurred, these addresses will
| be displayed as "UNKNOWN".

| **User response:** Ensure that the alias transaction ID
| supplied by the analyzer user replaceable program has
| been defined to CICS.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, tranid,*
| *userid, hostaddr, clientaddr, {1= , 2= TCPIPSERVICE: },*
| *tcpipservice*

| **DFHWB0728** *date time applid tranid CICS Web attach*
| **processing detected a storage error**
| **within the Web receive module**
| **DFHWBSR. Host IP address:** *hostaddr.*
| **Client IP address:** *clientaddr.{ |*
| *TCPIPSERVICE: }tcpipservice*

| **Explanation:** A storage error in program DFHWBSR
| has forced CICS Web attach processing to abandon a
| client request. If the host IP address and the client IP
| address are not available when this error occurred,
| these addresses will be displayed as "UNKNOWN."

| **System action:** An error response is sent to the client
| and the request is terminated.

| **User response:** The most probable cause of this error
| is there being insufficient storage to process the client
| request. This failure may indicate that you need to
| increase the size limits of the EDSAs. EDSA storage
| limits are specified by the EDSALIM system
| initialization parameter. See the *CICS System Definition*
| *Guide* for more guidance on EDSALIM.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, hostaddr,*
| *clientaddr, {1= , 2= TCPIPSERVICE: }, tcpipservice*

| **DFHWB0729** *date time applid tranid CICS Web attach*
| **processing detected an abend in the**
| **analyzer user replaceable module**
| *progname. Host IP address:* *hostaddr.*
| **Client IP address:** *clientaddr.{ |*
| *TCPIPSERVICE: }tcpipservice*

| **Explanation:** An abend in the analyzer user
| replaceable module forced CICS Web attach processing
| to abandon a client request. If the host IP address and
| the client IP address are not available when this error
| occurred, these addresses will be displayed as
| "UNKNOWN".

| **System action:** An error response is sent to the client
| and the request is terminated.

| **User response:** Ensure that the program specified is
| correct.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, progname,*
| *hostaddr, clientaddr, {1= , 2=TCPIPSERVICE: }, tcpipservice*

| **DFHWB0730** *date time applid tranid CICS Web attach*
| **processing encountered an internal error**
| **while processing a client request. Host**
| **IP address:** *hostaddr Client IP address:*
| *clientaddr.{ | TCPIPSERVICE: }tcpipservice*

| **Explanation:** An internal error has forced CICS Web
| processing to abandon a client request. If the host IP
| address and the client IP address are not available
| when this error occurred, these addresses will be
| displayed as "UNKNOWN."

| **System action:** A system dump is taken. An error
| response is sent to the client and the request is
| terminated. Message DFHME0116 is normally produced
| containing the symptom string for this problem.

| **User response:** You may need further assistance from
| IBM to resolve this problem. See the *CICS External*
| *Interfaces Guide* and Part 4 of the *CICS Problem*
| *Determination Guide* for guidance on how to proceed.
| Report the details of the symptom string given in
| message DFHME0116.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, hostaddr,*
| *clientaddr, {1= , 2= TCPIPSERVICE: }, tcpipservice*

| **DFHWB0731** *date time applid tranid CICS Web attach*
| **processing detected an HTTP header**
| **longer than 32767 bytes. Host IP**
| **address:** *hostaddr. Client IP address:*
| *clientaddr.{ | TCPIPSERVICE: }tcpipservice*

| **Explanation:** An HTTP request was being received by
| DFHWBSR when it detected that the header data of the
| request exceeded the currently supported maximum of
| 32767 bytes. If the host IP address and the client IP
| address are not available when this error occurred,
| these addresses will be displayed as "UNKNOWN".

| **System action:** Trace entry 0418 is issued containing
| the web request block. The length of the HTTP header
| data can be inferred from the user_data_offset field.

| **User response:** Examine the input HTTP request and
| reduce the length of the header information to be
| within the allowed limit. See the *CICS External Interfaces*
| *Guide* and Part 4 of the *CICS Problem Determination*
| *Guide* for guidance on how to proceed.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, hostaddr, clientaddr, {1= , 2= TCPIPSERVICE: }, tcpipservice*

| **DFHWB0732** *date time applid tranid CICS Web attach processing encountered a sockets I/O error while receiving a client request. Host IP address: hostaddr. Client IP address: clientaddr.} | TCPIPSERVICE: }tcpipservice*

| **Explanation:** A sockets I/O error has forced CICS Web processing to abandon a client request. If the host IP address and the client IP address are not available when this error occurred, these addresses will be displayed as "UNKNOWN".

| **System action:** The Web error program DFHWBEP is driven, but no error response can be sent to the client. The request is terminated.

| **User response:** Check for any associated sockets domain error messages, which may give more details on the error which has occurred. The error may have been caused by a user terminating their Web Browser before CICS has been able to process the request. If the problem persists, there may be a problem with the TCP/IP network. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, hostaddr, clientaddr, {1= , 2= TCPIPSERVICE: }, tcpipservice*

| **DFHWB0733** *date time applid tranid CICS Web attach processing failed because there were no available SSL TCBS. Host IP address: hostaddr. Client IP address: clientaddr.} | TCPIPSERVICE: }tcpipservice*

| **Explanation:** A Secure Sockets Layer connection from a client with address *ipaddr* was received on TCPIPSERVICE(*service*), but there were no available TCBS to process the request.

| **System action:** The socket for the connection is closed. No message is sent to the client because the client expects the response to be encrypted by SSL, but SSL services cannot be provided.

| **User response:** If this message occurs frequently, consider raising the value of the MAXSSLTCBS system initialization parameter. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, hostaddr,*

| *clientaddr, {1= , 2= TCPIPSERVICE: }, tcpipservice*

| **DFHWB0734** *date time applid tranid CICS Web attach processing failed because the SSL handshake with the client has failed. Host IP address: hostaddr. Client IP address: clientaddr.} | TCPIPSERVICE: }tcpipservice*

| **Explanation:** A Secure Sockets Layer connection from a client with address *ipaddr* was received on TCPIPSERVICE(*service*), but the SSL handshake failed.

| **System action:** The socket for the connection is closed. No message is sent to the client because the client expects the response to be encrypted by SSL, but SSL services cannot be provided. The reason for the handshake failure may be displayed in an earlier DFHSO0123 message.

| **User response:** If the DFHSO0123 message indicates a CICS configuration error, correct it. Otherwise, the problem is likely to be a client error, and can be ignored. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, hostaddr, clientaddr, {1= , 2= TCPIPSERVICE: }, tcpipservice*

| **DFHWB0736** *date time applid tranid The method in the received HTTP request is not implemented by the server. Host IP address: hostaddr. Client IP address: clientaddr. TCPIPSERVICE: tcpipservice.*

| **Explanation:** As part of its normal processing of a request, CICS Web Support checks the supplied method with the HTTP version of the request and the version of HTTP supported by the server. The HTTP version supported by CICS depends on the version that the server application is running at.

| **System action:** An error response is sent to the client and processing of the request is terminated.

| **User response:** Correct the method in the request to one supported by the version of HTTP being used and the version that the server application is capable of running at. The version of the server is that supplied on the HTTP response.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, hostaddr, clientaddr, tcpipservice*

DFHWB0737 *date time applid tranid* CICS Web support has detected that the version of the incoming HTTP request is higher than the version that CICS supports. Host IP address: *hostaddr*. Client IP address: *clientaddr*. TCPIPSERVICE: *tcpipSERVICE*.

Explanation: As part of its normal processing of a request, CICS Web Support checks the version of the incoming HTTP request. If it is higher than the version CICS supports and the method is not recognised the request is rejected.

System action: An error response is sent to the client and processing of the request is terminated.

User response: Examine the version in the HTTP response to determine the HTTP version that is supported.

Destination: CWBO

Modules: DFHWPBXN

XMEOUT Parameters: *date, time,applid, tranid, hostaddr, clientaddr, tcpipSERVICE*

DFHWB0738 *date time applid tranid* CICS Web Support has detected that the incoming HTTP request has a version that is at least HTTP/1.1 but has no host header. Host IP address: *hostaddr*. Client IP address: *clientaddr*. TCPIPSERVICE: *tcpipSERVICE*.

Explanation: As part of its normal processing of a request, CICS Web Support checks the version of the incoming HTTP request. If it is at least HTTP/1.1 and there is no host header, the request is rejected as it is not compliant.

System action: An error response is sent to the client and processing of the request is terminated.

User response: Issue the request again after adding a host header.

Destination: CWBO

Modules: DFHWPBXN

XMEOUT Parameters: *date, time,applid, tranid, hostaddr, clientaddr, tcpipSERVICE*

DFHWB0739 *date time applid tranid* An invalid EXPECT header has been received. Client IP address: *clientaddr*. TCPIPSERVICE: *tcpipSERVICE*

Explanation: While processing an EXPECT header CICS has detected that the value is not 100-continue.

System action: The request is rejected with a HTTP/1.1 status of 417 Expectation Failed.

User response: Correct the HTTP/1.1 Client.

Destination: CWBO

Modules: DFHWPBXN

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, tcpipSERVICE*

DFHWB0740 *date time applid tranid* An HTTP/1.0 client has sent an EXPECT header which is not supported. Client IP address: *clientaddr*. TCPIPSERVICE: *tcpipSERVICE*

Explanation: While processing an EXPECT header CICS has detected that the client is not using HTTP version 1.1.

System action: The request is rejected with an HTTP/1.0 status code of 400 Bad Request.

User response: Correct the HTTP Client.

Destination: CWBO

Modules: DFHWPBXN

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, tcpipSERVICE*

DFHWB0741 *date time applid tranid* An HTTP socket receive request has timed out. Client IP address: *clientaddr*. TCPIPSERVICE: *tcpipSERVICE*

Explanation: There are two possible reasons for this message

- CICS has timed out while receiving data from the client.
- CICS has sent a 100 Continue header in response to an EXPECT: header however the request has timed out before the client has sent the message body.

System action: The possible causes are

- The value of the SOCKETCLOSE parameter on the TCPIPSERVICE is too low
- The client has sent an incorrect Content-Length header
- The client has not sent the body of the request

User response: Possible solutions are

- Increase the value of the SOCKETCLOSE parameter on the TCPIPSERVICE.
- Correct the HTTP Client.

Destination: CWBO

Modules: DFHWPBXN

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, tcpipSERVICE*

DFHWB0742 *date time applid tranid* Conversion of HTTP header failed. Host IP address: *hostaddr*. Client IP address: *clientaddr*. TCPIPSERVICE: *tcpipSERVICE*

Explanation: The conversion of the inbound HTTP

| header has failed and this has caused CICS Web
| processing to abandon the request. If the host IP
| address and the client IP address are not available
| when this error occurred, these addresses will be
| displayed as "UNKNOWN".

| **System action:** An exception entry is made in the
| trace table. An error response is sent to the client and
| the request is terminated. Message DFHME0116 is
| normally produced containing the symptom string for
| this problem.

| **User response:** The exception trace entry may help
| you to determine the cause of the error. If not you may
| need further assistance from IBM to resolve this
| problem. See the *CICS External Interfaces Guide* and Part
| 4 of the *CICS Problem Determination Guide* for guidance
| on how to proceed. Report the details of the symptom
| string given in message DFHME0116.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, hostaddr,*
| *clientaddr, {1= , 2= TCPIPSERVICE: }, tcpipservice*

| **DFHWB0743** *date time applid tranid* **The CICS Web**
| **charset codepage is invalid. Host IP**
| **address: hostaddr. Client IP address:**
| *clientaddr.{ | TCPIPSERVICE: }tcpipservice*

| **Explanation:** The CICS Web charset codepage is
| invalid and this has caused CICS Web processing to
| abandon the request. If the host IP address and the
| client IP address are not available when this error
| occurred, these addresses will be displayed as
| "UNKNOWN".

| **System action:** An exception entry is made in the
| trace table. An error response is sent to the client and
| the request is terminated. Message DFHME0116 is
| normally produced containing the symptom string for
| this problem.

| **User response:** The exception trace entry may help
| you to determine the cause of the error. If not you may
| need further assistance from IBM to resolve this problem. See
| the *CICS External Interfaces Guide* and Part 4 of the *CICS*
| *Problem Determination Guide* for guidance on how to
| proceed. Report the details of the symptom string given
| in message DFHME0116.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, hostaddr,*
| *clientaddr, {1= , 2= TCPIPSERVICE: }, tcpipservice*

| **DFHWB0744** *date time applid tranid* **The CICS Web**
| **codepage is invalid. Host IP address:**
| *hostaddr. Client IP address: clientaddr.{ |*
| *TCPIPSERVICE: }tcpipservice*

| **Explanation:** The CICS Web host codepage is invalid
| and this has caused CICS Web processing to abandon
| the request. If the host IP address and the client IP
| address are not available when this error occurred,
| these addresses will be displayed as "UNKNOWN".

| **System action:** An exception entry is made in the
| trace table. An error response is sent to the client and
| the request is terminated. Message DFHME0116 is
| normally produced containing the symptom string for
| this problem.

| **User response:** The exception trace may help you to
| determine the cause of the error. If not you may need
| further assistance from IBM to resolve this problem. See
| the *CICS External Interfaces Guide* and Part 4 of the *CICS*
| *Problem Determination Guide* for guidance on how to
| proceed. Report the details of the symptom string given
| in message DFHME0116.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, hostaddr,*
| *clientaddr, {1= , 2= TCPIPSERVICE: }, tcpipservice*

| **DFHWB0745** *date time applid tranid* **Conversion of user**
| **data failed. Host IP address: hostaddr.**
| **Client IP address: clientaddr.{ |**
| *TCPIPSERVICE: }tcpipservice*

| **Explanation:** The conversion of the inbound user data
| has failed and this has caused CICS Web processing to
| abandon the request. If the host IP address and the
| client IP address are not available when this error
| occurred, these addresses will be displayed as
| "UNKNOWN".

| **System action:** An exception entry is made in the
| trace table. An error response is sent to the client and
| the request is terminated. Message DFHME0116 is
| normally produced containing the symptom string for
| this problem.

| **User response:** The exception trace entry may help
| you to determine the cause of the error. If not you may
| need further assistance from IBM to resolve this
| problem. See the *CICS External Interfaces Guide* and Part
| 4 of the *CICS Problem Determination Guide* for guidance
| on how to proceed. Report the details of the symptom
| string given in message DFHME0116.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, hostaddr,*
| *clientaddr, {1= , 2= TCPIPSERVICE: }, tcpipservice*

| **DFHWB0746** *date time applid tranid* **The maximum**
| **length of data that can be received has**
| **been exceeded. Client IP address:**
| *clientaddr. TCPIPSERVICE: tcpipservice*

| **Explanation:** The amount of data transmitted by a client has exceeded the limit defined on the tcpipSERVICE.

| **System action:** The request is rejected

| **User response:** There are two possible causes

- | • The value of the MAXDATALEN parameter on the TCPIPSERVICE is too low
- | • There is an error in the client

| There are two possible solutions

- | • Increase the value of the MAXDATALEN parameter on the TCPIPSERVICE.
- | • Correct the HTTP Client.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, clientaddr, tcpipSERVICE*

| **DFHWB0747** *date time applid tranid* **A Content-Length and Transfer-Encoding conflict has been detected. Client IP address: *clientaddr*. TCPIPSERVICE: *tcpipSERVICE***

| **Explanation:** The Client has sent a request that contains a Content-Length header as well as a Transfer-Encoding header.

| **System action:** The request is rejected.

| **User response:** Correct the client

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, clientaddr, tcpipSERVICE*

| **DFHWB0748** *date time applid tranid* **An invalid Chunk Size header has been received. Client IP address: *clientaddr*. TCPIPSERVICE: *tcpipSERVICE***

| **Explanation:** The Client has sent a request that contains a an invalid chunk size header. Valid values are 0 - 9, A - F with a maximum of 8 characters.

| **System action:** The request is rejected.

| **User response:** Correct the client

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, clientaddr, tcpipSERVICE*

| **DFHWB0749** *date time applid tranid* **An invalid Trailer has been received. Client IP address: *clientaddr*. TCPIPSERVICE: *tcpipSERVICE***

| **Explanation:** The request contains a Trailer that exceeds 32767 bytes in length.

| **System action:** The request is rejected.

| **User response:** Correct the client

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, clientaddr, tcpipSERVICE*

| **DFHWB0750** *date time applid tranid* **HTTP warning request header received. Warning: *warnvalue* Host IP address: *hostaddr* Client IP address: *clientaddr***

| **Explanation:** A warning header has been received on an incoming HTTP request, by CICS Web support. The contents are written in this message for audit purposes.

| **System action:** Processing for the request continues normally.

| **User response:** Examine the warning to determine if action is required.

| **Destination:** CWBW

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, warnvalue, hostaddr, clientaddr*

| **DFHWB0751** *date time applid tranid* **A precondition specified by an If-Unmodified-Since header has failed. Client IP address: *clientaddr*. TCPIPSERVICE: *tcpipSERVICE*.**

Explanation: The request contains an If-Unmodified-Since header and the precondition has failed.

Note: If CICS is returning dynamic content it is assumed that any If-Unmodified-Since precondition can never be met.

| **System action:** The request is rejected with a HTTP/1.1 412 response.

| **User response:** None required.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, clientaddr, tcpipSERVICE*

| DFHWB0752 *date time applid tranid* **HTTP Warning response header received. Warning: warnvalue Client IP address: clientaddr Server IP address: serveraddr.**

| **Explanation:** A warning header has been received in response to an HTTP request sent by CICS as a client. The contents are written in this message for audit purposes.

| **System action:** Processing for the request continues normally.

| **User response:** Examine the warning to determine if any action is required.

| **Destination:** CWBW

| **Modules:** DFHWBCL

| **XMEOUT Parameters:** *date, time,applid, tranid, warnvalue, clientaddr, serveraddr*

| DFHWB0753 *date time applid* **Transaction tranid chunked request incomplete. Session token: X'sesstoken'.**

| **Explanation:** The transaction has terminated with an incomplete chunked request sent by CICS as a client.

| **System action:** End of transaction processing continues normally.

| **User response:** Examine the warning to determine if any action is required.

| **Destination:** CWBO

| **Modules:** DFHWBCL

| **XMEOUT Parameters:** *date, time,applid, tranid, X'sesstoken'*

| DFHWB0754 *date time applid tranid* **An invalid Chunk has been received. Client IP address: clientaddr. TCPIPService: tcpipservice**

| **Explanation:** The client has sent a chunk request but the chunk has not been terminated with the expected CRLF characters.

| **System action:** The request is rejected.

| **User response:** Correct the client.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, clientaddr, tcpipservice*

DFHWB0756 *date time applid tranid* **The host on the received HTTP request is invalid. Client IP address: clientaddr. TCPIPService: tcpipservice**

Explanation: The host on the HTTP request received by CICS is invalid.

System action: The request is rejected.

User response: Correct the client.

Destination: CWBO

Modules: DFHWBXN

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, tcpipservice*

| DFHWB1007 *applid* **Initializing CICS Web environment.**

| **Explanation:** Module DFHWBIP has been invoked to initialize the CICS Web 3270 environment.

| **System action:** Processing continues.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHWBIP

| **XMEOUT Parameter:** *applid*

| DFHWB1008 *applid* **CICS Web environment initialization is complete.**

| **Explanation:** The CICS Web 3270 environment has been initialized, and it is now ready to process Web-related work.

| **System action:** Processing continues.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHWBIP

| **XMEOUT Parameter:** *applid*

| DFHWB1009 *applid* **CICS Web environment initialization failed. Reason Code: X'rc'.**

| **Explanation:** The CICS Web 3270 environment initialization failed with reason code *rc*.

| **System action:** CICS initialization continues. Subsequent calls to the components of the CICS Web environment may fail.

| **User response:** Use the reason code *rc* to determine why initialization failed. The possible reasons are:

| 1 Storage for the Web anchor block could not be obtained.

| 3 Load for module DFHWBST failed.

| 4 Load for module DFHWBTC failed.

| 5 Storage for the State Manager anchor block could not be obtained.

- | 6 The creation of the State Token Directory failed.
- | 7 The subpool required for state management could not be added.
- | 8 The subpool required for HTTP buffers could not be added.
- | 9 The addition of the WBST lock failed.
- | A Load for module DFHWBIP failed.

| Reason codes 1 to 9 originate in DFHWBIP. Reason code A originates from DFHSIJ1.

| **Destination:** Console

| **Modules:** DFHWBIP, DFHSIJ1

| **XMEOUT Parameters:** *applid, X'rc'*

| **DFHWB1020** *date time applid* **CICS Web State Manager could not find state data for state token *stoken* for a {destroy | retrieve | store} request.** | *TCPIPSERVICE: }tcpipservice*

| **Explanation:** The CICS Web State Manager could not find the state data for the state token *stoken* or the supplied state token *stoken* does not exist.

| **System action:** The requested state data cannot be destroyed, updated or retrieved by the Web State Manager. An exception trace entry is made in the trace table.

| **User response:** Ensure that the supplied state token *stoken* is correct. On a busy CICS region, the most likely cause of this error is that the state data has been discarded by the Web garbage collection process before the Web state manager could access it. Check that the system initialization *WEBDELAY* parameters are appropriate values. See the *CICS System Definition Guide* for guidance on setting the values of the Web garbage collection interval and the Web terminal timeout interval.

| **Destination:** CWBO

| **Modules:** DFHWBST

| **XMEOUT Parameters:** *date, time,applid, stoken, {1=destroy,2=retrieve, 3=store}, {1= , 2= TCPIPSERVICE: }, tcpipservice*

| **DFHWB1021** *date time applid* **CICS Web State Manager could not find state data for state token *stoken* in order to perform the {initialize partnership | make partnership | break partnership | trigger partner | wait for partner | query partner | terminate partnership} request for task number *taskid*, CICS unit of work id *X'cuowid'*.** | *TCPIPSERVICE: }tcpipservice*

| **Explanation:** The CICS Web State Manager could not

| find the state data for the state token *stoken* because the supplied state token *stoken* does not exist. The running task is task number *taskid* and the associated CICS unit of work id is *cuowid*.

| **System action:** The Web State Manager cannot therefore perform the requested partnership function for the running task. An exception trace entry is made in the trace table.

| **User response:** Ensure that the supplied state token *stoken* is correct. On a busy CICS region, the most likely cause of this error is that the state data has been discarded by the Web garbage collection process before the Web State Manager could access it for the running task. Check that the system initialization *WEBDELAY* parameters are appropriate values. See the *CICS System Definition Guide* for guidance on setting the values of the Web garbage collection interval and the Web terminal timeout interval.

| **Destination:** CWBO

| **Modules:** DFHWBST

| **XMEOUT Parameters:** *date, time,applid, stoken, {1=initialize partnership, 2=make partnership, 3=break partnership, 4=trigger partner, 5=wait for partner, 6=query partner, 7=terminate partnership}, taskid, X'cuowid', {1= , 2= TCPIPSERVICE: }, tcpipservice*

| **DFHWB1100 E** *date time applid* **The CICS Web Interface received data from the user application that is longer than expected.**

| **Explanation:** The environment variables program has received data from a user application. However, the data received was longer than expected.

| **System action:** Exception trace point 4623 is written. The environment variables program abnormally terminates with abend code AWB7.

| **User response:** Examine the data sent to CICS from the application program.

| **Destination:** Console Routecodes 2 and 12 and Transient Data Queue CWBO

| **Modules:** DFHWBENV

| **XMEOUT Parameters:** *date, time,applid*

| **DFHWB1200** *date time applid tranid* **The CICS Web Interface analyzer program set parameter *WBRA_USER_DATA_LENGTH* to more than the maximum. Program name: *progname*. RESPONSE: *response*. REASON: *reason*. Host IP address: *hostaddr*. Client IP address: *clientaddr*. Data offset: *X'dataoffset'*. Data length: *X'datalength'*. Buffer length: *X'bufferlength'*.** | *TCPIPSERVICE: }tcpipservice*

| **Explanation:** As part of its normal processing of a request, Web attach processing invokes the user replaceable analyzer to tailor the required actions. This program is passed the length of the user data part of the HTTP request in parameter WBRA_USER_DATA_LENGTH, which it can modify. However, the modified value is greater than the maximum allowable value which represents the available space in the data buffer.

| **System action:** An error response is sent to the client and processing of the request is terminated.

| **User response:** Modify the analyzer program so that it does not set the parameter WBRA_USER_DATA_LENGTH to be greater than the maximum. The sum of the data offset and the data length should not exceed the buffer length.

| **Destination:** CWBO

| **Modules:** DFHWBXN

| **XMEOUT Parameters:** *date, time,applid, tranid, progname, response, reason, hostaddr, clientaddr, X'dataoffset', X'datalength',X'bufferlength', {1=, 2=TCPIPSERVICE: }, tcpipservice*

DFHWB1525 *date time applid tranid* **The CICS Web Interface connection manager received an unexpected response from CICS.**

Explanation: The connection manager received an unexpected response to a CICS command. This is a logic error.

System action: A system dump is taken. Processing continues. Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116.

Destination: CWBO and Terminal End User

Modules: DFHWBC01

XMEOUT Parameters: *date, time,applid, tranid*

| **DFHWB1551** *date time applid* **The CWBC Transaction is no longer used to manage CICS Web resources.**

| **Explanation:** An attempt has been made to run the CICS-supplied transaction CWBC. This transaction is no longer used to manage CICS Web resources.

| **System action:** None. Processing continues.

| **User response:** Refer to the *CICS Internet and External Interfaces Guide*, and the *Resource Definition Guide* for details of how to manage CICS Web

| resources. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Destination:** CWBO and Terminal End User

| **Modules:** DFHWBC01

| **XMEOUT Parameters:** *date, time,applid*

| **DFHWB7001** **HTTPD_extract for envvar failed.**
| **Processing of this request terminated**
| **rc=retcode.**

| **Explanation:** The CICS GWAPI program received an error response *retcode* when it executed the HTTPD_extract function to retrieve the specified environment variable *envvar*.

| **System action:** The CICS GWAPI program terminates and returns an HTTP server error response (code 500) to the Web browser.

| **User response:** Investigate whether the ICSS/390 server has been correctly configured to use the CICS GWAPI DLL. Refer to the *CICS External Interfaces Guide* for further information.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHWBAPI

| **DFHWB7002** **HTTPD_read for HTTP user data failed.**
| **Processing of this request terminated**
| **rc=retcode.**

| **Explanation:** The CICS GWAPI program received an error response *retcode* when it executed the HTTPD_read function to retrieve the user data sent with an HTTP request.

| **System action:** The CICS GWAPI program terminates and returns an HTTP server error response (code 500) to the Web browser.

| **User response:** Investigate whether the ICSS/390 server has been correctly configured to use the CICS GWAPI DLL. Refer to the *CICS External Interfaces Guide* for further information.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHWBAPI

| **DFHWB7003** **Invalid URL passed to DFHWBAPI: url.**
| **Processing of this request terminated**
| **rc=retcode.**

| **Explanation:** The CICS GWAPI program has attempted to analyze the path name section of the

| Uniform Resource Locator *url* that it received from the
| Web browser, but has determined that its syntax is not
| in the standard format expected to decide which CICS
| region, transaction, and program should process the
| request.

| The reason for the failure is given by one of the
| following values for the return code *retcode*.

- | 1 The path name contains fewer than eight
| characters.
- | 2 The path name does not begin with a leading
| slash ('/') character.
- | 3 The CICS applid is invalid.
- | 4 The converter name is invalid.
- | 5 The transaction name is invalid.
- | 6 The server program name is invalid.

| **System action:** The CICS GWAPI program terminates
| and returns an HTTP server error response (code 500)
| to the Web browser.

| **User response:** Investigate whether the ICSS/390
| server has been correctly configured to use the CICS
| GWAPI DLL. Refer to the *CICS External Interfaces Guide*
| for further information.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHWBAPI

| **DFHWB7006 Link to program *program_name* at applid
| *applid* failed for URL *url*. Processing of
| this request terminated RESP=*resp*
| RESP2=*resp2*.**

| **Explanation:** The CICS GWAPI program has
| attempted to use the CICS External Call Interface
| (EXCI) to link to the Business Logic Interface program
| *program_name* in the CICS region with applid *applid*, but
| the link was unsuccessful. The EIBRESP and EIBRESP2
| values from the EXEC CICS LINK command are *resp*
| and *resp2*.

| **System action:** The CICS GWAPI program terminates
| and returns an HTTP error response to the Web
| browser. If *resp* and *resp2* indicate that there is a
| temporary problem establishing an Inter-Region
| Communication connection, the HTTP error response is
| 503 (system not available), otherwise it is 500 (server
| error).

| **User response:** Investigate whether the target CICS
| region has been correctly configured to receive EXCI
| requests from this ICSS/390 server address space.

| The following must be set up:

- | • The target CICS region must be active.
- | • There must be a generic EXCI pipe, or a specific
| EXCI pipe for *applid*, installed in the target CICS
| region.

- | • Inter-Region Communication must be active in the
| target CICS region.

| Refer to the *CICS External Interfaces Guide* for further
| information.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHWBAPI

| **DFHWB7007 Error detected by program *program_name*.
| Processing of this request terminated
| rc=*retcode*.**

| **Explanation:** The CICS GWAPI program has
| attempted to use the CICS External Call Interface
| (EXCI) to link to the Business Logic Interface program
| *program_name* in a CICS region, but an error response
| was returned by the program. The return code *retcode* is
| the Business Logic Interface response that was returned
| in *wbb1_response*.

| **System action:** The CICS GWAPI program terminates
| and returns *retcode* as the HTTP server response to the
| Web browser.

| **User response:** Investigate the reason for the error
| response. The values that can be returned in
| *wbb1_response* are documented in the *CICS External
| Interfaces Guide*, and are generally caused by a
| programming error in either the converter program or
| the server application program.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHWBAPI

| **DFHWB7008 HTTPD_set for *variable* failed for URL
| *url*. Processing of this request
| terminated rc=*retcode*.**

| **Explanation:** The CICS GWAPI program received an
| error response *retcode* when it executed the HTTPD_set
| function to set a value for the specified variable *variable*
| while processing URL *url*.

| **System action:** The CICS GWAPI program terminates
| and returns an HTTP server error response (code 500)
| to the Web browser.

| **User response:** Investigate whether the ICSS/390
| server has been correctly configured to use the CICS
| GWAPI DLL. Refer to the *CICS External Interfaces Guide*
| for further information.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** SYSPRINT

| **Modules:** DFHWBAPI

| **DFHWB7009 HTTP_write failed for URL *url*.**
| **Processing of this request terminated**
| **rc=*retcode*.**

| **Explanation:** The CICS GWAPI program received an
| error response *retcode* when it executed the HTTPD_write
| function to write the user data to be sent with an HTTP
| response for URL *url*.

| **System action:** The CICS GWAPI program terminates
| and returns an HTTP server error response (code 500)
| to the Web browser.

| **User response:** Investigate whether the ICSS/390
| server has been correctly configured to use the CICS
| GWAPI DLL. Refer to the *CICS External Interfaces Guide*
| for further information.

| **Note:** This message cannot be changed with the
| message editing utility.

DFHXAxxxx messages

| **DFHXA6521I *applid* CICS shutdown initiated by**
| **CEBT event**

| **Explanation:** This is an informational message issued
| from the CICS TCB.

| **System action:** CICS terminates normally.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHXRCP

| **XMEOUT Parameter:** *applid*

| **DFHXA6526I *applid* MESSAGE RECEIVED FOR**
| **UNSUPPORTED QUEUE *X'queue'*.**

| **Explanation:** This message is issued from the CAVM
| TCB. A tracking message has been received for a queue
| with hexadecimal name *X'queue'*. However this queue
| is not recognized by CICS.

| **System action:** CICS processing continues, but
| tracking messages for queue *X'queue'* are ignored.

| **User response:** Check that the active CICS system and
| the alternate CICS system are at the same functional
| level with respect to XRF.

| If both CICS systems are at the same level, check why
| the active CICS system has written data to the alternate
| system.

| Ensure that the queue name has not been corrupted.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** DFHXRB

| **DFHXA6528I *applid* Unable to link to program**
| ***progrname***

| **Explanation:** This message is issued from the CICS
| TCB. CICS is unable to link to program *progrname*.

| **System action:** CICS terminates abnormally with a
| system dump and abend code 0210.

| **User response:** Examine the dump to determine why
| CICS was unable to link to program *progrname*.

| Ensure that the named program is not missing from the
| data sets concatenated in the DFHRPL DD statement. If
| *progrname* is missing, obtain a copy of the program and
| include it in the library. In addition, ensure that enough
| storage is available for the dynamic storage areas.

| **Destination:** Console

| **Modules:** DFHXRE

| **XMEOUT Parameters:** *applid, progrname*

| **DFHXA6530 *applid* START=STANDBY specified.**
| **CICS start-up is terminated because**
| **XRF=NO is specified**

| **Explanation:** START=STANDBY and XRF=NO cannot
| be specified together.

| **System action:** CICS terminates abnormally with a
| dump.

| **User response:** Correct the conflicting values of the
| operands START and XRF.

| **Destination:** Console

| **Modules:** DFHSIC1

| **XMEOUT Parameter:** *applid*

| **DFHXA6540I XRF HAS FAILED. ERROR NUMBER**
| ***nn* ON XRF MESSAGE DATA SET IN**
| **CONTROL INTERVAL WITH RBA**
| **HEX'*xx*'.**

| **Explanation:** The XRF message manager has
| encountered a problem with the contents of the given
| control interval in the message data set. The message
| includes an error number *nn* which can take one of the
| following values:

- | 01 The CI does not contain an XRF message manager control record.
- | 02 The XRF message control record contains a cycle number less than that of the current read cycle.
- | 03 The XRF message manager did not find a message record boundary where it expected one.
- | 04 There is an XRF message sequence number error.
- | 05 The CIDF is invalid (for example, the free area length is negative).
- | 06 The length in the RDF is less than the length of a message record header, or is inconsistent with the data length in the message record header.
- | 07 The end of the record lies outside the data area defined by the data length field of the CIDF.

| **System action:** Surveillance by the alternate system ceases.

| **User response:** Check that the active and alternate systems are using the same pair of data sets for XRF surveillance. If they are, this is almost certainly a CICS error affecting either the alternate system, the active system, or both.

| You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** Console

| **Modules:** DFHWMRD

| **DFHXA6541I XRF HAS FAILED. THE XRF MESSAGE READER IN THE ALTERNATE SYSTEM HAS FALLEN TOO FAR BEHIND.**

| **Explanation:** The alternate system has been unable to keep up with the messages generated by the active CICS system. Its read position in the wrap-round message data set has been 'lapped' by the active system.

| **System action:** Surveillance by the alternate system ceases.

| **User response:** Try to determine and correct the reason for the delay to the alternate system. It may be that the message data set is too small to allow adequate buffering, or the message data set has been reserved by the active CEC – not necessarily by the active CICS.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** Console

| **Modules:** DFHWMRD

| **DFHXA6560I applid TERMINATION COMMAND FAILED: command.**

| **Explanation:** The command issued by the alternate CICS during takeover to terminate the active CICS failed. MVS rejected the system operator command *command* issued under program control as being invalid.

| **System action:** Message DFHXA6581 or DFHXA6582 is also displayed. The alternate CICS continues with its processing to detect termination of the active CICS job.

| **User response:** Ensure that the active CICS job terminates. See messages DFHXA6581 and DFHXA6582. For problem determination, hard copy of the console log may be required.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** Console

| **Modules:** DFHWTI

| **DFHXA6561D applid WHEN jesno jobname ENDS REPLY 'JOB' OR WHEN CEC sid HAS FAILED REPLY 'CEC'.**

| **Explanation:** During a takeover attempt, the issuing CICS system was unable to determine whether job *jobname*, running on a different CEC, has terminated. This is for one of the following reasons:

- | • CICS was unable to issue a system operator command under program control to cancel the named job. In this case, message DFHXA6560, DFHXA6569 or DFHXA6570 has been produced.
- | • CICS has either successfully issued a cancel command, or job *jobname* is a failing DBCTL subsystem, but the job still appears to be running after the time period specified by the initialization parameter JESDI.

| If *jobname* is the active CICS. Takeover cannot continue until *jobname* has ended. If *jobname* is a DBCTL subsystem, an alternate DBCTL cannot be started until *jobname* has ended.

| **System action:** The system waits for a reply. In the meanwhile, the issuing CICS system continues processing to detect termination of the job.

| If termination is detected while the reply is still outstanding, this message is deleted and message DFHXA6564 is displayed. In this case, a reply is no longer required.

| If the reply is 'JOB', then processing continues as if
| CICS had detected the termination itself.

| This also happens if the reply is 'CEC', but in addition
| an internal record is created indicating that the CEC is
| inoperative at this time. Other alternate CICS which
| have issued this message for jobs executing on the CEC
| specified, and which are still waiting for a reply, will
| detect the internal record of the failed CEC. Having
| done so they delete their outstanding replies and issue
| message DFHXA6563.

| **User response:** The operator should either:-

- | • Ensure that job *jobname* with JES number *jesno*
| terminates, and then reply 'JOB', or
- | • Ensure that the CEC with MVS system identifier *sid*
| is inoperative at this time, for example by selecting
| SYSTEM RESET on that CEC, and then reply 'CEC'.

| No action is necessary if at any time CICS deletes this
| message, as described above.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** DFHWTI

| **DFHXA6563I** *applid jesno jobname ENDED DUE TO*
| **FAILURE OF CEC** *sid*.

| **Explanation:** During takeover, the alternate CICS has
| detected that the CEC with MVS system identifier *sid*
| has failed and therefore that the active CICS job with
| job name *jobname* and JES job number *jesno* is regarded
| to have ended.

| **System action:** The alternate CICS continues with its
| takeover processing.

| **User response:** None.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** DFHWTI

| **DFHXA6564I** *applid TERMINATION OF jesno jobname*
| **DETECTED**.

| **Explanation:** During takeover, the alternate CICS has
| detected that the active CICS job with specified job
| name and JES job number has ended.

| **System action:** The alternate CICS continues with its
| takeover processing.

| **User response:** None.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** DFHWTI

| **DFHXA6566I** *applid modname NOT LINK-EDITED*
| **REENTERABLE**.

| **Explanation:** Module *modname*, the CLT or RST
| currently in use, was found not to have been
| link-edited with the reenterable module attribute.

| The initialization option CLT=*xx* or RST=*xx* specifies
| the suffix of the CLT or RST currently in use by this
| alternate CICS.

| **System action:** Further messages are issued which
| describe the action taken by CICS.

| **User response:** The appropriate response is indicated
| by subsequent messages.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** DFHWTI

| **DFHXA6567I** *applid APPLID applid2 NOT FOUND IN*
| *modname*.

| **Explanation:** Module *modname*, the CLT or RST
| currently in use by this alternate CICS, was found not
| to contain the APPLID *applid2*.

| **System action:** Further messages are issued which
| describe the action taken by CICS.

| **User response:** The appropriate response is indicated
| by subsequent messages.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** DFHWTI

| **DFHXA6568I** *applid JOBNAME jobname NOT*
| **FOUND IN** *modname*.

| **Explanation:** Module *modname* is either a CLT or an
| RST.

| If the module is a CLT, it was found not to contain the
| job name *jobname* associated with the APPLID of this
| alternate CICS.

| If the module is an RST, it was found not to contain the
| job name *jobname* associated with the DBCTL
| subsystem identified in the message.

| *jobname* is the job name which the alternate CICS
| would have used to cancel the active CICS job or
| DBCTL job during a takeover

| **System action:** Further messages are issued which
| describe the action taken by CICS.

| **User response:** The appropriate response is indicated
| by subsequent messages.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** DFHWTI

| **DFHXA6569I** *applid* MVS SYSTEM IDENTIFIER *sid*
| NOT FOUND IN DFHCLT xx .

| **Explanation:** The CLT currently in use was found not
| to contain the specified MVS system identifier *sid*,
| which identifies the CEC on which the active CICS was
| executing.

| The initialization option CLT= xx specifies the suffix of
| the CLT currently in use by this alternate CICS.

| **System action:** Further messages are issued by the
| alternate CICS to describe the action taken.

| **User response:** The appropriate response is indicated
| by subsequent messages.

| **Note:** This message cannot be changed with the
| message editing utility.

| NOT VALID.

| **Explanation:** Module *modname*, the CLT or RST
| defined for use by this CICS system, is not valid.

| **System action:** Further messages are issued by the
| alternate CICS to describe the action taken.

| **User response:** The appropriate response is indicated
| by subsequent messages.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** DFHWTI

| **DFHXA6574I** *applid* ERROR FOUND WITH
| DFHCLT xx .

| **Explanation:** The alternate CICS that issued this
| message is unable to load a CLT, or has performed a
| check on the CLT contents and has found an error. If
| the specified CLT is used during a future takeover, the
| takeover might not be successful. A new or corrected
| CLT can be made available and loaded at takeover.

| **System action:** Processing continues.

| **User response:** Verify that the alternate CICS job is

| authorized to perform a takeover of the active CICS.
| Take appropriate action if not.

| Locate the previous message issued by this alternate
| CICS, which provides details of the CLT error.

| Perform the appropriate source edit, assembly and
| link-edit tasks necessary to make a correct CLT
| available for this alternate CICS.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** DFHWTI

| **DFHXA6575I** *applid* **SUBSYSTEM NAME** *subsysid*
| **NOT FOUND IN** *rstname* **FOR THIS**
| **APPLID.**

| **Explanation:** This is an informational message
| indicating that RST *rstname*, which was selected via the
| SIT, does not include an entry for DBCTL subsystem
| *subsysid* in any RSE containing the specific APPLID
| *applid* of this CICS.

| **System action:** No action results directly when this
| message is issued. Other messages may be issued
| following this verification failure.

| **User response:** Check the RST suffix specified in the
| SIT, the RST, and the DBCTL subsystem to which CICS
| is connected.

| Check any other messages that may also have been
| issued.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** DFHWTI

| **DFHXA6576I** *applid* **CLT PROCESSING NOT**
| **POSSIBLE OWING TO ERROR IN**
| **DFHCLTxx.**

| **Explanation:** During takeover, the alternate CICS that
| issued this message performed a check on the CLT
| contents and found an error.

| A previous message specifies the error.

| **System action:** Commands in the CLT are not issued
| by this alternate CICS. Other takeover processing
| continues.

| **User response:** Verify that the alternate CICS job is
| authorized to perform a takeover of the active CICS
| and take appropriate action if it is not.

| If the takeover is to be successful, the system operator
| should monitor and coordinate execution of the active
| CICS and alternate CICS jobs in the XRF complex.

| Perform the source edit, assembly and link-edit tasks
| necessary to correct the CLT.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** DFHWTI

| **DFHXA6577I** *applid* **NOT AUTHORIZED TO**
| **CANCEL** *jesno jobname* **ON CEC sid.**

| **Explanation:** The issuing alternate CICS is attempting
| a takeover of the specified active CICS job. It has been
| unable to find the data that is needed to fully authorize
| takeover in the CLT or RST. This may be because the
| alternate cannot load the table, or because job *jobname*
| cannot be found:

- | • In the CLT, for an active CICS, or
- | • In the RST, for a DBCTL subsystem, or
- | • Because the CLT or RST is invalid.

| Further messages specify the error with the CLT or
| RST, or define why the CLT or RST is invalid.

| **System action:** The issuing CICS system cannot issue
| a CANCEL, but attempts to alert the active CICS
| system to the takeover request via the XRF control data
| set. In most cases this causes the active system to
| initiate termination. The alternate continues processing
| to detect termination of the job.

| When termination is detected, message DFHXA6563 or
| DFHXA6564 is displayed.

| **User response:** Verify that the alternate CICS job is
| authorized to perform a takeover of the active CICS.
| Take appropriate action if the alternate CICS job is not
| authorized.

| Your CLT and/or RST may require some maintenance
| action.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** DFHWTI

| **DFHXA6578I** *applid* **NOT AUTHORIZED TO**
| **CANCEL** *jesno jobname.*

| **Explanation:** The issuing alternate CICS is attempting
| a cancel of the specified active CICS job. It has been
| unable to find the data that is needed to fully authorize
| the cancellation in the CLT or RST. This may be
| because the alternate cannot load the table, or because
| job *jobname* cannot be found:

- | • In the CLT, for an active CICS, or
- | • In the RST, for a DBCTL subsystem. or
- | • Because the CLT or RST is invalid.

| Further messages specify the error with the CLT or RST, or define why the CLT or RST is invalid.

| **System action:** The issuing CICS system cannot issue a CANCEL, but attempts to alert the active CICS system to the takeover request via the XRF control data set. In most cases this causes the active system to initiate termination. The alternate continues processing to detect termination of the job.

| When termination is detected, message DFHXA6564 is displayed.

| **User response:** Verify that the alternate CICS job is authorized to perform a takeover of the active CICS. Take appropriate action if the alternate CICS job is not authorized.

| Your CLT and/or RST may require maintenance action.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** Console

| **Modules:** DFHWTI

| **DFHXA6580I PROGRAM LOGIC ERROR
DETECTED.**

| **Explanation:** An internal error has been detected that prevents the CICS XRF CAVM supervisor state processing from continuing.

| Depending on the CAVM supervisor state service being processed at the time, CICS may or may not abnormally terminate.

| The CAVM TCB for processing the service has abnormally terminated.

| Job output should include a dump of MVS LSQA associated with the SYSABEND DD statement.

| **Diagnostics:** Register 2 is the base register for DFHWTI global storage. This storage begins with the eye catcher WTISTOR. The format of this storage is defined in DSECT WSTORAGE in source member DFHWTI.

| DFHWTI request arguments copied to global storage begin at field WGLODATA.

| Source member DFHWTADS defines the format of global storage arguments.

| Field WGLOLOCA contains the address of the first register save area for a routine in DFHWTI.

| In the SVRB for the CICS SVC call that invoked DFHWTI, the first *fullword* in the FEPARM field contains the address of DFHWTI global storage.

| Register 4 is the base register for local storage for each routine in DFHWTI. Its format is defined in a DSECT whose name is of the form WLOCxxx where xxx is the short name of the routine (see below for a list of routine names).

| These DSECTs are in source member DFHWTI. The first *halfword* is the internal return code for the routine. The values used for internal return codes are the same as the DFHWTI request reason codes as defined in source member DFHWTADS field name WTARRC.

| In addition, internal return codes of the format X'40nn' are used. X'40F0' is 'Internal Logic Error' variable name, RCLOGERR.

| Other internal return codes of this format are defined in the local storage DSECTs.

| The DFHWTI request type for the CAVM supervisor state service is copied into local storage associated with the DFHWTI initialization and termination routine, field name WWTIREQ, DSECT WLOCWTI in source member DFHWTI.

| Register 6 is the base register for each routine in DFHWTI. When set, it points at a location immediately following an eye catcher of the routine's long name (see list of routine names).

| Register 13 is the base register for a register save area local to a routine in DFHWTI. These save areas are standard MVS format except the first *fullword* contains the routine's short name (see list of names). They are chained in the standard way with backward and forward pointers set on entry to a routine and zeroed on return.

| Register save areas physically precede the storage local to a routine.

| If a routine has to access the CLT, its address is in local storage for the routine. The field name for the CLT address is of the form WxxxCLTA, where xxx is the short name of the routine.

| **System action:** In general, the CAVM request issued by this CICS job will fail. For the effect this has on processing by this CICS job, refer to messages issued after this one.

| CAVM XRF supervisor state processing issues an MVS abend with system abend code 0214 and an MVS SYSABEND dump is produced.

| **User response:** Keep the job output and console log for problem determination.

| Using the SYSABEND dump of the MVS LSQA, and if available, the MVS symptom dump output, find the DFHWTI routine that detected the error from the value of register 6 or register save area chain fields.

| Find the internal return code currently set in local storage for the routine.

| Using the reason code value, remaining content of local storage and global storage, try to determine the cause of the action by the routine.

| An assembly listing of the CLT assembled with the PRINT NOGEN option may be required.

| **Routine names** Long names are used for:

- The routine entry point name, and
- The routine entry eye catcher.

Short names are used for:

- The routine register save area eye catcher,
- Characters 2 to 4 of routine local storage field names,
- Characters 5 to 7 of routine local storage DSECT names, and
- Characters 1 to 3 of routine labels.

Routines are as follows:

Long Name

Short Name

(1)	WTI
TIPENTRY	TIP
OATERM	OAT
OAWAIT	OAW
VERCLT	VCL
CLPENTRY	CLE
CLPROC	CLP
OPCLT	OCL
CHECKT	CHT
OPCDATA	OPC
INQJES	IJE
TSENTRY	TSS
MUVENTRY	MUV
VAXENTRY	VAX
SCMENTRY	SCM
DXRENTY	DXR
IJESSUB(2)	*

1. Module entry point with standard DFHVM fields.
2. Subtask with start of module as entry point and using SIJSTOR for local storage.

For further guidance in error diagnosis, see the *CICS Problem Determination Guide*.

DFHXA6581I *applid* **UNABLE TO DETERMINE STATUS OF JOB** *jesno jobname*.

Explanation: The issuing CICS system was unable to determine whether job *jobname*, running on the same CEC, has terminated. This is for one of the following reasons:

1. CICS was unable to issue a system operator command under program control to cancel the named job. In this case, message DFHXA6560 has been produced.
2. CICS has successfully issued a cancel command, but the job still appears to be running after the time period specified by the initialization parameter JESDI.
3. Job *jobname* is a failing DBCTL subsystem, but the job still appears to be running after the time period specified by the initialization parameter JESDI.

If *jobname* is the active CICS, takeover cannot continue until *jobname* has ended.

If *jobname* is a DBCTL subsystem, an alternate DBCTL cannot be started until *jobname* has ended.

System action: Takeover is suspended until the issuing CICS system detects the termination of the named job.

When termination is detected the message DFHXA6564 is displayed.

User response: Ensure that the active CICS job terminates.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWTI

DFHXA6582I *applid* **UNABLE TO DETERMINE STATUS OF JOB** *jesno jobname* **ON MVS SYSTEM** *mvsname(sid)*.

Explanation: The issuing CICS system was unable to determine whether job *jobname*, running on MVS image *mvsname*, has terminated. This is for one of the following reasons:

- CICS was unable to issue a system operator command under program control to cancel the named job. In this case, message DFHXA6560, DFHXA6569, or DFHXA6570 has been produced.

| • CICS has successfully issued a cancel command, but the job still appears to be running after the time period specified by the initialization parameter JESDI.

| • Job *jobname* is a failing DBCTL subsystem, but the job still appears to be running after the time period specified by the initialization parameter JESDI.

| If *jobname* is the active CICS, takeover cannot continue until *jobname* has ended.

| If *jobname* is a DBCTL subsystem, an alternate DBCTL cannot be started until *jobname* has ended.

| **System action:** Takeover is suspended until the issuing CICS system detects the termination of the named job.

| When termination is detected the message DFHXA6583 is displayed.

| **User response:** Ensure that the active CICS job terminates.

DFHXCxxxx messages

DFHXC6600I *applid* CAVM DATA SET INITIALIZATION FAILED.

Explanation: The CICS job which displayed this message attempted to sign on to the CAVM but the signon request failed because the CAVM data sets could not be initialized properly. This is due to one of the following:

- The data set formatting subtask had not completed its processing in 2 minutes. This might occur if reserves issued by jobs (not necessarily CICS) running in other CECs cause a CAVM data set's DASD volume or a VSAM catalogue to remain inaccessible for a protracted period.
- SIGNON found that one of the CAVM data sets had already been formatted by a different CICS job but that the other was either empty or could not be opened because of conflict with another user of the data set. SIGNON waited for the other CICS job to finish the data set formatting, but 5 minutes later, this still had not been done. This might occur if a CICS job failed during data set formatting. A specific error reported in a previous message prevented successful completion of data set initialization.

System action: See following message issued by this CICS job.

User response: Correct the JCL or redefine the CAVM data sets if necessary and resubmit the CICS job. See the *CICS System Definition Guide* for information on CAVM data sets.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSSN3

DFHXC6607I *applid* SIGNON IS WAITING TO RESERVE OR ACCESS CAVM DATA SET *dsname*

Explanation: The CICS job which displayed this message issued a sign on to the CAVM. CAVM is attempting to reserve or access the CAVM data set indicated in the message text, but for some considerable time, either the required resource has remained unavailable or an outstanding I/O request has not completed. The reason for issuing this particular message cannot be failure of a conditional reserve request unless new empty CAVM data sets are being used for the first time. The reserve attempt should not fail anyway unless another CICS job using the same CAVM data set and executing a sign on, sign-off or takeover request has been held up, possibly by I/O delays, after issuing a successful reserve. I/O delay might be caused by reserves issued by jobs (not necessarily CICS) running in other CECs that have made the CAVM data set's DASD volume temporarily inaccessible.

System action: After a short delay, the CICS job that displayed this message either reissues the conditional reserve macro or checks for completion of the outstanding I/O. If the required resource is now available or the I/O request has completed, normal processing continues. Otherwise, this message is reissued.

User response: None, unless the condition persists. If so, another CEC might have failed after reserving the DASD volume containing a CAVM data set. In this

case, follow your installation's operations procedure for removing an outstanding reserve for a shared DASD. (For example, issue system reset on the failed CEC.)

Note: This message cannot be changed with the message editing utility.

Modules: DFHWSSN3

DFHXC6618I *applid* SPACE ALLOCATED TO CAVM
DATA SET *dsname* IS INADEQUATE.

Explanation: The CICS job which issued this message issued a SIGNON to the CAVM. The CAVM is attempting to format the CAVM data sets, but the error condition described in the message text has been detected.

System action: See following message issued by this CICS job.

User response: See message DFHXC6600

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSSN3

DFHXC6620I *applid* **SIGNON IS WAITING TO RESERVE OR ACCESS A CAVM DATA SET.**

Explanation: The CICS job that displayed this message issued a sign on to the CAVM. CAVM is attempting to reserve the CAVM control data set or access either the control or the message data set, but for some considerable time either the required resource has remained unavailable or an outstanding I/O request has not completed. The reserve attempt should not fail unless another CICS job using the same CAVM data set and executing a sign on, sign-off or takeover request has been held up, possibly by I/O delays, after issuing a successful reserve. I/O delay might be caused by reserves issued by jobs (not necessarily CICS) running in other CECs that have made the CAVM data set's DASD volume temporarily inaccessible.

System action: See message DFHXC6607.

User response: See message DFHXC6607.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSSN2

DFHXC6621I *applid* **CAVM SIGNON CANNOT PROCEED BECAUSE JES IS EITHER NOT RUNNING OR NOT RESPONDING TO JOB STATUS ENQUIRIES.**

Explanation: The CICS job that displayed this message issued a sign on to the CAVM. To process the request, CAVM needs to know the status of a job identified by an entry in the control data set, but cannot obtain this information for the reason given in the message text.

System action: After a one minute delay, the CICS job that displayed this message reissues the failing job status enquiry. If the request is completed successfully this time, normal processing continues. Otherwise, this message is reissued.

User response: If JES is not running, restart it if possible. Otherwise, if the condition persists, try to correct the problem that is preventing job status enquiries from being answered. In some cases, just stopping JES and restarting it again may achieve the desired effect. In a JES2 environment, a possible cause of this trouble is that another CEC has failed after

reserving the DASD volume containing the check-point data set. See message DFHXC6607. In a JES3 environment, job status enquiries cannot be answered if the global processor has failed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSSN2

DFHXC6622I *applid* **ERROR IN INQUIRE HEALTH EXIT DURING SIGNON.**

Explanation: The CICS job that displayed this message issued a SIGNON to the CAVM, but the return code passed back to CAVM by the INQUIRE HEALTH exit (DFHXRC) when it was called during sign on processing was nonzero. This message always indicates an internal error in CAVM or CICS.

System action: CAVM SIGNON continues but XRF function is probably degraded.

User response: Inform your installation's system programmer.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSSN2

DFHXC6623I *applid* **CAVM SIGNON IMPOSSIBLE AT PRESENT BECAUSE ANOTHER JOB HAS SIGNED ON WITH THE SAME SPECIFIC APPLID.**

Explanation: The CICS job which issued this message issued a SIGNON to the CAVM, but the request cannot be accepted because the error condition described in the message text has been detected.

System action: See following message issued by this CICS job.

User response: None unless the wrong specific applid has been requested for the new job or the conflicting job was started by mistake. If so, resubmit the failing CICS job with appropriate corrections or after canceling the conflicting job.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSSN2

DFHXC6624I *applid* CAVM SIGNON IMPOSSIBLE
BECAUSE SMF IS NOT ACTIVE FOR
THE REQUESTING JOB.

Explanation: The CICS job which issued this message issued a SIGNON to the CAVM, but the request cannot be accepted because the error condition described in the message text has been detected.

System action: See following message issued by this CICS job.

User response: Re-IPL the MVS system, ensuring that the system parameters chosen include SMF.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSSN2

DFHXC6625I *applid* CAVM SIGNON IMPOSSIBLE
BECAUSE CAVM DATA SETS ARE
UNUSABLE.

Explanation: The CICS job which issued this message issued a SIGNON to the CAVM, but the request cannot be accepted because the error condition described in the message text has been detected.

System action: See following message issued by this CICS job.

User response: See message DFHXC6600

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSSN2

DFHXC6626D *applid* POSSIBLE CAVM SIGNON
CONFLICT. IS JOB *jobname,jesno*
RUNNING ON SYSTEM *sid?* REPLY
'YES' OR 'NO'.

Explanation: The CICS job which issued this message issued a SIGNON to the CAVM but the CAVM needs the operator's help in order to decide whether it is safe to accept the request. The CAVM has found that the control data set refers to a job satisfying all the following conditions:

- JES believes that this job is still executing.
- If JES is right, the current sign on request must be rejected because the presence of this job would conflict with it.
- This job is not running in the same CEC as the CICS job which is attempting to sign on.
- This job's surveillance signals appear to be absent.

Such a situation might have arisen as a result of a failure of the CEC in which the conflicting job was running and if so, the CAVM should not reject the sign on request unless it finds another reason for doing so. If the job which displayed this message is a CICS active, the conflicting job is another active or an alternate which has started a takeover. If the job which displayed this message is a CICS alternate, the conflicting job is another alternate. The jobname, JES job identifier and CEC SMF identifier of the conflicting job are specified in the message text.

System action: The CICS job waits for a reply.

User response: If the job which displayed this message is a CICS active job, reply NO only if:

1. You are certain that the job referred to in the message text is not executing. It might be necessary to perform a System Reset of the CEC where it was running to guarantee this.

AND

2. The job which issued this message ought to continue with its CAVM sign on request and become the CICS active job.

Otherwise reply YES.

If the job which displayed this message is a CICS alternate job, reply NO only if:

1. You are certain that the job referred to in the message text is not executing. It might be necessary to perform a System Reset of the CEC where it was running to guarantee this.

AND

2. The job which issued this message ought to continue with its CAVM sign on request and become the CICS alternate job.

Otherwise reply YES.

Note: This message cannot be changed with the message editing utility.

Destination: Console

User response: None

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSTKV

DFHXC6631I *applid* TAKEOVER REJECTED BECAUSE LAST ACTIVE INSTANCE NUMBER DOES NOT MATCH THAT SPECIFIED.

Explanation: The CICS job which issued this message issued a takeover request to the CAVM but the request has been rejected due to the error condition described in the message text. This error would occur if a new CICS active job signed on to the CAVM after this CICS alternate job had already made the decision to attempt to take over from the previous CICS active job.

System action: See following message issued by this CICS job.

User response: None

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSTKV

DFHXC6632I *applid* NON PRE-EMPTIVE TAKEOVER REJECTED BECAUSE LATEST ACTIVE VERSION NUMBER DOES NOT MATCH THAT SPECIFIED.

Explanation: The CICS job which issued this message issued a takeover request to the CAVM but the request has been rejected due to the error condition described in the message text.

System action: See following message issued by this CICS job.

User response: None

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSTKV

DFHXC6633I *applid* NON PRE-EMPTIVE TAKEOVER REJECTED BECAUSE A TAKEOVER IS ALREADY IN PROGRESS.

Explanation: The CICS job which issued this message issued a takeover request to the CAVM but the request has been rejected due to the error condition described in the message text.

System action: See following message issued by this CICS job.

User response: None

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSTKV

DFHXC6634I *applid* TAKEOVER REJECTED BECAUSE NECESSARY TOD CLOCK DIFFERENCE INFORMATION IS NOT AVAILABLE.

Explanation: The CICS job which issued this message issued a takeover request to the CAVM but the request has been rejected due to the error condition described in the message text. This error cannot occur unless both the following conditions are satisfied:

- The CICS active and alternate jobs are running in different CECs.
- A TAKEOVER has been attempted before the alternate job has had the chance to observe the active job's surveillance signals for the short time (less than 1 minute) needed to deduce the maximum possible difference between the respective TOD clocks.

The takeover cannot be performed unless the difference between the CECs' TOD clocks is known because normal CICS processing must not be resumed until the current TOD clock reading is later than the TOD clock reading when the old CICS active job terminated as observed in the CEC where it had been running.

System action: See following message issued by this CICS job.

User response: None

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSTKV

DFHXC6635I *applid* TAKEOVER PROCESSING TERMINATED BECAUSE ANOTHER BACKUP HAS STARTED A PRE-EMPTIVE TAKEOVER.

Explanation: The CICS job which issued this message issued a takeover request to the CAVM and the request was accepted, but the error condition described in the message text was encountered before the completion of TAKEOVER.

System action: See following message issued by this CICS job.

User response: None

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSTKV

DFHXC6636I *applid* TAKEOVER PROCESSING TERMINATED BECAUSE STATUS OF ACTIVE JOB CANNOT BE DETERMINED.

Explanation: The CICS job which issued this message issued a takeover request to the CAVM and the request was accepted, but takeover processing could not be completed because of an error encountered in using the CAVM services provided by the CICS SVC.

System action: See following message issued by this CICS job.

User response: For problem determination, consult the *CICS Problem Determination Guide*. The console log and job output may be required.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSTKV

DFHXC6637I *applid* TAKEOVER IS WAITING TO RESERVE OR ACCESS THE CAVM CONTROL DATA SET.

Explanation: The CICS job that issued this message issued a TAKEOVER request to the CAVM. CAVM is attempting to reserve or access the CAVM control data set in order to process the request, but for some considerable time, either the required resource has remained unavailable or an outstanding I/O request has not completed. The reserve attempt should not fail unless another CICS job using the same CAVM data set and executing a SIGNON, SIGNOFF or TAKEOVER request has been held up, possibly by I/O delays, after issuing a successful reserve.

System action: See message DFHXC6607.

User response: See message DFHXC6607.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSTKV

DFHXC6638I *applid* NOTIFY RC= *retcode* - *text*

Explanation: The CICS job that displayed this message has found that the return code passed back to CAVM by the NOTIFY exit (DFHXRFB) was non-zero. The message includes the actual return code value *retcode* (or greater than 99) and some text identifying the type of event which was being processed when the error occurred. This message always indicates either an internal error in CAVM or CICS or that code or data has become corrupted.

System action: Processing continues but XRF function is probably degraded.

User response: Inform your installation's system programmer.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSTKV

DFHXC6640I *applid* ALL STATUS WRITERS ARE IN I/O WAIT.

Explanation: The CICS job which displayed this message has found that the writes of its latest status issued to the control data set and the message data set are both taking a long time to complete. This might occur if reserves issued by jobs (not necessarily CICS) running in other CECs have made the DASD volumes of both CAVM data sets temporarily inaccessible.

System action: The CICS job re-issues this warning message at intervals until one of its status writes completes. Meanwhile, it continues to perform any processing which is not dependent on status write completion. If the job which displayed this message is a CICS active and the condition persists for long enough, it is possible that an unwanted takeover will be initiated when the alternate (assuming that it is able to read the CAVM data sets because it is running in a different CEC) notices that the active system's surveillance signals have ceased.

User response: If this message is issued by an CICS active job which does not seem to be experiencing other problems, it might be advisable to issue a suitable command to the corresponding alternate job to prevent it from initiating an unnecessary takeover. See also message DFHXC6607.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSSW

DFHXC6641I *applid* STATUS WRITE I/O ERROR ON *dsname*

Explanation: The CICS job which displayed this message has encountered an I/O error in writing its latest status to either the control data set or the message data set.

System action: If the CICS job is able to write its status successfully to either the control data set or the message data set, processing continues. Further writes to the failing data set might be attempted later on because it is possible that the error condition was transient. If both data sets become unusable simultaneously, the CAVM TCB ABENDs.

User response: Inform your installation's system programmer.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSSW

DFHXC6642I *applid* ALL STATUS READERS ARE IN I/O WAIT.

Explanation: The CICS job which displayed this message has found that the reads it has issued to the control data set and the message data set to obtain the latest available status of its partner system are both taking a long time to complete. This might occur if reserves issued by jobs (not necessarily CICS) running in other CECs have made the DASD volumes of both CAVM data sets temporarily inaccessible.

System action: The CICS job reissues this warning message at intervals until one of the status reads completes. Meanwhile, it continues to perform any processing which is not dependent on status read completion. If the job which displayed this message is a CICS alternate, it is possible that a takeover will not be initiated if the active fails, since the alternate cannot detect that the active's surveillance signals have ceased.

User response: See message DFHXC6607.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSSR

DFHXC6643I *applid* STATUS READ I/O ERROR ON
dsname

Explanation: The CICS job which displayed this message has encountered an I/O error in reading the latest available status of its partner system from either the control data set or the message data set. *dsname* is the name of the data set.

System action: Processing continues but XRF function will be degraded because the affected system might not be able to detect changes in its partner's status. Further reads from the failing data set might be attempted later on because it is possible that the error condition was transient. If this error is encountered in an alternate system while it is processing a takeover request, the takeover will fail.

User response: Inform your installation's system programmer.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSSR

DFHXC6644I *applid* NOTIFY RC= *retcode* - *text*

Explanation: The CICS job which displayed this message has found that the return code passed back to CAVM by the NOTIFY exit (DFHXRB) was non-zero. The message includes the actual return code value *retcode* (or a value greater than 99) and some text identifying the type of event that was being processed when the error occurred. This message always indicates either an internal error in CAVM or CICS or that code or data has become corrupted.

System action: Processing continues but XRF function is probably degraded.

User response: Inform your installation's system programmer.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSSR

DFHXC6645I *applid* ERROR IN INQUIRE HEALTH
EXIT.

Explanation: The CICS job which displayed this message has found that the return code passed back to CAVM by the INQUIRE HEALTH exit (DFHXRC) was nonzero. This message indicates either an internal error in CAVM or in CICS, or that code or data has become corrupted.

System action: Processing continues but XRF function is probably degraded.

User response: Inform your installation's system programmer.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSTI

DFHXC6646I *applid* ERROR CALLING CICS SVC -
xxxxxxxxxxxx

Explanation: The CICS job which displayed this message has encountered an error calling the CICS supervisor code (SVC) to determine the status of another MVS image in the same XCF sysplex as the calling CICS MVS image.

System action: Processing continues but XRF function is probably degraded.

User response: Ensure that the correct level of CICS SVC has been specified. Also ensure that MVS has issued an acceptable return code as this error can be caused by a change in MVS response codes. If the error is caused by neither of these, it could be the result of an internal error in CAVM. If this is the case, you need further guidance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSSR

DFHXC6649I *applid* SIGNOFF IS UNABLE TO
RESERVE THE CAVM CONTROL
DATA SET.

Explanation: The CICS job which issued this message issued a SIGNOFF request to the CAVM or SIGNOFF processing was invoked implicitly by abnormal termination of the CAVM TCB. CAVM attempted to reserve the CAVM control data set in order to process the request, but for some considerable time, the required resource remained unavailable. The reserve attempt should not fail unless another CICS job using the same CAVM data set and executing a SIGNON, SIGNOFF or TAKEOVER request has been held up, possibly by I/O delays, after issuing a successful reserve.

System action: The CAVM TCB terminates without updating the CAVM data sets to indicate that this CICS job has signed off. See also any following message issued by this CICS job.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSSOF

DFHXC6650I *applid* CAVM HAS FAILED, CODE = *code*

Explanation: The CICS XRF job that issued this message has encountered an unexpected severe error during CAVM processing. The code *code* in the message identifies both the error, and the CAVM module that detected it, as follows:

Errors detected by DFHWSRTR (00xx)

0002 CAVM dispatcher has no ready processes to dispatch and no external event to wait for.

Errors detected by DFHWSSN1 (10xx)

1001 Nonzero return code from ATTACH for CAVM TCB.

Errors detected by DFHWSSN2 (20xx)

2001 Function code in SIGNON parameter block is invalid.

2002 Function modifier in SIGNON parameter block is invalid.

2003 Length of SIGNON parameter block extension is incorrect.

2004 Requested surveillance interval is not positive.

2005 Nonzero return code from ESTAE to establish recovery for CAVM TCB.

2006 Nonzero return code from asynchronous VSAM GET or CHECK while reading the state management record. (This could be caused by an I/O error.)

2007 Nonzero return code from asynchronous VSAM PUT or CHECK while updating the state management record. (This could be caused by an I/O error.)

2008 Nonzero return code from a request to start a check for the presence of surveillance signals.

2009 Unexpected return code from a request to complete a check for the presence of surveillance signals.

200A Nonzero return code from asynchronous VSAM GET or CHECK while reading a status CI to check for the presence of surveillance signals. (This could be caused by an I/O error.)

200B Routine to check for the presence of surveillance signals found that the sequence number in a status CI has decreased.

200C Nonzero return code from asynchronous VSAM GET or CHECK while reading a status CI in order to update it. (This could be caused by an I/O error.)

200D Content of the state management record has changed but its security count is unaltered.

200E Nonzero return code from asynchronous VSAM PUT or CHECK while updating a status CI in the control data set. (This could be caused by an I/O error.)

200F Unexpected return code from the conditional RESERVE macro.

2010 Nonzero return code from VSAM MODCB macro to change OPTCD in RPL to UPD.

2011 Nonzero return code from VSAM MODCB macro to change ACB address in RPL.

2012 Nonzero return code from ATTACH for TCB to issue a job STATUS enquiry request to the CICS SVC.

2013 Unexpected return code from CICS SVC (A version of DFHCSVC which includes XRF support might not have been installed on the MVS/ESA system, or the wrong SVC number might have been specified on the SIT or as an override.)

2014 Unexpected return code from a requested JES job STATUS enquiry function. (This error could also be caused by using a wrong SVC number which does not correspond to any version of the CICS SVC.)

2015 Unexpected return code from a XCF IXCQUERY function.

2016 Unexpected response code from CICS SVC when attempting to determine details of a job that is running under a release of MVS which supports XCF.

2017 Unexpected reason code from CICS SVC when attempting to determine details of a job that is running under a release of MVS which supports XCF.

Errors detected by DFHWSSN3 (30xx)

3001 Nonzero return code from VSAM GENCB macro to build an RPL.

3002 Nonzero return code from VSAM SHOWCB macro to obtain the length of an ACB.

3003 Nonzero return code from VSAM SHOWCB macro to obtain the length of an RPL.

3004 Nonzero return code from VSAM SHOWCB macro to obtain ACB OPEN error code.

3005 Nonzero return code from VSAM SHOWCB macro to obtain ACB CI size and RBA data.

- 3006 The high-used RBA of a CAVM data set is zero when it should not be empty.
- 3007 Nonzero return code from asynchronous VSAM GET while reading the Control CI from a CAVM data set.
- 3008 Nonzero return code from VSAM MODCB macro to change STRNO in an ACB.
- 3009 Unexpected return code from the conditional RESERVE macro.
- 300A Nonzero return code from ATTACH for TCB to format a new pair of CAVM data sets.
- 300B Internal logic error while processing a new pair of CAVM data sets.
- 300C Nonzero return code from VSAM TESTCB macro to test whether the data set associated with an open ACB is an ESDS.
- 300D Nonzero return code from VSAM SHOWCB macro to obtain ACB CI size and RBA data during the data set formatting.
- 300E Nonzero return code from synchronous VSAM PUT while formatting a new pair of CAVM data sets. (This could be caused by an I/O error.)
- 300F Nonzero return code from VSAM GENCB macro to build an ACB.
- 3010 Nonzero return code from VSAM SHOWCB macro to obtain ACB CI size and RBA data.
- 3011 Nonzero return code from VSAM MODCB macro to change the ACB address in RPL.
- Errors detected by DFHWSSOF (40xx)
- 4001 Nonzero return code from VSAM GENCB macro to build RPLs.
- 4002 Error return code from PURGE macro (SVC 16).
- 4003 Nonzero return code from VSAM MODCB macro or synchronous GET, or I/O request was purged by the timer exit, when trying to read the state management record. (This could be caused by an I/O error.)
- 4004 The MVS/ESA system no longer has an SMF SMCA although it existed when this CICS XRF job signed on to the CAVM.
- 4005 This CICS XRF job no longer has an SMF TCT although it existed at SIGNON.
- 4006 This CICS XRF job no longer has an SMF JMR although it existed at SIGNON.
- 4007 State management record contains invalid duplicate entries for this CICS XRF job.
- 4008 The location of this CICS XRF job's description in the state management record is inconsistent with the current value of SMDR1NDX.
- 4009 The sequence numbers in this CICS XRF job's pair of status CIs in the control and message data sets are equal but nonzero.
- 400A Unexpected return code from the conditional RESERVE macro.
- 400B Unable to RESERVE control data set after repeated attempts.
- 400C Nonzero return code from VSAM MODCB macro or return code 4 from synchronous PUT when trying to update status CI.
- 400D Nonzero return code from VSAM MODCB macro or synchronous GET, or I/O request was purged by the timer exit, when trying to update the state management record. (This could be caused by an I/O error.)
- Errors detected by DFHWSSR (50xx)
- 5001 Nonzero return code from VSAM GENCB macro to build an RPL.
- 5002 The alternate has detected that the active's status CI was still being updated after the active job had signed off or terminated. (This error could be caused by an invalid XRF configuration in which the active and alternate do not share a common JES job queue. The problem was not discovered when the second job signed on to the CAVM because at that time it was unable to detect the first job's surveillance signals.)
- 5003 The sequence number in a status CI of an XRF partner job has decreased.
- 5004 The alternate has detected that the sequence numbers in the active's pair of status CIs in the control and message data sets are equal but nonzero.
- 5005 The estimate of the lower bound of the difference between the active's and alternate's TOD clocks derived from the time-stamp in the status CI which has just been read is greater than the existing estimate of the upper bound of this difference.
- 5006 The estimate of the upper bound of the difference between the active's and alternate's TOD clocks derived from the time-stamp in the status CI which has just been read is less than the existing estimate of the lower bound of this difference.
- 5007 The sequence numbers in an XRF partner job's pair of status CIs in the control and message data sets are equal but nonzero.
- 5008 The sequence number in a status CI of an XRF

partner job is now inconsistent with previously observed values.

- 5009 The instance and version numbers in a status CI of an XRF partner job are now less than the corresponding values in the public status area.
- 500A The instance and version numbers in a status CI of an XRF partner job are unaltered but the job state indicator has changed from 'signed off' to 'signed on'.
- 500B Public status area seems to contain valid data about an XRF partner job before it should.
- 500C Attempt to indicate that public status is available for another XRF partner job when it is already available for all partners.
- 500D The alternate has encountered I/O errors in consecutive attempts to read the active's status CIs from both control and message data sets.
- 500E The alternate has encountered an I/O error in trying to read one of the active's status CIs during a takeover.
- 500F Logical error return code from VSAM CHECK of an asynchronous GET.
- 5010 Nonzero return code from asynchronous VSAM GET.
- 5011 This alternate has been invalidated by the active, probably because of message transmission difficulties. This can also be caused by a message data set that is too small. In this case, increase the size of the message data set to allow the alternate CICS to apply its updates before they are overwritten by those of the active CICS.

Errors detected by DFHWSSW (60xx)

- 6001 Logical error return code from VSAM CHECK of an asynchronous PUT.
- 6002 I/O errors have been encountered in consecutive attempts to write to this job's status CIs in both control and message data sets.
- 6003 Nonzero return code from asynchronous VSAM PUT.
- 6004 The 'status write completed' event masks have been corrupted.
- 6005 WSAGINDX has been corrupted.
- 6006 Nonzero return code from VSAM GENCB macro to build an RPL.
- 6007 The sequence number in one of this job's status CIs has been corrupted in the control or message data set. (This error could be caused by an invalid XRF configuration in which two actives or two alternates do not share a

common JES job queue. The problem was not discovered when the second job signed on to the CAVM because at that time, it was unable to detect the first job's surveillance signals.)

Errors detected by DFHWSTKV (80xx)

- 8001 Nonzero return code from VSAM GENCB macro to build an RPL.
- 8002 State management record indicates that the alternate attempting to take over already holds the takeover lock.
- 8003 State management record indicates that the alternate attempting to take over already holds the resources which are freed by SIGNOFF of the active job.
- 8004 State management record indicates that the alternate attempting to take over already holds the resources which are freed by termination of the active job.
- 8005 DFHWTI encountered an error in trying to confirm termination of the active job after the alternate performing the takeover had already acquired the resources freed by the active SIGNOFF.
- 8006 Another alternate has started a preemptive takeover after this alternate had already acquired the resources freed by the active SIGNOFF.
- 8007 The time-stamp associated with the resources freed by termination of the active job cannot be updated because an unexpected problem has arisen with the TOD clock difference data after this alternate had already acquired the resources freed by the active SIGNOFF.
- 8008 Nonzero return code from asynchronous VSAM GET to read the state management record.
- 8009 Nonzero return code from VSAM CHECK of asynchronous GET for the state management record. (This could be caused by an I/O error.)
- 800A Nonzero return code from asynchronous VSAM PUT to update the state management record.
- 800B Nonzero return code from VSAM CHECK of asynchronous PUT for the state management record. (This could be caused by an I/O error.)
- 800C Nonzero return code from asynchronous VSAM GET to read the state management record in QUIESCE routine.
- 800D Nonzero return code from VSAM CHECK of asynchronous GET for the state management record in QUIESCE routine. (This could be caused by an I/O error.)

- 800E** Nonzero return code from VSAM MODCB macro to change OPTCD in RPL to UPD.
- 800F** Nonzero return code from VSAM MODCB macro to change OPTCD in RPL to NUP.
- 8010** Unexpected return code from the conditional RESERVE macro.
- 8011** Invalid request code passed to the routine which attaches subtask TCBs to issue XRF requests to the CICS SVC.
- 8012** Nonzero return code from ATTACH for TCB to issue XRF request to the CICS SVC.
- 8013** Nonzero return code from DETACH for subtask TCB.

System action: An ABEND U0218 is issued with a reason code equal to the code in message DFHXC6650. This results in abnormal termination of the CICS XRF job. See also any following messages issued by this CICS XRF job.

User response: Inform your installation's system programmer.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWSRTR, DFHWSSN1, DFHWSSN2, DFHWSSN3, DFHWSSOF, DFHWSSR, DFHWSSW, DFHWSTKV

DFHXC6651I *applid* CAVM HAS DETECTED AN INVALID REQUEST.

Explanation: CAVM has found that the parameter block passed to it is invalid, or that the request is being made at an inappropriate time.

System action: An ABEND U0218 is issued with reason code 1. This results in the abnormal termination of the CICS job. See also any following messages issued by this CICS job.

User response: Restart the failing CICS job and inform your installation's system programmer.

Note: This message cannot be changed with the message editing utility.

Destination: Console

DFHXGxxxx (XRF general) messages

DFHXG6215 *applid progname operation failure, response code cccc cccc keyrange: rrrr{. | key: }key*

| **Explanation:** Table builder services (DFHTBSS) failed in an operation on the global catalog (DFHCCCC).

| The failing operation is shown in the message, and is a DELETE, WRITE_NEXT, START_WRITE or END_WRITE request.

| • *cccc cccc* are the response and reason codes from the catalog domain.

| • *rrrr* is the internal RQ token passed to the catalog domain.

| • *key* appears in the message only for a WRITE or DELETE operation, and usually includes the name of the resource for which CICS failed to record information on the global catalog.

| This is normally an internal CICS error, however, it can occur during shut down if one task initiates a normal shut down, and another initiates an immediate shut down shortly afterwards. This is because the immediate shut down closes resources that are being used by the normal shut down task.

| This can also occur if the global catalog is not big enough and a large group is being installed.

| **System action:** CICS terminates.

| **User response:** Check the size of the global catalog. Redefine a larger one if necessary.

| Alternatively this message could be caused by an immediate shutdown of CICS because tasks not yet quiesced may abend trying to access a service removed by the shutdown process.

| **Modules:** DFHTBSS

| **XMEOUT Parameters:** *applid, progname, operation, cccc, cccc, rrrr,{1=., 2= key: }, key*

DFHXG6400I *applid* Signing on to the CAVM as active with generic APPLID *genericid*

Explanation: This is an informational message issued from the CICS TCB. It indicates that the system is about to sign on to the CICS availability manager (CAVM) as active. The message insert provides the generic applid.

System action: CICS initialization is delayed until the signon request has been processed.

In general the delay is insignificant. In those cases where the delay is significant messages are produced by the CAVM to note the reasons.

User response: None.

Destination: Console

Modules: DFHXRA

XMEOUT Parameters: *applid, genericid*

DFHXG6401I *applid* Sign on to the CAVM as active accepted

Explanation: This is an informational message issued from the CICS TCB. It indicates that the signon request (refer to message DFHXG6400) has been accepted by the CAVM.

System action: CICS initialization is resumed.

User response: None

Destination: Console

Modules: DFHXRA

XMEOUT Parameter: *applid*

DFHXG6402I *applid* Sign on to the CAVM as active rejected

Explanation: This is an informational message issued from the CICS TCB. It indicates that the signon request has been rejected by the CAVM. (Refer to message DFHXG6400.) Messages are produced by the CAVM to note the reasons for rejecting the request.

System action: CICS is terminated abnormally.

User response: Refer to message DFHXG6439 for further information and guidance. Correct the errors.

Destination: Console

Modules: DFHXRA

XMEOUT Parameter: *applid*

DFHXG6403I *applid* Sign on of *specificid* to the CAVM as alternate detected.

Explanation: This is an informational message issued from the CICS TCB. It indicates that CICS has been notified that the named alternate CICS has signed on to the CAVM.

System action: Transaction CXCU is attached to send keypoint data to alternate CICS.

User response: None.

Destination: Console

Modules: DFHXRSP

XMEOUT Parameters: *applid, specificid*

DFHXG6404I *applid* SIGNING OFF NORMALLY FROM THE CAVM.

Explanation: This is an informational message issued from the CICS TCB. It indicates that the system is about to sign off normally from the CAVM.

System action: CICS termination is delayed until the sign off request has been processed.

User response: None.

Note: This message cannot be changed with the message editing utility.

DFHXG6411I *applid* **Sign off abnormal from the CAVM detected.**

Explanation: This is an informational message issued from the CICS TCB. It indicates that CICS has been

notified that the alternate CICS has signed off from the CAVM.

System action: The system continues with normal processing. However, you should be aware that takeover does not occur if the active CICS fails.

User response: Determine the reason for the abnormal sign-off.

Destination: Console

Modules: DFHXRSP

XMEOUT Parameter: *applid*

DFHXG6415I *applid* **CICS is being taken over. Execution will be terminated.**

Explanation: This is an informational message issued from the CICS TCB. It indicates that CICS has been notified that the CAVM has accepted a takeover request from alternate CICS.

System action: CICS is terminated abnormally with abend code 206.

User response: None.

Destination: Console

Modules: DFHXRSP

XMEOUT Parameter: *applid*

| **DFHXG6416I** *applid* **APPARENT FAILURE OF ALTERNATE CICS DETECTED.**

| **Explanation:** This is an informational message issued from the CICS TCB. It indicates that CICS has been notified that the alternate CICS appears to have failed.

| **System action:** The system continues with normal processing. However, you should be aware that takeover may not occur should the active CICS fail.

| **User response:** Determine the reason for the apparent failure of the alternate CICS.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** Console

| **Modules:** DFHXRSP

| **DFHXG6417I** *applid* **Recovery of alternate CICS detected.**

| **Explanation:** This is an informational message issued from the CICS TCB. It indicates that CICS has been notified that alternate CICS has recovered from the apparent failure reported by message DFHXG6416.

| **System action:** The system continues with normal processing.

| **User response:** None.

| **Destination:** Console
 | **Modules:** DFHXRSP
 | **XMEOUT Parameter:** *applid*

| **DFHXG6422I** *applid* **Sign off normal from the CAVM assumed.**

| **Explanation:** This is an informational message issued from the CICS TCB. It indicates that CICS has assumed that the alternate CICS has signed off from the CAVM.

| This is likely to occur when the active CICS is running on CEC 1 and:

- | 1. the CICS alternate is started on CEC 2, or
- | 2. the CEC 2 initial program load is repeated, or
- | 3. CICS alternate is restarted on CEC 2.

| **System action:** CICS processing is continued.
 | **User response:** None.

| **Destination:** Console
 | **Modules:** DFHXRSP
 | **XMEOUT Parameter:** *applid*

| **DFHXG6423I** *applid* **CAVM failure detected. CICS cannot continue as active.**

| **Explanation:** This is an informational message issued from the CICS TCB. It indicates that CICS has been notified that the CAVM has failed.

| Messages are produced by the CAVM to note the reasons for failure.

| **System action:** CICS terminates abnormally with abend code 212.
 | **User response:** Correct the error.

| **Destination:** Console
 | **Modules:** DFHXRSP
 | **XMEOUT Parameter:** *applid*

| **DFHXG6427I** *applid* **Terminal control restart task has failed. CICS execution will be terminated.**

| **Explanation:** This is an informational message issued from the CICS TCB. It indicates that the terminal control restart task has failed. It is no longer possible for CICS to continue either as active or as alternate.

| Messages are produced by the terminal control restart task to note the reasons for failure.

| **System action:** CICS terminates abnormally with abend code 209.
 | **User response:** Correct the error.

| **Destination:** Console

| **Modules:** DFHXRSP
 | **XMEOUT Parameter:** *applid*

| **DFHXG6429I** *applid* **Transaction CXCUC cannot be attached.**

| **Explanation:** This is an informational message issued from the CICS TCB. It indicates that CICS is unable to attach transaction CXCUC. Therefore, CICS is unable to initiate the transmission of tracking messages. Takeover is adversely affected if CXCUC cannot be attached. This can occur if:

- | 1. CXCUC is not defined to CICS, or
- | 2. CICS is short on storage

| **System action:** CICS attempts to attach CXCUC at regular intervals.
 | **User response:** Either install CXCUC using RDO, or alleviate the storage shortage.

| **Destination:** Console
 | **Modules:** DFHXRSP
 | **XMEOUT Parameter:** *applid*

| **DFHXG6439I** *applid* **CICS startup is terminated for reasons given above.**

| **Explanation:** This is an informational message indicating that CICS startup is terminated.

| **System action:** CICS is terminated abnormally with a dump.
 | **User response:** Refer to previous messages that have been sent to the system console for further guidance.

| **Destination:** Console
 | **Modules:** DFHSIC1
 | **XMEOUT Parameter:** *applid*

| **DFHXG6440I** **I/O ERROR ON XRF MESSAGE DATA SET. RPL ADDRESS = HEX'xx'.**

| **Explanation:** VSAM reported a physical I/O error on the XRF message data set. The address 'xx' is that of the VSAM RPL which reported the error.

| **System action:** Surveillance by the XRF system ceases.
 | **User response:** It is necessary to restart both the active and alternate CICS systems with a fresh pair of surveillance data sets. For diagnostic purposes, the message gives the address of the RPL being used at the time the error was reported. The RPL has an associated VSAM message area.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** Console
 | **Modules:** DFHWMMT

**DFHXG6441I LOGICAL ERROR ON XRF
MESSAGE DATA SET. VSAM
FEEDBACK DATA = HEX' xx'.**

Explanation: VSAM reported a logical error on the XRF message data set.

System action: Surveillance by the XRF system ceases.

User response: This is an error in the CICS system. For diagnostic purposes the message contains the VSAM feedback data for the error.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWMMT

**DFHXG6442I INTERNAL ERROR IN XRF
MESSAGE MANAGER.**

Explanation: Request chains maintained by the CICS message manager are in an inconsistent state.

System action: Surveillance by the XRF system ceases.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWMQS

**DFHXG6443I INTERNAL ERROR IN XRF
SURVEILLANCE COMPONENT.**

Explanation: An invalid internal call has been made to a routine in XRF surveillance component.

System action: Surveillance by the XRF system ceases.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWCCS

**DFHXG6444I VSAM REQUEST REJECTED FOR
XRF MESSAGE DATA SET.**

Explanation: A VSAM PUT or GET request directed to the XRF message data set has been rejected.

System action: Surveillance by the XRF system ceases.

User response: You need further assistance from IBM

to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWMMT

**DFHXG6445I XRF MESSAGE DATA SET
FORMATTING STARTED.**

Explanation: The XRF message data set is new and must be formatted before it can be used to pass messages from the active to the alternate.

System action: Normal service continues.

User response: Depending on the size of the message data set, there will be some delay before the active can send messages to the alternate. It may be advisable to defer starting an alternate system until the corresponding message DFHXG6446 has been received.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWMMT

**DFHXG6446I XRF MESSAGE DATA SET
FORMATTING COMPLETED.**

Explanation: The XRF message data set has now been formatted. It can be used to pass messages from the active to the alternate.

System action: Normal service continues.

User response: None. See message DFHXG6445.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWMMT

**DFHXG6447I NON CRUCIAL XRF MESSAGE(S)
DISCARDED.**

Explanation: The XRF message data set is full. Some messages are being discarded in preference to invalidating the alternate system by overwriting messages that it has not yet read.

System action: Normal service continues.

User response: This situation is likely to arise in circumstances similar to those described for message DFHXG6541. The alternate has not yet become invalid but is likely to become so and corrective action is warranted. Refer to message DFHXG6541 for further guidance.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **DFHXG6454I PROGRAM CHECK IN XRF**
| **SURVEILLANCE. PSW = HEX'xx' 'xx'.**
| **ADDRESS OF EPIE COPY = HEX'xx'.**

| **Explanation:** A program check occurred from which
| the XRF process was unable to recover.

| **System action:** An MVS abend 0194 is issued and a
| dump is produced.

| **User response:** This is an error in the CICS system.
| The message gives the PSW at which the check
| occurred. Further information is preserved in the
| dump.

| You need further assistance from IBM to resolve this
| problem. See Part 4 of the *CICS Problem Determination*
| *Guide* for guidance on how to proceed.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** DFHWDSRP

| **DFHXG6475 applid iiii Backup simlogon(s) abandoned**

| **Explanation:** An XRF alternate is taking over, and is
| processing the last few session tracking requests.

| CICS has issued a SIMLOGON for a standby session,

| but VTAM has not yet returned the logon request to
| CICS's VTAM logon exit.

| Message DFHXG6480 has been issued twice, and CICS
| has now assumed that the logons will not appear.

| Normal processing continues, though the state of the
| sessions currently pending backup SIMLOGON is
| unpredictable at the end of CICS initialization.

| The reconnection process attempts to BIND these
| sessions normally.

| **System action:** Normal takeover processing continues.

| **User response:** The CSTL log and CICS trace should
| be collected.

| **Destination:** Console

| **Modules:** DFHZXST

| **XMEOUT Parameters:** *applid, iiii*

| **DFHXG6476I** *applid* **XRF catch-up abandoned - all
| XRF alternates signed off**

| **Explanation:** A run of the XRF catch-up transaction
| has been abandoned because there are no XRF
| alternates. A failing alternate may have issued some
| messages.

| **System action:** Normal processing continues.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHZXCU

| **XMEOUT Parameter:** *applid*

| **DFHXG6477I** *applid* **Generic and Specific Ids have
| same value**

| **Explanation:** A CICS system has issued the command
| to re-assign the VTAM USERVAR representing the XRF
| complex so that from now on logon requests to the
| XRF complex are directed to this CICS. However, this
| system is an XRF primary, and the value of the specific
| ID is the same as the generic ID for the XRF complex.

| **System action:** Normal processing continues.

| **User response:** None. However special care must be
| taken when using the application ID. You must make it
| clear whether reference is being made to the CICS
| system or to the XRF complex.

| **Destination:** Console

| **Modules:** DFHZXSTS

| **XMEOUT Parameter:** *applid*

| **DFHXG6479** *applid* **Modify USERVAR issued
| unsuccessfully. Return code nn**

| **Explanation:** A CICS system has unsuccessfully issued
| a command to re-assign the VTAM USERVAR
| representing the XRF complex.

| **System action:** Normal processing continues.

| **User response:** The system operator can issue the
| command on CICS's behalf. The format is as follows:

| F procname,USERVAR,ID=generic-
| id,VALUE=specific-id

| Where:

- | • 'procname' is the procedure name for VTAM,
- | • 'generic-ID' is the VTAM application ID for the
| whole complex, and
- | • 'specific-ID' is the VTAM application ID for the new
| CICS

| If it is not possible to change the USERVAR, end-user
| logons which name the generic-ID value continue to be
| directed to the old specific-applid, with unpredictable
| results.

| (However, logons quoting the specific-ID of the new
| system are routed to that system.)

| **Destination:** Console

| **Modules:** DFHZXSTS

| **XMEOUT Parameters:** *applid, nn*

| **DFHXG6480I** *applid* **Waiting for backup simlogon
| processing to drain**

| **Explanation:** An XRF alternate is taking over, and is
| processing the last few session tracking requests.

| CICS has issued SIMLOGON for a standby session, but
| VTAM has not yet returned the logon request to the
| CICS VTAM logon exit.

| This message is issued every 5 seconds for 20 seconds
| while the takeover is being held up.

| This indicates either a VTAM error or a CICS logic
| error.

| **System action:** This message is issued twice and then
| message DFHXG6475 is issued.

| **User response:** If this message is repeated look for
| other evidence of failure in CICS or VTAM.

| **Destination:** Console

| **Modules:** DFHZXQO

| **XMEOUT Parameter:** *applid*

DFHXG6481I *applid* **Autoconnect delayed for *hh* hours, *mm* minutes, *ss* seconds.**

Explanation: CICS has delayed running the reconnection transaction CXRE for an interval of *hh* hours, *mm* minutes, *ss* seconds, to either:

- acquire AUTOCONNECT terminals after a CICS startup, or
- reacquire terminal sessions after an XRF takeover.

The delay value, *hh* hours, *mm* minutes, *ss* seconds, is taken from the AUTCONN system initialization parameter. In the case of XRF takeover, a value calculated from the number of standby BINDs held at the time of takeover. This extra interval allows the switching of XRF-capable terminals before non-XRF sessions are reconnected by CXRE.

System action: Normal processing continues.

User response: None.

Destination: Console

Modules: DFHSIJ1

XMEOUT Parameters: *applid, hh,mm, ss*

DFHXG6482 *applid* **Unable to issue SETLOGON HOLD (*reqcode,reg15,reg0*)**

Explanation: This message is issued if VTAM SETLOGON START fails during initialization or if in preparation for changing the routing of VTAM logons, this system (which is currently doing an XRF takeover) has attempted to request VTAM to stop passing any more logon requests to it. The attempt failed, and the details of the failure are given in the message, as follows. The first insert is one of the following.

- ‘S’—The SETLOGON START request failed.
- ‘H’—The SETLOGON HOLD request failed.

The second and third inserts are the values of registers 15 and 0, respectively, at the time of the failure.

See the *VTAM Programming* manual for your release of VTAM for the interpretation of these values.

Valid logons reaching CICS before message DFHSI1517 is issued may be rejected.

System action: Normal processing continues.

User response: Note the message.

Destination: Console

Modules: DFHZXSTS

XMEOUT Parameters: *applid, reqcode,reg15, reg0*

DFHXG6483I *applid* **This will be the last pass.**

Explanation: The reconnection transaction CXRE is about to scan the VTAM terminals and sessions that were to be (re)connected for the last time. All those found are listed in message DFHXG6486.

System action: Processing continues

User response: If any of the VTAM terminals or sessions listed in message DFHXG6486 are crucial, then check whether they are successfully connected as a result of this pass.

Destination: Console

Modules: DFHZXRE

XMEOUT Parameter: *applid*

DFHXG6484I *applid* **Autoconnect processing now complete.**

Explanation: The reconnection transaction CXRE has just scanned all the VTAM terminals and sessions, and all those that were to be (re)connected are now connected.

System action: Processing continues

User response: None.

Destination: Console

Modules: DFHZXRE

XMEOUT Parameter: *applid*

DFHXG6485 *applid* **Unable to schedule Autoconnection / Reconnection process.**

Explanation: CICS initialization attempted to schedule the reconnection process, but was unable to do this as CICS rejected the DFHPC TYPE=LINK call.

See following message DFHXG6487 or DFHXG6488 for the reason.

System action: The reconnection process is not run.

User response: CEMT must be used to restore individual terminals to the desired state.

Destination: Console

Modules: DFHZOPA

XMEOUT Parameter: *applid*

DFHXG6486I *applid termid* **may not be acquired after takeover**

Explanation: The reconnection transaction, CXRE, is making its last run, but has discovered that terminal or session *termid* is still not bound in the same status that it was in during the previous failed run of CICS.

System action: Normal processing continues.

| **User response:** Note the terminal identification *termid*
| in the message, and try to discover why previous
| reconnection attempts failed. The terminal may not
| have been physically switched, for example, CEMT
| may be used to acquire individual terminals after such
| problems have been cleared.

| **Destination:** Console

| **Modules:** DFHZXRE0

| **XMEOUT Parameters:** *applid, termid*

DFHXG6487 *applid* Unexpected IC/PC error code
X'code'. **Module** *modname*

Explanation: The reconnection transaction CXRE could not be scheduled or rescheduled., as the DFHIC TYPE=INITIATE or DFHPC TYPE=LINK was rejected with code *X'code'*. This is caused by a CICS logic error.

This message follows either:

- DFHXG6485 if CICS was unable to schedule CXRE,
or
- DFHXG6489 if CICS was unable to reschedule CXRE.

System action: The action taken by CICS depends upon whether the error occurred during scheduling or rescheduling of CXRE.

Refer to the system action for either DFHXG6485 or DFHXG6489 for further details about the action taken by CICS.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHSIJ1, DFHZOPA

XMEOUT Parameters: *applid, X'code', modname*

DFHXG6488 *applid* Required transaction CXRE is not defined to CICS. **Module** *modname*

Explanation: The reconnection transaction, CXRE, could not be rescheduled. This was because either the transaction code required no longer has an installed transaction definition, or the program required does not have an installed program definition.

This message follows DFHXG6489 or DFHXG6485

System action: The current run of the reconnection transaction is the last one. Message DFHXG6486 is issued for all terminals and sessions found.

User response: If non-XRF terminals are to be reconnected, correct the problem.

Destination: Console

Modules: DFHSIJ1, DFHZOPA

XMEOUT Parameters: *applid, modname*

DFHXG6489 *applid* Unable to schedule
Autoconnection / Reconnection
transaction CXRE. Module *modname*.

Explanation: The reconnection transaction, CXRE, attempted to reschedule itself, but was unable to as CICS interval control rejected the DFHIC TYPE=INITIATE call.

This message is followed either by DFHXG6487 or DFHXG6488, which provides further information about the cause of the error.

System action: The current run of the reconnection transaction is the last one. Message DFHXG6486 is issued for all terminals and sessions found.

User response: See the following message. CEMT may be used to acquire individual terminals.

Destination: Console

Modules: DFHSIJ1

XMEOUT Parameters: *applid, modname*

DFHXG6490I *applid* Reconnecting VTAM session -
pass number *xxxx*

Explanation: Control has recently been given to CICS after an XRF takeover. The reconnection transaction, CXRE, which attempts to start acquire processing for logical units that were in session in the failed active, has just started for the pass number *xxxx*.

System action: Normal processing continues.

User response: Note any error messages arising as CICS attempts to reconnect terminals and sessions.

Destination: Console

Modules: DFHZXRE0

XMEOUT Parameters: *applid, xxxx*

DFHXG6491 *applid* Logic error during session
tracking. REASON *rcode terminal/session*
event

Explanation: XRF session tracking encountered an unexpected circumstance probably due to a design error. The reason code (*rcode*) is one of the following.

1 POST called but no pending action for terminal or session.

Inserts:

- name of terminal or session.

2 DFHZXST called with bad request value.

3 XRF-capable session lacks a correlation id.

Inserts:

- name of terminal or session,

• code for event being tracked.

The following are valid for DFHSUSX only.

- X'01'—Send sign on data
- X'02'—Send sign on data (catchup)
- X'03'—Receive sign on data

The following are valid for DFHZXST only.

- X'F1'—BIND
- X'F2'—Free LOGON data
- X'F3'—UNBIND

4 Could not get key to build tracking message.

Inserts:

- name of terminal or session
- code for event being tracked (see 3 above)

5 Could not get send tracking message.

Inserts:

- name of terminal or session
- code for event being tracked (see 3 above)

6 Could not find session named in tracking message.

Inserts:

- name of terminal or session
- code for event being tracked (see 3 above)

7 Illegal entry named in tracking message.

Inserts:

- name of terminal or session
- code for event being tracked (see 3 above)

8 Bad request code in tracking message.

Inserts:

- name of terminal or session
- bad request code (see 3 above for valid DFHZXST codes)

9 Correlator in tracking message is longer than 8.

Insert:

- name of terminal or session

10 Unable to schedule standby BIND.

Insert:

- name of terminal or session.

System action: Normal processing continues.

User response: Note the message. Resources and states may be incorrect should the backup take over. If many of these messages are issued, then it is likely that there is a more general problem.

Destination: Console

Modules: DFHSUSX, DFHZXST

XMEOUT Parameters: *applid, rcode,terminal/session, event*

DFHXG6492I *applid XRF catch-up logic error reason length*

Explanation: The XRF catch-up program encountered an unexpected circumstance probably due to a CICS design error. The reason, indicated by the first insert, is one of the following:

- 1 Catalog record internal length value not correct.
- 2 Catalog record format error. There is no room for a key.
- 3 Catalog record format error. The key is longer than 16.
- 4 Catalog record too long for buffer (variable CUBUFFER). The second insert gives the required length.
- 5 Unexpected ABEND or response from EXEC CICS command.
- 6 Catalog record format error. There is no resource manager prefix.

System action: In cases 1, 2, 3, and 6 above, normal processing continues.

In case 4, DFHZXCU abends with abend code AZXB. In case 5, DFHZXCU abends with abend code AZXA.

User response: Note the message. Resources and states may be incorrect should the alternate take over. If many of these messages are issued, it is likely that there is a more general problem.

Destination: Console

Modules: DFHZXCU

XMEOUT Parameters: *applid, reason,length*

DFHXG6493 *date time applid XRF tracking record could not be sent xxxx xxxx xxxx xxxx (Module: modname)*

Explanation: The XRF catch-up program obtained a bad return code from the XRF message manager and was unable to send a record that the alternate would require to obtain a correct copy of the active. The inserts (internal diagnostic information) are:

1. WMSRETC
DFHWMS return code. (For values and meanings of the return codes, refer to the XRF CICS manager request interface block (WMSPS) listing in the *CICS Data Areas*.)
2. WMSREASN
DFHWMS reason code. (For values and meanings of the reason codes, please refer to the XRF CICS manager request interface block (WMSPS) listing in the *CICS Data Areas*.)
3. XTR-KEY-VALUE is the key of the tracking record.
4. XTR-ID is the record ID, where
 - zero = tracking, and
 - non-zero = catch-up.
5. XTR-TYPE is the record type (see DFHZXTR), where

- | • X = tracking control,
- | • C = TCT contents,
- | • S = ZCP session tracking, and
- | • U = sign on data

| The message is issued from module *modname*.

| **System action:** Normal processing continues.

| **User response:** Note the message. Resources and states may be incorrect should the alternate take over. If many of these messages are issued, then it is likely that there is a more general problem.

| **Destination:** Console and Transient Data Queue
| CSMT

| DFHTBSSP, DFHSUSX

| **XMEOUT Parameters:** *date, time,applid, xxxx, xxxx, xxxx,xxxx, xxxx, modname*

DFHXG6494I *date time applid XRF session state catch-up ended*

Explanation: The XRF catch-up program has just finished an attempt to send messages to allow a newly signed-on alternate CICS to bring itself up to date with respect to the bound or unbound session states.

System action: Normal processing continues.

User response: None.

Destination: CSMT

Modules: DFHZXCU

XMEOUT Parameters: *date, time,applid*

DFHXG6495I *date time applid XRF session state catch-up started*

Explanation: The XRF catch-up program is about to start an attempt to send messages to allow a newly signed-on alternate CICS to bring itself up to date with respect to the bound or unbound session states.

System action: Normal processing continues.

User response: None.

Destination: CSMT

Modules: DFHZXCU

XMEOUT Parameters: *date, time,applid*

DFHXG6496I *date time applid XRF TCT contents catch-up ended*

Explanation: The XRF catch-up program has just finished an attempt to send messages to allow a newly signed-on alternate CICS to bring itself up to date with respect to the contents of the TCT.

System action: Normal processing continues.

User response: None.

Destination: CSMT

Modules: DFHZXCU

XMEOUT Parameters: *date, time,applid*

DFHXG6497I *date time applid XRF TCT contents catch-up started*

Explanation: The XRF catch-up program is about to start an attempt to send messages to allow a newly signed-on alternate CICS to bring itself up to date with respect to the contents of the TCT.

System action: Normal processing continues.

User response: None.

Destination: CSMT

Modules: DFHZXCU

XMEOUT Parameters: *date, time,applid*

DFHXG6498I *date time applid XRF catch-up ended*

Explanation: The XRF catch-up program has just finished an attempt to send messages to allow a newly signed-on alternate CICS to bring itself up to date.

System action: Normal processing continues.

User response: None.

Destination: CSMT

Modules: DFHZXCU

XMEOUT Parameters: *date, time,applid*

DFHXG6499I *date time applid XRF catch-up started*

Explanation: The XRF catch-up program is about to start an attempt to send messages to allow a newly signed-on alternate CICS to bring itself up to date.

User response: None.

System action: Normal processing continues.

Destination: CSMT

Modules: DFHZXCU

XMEOUT Parameters: *date, time,applid*

DFHXG6500I *applid Signing on to the CAVM as alternate with generic APPLID genericid*

Explanation: This is an informational message issued from the CICS TCB. It indicates that the system is about to sign on to the CICS availability manager (CAVM) as alternate. The message insert provides the generic applid.

System action: CICS initialization is delayed until the sign on request has been processed. In general the

| delay is insignificant. In those cases where the delay is significant messages are produced by the CAVM to note the reasons.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHXRA

| **XMEOUT Parameters:** *applid, genericid*

| **DFHXG6501I** *applid* **Sign on to the CAVM as alternate accepted**

| **Explanation:** This is an informational message issued from the CICS TCB. It indicates that the sign on request has been accepted by the CAVM. (Refer to message DFHXG6500.)

| **System action:** CICS initialization is resumed.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHXRA

| **XMEOUT Parameter:** *applid*

| **DFHXG6502I** *applid* **Sign on to the CAVM as alternate rejected**

| **Explanation:** This is an informational message issued from the CICS TCB. It indicates that the sign on request has been rejected by the CAVM. (Refer to message DFHXG6500.) Messages are produced by the CAVM to note the reasons for rejecting the request.

| **System action:** CICS initialization is terminated.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHXRA

| **XMEOUT Parameter:** *applid*

| **DFHXG6503I** *applid* **Sign on of *specificid* to the CAVM as active detected.**

| **Explanation:** This is an informational message issued from the CICS TCB. It indicates that CICS has been notified that the named active CICS has signed on to the CAVM.

| **System action:** CICS initialization continues.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHXRSP

| **XMEOUT Parameters:** *applid, specificid*

| **DFHXG6507I** *applid* **Sign off normal from the CAVM detected.**

| **Explanation:** This is an informational message issued from the CICS TCB. It indicates that CICS has been notified that active CICS has signed off from the CAVM.

| **System action:** CICS processing is terminated.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHXRSP

| **XMEOUT Parameter:** *applid*

| **DFHXG6511I** *applid* **Sign off abnormal from the CAVM detected.**

| **Explanation:** This is an informational message issued from the CICS TCB. It indicates that CICS has been notified that active CICS has signed off from the CAVM.

| **System action:** The action taken depends on the current value of the takeover option. This is specified in the system initialization table. The CEBT SET TAKEOVER command is used to change the value. A takeover request is passed to the CAVM if the current value of the takeover option is either AUTOMATIC or MANUAL.

| **User response:** The user response, if any, is installation dependent.

| **Destination:** Console

| **Modules:** DFHXRSP

| **XMEOUT Parameter:** *applid*

| **DFHXG6512I** *applid* **Takeover request passed to the CAVM**

| **Explanation:** This is an informational message issued from the CICS TCB. It indicates that the system is about to request the CAVM to initiate takeover.

| **System action:** CICS initialization continues.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHXRA

| **XMEOUT Parameter:** *applid*

| **DFHXG6513I** *applid* **Takeover request accepted by the CAVM**

| **Explanation:** This is an informational message issued from the CICS TCB. It indicates that the takeover request (refer to message DFHXG6512) has been accepted by the CAVM.

| **System action:** CICS initialization continues.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHXRA

| **XMEOUT Parameter:** *applid*

| **DFHXG6514I** *applid* Takeover request rejected by the
| CAVM

| **Explanation:** This is an informational message issued
| from the CICS TCB. It indicates that the takeover
| request (refer to message DFHXG6512) has been
| rejected by the CAVM. Messages are produced by the
| CAVM to note the reasons for rejecting the request.

| **System action:** CICS initialization continues.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHXRA

| **XMEOUT Parameter:** *applid*

| **DFHXG6516I** *applid* Apparent failure of active CICS
| detected.

| **Explanation:** This is an informational message issued
| from the CICS TCB. It indicates that CICS has been
| notified that active CICS appears to have failed.

| **System action:** The action taken depends on the
| current value of the takeover option. This is specified
| in the system initialization table. The CEBT SET
| TAKEOVER command is used to change the value. A
| takeover request will be passed to the CAVM if the
| current value of the takeover option is AUTOMATIC.
| Message DFHXG6518 will be sent to the console if the
| current value is MANUAL.

| **User response:** Determine the reason for the apparent
| failure of active CICS.

| **Destination:** Console

| **Modules:** DFHXRSP

| **XMEOUT Parameter:** *applid*

| **DFHXG6517I** *applid* Recovery of active CICS
| detected.

| **Explanation:** This is an informational message issued
| from the CICS TCB. It indicates that CICS has been
| notified that active CICS has recovered from the
| apparent failure reported by message DFHXG6516.

| **System action:** CICS initialization continues.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHXRSP

| **XMEOUT Parameter:** *applid*

| **DFHXG6518A** *applid* APPARENT FAILURE OF
| ACTIVE CICS DETECTED. REPLY
| 'TAKEOVER' OR 'IGNORE'

| **Explanation:** This is an action message issued from
| the CICS TCB. It is issued when the current value of
| the active CICS appears to have failed.

| **System action:** If the reply is 'TAKEOVER', CICS
| requests the CAVM to initiate takeover.

| If the reply is 'IGNORE', CICS assumes one of the
| following:

- | • The active CICS system recovers from the apparent failure.
- | • The active CICS system is restarted.
- | • The CEBT PERFORM TAKEOVER command is used to initiate takeover.

| Subsequent events may mean that the user need not
| reply to message DFHXG6518A. Examples of this are :

- | • If CICS is notified that the active CICS system has recovered from the apparent failure reported by message DFHXG6516, messages DFHXG6517 and DFHXG6519 are sent to the console.
- | • If CICS is notified that the active CICS system has signed off abnormally from the CAVM, messages DFHXG6511 and DFHXG6519 are sent to the console.
- | • If takeover is initiated (from the alternate CICS system) at the same time as the active CICS recovers from the apparent failure reported by message DFHXG6516, messages DFHXG6513 and DFHXG6539 are sent to the console.

| **User response:** Determine the reason for the apparent
| failure of the active CICS. If possible, resolve the failure
| and make the appropriate reply.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** DFHXRSP

| **DFHXG6519I** *applid* The reply to message
| DFHXG6518 is assumed to be IGNORE.

| **Explanation:** This is an informational message issued
| from the CICS TCB. It indicates that CICS no longer
| requires the user to respond to message DFHXG6518.

| **System action:** CICS initialization continues.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHXRSP

| **XMEOUT Parameter:** *applid*

DFHXG6520I *applid* CICS shutdown initiated by CAVM event.

Explanation: This is an informational message issued from the CICS TCB. CICS initiated shutdown occurs in the following situations:

1. CICS is notified that active CICS has signed off normally from the CAVM. Message DFHXG6507 is sent to the console.
2. CICS is notified that active CICS has been restarted "in place". Message DFHXG6511 is sent to the console.
3. CICS assumes that the active CICS has signed off normally from the CAVM. Message DFHXG6522 is sent to the console.

System action: CICS terminates normally, but note that takeover does not occur if (active) CICS fails.

User response: Consider restarting (alternate) CICS.

Destination: Console

Modules: DFHXRSP

XMEOUT Parameter: *applid*

DFHXG6522I *applid* Sign off normal from the CAVM assumed.

Explanation: This is an informational message issued from the CICS TCB. It indicates that CICS has assumed that the active CICS has signed off from the CAVM. This is likely to occur when the alternate CICS is running on CEC 1 and:

1. Active CICS is started on CEC 2.
2. CEC 2 is reinitialized.
3. Active CICS is restarted on CEC 2.

System action: CICS processing is terminated.

User response: None.

Destination: Console

Modules: DFHXRSP

XMEOUT Parameter: *applid*

DFHXG6523I *applid* CAVM failure detected. CICS cannot continue as Alternate.

Explanation: This is an informational message issued from the CICS TCB. It indicates that CICS has been notified that the CAVM has failed. Messages are produced by the CAVM to note the reasons for failure.

System action: CICS terminates abnormally. The abend code is 207.

User response: Correct the error.

Destination: Console

Modules: DFHXRSP

XMEOUT Parameter: *applid*

DFHXG6524I *applid* CAVM error detected. CICS cannot continue as Alternate.

Explanation: This is an informational message issued from the CICS TCB. It indicates that CICS has been notified that the CAVM has detected an error that prevents CICS from continuing as an alternate.

This would be the case, for example, where the alternate CICS has been unable to keep up with the messages generated by the active CICS.

Messages are produced by the CAVM to note the reasons for failure.

System action: CICS terminates abnormally. The abend code is 213.

User response: Correct the error.

Destination: Console

Modules: DFHXRSP

XMEOUT Parameter: *applid*

DFHXG6539I *applid* The reply to message DFHXG6518 is assumed to be TAKEOVER.

Explanation: This is an informational message issued from the CICS TCB. It indicates that CICS no longer requires the user to respond to message DFHXG6518.

System action: CICS initialization continues.

User response: None.

Destination: Console

Modules: DFHXRSP

XMEOUT Parameter: *applid*

DFHXG6680I *applid* TIME-OF-DAY CLOCK DIFFERENCE IS AT LEAST *sss* SECONDS.

Explanation: This is an informational message issued from the CICS TCB. Active CICS and alternate CICS systems are executing on different CECs, and the time-of-day clock on the alternate CEC is earlier than that on the active CEC. If takeover occurs then some CICS processing will have to be delayed until the time-of-day clock on the alternate CEC is later than that on the active CEC. The CAVM has estimated the lower bound to the clock difference and this is at least 15 seconds; the message contains the estimated difference. Note that the lower bound may change as more surveillance signals are processed by the CAVM. This may be the case within the first 3 to 5 surveillance signals of the active CICS starting. An elapsed time of some 10 seconds. This message is repeated as necessary.

System action: CICS processing continues.

User response: Ensure that the time-of day clocks are

| synchronized as closely as possible. Note that takeover
| times may be increased if the difference in values is
| significant.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** DFHXRSP

| **DFHXG6681I** *applid* **TIME-OF-DAY CLOCK**
| **DIFFERENCE IS AT MOST** *sss*
| **SECONDS.**

| **Explanation:** This is an informational message issued
| from the CICS TCB. Active CICS and alternate CICS
| systems are executing on different CECS, and the
| time-of-day clock on the alternate CEC is earlier than
| that on the active CEC. If takeover occurs then some
| CICS processing will have to be delayed until the
| time-of-day clock on the alternate CEC is later than that
| on the active CEC. The CAVM has estimated the upper
| bound to the clock difference and this is at least 15
| seconds; the message contains the estimated difference.
| Note that the upper bound may change as more
| surveillance signals are processed by the CAVM;
| message DFHXG6681 will be repeated as necessary.

| **System action:** CICS processing continues.

| **User response:** Ensure that the time-of day clocks are
| synchronized as closely as possible. Note that takeover
| times may be increased if the difference in values is
| significant.

| **Note:** This message cannot be changed with the
| message editing utility.

| **Destination:** Console

| **Modules:** DFHXRSP

| **DFHXG6682I** *applid* **XRF clock synchronization**
| **started**

| **Explanation:** This is an informational message issued
| from the CICS TCB. The time-of-day clock on the
| alternate CEC is earlier than that on the active CEC;
| time dependent processing must be suspended. Such
| processing is delayed until the time-of-day clock value
| on the alternate is later than that on the active CEC
| when the active job terminated.

| **System action:** Some CICS initialization continues.

| **User response:** Ensure that the time-of-day clocks are
| synchronized as closely as is possible. Note that
| takeover times may be increased if the difference in
| values is significant.

| **Destination:** Console

| **Modules:** DFHXRA

| **XMEOUT Parameter:** *applid*

| **DFHXG6683I** *applid* **XRF clock synchronization ended**

| **Explanation:** This is an informational message issued
| from the CICS TCB. The time-of-day clock on the
| alternate CEC is now later than that on the active CEC;
| time dependent processing can be resumed.

| **System action:** CICS initialization continues.

| **User response:** None.

| **Destination:** Console

| **Modules:** DFHXRA

| **XMEOUT Parameter:** *applid*

DFHXMxxxx messages

DFHXM0001 *applid* **An abend (code *aaa/bbbb*) has
occurred at offset *X'offset'* in module
modname.**

Explanation: An abnormal end (abend) or program
check has occurred in module *modname*. This implies
that there may be an error in the CICS code.
Alternatively, unexpected data has been input, or
storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if
applicable), followed by a 4-digit alphanumeric CICS
code. The MVS code is a system completion code (for
example, 0C1 or D37). If an MVS code is not applicable,
this field is filled with three hyphens. The CICS code is
an abend code or a number referring to a CICS
message (for example, AKEA is a CICS abend code;
1310 refers to message DFHTS1310).

System action: An exception entry is made in the
trace table. A system dump is taken, unless you have

specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump
table that CICS should terminate. In some
circumstances CICS is terminated directly if the error
occurred in a crucial XM domain module.

Message DFHME0116 is normally produced containing
the symptom string for this problem.

User response: If CICS is still running, it is necessary
to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant
MVS codes manual which is detailed in the book list in
the front of this manual.

Next, look up the CICS alphanumeric code in this
manual. for further guidance.

If module *modname* is not crucial to the running of your
CICS system, you may decide to continue to run and

bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHXMAT, DFHXMBD, DFHXMCL, DFHXMDD, DFHXMDM, DFHXMER, DFHXMFD, DFHXMIQ, DFHXMLD, DFHXMQD, DFHXMQC, DFHXMRP, DFHXMSR, DFHXMTA, DFHXMXD, DFHXMXE

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

DFHXM0002 *applid* **A severe error (code X'code')** has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code X'code' is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code X'code' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. In some circumstances CICS is terminated directly if the error is critical.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHXMAT, DFHXMBD, DFHXMCL, DFHXMDD, DFHXMDM, DFHXMER, DFHXMFD, DFHXMIQ, DFHXMLD, DFHXMQD, DFHXMQC,

DFHXMRP, DFHXMSR, DFHXMTA, DFHXMXD, DFHXMXE

XMEOUT Parameters: *applid, X'code', modname*

DFHXM0004 *applid* **A possible loop has been detected at offset X'offset' in module modname.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'offset'. This is the offset of the instruction which happened to be executing at the time when the error was detected.

System action: An exception entry is made in the trace table.

A system dump is taken unless you have specifically suppressed the dump (by a user exit program at the XDUREQ exit, in the dump table or by global system dump suppression). CICS processing continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 is normally produced containing the symptom string for this problem.

User response: If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that execution of module *modname* is terminated and CICS continues.

If you have specified ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online using the CEMT transaction.

If raising the ICVR time does not solve the problem, you may need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

DFHXM0101 *date time applid terminal userid tranid*
TRANSACTION definition entry for
transname has been added.

Explanation: This is an audit log message indicating that transaction definition entry *transname* has been added to the system using the INSTALL command.

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Destination: CSKL

Modules: DFHXMxD

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, transname*

DFHXM0103 *date time applid terminal userid tranid*
TRANSACTION definition entry for
transname has been deleted.

Explanation: This is an audit log message indicating that transaction definition entry *transname* has been deleted from the system using the DISCARD command.

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Destination: CSKL

Modules: DFHXMDD

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, transname*

DFHXM0105 *date time applid terminal userid tranid*
TRANSACTION definition entry for
transname has been replaced.

Explanation: This is an audit log message indicating that transaction definition entry *transname* has been replaced in the system using the INSTALL command.

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.

- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Destination: CSKL

Modules: DFHXMxD

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, transname*

DFHXM0110 *date time applid* **Transaction definition**
transid1 has been installed with the
same REMOTENAME and
REMOTESYSTEM as existing definition
transid2.

Explanation: Transaction definition *transid1* has been installed with the same REMOTENAME and REMOTESYSTEM as transaction definition *transid2*.

If this CICS system routes a transaction to the CICS system named as the REMOTESYSTEM of both the definitions and that transaction issues an EXEC CICS START request for the transaction-id named as the REMOTENAME of *transid1* and *transid2*, CICS can either attach *transid1* or *transid2* on the local system to satisfy the START request.

System action: The install of transaction definition *transid1* continues normally.

If an EXEC CICS START request is issued on a remote system as described in the message explanation, CICS attaches *transid1* and not *transid2* on the local system.

CICS does not always resolve this ambiguity in the same way after a warm or emergency restart, however.

User response: This situation usually causes no problems because the correct transaction is attached in the remote system. However, the correct transaction in the local system may not have been attached and this can manifest itself in the following ways:

- Inconsistent statistics being accumulated in the local system.
- The incorrect TRPROF being used when routing the START request back over to the remote system.
- CEMT INQUIRE TASK showing the wrong set of transactions running in the local system.

Although these are not necessarily problems, you may want to check the definitions of the remote transactions in this system in case they have been defined incorrectly.

If remote START requests are issued as described, and it does matter which transaction CICS attaches in the local system, you should modify and reinstall the transaction definition that should not be attached. This removes any ambiguity.

Destination: CSMT

Modules: DFHXMxD

XMEOUT Parameters: *date, time,applid, transid1, transid2*

DFHXM0111 *date time applid* **Catalog failure while processing {INSTALL | SET | DISCARD} request for transaction definition *transid*.**

Explanation: An error has occurred while altering the catalog during the processing of an install, set, or discard request for transaction definition *transid*.

System action: The request continues as normal.

Depending upon the error that has occurred with the catalog, there may be severe problems if a warm or emergency restart of CICS is attempted. The catalog domain will have issued a message outlining the problem in this case.

Alternatively the problem may only be local to the catalog record containing the image of transaction definition *transid* and the following problems may occur only on a warm or emergency restart.

INSTALL

If it is a reinstall, the old version of the transaction definition is recovered. If it is an install, the transaction definition is not recovered.

SET The change requested by the SET is not recovered. Instead the transaction definition is recovered to the state prior to the SET request being issued.

DISCARD

The transaction definition is recovered on the restart even though it is currently discarded.

User response: No immediate action is required. Consider performing a cold or initial start the next time CICS is restarted to remedy the problem. If a cold or initial start is not appropriate and the problem is only localized to transaction definition *transid*, remedy the effects outlined for each case previously.

For example,

INSTALL

Reinstall the tranclass definition after the restart.

SET Reissue the SET command after CICS has been restarted.

DISCARD

Reissue the DISCARD command after CICS has been restarted.

If the catalog problem persists after the restart, you need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Modules: DFHXMxD

XMEOUT Parameters: *date, time,applid, transid1, X'*xtranid*',transid2*

DFHXM0115 *date time applid* **The install of transaction definition *transid1* has removed TPNAME *tpname* of *transid2*.**

Explanation: Transaction definition *transid1* has been installed with a TPNAME of *tpname*. However, TPNAME *tpname* currently invokes transaction definition *transid2*.

System action: The install of *transid1* continues as normal.

The TPNAME *tpname* now invokes transaction definition *transid1* and not *transid2* as previously.

User response: If removal of transaction definition *transid2*'s TPNAME was expected, no action is required. However, transaction definition *transid2* should be modified on the CSD so that it no longer specifies the TPNAME.

If the TPNAME has been removed in error, reinstall transaction definition *transid2* to reinstate its TPNAME. Transaction definition *transid1* should be modified on the CSD so that it no longer specifies the TPNAME.

Destination: CSMT

Modules: DFHXMxD

XMEOUT Parameters: *date, time,applid, transid1, tpname, transid2*

DFHXM0116 *date time applid* **PROGRAM parameter missing from transaction definition *transid*. PROGRAM is required because REMOTESYSTEM is the same as the local system.**

Explanation: Transaction definition *transid* has been installed without a PROGRAM parameter. Since it has been defined with a REMOTESYSTEM equal to the local system, a program is required if the transaction is executed on this system.

System action: The install of *transid* continues as normal. Any attempt to run the transaction *transid* will fail because there is no program to link to.

User response: This message is issued for information only. There is no problem if transaction *transid* is not executed on this system. If it is to be executed, the definition of *transid* needs to be modified and then reinstalled.

If the transaction is not executed, you may wish to investigate why the transaction definition has been installed. It could be that the transaction is defined in an RDO group that is shared between a number of different CICS systems. For example *transid* may be TTT1 in the following pair of definitions used to implement transaction routing to this local system CICB.

Transaction	Remotesystem	Remotename	Program
TTT1	CICB	TTT2	-
TTT2	-	-	PROGA

In this example, a single definition would suffice if the transaction was made to have the same name on this system.

Transaction	Remotesystem	Remotename	Program
TTT1	CICB	TTT1	PROGA

Modules: DFHXMxD

XMEOUT Parameters: *date, time,applid, transid*

DFHXM0201 *date time applid terminal userid tranid* **TRANCLASS definition entry for *tranclassname* has been added.**

Explanation: This is an audit log message indicating that tranclass definition entry *tranclassname* has been added to the system using the INSTALL command.

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.

- *trandid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Destination: CSKL

Modules: DFHXMCL

XMEOUT Parameters: *date, time, applid, terminal, userid, trandid, tranclassname*

DFHXM0203 *date time applid terminal userid trandid*
TRANCLASS definition entry for
tranclassname **has been deleted.**

Explanation: This is an audit log message indicating that tranclass definition entry *tranclasssname* has been deleted from the system using the DISCARD command.

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *trandid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Destination: CSKL

Modules: DFHXMCL

XMEOUT Parameters: *date, time, applid, terminal, userid, trandid, tranclassname*

DFHXM0205 *date time applid terminal userid trandid*
TRANCLASS definition entry for
tranclassname **has been replaced.**

Explanation: This is an audit log message indicating that tranclass definition entry *transname* has been replaced in the system using the INSTALL command.

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *trandid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Destination: CSKL

Modules: DFHXMCL

XMEOUT Parameters: *date, time, applid, terminal, userid, trandid, tranclassname*

DFHXM0211 *date time applid* **Catalog failure while processing {INSTALL | SET | DISCARD} request for tranclass definition**
tranclassname.

Explanation: An error has occurred while altering the catalog during the processing of an install, set, or discard request for tranclass definition *tranclassname*.

System action: The request continues normally.

Depending upon the error that has occurred with the catalog, there may be severe problems if a warm or emergency restart of CICS is attempted. The catalog domain will have issued a message outlining the problem in this case.

Alternatively the problem may only be local to the catalog record containing the image of tranclass definition *tranclassname* and the following problems may occur only on a warm or emergency restart.

INSTALL

If it is a reinstall, the old version of the tranclass definition is recovered. If it is an install, the tranclass definition was not recovered.

SET The change requested by the SET is not recovered. Instead the tranclass definition is recovered to the state it was in before the SET request was issued.

DISCARD

The tranclass definition is recovered on the restart even though it is currently discarded.

User response: No immediate action is required. To fully resolve the problem, consider performing a cold or initial start the next time CICS is restarted. If a cold or initial start is not appropriate and the problem is only localized, to tranclass definition *tranclassname*, you can resolve each of the symptoms separately.

For example:

INSTALL

Reinstall the tranclass definition after CICS has been restarted.

SET Reissue the SET command after CICS has been restarted.

DISCARD

Reissue the DISCARD command after CICS has been restarted.

If the catalog problem persists after the restart, you may need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console and Transient Data Queue
CSMT

Modules: DFHXMCL

XMEOUT Parameters: *date, time,applid, {1=INSTALL, 2=SET,3=DISCARD}, tranclassname*

DFHXM0212 *applid* **Transaction *transid* has been attached with unknown tranclass *tranclassname*.**

Explanation: Transaction *transid* has just been attached. It is defined as belonging to tranclass *tranclassname* but *tranclassname* does not exist.

This message is only issued the first time transaction *transid* is attached with the unknown tranclass.

System action: The attach of transaction *transid* proceeds as normal but without being subject to any tranclass scheduling constraints.

User response: If transaction *transid* should belong to tranclass *tranclassname*, install that tranclass. If not, modify the transaction definition for *transid* as appropriate, and reinstall.

The CEDA CHECK command can be used to ensure that each of the tranclasses referenced by transaction definitions are defined within the same startup GRPLIST.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHXMQC

XMEOUT Parameters: *applid, transid,tranclassname*

DFHXM0213 *applid* **Insufficient storage for system attach of transaction *transid*.**

Explanation: There is insufficient storage for a new task to be created for the attach of transaction *transid*.

Since the majority of the storage required for the new task is obtained from DSA storage, CICS is probably short on storage in one of the DSAs.

System action: The attach request is queued. It is retried later when more storage should have become available. If the retried attach fails, it is queued and retried repeatedly until it succeeds.

User response: If CICS is short on storage, message DFHSM0133 is also issued. Refer to that message for advice on how to resolve the condition.

If message DFHSM0133 has not been issued, the problem has been caused by insufficient MVS storage. In this case consider lowering the EDSALIM of the system to increase the amount of available MVS storage.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHXMAT

XMEOUT Parameters: *applid, transid*

DFHXM0301 *date time applid* **An attempt to link to the user-replaceable transaction restart program (DFHREST) has failed for task number *tasknum*. Transaction restart is not performed for transaction *transid*.**

Explanation: A restartable transaction abended and the transaction manager attempted to link to the user-replaceable transaction restart program (DFHREST) but the link has failed. Likely reasons are:

- DFHREST is not defined (and not autoinstalled)
- DFHREST is not present in any library specified in the DFHRPL concatenation.
- DFHREST has been linked with AMODE(24).

System action: The transaction is not restarted.

User response: If the problem is not rectified, a message is issued each time the link to DFHREST fails. To avoid this, ensure that DFHREST is properly defined and present in a library specified in the DFHRPL concatenation.

See the *CICS Customization Guide* for more information about user-replaceable programs.

Destination: Console and Transient Data Queue CSMT

Modules: DFHXMTA.

XMEOUT Parameters: *date, time,applid, tasknum, transid*

DFHXM0302 *applid* **An abend *abcode* occurred in the user-replaceable transaction restart program (DFHREST) under task number *tasknum*. Transaction restart is not performed for transaction *transid*.**

Explanation: A restartable transaction abended and the transaction manager linked to the user-replaceable transaction restart program (DFHREST). DFHREST abended.

System action: The transaction is not restarted.

User response: If the problem is not rectified, a message is issued each time DFHREST abends. To avoid this, fix the problem in DFHREST and ensure that it is properly defined and present in a library specified in the DFHRPL concatenation.

See the *CICS Customization Guide* for more information about user-replaceable programs.

Destination: Console

Modules: DFHXMTA.

XMEOUT Parameters: *applid, abcode,tasknum, transid*

DFHXM0303 *applid* **A severe error (code X'code')** has occurred while initializing task number *tasknum* with transaction identifier *tranid*. Terminal *termid* has not been released. The task is suspended indefinitely.

Explanation: An internal error has prevented the initialization of task number *tasknum* with identifier *tranid*.

The task cannot run and cannot be abended. The principal facility of the task is a terminal. No message may be sent to the terminal and it is unusable by CICS. Rather than terminate CICS, the transaction manager keeps CICS running and preserves its integrity by suspending the task.

The suspended task will hold its MXT slot until CICS is terminated.

Note that the task may hold resources (for example, locks and enqueues) so you should cancel CICS at your earliest convenience. Otherwise you may risk other tasks being prevented from running because they also need access to the same resources. You may wish to add a dump table entry to always terminate CICS on this message.

System action: The task is suspended indefinitely. First failure diagnostics should be produced by the component which first detects the error. The transaction manager also takes a dump. Message DFHME0116 is normally produced containing the symptom string for this problem.

The terminal principal facility of the task is unusable by CICS until CICS is canceled.

The task is suspended with a resource type of FOREVER and a resource name of DFHXMETA.

User response: You must cancel CICS if you need to release the terminal associated with the task. You cannot quiesce CICS since this task will not terminate. You cannot purge or force-purge the task.

Note the error code X'code'. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHXMETA.

XMEOUT Parameters: *applid*, X'code', *tasknum*, *tranid*, *termid*

DFHXM0304 *applid* **A severe error (code X'code')** has occurred while initializing task number *tasknum* with transaction identifier *tranid*. Transient data queue *tdqueue* has not been released. The task is suspended indefinitely.

Explanation: An internal error has prevented the initialization of task number *tasknum* with identifier *tranid*.

The task cannot run and cannot be abended. The principal facility of the task is a transient data queue. The TD queue will not trigger another task until CICS is terminated. Rather than terminate CICS, the transaction manager keeps CICS running and preserves its integrity by suspending the task.

The suspended task will hold its MXT slot until CICS is terminated.

Note that the task may hold resources (for example, locks and enqueues) so you should cancel CICS at your earliest convenience. Otherwise you risk other tasks being prevented from running because they also need access to the same resources. You may wish to add a dump table entry always to terminate CICS on this message.

System action: The task is suspended indefinitely. First failure diagnostics should be produced by the component which first detects the error. The transaction manager also takes a dump. Message DFHME0116 is normally produced containing the symptom string for this problem.

The task is suspended with a resource type of FOREVER and a resource name of DFHXMETA.

User response: You must cancel CICS if you need to release the TD queue associated with the task. You cannot quiesce CICS since this task will not terminate. You cannot purge or force-purge the task.

Note the error code X'code'. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHXMETA.

XMEOUT Parameters: *applid*, X'code', *tasknum*, *tranid*, *tdqueue*

DFHXM0305 *applid* **A severe error (code X'code')** has occurred while initializing task number *tasknum* with transaction identifier *tranid*. The interval control element has not been released. The task is suspended indefinitely.

Explanation: An internal error has prevented the initialization of task number *tasknum* with identifier *tranid*.

The task cannot run and cannot be abended. The principal facility of the task is an interval control element. Any start data associated with the ICE will not

be retrieved. Rather than terminate CICS, the transaction manager keeps CICS running and preserves its integrity by suspending the task.

The suspended task will hold its MXT slot until CICS is terminated.

Note that the task may hold resources (for example, locks and enqueues) so you should cancel CICS at your earliest convenience. Otherwise you may risk other tasks being prevented from running because they also need access to the same resources. You may wish to add a dump table entry always to terminate CICS on this message.

System action: The task is suspended indefinitely. First failure diagnostics should be produced by the component which first detects the error. The transaction manager also takes a dump. Message DFHME0116 is normally produced containing the symptom string for this problem.

The task is suspended with a resource type of FOREVER and a resource name of DFHXMTA.

User response: You must cancel CICS if you need to destroy the ICE. Any start data will remain in temporary storage until it is deleted unless it is nonrecoverable in which case it will disappear on the next cold, initial or emergency restart of CICS. You cannot quiesce CICS since this task will not terminate. You cannot purge or force-purge the task.

Note the error code *X'code'*. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHXMTA.

XMEOUT Parameters: *applid, X'code', tasknum, tranid*

DFHXM0306 *applid* **A severe error (code *X'code'*) has occurred while initializing task number *tasknum* with transaction identifier *tranid*. The task is suspended indefinitely.**

Explanation: An internal error has prevented the initialization of task number *tasknum* with identifier *tranid*.

The task cannot run and cannot be abended. The task has no principal facility bound to it. Rather than terminate CICS, the transaction manager keeps CICS running and preserves its integrity by suspending the task.

The suspended task will hold its MXT slot until CICS is terminated.

Note that the task may hold resources (for example, locks and enqueues) so you should cancel CICS at your earliest convenience. Otherwise you may risk other

tasks being prevented from running because they also need access to the same resources. You may wish to add a dump table entry to always terminate CICS on this message.

System action: The task is suspended indefinitely. First failure diagnostics should be produced by the component which first detects the error. The transaction manager also takes a dump. Message DFHME0116 is normally produced containing the symptom string for this problem.

The task is suspended with a resource type of FOREVER and a resource name of DFHXMTA.

User response: You must cancel CICS if you need to destroy the task. You cannot quiesce CICS since this task will not terminate. You cannot purge or force-purge the task.

Note the error code *X'code'*. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHXMTA.

XMEOUT Parameters: *applid, X'code', tasknum, tranid*

DFHXM0307 *applid* **A severe error (code *X'code'*) has occurred while terminating task number *tasknum* with transaction identifier *tranid*. The terminal *termid* has not been released. The task is suspended indefinitely.**

Explanation: An internal error has prevented the termination of task number *tasknum* with identifier *tranid*. It is not possible to abend the task or send a message to its terminal principal facility. Rather than terminate CICS, the transaction manager keeps CICS running and preserves its integrity by suspending the task.

The suspended task will hold its MXT slot until CICS is terminated.

Note that the task may hold resources (for example, locks and enqueues) so you should cancel CICS at your earliest convenience. Otherwise you may risk other tasks being prevented from running because they also need access to the same resources. You may wish to add a dump table entry to always terminate CICS on this message.

System action: The task is suspended indefinitely. First failure diagnostics should be produced by the component which detected the error. The transaction manager also takes a dump. Message DFHME0116 is normally produced containing the symptom string for this problem.

The terminal principal facility of the task is unusable until CICS is canceled.

The task is suspended with a resource type of FOREVER and a resource name of DFHXMTA.

User response: You must cancel CICS if you need to free up the terminal associated with the task. You cannot quiesce CICS since this task will not terminate. You cannot purge or force purge the task.

Note the error code *X'code'*. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHXMTA.

XMEOUT Parameters: *applid, X'code', tasknum, tranid, termid*

DFHXM0308 *applid* **A severe error (code *X'code'*) has occurred while terminating task number *tasknum* with transaction identifier *tranid*. The transient data queue *tdqueue* has not been released. The task is suspended indefinitely.**

Explanation: An internal error has prevented the termination of task number *tasknum* with identifier *tranid*. It is not possible to abend the task. The principal facility of the task is a transient data queue. The TD queue will not trigger another task until CICS is terminated. Rather than terminate CICS, the transaction manager keeps CICS running and preserves its integrity by suspending the task.

The suspended task will hold its MXT slot until CICS is terminated.

Note that the task may hold resources (for example, locks and enqueues) so you should cancel CICS at your earliest convenience. Otherwise you may risk other tasks being prevented from running because they also need access to the same resources. You may wish to add a dump table entry always to terminate CICS on this message.

Destination: Console

Modules: DFHXMTA.

XMEOUT Parameters: *applid, X'code', tasknum, tranid*

DFHXM0310 *applid* A severe error (code *X'code'*) has occurred while terminating task number *tasknum* with transaction identifier *tranid*. If the task had a principal facility, it has been released. The task is suspended indefinitely.

Explanation: An internal error has prevented the termination of task number *tasknum* with identifier *tranid*. It is not possible to abend the task. Rather than terminate CICS, the transaction manager keeps CICS running and preserves its integrity by suspending the task.

The suspended task will hold its MXT slot until CICS is terminated.

Note that the task may hold resources (for example, locks and enqueues) so you should cancel CICS at your earliest convenience. Otherwise you risk other tasks being prevented from running because they also need access to the same resources. You may wish to add a dump table entry always to terminate CICS on this message.

System action: If the task had a principal facility, it has been released. If this was a terminal, the terminal should be usable by CICS.

The task is suspended indefinitely. First failure diagnostics should be produced by the component which detects the error. The transaction manager also takes a dump. Message DFHME0116 is normally produced containing the symptom string for this problem.

The task is suspended with a resource type of FOREVER and a resource name of DFHXMETA.

User response: You cannot quiesce CICS since this task will not terminate. You cannot purge or force-purge the task.

Note the error code *X'code'*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

Modules: DFHXMETA.

XMEOUT Parameters: *applid*, *X'code'*, *tasknum*, *tranid*

DFHXM0311 *applid* A severe error (code *X'code'*) has occurred while initializing task number *tasknum* with transaction identifier *tranid*. Scheduler resources associated with the task have not been released. The task is suspended indefinitely.

Explanation: An internal error has prevented the initialization of task number *tasknum* with identifier *tranid*.

The task cannot run and cannot be abended. The principal facility of the task is the scheduler. The scheduler will not initiate another task until CICS is terminated. Rather than terminate CICS, the transaction manager keeps CICS running and preserves its integrity by suspending the task.

The suspended task will hold its MXT slot until CICS is terminated.

Note that the task may hold resources (for example, locks and enqueues), so you should cancel CICS at your earliest convenience. Otherwise, you risk other tasks being prevented from running because they also need access to the same resources. You may wish to add a dump table entry to always terminate CICS on production of this message.

System action: The task is suspended indefinitely. First failure diagnostics should be produced by the component which first detects the error. The transaction manager also takes a dump. Message DFHME0116 is normally produced containing the symptom string for this problem.

The task is suspended with a resource type of FOREVER and a resource name of DFHXMETA.

User response: You must cancel CICS if you need to release the resources associated with the task. You cannot quiesce CICS since this task will not terminate. You cannot purge or force-purge the task.

Note the error code *X'code'*. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: Do not attempt to reroute this message to a transient data queue.

Destination: Console

Modules: DFHXMETA.

XMEOUT Parameters: *applid*, *X'code'*, *tasknum*, *tranid*

DFHXM0501 *applid* CICS cannot satisfy request for MXT. Value *mxtvalue* has been used instead.

Explanation: The value entered for MXT cannot be handled by the system. *mxtvalue* is the largest value for which CICS has been able to acquire task storage.

The majority of the task storage required is now acquired from CICS DSAs.

System action: The system continues to run with a MXT value of *mxtvalue*.

User response: Check that the original value entered for MXT was correctly typed. If the value is mistyped, use CEMT to amend the MXT value (you are unlikely to be able to force the value higher). Remember that MXT now only includes user tasks and so it should not

need to be set to a value as high as in previous releases.

If the value *mxtoalue* is acceptable, no action is necessary.

If the value *mxtoalue* is too small, check to see which programs, apart from CICS, are running in this region. To relieve the storage constraint, either increase the DSALIM or EDSALIM of the system to give CICS more storage for its own use. For further details about storage allocation at initialization, see the *CICS Transaction Server for z/OS Installation Guide*.

Destination: Console

Modules: DFHXMSR

XMEOUT Parameters: *applid, mxtoalue*

DFHXM0502 *applid* **A catalog failure has occurred while saving the MXT setting.**

Explanation: An error has occurred while saving the requested MXT setting on the catalog.

System action: The requested MXT change request continues as normal.

Depending upon the error that has occurred with the catalog, there may be severe problems if a warm or emergency restart of CICS is attempted. The catalog domain will have issued a message outlining the problem in this case.

Alternatively the problem may only be local to the catalog record containing the MXT value and only it may not be recovered on a warm or emergency restart.

User response: No immediate action is required.

DFHXOxxxx messages

DFHXO6700 **OPTION STARTING xxx HAS ILLEGAL SYNTAX.**

Explanation: The option *xxx* has illegal syntax.

System action: The overseer program is abnormally terminated after completion of parameter analysis.

User response: Correct the error and resubmit the overseer program.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWOSA

DFHXO6702 **JOB STEP IS NOT APF-AUTHORIZED.**

Explanation: Part of CICS initialization must be done in an APF-authorized state. The kernel has detected that DFHSIP is not APF-authorized.

Consider performing a cold or initial start, with the required MXT value specified in the SIT the next time CICS is restarted. If a cold start is not appropriate, add MXT as a SIT override specifying the required MXT value.

Destination: Console

Modules: DFHXMSR

XMEOUT Parameter: *applid*

DFHXM0503 *applid* **CICS cannot support minimum MXT value of *minmxt*. CICS is terminated.**

Explanation: A severe lack of storage has resulted in CICS not being able to acquire enough task storage to satisfy even the minimum MXT value of *minmxt*.

CICS cannot perform any useful work without *minmxt* number of user tasks.

System action: CICS is terminated.

User response: Investigate why there is insufficient storage for CICS to support such a low number of user tasks.

To relieve the storage constraint, either increase the DSALIM or EDSALIM of the system to give CICS more storage for its own use. For further details about storage allocation at initialization, see the *CICS Transaction Server for z/OS Installation Guide*.

Destination: Console

Modules: DFHXMSR

XMEOUT Parameters: *applid, minmxt*

System action: The overseer program is abnormally terminated.

User response: Ensure that the job step is APF-authorized. All libraries concatenated in the STEPLIB concatenation should be APF-authorized, and DFHSIP should be link-edited with an authorization code of 1.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWOSA

DFHXO6703 **UNABLE TO SET UP AUTHORIZED FACILITY.**

Explanation: Insufficient storage is available to initialize the authorized facility required by the overseer.

System action: The overseer program is abnormally terminated.

User response: Ensure that the REGION parameter is sufficiently large.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWOSA

DFHXO6704 UNABLE TO OPEN DFHLIB.

Explanation: A DD statement for (ddname) DFHLIB was missing from the batch job stream.

System action: The overseer program is abnormally terminated.

User response: Correct the JCL.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWOS

DFHXO6705 xxx OPTION IS MISSING.

Explanation: The option xxx may not be omitted.

System action: The overseer program is abnormally terminated after completion of parameter analysis.

User response: Correct the error and resubmit the overseer program.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWOSA

DFHXO6706 CYTIM OPTION MUST BE IN RANGE 20 TO 32767.

Explanation: The CYTIM option must fall within the range 20 through 32767.

System action: The overseer program is abnormally terminated after completion of parameter analysis.

User response: Correct the error and resubmit the overseer program.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWOSA

DFHXO6707 VALUE OF xxx OPTION IS LONGER THAN 5 DIGITS.

Explanation: The value of the given numeric option must occupy no more than five digits.

System action: The overseer program is abnormally terminated after completion of parameter analysis.

User response: Correct the error and resubmit the overseer program.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWOSA

DFHXO6708 VALUE OF xxx OPTION IS NON-NUMERIC.

Explanation: The value of the option xxx must be numeric.

System action: The overseer program is abnormally terminated after completion of parameter analysis.

User response: Correct the error and resubmit the overseer program.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWOSA

DFHXO6709 VALUE OF xxx OPTION IS LONGER THAN 8 CHARACTERS.

Explanation: The value of option xxx must occupy no more than eight characters.

System action: The overseer program is abnormally terminated after completion of parameter analysis.

User response: Correct the error and resubmit the overseer program.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWOSA

DFHXO6712 xxx IS AN INVALID OPTION KEYWORD.

Explanation: The specified keyword xxx is an invalid option.

System action: Option xxx is ignored.

User response: Correct the error.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWOSA

DFHXO6720 THE CICS XRF OVERSEER HAS RECEIVED AN INVALID RESPONSE TO A SUBSYSTEM INTERFACE REQUEST.

Explanation: Overseer services has received an inconsistent response to an MVS subsystem interface request for job status. The response indicates insufficient storage although more than the indicated necessary amount is provided.

System action: A dump is taken and the overseer job abnormally terminates with MVS user abend code 224.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWOSB

DFHXQxxxx messages

DFHXQ0101I Shared TS queue server initialization is in progress.

Explanation: The queue server program has started execution.

System action: Initialization continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQMN

DFHXQ0102I Shared TS queue server for pool *poolname* is now active.

Explanation: The queue server for the named pool has completed initialization and is now ready to accept connections.

System action: The server waits for connection requests or operator commands.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

DFHXO6721 THE CICS XRF OVERSEER HAS BEEN UNABLE TO GET STORAGE FOR A SUBSYSTEM INTERFACE REQUEST.

Explanation: The XRF overseer application program has issued a DFHWOSM FUNC=JJC, JJS or QJJS macro. The MVS subsystem interface request issued by the overseer services program while processing this request has failed. The response indicates that the reply area is too small. The MVS GETMAIN request to obtain a larger area is not satisfied.

System action: The subsystem options block (SSOB), indicating 'status array too small' (SSOBRETN=SSCSMALL), is returned to the caller in the 256 byte SSOB return area specified in the DFHWOSM macro.

User response: Since the areas involved are small, the condition should not normally occur. If it persists, or disrupts the effectiveness of your overseer application, you may need to cancel the overseer job with a dump to investigate the reason for the shortage of storage.

Note: This message cannot be changed with the message editing utility.

Destination: Console

Modules: DFHWOSB

Modules: DFHXQMN

DFHXQ0103 The pool name parameter is missing.

Explanation: The shared TS queue server program needs to know the name of the queue pool in order to complete initialization but no pool name was specified in the SYSIN or PARM field parameters.

System action: The queue server is terminated.

User response: Ensure that the parameter POOLNAME=name is specified either in the SYSIN parameters or in the PARM field of the JCL for the queue server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQMN

DFHXQ0104 Shared TS queue server initialization failed because program DFHXQMN is not APF authorized.

Explanation: The queue server main program DFHXQMN cannot complete initialization because it is not running with APF authorization.

System action: The queue server is terminated.

User response: Ensure that the queue server program DFHXQMN is loaded from an APF authorized library and has been linkedited with the option AC(1).

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQMN

DFHXQ0111I Shared TS queue server for pool *poolname* is terminating.

Explanation: The queue server has started termination processing, so no further requests will be processed.

System action: Termination continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQMN

DFHXQ0112I Shared TS queue server has terminated, return code *retcode*, reason code *rsncode*.

Explanation: The queue server has completed termination processing. If the termination was caused by an error, the return code will be non-zero and the reason code will normally be the number of a previous DFHXQnnnn message giving the reason for termination.

System action: The queue server program returns control (via the AXM termination routines) to MVS for job step termination.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQMN

DFHXQ0113 Shared TS queue server completion code is *cmpcode*, reason code *rsncode*.

Explanation: The queue server has terminated after intercepting an abnormal termination (ABEND) request. If the completion code is a system completion code, it is shown as three hexadecimal digits, otherwise it is shown as four decimal digits for a user completion code.

System action: The queue server program returns control (via the AXM termination routines) to MVS for job step termination.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQMN

| **DFHXQ0121I Automatic restart support is not available because &SYSCZONE may not be unique within the sysplex.**

| **Explanation:** The server attempted to generate a default ARM element identifier to use for automatic restart registration, using the one or two character &SYSCZONE value to identify the MVS system. Normally, MVS verifies during start-up that &SYSCZONE is unique within the sysplex. However, the server is running on a level of MVS where this check is optional and has not been performed, so the server is unable to generate a unique element identifier.

| **System action:** The server is terminated.

| **User response:** Servers should not normally be run on a level of MVS which does not enforce unique &SYSCZONE values. However, the problem can be bypassed by specifying an ARM element name explicitly on the server ARMELEMENT parameter.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** Console and SYSPRINT

| **Modules:** DFHXQRS

| **DFHXQ0122 IXCARM REQUEST=*reqtype* failed, return code *retcode*, reason code *rsncode*.**

| **Explanation:** A request to the MVS automatic restart manager (ARM) gave an unexpected return code. The return code and reason code are shown in hexadecimal notation.

| **System action:** The server is terminated.

| **User response:** See the IXCARM macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

| **Note:** This message cannot be changed with the message editing utility.

| **Destination:** Console and SYSPRINT

| **Modules:** DFHXQRS

DFHXQ0123 IXCARM REQUEST=*reqtype* failed,
return code *retcode*, reason code *rsncode*.

Explanation: Automatic restart support is not
available. The MVS automatic restart manager (ARM)
gave an unexpected return code. The return and reason
code are shown in hexadecimal notation.

System action: The server continues initialization.

User response: See the IXCARM macro in *z/OS MVS*
Programming: Sysplex Services Reference (GC28-1772) for
the explanation of the return and reason code.

Note: This message cannot be changed with the
message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQRS

DFHXQ0201I Processing *type* parameters

Explanation: The queue server parameter processing routine is interpreting the specified parameter string. The first word gives the type of parameter (SYSIN/PARM/SET/DISPLAY/PRINT) and the rest is the specified parameters optionally followed by descriptive comment text after one or more spaces. If the parameters start with an asterisk or a space, the whole line is taken as descriptive comments.

System action: Any specified parameters will be processed.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHXQPR

DFHXQ0202 Unknown parameter keyword: *keyword*

Explanation: This parameter keyword did not match any of the defined parameter keywords for the queue server.

System action: Processing of the current line of parameters is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter keyword (or remove the incorrect parameter) and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQPR

DFHXQ0203 Value *value* for parameter *keyword* is incorrect. It must be a name of up to *maxlength* characters.

Explanation: The value of this parameter should have been specified as a name containing not more than the indicated number of characters.

System action: Processing of the current line of parameters is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter keyword (or remove the incorrect parameter) and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQPR

DFHXQ0204 Value *value* for parameter *keyword* is incorrect. It must be a decimal number.

Explanation: The value of this queue server parameter should have been specified as a decimal number but was not in a valid format. (Numeric parameters can optionally be followed by the letter K, M or G to denote the appropriate powers of 1024).

System action: Processing of the current line of parameters is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value (or remove the incorrect parameter) and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQPR

DFHXQ0205 Value *value* for parameter *keyword* is greater than the maximum allowed value *maximum*.

Explanation: The value of this queue server parameter exceeded the maximum allowed value *maximum*.

System action: Processing of the current line of parameters is terminated. For an initialization parameter specified in SYSIN or the PARM field, a

return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value (or remove the incorrect parameter) and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQPR

DFHXQ0206 Value *value* for parameter *keyword* is less than the minimum allowed value *minimum*.

Explanation: The value of this queue server parameter was less than the minimum allowed value *minimum*.

System action: Processing of the current line of parameters is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value (or remove the incorrect parameter) and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQPR

DFHXQ0207 Value *value* for parameter *keyword* is incorrect. It should be a time hh

Explanation: The value of this queue server parameter did not conform to the correct syntax for a time interval.

System action: Processing of the current line of parameters is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value (or remove the incorrect parameter) and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQPR

DFHXQ0208 Parameter keyword *keyword* is not supported for *command*.

Explanation: A queue server parameter keyword was specified in a context where it is not valid, usually indicating an attempt to SET dynamically a parameter which can only be specified at initialization time.

System action: Processing of the current line of parameters is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value (or remove the incorrect parameter) and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQPR

DFHXQ0209 Parameter text contains invalid character: *text*

Explanation: The queue server parameter processing routine found some unexpected text when attempting to process parameters.

System action: Processing of the current line of parameters is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameters (or remove the incorrect parameter) and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQPR

DFHXQ0210 Parameter keyword *keyword* should not have a value for *command*.

Explanation: A queue server parameter keyword was specified in the form keyword=value in a context where it was not expected, for example on a DISPLAY command.

System action: Processing of the current line of parameters is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Reenter the command without specifying a value for the parameter to be displayed.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQPR

DFHXQ0211I Parameter value: *keyword=value*

Explanation: This message is issued to show the current value of a queue server parameter setting in response to a DISPLAY or PRINT command.

System action: Processing continues normally.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQPR

DFHXQ0212 Value *value* for parameter *keyword* is incorrect. It must be one of *validlist*.

Explanation: The value of this queue server parameter was not recognized. It should have been specified as one of the indicated list of values.

System action: Processing of the current line of parameters is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value (or remove the incorrect parameter) and reenter the command or restart the server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQPR

DFHXQ0213 Value for parameter *keyword* is missing. The correct form is *keyword=value*.

Explanation: A parameter keyword was specified without an associated parameter value on a queue server SET command or in a SYSIN or PARM parameter string. Note that the only character which should appear between the parameter keyword and its intended value is the equals sign, without any extra spaces.

System action: Processing of the current line of parameters is terminated. For an initialization parameter specified in SYSIN or the PARM field, a

return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Reenter the parameter specification in the correct form *keyword=value*.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQPR

DFHXQ0301I Console operator *consname* issued command: *command*

Explanation: A queue server operator command has been issued via the MVS MODIFY or STOP command. This message identifies the console name (or TSO userid) from which the command was issued and the text of the command.

System action: Processing continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: SYSPRINT

Modules: DFHXQOP

DFHXQ0302I *command* command ignored because no valid parameters were given.

Explanation: A queue server command was issued which had no valid parameters on it but was otherwise syntactically valid. The command has had no effect.

System action: Processing continues normally.

User response: Ensure that the command was entered correctly.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQOP

DFHXQ0303I *command* command has been processed.

Explanation: A queue server command has been processed successfully.

System action: Processing continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQOP

DFHXQ0304I STOP command is waiting for connections to be closed. Number of active connections = *connections*.

Explanation: A queue server STOP command has been issued (either via an MVS STOP command or via an MVS MODIFY command with the text STOP) but there are still active connections to the server, so the STOP command has not yet taken effect.

System action: The server rejects any further attempts to establish new connections, but continues processing requests for existing connections. Each time a connection is terminated, this message is repeated for as long as there are more active connections.

User response: Further information about the connections which are still active can be obtained using the command DISPLAY CONNECTIONS.

If the server needs to be shut down without waiting for connections to be closed, issue the queue server CANCEL command. Note that this immediately terminates any active connections, causing any further requests for that server to be given a SYSIDERR indication. (The MVS CANCEL command can also be used, but should preferably be avoided because it prevents the server from producing its normal closedown statistics and reports).

Note that if a CICS region is abnormally terminated while server connect or disconnect processing is in progress, or is terminated without going through end of task processing (for example using the FORCE command) there is a slight chance that the server will not be notified that the connection has been terminated. In this case the server is not able to be closed down with the server STOP command, but only with the server CANCEL command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQOP

DFHXQ0305I STOP command has been processed.

Explanation: Processing of a queue server STOP command has now been successfully completed. This means that there are no longer any active connections and the server is ready to close down.

System action: The queue server starts termination processing.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQOP

DFHXQ0306 Shared TS queue server does not support this command: *command*

Explanation: An operator command was addressed to the queue server using the MVS MODIFY command, but the first word of the MODIFY text is not a recognized queue server command (SET, DISPLAY, PRINT, STOP or CANCEL).

System action: The command is ignored.

User response: Correct and reenter the command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQOP

DFHXQ0307I CANCEL *parm* command has been processed. Number of active connections = *connections*.

Explanation: A queue server CANCEL command has been issued, either from an operator console or internally by the queue server in response to a severe error. This message includes any restart parameter specified on the command and the number of active connections which may be affected by this command.

System action: The queue server terminates immediately, without waiting to close connections.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQOP

DFHXQ0309 Parameter *parm* on CANCEL command is incorrect. The only valid parameters are RESTART=YES or RESTART=NO.

Explanation: A queue server CANCEL command was issued with a parameter which did not match the valid parameter keywords.

System action: The command is ignored.

User response: Correct and reenter the command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQOP

DFHXQ0310 Parameter *parm* on STOP command is incorrect. No parameters should be specified.

Explanation: A queue server STOP command was issued with parameters, but the STOP command does not support any parameters.

System action: The command is ignored.

User response: Correct and reenter the command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQOP

DFHXQ0351I Connection: Job *jobname* Appl *applid*
Idle *idletime*

Explanation: This describes a single connection in response to the command DISPLAY CONNECTIONS or PRINT CONNECTIONS. The information shows the job name, the specific APPLID and the time in hours, minutes and seconds since the most recent queue request or inquire call was issued using the connection.

System action: This message is issued for each active connection then message DFHXQ0352I is issued to show the total number of active connections.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCN

DFHXQ0352I Queue pool *poolname* total active connections: *connections*.

Explanation: This describes the total number of active connections to the queue pool server, in response to the server command DISPLAY CONNECTIONS or PRINT CONNECTIONS.

System action: Processing continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCN

DFHXQ0401I Connected to CF structure *strname*.

Explanation: The queue server has successfully established a connection to the coupling facility list structure for the queue pool, using the IXLCONN macro.

System action: Processing continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0402I CF structure *strname* was allocated by this connection.

Explanation: The list structure did not previously exist and was allocated as part of the connection process.

System action: List structure initialization will be performed if necessary.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0403 Connection to CF structure *strname* failed, IXLCONN return code *retcode*, reason code *rsncode*.

Explanation: The IXLCONN macro to connect the queue server to its coupling facility list structure failed.

System action: The queue server is terminated.

User response: See the IXLCONN macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code. If the reason code is of the form xxxx0C08, indicating structure allocation failure, this message is followed by message DFHXQ0409 giving the facility reason code for each CF in which allocation was attempted.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0404 CF structure *strname* cannot be used because it has been allocated with attribute *attribute*.

Explanation: The queue server has successfully connected to its list structure but has found that the structure has been allocated using an IXLCONN structure attribute keyword which is not supported by the queue server.

System action: The queue server is terminated.

User response: This probably indicates that the structure has been allocated or modified by some program other than the queue server. In this case, the incorrect structure should be deleted (for example using the SETXCF FORCE command) so that it will be reallocated correctly when the queue server is restarted.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0405 CF structure *strname* element size *elemsize* is incorrect. It should be a power of 2 in the range 256 to 4096.

Explanation: The queue server list structure element size (specified via the ELEMSIZE initialization parameter) is not a power of two, or is outside the range supported by the list structure hardware.

System action: The queue server is terminated (without attempting to connect to the list structure).

User response: Correct the ELEMSIZE parameter and restart the queue server.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0406 Initialization failed for CF structure *strname* with response *response*.

Explanation: Queue server processing to initialize the list structure failed with an abnormal internal response code.

System action: The server is terminated.

User response: If the response code is 8 (I/O error), it indicates that an IXLLIST macro gave an abnormal return code, in which case a previous DFHXQ0441 message will have been issued giving the IXLLIST return code and reason code. If this response code is any other value, this indicates that the list structure is in a state which should not occur, probably indicating that it was allocated or modified by a program other

than the queue server. In this case the structure may need to be deleted (using SETXCF FORCE) so that it will be reallocated when the server is restarted.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0407 CF structure *strname* is not available for shared use.

Explanation: The queue pool is currently locked for exclusive use by some other job such as a queue pool unload or reload job. (This serialization uses an MVS ENQ with scope SYSTEMS for major name SYSZDFH minor name DFHXQLS_poolname).

System action: The server is terminated.

User response: Check whether a queue pool maintenance job is currently running. If it is, wait until it has finished before trying to start the server again.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0408 CF structure *strname* is not available for exclusive use.

Explanation: The current job (an unload or reload) requires exclusive use of the queue pool, but some other job is running which already has shared or exclusive use of the pool. (This serialization uses an MVS ENQ with scope SYSTEMS for major name SYSZDFH minor name DFHXQLS_poolname).

System action: The server is terminated.

User response: Check whether a queue pool server or maintenance job is currently running. If it is, wait until it has finished before trying to run the current job again.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0409 CF structure *strname* could not be allocated in facility *cfname*, reason code *rsncode*.

Explanation: If a previous message DFHXQ0403 indicated an IXLCONN failure because the structure could not be allocated, this message is issued for each CF in which allocation was attempted to show the

facility reason code indicating why structure allocation failed. If the reason code is known to the server, the name of the reason code is given (without the ConaRsn prefix), otherwise its decimal value is shown.

If the response indicates `InvalidStructureSize`, this means that the initial list structure size (specified on the server `POOLSIZE` parameter or in the CFRM policy `INITSIZE` parameter) is not large enough to contain the required structure control information. The size of the control information is affected by the number of list headers (determined by the server `MAXQUEUES` parameter) and by the maximum structure size specified in the CFRM policy.

System action: The queue server is terminated.

User response: See the descriptions of the reason codes in the MVS macro `IXLYCONA` which maps the connect answer area.

If the response was `InvalidStructureSize`, increase the initial structure size specification in the server `POOLSIZE` parameter or the CFRM policy `INITSIZE` parameter to ensure that there is enough space for data in addition to the structure control information. Also, check that the server `MAXQUEUES` parameter and the maximum structure size specified in the CFRM policy are not unnecessarily large. See the *System Definition Guide* for more information on how to estimate temporary storage queue pool sizes.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0410 CF structure *strname* cannot be used, coupling facility maintenance level is too low.

Explanation: Initialization test routines executed against the allocated list structure gave incorrect results, indicating that the coupling facility control code does not include all maintenance necessary to support shared temporary storage.

System action: The queue server is terminated.

User response: Ensure that the required level of coupling facility maintenance is applied.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0411I CF structure *strname* now has *percentage%* of entries in use.

Explanation: This message is issued by the queue server when the percentage of list entries in use within the list structure increases past certain set threshold levels, or when it decreases past a threshold level after previously being at a higher level. This message is also issued immediately after an `ALTER` request has completed in order to show how the percentage has been affected by changes in the structure size or entry to element ratio.

System action: The warning threshold is increased to the next higher level (normally 5% higher if less than 95%, otherwise 1% higher), or decreased to the previous lower level depending on whether the usage is increasing or decreasing. If the structure usage is increasing and the structure element to entry ratio is not making full use of the available space, the server may issue an automatic `IXLALTER` request to adjust the ratio.

User response: Note that the structure may soon become full, preventing queues from being created. If the structure was allocated at less than its maximum size and the coupling facility has enough free space, the size of the structure can be altered dynamically using the MVS `SETXCF` command with the `START,ALTER` options.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0412I CF structure *strname* now has *percentage%* of elements in use.

Explanation: This message is issued by the queue server when the percentage of list data elements in use within the list structure increases past certain set threshold levels, or when it decreases past a threshold level after previously being at a higher level. This message is also issued immediately after an `ALTER` request has completed in order to show how the percentage has been affected by changes in the structure size or entry to element ratio.

System action: The warning threshold is increased to the next higher level (normally 5% higher if less than 95%, otherwise 1% higher), or decreased to the previous lower level depending on whether the usage is increasing or decreasing. If the structure usage is increasing and the structure element to entry ratio is not making full use of the available space, the server may issue an automatic `IXLALTER` request to adjust the ratio.

User response: Note that the structure may soon become full, preventing queues from being created. If the structure was allocated at less than its maximum

size and the coupling facility has enough free space, the size of the structure can be altered dynamically using the MVS SETXCF command with the START,ALTER options.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0413I Starting ALTER to adjust CF structure
strname **entry/element ratio to**
entries/elements.

Explanation: The queue server has determined that the ratio of free entries to free elements is significantly different from the ratio of entries to elements actually in use. It is issuing an IXLALTER macro to request the coupling facility to adjust the ratio to make better use of the coupling facility storage.

System action: The server continues by issuing the IXLALTER macro. A further message will be issued when the ALTER request is accepted or rejected by MVS.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0414I ALTER started for CF structure *strname.*

Explanation: The queue server has successfully started an ALTER request to change the entry to element ratio for the list structure.

System action: The queue server event exit will be notified by MVS when the ALTER request completes and a further message will then be issued.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0415I ALTER rejected for CF structure
strname, **ALTER already active.**

Explanation: The queue server attempted to start an ALTER to change the entry to element ratio for the list structure, but this was rejected by the system because another ALTER was already active.

System action: The queue server event exit will be notified by MVS when the ALTER request completes

and a further message will then be issued.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0416 ALTER request failed for CF structure
strname, **IXLALTER return code** *retcode*,
reason code *rsncode.*

Explanation: The queue server attempted to start an ALTER to change the entry to element ratio for the list structure, but this was rejected by the system with an unexpected return code.

System action: The current ALTER attempt is abandoned. Another attempt may be made when the minimum alter interval has expired.

User response: See the IXLALTER macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0417I ALTER completed normally for CF
structure *strname.*

Explanation: The queue server has been notified by the system that an ALTER request has completed normally.

System action: New values for the structure size and numbers of elements and entries are stored. This message is followed by messages DFHXQ0411 and DFHXQ0412 to indicate the new usage percentages.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0418I ALTER ended abnormally for CF
structure *strname* **with status** *status.*

Explanation: The queue server has been notified by the system that an ALTER request has ended abnormally. The two bytes of status information in this message are taken from EEPLALTERENDSTATEFLAGS in the event exit parameter list (defined in the IXL YEEPL macro).

System action: No action is taken as a result of this notification, but the problem which caused the ALTER to fail will probably result in other related problems.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0419I ALTER ended normally for CF structure *strname* but target was not attained.

Explanation: The queue server has been notified by the system that an ALTER request has ended normally but that the target ratio or target size was not attained.

System action: New values for the structure size and numbers of elements and entries are stored. This message is followed by messages DFHXQ0411 and DFHXQ0412 to indicate the new usage percentages.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0424 Connectivity has been lost to CF structure *strname*. The shared TS queue server cannot continue.

Explanation: The queue server has been notified by the system that connectivity has been lost to its list structure.

System action: The server issues an internal CANCEL command to terminate itself immediately.

User response: Restart the server when connectivity to the server from the current system has been reestablished. If connectivity is still available from other systems, CICS transactions which require access to the affected queue pool should be diverted to those systems if possible.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0425 CF structure *strname* has failed. The shared TS queue server cannot continue.

Explanation: The queue server has been notified by the system that its list structure has been lost due to

coupling facility failure. All data in the queue pool has been lost.

System action: Each queue server for the affected pool issues an internal CANCEL command to terminate itself immediately.

User response: If another coupling facility is available and is included in the CFRM preference list for the failed structure, delete the failed structure and restart the servers to cause a fresh copy of the list structure to be allocated on the alternate coupling facility. If no other coupling facility is available, wait until the original coupling facility has been made available again before restarting the servers.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0431I Access statistics for CF structure *strname*:

Explanation: This message gives a summary of coupling facility access statistics. It is issued in response to a DISPLAY or PRINT command which includes the CFSTATS parameter, and may also be produced on the SYSPRINT file during interval statistics if the statistics options include print file output.

The detailed message layout is as follows:

```
Index: Wrt Adjs Writes Reads Deletes Rereads
        n      n      n      n      n
      Read Adjs
        n
Data: Creates Writes Reads Deletes Rereads
      n      n      n      n      n
    Rewrites
      n
| Responses: Asynch Unavail Normal Len err
|           n      n      n      n
|           Not fnd Vers chk List chk
|           n      n      n
|           List full Str full I/O err
|           n      n      n
```

System action: Processing continues.

User response: The statistics are described in detail in the DFHXQS1D data area. For queues which do not exceed 32K bytes, the data is included in the queue index, otherwise it is stored as a separate list. The individual fields have the following meanings:

- Index access counts:

Wrt Adjs

Number of index writes to update adjunct area only. (This area contains the read cursor for small queues and the queue status including last used data).

Writes Number of queue writes (new or update) including data.

Reads Number of queue index reads.

Delete Number of queue deletes.

Rereads
Number of reads which had to be repeated because the data was larger than the default data transfer size.

Read Adjs
Number of index reads for the status area only. This is used for inquire processing, and also to read the queue details if necessary during delete processing.

• Data access counts:

Creates Number of times a separate data list was created.

Writes Number of writes to add items to separate data lists.

Reads Number of reads from separate data lists.

Delete Number of times a separate data list was deleted.

Rereads
Number of reads which had to be repeated because the data was larger than the default data transfer size.

Rewrites
Number of writes to replace items in separate data lists.

• Response counts:

Asynch
Number of requests for which completion was asynchronous.

| **Unavail**
| Number of times requests were deferred
| because the structure was temporarily
| unavailable, for example because
| system-managed rebuild was in progress.

Normal
Number of normal responses.

Len err The input buffer was too small to contain the data. The server often tries a buffer size of only 4K in order to use a synchronous read if possible. If this response occurs, the server sets up the maximum sized buffer and reissues the read.

Not fnd
The specified entry (queue or item) was not found.

Vers chk
A version check failed for an entry being updated or created, indicating that another task had updated it first.

List chk
A list authority comparison failed, usually meaning that the queue is in the process of being deleted.

List full
A queue reached the maximum number of items, causing the relevant list to be marked as full.

Str full The list structure became full.

I/O err Some other error code was returned by IXLLIST.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0432I Queue pool statistics for CF structure
strname:

Explanation: This message gives a summary of the usage statistics for the queue pool list structure. It is issued in response to a DISPLAY or PRINT command which includes the POOLSTATS parameter, and may also be produced on the SYSPRINT file during interval statistics if the statistics options include print file output.

The detailed message layout is as follows:

```

Structure: Size Max size Elem size
           nK      nK      n
Queues: Current Highest
           n      n
Lists: Total In use Max used Control Data
        n      n      n      n      n
        100%  n%      n%      n%      n%
Entries: Total In use Max used Free Min free
           n      n      n      n      n
           100%  n%      n%      n%      n%
Elements: Total In use Max used Free Min free
           n      n      n      n      n
           100%  n%      n%      n%      n%

```

System action: Processing continues.

User response: The statistics are described in detail in the DFHXQS1D data area. Pool usage statistics are calculated from information returned by coupling facility requests, and are not always very accurate, especially if the relevant information has not been accessed recently by the current server. The individual fields have the following meanings:

• Structure:

Size Current allocated size of the list structure.

Max size
Maximum size to which this structure could be altered.

- Elem size**
Data element size used for the structure.
- Queues:
 - Current**
Number of queues currently in existence.
 - Highest**
Highest number of queues at any time (since last reset).
- Lists:
 - Total** Maximum number of list headers in the structure.
 - In Use** Number currently in use.
 - Max Used**
Maximum number in use (since last reset).
 - Control**
Number of lists in use for control information.
 - Data** Number of lists in use for queue data.
- Entries:
 - Total** Total entries in the currently allocated structure. (Obtained at connection time, may be updated by ALTER).
 - In Use** Number of entries currently in use.
 - Max Used**
Maximum number in use (since last reset).
 - Free** Number of entries currently free (total minus used).
 - Min Free**
Minimum number of free entries (since last reset).
- Elements:
 - Total** Total data elements in the currently allocated structure. (Obtained at connection time, may be updated by ALTER).
 - In Use** Number of elements currently in use.
 - Max Used**
Maximum number in use (since last reset).
 - Free** Number of elements currently free (total minus used).
 - Min Free**
Minimum number of free elements (since last reset).

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0441 CF structure *strname* request failed, IXLLIST return code *retcode*, reason code *rsncode*.

Explanation: A coupling facility access request issued via the IXLLIST macro gave an abnormal return code.

System action: The failing request is given an I/O error indication, giving an IOERROR condition if it originated from a CICS API request.

User response: See the IXLLIST macro in *OS/390 MVS Programming: Sysplex Services Reference (GC28-1772)* for the explanation of the return and reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0442 CF structure *strname* request failed, structure is full.

Explanation: A coupling facility access request issued via the IXLLIST macro failed because there are insufficient free entries or elements to store the new data in the structure.

System action: The failing request is given a NOSPACE indication if it originated from a CICS API request. For reload processing, if an automatic ALTER is in progress, the request may be suspended until the outcome of the ALTER is known, then retried. This message will not be issued again for further failures until the used numbers of elements and entries fall well below the warning threshold.

User response: Any queues which are no longer in use should be deleted so that the space can be reused. If the structure is not at its maximum size, it may be possible to start an ALTER request to increase the size using the MVS SETXCF command.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0443 CF structure *strname* request failed, all lists are in use.

Explanation: A coupling facility access request issued via the IXLLIST macro failed because all list headers defined in the structure are now in use. The number of list headers is determined by the MAXQUEUES server initialization parameter when the structure was allocated.

System action: The failing request is given a NOSPACE indication if it originated from a CICS API request. This message will not be issued again for

further failures while the shortage of list entries remains.

User response: Any queues of total size greater than 32K bytes which are no longer in use should be deleted to free up data lists. As the number of lists is fixed when the structure is allocated, the only way to increase the number of lists is to unload the structure, use SETXCF FORCE to delete it then reload it with a larger MAXQUEUES parameter.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0444I CF request has been suspended to await ALTER completion.

Explanation: A coupling facility access request issued from the server address space (during reload processing) ran out of space in the list structure, but an automatic ALTER attempt to free up more space is either already active or is being started at this point. The request is therefore being suspended to await the outcome of the ALTER attempt.

System action: The request is suspended until either the ALTER request completes (normally or abnormally), then the request is retried.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0445I CF request is being retried after ALTER completion.

Explanation: A request which was suspended to await the completion of an ALTER request is now being retried because the ALTER has either completed or failed.

System action: The suspended request will be restarted.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0451 Purge for CF structure *strname* failed, IXPURGE return code *retcode*, reason code *rsncode*.

Explanation: A queue access request was terminated abnormally and the queue server issued an IXPURGE macro to ensure any active IXLLIST request was purged before releasing the I/O buffer, but the IXPURGE macro gave a non-zero return code.

System action: The error is ignored because this only occurs when a request is already being terminated abnormally.

User response: See the IXPURGE macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0461I Disconnected from CF structure *strname*.

Explanation: The server has successfully disconnected from the CF structure (using the IXLDISC macro).

System action: Processing continues.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0462 Disconnect from CF structure *strname* failed, IXLDISC return code *retcode*, reason code *rsncode*.

Explanation: The IXLDISC macro to disconnect the queue server from its coupling facility list structure failed.

System action: The error is ignored, as disconnection only occurs when the server is already terminating.

User response: See the IXLDISC macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQCF

DFHXQ0481I Waiting for structure *strname* to become available.

Explanation: The queue server was unable to connect to its coupling facility structure because of an environmental error, such as the structure being unavailable, as described in a previous DFHXQ0403 message. The server is now waiting for this problem to be fixed, and will retry the connection request when it is notified via the ENF facility that the specific structure may now be available or that some change has occurred in the status of general coupling facility resources.

System action: The server waits to be notified of a relevant event.

User response: No action is required, but the waiting server can optionally be terminated using the MVS CANCEL command if it is no longer required.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQEN

DFHXQ0482I Retrying connection to structure *strname*.

Explanation: The queue server has been notified via ENF that its list structure may now be available or that a change has occurred in the status of some general coupling facility resources, so it is about to make another attempt to connect to the structure.

System action: The original IXLCONN request is retried.

User response: None.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQEN

DFHXQ049I ENFREQ ACTION=*action* failed, return code *retcode*.

Explanation: An ENF request issued by the queue server gave an unexpected return code.

System action: If this occurs on the ENFREQ ACTION=LISTEN request and the server is subsequently unable to connect to the list structure, the server will be terminated instead of waiting for the structure to become available.

User response: See the documentation of the ENFREQ macro in *OS/390 MVS Programming: Authorized Assembler Services Reference, Volume 2*

(*ENFREQ-ITTFMTB*) (GC28-1765) for the explanation of the return and reason code.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQEN

DFHXQ050I Insufficient storage, only *actual* of *requested* data buffers allocated.

Explanation: The queue server was unable to allocate the specified number of data buffers (of 32K bytes) during initialization because the relevant storage pool (AXMPGANY) was exhausted.

System action: The server is terminated.

User response: Decrease the BUFFERS initialization parameter to a value less than the number which were successfully allocated (to leave plenty of storage for request processing) and restart the server. Alternatively, increase the region size for the queue server to allow more buffers to be allocated.

Note: This message cannot be changed with the message editing utility.

Destination: Console and SYSPRINT

Modules: DFHXQBF

DFHXQ051I Queue index buffer pool statistics:

Explanation: This message gives a summary of the usage statistics for the queue index buffer pool, which is used to read and write queue index entries and their associated data, and to save recently accessed index entries in storage to reduce coupling facility I/O. It is issued in response to a DISPLAY or PRINT command which includes the BUFSTATS parameter, and may also be produced on the SYSPRINT file during interval statistics if the statistics options include print file output.

The detailed message layout is as follows:

```
Buffers: Total Max used Active On LRU Empty
           n         n         n         n         n
Requests: Gets Puts Keeps Frees Purges
           n         n         n         n         n
Results: Got hit Got free Got new Got LRU No buff
(Get)      n         n         n         n         n
Errors: Not freed No purge Not owned
