DFHIR3748 *date time applid* **Initial start of connected system** *sysid, netname netname, protocol pppp* **was detected.**

Explanation: A new logname was received during the MRO bind process from the connected system. This indicates that the connected system has restarted with a start type of INITIAL, since it last communicated with this CICS. If the message-issuing system has any resynchronization data relating to units of work from a previous usage of the connection, this data is kept but cannot be used by the system for automatic resynchronization.

System action: New MRO work for the connection is not inhibited.

User response: Examine the resynchronization information kept by the system from the previous usage of the connection using the

EXEC CICS INQUIRE UOWLINK RESYNCSTATUS

command (or the equivalent CEMT command) for the named connection in order to locate UOWLINKs with a RESYNCSTATUS of COLDSTART. You can use this information to resolve manually any indoubt units of work that existed on this system or the connected system. When the information is no longer of use, issue the

EXEC CICS SET CONNECTION PENDSTATUS(NOTPENDING)

command (or the CEMT equivalent) for the named connection to discard the resynchronization data

relating to the previous usage. Note that any new resynchronization data generated for the newly established connection is still kept.

Module: DFHCRR

XMEOUT Parameters: *date, time, applid, sysid, netname, pppp*

Destination: Console and Transient Data Queue CSMT

DFHIR3750 *applid* **Unable to stop interregion communication session during startup recovery.**

Explanation: A request has been received as the result of an abnormal termination to stop the interregion communication session during the startup recovery process. This request has failed.

System action: The session remains active.

User response: If the session must be stopped, you may have to re-IPL. (To diagnose the underlying problem, contact your IBM Support Center.)

Module: DFHCRNP

XMEOUT Parameter: *applid*

Destination: Console

DFHIR3751 *applid* **Unable to stop interregion communication session during shutdown.**

Explanation: A request has been received (by means of system termination, abnormal termination, or master terminal) to stop the interregion communication session during the shutdown process. This request has failed.

System action: The session remains active.

User response: If the session must be stopped, you may have to re-IPL. (To diagnose the underlying problem, contact your IBM Support Center.)

Module: DFHSTP

XMEOUT Parameter: *applid*

Destination: Console

DFHIR3760 *applid* **Unable to break lines with interregion communication. (Modname: modname)**

Explanation: A request has been made to shut down the interregion session. This has caused module DFHZCX to issue a request to the interregion communication program to terminate the association between CICS and the interregion communication program, but the request failed because of a system error.

System action: Any running batch (database sharing)

DFHIR3762 • DFHIR3773

programs are left in the wait state, and should be canceled. Any CICS tasks (in other CICS systems) that are in communication with this system are also left in the wait state. These other CICS systems should issue CEMT SET CONNECTION(*sysid*) OUTSERVICE PURGE, where *sysid* is the CONNECTION name of the system for which DFHIR3760 was issued. Also, any attempt to restart the interregion session (in the current or any subsequent CICS session) fails.

User response: To run further batch CICS interregion communication, you must re-IPL. You will need further assistance to resolve the underlying problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHZIS2, DFHSTP

XMEOUT Parameters: *applid, modname*

Destination: Console

DFHIR3762 *date time applid* **Inter-region activity now complete**

Explanation: A CEMT SET INTERREGION COMMUNICATION (IRC) CLOSED request was issued at the master terminal. The IRC session is now complete.

System action: Processing continues.

User response: None.

Module: DFHCRNP

XMEOUT Parameters: *date, time, applid*

Destination: CSMT

DFHIR3765 UNABLE TO STOP INTERREGION COMMUNICATION SESSION AFTER SYSTEM ABEND.

Explanation: A request has been received (by means of system termination, abnormal termination, or master terminal) to stop the interregion session. This request has failed.

System action: The session remains active.

User response: If the session must be stopped, you may have to re-IPL. You will need further assistance to resolve the underlying problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHCRC

Destination: Console

DFHIR3767 *applid* **The interregion startup program DFHCRSP is not present.**

Explanation: Module DFHCRSP is required to start an IRC session, but is missing from the CICS program library or has no installed program definition.

System action: The IRC session is not started.

User response: Install DFHCRSP definition (group DFHISC) and/or supply module DFHCRSP

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHIR3771 *applid* **Unable to start interregion communication because (E)STAE macro failed.**

Explanation: CICS issued an ESTAE macro that did not execute successfully, probably because storage for a ESTAE control block (SCB) was not available. For more information about the SCB, refer to the *MVS/ESA System Programming Library Application Development Guide*.

System action: The IRC session is not started.

User response: Correct the cause of (E)STAE failure.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHIR3772 *applid* **Error while attempting to start interregion communication.**

Explanation: CICS has evidence that the IRC session has already started. This is probably because the previous session could not be stopped (see messages DFHIR3760 and DFHIR3765). in a usable state.

System action: The IRC session is not started.

User response: Perform another IPL.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHIR3773 *applid* **Unable to start interregion communication because the APPLID option has a blank value.**

Explanation: Either the default value of *applid* (on DFHTCT TYPE=INITIAL, DFHSIT, override) must be used, or a value which is not a null value must be used.

System action: The IRC session is not started.

User response: Correct the *applid* value.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHIR3775 *applid* **Unable to start interregion communication because short on storage.**

Explanation: Main storage is required to start the IRC session, but the storage is not available.

System action: The IRC session is not started.

User response: Wait until the storage condition has eased, then issue CEMT SET IRC OPEN command at the master terminal.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHIR3776 *applid* **Unable to start interregion communication because another CICS system of the same name is active.**

Explanation: A CICS system is named by its applid value. If two CICS systems have the same applid value, the interregion communication SVC cannot distinguish between the systems. interregion communication (IRC) session could not be stopped; see message DFHIR3760. In this case, the IRC SVC would consider that the new session conflicted with the old (unstoppable) session.

System action: The IRC session is not started.

User response: Use a different generic applid for each CICS system.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHIR3777 *applid* **The interregion communication table is full**

Explanation: The interregion communication SVC's user table is full.

System action: The IRC session is not started.

User response: When there are fewer batch-sharing programs running, issue CEMT SET IRC OPEN at the master terminal.

A common cause of this error is that MAXGROUP is set too low in an XCF Sysplex environment. Check the value of MAXGROUP and, if necessary, raise it to suit your environment. For further information, See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHIR3778 *applid* **Insufficient storage is available for interregion communication blocks.**

Explanation: There is insufficient key 0 storage for the IRC control blocks. Storage is required from the CICS region but from outside the CICS DSA.

System action: The IRC session is not started.

User response: Ensure that sufficient storage is available. See the *CICS Performance Guide* for further guidance on how to determine the CICS DSA size limits in relation to the REGION size.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHIR3779 *applid* **Insufficient storage is available for interregion communication subsystem blocks.**

Explanation: There is insufficient storage for the control blocks required by IRC. Storage is required from the CICS region but from outside the CICS DSA.

System action: The IRC session is not started.

User response: Ensure that sufficient storage is available. See the *CICS Performance Guide* for further guidance on how to determine the CICS DSA size limits in relation to the REGION size.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHIR3780 *applid* **Unable to start interregion communication. Return code=*X'retcode*, Reason code=*X'rsncode*'.**

Explanation: CICS attempted to establish itself as a user of the interregion communication (IRC) services, but the attempt failed.

System action: The IRC session is not started.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: The return code and reason code (if any) correspond to a number of possible errors. The four byte return code field displays the following information starting with the high order byte

- One byte error qualifier (if any)
- One byte MVS return code (if any)
- Two byte IRC return code

See *Interregion Control Blocks (IRC)* in the *CICS Data Areas* manual for a complete list of return codes and

error qualifiers. (The names of all the return codes and error qualifiers start with IRERR and IRERQ respectively.)

The return codes should be referenced from the documentation for the version of CICS that supplied the IRP program in use rather than the version of CICS that issued the message.

Check that the following requirements are satisfied

- A copy of DFHIRP providing an adequate level of function is present in the link pack area (LPA).
- CICS has been defined as an operating system subsystem. The *CICS Transaction Server for z/OS Installation Guide* explains how to define CICS as a subsystem.
- The XCF couple data sets have been formatted with enough XCF groups and members per group to satisfy the requirements of your installation.
- The userid of the CICS job is authorized to log on to the CICS interregion program (DFHIRP) using the generic applid specified.
- The CICS region has a unique generic applid within the MVS sysplex.
- The CICS DB2 attachment has **not** been initialized before the first start of IRC in a CICS system that is using **both** of the following
 - Multiregion operation (MRO) or CICS shared database, where any of the installed MRO or CICS shared database resource definitions specify ACCESSMETHOD(XM)
 - The DB2 CICS attachment to run DB2 applications.

If the message is issued when all of these conditions have been met, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSIJ1

XMEOUT Parameters: *applid, X'rcode', X'rsncode'*

Destination: Console

DFHIR3781 *applid* **Unable to start interregion communication because task CSNC cannot be attached.**

Explanation: Definitions for CSNC or DFHCRNP have not been installed, or DFHCRNP is missing from the CICS program library.

System action: The IRC session is not started.

User response: Make CSNC or DFHCRNP available.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHIR3783 *date time applid* **Transaction *transid* termid *termid* - Connected transaction abended with message *xxxx***

Explanation: Transaction *transid* was connected to a transaction in another CICS system, through an MRO link. This other transaction has abnormally terminated with the given message, causing the local transaction to abnormally terminate.

System action: The transaction abnormally terminates.

User response: Correct the cause of the abend in the connected transaction.

Module: DFHZCX

XMEOUT Parameters: *date, time, applid, transid, termid, xxxx*

Destination: CSMT

DFHIR3784 *applid* **A severe error (code *X'code*) has occurred in module DFHCRR. Connection *connname* (if non-blank) has been set out of service.**

Explanation: An error has been detected in module DFHCRR. The code *X'code* is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System action: An exception entry is made in the trace table (*X'code* in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

The connection *connname* (if any) being processed at the time of error is set out of service, to prevent the error from recurring repeatedly.

CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Find and fix the source of the error before setting the connection back in service.

Notify the system administrator. This failure indicates a serious error in CICS. If you have not requested termination in the dump table, you may want to terminate CICS. For further information about CICS exception trace entries, see the *CICS Problem Determination Guide*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHCRR

XMEOUT Parameters: *applid, X'code', connname*

Destination: Console

DFHIR3785 *applid* **Interregion control task CSNC abend. Interregion activity will be abnormally terminated.**

Explanation: CSNC is abnormally terminated.

System action: CSNC is abnormally terminated with a system dump. All tasks using MRO links to other systems are abnormally terminated. CICS also abends all tasks in other CICS regions (including CICS shared data base batch regions) that are currently communicating with this system.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Following this abend it is not possible to use IRC within this CICS system. CICS must be restarted before IRC can be used.

Module: DFHCRNP

XMEOUT Parameter: *applid*

Destination: Console

DFHIR3786 *applid* **Unable to start interregion communication because module DFHSCTE could not be found.**

Explanation: The IRC module DFHIRP attempted to load DFHSCTE, but the module was not in the LPA.

System action: The interregion communication session is not started.

User response: Ensure that DFHSCTE is available.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHIR3788 *date time applid* **Unexpected failure (return code=X'retcode', reason code=X'rsncode') trying to establish connection to system sysid**

Explanation: CICS could not establish a link to system *sysid*, even though system *sysid* is available for communication.

The most common value of code X'*retcode*' returned by the interregion communication SVC is X'68. This means that no connection to the requesting region has been defined in the target region.

Another possible value of code X'*retcode*' returned by the interregion communication SVC is X'138. This means that although the requesting and the target region are both running in the same MVS image, and it is possible to connect via cross memory, the requesting and the target regions belong to different XCF Groups.

The four byte return code field displays the following

information starting with the high order byte

- One byte error qualifier (if any)
- One byte MVS return code (if any)
- Two byte IRC return code

See *Interregion Communication Control Blocks* in the *CICS Data Areas* manual for a complete list of return codes and error qualifiers. (The names of all the return codes and error qualifiers start with IRERR and IRERQ respectively.)

A possible reason for this message is that the *applid* of the system on which the message appears does not match the NETNAME on any of the system entries defined in system *sysid*.

This error may also occur when connections are being created dynamically. In this case, the mismatch is transient and will eventually be resolved when the connection creation process running on the remote CICS region completes.

System action: If the mismatch is transient, the connection is established.

If there is a definition error, the connection is not established. Any existing connections are not affected.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If the mismatch is transient, a connection should be established. This can be verified by querying the connection status using CEMT.

If an *applid* or a NETNAME mismatch has occurred, correct the error and retry.

If an XCFGROUP mismatch has occurred, correct the error and retry.

If a mismatch is not the cause of the error, you may need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHCRNP

XMEOUT Parameters: *date, time, applid, X'retcode', X'rsncode', sysid*

Destination: CSMT

DFHIR3789 *date time applid* **SEND/RECEIVE mismatch between TCT system entries for this system and system sysid**

Explanation:

- The number of send sessions defined in this system's TCT entry for system *sysid* does not equal the number of receive sessions defined in system *sysid*'s TCT entry for this system, or
- The number of receive sessions defined in this system's TCT entry for system *sysid* does not equal

DFHIR3790 • DFHIR3796

the number of send sessions defined in system *sysid*'s TCT entry for this system.

System action: As many sessions as possible are established.

User response: Alter one or both DFHTCT entries.

Module: DFHCRNP

XMEOUT Parameters: *date, time,applid, sysid*

Destination: CSMT

DFHIR3790 *date time applid* **Unable to connect to system *sysid* for security reasons**

Explanation: The TYPE=SYSTEM entry in system *sysid*'s DFHTCT entry for this system contained a SECURITYNAME operand that did not match the real external security ID of this system, or the ID was unknown to IRC.

System action: The connection is not established.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Discuss with the system programmer responsible for system *sysid*.

Module: DFHCRNP

XMEOUT Parameters: *date, time,applid, sysid*

Destination: CSMT

DFHIR3791 *applid* **Unable to start interregion communication because ISC=NO has been specified.**

Explanation: IRC facilities are not available because ISC=NO has been specified.

System action: The interregion communication session is not started.

User response: Run with a value other than NO in the ISC operand of DFHSIT or system initialization overrides.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHIR3793 *applid* **Unable to start interregion communication because a severe error has occurred in the recovery manager.**

Explanation: IRC facilities are not available because an internal request issued to recovery manager has failed.

System action: The interregion communication session is not started.

User response: You need further assistance from IBM

to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHIR3794 *date time applid* **Interregion usage of MVS CSA storage has reached *nnnn* bytes for this IPL**

Explanation: The maximum number of MVS CSA bytes used so far in this IPL by the CICS interregion communication facility (for interregion buffers), is *nnnn*.

System action: Processing continues.

User response: None.

Module: DFHZCX

XMEOUT Parameters: *date, time,applid, nnnn*

Destination: CSMT

DFHIR3795 **ABNORMAL TERMINATION - STATUS CODE DH_{xx}**

Explanation: The IMS high-level programming interface (HLPI) has found a condition caused by a programming error, or DLI has returned a status code to HLPI that indicates an error. *xx* is the status code.

System action: The batch program abnormally terminates with abend code 3795.

User response: Correct the error and try again. See the *IMS Application Programming: DLI Calls* or the *Application Programming: EXEC DLI Commands* for an explanation of the IMS status code.

Module: DFHDRPG

Destination: Console

DFHIR3796 *date time applid* **Transaction *tranid* termid *termid* - A connected transaction sent issue abend with following message: *xxxxxx***

Explanation: Transaction *tranid* was connected to a transaction in another CICS system via an MRO link. The other transaction sent an ISSUE-ABEND flow with a message.

System action: Processing continues.

User response: Examine the information in the included message to determine the circumstances and what action to take.

Module: DFHZIS1.

XMEOUT Parameters: *date, time,applid, tranid, termid, xxxxxx*

Destination: CSMT

DFHIR3798 *applid* IRC Not Started. Unable to load Interregion Communication Work Exit DFHIRW10.

Explanation: As part of interregion communication initialization, an attempt is made to establish an internal work exit mechanism. This attempt has failed.

The most likely reason for the failure is that the interregion communication work exit module, DFHIRW10, cannot be loaded. This module should appear in an APF authorized library in the STEPLIB concatenation for the CICS region, in the linklist, or in the LPA.

System action: The attempt to initiate the interregion communication facility (via the IRCSTRT DFHSIT or override option or via the CEMT SET IRC OPEN command) fails. CICS continues.

User response: Ensure that the interregion communication work exit module, DFHIRW10, is available to be loaded.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHIR3799 *applid* Unable to start interregion communication because DFHIRP services are down level.

Explanation: The version of DFHIRP being used is at a lower level than that of the caller wishing to make use of interregion communication.

System action: The interregion communication session is not started.

User response: If IRC is required, update the level of the DFHIRP module in the LPA such that it matches the level of the latest CICS version in use. If IRC is not required, run with system initialization override option IRCSTRT=NO.

Module: DFHSIJ1, DFHDRPF

XMEOUT Parameter: *applid*

Destination: Console

DFHISnnnn messages

DFHIS0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem. If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHISDM, DFHISIS, DFHISIC, DFHISCO, DFHISRR, DFHISEM, DFHISSR

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*, *modname*

Destination: Console

DFHIS0002 *applid* A severe error (code *X'code*) has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code *X'code* is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code *X'code* in the message) is made in the trace table. A system

dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHISIS, DFHISDM, DFHISCO, DFHISRR, DFHISEM, DFHISSR

XMEOUT Parameters: *applid, X'code',modname*

Destination: Console

DFHIS0003 *applid* **Insufficient storage to satisfy Getmain (code *X'code*) in module *modname*.**

Explanation: A CICS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request.

The code *X'code* is the exception trace point ID which uniquely identifies the place where the error was detected.

System action: An exception entry is made in the trace table (code *code* in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table. This is a critical error.

If DFHIEDM issues this message, CICS terminates, even if you have specified in the dump table that CICS should not terminate.

If DFHIXM issues this message, an exception trace and a system dump is taken and CICS continues.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If CICS has been terminated by another module, look out for the relevant termination

messages (from, for example, the domain manager), and look up the user response for these messages.

If CICS is still running, the problem may be a temporary one which will right itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

Try increasing the size limits of the DSAs or EDSAs. See the *CICS System Definition Guide* or the *CICS Performance Guide* for further information on CICS storage.

Module: DFHISIS

XMEOUT Parameters: *applid, X'code',modname*

Destination: Console

DFHIS0004 *applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset *X'offset'*. This is the offset of the instruction that was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it will be necessary to decide whether the problem is serious enough to bring CICS down.

Because some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS will purge a CICS function that exceeds the runaway task time interval that you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that the module *modname* will be terminated and CICS will continue.

If you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you

consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time to do this permanently. However, you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHISIS, DFHISDM

XMEOUT Parameters: *applid, X'offset', modname*

Destination: Console

DFHIS0006 *applid* **Insufficient storage to satisfy Getmain (code X'code') in module modname. MVS code mvscode.**

Explanation: An MVS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request.

The code X'code' is the exception trace point ID which uniquely identifies the place where the error was detected.

The code *mvscode* is the MVS GETMAIN return code.

System action: An exception entry is made in the trace table (code X'code'). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the user response suggested for these messages.

If CICS is still running, the problem may be a temporary one which rights itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

See the *CICS Trace Entries* for a description of the exception trace point ID, X'code' and the data it contains.

You can get diagnostic information about the MVS

return code by consulting the relevant MVS codes manual.

Try decreasing the limits of the CICS dynamic storage areas (DSAs), or increasing the MVS region size. You can vary the CICS DSAs dynamically using the DSALIM and EDSALIM parameters on the CEMT master terminal command. To increase the MVS region size you must bring CICS down and change the MVS JCL REGION parameter.

Module: DFHISIS

XMEOUT Parameters: *applid, X'code', modname, mvscode*

Destination: Console

| **DFHIS0100** *APPLID* **Unable to start IS domain because transaction CISC cannot be attached.**

| **Explanation:** The IS domain failed to attach the CISC transaction to do IPCONN autoconnect processing.

| **System action:** CICS is not started.

| **User response:** Use the trace to investigate the reason for the failure to attach the CISC transaction. A probable reason for the failure is that there is no installed definition for CISC. Resource definition group DFHISCIP should be included in one of the lists specified in the startup GRPLIST.

| **Module:** DFHISDM

| **XMEOUT Parameter:** *applid*

| **Destination:** Console

DFHIS0998 *date time applid* **Mirror transaction processing DPL request using IP Interconnectivity has abended with code abcode.**

Explanation: A mirror transaction processing a DPL request using IP interconnectivity has abended with the specified abend code. This is because of an error in the user program linked for the DPL request, or because of an error in CICS. The abend processing has invoked IS domain to inform the client of the failure.

System action: If the original problem was in IS domain, the appropriate error actions will already have been taken. If the problem was not in IS domain, this message will be attached as Error Log Data to an FMH7 that is sent to the client to abend the conversation.

User response: Use the messages and dumps from the transaction abend to determine the root cause of the problem.

Module: DFHISIS

XMEOUT Parameters: *date, time, applid, abcode*

Destination: CISO

DFHIS1000 *date time applid* **Invalid parameter list passed to IS domain module *modname*.**

Explanation: A call was made to module *modname* of the IP interconnectivity (IS) domain during the processing of a request but the parameter list was not valid. This is probably because of a storage overwrite or an internal error in the calling component.

System action: An exception trace is written by IS domain, a system dump is taken and the task in progress is abended.

User response: Use the dump to determine the fault in the calling component.

Module: DFHISIC, DFHISIS, DFHISCO, DFHISRR, DFHISEM, DFHISSR

XMEOUT Parameters: *date, time, applid, modname*

Destination: CISO

DFHIS1001 *date time applid* **Unexpected exception from domain call made by IS domain module *modname*.**

Explanation: An unexpected exception was returned to a domain call made by module *modname* of the IP interconnectivity (IS) domain.

System action: An exception trace is written by IS domain and a system dump is taken. The task in progress is abended if necessary.

User response: Use the dump to determine the fault in the calling component.

Module: DFHISCO, DFHISRR, DFHISEM, DFHISSR

XMEOUT Parameters: *date, time, applid, modname*

Destination: CISO

DFHIS1002 *date time applid* **Unable to {*acquire* /*release*} IPCONN *ipconn*. IPCONN not found.**

Explanation: A call was made to module DFHISCO of the IP interconnectivity (IS) domain to acquire or release IPCONN *ipconn* but, when DFHISCO attempted to locate the IPCONN, a NOT_FOUND exception was returned. This is probably because another task has deleted the IPCONN before the task attached to acquire or release the IPCONN was started.

System action: An exception trace is written by IS domain and the task in progress is abended.

User response: Inspect the IS domain message log for concurrent activity on the IPCONN. Use CEDA or SPI commands to recreate the IPCONN. Ensure it is INSERVICE. Reissue SET IPCONN ACQUIRED if required.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, {1=acquire, 3=release}, ipconn*

Destination: CISO

DFHIS1003 *date time applid* **Unable to {*acquire* /*release*} IPCONN *ipconn*. IPCONN state {INSERVICE | OUTSERVICE},{RELEASED | OBTAINING | ACQUIRED | FREEING} is invalid.**

Explanation: An attempt was made to SET IPCONN(*ipconn*) ACQUIRED or RELEASED but by the time the call was made to module DFHISCO of the IP interconnectivity (IS) domain to action the state change, the IPCONN was not in a valid state. An IPCONN must be INSERVICE and RELEASED before it can be acquired. An IPCONN must be ACQUIRED or FREEING before it can be released. This is probably due to a race condition with another task that has been started to either acquire or release the IPCONN or set it out of service.

System action: An exception trace is written by IS domain and the task in progress is abended.

User response: Use CEMT to inquire on the IPCONN status. Inspect the IS domain message log for concurrent activity on the IPCONN. If the IPCONN status is OBTAINING, it may be necessary to cancel a CISC or CISS transaction that is awaiting a response and thus preventing the IPCONN state change from completing. Ensure the IPCONN is in the correct state and reissue the SET IPCONN ACQUIRED or RELEASED.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, {1=acquire, 3=release}, ipconn, {1=INSERVICE, 2=OUTSERVICE}, {1=RELEASED, 2=OBTAINING, 3=ACQUIRED, 4=FREEING}*

Destination: CISO

DFHIS1004 *date time applid* **Unable to acquire IPCONN *ipconn*. Associated TCPIPService *tcipSERVICE* not found.**

Explanation: A call was made to module DFHISCO of the IP interconnectivity (IS) domain to acquire IPCONN *ipconn* but TCPIPService *tcipSERVICE* referenced by the IPCONN could not be located. The TCPIPService must be installed and OPEN when an IPCONN is acquired. This is probably because the TCPIPService has been deleted since the IPCONN was installed.

System action: An exception trace is written by IS domain and the task in progress is abended.

User response: Inspect the IS and SO domain message logs for concurrent activity on the

TCPIPSERVICE and IPCONN. Use CEDA or SPI commands and CEMT to reinstall and open the TCPIPSERVICE. Reissue SET IPCONN ACQUIRED if required.

Module: DFHISCO

XMEOUT Parameters: *date, time,applid, ipconn, tcpipSERVICE*

Destination: CISO

DFHIS1005 *date time applid* **Unable to acquire IPCONN *ipconn*. Associated TCPIPSERVICE *tcpipSERVICE* not open.**

Explanation: A call was made to module DFHISCO of the IP interconnectivity (IS) domain to acquire IPCONN *ipconn* but TCPIPSERVICE *tcpipSERVICE* referenced by the IPCONN was not in the correct state. The TCPIPSERVICE must be installed and OPEN when an IPCONN is acquired. This is probably because the TCPIPSERVICE has been closed by another task or never opened.

System action: An exception trace is written by IS domain and the task in progress is abended.

User response: Inspect the IS and SO domain message logs for concurrent activity on the TCPIPSERVICE and IPCONN. Use CEMT or SPI commands to SET the TCPIPSERVICE OPEN and reissue SET IPCONN ACQUIRED if required.

Module: DFHISCO

XMEOUT Parameters: *date, time,applid, ipconn, tcpipSERVICE*

Destination: CISO

DFHIS1006 *date time applid* **Unable to acquire IPCONN *ipconn*. TCPIP not open.**

Explanation: A call was made to module DFHISCO of the IP interconnectivity (IS) domain to acquire IPCONN *ipconn* but TCPIP was not OPEN. TCPIP must be OPEN when an IPCONN is acquired.

System action: An exception trace is written by IS domain and the task in progress is abended.

User response: Set TCPIP OPEN and reissue SET IPCONN ACQUIRED if required.

Module: DFHISCO

XMEOUT Parameters: *date, time,applid, ipconn*

Destination: CISO

DFHIS1007 *date time applid* **Unable to acquire IPCONN *ipconn*. Failure to open session to *hostname*, port *portnumber*.**

Explanation: During processing of an acquire for IPCONN *ipconn* module DFHISCO of the IP

interconnectivity (IS) domain failed to open a Web session with host *hostname* on port *portnumber*. This is probably because there is no TCPIPSERVICE in a partner CICS open on port *portnumber* at host *hostname*

System action: An exception trace is written by IS domain and the task in progress is abended.

User response: Check that the hostname and port are correct and ensure that there is a partner CICS active at the given host with a TCPIPSERVICE with protocol IPIC open on the given port. Reissue SET IPCONN ACQUIRED if required.

Module: DFHISCO

XMEOUT Parameters: *date, time,applid, ipconn, hostname, portnumber*

Destination: CISO

DFHIS1008 *date time applid* **Unable to acquire IPCONN *ipconn*. Invalid HTTP response to capability exchange.**

Explanation: During processing of an acquire for IPCONN *ipconn* module DFHISCO of the IP interconnectivity (IS) domain received an invalid response to its capability exchange request to the partner CICS; it contains either an unexpected HTTP media type or status code. A possible error cause is that the port specified in the IPCONN does not reference a TCPIPSERVICE in a partner CICS system whose protocol is defined as IPIC.

System action: An exception trace is written by IS domain and the task in progress is abended.

User response: If no resource definition errors can be identified, examine the response message in the exception trace and check the message log in the partner CICS system. Correct the problem and reissue SET IPCONN ACQUIRED.

Module: DFHISCO

XMEOUT Parameters: *date, time,applid, ipconn*

Destination: CISO

DFHIS1009 *date time applid* **Unable to acquire IPCONN *ipconn*. Response to capability exchange timed out.**

Explanation: During processing of an acquire for IPCONN *ipconn* the receive for a capability exchange response from the partner CICS, by module DFHISCO of the IP interconnectivity (IS) domain, timed out. A response to the capability exchange request was not received within the RTIMOUT value set in the profile for the transaction attached to handle the IPCONN acquire. This might be due to an error preventing the response being sent by the partner CICS or the RTIMOUT value may be too low for acquire processing to complete and

the response to be received. This problem may occur in the system initiating the IPCONN acquire, from a CISC transaction instance, or in the partner CICS, from an IPIC TCPIP SERVICE transaction, CISS by default. Note that the RTIMOUT for CISC needs to allow time for the partner to attach a transaction to establish a callback connection back to the initiating CICS system, and possibly to autoinstall an IPCONN, before sending its response. CISS, or its equivalent, may need to autoinstall an IPCONN and then needs to allow the partner time to attach a transaction to locate and update the initiating IPCONN before sending its response.

System action: An exception trace is written by IS domain and the task in progress is abended.

User response: Check the message log in the partner CICS system for errors that might have prevented the response being sent and correct any problem found. Adjust the transaction's RTIMOUT value if appropriate. Reissue SET IPCONN ACQUIRED.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, ipconn*

Destination: CISO

DFHIS1010 *date time applid* **Unable to acquire IPCONN *ipconn*. Invalid capability exchange response received.**

Explanation: During processing of an acquire for IPCONN *ipconn* module DFHISCO of the IP interconnectivity (IS) domain received an invalid response to its capability exchange request to the partner CICS. The response is shorter than expected. Possible error causes include

- the port specified in the IPCONN being acquired is not that of a TCPIP SERVICE in a partner CICS with PROTOCOL(IPIC) but it has replied using the CICS IPIC HTTP mediatype.
- a processing error in one or both of the CICS systems

System action: An exception trace is written by IS domain and the task in progress is abended.

User response: Check the port number in the IPCONN refers to a CICS IPIC TCPIP SERVICE. Look at the response message in the exception trace and check the message log in the partner CICS system. Correct the resource definitions and reissue SET IPCONN ACQUIRED.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, ipconn*

Destination: CISO

DFHIS1011 *date time applid* **Unable to acquire IPCONN *ipconn*. An {EXCEPTION | DISASTER | INVALID | KERNERROR | PURGED} response to the capability exchange was received, reason={AUTOINSTALL_FAILED | INVALID_IPCONN_STATE | INVALID_PARTNER_STATE | IPCONN_NOT_FOUND | ISCE_ERROR | ISCE_INVALID_APPLID | ISCE_TIMED_OUT | ISCE_BAD_RECOV | ISCE_BAD_RESPONSE | ISCE_ERROR | ISCE_HTTP_ERROR | ISCE_TIMED_OUT | SESSION_OPEN_FAILED | SHUTDOWN | TCPIP_CLOSED | TCPIP_SERVICE_MISMATCH | TCPIP_SERVICE_NOT_FOUND | TCPIP_SERVICE_NOT_OPEN | NO_IPCONN | ONE_WAY_IPCONN | CAPEX_RACE | SECURITY_VIOLATION | UNKNOWN}.**

Explanation: During processing of an acquire for IPCONN *ipconn*, module DFHISCO of the IP interconnectivity (IS) domain received an error response to its capability exchange request to the partner CICS. The capability exchange request will have been processed by DFHISCO initialize_connection in the partner system; the reason string corresponds to the error detected by that DFHISCO function in the partner system.

Exception response reasons

AUTOINSTALL_FAILED

No IPCONN was found to match an incoming IPIC connection and capability exchange and the subsequent autoinstall attempt was disallowed or failed.

INVALID_PARTNER_STATE

A capability exchange request was received for an IPCONN whose state is invalid. The IPCONN must be inservice and not already acquired.

INVALID_IPCONN_STATE

An ISCO ACQUIRE_CONNECTION has been issued for an IPCONN whose state is invalid. The IPCONN must be inservice and released.

IPCONN_NOT_FOUND

An ISCO ACQUIRE_CONNECTION has been issued for an IPCONN which no longer exists.

ISCE_ERROR

The capability exchange request was determined to be invalid and rejected by the partner CICS.

ISCE_INVALID_APPLID

The server_applid, or its high level qualifier, in

the capability exchange message does not match the partner CICS's local applid and high level qualifier.

ISCE_TIMED_OUT

The TCPIP SERVICE transaction (CISS by default) has been attached to initialize a connection for an ipconn but it has not received its initial data, the capability exchange request, within the timeout period defined in its transaction profile.

ISCE_BAD_RECOV

A capability exchange request has been received that contains an unsupported `isce_preferred_recovery` value and no matching `isce_supported_protocols` flags are set to fallback to.

ISCE_BAD_RESPONSE

The callback capability exchange response contains a bad isco response and reason from the partner CICS.

ISCE_ERROR

The callback capability exchange response was determined to be invalid.

ISCE_HTTP_ERROR

The callback capability exchange response contained a bad http status code.

ISCE_TIMED_OUT

DFHISCO `acquire_connection` has not received a response to its capability exchange request within the timeout period specified.

SESSION_OPEN_FAILED

While acquiring an ipconn, DFHISCO has failed to open a web session to the partner host defined in the ipconn.

SHUTDOWN

A call has been made to DFHISCO to acquire or initialize an ipconn but CICS has been shutdown before the function completed.

TCPIP_CLOSED

DFHISCO `acquire_connection` has been called for an ipconn but tcpip is closed.

TCPIP SERVICE_MISMATCH

A capability exchange request was received for an IPCONN which is defined as using a different tcpip service from that used for the capability exchange.

TCPIP SERVICE_NOT_FOUND

Either `acquire_connection` has been called for an ipconn but the tcpip service named in the ipconn is not installed or `release_connection` has been called for a tcpip service that is no longer installed.

TCPIP SERVICE_NOT_OPEN

DFHISCO `acquire_connection` has been called for an ipconn but the tcpip service named in the ipconn is not open.

NO_IPCONN

DFHISCO `acquire` or `release_connection` has been called for a tcpip service that has no ipconn referencing it.

ONE_WAY_IPCONN

The caller requires a two-way connection but the partner IPCONN is defined as one-way.

CAPEX_RACE

Acquire has been initiated from both sides of an IPCONN connection simultaneously. The acquire from this system is abnormally terminated. The acquire from the partner system will proceed because the partner has an alphabetically lower fully qualified APPLID than this system.

SECURITY_VIOLATION

The security credentials of the caller are not acceptable to the partner system.

System action: An exception trace is written by IS domain in both systems and the task in progress is abended.

User response: Examine the resource definitions, message log, and trace if necessary, in both CICS systems. Possible problem causes include

- A mismatch between the definitions of the IPCONN in the two CICS systems
- The IPCONN in the partner CICS is not in the correct state to process an incoming connection request
- A processing error in the partner CICS system
- A mismatch between a definition of an IPCONN in one system and a definition of a TCPIP SERVICE in its partner system

Correct the problem and reissue SET IPCONN ACQUIRED if necessary.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, ipconn, {2=EXCEPTION,3=DISASTER, 4=INVALID, 5=KERNERROR,6=PURGED}, {1=AUTOINSTALL_FAILED,2=INVALID_IPCONN_STATE, 3=INVALID_PARTNER_STATE, 4=IPCONN_NOT_FOUND, 5=ISCE_ERROR, 6=ISCE_INVALID_APPLID, 7=ISCE_TIMED_OUT, 8=ISCE_BAD_RECOV, 9=ISCE_BAD_RESPONSE, 10=ISCE_ERROR, 11=ISCE_HTTP_ERROR, 12=ISCE_TIMED_OUT, 13=SESSION_OPEN_FAILED, 14=SHUTDOWN, 15=TCPIP_CLOSED, 16=TCPIP SERVICE_MISMATCH, 17=TCPIP SERVICE_NOT_FOUND, 18=TCPIP SERVICE_NOT_OPEN, 19=NO_IPCONN, 20=ONE_WAY_IPCONN, 21=CAPEX_RACE, 22=SECURITY_VIOLATION, 99=UNKNOWN}*

Destination: CISO

DFHIS1012 *date time applid* **Invalid capability exchange request received on TCPIP SERVICE** *tcpip service.*

Explanation: During processing of a connection request for an IPIC web session on TCPIP SERVICE *tcpip service*, module DFHISCO of the IP interconnectivity (IS) domain received an invalid capability exchange request from the partner CICS. This could be caused by a non-IPIC client opening a web session to a TCPIP SERVICE whose protocol is defined as IPIC. It could also be caused by a mismatch between the option specified for the SSL attribute in the TCPIP SERVICE and the SSL attribute for the IPCONN resource definition in the partner system.

System action: An exception trace is written by IS domain, the TCPIP SERVICE task is abended and the session closed.

User response: Examine the CICS trace to determine the location of the client. Correct resource definitions as appropriate.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, tcpip service*

Destination: CISO

DFHIS1013 *date time applid* **Invalid applid networkid.applid received in capability exchange request on TCPIP SERVICE** *tcpip service.*

Explanation: During processing of a connection request for an IPIC web session on TCPIP SERVICE *tcpip service*, module DFHISCO of the IP interconnectivity (IS) domain received a capability exchange request containing an invalid fully qualified applid. Either the networkid, *networkid*, applid, *applid*, or both are incorrect. The applid (*isce_server_applid*) in the capability exchange request created by the initiating system must match the applid of this, the target, CICS system. The network id qualifier (*isce_server_networkid*) must match the VTAM NETID, or UOWNETQL SIT parameter value in a system where VTAM=NO, in this, the target, CICS system. If the partner is another CICS TS, the applid and networkid values are taken from its IPCONN definition for this target CICS.

System action: An exception trace is written by IS domain, the TCPIP SERVICE task is abended and the session closed.

User response: Correct the resource definition in the partner system.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, networkid, applid, tcpip service*

Destination: CISO

DFHIS1014 *date time applid* **Capability exchange request not received on TCPIP SERVICE** *tcpip service.*

Explanation: During processing of a connection request for an IPIC web session on TCPIP SERVICE *tcpip service*, module DFHISCO of the IP interconnectivity (IS) domain issued a receive for a capability exchange request from the initiating system. The capability request did not arrive within the RTIMOUT value specified in the TCPIP SERVICE transaction's profile. This is probably due to network problems or too low an RTIMOUT value for the TCPIP SERVICE transaction. It is also possible that a non-IPIC client has opened a web session to a TCPIP SERVICE whose protocol is defined as IPIC but has not sent any data.

System action: An exception trace is written by IS domain. The TCPIP SERVICE task, CISS by default, is abended and the session closed.

User response: Examine the CICS trace to determine the location of the client. Correct resource definitions as appropriate.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, tcpip service*

Destination: CISO

DFHIS1015 *date time applid* **Unable to accept connection for IPCONN** *ipconn*. **IPCONN client session state is invalid.**

Explanation: A capability exchange request was received for IPCONN *ipconn* during initialization of a new IPIC connection by module DFHISCO of the IPIC over TCP/IP (IS) domain, but the IPCONN was not in a valid state to be acquired. An IPCONN must be INSERVICE and not FREEING, and its ipclient session must be RELEASED, before it can accept incoming initialize requests. This is probably because the IPCONN is out of service but may be due to a race condition with another task that has been started to free the IPCONN.

System action: An exception trace is written by IS domain and the IPIC TCPIP SERVICE task attached to handle the incoming connection, CISS by default, is abended.

User response: Inspect the IS domain message log for concurrent activity on the IPCONN. Ensure the local IPCONN is INSERVICE, RELEASED and reissue SET IPCONN ACQUIRED.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, ipconn*

Destination: CISO

DFHIS1016 *date time applid* **Invalid recovery protocol received in capability exchange request on TCPIP SERVICE tcpip service.**

Explanation: During processing of a connection request for an IPIC web session on TCPIP SERVICE *tcpip service*, module DFHISCO of the IP interconnectivity (IS) domain received a capability exchange request containing an invalid, or unsupported, recovery protocol value.

System action: An exception trace is written by IS domain, the TCPIP SERVICE task is abended and the session closed.

User response: Examine CICS diagnostics to determine the source of the capability exchange and check that it has come from a supported partner.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, tcpip service*

Destination: CISO

DFHIS1017 *date time applid* **IS domain input queue error.**

Explanation: The IS domain request/response receiver module, DFHISRR, has detected an unrecoverable error in its input queue. This is probably due to a CICS internal processing error or storage overwrite.

System action: An exception trace is written by IS domain and the IS domain long running receiver task, CISR, is abended and a system dump taken.

User response: Inspect the trace, dump and IS domain message log to determine the cause of the error. CICS will have to be restarted to reinstate CICS IP interconnectivity processing.

Module: DFHISRR

XMEOUT Parameters: *date, time, applid*

Destination: CISO

DFHIS1018 *date time applid* **IS domain error queue error.**

Explanation: The IS domain error and message handler module, DFHISEM, has detected an unrecoverable error in its error queue. This is probably due to a CICS internal processing error or storage overwrite.

System action: An exception trace is written by IS domain, the IS domain long running error and message task, CISE, is abended and a system dump taken.

User response: Inspect the trace, dump and IS domain message log to determine the cause of the error. CICS will have to be restarted to reinstate CICS

IP interconnectivity processing.

Module: DFHISEM

XMEOUT Parameters: *date, time, applid*

Destination: CISO

DFHIS1019 *date time applid* **Conversation convid no longer active on IPCONN ipconn.**

Explanation: The IS domain request/response receiver module, DFHISRR, has received an input message for IPCONN *ipconn* with an IPIC HTTP header that contains a conversation id for which there is no active ISSB. This is probably due to the late arrival of a request or response for a task which has timed out and relinquished its ISSB.

System action: An exception trace is written by IS domain, the IPCONN session is added to the IS domain error queue for processing by the long running error and message task, CISE.

User response: Inspect the trace, dump and IS domain message log to determine the cause of the error.

Module: DFHISEM

XMEOUT Parameters: *date, time, applid, convid, ipconn*

Destination: CISO

DFHIS1020 *date time applid* **Acquire for IPCONN ipconn rejected; shutdown in progress.**

Explanation: An acquire request for IPCONN *ipconn* was rejected because CICS shutdown is in progress.

System action: None.

User response: None.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, ipconn*

Destination: CISO

DFHIS1021 *date time applid* **Session error occurred on sesstype IPIC session in IPCONN ipconn.**

Explanation: The IS domain request/response receiver module, DFHISRR, has detected an error with the *sesstype* web session associated with IPCONN *ipconn*. The session may have been closed prematurely by the partner system or a network or socket error may have occurred.

System action: An exception trace is written by IS domain, the IPCONN session is added to the IS domain error queue for processing by the long running error and message task, CISE. All user and mirror tasks using the IPCONN are abended, either immediately or when they

next try to communicate with the partner. The IPCONN is released.

User response: Inspect the trace, dump and CICS message log to determine the cause of the error.

Module: DFHISEM

XMEOUT Parameters: *date, time, applid, sesstype, ipconn*

Destination: CISO

DFHIS1022 *date time applid* **Protocol error (code X'errorcode') occurred on sesstype IPIC session in IPCONN ipconn.**

Explanation: The IS domain request/response receiver module, DFHISRR, has been unable to continue processing IPIC messages on the *sesstype* web session associated with IPCONN *ipconn*. The errorcode X'errorcode' is the exception trace point ID which uniquely identifies what the error is and where the error was detected, for example

- 0507 An internal processing error occurred.
- 0611 The IPIC HTTP header is invalid.
- 0615 The IPCONN is not in the correct state to receive messages.

System action: An exception entry (code X'errorcode' in the message) is made in the trace table. The IPCONN session is added to the IS domain error queue for processing by the long running error and message task, CISE. All user and mirror tasks using the IPCONN are abended, either immediately or when they next try to communicate with the partner. An FMH7 error response is sent for sessions in SEND state. The IPCONN is released.

User response: Inspect the trace, dump and CICS message log to determine the cause of the error.

Module: DFHISEM

XMEOUT Parameters: *date, time, applid, X'errorcode', sesstype, ipconn*

Destination: CISO

DFHIS1023 *date time applid* **Conversation error (code X'errorcode') occurred on IPIC session name in IPCONN ipconn.**

Explanation: The IS domain request/response receiver module, DFHISRR, has received data that it is unable to process for the conversation on session block (ISSB) *name* on IPCONN *ipconn*. The errorcode X'errorcode' is the exception trace point ID which uniquely identifies what the error is and where the error was detected, for example:

- 0614 The ISSB task is not waiting for data.
- 061C The mirror or user task resume failed unexpectedly.

- 061D No ISSB available for new task attach request.
- 061E The ISSB is not in RECEIVE state; data is not expected.
- 0629 Chain state in header does not match ISSB chain state.
- 062A Chain element received before pacing message sent.
- 062D Invalid message sequence number.
- 062E Invalid chain sequence number.
- 062F IS header contains unrecognized IBM CCSID.
- 0630 Data received for a task which is no longer active.

System action: An exception entry (code X'errorcode' in the message) is made in the trace table. The IPCONN session is added to the IS domain error queue for processing by the long running error and message task, CISE. The user or mirror task using the ISSB in error is abended, either immediately or when it next tries to communicate with the partner. An FMH7 error response is sent for sessions in SEND state.

User response: Inspect the trace, dump, and CICS message log to determine the cause of the error.

Module: DFHISEM

XMEOUT Parameters: *date, time, applid, X'errorcode', name, ipconn*

Destination: CISO

DFHIS1024 *date time applid* **Mirror attach rejected on IPCONN ipconn. No sessions available.**

Explanation: The IS domain request/response receiver module, DFHISRR, has received an input request to start a new mirror task on IPCONN *ipconn* but there is no ISSB available to process it. This is probably due to a previous mirror task abend not completing in a timely manner.

System action: An exception trace is written by IS domain, the IPCONN session is added to the IS domain error queue for processing by the long running error and message task, CISE. An FMH7 exception response is returned to the partner.

User response: Inspect the trace, dump and IS domain message log to determine the cause of the error. If this situation occurs frequently, it might be sensible to increase the number of sessions available in the IPCONN definition: RECEIVE sessions in this CICS; SEND sessions in the IPCONN in the partner system.

Module: DFHISEM

XMEOUT Parameters: *date, time, applid, ipconn*

Destination: CISO

DFHIS1025 *date time applid* **Failed to attach mirror transaction *tranid* on IPCONN *ipconn*. Error code is *X'errorcode'*.**

Explanation: The IS domain request/response receiver module, DFHISRR, has received data for a new mirror transaction *tranid* on IPCONN *ipconn* that it is unable to process. The errorcode *X'errorcode* is the exception trace point ID which uniquely identifies what the error is and where the error was detected, for example

- 0618 The mirror transaction code was not found.
- 0619 The mirror transaction code was disabled.
- 061A The mirror transaction code was disabled for shutdown.
- 061B The mirror attach failed unexpectedly.

System action: An exception entry (code *X'errorcode* in the message) is made in the trace table. An IS7 error response is sent to the caller by either the abnormal condition transaction, CSAC, or the IS domain long running error and message task, CISE.

User response: Ensure transaction definitions are correct and examine the CICS trace if necessary to determine the cause of the error.

Module: DFHISEM, DFHISIS

XMEOUT Parameters: *date, time, applid, tranid, ipconn, X'errorcode'*

Destination: CISO

DFHIS1026 *date time applid* **Incorrect TCPIPService *tcpipSERVICE* used for inbound connection to IPCONN *ipconn*, which is defined to use TCPIPService *ipconn_tcpipSERVICE*.**

Explanation: A capability exchange request was received from a partner system on TCPIPService *tcpipSERVICE*, for IPCONN *ipconn*, during initialization of a new IPIC connection by module DFHISCO of the IP interconnectivity (IS) domain, but the IPCONN was defined as using a different *tcpipSERVICE*, *ipconn_tcpipSERVICE*. If the partner is another CICS system, this has occurred during processing of an IPCONN acquire from the partner CICS. The IPCONN acquire may have been issued explicitly in the partner CICS system, using CEMT or the CICS SPI. Alternatively, the IPCONN acquire may have been issued to establish a callback connection as a result of an IPCONN acquire issued locally, from this CICS.

System action: An exception trace is written by IS domain, an error response is sent to the client and the IPIC TCPIPService task attached to handle the incoming connection, CISS by default, is abended.

User response: Either

- Change the value of the TCPIPService attribute in the IPCONN definition in this CICS system to *tcpipSERVICE* or
- Change the client to connect to the port defined in *ipconn_tcpipSERVICE*. If the client is another CICS system, this can be done by changing the PORT attribute of the IPCONN in the client CICS.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, tcpipSERVICE, ipconn, ipconn_tcpipSERVICE*

Destination: CISO

DFHIS1027 *date time applid* **Security violation has been detected using IPCONN *ipconn* and transaction id *transid* by userid *userid***

Explanation: A request to attach a remote transaction failed due to a security problem. The request used the named IPCONN, transaction ID and userid. An attempt was made to extract security fields from the attach request and to pass them to the user domain and security domain to signon the user, but this process failed.

System action: The request to attach the remote transaction is rejected.

User response: Verify that the IPCONN in use has been defined with the correct value of the USERAUTH attribute. Refer to previous security messages that are written to TD queue CSCS for further information and guidance. If no previous messages were issued, examine the trace to determine the reason for the failure. If security parameters were passed on the attach request such as userid or password, check whether they are valid.

Module: DFHISXM

XMEOUT Parameters: *date, time, applid, ipconn, transid, userid*

Destination: CISO

DFHIS1028 *date time applid* **A request has been received over IPCONN *ipconn* to use transaction id *transid* by userid *userid*. This userid is not authorized to use the transaction.'**

Explanation: The operator with user ID *userid* has invoked a transaction *tranid* using IP connection *ipconn* for which the operator is not authorized.

System action: CICS does not initialize the invoked transaction. Message DFHIS1028 is sent to the connected system. Other CICS processing continues.

User response: Refer to the *userid* in the preceding message, DFHXS1111 on the CSCS TD queue, to determine the identity of the user trying to invoke

transaction *transid* and the reason for the attempt.

Module: DFHISXM

XMEOUT Parameters: *date, time, applid, ipconn, transid, userid*

Destination: CISO

DFHIS1029 *date time applid* **One-way IPCONN *ipconn* not valid for connection from *applid networkid.applid*. A callback is expected on host *ipaddr, port port*.**

Explanation: During processing of a connection request for an IPIC web session, module DFHISCO of the IP interconnectivity (IS) domain received a capability exchange request whose fully qualified *applid, networkid.applid*, matched that of IPCONN *ipconn*, but the IPCONN is defined as 'one-way'; it has no port or send sessions defined for it, whereas the capability exchange requests a callback connection on host *ipaddr, port port*. IPCONNs used for CICS to CICS communication, using the CICS recovery protocol, must have both send and receive sessions. One-way IPCONNs are supported for JCA, which uses the XA recovery protocol.

System action: An exception trace is written by IS domain, the TCP/IPSERVICE task is abended and the session closed.

User response: Add at least one send session, and host and port definitions, to the IPCONN and reinstall it before attempting to reacquire the connection.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, ipconn, networkid, applid, ipaddr, port*

Destination: CISO

DFHIS1030 *date time applid* **Recovery value *X'ipconn_recovprot'* for IPCONN *ipconn* different from capability response recovery value *X'iscer_recovprot'*.**

Explanation: The INITIALIZE_CONNECTION function of DFHISCO of the IP interconnectivity (IS) domain has been called to handle an acquire for IPCONN *ipconn* initiated by its partner. It has detected that the recovery protocol established for the local *ipconn, X'ipconn_recovprot*, does not match the recovery protocol in the capability exchange response received from the partner, *X'iscer_recovprot*.

System action: The capability exchange is rejected. The connection status of the IPCONN reverts to RELEASED.

User response: This is probably a CICS internal problem. Examine the CICS log for any associated error messages. Contact your IBM support center if you are unable to determine the cause of the problem.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, X'ipconn_recovprot', ipconn, X'iscer_recovprot'*

Destination: CISO

DFHIS1031 *date time applid* **Incoming acquire for IPCONN *ipconn* rejected due to race with concurrent local acquire.**

Explanation: The INITIALIZE_CONNECTION function of DFHISCO of the IP interconnectivity (IS) domain has been called to handle an acquire for IPCONN *ipconn* initiated by its partner. It has detected that an acquire is in progress concurrently from this CICS system and rejected the incoming request from the partner. When such a race condition occurs, the acquire initiated by the system with the alphabetically lower of the two fully qualified APPLIDs will proceed.

System action: The locally initiated capability exchange continues normally.

User response: No action is required. If this condition occurs frequently, you could consider setting AUTOCONNECT(YES) on only one of the two IPCONN resource definitions if it is currently set on both.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, ipconn*

Destination: CISO

DFHIS1032 *date time applid* **Unable to acquire IPCONN *ipconn*. Applid *networkid.applid* is the same as the local applid.**

Explanation: A call was made to module DFHISCO of the IP interconnectivity (IS) domain to acquire IPCONN *ipconn* but the fully qualified IPCONN *applid* is the same as the fully qualified local *applid, networkid.applid*. It is invalid to make an IPCONN connection back to the local CICS system.

System action: An exception trace is written by IS domain and the CISC task performing the acquire is abended.

User response: Correct the *applid* in the IPCONN resource definition.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, ipconn, networkid, applid*

Destination: CISO

DFHIS2000 *date time applid* **Server session with *applid applid* on host *hostname, port portnumber* acquired for IPCONN *ipconn*.**

Explanation: IPCONN *ipconn* was acquired

successfully and is ready for use by IP interconnectivity (IS) domain.

System action: The IPCONN state is changed to ACQUIRED.

User response: IPCONN sessions may now be allocated for use by programs using IP interconnectivity.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, applid, hostname, portnumber, ipconn*

Destination: CISO

DFHIS2001 *date time applid* **Client session from applid applid accepted for IPCONN ipconn.**

Explanation: IPCONN *ipconn* was initialized successfully and is ready to receive inbound IPIC requests over TCP/IP.

System action: The IPCONN is updated with the inbound session. Inbound requests for this IPCONN may now be queued to CISR for processing.

User response: None.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, applid, ipconn*

Destination: CISO

DFHIS2002 *date time applid* **Number of SEND sessions for IPCONN ipconn set to usable. Number requested req. Partner limit max.**

Explanation: IPCONN *ipconn* was acquired successfully but the number of send sessions requested, the local IPCONN SENDCOUNT value *req*, is different from the number of receive sessions allowed, the partner IPCONN RECEIVECOUNT value *max*.

System action: The maximum number of send sessions is set to the lower of the two values, *usable*. Storage is wasted in the system with the higher value as sessions will be defined but never used.

User response: Update one or both of the IPCONNs so that the number of send sessions in one matches the number of receive sessions in the other.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, ipconn, usable, req, max*

Destination: CISO

DFHIS2003 *date time applid* **Number of RECEIVE sessions for IPCONN ipconn set to usable. Number requested req. Limit max.**

Explanation: IPCONN *ipconn* was initialized successfully but the number of send sessions requested by the partner, the partner IPCONN SENDCOUNT value *req*, is different from the RECEIVECOUNT value *max* specified for the IPCONN defined, or autoinstalled, locally in this CICS system.

System action: The maximum number of receive sessions is set to the RECEIVECOUNT value, *usable*. If the system with the higher value is a CICS system, storage may be wasted in it for sessions that are defined but never used.

User response: If the partner is a CICS system, update one or both of the IPCONNs so that the number of send sessions in one matches the number of receive sessions in the other. This message may be expected for connections from non-CICS partners that have non-configurable IPIC connections.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, ipconn, usable, req, max*

Destination: CISO

DFHIS2006 *date time applid* **Port ipconn_port for IPCONN ipconn different from partner port partner_port.**

Explanation: The INITIALIZE_CONNECTION function of DFHISCO of the IP interconnectivity (IS) domain has been called to handle an acquire for IPCONN *ipconn* initiated by its partner. It has detected that the port number defined for the local ipconn, *ipconn_port*, does not match the port number in the capability exchange received from the partner, *partner_port*. The partner port is that defined in the TCPIPSERVICE associated with the partner's IPCONN. This behaviour may be expected if TCP/IP address translation occurs between the CICS system and its partner or it may be the result of inconsistent CICS definitions.

System action: Processing continues using the port number from the local IPCONN; the partner port is ignored.

User response: Correct the port number definition in the local IPCONN or partner TCPIPSERVICE if the definitions are inconsistent.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, ipconn_port, ipconn, partner_port*

Destination: CISO

DFHIS2008 *date time applid* **Receipt of *msgtype* for task *taskno* timed out on IPCONN *ipconn*.**

Explanation: During processing of an IP interconnectivity request, a WB domain read on behalf of task *taskno* for a *msgtype* message timed out. The task was using a session on IPCONN *ipconn*. This condition occurs when IS domain has been notified that data is available on the web session but insufficient data arrives within the task's timeout period to satisfy the read. This is probably caused by a network error.

System action: The task is abnormally terminated.

User response: Inspect the CICS and system logs for network problems relating to the IPCONN. Changing the timeout value is unlikely to resolve the problem as a partial message has already been received within the timeout period.

Module: DFHISSR

XMEOUT Parameters: *date, time, applid, msgtype, taskno, ipconn*

Destination: CISO

DFHIS2009 *date time applid* **Client session in IPCONN *ipconn* from applid *applid* released.**

Explanation: The inbound client web session in IPCONN *ipconn* was closed. This may be due to an operator initiated IPCONN release from either the local or the partner system, or it may be the result of an error.

System action: No further inbound requests can be accepted for this IPCONN until it is SET ACQUIRED. Once the IPCONN server web session is also closed, the IPCONN connection status will move to RELEASED.

User response: If this is not due to normal release processing, inspect the CICS log for accompanying error messages.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, ipconn, applid*

Destination: CISO

DFHIS2010 *date time applid* **Server session in IPCONN *ipconn* with applid *applid* on host *hostname*, port *portnumber* released.**

Explanation: The outbound server web session in IPCONN *ipconn* was closed. This may be due to an operator initiated IPCONN release from either the local or the partner system, or it may be the result of an error. No further allocate_send requests can be accepted for this IPCONN until it is SET ACQUIRED.

Once the IPCONN client web session is also closed, the IPCONN connection status will move to RELEASED.

User response: If this is not due to normal release processing, inspect the CICS log for accompanying error messages.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, ipconn, applid, hostname, portnumber*

Destination: CISO

DFHIS2011 *date time applid {PURGE | FORCEPURGE | KILL}* **issued successfully for *num_purged* tasks using the *sesstype* session of IPCONN *ipconn*. There are currently *num_active* tasks active of which *num_purging* are being purged.**

Explanation: In response to a connection error or to the the SPI command SET IPCONN PURGE, IS domain has purged *num_purged sesstype* session tasks on IPCONN *ipconn* and sent an IS purge command message to the conversation partner of each task.

There were *num_active sesstype* sessions associated with the IPCONN of which *num_purging* are now being purged.

The *purge_type* value indicates whether the SPI command issued was PURGE, FORCEPURGE or KILL and defines the type of the corresponding IS purge command sent to the partner.

System action: The purged tasks are resumed for abend. New tasks may be started at the IPCONN.

User response: If a normal PURGE was issued and the number of active tasks is greater than the number being purged, some tasks may be purge protected. It may be necessary to issue a FORCEPURGE.

KILL may only be used after a FORCEPURGE has been attempted. If a KILL command was issued and the number of active tasks is greater than the number being purged, it may be necessary to issue a FORCEPURGE command.

Module: DFHISEM

XMEOUT Parameters: *date, time, applid, {1=PURGE, 2=FORCEPURGE, 3=KILL}, num_purged, sesstype, ipconn, num_active, num_purging*

Destination: CISO

DFHIS2040 *date time applid* **Unable to acquire IPCONN *ipconn* due to a security violation**

Explanation: An attempt to acquire the named IPCONN failed due to a security problem. During an attempt to establish IP interconnectivity, the security

credentials of the partner system were not found to be valid to allow communication.

System action: The request to acquire the IPCONN fails.

User response: Verify that the security attributes of the named IPCONN or the TCPIP SERVICE to which the IPCONN refers are correct. If a certificate has been passed by the partner system, verify that it is correctly defined to the external security manager so that it is associated with a valid userid. There may be a previous security message written to TD queue CSCS for further information and guidance. If no previous messages were issued, examine the trace to determine the reason for the failure.

Module: DFHISCO

XMEOUT Parameters: *date, time, applid, ipconn*

Destination: CISO and Terminal End User

DFHIS3000 *date time applid IPCONN ipconn with applid networkid.applid autoinstalled successfully using autoinstall user program aupname and template template after a connection request was received on tcpip service tcpip service from host hostname.*

Explanation: An IPCONN with name *ipconn* has been successfully autoinstalled on this system in response to a connect flow arriving on TCPIP SERVICE *tcpip service* from host *hostname*. Autoinstall user program *aupname* and template IPCONN *template* were used for the autoinstall. Template '(NONE)' indicates that, rather than copy values from a template, the system default values were used. The IPCONN was installed with networkid *networkid* and applid *applid*.

System action: Processing continues.

User response: None required.

Module: DFHISIC

XMEOUT Parameters: *date, time, applid, ipconn, networkid, applid, aupname, template, tcpip service, hostname*

Destination: CISO

DFHIS3001 *date time applid IPCONN autoinstall rejected after a connection request was received on TCPIP SERVICE tcpip service from host hostname because the TCPIP SERVICE has URM(NO).*

Explanation: A connect flow arriving on TCPIP SERVICE *tcpip service* from host *hostname* did not contain an applid that matched an installed IPCONN. No attempt was made to autoinstall an

IPCONN because the TCPIP SERVICE URM value was NO.

System action: The connect flow is rejected.

User response: If autoinstall of the IPCONN is required, then change the URM attribute of the TCPIP SERVICE to the name of an appropriate autoinstall user program. The CICS-supplied sample autoinstall user program is DFHISAIP.

Module: DFHISIC

XMEOUT Parameters: *date, time, applid, tcpip service, hostname*

Destination: CISO

DFHIS3002 *date time applid IPCONN autoinstall rejected after a connection request was received on TCPIP SERVICE tcpip service from host hostname. Use of autoinstall user program aupname has caused error code code.*

Explanation: A connect flow arriving on TCPIP SERVICE *tcpip service* from host *hostname* did not contain an applid that matched an installed IPCONN. An attempt was made to autoinstall an IPCONN for this connection, using autoinstall user program (AUP) *aupname* as specified in the URM attribute of the TCPIP SERVICE. The autoinstall failed with error *code*.

- 1 The AUP set a non-zero response code in field *isaic_response*, indicating that the autoinstall should not be allowed.
- 2 The link to the AUP failed because there is no installed definition for the program and it could not be autoinstalled.
- 3 The link to the AUP failed because the program was not available. This could be because the program is not enabled, or is defined as remote.
- 4 The AUP abended during its processing.
- 5 The link to the AUP failed with an AMODE error.

System action: An exception trace of the AUP commarea is made. The connect flow is rejected.

User response: If autoinstall of the IPCONN is required, then change the URM attribute of the TCPIP SERVICE to the name of an appropriate autoinstall user program. The CICS-supplied sample autoinstall user programs are DFHISAIP (Assembler), DFHISCIP (COBOL), DFHISDIP (C) and DFHISPIIP (PL/1).

Module: DFHISIC

XMEOUT Parameters: *date, time, applid, tcpip service, hostname, aupname, code*

Destination: CISO

DFHIS3003 *date time applid* **IPCONN autoinstall failed due to a severe error in another CICS component.**

Explanation: An attempt to autoinstall an IPCONN failed due to a severe error in another component of CICS.

System action: The autoinstall is rejected. The failing component will have issued messages, trace and dump information relevant to the error.

User response: Proceed as directed by the diagnostics from the failing component.

Module: DFHISIC

XMEOUT Parameters: *date, time, applid*

Destination: CISO

DFHIS3004 *date time applid* **IPCONN autoinstall rejected after a connection request was received on TCPIP SERVICE tcpip service from host hostname. The autoinstall user program aupname returned invalid value ipconn for use as the IPCONN name.**

Explanation: A connect flow arriving on TCPIP SERVICE *tcpip service* from host *hostname* did not contain an applid that matched an installed IPCONN. An attempt was made to autoinstall an IPCONN for this connection, using autoinstall user program (AUP) *aupname* as specified in the URM attribute of the TCPIP SERVICE. The autoinstall could not complete because the AUP returned an invalid value to be used as the IPCONN name in field *isaic_ipconn*. The special value -blanks- indicates that the field returned blanks (hexadecimal 40s).

System action: An exception trace of the AUP commarea is made. The connect flow is rejected.

User response: If autoinstall of the IPCONN is required, then change the AUP to return a valid IPCONN name. The CICS-supplied sample autoinstall user programs are DFHISAIP (Assembler), DFHISCIP (COBOL), DFHISDIP (C) and DFHISPIP (PL/1).

Module: DFHISIC

XMEOUT Parameters: *date, time, applid, tcpip service, hostname, aupname, ipconn*

Destination: CISO

DFHIS3005 *date time applid* **IPCONN autoinstall rejected after a connection request was received on TCPIP SERVICE tcpip service from host hostname. The autoinstall user program aupname returned ipconn for use as the IPCONN**

name. This name is already in use.

Explanation: A connect flow arriving on TCPIP SERVICE *tcpip service* from host *hostname* did not contain an applid that matched an installed IPCONN. An attempt was made to autoinstall an IPCONN for this connection, using autoinstall user program (AUP) *aupname* as specified in the URM attribute of the TCPIP SERVICE. The autoinstall could not complete because the AUP returned *ipconn* in field *isaic_ipconn* to be used as the IPCONN name. That name is already in use in the system.

System action: An exception trace of the AUP commarea is made. The connect flow is rejected.

User response: If autoinstall of the IPCONN is required, then change the AUP to return a unique IPCONN name. The CICS-supplied sample autoinstall user programs are DFHISAIP (Assembler), DFHISCIP (COBOL), DFHISDIP (C) and DFHISPIP (PL/1).

Module: DFHISIC

XMEOUT Parameters: *date, time, applid, tcpip service, hostname, aupname, ipconn*

Destination: CISO

DFHIS3006 *date time applid* **IPCONN autoinstall rejected after a connection request was received on TCPIP SERVICE tcpip service from host hostname. The autoinstall user program aupname returned template as the autoinstall template. No IPCONN with this name exists.**

Explanation: A connect flow arriving on TCPIP SERVICE *tcpip service* from host *hostname* did not contain an applid that matched an installed IPCONN. An attempt was made to autoinstall an IPCONN for this connection, using autoinstall user program (AUP) *aupname* as specified in the URM attribute of the TCPIP SERVICE. The autoinstall could not complete because the AUP returned *template* in field *isaic_template* to be used as the name of the IPCONN template for the autoinstall. No IPCONN with that name is currently installed in this CICS.

System action: An exception trace of the AUP commarea is made. The connect flow is rejected.

User response: If autoinstall of the IPCONN is required, then change the AUP to return a valid template name, or leave *isaic_template* blank so that default values are used. The CICS-supplied sample autoinstall user programs are DFHISAIP (Assembler), DFHISCIP (COBOL), DFHISDIP (C) and DFHISPIP (PL/1).

Module: DFHISIC

XMEOUT Parameters: *date, time, applid, tcpip service, hostname, aupname, template*

Destination: CISO

DFHIS3007 *date time applid* **IPCONN autoinstall rejected after a connection request was received on TCPIP SERVICE *tcpip service* from host *hostname*. The autoinstall user program *aupname* returned *template* as the autoinstall template. This IPCONN is not in service.**

Explanation: A connect flow arriving on TCPIP SERVICE *tcpip service* from host *hostname* did not contain an applid that matched an installed IPCONN. An attempt was made to autoinstall an IPCONN for this connection, using autoinstall user program (AUP) *aupname* as specified in the URM attribute of the TCPIP SERVICE. The autoinstall could not complete because the AUP returned *template* in field *isaic_template* to be used as the name of the IPCONN template for the autoinstall. This IPCONN is currently out of service, and so cannot be used as a template.

System action: An exception trace of the AUP commarea is made. The connect flow is rejected.

User response: If autoinstall of the IPCONN is required, then change the AUP to return a different template name, leave it blank, or put the template IPCONN in service and retry. The CICS-supplied sample autoinstall user programs are DFHISAIP (Assembler), DFHISCIP (COBOL), DFHISDIP (C) and DFHISPIP (PL/1).

Module: DFHISIC

XMEOUT Parameters: *date, time, applid, tcpip service, hostname, aupname, template*

Destination: CISO

DFHIS3008 *date time applid* **IPCONN autoinstall rejected after a connection request was received on TCPIP SERVICE *tcpip service* from host *hostname*. The autoinstall user program *aupname* returned *applid* for use as the applid. This is already in use.**

Explanation: A connect flow arriving on TCPIP SERVICE *tcpip service* from host *hostname* contained a blank applid or an applid that did not match an installed IPCONN. An attempt was made to autoinstall an IPCONN for this connection, using autoinstall user program (AUP) *aupname* as specified in the URM attribute of the TCPIP SERVICE. The autoinstall could not complete because the AUP set a value in *isaic_applid* that would cause the fully qualified applid of the IPCONN to be *applid*. This applid is already in use in the system.

System action: An exception trace of the AUP commarea is made. The connect flow is rejected.

User response: If autoinstall of the IPCONN is required, then change the AUP to return a unique applid. The CICS-supplied sample autoinstall user programs are DFHISAIP (Assembler), DFHISCIP (COBOL), DFHISDIP (C) and DFHISPIP (PL/1).

Module: DFHISIC

XMEOUT Parameters: *date, time, applid, tcpip service, hostname, aupname, applid*

Destination: CISO

DFHIS3009 *date time applid* **IPCONN autoinstall rejected after a connection request was received on TCPIP SERVICE *tcpip service* from host *hostname*. The autoinstall user program *aupname* returned *sysid* for use as the IPCONN name. This is already in use for a CONNECTION with a different applid.**

Explanation: A connect flow arriving on TCPIP SERVICE *tcpip service* from host *hostname* contained a blank applid or an applid that did not match an installed IPCONN. An attempt was made to autoinstall an IPCONN for this connection, using autoinstall user program (AUP) *aupname* as specified in the URM attribute of the TCPIP SERVICE. The autoinstall could not complete because the AUP set a value of *sysid* in *isaic_ipconn* for the IPCONN name. This is the same as a currently installed CONNECTION resource definition and that CONNECTION has a NETNAME value that is different to the APPLID of the IPCONN (in *isaic_applid*) and so must represent a different system.

System action: An exception trace of the AUP commarea is made. The connect flow is rejected.

User response: Change the AUP to return a name consistent with installed CONNECTION definitions. The CICS-supplied sample autoinstall user programs are DFHISAIP (Assembler), DFHISCIP (COBOL), DFHISDIP (C) and DFHISPIP (PL/1).

Module: DFHISIC

XMEOUT Parameters: *date, time, applid, tcpip service, hostname, aupname, sysid*

Destination: CISO

DFHIS3010 *date time applid* **IPCONN autoinstall rejected after a connection request was received on TCPIP SERVICE *tcpip service* from host *hostname*. The autoinstall user program *aupname* returned invalid value *port* for use as the port number.**

Explanation: A connect flow arriving on TCPIP SERVICE *tcpip service* from host *hostname* did not contain an applid that matched an installed IPCONN. An attempt was made to autoinstall an

IPCONN for this connection, using autoinstall user program (AUP) *aupname* as specified in the URM attribute of the TCIPSERVICE. The autoinstall could not complete because the AUP returned an invalid value to be used as the port number in field *isaic_port*.

The AUP can set any value in the range 1 to 65535, unless the value passed in was -1, in which case it cannot be modified.

System action: An exception trace of the AUP commarea is made. The connect flow is rejected.

User response: If autoinstall of the IPCONN is required, change the AUP to return a valid port number. The CICS-supplied sample autoinstall user programs are DFHISAIP (Assembler), DFHISCIP (COBOL), DFHISDIP (C), and DFHISPIP (PL/1).

Module: DFHISIC

XMEOUT Parameters: *date, time, applid, tcpipservice, hostname, aupname, port*

Destination: CISO

DFHIS3011 *date time applid* **Failed to invoke Autoinstall User Program *aupname* during discard of IPCONN *ipconn*.**

Explanation: During discard or release of autoinstalled IPCONN *ipconn*, autoinstall user program (AUP) *aupname* was invoked with function delete. The link to the AUP failed.

System action: An exception trace of the AUP commarea is made. The deletion completes.

User response: Ensure that the AUP is available.

Module: DFHISIC

XMEOUT Parameters: *date, time, applid, aupname, ipconn*

Destination: CISO

DFHIS3030I *date time applid* **IPCONN *name* {*installed* / *deleted*}.**

Explanation: CICS has installed or deleted IPCONN *name*.

System action: CICS continues.

User response: None.

Module: DFHISIC

XMEOUT Parameters: *date, time, applid, name, {1=installed,2=deleted}*

Destination: CISL

DFHIS4000 *date time applid* **Conversation failure on IPCONN *ipconn*. Sense code (*X'sense*). Message (*msgtext*).**

Explanation: An error flow (IS7) was received on IPCONN *ipconn* when a normal request or response was expected. The sense code for the error was *sense*. The message associated with the error on the other system is *msgtext*.

System action: An exception trace of the IS7 and associated data is made. The receiving transaction will be abended.

User response: Determine what caused the other system to send the IS7 by using the diagnostics issued on that system.

Module: DFHISZA

XMEOUT Parameters: *date, time, applid, ipconn, X'sense', msgtext*

Destination: CISO

DFHIS5000I *applid* **Recovery action requested for IP connection *name*.**

Explanation: The XISQUE global user exit program has been invoked by CICS because of a potential problem with the IP connection. The global user exit has used return code UERCAKLL indicating that throughput on the connection is abnormally low and some exceptional action is required. The poor performance of the connection can be caused by

- Poor response on the receiving end
- Increased load on the sending end.

The condition may be intermittent. Message DFHIS5001 may follow indicating that the connection has recovered.

This message may also occur when the XISQUE global user exit is disabled but the connection has been at the QUEUELIMIT for MAXQTIME where both parameters are specified in the connection definition.

System action: CICS cancels all transactions which have outstanding queued requests to use the connection.

User response: Investigate the cause of the poor performance of the IP connection. Check the availability and condition of the connected system.

Module: DFHISAL

XMEOUT Parameters: *applid, name*

Destination: Console

DFHIS5001I *applid* IP connection *name* operating normally following recovery action.

Explanation: Message DFHIS5000 has been issued for this IP connection. The IP connection has now recovered and is operating normally.

System action: Processing continues.

User response: None

Module: DFHISAL

XMEOUT Parameters: *applid, name*

Destination: Console

DFHIS5002 *date time applid nnnnnnnn* queued requests to use IPCONN *ipconn* have been cancelled. There are *nnnnnnnn* requests which remain queued.

Explanation: Requests that are queueing to use IPCONN *ipconn* have been cancelled. This could be due to the reinstall of an IPCONN, as a result of a SPI or CEMT SET IPCONN(*ipconn*) CANCEL command or as part of recovery from a previous error. Any queued requests that remain after this operation are also enumerated in this message.

System action: Requests that are queueing to use the IPCONN are purged from the system.

User response: None.

Module: DFHISAL

XMEOUT Parameters: *date, time,applid, nnnnnnnn, ipconn, nnnnnnnn*

Destination: CISO

DFHIS5003 *date time applid nnnnnnnn* queued requests to use IPCONN *ipconn* have been cancelled. There are *nnnnnnnn* requests which remain queued.

Explanation: Requests that are queueing to use IPCONN *ipconn* have been cancelled. Some of the requests that were cancelled may have been system requests. This could be due to the reinstall of an IPCONN, as a result of a SPI or CEMT SET IPCONN(*ipconn*) FORCECANCEL command or as part of recovery from a previous error. Any queued requests that remain after this operation are also enumerated in this message.

System action: Requests that are queueing to use the IPCONN are purged from the system.

User response: None.

Module: DFHISAL

XMEOUT Parameters: *date, time,applid, nnnnnnnn, ipconn, nnnnnnnn*

Destination: CISO

DFHIS6000 *date time applid* IP Interconnectivity Recovery. A process error has occurred while running transaction CISX.

Explanation: An attempt to return a list of XIDs by the CISX transaction has failed. The XIDs are those associated with unresolved in-doubt units of work relating to XA clients of the region. The cause of the failure may be an internal domain call error or because the associated task has been purged by the system.

System action: An exception trace is written by IS domain, and by the domain call that failed. A FMH7 response message is returned to the XA client that requested this operation.

User response: Resubmit the request to find the list of XIDs. If the problem persists you will need further assistance from IBM to resolve this problem.

Module: DFHISRE

XMEOUT Parameters: *date, time,applid*

Destination: CISO

DFHIS6001 *date time applid* A communications failure has occurred while running transaction CISX.

Explanation: An attempt to return a list of XIDs by the CISX transaction has failed. The XIDs are those associated with unresolved in-doubt units of work relating to XA clients of the region. The cause of the error is a communications failure that has prevented the list of XIDs from being returned to the caller.

System action: An exception trace is written by IS domain, and by the domain call that failed. The resources used by the CISX task are then released.

User response: Once communications between the XA client and CICS have been re-established the request can be resubmitted.

Module: DFHISRE

XMEOUT Parameters: *date, time,applid*

Destination: CISO

DFHIS6002 *date time applid* IP Interconnectivity Recovery. A process error has occurred while attempting to resynchronize a transaction with an XID of *XID*.

Explanation: An attempt to carry out a recovery or resynchronization attempt for the UOW, associated with the XID shown in the message, has failed. The UOW persists until a subsequent resynchronization attempt is successful. The cause of the failure may be an internal domain call error or because the associated task has been purged by the system.

System action: An exception trace is written by IS domain, and by the domain call that failed. A FMH7 response message is returned to the XA client that requested this operation.

User response: Resubmit the request to make another attempt to complete this unit of work. If the problem persists you will need further assistance from IBM to resolve this problem.

Module: DFHISRE

XMEOUT Parameters: *date, time, applid, XID*

Destination: CISO

DFHIS6003 *date time applid IP Interconnectivity Recovery. A communications error has occurred. The unit of work uowid for XID XID has been committed.*

Explanation: While carrying out a resynchronization attempt for a local unit of work, the CISX task was unable to send a response to its XA client as communication had been lost.

System action: The local unit of work updates are committed. CICS writes an exception trace and then terminates the CISX task.

User response: Manual resynchronization of the updates on the client side may be needed in order for the XA client's task to be synchronized with the unit of work that CICS successfully committed.

Module: DFHISRE

XMEOUT Parameters: *date, time, applid, uowid, XID*

Destination: CISO

DFHIS6004 *date time applid IP Interconnectivity Recovery. A communications error has occurred. The unit of work uowid for XID XID has been backout out.*

Explanation: While carrying out a resynchronization attempt for a local unit of work, the CISX task was unable to send a response to its XA client as communication had been lost.

System action: The local unit of work updates are rolled back. CICS writes an exception trace and then terminates the CISX task.

User response: Manual resynchronization of the updates on the client side may be needed in order for the XA client's task to be synchronized with the unit of work that CICS successfully committed.

Module: DFHISRE

XMEOUT Parameters: *date, time, applid, uowid, XID*

Destination: CISO

DFHIS6005 *date time applid IP Interconnectivity Recovery. An attempt to resynchronize a unit of work with an XID of XID has failed because the unit of work could not be found.*

Explanation: While carrying out a resynchronization attempt for a local unit of work, the CISX task could not find a unit of work for the given XID.

System action: The resynchronization attempt fails and a FMH7 response is returned to the XA client. The CISX task is ended.

User response: It is possible that another task has completed the CICS unit of work. Check that the XID is still valid and if it is then manually complete the XA client task associated with it.

Module: DFHISRE

XMEOUT Parameters: *date, time, applid, XID*

Destination: CISO

DFHIS6006 *date time applid IP Interconnectivity Recovery. Resynchronization has failed, because of an error in the partner region, for the following local UOW X'localuowid' IPCONN name name transaction tranid task number trannum terminal termid user userid.*

Explanation: Resynchronization of the unit of work cannot be completed following the re-acquiring of an IPCONN, because the partner region has encountered an error during the resynchronization attempt. This unit of work will be retained until it can be resolved.

System action: The unit of work remains shunted and the connection is placed into a PENDING state until this and any other units of work are resolved.

User response: Look for messages in the partner region identifying the cause of the error there. Once the cause of the error has been removed a further resynchronization attempt can be made by re-acquiring the IPCONN resource.

Module: DFHISRE

XMEOUT Parameters: *date, time, applid, X'localuowid', name, tranid, trannum, termid, userid*

Destination: CSMT

DFHIS6007 *date time applid IP Interconnectivity Recovery. Resynchronization not possible, because the corresponding unit of work could not be found by the partner region, for the following local UOW X'localuowid' associated with IPCONN ipconn.*

Explanation: Resynchronization of the unit of work

cannot be completed following the re-acquiring of an IPCONN, because the corresponding unit of work could not be found by the partner region. The local unit of work has been retained until it can be resolved manually.

System action: The unit of work remains shunted and the connection is placed into a PENDING state until this and any other units of work are resolved.

User response: Examine the records from the partner system to determine the outcome of the corresponding unit of work there. Force the local unit of work to complete using the CICS SPI command. Once all such local units of work have been resolved the connection can be set to NOTPENDING to place it in service.

Module: DFHISRE

DFHJCnnnn messages

DFHJC4522 DDNAME *ddname* HAD A PERMANENT
I/O ERROR.

Explanation: An unrecoverable I/O error occurred while the CICS journal print utility was processing the data set defined in the DD statement *ddname*.

System action: If the error occurred on an output data set, and multiple output copies were specified, processing continues with the other copies. Otherwise, the journal print utility terminates abnormally.

User response: If the error occurred on an output data set, and you wish to rerun, change the DD statement to refer to a different volume, and resubmit the job. Take the original volume offline for recovery, if possible.

If the error occurred on an input data set, to be able to recover you must have a backup copy of the defective volume. You can change the DD statement to refer to the backup volume, and rerun the job. If you have a backup copy of a defective disk, you can use IBM utilities to recover the disk by flagging the defective track and pointing to an alternate track.

Module: DFHJUP

Destination: SYSPRINT

DFHJC4523 PROCESSING IS BEING TERMINATED
FOR THIS OPTION.

terminal *termid* user *userid*.

Explanation: Resynchronization of the unit of work cannot be completed following the re-acquiring of an IPCONN, because the partner region has carried out an initial start and lost the log data relating to the outcome of this unit of work. The IPCONN resource specifies XLNACTON(KEEP), which means that this unit of work will be retained until it can be resolved.

System action: The unit of work remains shunted and the connection is placed into a PENDING state until this and any other units of work are resolved.

User response: Force the local unit of work to complete using the CICS SPI command. Once all such local units of work have been resolved the connection can be set to NOTPENDING to place it in service.

Module: DFHISRE

XMEOUT Parameters: *date, time, applid, X'localuowid', name, transid, trannum, termid, userid*

Destination: CSMT

Explanation: This is an informatory message issued by the CICS journal print utility, when it completes processing for an OPTION card. The card referred to is the last OPTION card before this message on SYSPRINT.

System action: The journal print utility continues processing with the next option.

User response: If no other messages appear between the OPTION card and this message, the termination is normal. If other messages have been issued, check them to see if the termination is normal or abnormal. If abnormal termination has occurred, correct the errors notified in other message(s), and resubmit the job.

Module: DFHJUP

Destination: SYSPRINT

DFHJC4524 INVALID CONTROL CARD FORMAT.

Explanation: The CICS journal print utility detected an error in an input CONTROL card. The card is displayed on SYSPRINT on the line before this message.

System action: The journal print utility ignores the invalid card, and assumes standard defaults.

User response: If the output of the run is not what you want, correct the invalid card and resubmit the job.

Module: DFHJUP

DFHJC4525 • DFHJC4531

Destination: SYSPRINT

DFHJC4525 INVALID CARD TYPE.

Explanation: The CICS journal print utility read an input card that did not contain one of the following strings starting in column 1

'CONTROL', 'OPTION', '**', or 'END'.

The invalid card is displayed on SYSPRINT in the line before this message.

System action: The journal print utility ignores the invalid card and continues processing.

User response: If the job fails or the output is not what you want, correct the invalid card and resubmit the job.

Module: DFHJUP

Destination: SYSPRINT

DFHJC4526 INVALID OPTION CARD OR PRIOR ERROR.

Explanation: The CICS journal print utility detected an error in an OPTION card or ignored it because of a previous error. The card is displayed in the line before this message.

System action: The journal print utility ignores the card and continues processing.

User response: If the job fails or the output is not what you want, correct the error and resubmit the job.

Module: DFHJUP

Destination: SYSPRINT

DFHJC4527 END OF JOB.

Explanation: This is an end-of-job information message issued by the CICS journal print utility when it terminates normally. Errors may have been detected but none was sufficient to cause abnormal termination.

System action: The journal print utility terminates normally.

User response: Check that all options completed normally. If not, submit another job for the options that you still need.

Module: DFHJUP

Destination: SYSPRINT

DFHJC4528 NO OPTION CARDS SUPPLIED.

Explanation: The CICS journal print utility detected that, for one CONTROL card

1. No OPTION cards were supplied **OR**

2. All the OPTION cards contained errors (notified in previous messages).

System action: The journal print utility does no processing for the CONTROL card with no OPTION cards.

User response: Supply correct OPTION cards for the options you want and resubmit the job.

Module: DFHJUP

Destination: SYSPRINT

DFHJC4529 UNABLE TO OPEN INPUT FILE.

Explanation: The CICS journal print utility was unable to open the input data set associated with the CONTROL card displayed before this message.

System action: The journal print utility continues processing with the next input card.

User response: Check the JCL. For a data set without a standard label, check that the data set control block (DCB) parameters are supplied. If you find a JCL error, correct it and resubmit the job.

Module: DFHJUP

Destination: SYSPRINT

DFHJC4530 ELEMENT LIST ERROR.

Explanation: The CICS journal print utility detected an error while processing an input file.

System action: The journal print utility terminates processing with the MVS user abend code 0185.

User response: This is usually caused by a previous error, for which a message has been issued. If any previous error messages were displayed, make the necessary corrections and resubmit the job.

Module: DFHJUP

Destination: SYSPRINT

DFHJC4531 END OF FILE ON INPUT.

Explanation: The CICS journal print utility has reached EOF on the current input file.

System action: The journal print utility completes processing for the CONTROL card preceding this message on SYSPRINT.

User response: None.

Module: DFHJUP

Destination: SYSPRINT

DFHJC4532 OPTION COMPLETE.

Explanation: The CICS journal print utility has completed processing for the OPTION card preceding this message on SYSPRINT.

System action: The journal print utility continues processing with the next OPTION card or, if there are no further options before the END card, completes processing for the current control card.

User response: None.

Module: DFHJUP

Destination: SYSPRINT

DFHJC4533 UNABLE TO OPEN OUTPUT FILE.

Explanation: The CICS journal print utility was unable to open the output data set associated with the last CONTROL card displayed on SYSPRINT before this message.

System action: The journal print utility terminates processing for this CONTROL card, and continues processing with the next CONTROL card.

User response: Check the JCL. For a data set without a standard label, check that the data set control block (DCB) parameters are supplied. If you find a JCL error, correct it and resubmit the job.

Module: DFHJUP

Destination: SYSPRINT

DFHJC4534 NO ELEMENT LIST ADDRESS.

DFHKCnnnn messages

DFHKC0102 *date time applid terminal userid tranid*
PFT entry for profname has been added.

Explanation: This is an audit log message indicating that profile entry *profname* has been added to the PFT using the INSTALL command.

terminal is the netname or termid of the terminal at which the INSTALL command was entered.

userid is the user identifier of the operator performing the INSTALL command.

tranid is the transaction used to perform the INSTALL command.

System action: The system continues normally.

User response: None.

Module: DFHKCQ

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, profname*

Destination: CSKL

Explanation: During CICS journal print utility processing, an error occurred in building the element list.

System action: The journal print utility terminates processing for this element list, and terminates abnormally with the MVS user abend code, 0184.

User response: This is an internal error in the journal print utility, DFHJUP. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHJUP

Destination: SYSPRINT

DFHJC4571 AN ERROR (CODE X'code) HAS OCCURRED IN THE USER EXIT PROGRAM.

Explanation: An error has been detected in the user exit program. The code *code* is the value returned in register 15 from the exit program to DFHJUP. The journal print utility terminates without processing any remaining OPTION cards.

User response: Correct the error in the user exit program and resubmit the job.

Module: DFHJUP

Destination: SYSPRINT

DFHKC0104 *date time applid terminal userid tranid*
PFT entry for profname has been deleted.

Explanation: This is an audit log message indicating that profile entry *profname* has been deleted from the CICS profile table (PFT) using the DISCARD command.

terminal is the netname or termid of the terminal at which the DISCARD command was entered.

userid is the user identifier of the operator performing the DISCARD command.

tranid is the transaction used to perform the DISCARD command.

System action: The system continues normally.

User response: None.

Module: DFHKCQ

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, profname*

Destination: CSKL

DFHKC0106 *date time applid terminal userid tranid*
PFT entry for profname has been replaced.

Explanation: This is an audit log message indicating that profile entry *profname* has been replaced in the CICS profile table PFT using the INSTALL command.

terminal is the netname or termid of the terminal at which the INSTALL command was entered.

userid is the user identifier of the operator performing the INSTALL command.

tranid is the transaction used to perform the INSTALL command.

System action: The system continues normally.

User response: None.

Module: DFHKCQ

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, profname*

Destination: CSKL

DFHKC0301 *applid* **Program DFHKCRP cannot be found.**

Explanation: The transaction manager recovery program is not available. CICS cannot find DFHKCRP in any data set concatenated in the DFHRPL DD statement in the CICS startup job stream.

System action: CICS terminates abnormally with a dump.

User response: To correct this error, place DFHKCRP in a partitioned data set in the DFHRPL DD statement.

Module: DFHKCQ

XMEOUT Parameter: *applid*

Destination: Console

DFHKC0302 *applid* **Transaction Manager restart failed. Reason - rc.**

Explanation: During transaction manager initialization, CICS executes the following steps in the order in which they are listed:-

- 1 Building the profile table (PFT) directory.
- 8 Purging profile definitions from the global catalog using the catalog domain.
- 10 Restoring profile definitions from the global catalog using the catalog domain.

The transaction manager restart has failed for reason *rc*, where *rc* indicates the job step that did not complete successfully. Subsequent steps have not been attempted.

System action: CICS terminates the task under which

DFHKCRP is running with an AKCB abend code, and issues message DFHSI1521.

User response: Examine the trace in the CICS AKCB transaction dump to see the history of the task that DFHKCRP is running under for further information regarding the precise cause of the failure.

Module: DFHKCRP

XMEOUT Parameters: *applid, rc*

Destination: Console

DFHKC0308I *applid* **ERROR OCCURRED IN SRB MODE.**

Explanation: An error such as a program check was detected by the operating system during the execution of a unit of work scheduled by means of a service request block (SRB). The SRB was scheduled, directly or indirectly, by CICS in order to issue a VTAM authorized path request.

A message could not be issued because the error was detected when running under an SRB.

Diagnostics: The error is handled by a functional recovery routine (FRR) in DFHKCSP. This FRR saves the system diagnostic work area (SDWA) if one was provided, and issues a CALLRTM to terminate the CICS TCB with user abend code 0308.

This, in turn, causes the ESTAE exit established by DFHKESTX to be taken, resulting in the storing of the CICS TCB status and provision of a dump as for abends occurring during execution under the CICS TCB.

The SDWA saved by DFHKCSP may be located in the dump by

- Finding the module itself (look for characters 'DFHKCSP').
- Finding the save area (look for characters 'SRB SDWA SAVE AREA'); the SDWA follows this character string.

Analysis: The SDWA, located as described above, is a standard MVS SDWA. The principal contents of the SDWA are

SDWAGRSV

General registers 0 through 15

SDWAEC1

Program status word (PSW) at the time of the interrupt.

In general, registers 12 and 13 will not address a TCA or the CSA.

The registers and PSW recorded in DFHKESTX represent the state of the CICS TCB when CICS was terminated by the FRR. Normally this information is not

relevant to the cause of the failure, but may give clues to the environment in which the SRB was running.

System action: CICS is terminated with user abend code U0308. The system diagnostic work area (SDWA) presented at the time of error is copied into module DFHKCSP. DFHKCSP resides in protected storage and can be printed from an MVS region dump.

User response: Locate the SDWA, situated in DFHKCSP after the characters “SRB SDWA WORK AREA”. This contains the PSW and registers at the time of the error.

If the address in SDWAEC1 is in CICS code, examine the code to determine the expected register contents at this point. If this does not suggest any obvious local problem, look for a pointer to the RPL associated with the SRB mode execution. This will indicate the location of the MVS save area.

If the address in SDWAEC1 is not in CICS code (that is in MVS), try using the contents of register 13 to trace back through the save areas to the one provided by CICS. The contents of this save area will show the point of call in CICS (in DFHZHPRX), and the arguments passed to the access method, in particular the address of the RPL (register 1). Failure in an access method may be due to an incorrect RPL. Therefore check the ACB address, entry point, and I/O area address. When CICS is executing in SRB mode, it is not possible for the message to be issued. However, user abend code 308 is generated and should appear in message DFHSR0606.

Module: DFHKCSP

Destination: Console

DFHKEnnnn messages

DFHKE0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a three digit hexadecimal MVS code (if applicable), followed by a four digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in *OS/390 MVS System Codes*.

Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error

was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHKEDD, DFHKEDS, DFHKEGD, DFHKETI

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*, *modname*

Destination: Console

DFHKE0002 *applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code *code* is the exception trace point id which uniquely identifies what the error is and where the error was detected.

For further information about CICS exception trace entries, see the *CICS Problem Determination Guide*.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

DFHKE0004 • DFHKE0005

CICS will continue unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHKEDD, DFHKEGD, DFHKEIN

XMEOUT Parameters: *applid*, *X'code'*, *modname*

Destination: Console

DFHKE0004 *applid* A possible loop has been detected at offset *X'offset'* in module *modname*.

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset *X'offset'*. This is the offset of the instruction which was executing at the time the error was detected.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running

function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname* and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. However, you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHKEDD, DFHKEDS, DFHKEGD, DFHKETI

XMEOUT Parameters: *applid*, *X'offset'*, *modname*

Destination: Console

DFHKE0005 *applid* A hardware error has occurred (module *modname*, code *X'code'*). The MVS store clock was found inoperative.

Explanation: A hardware error has occurred during the running of module *modname*. The MVS store clock facility is the timing mechanism for the operating system.

The code *code* is the exception trace point ID which uniquely identifies the place where the error was detected.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS. This is probably a hardware error and you should first investigate the MVS store clock and find out whether it is working properly. If this is the cause, you should take the appropriate action to have it repaired or replaced.

In the unlikely event that this is not a hardware problem, you will need further assistance from IBM. See Part 4 of

the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHKETI

Destination: Console

DFHKE0006 *applid* **Insufficient storage to satisfy Getmain (code X'code') in module modname. MVS code mvscode.**

Explanation: An MVS GETMAIN was issued by module *modname* but there was insufficient storage available to satisfy the request.

The code X'code' is the exception trace point ID which uniquely identifies the place where the error was detected.

The code *mvscode* is the MVS GETMAIN return code.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS will terminate with a system dump. An exception entry is made in the trace table (code *code* in the message).

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Inform the system programmer.

You can get diagnostic information about the MVS return code by consulting the relevant MVS codes manual which is listed in the book list at the front of this book.

Try decreasing the overall size limit of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. If CICS is not already terminated, you will need to bring CICS down to do this. See the *CICS System Definition Guide* or the *CICS Performance Guide* for further information on CICS storage.

Module: DFHKEIN

XMEOUT Parameters: *applid*, X'code',*modname*, *mvscode*

Destination: Console

DFHKE0101 *applid* **DFHSIP IS NOT APF-AUTHORIZED. CICS WILL TERMINATE.**

Explanation: Part of CICS initialization must be done in an APF-authorized state. The kernel has detected that DFHSIP is not APF-authorized.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS will terminate. The CICS job step terminates with return code 12.

User response: All libraries concatenated in the STEPLIB concatenation should be APF-authorized, and DFHSIP should be link-edited with an authorization code of 1.

Module: DFHKESIP

Destination: Console

DFHKE0102 *applid* **UNSUCCESSFUL PRE-INITIALIZATION OF domain DOMAIN. CICS WILL TERMINATE.**

Explanation: A domain has failed to pre-initialize and as a result the system will terminate.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

Since this problem has occurred so early in CICS initialization, possible causes include a severe lack of storage or corruption of the local catalog.

System action: CICS terminates.

User response: Examine all earlier messages sent to the console to look for any obvious cause of the domain pre-initialisation failure.

If you cannot find the cause of the failure from the messages, inform the system programmer. If a dump is taken, investigate this problem using the exception trace which is issued by the failing domain.

You may need further assistance to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHKETCB.

Destination: Console

DFHKE0103 *applid* **IDENTIFY FAILED IN MODULE modname. MVS CODE mvscode. CICS WILL TERMINATE.**

Explanation: The kernel has issued an MVS IDENTIFY which has failed.

The code *mvscode* is the MVS IDENTIFY return code.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates. The CICS job step terminates with return code 12.

User response: Inform the system programmer.

To resolve the problem, use the MVS IDENTIFY return code *mvscode* and the *MVS/XA Supervisor Services*

DFHKE0104 • DFHKE0208

and Macro Instructions manual, (GC28-1154), to determine why the IDENTIFY failed.

Module: DFHKETCB.

Destination: Console

DFHKE0104 *applid* CICS HAS BEEN SUPPLIED WITH INCORRECT SVC NUMBER *svcno*.

Explanation: CICS has validated the SVC number *svcno*, but it does not correspond to the correct CICS Type 3 SVC for this release of CICS. CICS cannot function without the correct CICS SVC.

The SVC number *svcno* has been specified in the SIT, or as an override, by the CICSSVC= parameter.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: Control is returned to the parameter manager for interaction with the operator. Further action depends upon which PARMERR= parameter has been specified.

- If PARMERR=ABEND, CICS is terminated with a system dump.
- If PARMERR=IGNORE, CICS is terminated with a system dump.
- If PARMERR=INTERACT, the operator is prompted to enter another SVC number, or to bypass entry. If the operator bypasses entry, CICS is terminated with a system dump.

User response: The CICS Type 3 SVC is defined to MVS in SYS1.PARMLIB member IEASVCxx. SVC *svcno* must be defined as a Type 3 SVC with an entry point equal to the entry point name specified when the SVC module was installed into SYS1.LPALIB. Ensure that this is the case.

Module: DFHKEGD.

Destination: Console

DFHKE0105 *applid* CICS INITIALIZATION IS NOT SUPPORTED ON THIS LEVEL OF OPERATING SYSTEM.

Explanation: The kernel has detected that the release level of the operating system is earlier than the pre-requisite release level required to run CICS.

System action: CICS will terminate. The CICS job step terminates with return code 12.

User response: Refer to the *CICS Program Directory* and install the pre-requisite operating system release level or higher.

Module: DFHKESIP

Destination: Console

DFHKE0201 *applid* ABOUT TO TAKE SDUMP. DUMPCODE: *dumpcode*, DUMPID: *dumpid*. (MODULE *modname*).

Explanation: An error during pre-initialization or termination, possibly signalled by a previous message, has caused the kernel domain to take a dump, which will issue this message immediately before calling the MVS SDUMP facility.

The dump code *dumpcode* is the 8-character dump code 'KERNDUMP'.

The dumpid *dumpid* is the string '0/0000'.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: When the dump is complete, message number DFHKE0202 is issued.

User response: Inform the system programmer. See the associated dump and error messages for further guidance.

Module: DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

Destination: Console

DFHKE0202 *applid* SDUMP COMPLETE. (MODULE *modname*).

Explanation: This message is issued on successful completion of an SDUMP.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS will terminate.

User response: Print off the system dump if required. A previous MVS message will identify in which SYS1.DUMP data set this dump can be found.

Module: DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

Destination: Console

DFHKE0208 *applid* SDUMP BUSY - CICS WILL RETRY IN FIVE SECONDS. (MODULE *modname*).

Explanation: At the time of the MVS SDUMP request issued by CICS, another address space in the same MVS system was in the process of taking an SDUMP. This causes MVS to reject the new request. A nonzero value for the DURETRY parameter on the SIT means that CICS waits for five seconds before reissuing the SDUMP request.

System action: CICS issues an MVS STIMERM

macro which causes CICS to stop for five seconds. The request is reissued when the delay interval has expired. CICS delays and retries every five seconds for a total time equal to the number of seconds specified on the DURETRY system initialization parameter.

User response: None.

Module: DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

Destination: Console

DFHKE0209 *applid* **RETRYING SDUMP. (MODULE modname).**

Explanation: At the time of the MVS SDUMP request issued by CICS, another address space in the same MVS system was in the process of taking an SDUMP. This caused MVS to reject the new request. CICS has waited for five seconds (as indicated by message DFHKE0208) and is now reissuing the SDUMP request.

System action: CICS reissues the SDUMP request.

User response: None.

Module: DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

Destination: Console

DFHKE0210 *applid* **SDUMP REQUEST FAILED. (MODULE modname) - reason.**

Explanation: An MVS SDUMP request from CICS signalled by message DFHKE0201 has failed to complete successfully. The possible reasons *reason* for the failure are detailed below.

SDUMP RETURN CODE X'nn ONLY PARTIAL DUMP
The SYS1.DUMP data set to which the dump was written was not large enough to contain all of the dumped storage.

SDUMP RETURN CODE X'nn REASON X'mm SDUMP BUSY
At the time of the MVS SDUMP request issued by CICS, another address space in the same MVS system was in the process of taking an SDUMP. This caused MVS to reject the new request.

If a nonzero value has been specified for the DURETRY SIT parameter, CICS will have retried the SDUMP request every five seconds for the specified period. This message is issued if SDUMP is still busy after the final retry.

SDUMP RETURN CODE X'nn REASON X'mm NO DATA SET AVAILABLE
No data set is available for the SDUMP request.

SDUMP RETURN CODE X'nn REASON X'mm
MVS rejected the SDUMP request for some other reason than those listed above. X'nn gives the hexadecimal SDUMP return code and X'mm gives the hexadecimal SDUMP reason.

NOT AUTHORIZED IN CICS
SDUMP is not authorized for this CICS run.

INSUFFICIENT STORAGE
CICS issued an MVS GETMAIN for Subpool 253 storage during the processing of the SDUMP request. The GETMAIN was rejected by MVS.

STIMERM FAILED
In order to delay for five seconds before retrying SDUMP after an SDUMP busy condition, CICS issues an MVS STIMERM macro request. MVS has indicated that the STIMERM request has failed.

DFHDUSVC FESTAE FAILED
CICS issued an MVS FESTAE request from DFHDUSVC during the processing of the SDUMP request. The FESTAE has been rejected by MVS.

DFHDUSVC FUNCTION INVALID
CICS called DFHDUSVC during the processing of the SDUMP request. The function passed to DFHDUSVC was invalid.

During initialization, CICS does not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS proceeds as if the dump had been successful.

User response: The user response depends on the reason for the failure. For

SDUMP RETURN CODE X'nn ONLY PARTIAL DUMP
Examine the reason code that explains why the partial dump was taken. This code is contained in the MVS message IEA911E. See the *OS/390 MVS System Messages, Volume 1* for a description of this reason code.

SDUMP RETURN CODE X'nn REASON X'mm SDUMP BUSY
Cause the SDUMP to be reissued by increasing the DURETRY value on the SIT. See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the SDUMP return code X'nn and reason X'mm.

SDUMP RETURN CODE X'nn REASON X'mm NO DATA SET AVAILABLE
Clear a SYS1.DUMP data set and then cause the SDUMP request to be reissued. See the *OS/390 MVS Programming: Authorized*

Assembler Services Reference for an explanation of the SDUMP return code X'nn and reason X'mm.

SDUMP RETURN CODE X'nn REASON X'mm

No action is required if the dump was suppressed deliberately. If the dump failed because of an error in the MVS SDUMP routine, use MVS problem determination methods to fix the error and then cause the SDUMP request to be reissued. See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the SDUMP return code X'nn and reason X'mm.

NOT AUTHORIZED IN CICS

This reason should not appear, because an SDUMP is unconditionally authorized during CICS initialization, and should be authorized throughout the CICS run. If you do get this reason, the CICS AFCB (Authorized Function Control Block) has probably been accidentally overwritten.

INSUFFICIENT STORAGE

Ensure sufficient storage is available to MVS for subpool 253 requests.

STIMERM FAILED

Use MVS problem determination methods to fix the STIMERM failure and then cause the SDUMP request to be reissued.

DFHDUSVC FESTAE FAILED

Use MVS problem determination methods to fix the FESTAE failure and then cause the SDUMP to be reissued. See the *OS/390 MVS Programming: Authorized Assembler Services Reference* for an explanation of the FESTAE macro.

DFHDUSVC FUNCTION INVALID

The CICS DAFFB (dump authorized function parameter block) has probably been accidentally overwritten.

Notify the system programmer. If CICS is still running, it will be necessary to decide whether to terminate CICS.

You may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

To resolve the problem, collect any dumps and any relevant messages and contact your IBM Support Center.

Further guidance on how to prepare information for IBM support is given in the *CICS Problem Determination Guide*. If you are not familiar with this process, refer to the guide before contacting IBM support.

Module: DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

Destination: Console

DFHKE0217 *applid* **SDUMPX REQUEST COMPLETED WITH A RETURN CODE OF X'04'. A COMPLETE OR PARTIAL DUMP HAS BEEN TAKEN.**

Explanation: An MVS SDUMPX request from CICS signalled by message DFHKE0201 may have resulted in a complete or partial SVC dump. Even though the request completed with an SDUMPX return code X'04', it is possible that sufficient information has been dumped to enable successful diagnosis of the problem that caused the dump to be taken. Use the accompanying message or messages IEA611E or IEA911E or both to determine the suitability of the dump for successful diagnosis. During initialization, CICS does not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS proceeds as if the dump had been successful.

User response: See the *z/OS MVS Programming: Authorized Assembler Services Reference* for an explanation of the SDUMPX return code X'04'.

Note: This message cannot be changed with the message editing utility.

Module: DFHKEDD, DFHKEDS, DFHKEGD, DFHKEIN, DFHKESTX

Destination: Console

DFHKE0301 *applid* **Insufficient storage to satisfy Getmain in module modname. MVS code mvscode.**

Explanation: The kernel (KE) domain has issued an MVS GETMAIN for kernel stack storage, but there was insufficient storage available to satisfy the request.

The code *mvscode* is the MVS GETMAIN return code.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates abnormally with a system dump. No exception entry is made in the trace table since a call to the trace (TR) domain would itself require kernel stack storage.

User response: Inform the system programmer.

You can get diagnostic information about the MVS return code by consulting the relevant MVS codes manual which is listed in the book list at the front of this book. Also look at the kernel domain section of the

system dump to see how the kernel stack storage has been used up.

Try decreasing the size limits of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. See the *CICS System Definition Guide* or the *CICS Performance Guide* for further information on CICS storage.

Module: DFHKESGM

Destination: Console

DFHKE0302 *applid* **Freemain of stack storage failed in module *modname*. MVS code *mvscode*.**

Explanation: The kernel (KE) domain has issued an MVS FREEMAIN for kernel stack storage, but a bad return code was returned.

The code *mvscode* is the MVS FREEMAIN return code.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates abnormally with a system dump. No exception entry is made in the trace table since a call to the trace (TR) domain would itself require kernel linkage.

User response: Inform the system programmer.

You can get diagnostic information about the MVS return code by consulting the *OS/390 MVS System Codes* manual.

Module: DFHKEDS

Destination: Console

DFHKE0303 *applid* **A RECURSIVE ABEND HAS BEEN DETECTED BY THE KERNEL DOMAIN.**

Explanation: The kernel (KE) domain has detected that the current task is recursively abending while attempting to recover from an abend.

System action: CICS terminates abnormally with a system dump. No exception entry is written to the trace table because the trace (TR) domain may be the cause of the loop.

User response: Use the dump provided to investigate the kernel error table to diagnose the earlier abends for the failing task.

Module: DFHKERRI

Destination: Console

DFHKE0401 *applid* **CICS REGISTER CALL TO AUTOMATIC RESTART MANAGER FAILED (RETURN CODES *X'resp'*, *X'reason'*).**

Explanation: An attempt to invoke a REGISTER request against the MVS automatic restart manager (ARM) failed.

The codes *resp*, *reason* are the hexadecimal response and reason codes from ARM.

System action: A system dump is taken.

CICS continues, but cannot subsequently be restarted by ARM.

User response: It is necessary to decide whether to terminate CICS.

For problem diagnosis look up the return codes from the IXCARM macro in the *OS/390 MVS Sysplex Services Reference* manual.

Further information about how to use ARM can also be found in *OS/390 MVS Setting Up a Sysplex*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHKEAR

Destination: Console

DFHKE0402 *applid* **CICS DEREGISTER CALL TO AUTOMATIC RESTART MANAGER FAILED (RETURN CODES *X'resp'*, *X'reason'*).**

Explanation: An attempt to invoke a DEREGISTER request against the MVS automatic restart manager (ARM) failed.

The codes *resp*, *reason* are the hexadecimal response and reason codes from ARM.

System action: If the request failed during startup, a dump is taken and CICS continues.

If the request failed during shutdown, an exception entry is made in the trace table, and a system dump is taken unless you have specifically suppressed dumps in the dump table. CICS continues to shut down unless you have specified in the dump table that CICS should terminate. The DEREGISTER failed so a subsequent failure of CICS or an IMMEDIATE shutdown may result in ARM restarting CICS.

User response: For problem diagnosis look up the return codes from the IXCARM macro in the *OS/390 MVS Sysplex Services Reference* manual.

Further information about how to use ARM can also be found in the *MVS/ESA Setting Up a Sysplex* manual.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination*

DFHKE0403 • DFHKE0406I

Guide for guidance on how to proceed.

Module: DFHKEAR

XMEOUT Parameters: *applid, X'resp',X'reason'*

Destination: Console

DFHKE0403 *applid* CICS WAITPRED call to automatic restart manager failed (return codes *X'resp', X'reason'*).

Explanation: An attempt to invoke a WAITPRED request against the MVS automatic restart manager (ARM) failed.

The codes *resp, reason* are the hexadecimal response and reason codes from ARM.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. The failure of the WAITPRED request may result in other subsystems not being available when CICS initialization completes.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

For problem diagnosis look up the return codes from the IXCARM macro in the *OS/390 MVS Sysplex Services Reference* manual.

Further information about how to use ARM can also be found in the *MVS/ESA Setting Up a Sysplex* manual.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHKEAR

XMEOUT Parameters: *applid, X'resp',X'reason'*

Destination: Console

DFHKE0404 *applid* CICS READY call to automatic restart manager failed (return codes *X'resp', X'reason'*).

Explanation: An attempt to invoke a READY request against the MVS automatic restart manager (ARM) failed.

The codes *resp, reason* are the hexadecimal response and reason codes from ARM.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. Other subsystems which are waiting for CICS are not be informed that CICS is ready for work and continue to wait until timed out.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

For problem diagnosis look up the return codes from the IXCARM macro in the *OS/390 MVS Sysplex Services Reference* manual.

Further information about how to use ARM can also be found in the *MVS/ESA Setting Up a Sysplex* manual.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHKEAR

XMEOUT Parameters: *applid, X'resp',X'reason'*

Destination: Console

DFHKE0405 *applid* CICS WAITPRED call to automatic restart manager timed out (return codes *X'resp', X'reason'*).

Explanation: A WAITPRED request against the MVS automatic restart manager (ARM) timed out.

The codes *resp, reason* are the hexadecimal response and reason codes from ARM.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. The WAITPRED request time out may result in other subsystems not being available when CICS initialization completes.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

For problem diagnosis look up the return codes from the IXCARM macro in the *OS/390 MVS Sysplex Services Reference* manual.

Further information about how to use ARM can also be found in the *MVS/ESA Setting Up a Sysplex* manual.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHKEAR

XMEOUT Parameters: *applid, X'resp',X'reason'*

Destination: Console

DFHKE0406I *applid* CICS is about to wait for predecessors defined in the MVS automatic restart management policy for this region.

Explanation: CICS is about to invoke a WAITPRED request against the automatic restart manager. This may result in a delay before CICS processing continues.

System action: CICS continues.

User response: None.

Module: DFHKEAR

XMEOUT Parameter: *applid*

Destination: Console

DFHKE0407 *applid* XRF IS INCOMPATIBLE WITH AUTOMATIC RESTART MANAGER. CICS IS TERMINATING.

Explanation: CICS has registered with the MVS automatic restart manager (ARM) after having been restarted but the restart JCL specifies XRF=YES. XRF is incompatible with ARM.

System action: CICS terminates.

User response: Ensure that the XRF=YES option in the restart JCL is correct.

Module: DFHKEAR

Destination: Console

DFHKE0408D *applid* PLEASE SPECIFY START TYPE, 'ASIS' OR 'AUTO'.

Explanation: An attempt to REGISTER with the MVS automatic restart manager (ARM) has failed when a cold or initial start has been specified in the SIT.

When the CICS region has been restarted with JCL that specifies START=COLD or START=INITIAL, CICS relies on ARM to determine whether to override the start type and change it to AUTO. As the REGISTER has failed, CICS cannot determine whether the region is being restarted by ARM, and so does not know whether to override the start type.

System action: CICS waits until the operator supplies the START type to be used by this region.

User response: If the region is being restarted by ARM, specify AUTO. If the startup type of COLD or INITIAL in the SIT should be preserved, specify ASIS.

See the previously issued message DFHKE0401 for guidance on dealing with the underlying REGISTER failure.

Module: DFHKEAR

Destination: Console Routecodes 1 and 11

DFHKE0410 *applid* CICS REGISTER CALL TO AUTOMATIC RESTART MANAGER FAILED BECAUSE THE JOB TYPE IS INVALID.

Explanation: An attempt to invoke a REGISTER request against the MVS automatic restart manager (ARM) failed because the job type is invalid to ARM. CICS can only register with ARM if it is being run as a started task or a batch job.

System action: CICS continues, but cannot subsequently be restarted by ARM.

User response: None.

Module: DFHKEAR

Destination: Console

DFHKE0411 *applid* CICS REGISTER CALL TO AUTOMATIC RESTART MANAGER FAILED BECAUSE MAXIMUM NUMBER OF USERS WAS REACHED.

Explanation: An attempt to invoke a REGISTER request against the MVS automatic restart manager (ARM) failed because the maximum number of ARM users allowed for in the ARM couple data set has been reached. This response is never given by ARM if ARM is restarting CICS.

System action: CICS continues, but cannot subsequently be restarted by ARM.

User response: None.

Module: DFHKEAR

Destination: Console

DFHKE0412I *applid* CICS WAITPRED call to automatic restart manager has completed.

Explanation: A WAITPRED request against the MVS automatic restart manager (ARM) has completed.

Further information about how to use ARM can also be found in the *MVS/ESA Setting Up a Sysplex* manual.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHKEAR

XMEOUT Parameter: *applid*

Destination: Console

DFHKE0413 *applid* CICS REGISTER CALL FAILURE IN MODULE DFHKESVC (RETURN CODE X'resp').

Explanation: An attempt to invoke a REGISTER request against the MVS automatic restart manager (ARM) failed in module DFHKESVC.

The code *resp* is the hexadecimal response from DFHKESVC and its meanings are

- 08 - The requested function is not supported.
- 0C - The getmain for the dynamic storage failed.
- 10 - Unable to establish the recovery routine.
- 14 - The **DFHAUTH CHECK** failed.

System action: CICS continues, but cannot

DFHKE0414 • DFHKE1798

subsequently be restarted by ARM.

User response: It is necessary to decide whether to terminate CICS.

Further information about how to use ARM can also be found in *OS/390 MVS Setting Up a Sysplex*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHKEAR

Destination: Console

DFHKE0414 BAD RETURN FROM MVS SERVICE CSRL16J.

Explanation: An attempt to invoke the MVS service CSRL16J (Load 16 and Jump) has returned to CICS with a non-zero return code. This service is called from the CICS Kernel 'Reset Address' function.

System action: CICS continues by deliberately executing a privileged instruction which causes a program exception with code 0C2 which leads to an ASRA abend. Register 4 has been loaded with the return code from the CSRL16J service.

User response: Inform the systems programmer.

Module: DFHKERET

Destination: Console

DFHKE0500 *applid* MAXPROCUSER exceeded while executing 'service-routine'.

Explanation: The Kernel issued a call to the *service-routine* callable service, and received a response of EMVSINITIAL with a reason code of X'0012', indicating that the number of processes for the current CICS region userid has been exceeded.

System action: CICS initialization continues.

User response: If this error occurs frequently, consider increasing the MAXPROCUSER value in the BPXPRMxx member of SYS1.PARMLIB.

Module: DFHKETCB

XMEOUT Parameters: *applid*, *service-routine*

Destination: Console

DFHKE0501 *applid* The Kernel received a return value of *X'rvalue'*, a return code of *X'rcode'* and a return reason of *X'rreason'* from the *uss* service-routine.

Explanation: Unix System Services has returned a non-zero return code/reason code to a service-routine call made by the Kernel during CICS initialization.

System action: CICS initialization continues since it is too early to tell whether Unix System Services will be

required later in the CICS run.

User response: Determine the reason for this response. The return code and reason code included in the message text should be described in the z/OS UNIX System Services Messages and Codes manual.

Module: DFHKETCB

XMEOUT Parameters: *applid*, *X'rvalue'*, *X'rcode'*, *X'rreason'*, *uss*

Destination: Console

DFHKE0999 *applid* MVS HAS CALLED DFHKESTX WITH NO SDWA. ABEND CODE *X'code'*.

Explanation: MVS has made a call to the CICS ESTAE-type recovery routine DFHKESTX, but it supplied no system diagnostic work area (SDWA). DFHKESTX is unable to continue with the recovery.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: Module DFHKESTX produces a system dump and percolates the error to the next ESTAE routine. This is potentially a serious error. CICS continues processing pending the result of the error percolation.

User response: The abend code *X'code* is the reason the CICS ESTAE was called. You need to find out which product has produced the abend. Typically it is an MVS system completion code, for example D37. However the abend may have been issued by CICS, for example abend 1596, or another product such as IMS.

Since there is little further diagnostic information in this case, look for any messages that may indicate the reason for the abend. The entry in the appropriate manual for the abend code gives user guidance regarding the error, and may also give some guidance concerning the appropriate user response.

The reason why no SDWA was passed and subsequently no recovery was attempted is probably a shortage of storage. This storage shortage may also be an influencing factor in the abend itself.

Module: DFHKESTX

Destination: Console

DFHKE1798 *applid* FO TCB FORCED TO TERMINATE.

Explanation: During an immediate shutdown of CICS the file owning TCB is detached before VSAM is able to close all data sets normally.

The detaching of this TCB can cause abends during shutdown. At CICS restart VSAM may need to perform a VERIFY for any data set that is open for update when

the immediate shutdown is performed, and this can cause a long delay.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If this is the case CICS uses the default *applid* value DBDCCICS.

System action: The immediate shutdown of CICS continues.

User response: None.

If this message occurs frequently, you may wish to issue a CEMT SET FILE ALL CLOSED before immediate shutdown is performed.

Module: DFHKESIP

Destination: Console

DFHKE1799 *applid* TERMINATION OF CICS IS COMPLETE.

Explanation: This message is issued when CICS has terminated.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: Control is given back to the operating system.

User response: None.

Module: DFHKESIP

DFHLDnnnn messages

DFHLD0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An unexpected program check or abend occurred with abend code *aaa/bbbb*.

The program status word (PSW) at the time of the program check or abend indicated that CICS was executing at offset *X'offset'* in module *modname*. This may have been caused by corruption of CICS code or control blocks.

System action: A system dump is taken and the system attempts to continue operation unless otherwise directed by entries in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the cause of the program check or abend using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Destination: Console

DFHKE1800 *applid* ABNORMAL TERMINATION OF CICS IS COMPLETE.

Explanation: CICS issues this message when it terminates abnormally.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: The abnormal termination of CICS continues. The kernel returns control to the operating system by issuing a user 1800 abend.

The original error which caused the abnormal termination may also have produced a dump. No specific dump is produced to accompany this message.

User response: If a dump is produced, check the dump to determine the cause of the error. Use the *CICS Problem Determination Guide* to assist you to determine the problem.

If no dump is produced, check for other CICS and MVS messages and abend codes to help you to determine the cause of the problem.

Module: DFHKESIP

Destination: Console

Module: DFHLDDM, DFHLDDMI, DFHLDDL, DFHLDDL1, DFHLDDL2, DFHLDDL3, DFHLDNT, DFHLDDST, DFHLDLB, DFHLDLB2, DFHLDLB3

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*, *modname*

Destination: Console

DFHLD0002 *applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation: The loader has received an unexpected error response from some other part of CICS or an operating system service. The operation requested by the loader is described by code *X'code'*.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: A system dump is taken and the system attempts to continue operation unless specifically inhibited by dump table entries.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the cause of the problem as follows

1. Determine if the problem can be explained by any previous messages output from some other part of CICS.
2. Examine the symptom string.
3. Examine the dump.

Module: DFHLDDM, DFHLDDMI, DFHLDDL, DFHLDDL1, DFHLDDL2, DFHLDDL3, DFHLDN, DFHLNST, DFHLDLB, DFHLDLB2, DFHLDLB3

XMEOUT Parameters: *applid, X'code', modname*

Destination: Console

DFHLD0004 *applid* **A possible loop has been detected at offset X'offset' in module modname.**

Explanation: CICS has detected what it believes to be a code execution loop. At the time execution was interrupted, the program status word (PSW) indicated the next instruction address would have been at offset X'offset' in module *modname*.

System action: CICS is terminated with a system dump unless dump table options specifically prevent this.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the existence of a previous error situation which may have led to corruption of CICS control blocks or to the non-completion of an expected event. If there is no evidence of a previous error, you will need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHLDDM, DFHLDDMI, DFHLDDL, DFHLDDL1, DFHLDDL2, DFHLDDL3, DFHLDN, DFHLNST, DFHLDLB, DFHLDLB2, DFHLDLB3

XMEOUT Parameters: *applid, X'offset', modname*

Destination: Console

DFHLD0101I *applid* **CICS nucleus module modname not found.**

Explanation: The CICS loader (LD) was unable to locate a copy of module *modname* in either the link pack area (LPA) in or the DFHRPL library concatenation.

System action: A system dump is taken and CICS execution continues unless specifically inhibited by a dump table entry.

User response: This message is followed by one or more messages informing the user of reduced function availability due to the missing module *modname*.

Ensure that there is a copy of module *modname* in the LPA and/or in a library within the DFHRPL concatenation.

If module was expected to be in the LPA, ensure CICS is utilizing LPA resident modules by specifying LPA=YES as a start up override.

Module: DFHLDDMI

XMEOUT Parameters: *applid, modname*

Destination: Console

DFHLD0102 *applid* **Unable to declare gate ff for module modname.**

Explanation: As part of its initialization, the CICS loader has attempted to define domain gate *ff* for module *modname*, but has received a bad response.

System action: A system dump is taken and CICS execution continues unless specifically inhibited by a dump table entry.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This message diagnoses an internal error within CICS. Investigate whether previous errors have left CICS in a damaged state. If there is no evidence of previous serious errors, you will need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHLDDMI

XMEOUT Parameters: *applid, ff, modname*

Destination: Console

DFHLD0103I *applid* **Module Storage Compression OFF. All modules are USAGE=TRANSIENT.**

Explanation: This message is normally preceded by either message DFHLD0101 or DFHLD0102 and indicates that the loader (LD) domain was unable to initialize its dynamic program storage compression facility.

System action: CICS execution continues but all nonresident application programs are treated as if they had been defined with the USAGE=TRANSIENT option. Therefore they are removed from storage the moment their use count reaches zero.

For some functions, this can lead to a performance degradation as programs may be loaded many times during the life of a transaction instead of only once.

User response: Investigate the reasons for the previous problem concerning module DFHLDN as diagnosed by either message DFHLD0101 or DFHLD0102.

Module: DFHLDDMI

XMEOUT Parameter: *applid*

Destination: Console

DFHLD0104I *applid* **Module Statistics are not being collected.**

Explanation: This message is normally preceded by either message DFHLD0101 or DFHLD0102 and indicates that the loader (LD) domain was unable to initialize its statistics collection module.

System action: CICS execution continues but no module statistics will be collected.

User response: Investigate the reasons for the previous problem concerning module DFHLDST as diagnosed by either message DFHLD0101 or DFHLD0102.

Module: DFHLDDMI

XMEOUT Parameter: *applid*

Destination: Console

DFHLD0105 *applid* **Restart of Loader Option Block (LOB) failed. System defaults in use.**

Explanation: The initialization of the CICS loader has detected one or more invalid parameters in the loader option block (LOB) recovered from the local catalog.

This may indicate that corruption of the local catalog has occurred.

System action: A system dump is taken and CICS execution continues unless specifically inhibited by a dump table option.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the possibility of corruption of the local catalog. If you suspect that the local catalog is corrupt, reinitialize it and resubmit the CICS job.

Module: DFHLDDMI

XMEOUT Parameter: *applid*

Destination: Console

DFHLD0106 *applid* **Bad response X'resp' returned on an OPEN of DFHRPL.**

Explanation: The CICS loader has attempted to open the DFHRPL library concatenation during initialization and has received the response code *resp*.

System action: CICS execution continues although only link pack area (LPA) resident modules are accessible.

Message DFHME0116 should be produced containing

the symptom string for this problem.

User response: Ensure the DFHRPL concatenation is correctly specified in the JCL and that the libraries specified in it are operational. The response code returned may be interpreted as for a BSAM open request.

Module: DFHLDDMI

XMEOUT Parameters: *applid, X'resp'*

Destination: Console

DFHLD0107I *applid modname1* **is unable to locate module *modname2* in the LPA. DFHRPL version of module will be used.**

Explanation: The user has specified the system initialization parameter LPA=YES. Module *modname2* is either defined as USELPACOPY=YES via RDO or is a CICS PCLASS=SYSTEM module. CICS has been unable to find *module2* in the link pack area (LPA).

System action: CICS execution continues with an attempt to locate module *modname2* in the CICS program library DFHRPL.

User response: carry out one of the following

- Load module *modname2* into the LPA, if this is required and the module is LPA eligible (refer to the *CICS Transaction Server for z/OS Installation Guide* for LPA eligibility of CICS modules).
- Code PRVMOD=*modname2* as a SIT option which ensures that CICS will not search the LPA for that module.
- Code LPA=NO as a system initialization parameter. This ensures that CICS does not search the LPA for any module.
- Inhibit this message from all or selected consoles using the MVS VARY command. For more information on how to do this, refer to the *CICS Transaction Server for z/OS Installation Guide*.

Module: DFHLDDMI, DFHLDL1

XMEOUT Parameters: *applid, modname1, modname2*

Destination: Console Routecode 11

DFHLD0108I *applid* **The maximum of 32767 entries that CICS allows on a BLDL has been exceeded.**

Explanation: During a warm or emergency restart, the loader domain has detected more than 32767 modules eligible for BLDL.

System action: A BLDL macro call is issued to locate the first 32767 modules and the rest are ignored. CICS initialization continues normally.

This is not a problem because CICS attempts to locate those modules not located during initialization when the module is first used.

User response: None.

Module: DFHLDDMI

XMEOUT Parameter: *applid*

Destination: Console

DFHLD0109I *applid modname1 is unable to locate module modname2 in the LPA. DFHRPL or dynamic LIBRARY version of module will be used.*

Explanation: The user has specified the system initialization parameter LPA=YES. Module *modname2* is either defined as USELPACOPY=YES via RDO or is a CICS PCLASS=SYSTEM module. CICS has been unable to find *module2* in the link pack area (LPA).

System action: CICS execution continues with an attempt to locate module *modname2* in the CICS program library DFHRPL or a dynamic LIBRARY in the LIBRARY search order. The sequence of LIBRARY concatenations in which CICS will attempt to locate *module2* will depend on the LIBRARY search order that is currently active in the system.

User response: Carry out one of the following

- Load module *modname2* into the LPA, if this is required and the module is LPA eligible (refer to the *CICS Installation Guide* for LPA eligibility of CICS modules).
- Code PRVMOD=*modname2* as a SIT option which ensures that CICS will not search the LPA for that module.
- Code LPA=NO as a system initialization parameter. This ensures that CICS does not search the LPA for any module.
- Inhibit this message from all or selected consoles using the MVS VARY command. For more information on how to do this, refer to the *CICS Installation Guide*.

Module: DFHLDL1, DFHLDDMI

XMEOUT Parameters: *applid, modname1, modname2*

Destination: Console Routecode 11

DFHLD0201 *applid Corrupt Loader load structure detected at X'address'. Module marked as unavailable.*

Explanation: During the execution of a CICS loader request, the loader detected an invalid field in the control block type *tttt* at storage address *address*.

System action: A system dump is taken and execution continues unless specifically inhibited by a dump table option.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the possibility of

corruption of CICS modules or control blocks or the local or global catalogs.

Module: DFHLDL1

XMEOUT Parameters: *applid, load, X'address'*

Destination: Console

DFHLD0202 *applid Loader SVC svc request failed due to shortage of free storage in the region.*

Explanation: The loader domain has issued a request to its CICS SVC service routine, DFHLDSVC, but the execution of this request failed due to a lack of free storage in the MVS region. The type of request is indicated by *svc*.

System action: A system dump will be taken unless specifically suppressed through a dump table entry and the system will continue execution. The task requesting loader services will be abnormally terminated with abend code APCT, or a PGMIDERR condition will be raised.

User response: Ensure there is adequate free storage in the MVS region by balancing the overall size limits of the DSAs or EDSAs with the size of the MVS region specified by the REGION parameter on the job card of the CICS job JCL.

Module: DFHLDL1

XMEOUT Parameters: *applid, svc*

Destination: Console

DFHLD0203 *applid Loader SVC svc request failed due to I/O errors on library DFHRPL.*

Explanation: The loader domain has issued a request to its CICS SVC service routine, DFHLDSVC, but the execution of this request failed due to I/O errors on the relocatable library, DFHRPL. The type of request is indicated by *svc*.

System action: A system dump is taken unless specifically suppressed through a dump table entry and the system continues execution. The task requesting loader services is abnormally terminated with abend code APCT, or a PGMIDERR condition is raised.

User response: Investigate the possible causes of the I/O errors encountered. The MVS system console log may contain more information about the problem in the form of access method or I/O subsystem messages. The loader domain exception trace entries, from the full trace, in the system dump normally identify the module or modules for which the I/O error occurred.

A possible cause of this problem is the compression of a partition data set (PDS) within the DFHRPL concatenation.

Module: DFHLDL1

XMEOUT Parameters: *applid, svc*

Destination: Console

DFHLD0204 *applid* **Bad Loader PDB for module *modname* recovered from the {Local | Global} catalog. Corruption suspected.**

Explanation: The loader definition record, PDB, for module *modname* has been read from either the local (DFHLCD) or the global (DFHGCD) catalog during startup and has been found to contain invalid data.

System action: System initialization terminates with a system dump, unless the dump is specifically suppressed. If the system dump is suppressed, the module definition is ignored.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Ensure the specified catalog data set has not been corrupted and is available to the CICS job.

Module: DFHLDDMI, DFHLDLD

XMEOUT Parameters: *applid, modname, {1=Local, 2=Global}*

Destination: Console

DFHLD0205 *applid* **Bad Loader PLDB for LIBRARY *libname* recovered from the Global catalog. Corruption suspected.**

Explanation: The loader program LIBRARY record, PLDB, for dynamic LIBRARY *modname* has been read from the global catalog during startup and has been found to contain invalid data.

System action: System initialization terminates with a system dump, unless the dump is specifically suppressed. If the system dump is suppressed, the dynamic LIBRARY resource is ignored.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Ensure the specified catalog data set has not been corrupted and is available to the CICS job.

Module: DFHLDDMI

XMEOUT Parameters: *applid, libname*

Destination: Console

DFHLD0206 *applid* **Loader SVC *svc* request failed due to I/O errors on LIBRARY *libname*.**

Explanation: The loader domain has issued a request to its CICS SVC service routine, DFHLDSVC, but the execution of this request failed due to I/O errors on the dynamic LIBRARY *libname*. The type of request is indicated by *svc*.

System action: The system action depends on the type of request in *svc*.

- When *svc* is BLDL, the problem has occurred while searching through the LIBRARY search order for the location of a program. The search will continue with the next LIBRARY in the LIBRARY search order, if any. The effect is as if LIBRARY *libname* was not included in the LIBRARY search order.
- When *svc* is LOAD, the problem has occurred while loading a program from a known location in a dynamic LIBRARY. A system dump is taken unless specifically suppressed through a dump table entry and the system continues execution. The task requesting loader services is abnormally terminated with abend code APCT, or a PGMIDERR condition is raised.

User response: Investigate the possible causes of the I/O errors encountered. The MVS system console log may contain more information about the problem in the form of access method or I/O subsystem messages. The loader domain exception trace entries, from the full trace, in the system dump normally identify the module or modules for which the I/O error occurred.

A possible cause of this problem is the compression of a partitioned data set (PDS) within the LIBRARY concatenation. Another possible cause is that one or more data sets in the dynamic LIBRARY concatenation has not been correctly defined as a partitioned data set (PDS) or partitioned data set extended (PDSE).

Module: DFHLDLD1

XMEOUT Parameters: *applid, svc, libname*

Destination: Console

DFHLD05011 *date time applid termid tranid* **LIBRARY *libname* is being installed with status {Enabled | Disabled}.**

Explanation: Install of the dynamic LIBRARY resource *libname* has started. The enablement status that has been requested for this LIBRARY is either Enabled or Disabled, as indicated in the message.

System action: The system processes the install of the LIBRARY resource. A subsequent message will indicate the result of the install.

User response: This is an informational message for audit trail purposes, no action is required.

Module: DFHLDLB2

XMEOUT Parameters: *date, time, applid, termid, tranid, libname, {1=Enabled, 2=Disabled}*

Destination: CSLB

DFHLD0502I *date time applid termid trandid* **Install of LIBRARY *libname* has completed successfully. Enablement status is {Enabled | Disabled}.**

Explanation: Install of the dynamic LIBRARY resource *libname* has completed and was successful. The enablement status of the LIBRARY has been successfully set to Enabled or Disabled, as indicated by the message.

System action: The system has processed install of the LIBRARY resource. This message follows message DFHLD0501 which indicated the start of install processing for the LIBRARY resource.

User response: This is an informational message for audit trail purposes, no action is required.

Module: DFHLDLB2

XMEOUT Parameters: *date, time, applid, termid, trandid, libname, {1=Enabled, 2=Disabled}*

Destination: CSLB

DFHLD0503W *date time applid termid trandid* **Install of LIBRARY *libname* has failed to complete successfully, for reason code *RSN*. Enablement status is Disabled.**

Explanation: Install of the dynamic LIBRARY resource *libname* has completed but has not done so successfully. One of the steps required to complete successful install of a dynamic LIBRARY resource has failed. The LIBRARY has been installed, but with an enablement status of Disabled, which means that it will not participate in the search order used when loading programs and program artifacts.

System action: The system has attempted to process install of the LIBRARY resource. This message follows message DFHLD0501 which indicated the start of install processing for the LIBRARY resource. The LIBRARY will not be searched when program artifacts are loaded, meaning that program artifacts that reside in the data sets defined for the LIBRARY will not be loaded from this LIBRARY.

User response: Examine the console log for one or more messages indicating the failure which occurred during install processing for this LIBRARY.

Module: DFHLDLB2

XMEOUT Parameters: *date, time, applid, termid, trandid, libname, RSN*

Destination: CSLB

DFHLD0504E *date time applid termid trandid* **Install of LIBRARY *libname* has failed because a LIBRARY of that name is already installed and enabled.**

Explanation: Install of the dynamic LIBRARY resource *libname* has been rejected because a LIBRARY of the same name is already installed, and is in an Enabled state. It is not possible to replace an existing LIBRARY resource with a new definition unless it is in a Disabled state.

System action: The system continues. The existing LIBRARY resource continues to be used.

User response: Investigate whether it was intended to install a new definition of the LIBRARY. If so, set the existing LIBRARY to Disabled and repeat the request used to install the new definition.

Module: DFHLDLB2

XMEOUT Parameters: *date, time, applid, termid, trandid, libname*

Destination: CSLB

DFHLD0505I *date time applid* **Details for LIBRARY *libname*, ranking: *ranking*, critical status: {Critical | Noncritical}, enablement status {Enabled | Disabled}.**

Explanation: This message gives details of the ranking, critical status and enablement status for LIBRARY *libname*. The ranking is given by *ranking*, and is a number which specifies how this LIBRARY should be positioned in the search order relative to other LIBRARY resources. The critical status is either Critical or Noncritical, and indicates whether or not this LIBRARY is critical to CICS start up. The enablement status is either Enabled or Disabled, and indicates whether the LIBRARY is currently enabled. Only an enabled LIBRARY can participate in the search order.

System action: The system continues. This is one of a set of informational messages that give details for the LIBRARY resources. The associated message gives information about the data sets defined in this LIBRARY.

User response: This is an informational message for audit trail purposes, no action is required.

Module: DFHLDLB2

XMEOUT Parameters: *date, time, applid, libname, ranking, {1=Critical, 2=Noncritical}, {1=Enabled, 2=Disabled}*

Destination: CSLB

DFHLD0506I *date time applid* **Details for LIBRARY *libname*, data sets 1-8: *dsname01, dsname02, dsname03, dsname04, dsname05, dsname06, dsname07, dsname08*.**

Explanation: This message gives details of data sets defined in the LIBRARY resource *libname*. Up to eight data sets in the LIBRARY are listed, given by the inserts *dsname01, dsname02, dsname03, dsname04,*

dsname05, dsname06, dsname07, and dsname08. This is the order in which the data sets appear in the LIBRARY definition (including blank data set slots). The remaining eight data sets (*dsname09* through to *dsname16*) are given in a subsequent message.

System action: The system continues. This is one of a set of informational messages which give details for the LIBRARY resource. The associated messages give details about attributes of this LIBRARY, and about the other data sets defined in the LIBRARY.

User response: This is an informational message for audit trail purposes, no action is required.

Module: DFHLDLB2, DFHLDLB3

XMEOUT Parameters: *date, time, applid, libname, dsname01, dsname02, dsname03, dsname04, dsname05, dsname06, dsname07, dsname08*

Destination: CSLB

DFHLD0507I *date time applid* **Details for LIBRARY *libname*, data sets 9-16:** *dsname09, dsname10, dsname11, dsname12, dsname13, dsname14, dsname15, dsname16.*

Explanation: This message gives details of data sets defined in the LIBRARY resource *libname*. The second set of up to eight data sets in the LIBRARY are listed, given by the inserts *dsname09, dsname10, dsname11, dsname12, dsname13, dsname14, dsname15, and dsname16*. This is the order in which the data sets appear in the LIBRARY definition (including blank data set slots). The first eight data sets (*dsname01* through to *dsname08*) are given in a preceding message.

System action: The system continues. This is one of a set of informational messages which give details about this LIBRARY resource. The associated messages give details of the attributes of the LIBRARY, and of the first eight data set slots defined for the LIBRARY.

User response: This is an informational message for audit trail purposes, no action is required.

Module: DFHLDLB2, DFHLDLB3

XMEOUT Parameters: *date, time, applid, libname, dsname09, dsname10, dsname11, dsname12, dsname13, dsname14, dsname15, dsname16*

Destination: CSLB

DFHLD0512I *date time applid termid tranid* **LIBRARY *libname* has been successfully discarded.**

Explanation: Discard of the dynamic LIBRARY resource *libname* has completed and was successful. This LIBRARY resource is no longer active in the CICS system.

System action: The system has processed discard of the LIBRARY resource.

User response: This is an informational message for audit trail purposes, no action is required.

Module: DFHLDLB2

XMEOUT Parameters: *date, time, applid, termid, tranid, libname*

Destination: CSLB

DFHLD0513W *date time applid termid tranid* **Discard of LIBRARY *libname* has failed for reason code *RSN*.**

Explanation: Discard of the dynamic LIBRARY resource *libname* has failed to complete successfully.

System action: The system has attempted to process discard of the LIBRARY resource. If one of the steps required to complete successful discard of a dynamic LIBRARY resource has failed, the LIBRARY will remain in a disabled state and will not participate in the search order used when loading programs and program artifacts. This message can also occur because a LIBRARY of this name is not installed, or because it is enabled.

User response: Check that the LIBRARY to be discarded is installed and is in a disabled state. If that is not the cause of the error, examine the console log for one or more messages indicating the failure that occurred during discard processing for this LIBRARY.

Module: DFHLDLB2

XMEOUT Parameters: *date, time, applid, termid, tranid, libname, RSN*

Destination: CSLB

DFHLD0521I *date time applid termid tranid* **Ranking of LIBRARY *libname* changed from *oldranking* to *newranking*.**

Explanation: The ranking value of LIBRARY resource *libname* has been changed. The original value was *oldranking* and the new value is *newranking*. This changes the position of this LIBRARY relative to other LIBRARY resources in the search order.

System action: The system has changed the ranking value of the LIBRARY resource. This message will be followed by a set of messages that show the new search order of the LIBRARY resources in the system.

User response: This is an informational message for audit trail purposes, no action is required.

Module: DFHLDLB3

XMEOUT Parameters: *date, time, applid, termid, tranid, libname, oldranking, newranking*

Destination: CSLB

DFHLD0522I *date time applid termid tranid* **Critical status of library *libname* changed from {Critical | Noncritical} to {Critical | Noncritical}**.

Explanation: The critical status of LIBRARY resource *libname* has been changed, as indicated in the message. The critical status of a LIBRARY can be

- Critical, meaning that this LIBRARY is critical to CICS startup.
- Noncritical, meaning that this LIBRARY is not critical to CICS startup. CICS startup can continue if an error occurs while installing a noncritical LIBRARY.

System action: The system has changed the critical status of the LIBRARY resource. This will have no effect until the next CICS startup, when the critical status will determine the handling of errors if this LIBRARY is installed during startup.

User response: This is an informational message for audit trail purposes, no action is required.

Module: DFHLDLB3

XMEOUT Parameters: *date, time, applid, termid, tranid, libname, {1=Critical, 2=Noncritical}, {1=Critical, 2=Noncritical}*

Destination: CSLB

DFHLD0523I *date time applid termid tranid* **LIBRARY *libname* has been enabled.**

Explanation: The enablement state of LIBRARY resource *libname* has been changed to Enabled. An enabled LIBRARY will participate in the search order through all LIBRARY resources, used to determine where a program artifact should be loaded from.

System action: The system has changed the enablement state of the LIBRARY resource to Enabled. This message will be followed by a set of messages which show the new search order of the LIBRARY resources in the system.

User response: This is an informational message for audit trail purposes, no action is required.

Module: DFHLDLB3

XMEOUT Parameters: *date, time, applid, termid, tranid, libname*

Destination: CSLB

DFHLD0524I *date time applid termid tranid* **LIBRARY *libname* has been disabled.**

Explanation: The enablement state of LIBRARY resource *libname* has been changed to Disabled. A disabled LIBRARY will not participate in the search order through all LIBRARY resources, used to determine where a program artifact should be loaded from.

System action: The system has changed the enablement state of the LIBRARY resource to Disabled. This message will be followed by a set of messages which show the new search order of the LIBRARY resources in the system.

User response: This is an informational message for audit trail purposes, no action is required.

Module: DFHLDLB3

XMEOUT Parameters: *date, time, applid, termid, tranid, libname*

Destination: CSLB

DFHLD0525W *date time applid termid tranid* **Attempt to set attributes or status of LIBRARY *libname* has failed for reason code *RSN*.**

Explanation: An attempt to set attributes of LIBRARY resource *libname* has failed. A SET request has been processed for the LIBRARY, but has not completed successfully.

System action: The system has attempted to process a SET for the LIBRARY resource, but has encountered an error during the processing. The requested attribute might not have been set.

User response: Examine the console log for one or more messages indicating the failure that occurred during SET processing for this LIBRARY.

Module: DFHLDLB3

XMEOUT Parameters: *date, time, applid, termid, tranid, libname, RSN*

Destination: CSLB

DFHLD0555I *date time applid* **Current LIBRARY search order follows.**

Explanation: This message precedes one or more instances of message DFHLD0556, that lists the current position in the search order for all installed and enabled LIBRARY resources. This provides a set of informational messages which show the search order for the LIBRARY resources in the CICS system.

These messages are issued whenever a change occurs that can affect the LIBRARY search order, such as installing a LIBRARY, enabling or disabling a LIBRARY, or changing the LIBRARY ranking. The messages are not issued when such a change occurs during CICS startup, but the set of messages is issued at the completion of CICS startup to show the search order for all enabled LIBRARY resources that were installed or recovered during CICS startup.

System action: The system continues.

User response: This is an informational message for audit trail purposes, no action is required.

Module: DFHDLDB, DFHDLDB2, DFHDLDB3

XMEOUT Parameters: *date, time,applid*

Destination: CSLB

DFHLD0556I *date time applid* **Position in search order: *srchpos*, LIBRARY: *libname*.**

Explanation: This message lists a position in the LIBRARY search order, *srchpos* and the name of the LIBRARY that is currently at that position, *libname*. The search order is a number which indicates the current absolute position of this LIBRARY in the overall search order through all LIBRARY resources, used to determine where a program artifact should be loaded from.

This is one of a set of informational messages that give the search positions of all installed and enabled LIBRARY resources in the CICS system. LIBRARY resources that are installed but disabled do not participate in the search order, and are not included in the set of messages.

These messages are issued whenever a change occurs that can affect the LIBRARY search order, such as installing a LIBRARY, enabling or disabling a LIBRARY, or changing the LIBRARY ranking. The messages are not issued when such a change occurs during CICS startup, but the set of messages is issued at the completion of CICS start, to show the search order for all enabled LIBRARY resources that were installed or recovered during CICS startup.

System action: The system continues.

User response: This is an informational message for audit trail purposes, no action is required.

Module: DFHDLDB, DFHDLDB2, DFHDLDB3

XMEOUT Parameters: *date, time,applid, srchpos, libname*

Destination: CSLB

DFHLD0701 *applid* **LIBRARY *libname* has a smaller ranking value than DFHRPL. Ranking value is *R*.**

Explanation: This message warns that dynamic LIBRARY *libname* has a ranking value that is smaller than that of the static LIBRARY, DFHRPL. Ranking is a number which specifies how this LIBRARY should be positioned in the search order relative to other LIBRARY resources. If a program artifact is located in the concatenations of two LIBRARY resources that are both installed and enabled, it will be loaded from the LIBRARY with the smaller ranking value. DFHRPL always has a ranking of 10, and *libname* has been given a ranking value of *R*, which is smaller than 10 and means that program artifacts that are in this LIBRARY and also in DFHRPL, will be loaded from this LIBRARY.

System action: The system continues. The CICS loader will search LIBRARY *libname* when loading program artifacts before searching DFHRPL.

User response: Verify that it is intended for this LIBRARY to have a ranking value smaller than that of DFHRPL (so that program artifacts will be loaded from this LIBRARY rather than from DFHRPL). If this was not the intention, set the ranking for the LIBRARY to a value greater than 10.

Module: DFHDLDB2, DFHDLDB3

XMEOUT Parameters: *applid, libname,R*

Destination: Console

DFHLD0702D *applid* **Critical LIBRARY *libname* could not be installed. Reply 'GO' or 'CANCEL'.**

Explanation: LIBRARY *libname* is being installed during CICS startup, and an error has occurred during install of the LIBRARY. The definition for this LIBRARY indicates that it should be installed as Enabled, and that it is a Critical LIBRARY. A Critical LIBRARY is one that must be available at CICS startup, so this message is issued to allow you to decide whether CICS startup should be allowed to continue without the LIBRARY.

System action: The system waits for a response.

User response: If you do not want CICS to start when this LIBRARY is not available, reply 'CANCEL' to terminate this CICS execution.

If you want to allow CICS to continue without the LIBRARY; for example, because you plan to resolve the problem after CICS has started, reply 'GO' to allow CICS to continue. If you decide that this LIBRARY should not be defined as Critical, SET the LIBRARY to Noncritical, and update the definition.

In both cases, you should study other messages on the console log to determine the reason for the error that occurred while installing the LIBRARY, and take steps to resolve the problem. This message can be issued because a LIBRARY of the same name is already installed and enabled.

Module: DFHDLDB2, DFHLD0703

XMEOUT Parameters: *applid, libname*

Destination: Console

DFHLD0703 *applid* **Noncritical LIBRARY *libname* could not be installed as enabled. CICS startup continues.**

Explanation: LIBRARY *libname* is being installed during CICS startup, and an error has occurred during install of the LIBRARY. The definition for this LIBRARY indicates that it should be installed as Enabled, and that it is a Noncritical LIBRARY. A Noncritical LIBRARY is one that does not need to be available at CICS startup,

so this message is issued to warn you that an error has occurred during install of the LIBRARY.

System action: CICS startup continues.

User response: If you want future CICS starts to give you the option to terminate CICS if this LIBRARY fails to install correctly, SET the LIBRARY to Critical, and update its definition.

Study other messages on the console log to determine the reason for the error that occurred while installing the LIBRARY, and take steps to resolve the problem.

Module: DFHLDLB2, DFHLDDMI

XMEOUT Parameters: *applid, libname*

Destination: Console

DFHLD0704 *applid* Reply CANCEL was received.

Explanation: A reply of 'CANCEL' was received in response to message DFHLD0702. This requests that CICS startup should be terminated.

System action: CICS terminates.

User response: None.

Module: DFHLDLB2, DFHLDDMI

XMEOUT Parameter: *applid*

Destination: Console

DFHLD0710 *applid* Install of LIBRARY *libname* encountered an error. The LIBRARY is installed but disabled.

Explanation: Install of the dynamic LIBRARY resource *libname* has completed but has not done so successfully. One of the steps required to complete successful install of a dynamic LIBRARY resource has failed. The LIBRARY definition indicates that the LIBRARY should be installed as Enabled. Due to the error, the LIBRARY has been installed, but with an enablement status of Disabled, which means that it will not participate in the search order used when loading programs and program artifacts.

System action: The LIBRARY will not be searched when program artifacts are loaded, meaning that program artifacts that reside in the data sets defined for the LIBRARY will not be loaded from this LIBRARY.

User response: Examine the console log for one or more messages indicating the failure that occurred during install processing for this LIBRARY. When the problem has been resolved, SET the LIBRARY to Enabled.

Module: DFHLDLB2

XMEOUT Parameters: *applid, libname*

Destination: Console

DFHLD0711 *applid* Install of LIBRARY *libname* encountered an error. The LIBRARY is installed as disabled.

Explanation: Install of the dynamic LIBRARY resource *libname* has completed but has not done so successfully. One of the steps required to complete successful install of a disabled LIBRARY resource has failed. Due to the error, the LIBRARY has been installed with an enablement status of Disabled, but this should not be a problem as Disabled status was specified in the LIBRARY definition.

System action: Disabled status means that the LIBRARY will not be searched when program artifacts are loaded, so that program artifacts that reside in the data sets defined for the LIBRARY will not be loaded from this LIBRARY.

User response: Examine the console log for one or more messages indicating the failure that occurred during install processing for this LIBRARY. You should plan to resolve the problem before attempting to SET the LIBRARY to Enabled.

Module: DFHLDLB2

XMEOUT Parameters: *applid, libname*

Destination: Console

DFHLD0712 *applid* Attempt to install or enable LIBRARY *libname* will be delayed because data set *dsname* is being recalled.

Explanation: LIBRARY *libname* is taking longer than expected to install or enable because one of the data sets in the LIBRARY definition, *dsname*, has been migrated and has to be recalled before the processing can complete.

System action: The install or enable of LIBRARY *libname* will be delayed until data set *dsname* has been recalled.

User response: None.

Module: DFHLDLB2, DFHLDLB3, DFHLDDMI

XMEOUT Parameters: *applid, libname, dsname*

Destination: Console

DFHLD0713 *applid* Attempt to enable LIBRARY *libname* encountered an error. The LIBRARY is disabled.

Explanation: An attempt to set the enablement status of the dynamic LIBRARY resource *libname* to Enabled has failed. One of the steps required to successfully enable a dynamic LIBRARY resource has failed. Due to the error, the LIBRARY remains Disabled, and will not participate in the search order used when loading programs and program artifacts. This error can occur as

a result of setting the enabled status of a LIBRARY, or of an attempt to enable a LIBRARY which has been restored from the catalog on a CICS warm or emergency restart.

System action: The LIBRARY will not be searched when program artifacts are loaded, meaning that program artifacts that reside in the data sets defined for the LIBRARY will not be loaded from this LIBRARY.

User response: Examine the console log for one or more messages indicating the failure that occurred when attempting to enable this LIBRARY. When the problem has been resolved, repeat the attempt to SET the LIBRARY to Enabled.

Module: DFHLDLB3

XMEOUT Parameters: *applid, libname*

Destination: Console

DFHLD0715 *applid* **Disable processing for LIBRARY *libname* encountered an error.**

Explanation: An attempt to set the enablement status of the dynamic LIBRARY resource *libname* to Disabled has encountered an error. One of the steps required to successfully complete disable processing for a dynamic LIBRARY resource has failed.

System action: The LIBRARY is set to Disabled status, and will not participate in the search order used when loading programs and program artifacts. However, maintenance operations on the LIBRARY, such as compression of a data set within the LIBRARY concatenation, might not be allowed.

User response: Examine the console log for one or more messages indicating the failure that occurred when attempting to disable this LIBRARY. When the problem has been resolved, repeat the attempt to SET the LIBRARY to Disabled.

Module: DFHLDLB3

XMEOUT Parameters: *applid, libname*

Destination: Console

DFHLD0720 *applid* **Dynamic allocation of data set *dsname* for LIBRARY *libname* failed. DYNALLOC return codes *X'rrrr'*, *X'cccc'*, *X'dddd'*.**

Explanation: While installing or enabling dynamic LIBRARY *libname*, an attempt to dynamically allocate data set *dsname* has failed. The DYNALLOC macro failed with return code *rrrr*. *cccc* is the SVC 99 error reason code, and *dddd* is the additional SVC 99 error information code.

System action: CICS continues with LIBRARY *libname* disabled. Programs will not be loaded from this LIBRARY.

User response: For the meaning of the DYNALLOC return codes, see the *z/OS MVS Authorized Assembler Services Guide*.

Module: DFHLDLB2, DFHLDLB3, DFHLDDMI

XMEOUT Parameters: *applid, dsname, libname, X'rrrr', X'cccc', X'dddd'*

Destination: Console

DFHLD0721 *applid* **Dynamic concatenation of data sets for LIBRARY *libname* failed. DYNALLOC return codes *X'rrrr'*, *X'cccc'*, *X'dddd'*.**

Explanation: While installing or enabling dynamic LIBRARY *libname*, an attempt to dynamically concatenate data sets in the LIBRARY has failed. The DYNALLOC macro failed with return code *rrrr*. *cccc* is the SVC 99 error reason code, and *dddd* is the additional SVC 99 error information code.

System action: CICS continues with LIBRARY *libname* disabled. Programs will not be loaded from this LIBRARY.

User response: For the meaning of the DYNALLOC return codes, see the *z/OS MVS Authorized Assembler Services Guide*.

Module: DFHLDLB2, DFHLDLB3, DFHLDDMI

XMEOUT Parameters: *applid, libname, X'rrrr', X'cccc', X'dddd'*

Destination: Console

DFHLD0722 *applid* **Open of DD for LIBRARY *libname* failed.**

Explanation: An attempt to open dynamic LIBRARY *libname* has failed with a non-zero VSAM return code.

System action: CICS continues processing, but LIBRARY *libname* is disabled and programs will not be loaded from this LIBRARY.

User response: VSAM will have issued a console error message. Use the information in the VSAM error message to solve the problem.

Module: DFHLDLB2, DFHLDLB3, DFHLDDMI

XMEOUT Parameters: *applid, libname*

Destination: Console

DFHLD0723 *applid* **Dynamic unallocation of data set *dsname* for LIBRARY *libname* failed. DYNALLOC return codes *X'cccc'*, *X'rrrr'*, *X'dddd'*.**

Explanation: An attempt to dynamically unallocate (deallocate) data set *dsname* for dynamic LIBRARY *libname* has failed. The DYNALLOC macro failed with return code *rrrr*. *cccc* is the SVC 99 error reason code,

and *dddd* is the additional SVC 99 error information code. This error can occur while disabling the LIBRARY, either as a result of a specific SET LIBRARY DISABLED request, or while backing out an unsuccessful install or enable of the LIBRARY, or an unsuccessful restore of the LIBRARY at CICS warm or emergency restart. This error can also occur while discarding the LIBRARY, if a previous attempt to disable the LIBRARY had encountered an error.

System action: CICS continues with LIBRARY *libname* still installed and disabled.

User response: For the meaning of the DYNALLOC return codes, see the *z/OS MVS Authorized Assembler Services Guide*. DFHLDLB2, DFHLDLB3, DFHLDMMI

XMEOUT Parameters: *applid, dsname, libname, X'cccc', X'rrrr', X'dddd'*

DFHLD0724 *applid* **Dynamic deconcatenation of data sets for LIBRARY *libname* failed. DYNALLOC return codes** *X'rrrr', X'cccc', X'dddd'*.

Explanation: An attempt to dynamically deconcatenate data sets from LIBRARY *libname* has failed. The DYNALLOC macro failed with return code *rrrr*. *cccc* is the SVC 99 error reason code, and *dddd* is the additional SVC 99 error information code. This error can occur while disabling the LIBRARY, either as a result of a specific SET LIBRARY DISABLED request, or while backing out an unsuccessful install or enable of the LIBRARY, or an unsuccessful restore of the LIBRARY at CICS warm or emergency restart. This error can also occur while discarding the LIBRARY, if a previous attempt to disable the LIBRARY had encountered an error.

System action: CICS continues and LIBRARY *libname* remains installed and disabled.

User response: For the meaning of the DYNALLOC return codes, see the *z/OS MVS Authorized Assembler Services Guide*.

Module: DFHLDLB2, DFHLDLB3, DFHLDMMI

XMEOUT Parameters: *applid, libname, X'rrrr', X'cccc', X'dddd'*

Destination: Console

DFHLD0725 *applid* **Close of DD for LIBRARY *libname* failed.**

Explanation: An attempt to close the DD for dynamic LIBRARY *libname* has failed. This error can occur while disabling the LIBRARY, either as a result of a specific SET LIBRARY DISABLED request, or while backing out an unsuccessful install or enable of the LIBRARY, or an unsuccessful restore of the LIBRARY at CICS warm or emergency restart. This error can also occur while discarding the LIBRARY, if a previous attempt to disable the LIBRARY had encountered an error.

System action: CICS continues processing, and LIBRARY *libname* remains installed and disabled.

User response: VSAM will have issued a console error message. Use the information in the VSAM message to solve the problem.

Module: DFHLDLB2, DFHLDLB3, DFHLDMMI

XMEOUT Parameters: *applid, libname*

Destination: Console

DFHLD0730 *applid* **An MVS ABEND occurred during {Getmain of LIBRARY control area | Dynamic allocation | Dynamic concatenation | Open | Close | Dynamic deconcatenation | Dynamic unallocation | Freemain of LIBRARY control area} for LIBRARY *libname*.**

Explanation: An attempt to perform an operation for dynamic LIBRARY *libname* caused an MVS abend condition. The message indicates the operation which resulted in the abend. This may indicate an error in the definition of the dynamic LIBRARY.

System action: CICS continues processing, but LIBRARY *libname* is either disabled or not installed, and programs will not be loaded from this LIBRARY.

User response: The operating system will have issued console error messages describing the abend condition. This can be accompanied by the CICS error message DFHLD0001. Use this information to solve the problem. Possible causes of this error include, but are not limited to

- A data set has been specified in the LIBRARY definition which is not a valid PDS or PDSE data set.
- The system does not have read access to a data set in the LIBRARY. Look for a message from a security manager, such as RACF, which indicates the data set for which there is an access failure.
- In the LIBRARY concatenation the total number of PDSEs and PDS extents exceeded the limit of 255.
- An I/O error occurred while processing a LIBRARY data set.
- A system error occurred while processing an SVC. The abend code will be of the form Fnn for an SVC call nn.
- CICS internal error occurred; for example, a program check.

Module: DFHLDLB2, DFHLDLB3

XMEOUT Parameters: *applid, {1=Getmain of LIBRARY control area, 2=Dynamic allocation, 3=Dynamic concatenation, 4=Open, 5=Close, 6=Dynamic deconcatenation, 7=Dynamic unallocation, 8=Freemain of LIBRARY control area}, libname*

Destination: Console

DFHLD0800E DFHLD0800E CLDM failed due to CICS Command error. EIBFN=*X'eibfn*, RESP=*resp*, RESP2=*resp2*. (instance)

Explanation: The CICS module mapping program encountered an unexpected response to a CICS command.

eibfn Identifies the failing CICS command EIB function code.

resp Identifies the CICS EIB RESP value for the failing command.

resp2 Identifies the CICS EIB RESP2 value for the failing command.

instance

A value that IBM support might be able to use to identify the command being issued.

System action: The CLDM transaction terminates.

User response: Check the *resp* and *resp2* values for the specified *eibfn* and take the necessary action.

Module: DFHLDMAP, DFHLDMHF, DFHLDMHS, EYU9XLLM

Destination: Terminal user.

DFHLD0801E CLDM bad STARTCODE.

Explanation: The CLDM transaction was started in an unexpected manner.

If the main CICS loader mapping module program (DFHLDMAP) is not invoked with an appropriate container, then it must be invoked at a terminal with data or started with data.

System action: The CLDM transaction terminates.

User response: Start CLDM with the necessary parameters depending on the invocation method.

Module: DFHLDMAP.

Destination: Terminal user.

DFHLD0802E CLDM invalid input. Format is CLDM PATH=value or CLDM SYSOUT=value. Instance (instance)

Explanation: The input to CLDM is invalid.

System action: The CLDM transaction terminates.

User response: Start CLDM with valid input. For valid input values, see CLDM in CICS Supplied Transactions.

Module: DFHLDMAP.

Destination: Terminal user.

DFHLD0803E CLDM CICS kernel inquire error.

Explanation: The CLDM transaction did not locate the required CICS kernel areas.

System action: The CLDM transaction terminates.

User response: Check that the current version of the DFHLDMAP program is correct for the CICS release. If the configuration is correct, contact the IBM support center.

Module: DFHLDMAP.

Destination: Terminal user.

DFHLD0803E CLDM CICS kernel anchor error.

Explanation: The CLDM transaction did not locate the required CICS kernel areas.

System action: The CLDM transaction terminates.

User response: Check that the current version of the DFHLDMAP program is correct for the CICS release. If the configuration is correct, contact the IBM support center.

Module: DFHLDMAP.

Destination: Terminal user.

DFHLD0805E CLDM output format routine (program) failed.

Explanation: The CLDM output routine *program* returned a failure response to DFHLDMAP.

System action: The CLDM transaction terminates.

User response: Check that the current version of the DFHLDMAP, DFHLDMHF, and DFHLDMHS programs are correct for the CICS release. If the configuration is correct, contact the IBM support center.

Module: DFHLDMAP.

Destination: Terminal user.

DFHLD0806E CLDM file system write failed. RETCODE=*X'retcode*' (usserr), RSNCODE=*'rsncode'*, FILE=*file*.

Explanation: An error occurred while writing to the z/OS UNIX System Services file system

retcode

The BPX1WRT return code.

usserr The name of the return code

rsncode

The BPX1WRT reason code.

file The name of the file being written to.

System action: The CLDM transaction terminates.

User response: Using the response information

provided in the message, check the BPX1WRT (write) description in the z/OS UNIX System Services Programming Assembler Callable Services Reference for details of the error.

Module: DFHLDMHF.

Destination: Terminal user.

DFHLD0807E CLDM file system open failed.

RETCODE=*X'retcode'* (*usserr*),
RSNCODE=*'rsncode'*, **FILE**=*file*.

Explanation: An error occurred while opening to the z/OS UNIX System Services file system

retcode

The BPX1OPN return code.

usserr The name of the return code

rsncode

The BPX1OPN reason code.

file The name of the file being written to.

System action: The CLDM transaction terminates.

User response: Using the response information provided in the message, check the BPX1OPN (open) description in the z/OS UNIX System Services Programming Assembler Callable Services Reference for details of the error.

Module: DFHLDMHF.

Destination: Terminal user.

DFHLD0808E CLDM file system close failed.

RETCODE=*X'retcode'* (*usserr*),
RSNCODE=*'rsncode'*, **FILE**=*file*.

Explanation: An error occurred while closing to the z/OS UNIX System Services file system

retcode

The BPX1CLO return code.

usserr The name of the return code

rsncode

The BPX1CLO reason code.

file The name of the file being written to.

System action: The CLDM transaction terminates.

User response: Using the response information provided in the message, check the BPX1CLO (close) description in the z/OS UNIX System Services Programming Assembler Callable Services Reference for details of the error.

Module: DFHLDMHF.

Destination: Terminal user.

DFHLD0809E CLDM mismatched quotes.

Explanation: The CLDM transaction did not locate the required CICS kernel areas.

System action: The CLDM transaction terminates.

User response: Check that the current version of the DFHLDMAP program is correct for the CICS release. If the configuration is correct, contact the IBM support center.

Module: DFHLDMAP.

Destination: Terminal user.

DFHLD0810E CLDM absolute path name required.

Explanation: The PATH operand of the CLDM transaction must be an absolute path and begin with a /.

System action: The CLDM transaction terminates.

User response: Re-enter the CLDM transaction and specify an absolute PATH operand.

Module: DFHLDMHF.

Destination: Terminal user.

DFHLD0811I CLDM complete. recordnum data records output.

Explanation: The CLDM request has completed. *recordnum* data records written to the output destination.

System action: The CLDM transaction is complete.

User response: None

Module: DFHLDMAP.

Destination: Terminal user.

DFHLD0812E CLDM unable to obtain Loader Domain state lock.

Explanation: The CLDM transaction was unable to obtain the necessary loader domain locks in order to capture the data required for processing.

System action: The CLDM transaction terminates.

User response: Check that the current version of the DFHLDMAP program is correct for the CICS release. If the configuration is correct, contact the IBM support center.

Module: DFHLDMAP.

Destination: Terminal user.

DFHLGnnnn messages

DFHLG0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue and bring CICS down at a convenient time to resolve the problem.

If you cannot continue without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHLGDM, DFHLGGL, DFHLGLD, DFHLGJN, DFHLGST DFHL2HS2, DFHL2HS3, DFHL2HS4, DFHL2HS5, DFHL2HS6, DFHL2HS7, DFHL2HS8, DFHL2HS9, DFHL2HSF, DFHL2HSG, DFHL2HSJ

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*, *modname*

Destination: Console

DFHLG0002 *applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot continue without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHLGDM, DFHLGGL, DFHLGLD, DFHLGJN, DFHLGST

XMEOUT Parameters: *applid*, *X'code'*, *modname*

Destination: Console

DFHLG0004 *applid* A possible loop has been detected at offset *X'offset'* in module *modname*.

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset *X'offset'*. This is the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* in the message is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently, but you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHLGLB

XMEOUT Parameters: *applid*, *X'offset'*, *modname*

Destination: Console

DFHLG0101I *applid* Log manager domain initialization has started.

Explanation: This is an informational message indicating the start of log manager domain initialization.

System action: Initialization continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHLGDM

XMEOUT Parameter: *applid*

Destination: Console

DFHLG0102I *applid* Log manager domain initialization has ended.

Explanation: This is an informational message indicating the end of log manager domain initialization.

System action: Initialization continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHLGDM

XMEOUT Parameter: *applid*

Destination: Console

DFHLG0103I *applid* System log (*journalname*) initialization has started.

Explanation: This is an informational message indicating the start of system log initialization for the specified journal (either DFHLOG or DFHSHUNT).

System action: Initialization continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHL2SLN

XMEOUT Parameters: *applid*, *journalname*

Destination: Console

DFHLG0104I *applid* System log (*journalname*) initialization has ended. Log stream *logstreamname* is connected to structure *structurename*.

Explanation: This is an informational message indicating the end of system log initialization for the specified journal (either DFHLOG or DFHSHUNT).

The name shown as LOGSTREAMNAME(*logstreamname*) in the message is the name of the log stream associated with this journal. A value of '*****' implies that it is a dummy log.

The name shown as STRUCTNAME(*structname*) in the message is the structure name of the log stream associated with this journal. A value of '*****' implies that it has no related structure, which means that either the log stream is a dummy log or of type DASDONLY(YES).

System action: Initialization continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHL2SLN

XMEOUT Parameters: *applid*, *journalname*,

logstreamname, structurename

Destination: Console

DFHLG0191 *subsys-name* {*CONVERTER* | *ALLOCATION*} **VERIFICATION HAS FAILED BECAUSE OF A** {*SEVERE ERROR* | *SYNTAX ERROR* | *MUTUAL EXCLUSION FAILURE*}

Explanation: A parse error was encountered while CICS was verifying the SUBSYS options of the application's JCL DD statement.

The message includes the following inserts

- *subsys_name* - the installation defined subsystem name for the system logger.
- *CONVERTER* - the error was detected during MVS JCL conversion.
- *ALLOCATION* - the error was detected during MVS allocation processing.
- *SEVERE ERROR* - the parser encountered a severe error during its processing.
- *SYNTAX ERROR* - the statement failed the syntax check. MVS message ASA104I is issued specifying the keyword in error and acceptable keywords.
- *MUTUAL EXCLUSION FAILURE* - the parser encountered mutually exclusive keywords. MVS message ASA103I is issued specifying the keywords in error.

System action: If the error was detected during MVS JCL conversion, the job is not executed because of the JCL error.

If the error was detected during MVS allocation processing, the allocation request is rejected.

User response: Correct the SUBSYS= specification and resubmit the job.

Module: DFHLGIPI, DFHLGIMS

Destination: Console and SYSPRINT

DFHLG0192 ERROR IN MVS LOGGER MACRO
macro_name **FOR REQUEST**
request_type. **MVS LOGGER CODES**
X'X'return-code' X'X'reason-code'

Explanation: The CICS subsystem exit made a call to the MVS logger to access a log. This message gives the return code and reason code for that operation. Usually this message is issued only when the return code indicates an error in the MVS logger macro.

The message includes the following inserts

- *macro_name* MVS logger macro
- *request_type* MVS logger macro REQUEST parameter
- *return-code* MVS logger macro return code
- *reason-code* MVS logger macro reason code.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: The subsystem exit terminates the logstream read, and passes a return code back to the caller.

This message is followed by message DFHLG0193 which specifies the logstream. In some cases a dump is also produced.

User response: Use the MVS logger return and reason codes to diagnose the problem. If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHLGSSI, DFHLGIGT

Destination: Console

DFHLG0193 *log-stream-name*

Explanation: This message gives the logstream referred to in the preceding DFHLG0192 message.

System action: See message DFHLG0192.

User response: See message DFHLG0192.

Module: DFHLGSSI, DFHLGIGT

Destination: Console

DFHLG0194 ERROR DETECTED BY CICS
SUBSYSTEM. *error-description X'data1'*
X'data2' X'data3'

Explanation: The CICS subsystem exit detected an unexpected error. The error is described by the *error-description* and optional hex data fields.

In some cases a dump is also produced.

System action: The subsystem exit terminates the logstream read, and passes a return code back to the caller. If DELETE was specified as an option on the SUBSYS keyword then it will be ignored.

User response: Use the *error-description* to identify the cause of the error. A possible cause is an invalid logstream or invalid entries within a valid logstream; the CICS logger and DFHJUP work only with CICS logstreams containing CICS records for the appropriate release.

If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHLGSSI, DFHLGIGT

Destination: Console

DFHLOG0195 LOG GAP WARNING UP TO BLOCKID
X'data1'

Explanation: The CICS subsystem exit made a call to the MVS logger to access a log stream using the IXGBRWSE macro but this received a return code of IXGRSNCODEWARNING (X'04') with a reason code of IxgRsnCodeWarningGap (X'0403'). The blockid is the ID of the next readable data in the log stream.

System action: The CICS subsystem exit continues to access the log. This message is followed by message DFHLOG0196.

User response: For further guidance on the IxgRsnCodeWarningGap reason code see the *z/OS Assembler Services Reference*. Use the blockid and the timestamp reported in DFHLOG0196 to investigate further if required. The warning may be the result of known activity that has deleted log data from the log.

Module: DFHLOGIGT

Destination: Console

DFHLOG0196 STCK of block after gap (time format):
X'data1'

Explanation: This message is issued in association with message DFHLOG0195. It provides the timestamp from the blockid header corresponding to the block read after the reported gap.

System action: See message DFHLOG0195.

User response: See message DFHLOG0195.

Module: DFHLOGIGT

Destination: Console

DFHLOG0301 date time applid An error has been detected for log stream stream for journal name journalname. The journal status has been set to FAILED.

Explanation: An error has been detected for log stream *stream* which is used by journal *journalname*.

System action: An exception entry is made in the trace table.

CICS marks the journal as failed and ends the associated connection with the log stream. Applications which attempt to use the journal receive an IOERROR response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

See the associated messages issued by CICS or the MVS system logger for more information and for guidance about appropriate recovery actions.

If journal *journalname* is not crucial to the running of your CICS system, you may decide to continue.

If the problem with the log stream can be resolved, use of the journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces.

If you cannot continue without the full use of journal *journalname* you should bring CICS down in a controlled shutdown.

Module: DFHLOGJN

XMEOUT Parameters: *date, time, applid, stream, journalname*

Destination: CSMT

DFHLOG0302 date time applid Journal name journalname has been installed. Journal type: {MVS | SMF | DUMMY}stream.

Explanation: Journal name *journalname* has been installed and is available for use. The type of journal, and for type MVS only, the log stream name *stream* are also shown.

System action: An event entry is made in the trace table.

User response: None

Module: DFHLOGJN

XMEOUT Parameters: *date, time, applid, journalname, {1=MVS, 2=SMF, 3=DUMMY}, stream*

Destination: CRDI

DFHLOG0303 date time applid An error has been detected while connecting to log stream stream for journal name journalname. The journal status has been set to FAILED.

Explanation: An error has been detected connecting to log stream *stream* which is used by journal *journalname*.

System action: An exception entry is made in the trace table.

CICS marks the journal as failed. Applications which attempt to use the journal receive an IOERROR response and may terminate abnormally.

User response: Notify the system programmer.

See the associated messages issued by CICS or the MVS system logger for more information and for guidance about appropriate recovery actions.

If CICS is still running, it is necessary to decide whether to terminate CICS.

If journal *journalname* is not crucial to the running of your CICS system, you may decide to continue.

If the problem with the log stream can be resolved, use of the journal can be restored by issuing the CEMT SET

JOURNALNAME(*journalname*) RESET or the EXEC CICS SET JOURNALNAME(*journalname*) RESET command.

If you cannot continue without the full use of journal *journalname* you should bring CICS down in a controlled shutdown.

Module: DFHLGJN

XMEOUT Parameters: *date, time, applid, stream, journalname*

Destination: CSMT

DFHLG0304 *date time applid* **An error has been detected writing the catalog entry for journal name *journalname*.**

Explanation: An error has been detected writing the global catalog entry for journal *journalname*.

System action: An exception entry is made in the trace table.

The new journal entry is used for this CICS run but does not persist over a CICS restart

User response: Notify the system programmer.

See the associated CICS messages for more information, and for guidance about appropriate recovery actions.

If you cannot continue without the full use of journal *journalname*, you should bring CICS down in a controlled shutdown.

Module: DFHLGJN

XMEOUT Parameters: *date, time, applid, journalname*

Destination: CSMT

DFHLG0305 *date time applid* **An error has been detected deleting the catalog entry for journal name *journalname*.**

Explanation: An error has been detected deleting the global catalog entry for journal *journalname*.

System action: An exception entry is made in the trace table.

The old journal entry could not be discarded and may reappear after a CICS restart

User response: Notify the system programmer.

See the associated CICS messages for more information and for guidance about appropriate recovery actions.

If you cannot continue without the full use of journal *journalname*, you should bring CICS down in a controlled shutdown.

Module: DFHLGJN

XMEOUT Parameters: *date, time, applid, journalname*

Destination: CSMT

DFHLG0306 *date time applid* **Journal name *journalname* has been discarded.**

Explanation: Journal name *journalname* has been discarded and is no longer available for use.

Future attempts to use the journal name will cause it to be reinstalled using the journal model definitions active at that time.

System action: An event entry is made in the trace table.

User response: None.

Module: DFHLGJN

XMEOUT Parameters: *date, time, applid, journalname*

Destination: CRDI

DFHLG0401 *date time applid* **Journal model resource *journalmodel* has been installed.**

Explanation: The journal model resource entry *journalmodel* has been installed and is available for use.

System action: An event entry is made in the trace table.

User response: None.

Module: DFHLGLD

XMEOUT Parameters: *date, time, applid, journalmodel*

Destination: CRDI

DFHLG0402 *date time applid* **An error has been detected writing the catalog entry for journal model *journalmodel*.**

Explanation: An error has been detected writing the global catalog entry for journal model *journalmodel*.

System action: An exception entry is made in the trace table.

The new journal model entry is used for this CICS run but does not persist over a CICS restart

User response: Notify the system programmer.

See the associated CICS messages for more information and for guidance about appropriate recovery actions.

If you cannot continue without the full use of journal model *journalmodel* you should bring CICS down in a controlled shutdown.

Module: DFHLGLD

XMEOUT Parameters: *date, time, applid, journalmodel*

Destination: CSMT

DFHLG0403 *date time applid* **An error has been detected deleting the catalog entry for journal model *journalmodel*.**

Explanation: The deletion of the global catalog entry for journal model *journalmodel* has failed.

System action: An exception entry is made in the trace table.

The old journal model entry could not be deleted and may reappear after a CICS restart

User response: Notify the system programmer.

See the associated CICS messages for more information and for guidance about appropriate recovery actions.

If you cannot continue without the full use of journal model *journalmodel* you should bring CICS down in controlled shutdown.

Module: DFHLGJN

XMEOUT Parameters: *date, time, applid, journalmodel*

Destination: CSMT

DFHLG0404 *date time applid* **Journal model resource *journalmodel1* has been replaced by *journalmodel2*.**

Explanation: A journal model resource entry has been replaced because journal model *journalmodel2* has the same journal name template as *journalmodel1*.

System action: An event entry is made in the trace table.

User response: None.

Module: DFHLGLD

XMEOUT Parameters: *date, time, applid, journalmodel1, journalmodel2*

Destination: CRDI

DFHLG0405 *date time applid* **Journal model *journalmodel* has been discarded.**

Explanation: Journal model *journalmodel* has been discarded and is no longer available for use.

System action: An event entry is made in the trace table.

User response: None.

Module: DFHLGLD

XMEOUT Parameters: *date, time, applid, journalmodel*

Destination: CRDI

DFHLG0501 *date time applid* **Log stream definition for *stream* suppressed by XLGSTRM user exit.**

Explanation: MVS log stream *stream* does not exist but could not be defined because the XLGSTRM user exit suppressed automatic installation.

System action: An exception entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications attempting to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Define the log stream directly to the MVS system logger.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream*

Destination: Console and Transient Data Queue CRDI

DFHLG0502 *date time applid* **Log stream *stream* defined to MVS using model stream *model*.**

Explanation: MVS log stream *stream* did not exist and has been successfully defined to the MVS system logger using the attributes of model log stream *model*.

System action: An event entry is made in the trace table.

CICS connects and uses the newly defined log stream.

User response: None.

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model*

Destination: CRDI

DFHLG0503 *date time applid* **Log stream *stream*, using model stream *model*, not defined to MVS for reason *X'rc'X'reason'*.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* for reason *X'rc'X'reason*.

X'rc is the return code from the IXGINVNT macro and *X'reason* is the reason code returned by the IXGINVNT macro. These are described in the *OS/390 MVS Programming: Assembler Services Reference* and in the IXGCON macro.

System action: An event entry is made in the trace table. The trace entry contains additional diagnostic information from the system logger answer area (IXGANSAA).

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream* you should bring CICS down in a controlled shutdown. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model, X'rc', X'reason'*

Destination: Console and Transient Data Queue CSMT

DFHLG0504 *date time applid* **Log stream *stream* using model stream *model* not defined to MVS due to insufficient authority.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger

using the attributes of model log stream *model* because of insufficient authority.

To define a log stream CICS requires the following authority

- ALTER authority to *stream* in the LOGSTRM class,
- UPDATE authority to *model* in the LOGSTRM class,
- UPDATE authority to resource IXLSTR.structure_name in the FACILITY class if the XLGSTRM exit supplies a structure name.

System action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream* you should bring CICS down in a controlled shutdown.

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model*

Destination: Console and Transient Data Queue CSMT

DFHLG0505 *date time applid* **Log stream *stream* using model stream *model* not defined to MVS because of an invalid HLQ parameter.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because of an invalid high level qualifier (HLQ) parameter.

The HLQ parameter specifies the high level qualifier to be used for log stream data sets.

System action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

DFHLG0506 • DFHLG0507

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Correct the HLQ parameter in the *model* logger definition or the XLGSTRM exit, or both.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model*

Destination: Console and Transient Data Queue CSMT

DFHLG0506 *date time applid* **Log stream *stream* using model stream *model* not defined to MVS because of insufficient LOGR couple data set space.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because of insufficient space in the MVS system logger's LOGR couple data set.

System action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Redefine the MVS system logger's LOGR couple data set to contain space for this log stream and for future requirements.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the

CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model*

Destination: Console and Transient Data Queue CSMT

DFHLG0507 *date time applid* **Log stream *stream* using model stream *model* not defined to MVS. Maximum number of streams reached.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because the maximum number of log streams for the coupling facility structure has been reached.

The maximum number of streams per structure is specified in the LOGSNUM parameter when defining a structure to the MVS system logger.

System action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Change the STRUCTNAME parameter in the *model* logger definition or the XLGSTRM exit to point to a structure that has room for more streams or delete unneeded streams from the current structure.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, you can restore the use of an associated journal by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model*

Destination: Console and Transient Data Queue
CSMT

DFHLG0508 *date time applid* **Log stream *stream* not defined to MVS because model stream *model* does not exist.**

Explanation: MVS log stream *stream* could not be defined to the MVS system logger because the model log stream *model* does not exist.

System action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU). or you can define the *model* log stream to the MVS logger if there are likely to be more log streams to be defined using the same model.

If the problem with the log stream can be resolved, you can restore the use of an associated journal by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream* you should bring CICS down in a controlled shutdown.

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model*

Destination: Console and Transient Data Queue
CSMT

DFHLG0509 *date time applid* **Log stream *stream* using model stream *model* not defined to MVS because of an invalid structure name.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because of an invalid coupling facility structure name.

System action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If

CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Correct the STRUCTNAME parameter in the *model* logger definition or the XLGSTRM exit, or both.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, you can restore the use of an associated journal by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream* you should bring CICS down in a controlled shutdown.

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream, model*

Destination: Console and Transient Data Queue
CSMT

DFHLG0510 *date time applid* **Log stream *stream* using model stream *model* not defined to MVS because of an invalid stream name.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because *stream* is an invalid stream name.

System action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream so applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Correct the JOURNALMODEL definition used to create the stream name and DISCARD any JOURNAL definitions which refer to the stream name or, if the stream is a VSAM forward recovery log stream, correct the stream name in the VSAM data set's catalog entry.

If the problem with the log stream can be resolved, you can restore the use of an associated journal by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, reopen the associated data sets.

If you cannot continue without the full use of log stream *stream* you should bring CICS down in a controlled shutdown.

Module: DFHLOGST

XMEOUT Parameters: *date, time, applid, stream, model*

Destination: Console and Transient Data Queue
CSMT

DFHLOG0511 *date time applid* **Log stream *stream* using model stream *model* not defined to MVS because STRUCTNAME parameter missing in model.**

Explanation: MVS log stream *stream* does not exist and could not be defined to the MVS system logger using the attributes of model log stream *model* because the model log stream definition does not contain the required STRUCTNAME parameter.

System action: An event entry is made in the trace table.

CICS cannot define or connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Redefine the model log stream in the MVS system logger's LOGR couple data set using the IXCMIAPU utility ensuring the model stream definition contains the **STRUCTNAME(structure_name)** parameter to indicate which coupling facility structure is to be used for the log stream. Alternatively you can use the CICS exit, XLGSTRM, to supply the structure name to the MVS system logger.

You can define the log stream directly to the MVS system logger using the MVS log stream definition utility (IXCMIAPU).

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Module: DFHLOGST

XMEOUT Parameters: *date, time, applid, stream, model*

Destination: Console and Transient Data Queue
CSMT

DFHLOG0512 *date time applid* **Log stream *stream* cannot be used as both a system log and a general log.**

Explanation: MVS log stream *stream* cannot be used as both a system log and as a general log.

It is likely that a JOURNALMODEL resource definition has resulted in the same log stream name for a user journal as for the system log journal names (DFHLOG and DFHSHUNT).

Alternatively a system log stream name may have been specified in the ICF catalog as the forward recovery log stream for a VSAM data set.

System action: CICS cannot connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Review and correct your installed Journalmodels to ensure that the the same log stream is not used for system logs (DFHLOG and DFHSHUNT) as for other journals. Use the CEMT DISCARD JOURNALNAME() command to remove any journals that have been installed with the incorrect stream name. and DFHSHUNT, you will need to perform an initial start.

If the ICF catalog specifies the wrong stream name, use the IDCAMS ALTER command to correct it.

Module: DFHLOGST

XMEOUT Parameters: *date, time, applid, stream*

Destination: CSMT

DFHLOG0513 *date time applid* **Log stream *stream* has failed and new connections cannot be accepted.**

Explanation: MVS log stream *stream* has been marked as failed by a previous error. The stream cannot be used again until all current users of the stream have disconnected and the problem that caused the failure has been resolved.

System action: CICS cannot connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

CICS continues with attempting to quiesce usage of the log stream and will disconnect from the log stream.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

CICS should automatically quiesce usage of the log stream but if CEMT INQUIRE STREAM(*stream*) shows continued use of the log stream, you should investigate whether there are any long running transactions that are preventing the closure of files which use the log stream as a forward recovery log or autojournal.

If the problem with the log stream can be resolved, use of an associated journal can be restored by issuing the command SET JOURNALNAME(*journalname*) ACTION(RESET) via the CEMT or EXEC CICS interfaces. If the log stream is a data set forward recovery log or autojournal, the associated data sets should be reopened.

If you cannot continue without the full use of log stream *stream*, you should bring CICS down in a controlled shutdown.

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream*

Destination: CSMT

DFHLG0514 *date time applid* **Log stream *stream* is in use by another CICS system.**

Explanation: MVS log stream *stream* is in use by another CICS region.

General log streams can be shared between CICS regions but each CICS region must have unique system log streams.

One of the following may have occurred

- You are running two copies of the CICS region (same APPLID)
- A JOURNALMODEL resource definition has resulted in the same log stream name for a system log as for the system log journal names (DFHLOG and DFHSHUNT) for another CICS region.
- A JOURNALMODEL resource definition has resulted in the same log stream name for a user journal as for the system log journal names (DFHLOG and DFHSHUNT).
- A system log stream name may have been specified in the ICF catalog as the forward recovery log stream for a VSAM data set.

System action: CICS cannot connect to the log stream. Applications which attempt to use the stream receive an error response and may terminate abnormally.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If stream *stream* is not crucial to the running of your CICS system, you may decide to continue.

Use the MVS console command DISPLAY GRS,RES=(DFHSTRM,*stream*) to find which other CICS region or regions are using the log stream,

Review and correct your installed Journalmodels to ensure that the the same log stream is not used for system logs (DFHLOG and DFHSHUNT as for other journals. Use the command CEMT DISCARD JOURNALNAME() to remove any journals that have been installed with the incorrect stream name. and DFHSHUNT, you will need to perform an initial start.

If the ICF catalog specifies the wrong stream name, use the IDCAMS ALTER command to correct it.

Module: DFHLGST

XMEOUT Parameters: *date, time, applid, stream*

Destination: Console and Transient Data Queue CSMT

DFHLG0730 *applid* **A severe error (code *X'code*) has occurred while opening the system log (*journalname*). CICS will be terminated.**

Explanation: The CICS log manager has detected a severe error while opening the primary or secondary system log. The nature of the error is indicated by a previous CICS message. The code *code* is the exception trace point ID which uniquely identifies the place where the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken and CICS is terminated immediately. CICS cannot tolerate a failure of this nature for the system log.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Using the previous message as a guide, correct the problem and restart CICS, ensuring that the appropriate SIT START parameter is specified in order to maintain data integrity.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHL2SLN

XMEOUT Parameters: *applid, X'code', journalname*

Destination: Console

DFHLG0731 *applid* **A failure has occurred while opening the system log (*journalname*). CICS will be terminated.**

Explanation: The CICS log manager has detected a failure while opening the primary or secondary system log. The nature of the failure is indicated by a previous CICS message.

System action: An exception entry is made in the trace table, and CICS is terminated immediately. CICS

DFHLG0733 • DFHLG0736

cannot tolerate a failure of this nature for the system log.

User response: Using the previous message as a guide, correct the problem and restart CICS, ensuring that the appropriate SIT START parameter is specified in order to maintain data integrity.

If you cannot resolve the problem, or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHL2SLN

XMEOUT Parameters: *applid, journalname*

Destination: Console

DFHLG0733 *applid* **A log stream type of SMF has been requested for the system log (*journalname*). This is not allowed.**

Explanation: A log stream type of SMF has been specified on the JOURNALMODEL definition for either the primary or secondary system log. JOURNALMODEL definitions for the system log must have a log stream type of either MVS or DUMMY.

System action: An exception entry is made in the trace table and CICS is terminated. CICS can not operate with an SMF system log.

User response: Change the JOURNALMODEL definition so that a log stream type of either MVS or DUMMY is specified.

Module: DFHL2SLN

XMEOUT Parameters: *applid, journalname*

Destination: Console

DFHLG0734 *applid* **A severe error (code *X'code*) has occurred while accessing the CICS system log. CICS will be terminated.**

Explanation: The CICS log manager has detected a severe error while writing to or reading from the primary or secondary system log. The nature of the error is indicated by a previous CICS message. The code *code* is the exception trace point ID which uniquely identifies the place where the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken and CICS is terminated immediately. CICS cannot tolerate a failure of this nature for the system log.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Using the previous message as a guide, correct the problem and restart CICS, specifying the SIT START parameter as AUTO.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHL2SLE

XMEOUT Parameters: *applid, X'code'*

Destination: Console

DFHLG0735 *applid* **A failure has occurred while {writing to | reading from} the system log (*journalname*). Access to the system log has been lost. CICS will be terminated.**

Explanation: The CICS log manager has detected a failure while writing to or reading from the system log. The nature of the failure is indicated by a previous CICS message, and implies that data on the log has not been lost.

System action: An exception entry is made in the trace table, and CICS is terminated immediately. CICS cannot tolerate a failure of this nature for the system log.

User response: Using the previous message as a guide, correct the problem and restart CICS, ensuring that the appropriate SIT START parameter is specified in order to maintain data integrity.

If you cannot resolve the problem, or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHL2SLE

XMEOUT Parameters: *applid, {1=writing to, 2=reading from}, journalname*

Destination: Console

DFHLG0736 *applid* **A failure has occurred while reading from the system log (*journalname*). The requested data could not be found. CICS will be quiesced allowing some tasks to complete. Further work requires an initial start.**

Explanation: The CICS log manager is unable to locate previously hardened data when reading from the system log during the dynamic backout of a task. This implies that data on the system log has been lost. The integrity of the system log is therefore suspect.

System action: No more blocks are written to the system log. CICS is quiesced via a normal shutdown to let as many tasks complete as possible. Any tasks that enter dynamic backout from this point onwards are suspended. If the next CICS start is not an initial start, CICS will terminate before allowing user processing to begin because system log data may have been lost.

User response: Transactions that failed to complete before shutdown will need to be recovered by other means before starting CICS again.

You may need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHL2SLE

XMEOUT Parameters: *applid, journalname*

Destination: Console

DFHLG0737 *applid* **A failure has occurred while writing to the system log (*journalname*). A log record was longer than the maximum block size for the MVS log stream. CICS will be terminated.**

Explanation: The CICS log manager has detected a failure while writing to the system log. An attempt was made to write a log record longer than the maximum block size allowed for the MVS log stream. The size mismatch is indicated by a previous DFHLG0742 message written to the CSMT TD destination.

System action: An exception entry is made in the trace table, and CICS is terminated immediately. CICS cannot tolerate a failure of this nature for the system log.

User response: Using the DFHLG0742 message as a guide, define a larger block size for the MVS log stream structure that the system log will use. Then restart CICS, ensuring that the appropriate SIT START parameter is specified in order to maintain data integrity.

Module: DFHL2SLE

XMEOUT Parameters: *applid, journalname*

Destination: Console

DFHLG0738 *applid* **A failure has occurred while reading the system log (*journalname*). The requested data could not be found. CICS will be terminated. Further work requires an initial start.**

Explanation: The CICS log manager is unable to locate previously hardened data when reading from the system log during a restart of CICS. This implies that data on the system log has been lost. The integrity of the system log is therefore suspect.

System action: No blocks are written to the system log. CICS restart is abandoned. If the next CICS start is not an initial start, CICS will terminate before allowing user processing to begin because system log data may have been lost.

User response: Incomplete transactions will need to be recovered by other means before starting CICS again.

You may need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHL2SLE

XMEOUT Parameters: *applid, journalname*

Destination: Console

DFHLG0739 *applid* **An attempt to start transaction CSQC to perform a normal shutdown of CICS has failed. Perform a normal shutdown of CICS manually.**

Explanation: The CICS log manager attempted to start transaction CSQC to quiesce CICS via a normal shutdown but the attempt was unsuccessful. CICS was being quiesced because the integrity of the system log is suspect.

System action: An exception entry is made in the trace table, and a system dump is taken. CICS continues processing but any tasks that enter dynamic backout are suspended indefinitely and remain inflight.

User response: Issue CEMT PERFORM SHUTDOWN to quiesce CICS via a normal shutdown. This lets as many transactions complete as possible. Refer to the explanations for messages DFHLG0736 and DFHLG0740.

Also attempt to establish why transaction CSQC failed to start, and correct the problem. If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHL2SLE

XMEOUT Parameter: *applid*

Destination: Console

DFHLG0740 *applid* **While writing data to the system log (*journalname*), a lost data warning was received. CICS will be quiesced without logging, allowing tasks to complete. Further work requires an initial start.**

Explanation: The CICS log manager received a lost data warning when writing to the system log. This means that one or more blocks of previously hardened data have been lost from the system log. The integrity of the system log is therefore suspect.

System action: No more blocks are written to the system log. CICS is quiesced via a normal shutdown to let as many tasks complete as possible. Any tasks that enter dynamic backout from this point onwards are suspended. If the next CICS start is not an initial start CICS will terminate before allowing user processing to begin because system log data may have been lost.

User response: Transactions that failed to complete

DFHLG0741 • DFHLG0745I

before shutdown will need to be recovered by other means before starting CICS again.

You may need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHL2SLE

XMEOUT Parameters: *applid, journalname*

Destination: Console

DFHLG0741 *applid* **A failure to read data from the system log during dynamic backout has caused task *tasknum* to be suspended indefinitely. Tranid *tranid*, termid *termid*.**

Explanation: Task *tasknum* with tranid *tranid* running at termid *termid* has been suspended indefinitely. Data required during dynamic backout could not be located on the system log. This message is preceded by message DFHLG0736.

System action: The task is suspended. CICS in the process of quiescing via a normal shutdown.

User response: Refer to the message explanation for message DFHLG0736.

Module: DFHL2SLE

XMEOUT Parameters: *applid, tasknum, tranid, termid*

Destination: Console

DFHLG0742 *date time applid* **Log record too long for block. Record size *rsiz* bytes. Block size *bsiz* bytes. {MVS log stream | SMF journal name}.**

Explanation: The CICS log manager has detected an attempt to write a log record to an MVS logger log stream or SMF journal where the log record is too long to fit in the maximum block size allowed.

The message indicates the size of the log record and the maximum size of a block for that log stream. The size of the log record includes a CICS record header (up to 200 bytes for system log, 56 bytes otherwise) and any user prefix data. There must also be enough room in the block for a CICS block header (158 bytes for SMF, 52 bytes for system log, 40 bytes otherwise).

System action: An exception entry is made in the trace table. If the log stream is part of the CICS system log and the log record was not written by a user application or exit program then CICS is terminated. Otherwise an exception is passed back to the caller.

User response: First establish whether a log record of the indicated size is expected. If the log record was written by a user application or exit program using EXEC CICS WRITE JOURNALNAME or DFHJCJCX

WRITE_JOURNAL_DATA, the program could be in error.

If the log record is correct, you should increase the block size for an MVS logger log stream by defining a larger block size for the structure that the log stream will use. For an SMF journal, the block size is fixed at 32756 bytes and cannot be changed.

Module: DFHL2LB, DFHL2WF, DFHL2CHM

XMEOUT Parameters: *date, time, applid, rsiz, bsiz, {1=MVS log stream, 2=SMF journalname}*

Destination: CSMT

DFHLG0743 *date time applid* **Tail of log stream *lsn* deleted at block id *X'blockid'*.**

Explanation: The CICS log manager has trimmed the tail of MVS logger log stream *lsn*. All records that occurred before (older) the specified MVS logger block id *blockid* have been deleted.

This occurs during activity keypoint processing when CICS decides it no longer needs records beyond a certain age on a CICS system log log stream.

System action: CICS continues processing.

User response: None.

Module: DFHL2CHE

XMEOUT Parameters: *date, time, applid, lsn, X'blockid'*

Destination: CSMT

DFHLG0744 *date time applid* **All records in log stream *lsn* have been deleted.**

Explanation: The CICS log manager has deleted all records from MVS logger log stream *lsn*.

This occurs either at CICS startup when the start type is initial, or during activity keypoint processing, when CICS decides it no longer needs any of the records currently on a CICS system log log stream.

System action: CICS continues processing.

User response: None.

Module: DFHL2CC, DFHL2CHE

XMEOUT Parameters: *date, time, applid, lsn*

Destination: CSMT

DFHLG0745I *applid* **System log full scan has started.**

Explanation: The CICS log manager has started the full scan of the system log during startup.

This is a progress message.

System action: CICS continues processing.

User response: None. The message can be

suppressed with the SIT parameter MSGLVL=0.

Module: DFHL2CHA

XMEOUT Parameter: *applid*

Destination: Console

DFHLG0746 *date time applid* **System log scan trim record found. Primary logstream block id *X'pblock'*, secondary logstream block id *X'sblock'*.**

Explanation: The CICS log manager has encountered a trim record during the scan of the system log stream during startup. The primary logstream trim record block id is *pblock*, the secondary logstream trim record block id is *sblock*.

This is an informational message.

System action: CICS continues processing.

User response: None.

Module: DFHL2CHN

XMEOUT Parameters: *date, time, applid, X'pblock', X'sblock'*

Destination: CSMT

DFHLG07471 *applid* **System log scan continuing, count records processed.**

Explanation: The CICS log manager has processed *count* records during the scan of the system logstream at a CICS restart.

The message is produced every 'n' records - where 'n' is half of AKPFREQ or 500, which ever is the greatest.

This is a progress message.

System action: CICS continues processing.

User response: None. The message can be suppressed with the SIT parameter MSGLVL=0.

Module: DFHL2CHN DFHL2CH4

XMEOUT Parameters: *applid, count*

Destination: Console

DFHLG07481 *applid* **System log selective scan has started.**

Explanation: The CICS log manager has started the selective scan of the system log during startup.

This is a progress message.

System action: CICS continues processing.

User response: None. The message can be suppressed with the SIT parameter MSGLVL=0.

Module: DFHL2CHH

XMEOUT Parameter: *applid*

Destination: Console

DFHLG07491 *applid* **System log scan has completed.**

Explanation: The CICS log manager has finished the scan of the system log stream during startup.

This is a progress message.

System action: CICS continues processing.

User response: None. The message can be suppressed with the SIT parameter MSGLVL=0.

Module: DFHL2CHL

XMEOUT Parameter: *applid*

Destination: Console

DFHLG0750 *applid* **Transaction CSQC has failed to perform a normal shutdown of CICS. Perform a normal shutdown of CICS manually.**

Explanation: Transaction CSQC has failed to quiesce CICS via a normal shutdown because an error was detected. CICS was being quiesced because the integrity of the system log is suspect.

System action: A system dump is taken. CICS continues processing but any tasks that enter dynamic backout are suspended indefinitely and remain inflight.

User response: Issue CEMT PERFORM SHUTDOWN to quiesce CICS via a normal shutdown. This lets as many transactions complete as possible. Refer to the explanations for messages DFHLG0736 and DFHLG0740.

Attempt to establish why transaction CSQC failed to quiesce CICS, and correct the problem. If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHLGQC

XMEOUT Parameter: *applid*

Destination: Console

DFHLG0760 *date time applid* **Log stream *lsn* not trimmed by keypoint processing. Number of keypoints since last trim occurred *trimnum*. History point held by transaction: *transid*, task number: *trannum*.**

Explanation: The CICS log manager has been unable to trim the tail of MVS logger log stream *lsn*, during an activity keypoint.

CICS will attempt to trim the system log log streams during activity keypoint processing, to delete redundant

DFHLG0770 • DFHLG0771

data from the oldest end of the log stream (the tail).

Note that this message is only issued if the primary system log stream (DFHLOG) fails to be trimmed during a keypoint operation. It is not issued if a trim does not occur for the secondary system log stream (DFHSHUNT). This is since a trim of the primary system log stream is considerably more likely to occur per keypoint, and hence failures to trim the primary system log stream should be recognized, and investigated if required.

System action: CICS continues processing.

User response: This is an informational message, but should be treated as a warning of a potential problem if the number of keypoints that have been unable to trim the primary system log stream continues to increase. Occasional keypoints that fail to trim DFHLOG are not unexpected events. However, if the message is issued by a number of sequential keypoints then this warrants further investigation.

The keypoint operation was unable to trim the tail of DFHLOG because the oldest log records on the log stream belong to a Unit Of Work (UOW) that is still required. This may be a validly long-running UOW; alternatively, it may be part of a long-running task executing an application that generates log records but does not issue syncpoint requests regularly enough.

This may be a transient phenomenon due to an atypical long-running UOW. Review the number of keypoints that have been unable to trim the log. Check what message CICS issues for log stream *Isn* at the next activity keypoint. Message DFHLG0743 indicates the log stream is now successfully trimmed. Another DFHLG0760 message indicates a long-running UOW still exists on the system. If the log stream still cannot be trimmed, use the CEMT INQUIRE UOW command to review the oldest UOWs on the system.

The transaction identifier and the task number of the task whose UOW relates to the oldest data on DFHLOG are also provided in the DFHLG0760 message. The CEMT INQUIRE TASK command may be used to review them.

It is also worthwhile reviewing how often CICS is performing activity keypoints (as defined by the AKPFREQ system definition parameter).

Module: DFHL2CHE

XMEOUT Parameters: *date, time, applid, Isn, trimnum, trnsid, trannum*

Destination: CSMT

DFHLG0770 *applid* **A severe error has occurred while writing to the SMF log, which was accessed via journal *jname*. SMF response *X'resp*'.**

Explanation: The CICS log manager has detected a severe error while writing to the SMF log. This is

accessed via journal *jname*. SMF returns the response byte *X'resp*.

System action: An exception entry is made in the trace table, a system dump is taken and an exception is returned to the caller.

User response: Using the SMF response byte, diagnose and correct the problem. If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHL2LB

XMEOUT Parameters: *applid, jname, X'resp'*

Destination: Console

DFHLG0771 *date time applid* **A temporary error condition occurred during MVS logger operation {IXGCONN | IXGWRITE | IXGBRWSE | IXGDELETE | IXGQUERY } {CONNECT | DISCONNECT | | START | READCURSOR | READBLOCK | END | ALL | RANGE} for log stream *Isn*. MVS logger codes: *X'ret', X'rsn'*.**

Explanation: The CICS log manager made a call to the MVS logger to access a log, which returned a temporary error condition. The MVS logger operation that returned the error condition is identified in the message. The return and reason codes shown are those returned by the MVS logger.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: The log manager automatically retries the operation while the temporary error condition persists. This message is issued every thirty seconds following the first/previous issue.

User response: None. This is a temporary condition.

Module: DFHL2HS2, DFHL2HS3, DFHL2HS4, DFHL2HS5, DFHL2HS6, DFHL2HS7, DFHL2HS8, DFHL2HS9, DFHL2HSF, DFHL2HSG, DFHL2HSJ

XMEOUT Parameters: *date, time, applid, {1=IXGCONN, 2=IXGWRITE, 3=IXGBRWSE, 4=IXGDELETE, 5=IXGQUERY}, {1=CONNECT, 2=DISCONNECT, 3=, 4=START, 5=READCURSOR, 6=READBLOCK, 7=END, 8=ALL, 9=RANGE}, Isn, X'ret', X'rsn'*

Destination: CSMT

DFHLG0772 *applid* An error has occurred during MVS logger operation {IXGCONN | IXGWRITE | IXGBRWSE | IXGDELETE | IXGQUERY }{CONNECT | DISCONNECT | | START | READCURSOR | READBLOCK | END | ALL | RANGE | CHECKCONNSTATUS(YES)} for log stream *lsn*. MVS logger codes: X'ret', X'rsn'. Log stream attributes: SYSTEMLOG({YES | NO}), DASDONLY({YES | NO}), STRUCTNAME(structname), RETPD(X'retpd), AUTODELETE({YES | NO}).

Explanation: The CICS log manager made a call to the MVS logger to access a log, which returned an error condition. The MVS logger operation that returned the error condition is identified in the message, and the return and reason codes shown are those returned by the MVS logger. This is followed by some of the attributes which define the log stream. A structure name of ***** indicates that no structure is being used by this log stream.

If the error occurred during a log stream connection, these attributes may not have been updated to the correct values for the log stream and should be ignored. These attributes are only valid following a successful connection.

This message may be followed by other CICS messages, especially if the log stream is part of the CICS system log.

This situation can occur when CICS calls the MVS logger using an obsolete log stream connection token, when the MVS logger has been restarted following either a crash or a user request. A restart of the MVS logger implicitly disconnects all connections to it.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table, and in some circumstances, a system dump is taken.

The log manager returns an exception condition.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If the MVS logger was recently restarted, AUTO start CICS. Otherwise use the MVS logger return and reason codes to diagnose the problem. If you cannot resolve the problem or the problem recurs, there may be a more severe error. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHL2HS2, DFHL2HS3, DFHL2HS4, DFHL2HS5, DFHL2HS6, DFHL2HS7, DFHL2HS8,

DFHL2HS9, DFHL2HSF, DFHL2HSG, DFHL2HSJ, DFHL2HB

XMEOUT Parameters: *applid*, {1=IXGCONN, 2=IXGWRITE, 3=IXGBRWSE, 4=IXGDELETE, 5=IXGQUERY }, {1=CONNECT, 2=DISCONNECT, 3=, 4=START, 5=READCURSOR, 6=READBLOCK, 7=END, 8=ALL, 9=RANGE, 10=CHECKCONNSTATUS(YES)}, *lsn*, X'ret', X'rsn', {1=YES, 2=NO}, {1=YES, 2=NO}, structname, X'retpd', {1=YES, 2=NO}

Destination: Console

DFHLG0773 *applid* A severe error (code X'code') has occurred while accessing ({IXGCONN | IXGWRITE | IXGBRWSE | IXGDELETE }{CONNECT | DISCONNECT | | START | READCURSOR | READBLOCK | END | ALL | RANGE}) the log stream *lsn*.

Explanation: The CICS log manager has detected a severe error while attempting to access a log. The code X'code' is the exception trace point ID which uniquely identifies where the error was detected. This message is preceded by DFHLG0001, and usually followed by other messages.

System action: An exception entry is made in the trace table. A system dump will have been taken by DFHLG0001. The log manager returns a disaster condition to the caller. If the log is the CICS system log, a forward recovery log or autojournal log, another message is issued. Otherwise a disaster condition is returned to the application program.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Refer to other messages following this message for more information and guidance.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHL2HS2, DFHL2HS3, DFHL2HS4, DFHL2HS5, DFHL2HS6, DFHL2HS7, DFHL2HS8, DFHL2HS9, DFHL2HSF, DFHL2HSG, DFHL2HSJ

XMEOUT Parameters: *applid*, X'code', {1=IXGCONN, 2=IXGWRITE, 3=IXGBRWSE, 4=IXGDELETE }, {1=CONNECT, 2=DISCONNECT, 3=, 4=START, 5=READCURSOR, 6=READBLOCK, 7=END, 8=ALL, 9=RANGE}, *lsn*

Destination: Console

DFHLG0774 *applid* The MVS logger has returned an alert during operation {IXGCONN | CONNECT | IXGWRITE } for logstream *lsn*. The log stream data set directory is full. MVS logger codes: X'ret' X'rsn'.

Explanation: The CICS log manager has detected a warning while attempting to access a log stream. The

DFHLG0775 • DFHLG0777

log stream's data set directory is full.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

CICS continues normal operation until the current data set of the log stream becomes full. When this happens message DFHLG0772 is issued.

User response: You should delete data from the log stream tail before the current data set fills up. You may wish to take a copy of the data before deleting it. Alternatively you could use a new log stream, but this may be too disruptive.

Module: DFHL2HS2, DFHL2HSF

XMEOUT Parameters: *applid*, {1=IXGCONN CONNECT, 2=IXGWRITE }, *Isn*, *X'ret'*, *X'rsn'*

Destination: Console

DFHLG0775 *applid* The MVS logger has returned an alert during operation {IXGCONN CONNECT | IXGWRITE } for log stream *Isn*. The log stream writer offload task is failing. MVS logger codes: *X'ret'* *X'rsn'*.

Explanation: The CICS log manager has detected a warning while attempting to access a log stream. The writer offload task for the log stream is failing.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

CICS can continue normal operation until the log stream's structure becomes full. When this happens DFHLG0772 is issued.

User response: You should investigate and fix the failing log stream writer offload task, which is part of the MVS logger, before the log stream structure in the coupling facility fills up.

Module: DFHL2HS2, DFHL2HSF

XMEOUT Parameters: *applid*, {1=IXGCONN CONNECT, 2=IXGWRITE }, *Isn*, *X'ret'*, *X'rsn'*

Destination: Console

DFHLG0776 *applid* The MVS logger has returned an alert during operation IXGWRITE for log stream *Isn*. The log stream staging data set has failed. MVS logger codes: *X'ret'* *X'rsn'*.

Explanation: The CICS log manager has detected an alert while attempting to access a log stream. The log stream staging data set has failed.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

CICS continues normal operation, but the data written to the log stream structure is not being duplexed. Consequently, if the structure (or coupling facility) fails, the data cannot be recovered.

User response: You are recommended to shutdown CICS as soon as possible. You should investigate and fix the failing log stream, without losing the data.

If the failing log stream is the CICS system log and CICS was shutdown immediately, you should emergency restart CICS in order to recover the inflight transactions.

Module: DFHL2HSF

XMEOUT Parameters: *applid*, *Isn*, *X'ret'*, *X'rsn'*

Destination: Console

DFHLG0777 *applid* A temporary error condition occurred during MVS logger operation {IXGCONN | IXGWRITE | IXGBRWSE | IXGDELETE | IXGQUERY } {CONNECT | DISCONNECT | START | READCURSOR | READBLOCK | END | ALL | RANGE} for log stream *Isn*. MVS logger codes: *X'ret'*, *X'rsn'*.

Explanation: The CICS log manager made a call to the MVS logger to access a log, which returned a temporary error condition. The MVS logger operation that returned the error condition is identified in the message. The return and reason codes shown are those returned by the MVS logger.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: The log manager automatically retries the operation while the temporary error condition persists. This message is issued every thirty seconds following the first/previous issue.

User response: None. This is a temporary condition.

Module: DFHL2HS2, DFHL2HS3, DFHL2HS4, DFHL2HS5, DFHL2HS6, DFHL2HS7, DFHL2HS8, DFHL2HS9, DFHL2HSF, DFHL2HSG, DFHL2HSJ

XMEOUT Parameters: *applid*, {1=IXGCONN, 2=IXGWRITE, 3=IXGBRWSE, 4=IXGDELETE, 5=IXGQUERY }, {1=CONNECT, 2=DISCONNECT, 3=, 4=START, 5=READCURSOR, 6=READBLOCK, 7=END, 8=ALL, 9=RANGE}, *Isn*, *X'ret'*, *X'rsn'*

Destination: Console

DFHLG0778 *applid* The MVS logger has returned an error during operation IXGCONN CONNECT for log stream *Isn*. CICS does not have authority to perform this operation. MVS logger codes: *X'ret'* *X'rsn'*.

Explanation: The CICS log manager has detected an error while attempting to access a log stream. CICS region userid has not been defined to the MVS logger with the authority to perform this operation.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

Ensure that the CICS region userid has authority to access the log stream. For further guidance, see the *CICS RACF Security Guide*.

Module: DFHL2HS2

XMEOUT Parameters: *applid, Isn,X'ret', X'rsn'*

Destination: Console

DFHLG0779 *applid* The MVS logger has returned an error during operation IXGCONN CONNECT for log stream *Isn*. The log stream is being deleted by another program. MVS logger codes: *X'ret'* *X'rsn'*.

Explanation: The CICS log manager has detected an error while attempting to access a log stream. The log stream is being deleted by a request from another program and CICS cannot connect to it until this program has finished.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log stream is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

You will need to understand why another program was deleting the log stream. Either prevent such a conflict from occurring in the future, or allocate a different log stream to CICS.

Module: DFHL2HS2

XMEOUT Parameters: *applid, Isn,X'ret', X'rsn'*

Destination: Console

DFHLG0780 *applid* The MVS logger has returned an error during operation IXGCONN CONNECT for log stream *Isn*. Some data previously written to this log stream has been lost. MVS logger codes *X'ret'* *X'rsn'*.

Explanation: The CICS log manager has detected an error while attempting to access a log stream. Some of the data written to this log stream has been permanently lost.

This message is issued only if the log stream is a general log (not a CICS system log).

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller.

User response: This log stream is a general log, therefore it must be deleted and redefined before it can be used by CICS again.

If the log stream is used as a forward recovery log, take a fresh backup of all data sets that use this log stream as soon as possible.

If the log stream is used as a user journal, the associated journal needs to be reenabled before it can be used again. To do this, issue the command

```
SET JOURNALNAME(...) RESET
```

Use the MVS logger return and reason codes to further diagnose the problem.

Module: DFHL2HS2

XMEOUT Parameters: *applid, Isn,X'ret', X'rsn'*

Destination: Console

DFHLG0781 *applid* The MVS logger has returned an error during operation IXGCONN CONNECT for log stream *Isn*. The maximum number of log stream connections that the MVS logger can support has been reached. MVS logger codes: *X'ret'* *X'rsn'*.

Explanation: The CICS log manager has detected an

DFHLG0782 • DFHLG0784

error while attempting to access a log stream. The maximum number of log stream connections that the MVS logger can support has been reached.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

It may be possible to retry this transaction later when other work has completed and the number of concurrent transactions has reduced. Otherwise you should investigate your usage of log streams within the sysplex with a view to reducing the number of log streams that need to be connected concurrently.

Module: DFHL2HS2

XMEOUT Parameters: *applid, Isn,X'ret', X'rsn'*

Destination: Console

DFHLG0782 *applid* **The MVS logger has returned an error during operation {IXGCONN CONNECT | IXGWRITE} for log stream Isn. The MVS logger does not have authority to access the log stream structure. MVS logger codes X'ret' X'rsn'.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. The MVS logger does not have the authority to access the log stream structure.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

Ensure that the MVS logger address space has authority to access the log stream structure.

Module: DFHL2HS2, DFHL2HSF

XMEOUT Parameters: *applid, {1=IXGCONN*

CONNECT, 2=IXGWRITE}, Isn,X'ret', X'rsn'

Destination: Console

DFHLG0783 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream Isn. CICS attempted to connect to a log stream model, which is not possible. MVS logger codes X'ret' X'rsn'.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. CICS attempted to connect to a log stream model, which is not possible.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

It is possible that a user journal definition has been defined with the wrong log stream name or that the log stream has been defined incorrectly to have the MODEL(YES) attribute. See the *CICS System Definition Guide* for guidance on defining user journals.

Module: DFHL2HS2

XMEOUT Parameters: *applid, Isn,X'ret', X'rsn'*

Destination: Console

DFHLG0784 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream Isn. You cannot connect to a DASDONLY log stream that is already connected to another MVS image. MVS logger codes: X'ret' X'rsn'.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. The MVS logger rejected the connect request because the log stream is of type DASDONLY and is already connected to another MVS image.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward

recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

Log streams of type DASDONLY were designed to work within the scope of a single MVS image only (although the MVS image itself can still be part of a sysplex).

The possibilities are;-

- The connect request is using the wrong log stream name.
- The current connection is using the wrong log stream name.
- The log stream was wrongly defined as being of type DASDONLY.

Module: DFHL2HS2

XMEOUT Parameters: *applid, lsn, X'ret', X'rsn'*

Destination: Console

DFHLG0785 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream *lsn*. This is a DASDONLY log stream, which is not supported by the current system release level. MVS logger codes: *X'ret' X'rsn'*.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. The MVS logger rejected the connect request because the log stream is of type DASDONLY and is not supported by the current system release level.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

Log streams of type DASDONLY are supported by system release level OS/390 2.4 or later.

The possibilities are;-

- CICS was running on the wrong system.
- The log stream was wrongly defined as being of type DASDONLY.
- The connect request is using the wrong log stream name.

Module: DFHL2HS2

XMEOUT Parameters: *applid, lsn, X'ret', X'rsn'*

Destination: Console

DFHLG0786 *applid* **The MVS logger has returned an error during operation IXGCONN CONNECT for log stream *lsn*. The MVS logger failed to find a suitable coupling facility for the log stream structure. MVS logger codes: *X'ret' X'rsn'*.**

Explanation: The CICS log manager has detected an error while attempting to access a log stream. The MVS logger failed to find a suitable coupling facility for the log stream structure.

For further guidance, see the *OS/390 MVS Programming: Assembler Services Reference*.

System action: An exception entry is made in the trace table.

The log manager returns an exception condition to the caller. If the log is the CICS system log, a forward recovery log or an autojournal log, another message is issued. Otherwise an exception condition is returned to the application program.

User response: Refer to any messages issued subsequently for guidance. Use the MVS logger return and reason codes to further diagnose the problem.

You should investigate your usage of the coupling facility resource within the sysplex.

Module: DFHL2HS2

XMEOUT Parameters: *applid, lsn, X'ret', X'rsn'*

Destination: Console

DFHLG0787 *applid* **CICS is attempting to read a blockid that does not belong to the current chain. Read blockid: *X'blkid1'*; Chain History Point: *X'blkid2'*.**

Explanation: The requested blockid is a lower relative number than the Chain History Point blockid, which means the CICS log manager has requested a block which was written earlier than the current logical start of the chain. This indicates an internal logic error within CICS.

The blockid of the requested block, and the blockid representing the Chain History Point for the log block chain in question, are shown in the message.

System action: An exception entry is made in the trace table and a system dump is taken, and the CICS log manager returns an exception condition.

If the failure occurred while CICS was reading from the system log, message DFHLG0736 will follow, and a quiesce of CICS will be initiated.

DFHLOG0788 • DFHLOG0800

User response: The logstream should be printed before CICS is restarted, using the DFHJUP utility. For guidance in using this, refer to the *CICS Operations and Utilities Guide*. If the failure occurred for the CICS system log, print both the primary and secondary CICS system log logstreams before restarting CICS.

Refer to any messages issued subsequently for further guidance.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHL2BLC

XMEOUT Parameters: *applid, X'blkid1', X'blkid2'*

Destination: Console

DFHLOG0788 *applid* **The System Log journals DFHLOG and DFHSHUNT have been defined on the same MVS logstream (logstream). This is invalid. CICS will terminate.**

Explanation: When connecting to the DFHLOG and DFHSHUNT journals, the CICS Logger Domain has detected that both journals are defined on the same MVS logstream. This is invalid.

System action: An exception entry is made in the trace table. A system dump is taken and CICS is terminated immediately. CICS cannot tolerate a failure of this nature for the system log.

User response: Correct the JOURNALMODEL definitions used to define the DFHLOG and DFHSHUNT journals and restart the system.

Module: DFHL2SLE

XMEOUT Parameters: *applid, logstream*

Destination: Console

DFHLOG0789 *date time applid* **Deletion of log stream *lsn* data was suppressed by the Logger Resource Manager Interface. MVS Logger codes: *X'ret', X'rsn'*.**

Explanation: When the CICS log manager issued an IXGDELETE request to delete data from the log stream, the Logger Resource Manager Interface suppressed the delete operation.

System action: An exception entry is made in the trace table.

User response: This may be expected behaviour. Check the status and settings of the Logger Resource Manager Interface, in relation to the meaning of the reason code from the IXGDELETE request.

Module: DFHL2CHE, DFHL2CC

XMEOUT Parameters: *date, time, applid, lsn, X'ret', X'rsn'*

Destination: CSMT

DFHLOG0800 *applid* **The MVS logger failed to locate a blockid requested by the CICS log manager. Missing blockid: *X'blkid1'*; Chain History Point: *X'blkid2'*.**

Explanation: The MVS logger has returned an IxgRsnCodeNoBlock (00000804) Reason Code to the CICS log manager. This means that the log block requested by CICS could not be located by the MVS logger.

The blockid of the requested block, and the blockid representing the Chain History Point for the log block chain in question, are shown.

System action: This is an informational message to provide the blockid of the missing block, and the blockid of the Chain History Point for the chain which should contain the requested block.

This message will have been preceded by message DFHLOG0772. An exception trace was written and a system dump taken.

If the failure occurred while CICS was reading from the system log message DFHLOG0736 will follow, and a quiesce of CICS will be initiated.

User response: Compare the requested blockid with the Chain History Point blockid. If the requested blockid is equal to, or a higher relative number than, the Chain History Point, the blockid represents a log block which CICS is still validly interested in and which should be available from the MVS logger.

If the requested blockid is a lower relative number than the Chain History Point blockid, then the CICS log manager has requested a block which was written earlier than the current logical start of the chain. This indicates an internal logic error within CICS.

The logstream should be printed before CICS is restarted, using the DFHJUP utility. For guidance in using this, refer to the *CICS Operations and Utilities Guide*. Note if the failure occurred for the CICS system log then print both the primary and secondary CICS system log logstreams before restarting CICS.

Refer to any messages issued subsequently for further guidance.

If the error condition persists, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHL2BLC

XMEOUT Parameters: *applid, X'blkid1', X'blkid2'*

Destination: Console

DFHLMnnnn messages

DFHLM0001 *applid* An abend (code *abcode*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *abcode* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

If there is an MVS code, look it up in the relevant MVS codes manual which is detailed in the book list in the front of this manual. Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHLMMDM, DFHLMDS, DFHLMIQ, DFHLMMLM

XMEOUT Parameters: *applid, abcode, X'offset', modname*

Destination: Console

DFHLM0002 *applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point ID which uniquely identifies what the error is and where the error was detected. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS will continue unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Inform the system programmer. This indicates a possible error in CICS code. The severity of its impact will depend on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHLMMDM, DFHLMDS, DFHLMIQ, DFHLMMLM

XMEOUT Parameters: *applid, X'code', modname*

Destination: Console

DFHLM0004 *applid* A possible loop has been detected at offset *X'offset'* in module *modname*.

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset *X'offset'*. This is the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have

DFHLM0006 • DFHMC4000

specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it will be necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS will purge a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* in the message will be terminated and CICS will continue.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname* and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHLMMDM, DFHLMDS, DFHLMIQ, DFHLMMLM

XMEOUT Parameters: *applid, X'offset', modname*

Destination: Console

DFHLM0006 *applid* **Insufficient storage to satisfy Getmain (code *X'code*) in module *modname*. MVS code *mvscode*.**

Explanation: An MVS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request. The code *X'code* is the

exception trace point id which uniquely identifies the place where the error was detected.

This error has occurred above the 16M line.

The code *mvscode* is the MVS GETMAIN return code.

System action: An exception entry is made in the trace table (code *code* in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS will continue unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Inform the system programmer. If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the user response suggested for these messages.

If CICS is still running, the problem may be a temporary one which will right itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

Try decreasing the overall size limits of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. If CICS is not already terminated, you will need to bring CICS down to do this. See the *CICS System Definition Guide* or the *CICS Performance Guide* for further information on CICS storage.

Module: DFHLMMDM, DFHLMDS, DFHLMIQ, DFHLMMLM

XMEOUT Parameters: *applid, X'code', modname, mvscode*

Destination: Console

DFHMCnnnn messages

DFHMC4000 CICS SYNAD EXIT TAKEN FOR *dscname*, INPUT MSG TRUNCATED.

Explanation: This message is issued when the SYNAD exit is taken for an input queue. *dscname* represents the DSCNAME.

System action: The DCB is closed and then opened again. The data is truncated to the specified block size and passed to the user.

User response: Increase the block size or reduce the length of input.

Module: MVS data management determines the problem. This message is issued from the CICS-provided SYNAD routine generated in the terminal control table (TCT).

Destination: Console

DFHMC4001I *date time applid* **Error purge delay inoperative, {transid | invalid req | unexpected} error**

Explanation: An error return code has been received from the interval control program (ICP) during initiation of the purge delay transaction, CSPQ.

The return code is caused by one of the following.

- A TRANSID error.
- An INVALID REQ error.
- An UNEXPECTED error.

System action: Purge delay does not operate for this execution of CICS. A dump is taken.

User response:

- For a TRANSID error, define transaction CSPQ.

- For an INVALID REQ, the ICP returned an INVALID REQUEST return code in response to the INITIATE request. Determine why this has occurred and correct the problem.
- For an UNEXPECTED error, the ICP returned an unrecognized error code in response to the INITIATE request. The error code can be found in the dump at label MCPINERR in program DFHMCP. Determine why this has occurred and correct the problem.

Module: DFHMCP

XMEOUT Parameters: *date, time, applid, {1=transid, 2=invalid req, 3=unexpected}*

Destination: CSMT

DFHMEnnnn messages

DFHME0001 *applid* **An abend (code xxx/yyyy) has occurred at offset X'offset' in module modname.**

Explanation: An abnormal end or program check has occurred in module *modname*.

The code *xxx/yyyy* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code (for example AKEA) or a number referring to a CICS message (for example 1310 refers to CICS message DFHTS1310).

System action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this error may not be critical, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Since the abend affects the national language modules in the message (ME) domain, CICS is not automatically terminated. However, you may decide that your system should not be allowed to run without these modules, in which case you need to bring CICS down.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in this manual. Look up the CICS alphanumeric code in this manual. This code tells you, for example, whether the error was a program check, an abend, a runaway, or a recovery percolation.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEDM, DFHMEME, DFHMESR

Destination: Console

DFHME0002 *applid* **An error (code X'code') has occurred in module modname.**

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point id which uniquely identifies the place where the error was detected.

System action: A bad return code is sent to the caller of the message (ME) domain. If the call is made by the domain manager, DFHDMDM, CICS is terminated by the domain manager, and a message is issued to this effect. However, if the message is issued by a message domain module, CICS is allowed to continue.

An exception entry is made in the trace table. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this error may not be critical, CICS is not terminated immediately, even if you have specified **terminate** in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Inform the system programmer as this message indicates a severe error in CICS code. Its impact may or may not be severe, depending on the circumstances. For example, if it only occurs once and CICS has not been terminated by the domain manager, you may decide to continue to run and bring CICS down at a convenient time. But if the message recurs or if you cannot run without the full use of all CICS messages, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

DFHME0004 • DFHME0006

Module: DFHMEDM, DFHMEME, DFHMESR, DFHMEWT

Destination: Console

DFHME0004 *applid* **A possible loop has been detected at offset X'offset' in module modname.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'offset'. This is the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. This situation may not be an error, or if it is an error it may not be critical, so CICS is not terminated immediately, even if you have specified **terminate** in the dump table. CICS will purge the runaway task if you have specified this in the SIT.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This error affects message generation, and the message (ME) domain does not automatically terminate CICS. You should decide whether the problem is serious enough to bring CICS down.

Since some transactions can use a lot of CPU time, this message may have been caused by a long-running transaction. Usually, CICS terminates a task which it considers to be a runaway task. It does this termination when the task exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds).

If you have declared ICVR=0, you have to terminate the task yourself if you consider that it has gone into a loop. Purge the task using the CEMT transaction.

If CICS has purged the task and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time in order to do this.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEDM, DFHMESR, DFHMEME

Destination: Console

DFHME0006 *applid* **Insufficient storage to satisfy GETMAIN (code X'code) in module modname. MVS code mvscode.**

Explanation: An MVS GETMAIN was issued by module *modname*, but there was insufficient storage

available to satisfy the request. The code X'code' is the exception trace point ID which uniquely identifies the place in the code where the error occurred. The code *mvscode* is the MVS GETMAIN return code.

System action: An exception entry is made in the trace table with code X'code'. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated immediately, even if you have specified **terminate** in the dump table. However, if this error indicates a general problem with storage, CICS could be abnormally terminated by the CICS storage manager. A message will be issued to this effect.

If the GETMAIN fails for DFHMEDM, a return code is sent to the domain manager, DFHDMDM, and CICS is terminated by the domain manager. A message is issued to this effect.

If the GETMAIN fails for the message domain DFHMEME, it could occur in one of four places. The code X'code' indicates which GETMAIN has failed as follows

Code	Meaning
------	---------

X'0340 -	
-----------------	--

	During formatting of TD message
--	---------------------------------

	The message is not issued.

	The rebuilt English message is not issued.
--	--

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If CICS is terminated, look out for the relevant termination messages from the storage manager or the domain manager and the user response suggested.

Try decreasing the size limits of the DSAs or EDSAs. Or, try increasing the size of the whole region, if it is not already at maximum size. You will need to bring CICS down to do this, if it has not already been terminated.

The problem may be a temporary one which rights itself if more storage becomes available. If CICS is still running, and you can manage without the full set of CICS messages, you may decide to continue and bring CICS down at a convenient time.

You can get diagnostic information about the MVS return code by consulting the relevant MVS codes manual.

Module: DFHMEDM, DFHMEME

Destination: Console

DFHME0101 *applid* **An error (code *X'code*) occurred while writing message *msgno* to transient data destination *dest***

Explanation: CICS has tried to write message *msgno* to the transient data destination *dest*. This has failed for one of the following reasons

1. Destination *dest* has not been defined in the DCT.
2. Destination *dest* is currently disabled.
3. The transient data queue for destination *dest* is full.
4. An I/O error has occurred writing to destination *dest*.

The code *X'code* is the exception trace point ID which uniquely identifies the place where the error was detected.

System action: An exception entry is made in the trace table and CICS continues.

User response: Check that *dest* is defined in your DCT.

If (1), add a new entry to the DCT for destination *dest*. Alternatively, if *msgno* is a DFHDB2xxx message, refer to the installed DB2CONN object. Change any of the *msgqueue1*, *msgqueue2* and *msgqueue3* parameters of the DB2CONN that specify destination *dest* so that they name a valid destination defined in the DCT.

If (2), use CEMT to reset the status of the queue to 'enabled'.

If (3), allocate more space for the queue, or reset the trigger level (if messages are being issued to a terminal or printer).

If (4), investigate and fix the cause of the I/O error.

Module: DFHMEME

Destination: Console

DFHME0102 *applid* **An error (code *X'code*) has occurred in module *modname* while producing message *msgno*.**

Explanation: A severe error has been detected and the message (ME) domain has been unable to produce message *msgno*. The code *X'code* is the exception trace point ID which uniquely identifies the place where the error was detected.

System action: A return code is sent to the caller of the message (ME) domain, but since the call was made by a message domain module, CICS is allowed to continue.

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated immediately, even if you have specified **terminate** in the dump table.

Message DFHME0116 should be produced containing

the symptom string for this problem.

User response: Inform the system programmer as this indicates a severe error in CICS code. However, its impact may not be serious. For example, if the error only occurs once and you can run without message *msgno*, you may continue to run and bring CICS down at a convenient time.

However, if the message recurs (and on each recurrence there is a different message number *msgno*), or if you cannot run without the full use of all CICS messages, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEBU, DFHMEIN, DFHMEWT, DFHMEME

Destination: Console

DFHME0105 *applid* **Insufficient storage to load module *modname*.**

Explanation: An MVS load has failed. The message language module *modname* could not be loaded as there was insufficient storage available. The language module is defined in the SIT for messages in a particular language, or is the default language module.

The default language is always used for messages sent to transient data queues and to consoles (providing that it is not a double-byte language in which case the message is sent to the console in English). If the default language module cannot be loaded, no messages can be delivered. Terminals can have messages in the default language or in another chosen language. If the chosen language module cannot be loaded, terminal messages use the default language instead.

System action: An exception entry is made in the trace table and a dump is taken, unless you have specifically suppressed dumps in the dump table. As this may not be a critical problem, CICS is not terminated unless the default language module cannot be loaded, (even if you have specified **terminate** in the dump table).

If the missing module is not the default language module, CICS uses the default language for messages to terminals. If the default language module cannot be loaded, a return code is sent to the domain manager and CICS is terminated by the domain manager.

User response: If the default language is in operation and this is acceptable, you need not bring CICS down. (Or you may bring CICS down at a more convenient time.)

If the default language is in operation and this is not acceptable, or if the default language module itself is missing, try decreasing the size limits of the DSAs or EDSAs. Or you could try increasing the size of the

DFHME0106 • DFHME0108

whole region, if it is not already at maximum size.

Alternatively, you may be able to get more storage space by removing unwanted language modules from storage. To do this, bring CICS down, remove the language codes you do not need from the SIT or respecify the list of language modules as an override parameter, and restart CICS. You should not remove the default language module from the SIT.

Module: DFHMEDM

Destination: Console

DFHME0106 *applid* **Module *modname* could not be loaded. REGISTER 1 = X'nnnnnnnn' and REGISTER 15 = X'nnnnnnnn'**

Explanation: The message language module *modname* could not be loaded. The reason that it could not be loaded is given by the contents of registers 1 and 15, which are returned by MVS.

System action: If the missing module is not the default language module, CICS uses the default language for messages.

If the default language module is missing, a return code is sent to the domain manager and CICS is terminated.

An exception entry is made in the trace table and a dump is taken, unless you have specifically suppressed dumps in the dump table. As this may not be a critical problem, CICS is not terminated unless the default language module cannot be loaded (even if you have specified **terminate** in the dump table).

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If the default language is in operation and this is acceptable, you need not bring CICS down, or you may do so at some convenient time.

If the default language is in operation and this is not acceptable, or if the default language module itself is missing, consult the MVS messages and codes manual to check the return codes displayed in the message. The return codes indicate why the module could not be loaded.

Module: DFHMEDM

Destination: Console

DFHME0107 *applid* **Module *modname* cannot be found in the library.**

Explanation: The message load module *modname* was not found in the library defined in the JCL for the CICS job. This load module is a language module for messages. It is either a module which has been defined in the SIT for messages in a particular language, or it is the default language module.

The default language is always used for messages sent

to transient data queues and to consoles (providing that it is not a double-byte language, in which case the message is sent to the console in English). If the default language module is missing no messages can be delivered.

Terminals can have messages in the default language or in another chosen language. If the chosen language module is missing, terminal messages use the default language instead.

System action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. But since this may not be a critical error, CICS is not terminated immediately, even if you have specified this in the dump table, unless the default language module is missing, (even if you have specified **terminate** in the dump table).

If the missing module is not the default language module, CICS uses the default language for messages. If the default language module is missing, a return code is sent to the domain manager and CICS is terminated.

User response: This error could have occurred because of a problem in a library or in the SIT. If the default language is in operation and this is acceptable, you need not bring CICS down, or you may do so at some convenient time.

The missing module may have been placed in the wrong library, or the wrong or misspelled module name may have been used in the right library.

If the default language is in operation and this is NOT acceptable, link the missing module into the library defined in the JCL for your CICS job by correcting whichever of the problems has occurred. You have to bring CICS down to do this.

It is also possible that an incorrect or misspelled language code has been used in the SIT. In this case, you have to bring CICS down, reinstall your chosen language code as a system initialization parameter, and restart CICS.

If you no longer need this language module, you should remove it from the SIT at the next convenient opportunity.

If the default language module is missing, CICS is terminated by the domain manager. You need to discover whether the fault is in the library or the SIT and follow the appropriate procedure above.

Module: DFHMEDM

Destination: Console

DFHME0108 *applid* **Message *msgno* cannot be found in module *modname*.**

Explanation: Message *msgno* should have been delivered, but was not found in message language module *modname*.

This module is the national language module specified in the SIT by the user which gives messages in a chosen language.

System action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue to run without message number *msgno*.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

Note that this message will appear after maintenance has been applied to the CICS message domain if there are older, pre-maintenance, versions of the DFHMETXl message modules elsewhere in the STEPLIB concatenation.

If you have just applied maintenance and are encountering this message, check for, and remove, older versions of the message modules in the STEPLIB concatenation.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEIN

Destination: Console

DFHME0109 *applid* **Message set *setname* could not be found in module *modname* while producing message *msgno*.**

Explanation: Message set *setname* was not found in the message language module *modname*.

The *setname* is the first two characters after the DFH in CICS messages (for example, LD or 21), which is followed by the message number.

System action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without message number *msgno*.

If you are using a message table which has been

created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEIN

Destination: Console

DFHME0110 *applid* **Optional value *nn* is missing from insert *ii* for message *msgno*.**

Explanation: Optional insert value *nn* was requested for insert *ii* on a call to the message domain but could not be found in the definition template for message *msgno*.

System action: CICS delivers the message with ??? in place of the insert *ii* as it cannot resolve which optional value has been requested for the insert.

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This message indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without message *msgno*.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEBU

Destination: Console

DFHME0111 *applid* **Insert *ii* is missing for message *msgno*.**

Explanation: Insert *ii* is required for message *msgno*. The insert was not found.

System action: CICS delivers the message with ??? in place of the missing insert *ii*.

An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. But since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Ensure that you have loaded the

DFHME0112 • DFHME0114

correct message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates a severe error in CICS code. However, its impact may not be serious. For example, the error may only occur once, or you may decide to continue without message *msgno*.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEBU

Destination: Console

DFHME0112 *applid* Insert number *ii* is invalid for message *msgno* (code *X'code*).

Explanation: Insert *ii*, supplied on the call to the message (ME) domain, was invalid. For example, it may have been a decimal insert with a length greater than 4 bytes.

The code *X'code* uniquely identifies the occurrence of the invalid insert.

System action: CICS delivers the message with ??? in place of the invalid insert *ii*.

An exception entry with code *X'code* is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Ensure that you have loaded the correct message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates an error in CICS code. However, its impact may not be serious. For example, the error may only occur once, or you may decide to continue without message *msgno* being produced.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEBU

Destination: Console

DFHME0113 *applid* Incorrect parameters used in call to DFHMEME for message *msgno*.

Explanation: A call to the message (ME) domain for message *msgno* was made with an invalid combination of parameters.

System action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS is not terminated, even if you have specified **terminate** in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Ensure that you have loaded the correct message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates a severe error in CICS code. However, its impact may not be serious. For example, the error may only occur once, or you may decide to continue without message *msgno*.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEME

Destination: Console

DFHME0114 *applid* There are no destinations specified for message *msgno*

Explanation: There was no destination *destid* specified in the message language module for message *msgno*. This error could occur if the message language module has been corrupted or is not at the correct release level.

System action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this error may not be critical, CICS is not terminated even if you have specified **terminate** in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Ensure that you have loaded the correct message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job

contains the correct message language module.

This message indicates a severe error in CICS code. However, its impact may not be serious. For example, the error may only occur once, or you may decide to continue without message *msgno* being produced. If you feel it is not critical, you can continue to run your system without message *msgno* until a convenient time comes to resolve the problem.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEIN

Destination: Console

DFHME0115 *applid modname* **Message module for language *language* not found. The default module *modnameb* is used.**

Explanation: The message language module *modname* for the national language *language* could not be found in the list of available modules. It is not found if a CICS program calls for a message in a particular language from the message domain, but the message domain cannot locate the message in that language.

The message language module may be unavailable because the LOAD for the appropriate message language module failed at initialization. In this case, there will have been an earlier message about the failed LOAD. Alternatively, the module may not be available because the language specified on the terminal definition, or userid definition, was not specified in the SIT or was specified incorrectly.

System action: An exception entry is made in the trace table. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

All messages which should appear in language *language* in module *modname* appear in the system default language *modnameb* instead.

User response: Your action depends on whether the use of the default language for messages is acceptable or not. If it is acceptable, you can delay taking any action until a convenient time. This may entail changing a terminal or userid definition if that is the cause of the problem.

If the use of the default language is not acceptable, and if module *modname* failed to load at initialization, take the action described for the appropriate message about a failed LOAD issued during start-up.

Otherwise, bring CICS down and specify module *modname* in the SIT or respecify the list of language

modules as an override parameter, and restart CICS.

Module: DFHMEIN

Destination: Console

DFHME0116 *applid (Module:modname)* **CICS symptom string for message *msgno* is *symstring***

Explanation: Message *msgno* has been issued as the result of a possible CICS error.

Symptom string *symstring* has been produced to provide additional diagnostic information for IBM support.

System action: This message accompanies message *msgno* and has no effect on the system action. The system action is that stated in message *msgno*.

User response: Refer to the user response of message *msgno* which provides the necessary information to determine if the error is serious enough to be reported to IBM Support.

Module: DFHMEME

XMEOUT Parameters: *applid, msgno, symstring, modname*

Destination: Console

DFHME0117 *applid* **The Message User Exit point XMEOUT is unavailable for message *msgno***

Explanation: The message (ME) domain was unable to use the message user exit point 'XMEOUT' when it was processing message *msgno*. This is probably because it was invoked too early in CICS initialization. A response of KERNERROR has been returned to the message (ME) domain from the program which invokes the user exit, DFHAPEX.

System action: The message (ME) domain continues processing as this error is not severe. The message *msgno* which the message (ME) domain was trying to produce is not suppressed or rerouted by the message user exit. Instead, it is issued to the original destination defined for message *msgno*.

User response: None. You cannot suppress message *msgno* because the error has occurred too early in initialization.

Module: DFHMEME

Destination: Console

DFHME0118 *applid* **An error has occurred when calling the Message User Exit for message *msgno***

Explanation: The message (ME) domain has received an incorrect response from DFHAPEX, the program

which invoked the message user exit.

System action: The message (ME) domain will continue processing as this error is not severe. The message *msgno* which the message (ME) domain was trying to produce is not suppressed or rerouted but is issued to its original destination.

User response: This message indicates a probable error in the message user exit. Ensure that your message user exit program is working properly.

However, it is possible that the user exit invoking program DFHAPEX interface has been corrupted. DFHAPEX issues an exception trace entry to indicate that there is an error, but is not able to issue its own error message via the message (ME) domain as doing so would cause CICS to loop. In this case, you will need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEME

Destination: Console

DFHME0119 *applid* Message *msgno* has an invalid {*Destination* | *User Exit* | *Message Identification*} component

Explanation: The message (ME) domain has encountered an invalid component in the definition of message *msgno* in the message language module. The message language module may have been corrupted or be at the wrong release level.

System action: The ME domain produces an exception trace entry and continues processing. No dump is taken.

User response: Ensure that you are using the correct level of the message language module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates a severe error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without message number *msgno*. If you feel it is not important, you can continue to run your system without this message until a convenient time comes to resolve the problem.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEIN

Destination: Console

DFHME0120I *applid* Message *msgno* has been rerouted to its original destination.

Explanation: The message domain user exit point XMEOUT has attempted to route message *msgno* to a transient data (TD) queue while CICS is quiescing or terminating. After CICS shutdown has started, a message can only be rerouted to a TD queue if its original destination has a TD queue.

System action: The message is rerouted to its original destination.

User response: None. For programming information about the XMEOUT user exit, see the *CICS Customization Guide*.

Module: DFHMEME

XMEOUT Parameters: *applid*, *msgno*

Destination: Console

DFHME0121 *applid* The {*first* | *second*} attempt at formatting message *msgno*, TD queue *queuename* has failed - {*Invalid DBCS format* | *Unknown error*}

Explanation: The message (ME) domain was trying to produce message *msgno* (destined for transient data queue *queuename*). However, an invalid response has been returned from the message formatting routine, DFHMEFO. This error is probably due to invalid DBCS characters being found in either the message inserts or the message text. The message text is checked at definition time for mismatched shift-out and shift-in characters. However, adjacent shift-in and shift-out characters could appear in a message, for instance, if a double byte message insert has not been supplied correctly.

The message (ME) domain first tries to format the message into 128-byte segments. However, if the transient data queue has been defined with a different queue length, formatting is performed a second time using the new queue length. (Hence the reason for *first* or *second* attempts at formatting the message.)

System action: A dump is taken. The message domain does not issue the message being formatted. An exception trace entry is made by the formatting routine DFHMEFO.

User response: This message indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without the message *msgno*. If you feel it is not critical, you can continue to run your system without message *msgno* until a convenient time comes to resolve the problem.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance

from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEME

Destination: Console

DFHME0122 *applid* **The Message User Exit has returned invalid route code information for message number *msgno***

Explanation: The message user exit program has set an invalid route code as the destination of message *msgno*. Valid route codes are numbers 1 to 28 inclusive.

System action: The message (ME) domain ignores the invalid route code and defaults to the original destination defined for message *msgno* in the message language module.

User response: Check that your message user exit program sets valid route code information for message *msgno*.

Module: DFHMEME

Destination: Console

DFHME0123 *applid* **The Message User Exit has returned invalid TD queue information for message number *msgno***

Explanation: The message user exit program has set an invalid queue name as the destination of the message *msgno*. Valid queue names consist of 4 alphanumeric characters.

System action: The message (ME) domain ignores the invalid queue name and defaults to the original destination defined for message *msgno* in the message language module.

User response: Check that your message user exit program sets valid queue name information for message *msgno*.

Module: DFHMEME

Destination: Console

DFHME0124 *applid* **TD is unavailable for writing message *msgno* to TD queue *queuname***

Explanation: The message (ME) domain has tried to output message *msgno* to transient data queue *queuname*. However, transient data (TD) is not yet available. This situation may occur early in CICS initialization.

System action: If the message destination is CDBC, the message is rerouted to the console instead. If the message destination is any other TD queue, it is lost.

User response: The impact of this error may not be severe. For example, the error may only occur once, or

you may decide to continue without message *msgno*. If you feel it is not critical, you can continue to run your system without message *msgno* until a convenient time comes to resolve the problem.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEME

Destination: Console

DFHME0125 *applid* **The Message User Exit has returned an invalid return code *rc* for message *msgno***

Explanation: The message user exit has returned a return code *rc*, which is neither 0 or 4 when it was processing message *msgno*. (A return code of 4 indicates that the message is to be suppressed.)

System action: The message (ME) domain continues processing as normal and does not suppress or reroute the message. Instead, it issues the message as it was originally defined in the message language module.

User response: Check that your message user exit program is working properly, and that it is passing the correct return code back to the message (ME) domain.

Module: DFHMEME

Destination: Console

DFHME0126 *applid* **Error in SYMREC invocation. Return code in R15 = X'mmmm', Reason code in R0 = X'nnnn'.**

Explanation: While handling an error, CICS tried to write a symptom record to SYS1.LOGREC.

However, a further problem was detected while attempting to invoke the SYMREC service.

Return code X'mmmm in register 15 and reason code X'nnnn in register 0 indicate the reason for the error. This may be one of the following.

- CICS has been prevented from writing the symptom record to SYS1.LOGREC by the ASREXIT MVS installation exit. In this case a system dump is not produced.
- There is an error in the SYMRBLD macro. (This is the macro CICS uses to build its symptom records.)
- CICS has supplied invalid data to be added to the symptom record.
- There is an error in the SYMREC service. Examples of possible problems include a storage error, or insufficient space in the LOGREC buffer.
- The SYMREC service is currently inoperative.

System action: Processing continues and a system dump may be produced.

An exception trace entry (pointid=X'0806) is made in the

trace table which contains the symptom record which CICS attempted to write.

User response: Determine whether the error was caused by a problem in the format of the symptom record produced by CICS, or by a problem in the SYMREC service.

The meanings of the return and reason codes, together with additional information about the SYMREC service can be found in the OS/390 MVS Programming: Assembler Services Reference manual.

Return codes 0010 or 0014 indicate a problem in the SYMREC service which must be reported to the MVS System Administrator.

A return code of 000C and a reason code of 0F1C indicates that the ASREXIT installation exit has prevented CICS from writing the symptom record. This could be caused by an installation error. Report the problem to your MVS system administrator.

Any other return code indicates that the symptom record is invalid to the SYMREC service.

The impact of this error need not be severe, if for example, the problem occurs only as an isolated incident or on the production of a particular message. In these cases, this message can be ignored.

However, if the problem is persistent, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEWS

Destination: Console

DFHME0127 *applid* **A severe error (code X'code) has occurred in module modname.**

Explanation: An error has been detected in module *modname*. The code X'code is the exception trace point ID which uniquely identifies the place where the error was detected.

System action: An exception entry is made in the trace table. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

A dump is taken, unless you have specifically suppressed dumps in the dump table. But since this error may not be critical, CICS is not terminated immediately, even if you have specified **terminate** in the dump table.

No symptom string is produced for this message because the error has occurred in a module concerned with symptom strings.

User response: Inform the system programmer. This message indicates a severe error in CICS code. However, the impact of this error should not be severe

because the module DFHMEWS is not crucial to CICS functioning.

If the problem recurs, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEWS

Destination: Console

DFHME0128 *applid* **Message msgno has an invalid route code.**

Explanation: The routine which issues the console message was unable to do so as it encountered an invalid route code associated with message *msgno*. Valid route codes are numbers from 1 through 28.

This error could only happen if the route codes have become corrupted as they are being passed to the routine which issues the console message, DFHSUWT.

System action: The message (ME) domain issues an exception trace entry. Message *msgno* is not issued.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEME

Destination: Console

DFHME0129 *applid* **Unable to format console message msgno as it contains invalid DBCS characters.**

Explanation: The routine which attempted to format console message *msgno* was unable to do so as it was found to contain invalid double byte (DBCS) characters. For example, adjacent or unmatched pairs of shift-in and shift-out characters are invalid in a string of DBCS text.

This situation could occur if there are inserts in the message which contain, for example, a shift-out and a shift-in character with no double byte characters entered in between.

System action: The message (ME) domain continues processing but message *msgno* is not issued as it cannot be formatted. The message formatting routine, DFHMEFO, issues an exception trace entry. The routine which issues console messages, DFHSUWT, also issues an exception trace entry.

User response: Ensure that any double-byte information entered from a terminal which may be used as a message insert is entered correctly.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

Module: DFHMEME

Destination: Console

DFHME0130 *applid* Message *msgno* has an invalid descriptor code.

Explanation: The routine which issues the console message was unable to do so as it encountered an invalid descriptor code associated with message *msgno*. Valid descriptor codes are numbers 1 through 16.

This error could only happen if the descriptor codes have become corrupted as they are being passed to the routine which issues the console message, DFHSUWT.

System action: The message (ME) domain issues an exception trace entry. Message *msgno* is not issued.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEME

Destination: Console

DFHME0131 *applid* Unable to calculate length of message *msgno* due to message table corruption, code(*code*)

Explanation: The message (ME) domain could not calculate the length of the message *msgno* due to possible corruption of the message language module.

System action: A return code is sent to the caller of the message (ME) domain. The message *msgno* is not issued.

User response: Ensure that you are using the correct level of the message data module. That is, ensure that you have the correct language specified in the NATLANG system initialization parameter and that the library concatenation accessed by your CICS job contains the correct message language module.

This message indicates an error in CICS code. However, its impact may not be severe. For example, the error may only occur once, or you may decide to continue without message number *msgno*. If you feel it is not critical, you can continue to run your system without message *msgno* until a convenient time comes to resolve the problem.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEME

Destination: Console

DFHME0132 *applid* The User's Message Exit program has failed while processing message *msgno*

Explanation: The user's message exit program is either looping or has failed with a program check.

System action: The message (ME) domain continues processing and issues message *msgno* to its original destination. The user exit invoking program DFHAPEX issues an exception trace entry to indicate that the user's message exit program has failed, but it cannot issue its own error message via the message (ME) domain as doing so would cause CICS to loop.

User response: Disable your message exit program and ensure it is working properly.

Module: DFHMEME

Destination: Console

DFHME0133 *applid* Message *msgno* could not be found in module DFHMEMGT

Explanation: The message domain was trying to issue one of its own error messages to indicate that an error had occurred in the message domain. However, the message domain was unable to find the message it was attempting to issue in its own internal message table DFHMEMGT.

System action: An exception entry is made in the trace table by the message domain. A dump is taken, unless you have specifically suppressed dumps in the dump table. Since this may not be a critical error, CICS is not terminated, even if you have specified **terminate** in the dump table.

User response: This message indicates an error in CICS code. However, its impact may not be severe.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSUME

Destination: Console

DFHME0134 *applid* Message *msgno* has been truncated because it was too long.

Explanation: The message (ME) domain was trying to output message *msgno*, but truncated the message because it was too long. Message *msgno* is a conversational message to an operator which has exceeded the maximum size of 119 characters.

System action: The ME domain truncates the message to 119 bytes before issuing it. An exception trace entry is made and a dump taken, but processing continues.

User response: This message indicates that *msgno* has been incorrectly defined in the message table, or

that the inserts supplied to the message have caused it to exceed the size limit imposed on conversational messages. If enough information can be obtained from the truncated message, the impact of this error may not be severe. If necessary, you can continue to run your system without this message until a convenient time comes to resolve the problem.

If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEME

Destination: Console

DFHME0135 *applid* **The default language *language* specified in the SIT NATLANG parameter is invalid. It has been defaulted to E.**

Explanation: The default language is the first character in the NATLANG system initialization parameter. The default language *language* is not in the list of valid CICS language suffixes.

System action: CICS continues with a default language of E (US English).

User response: If you do not want a default language of E, change the first character in the NATLANG system initialization parameter to another valid CICS language suffix. See the *CICS System Definition Guide* for a list of valid CICS language suffixes.

Module: DFHMESR

Destination: Console

DFHME0136 *applid* **Message *msgno* is missing from national language module *modname*. Searching the English message table for the message text.**

Explanation: Message *msgno* cannot be issued in the specified language because the message was not found in the national language module *modname*.

This could be the result of a PTF containing message *msgno* not being applied to the module *modname*. In this case, the text of the missing message could be present in the English language message table DFHMET1E.

System action: An exception entry is made in the trace table. The message domain tries to find the message in the English language message table. If the message is not found in the English table either, message DFHME0108 is issued followed by a system dump.

User response: Run the MEU PTF update process to

ensure that any new messages have been applied to your language table *modname*, and rebuild this table. See the *CICS Operations and Utilities Guide* for guidance on this.

If message DFHME0108 follows this message, there is an error in CICS code and you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEIN

Destination: Console

DFHME0137 *applid* **Message *msgno* cannot be rerouted to a transient data destination by the message user exit XMEOUT.**

Explanation: The message *msgno* cannot be rerouted to a transient data destination via XMEOUT because by doing so, CICS could get into a loop.

System action: An exception entry is made in the trace table. The message (ME) domain ignores the queue destination returned by the message exit and defaults to the original destination defined for message *msgno* in the message language module.

User response: Alter your message user exit program to avoid rerouting the message *msgno* to a transient data destination. The *noreroute* indicator is passed by the message domain to the exit so that the exit program can check whether or not it is valid to reroute a particular message.

Module: DFHMEME

Destination: Console

DFHME0138 **Message *msgno* not issued by module because MVS WTO is short on storage**

Explanation: The message *msgno* cannot be written to the console because MVS is short on storage and the MVS WTO has abended with either abend code 878, 80A or 804 while trying to issue the message. The message domain module which was attempting to issue the message is *module*.

System action: An exception trace entry is written by the message domain and a dump is taken for dumpcode ME0138. Message DFHME0138 is written out in message text part of the dump summary instead of being sent to the console in order to avoid causing another abend.

User response: Ensure you have enough storage for MVS or reduce the storage requirements of your CICS system below 16MB. Try decreasing the limits of the CICS dynamic storage areas (DSAs), or increasing the MVS region size. To increase the MVS region size you must terminate CICS and change the MVS JCL REGION parameter. For more information about how to do this, see the *CICS Performance Guide*.

Module: DFHMEME, DFHSUME

Destination: SYSPRINT

DFHME0139 *applid* (**Module:modname**) **Message msgno has been suppressed by KILL processing.**

Explanation: Message *msgno* has been suppressed for a task that is being killed.

The message and system dump request have been suppressed because the error has been caused by the attempt to kill the task.

System action: The attempt to kill the task continues.

User response: None

Module: DFHMEME

XMEOUT Parameters: *applid, modname,msgno*

Destination: Console

DFHME0140 *applid* **CICSplex SM messages cannot be issued because the English message table modname cannot be found.**

Explanation: The message load module *modname* was not found in STEPLIB for the CICS job. This load module is required for CICSplex SM messages.

System action: An exception entry is made in the CICS trace table. Message domain stops processing this message and returns a disaster response to CICSplex SM which in turn cannot continue to issue messages because its message module has not been loaded.

User response: This error could have occurred because the CICSplex SM authorized library, which contains the default message load module, is not in the JCL for the CICS job. Ensure that the correct library is included in the STEPLIB concatenation of the CICS JCL and restart your CICS.

Module: DFHMEME

Destination: Console

DFHME0141 **Message msgno not issued by module because MVS WTOR is short on storage.**

Explanation: The message *msgno* cannot be written to the console because MVS is short on storage and the MVS WTOR has abended with abend code D23 while trying to issue the message. The message domain module which was attempting to issue the message is module.

System action: An exception trace entry is written by the message domain and a dump is taken for dump code ME0141. Message DFHME0141 is written out in

| the message text part of the dump summary instead of
| being sent to the console in order to avoid causing
| another abend.

| **User response:** Ensure you have enough storage for
| MVS or reduce the storage requirements of your CICS
| system below 16 MB.

| Try decreasing the limits of the CICS dynamic storage
| areas (DSAs), DSALIM, or increasing the MVS region
| size. To increase the MVS region size you must stop
| CICS and change the MVS JCL **REGION** parameter. For
| more information about how to do this, see the *CICS
| Performance Guide*.

| **Module:** DFHMEME

| **Destination:** Dump summary

DFHME0500 PLEASE ENTER A MESSAGE NUMBER.

Explanation: No search of the messages and codes file has been made because both the component ID and message number fields were blank when you pressed the ENTER key.

System action: The transaction redisplay the main menu with this message.

User response: Enter a valid message number or abend code.

Module: DFHCMAC

Destination: Terminal End User

DFHME0501 AN INVALID OPTION HAS BEEN ENTERED.

Explanation: A key other than F3 or ENTER has been pressed.

System action: The transaction redisplay the main menu with this message.

User response: Enter a valid message number or abend code and press ENTER, or press a valid function key.

Module: DFHCMAC

Destination: Terminal End User

DFHME0502 THE CMAC FILE IS DISABLED.

Explanation: The CMAC file is disabled for one of these reasons

- The file was initially defined as disabled and has not been enabled
- The file has been disabled by an EXEC CICS SET command or by the CEMT transaction.

System action: The transaction redisplay the main menu with this message.

User response: If the CMAC file was defined as

DFHME0503 • DFHME9993I

disabled, use the CEMT transaction to enable the file.

If the CMAC file has been disabled, determine the reason. It might have been disabled for maintenance or update.

Module: DFHCMAC

Destination: Terminal End User

DFHME0503 THE CMAC FILE CANNOT BE FOUND IN THE FCT.

Explanation: The CMAC file cannot be found in the file control table (FCT).

System action: The transaction redisplay the main menu with this message.

User response: Check that the CMAC file has been defined and installed. See the *CICS Transaction Server for z/OS Installation Guide* for guidance.

Module: DFHCMAC

Destination: Terminal End User

DFHME0504 RESOURCE SECURITY CHECK FAILED ON CMAC FILE.

Explanation: The resource security check has failed.

System action: The transaction redisplay the main menu with this message.

User response: Ensure that the resource security class is correct.

Module: DFHCMAC

Destination: Terminal End User

DFHME0505 THE CMAC FILE IS CLOSED OR UNENABLED.

Explanation: One of the following has occurred

- The requested file is CLOSED and UNENABLED. The CLOSED, UNENABLED state is reached after a close request has been received against an OPEN ENABLED file and the file is no longer in use. This state can be specified as the initial state by means of the FILSTAT parameter of the DFHFCT TYPE=FILE control table macro, or by defining a file using the RDO options STATUS = UNENABLED and OPENTIME = FIRSTREF.
- The requested file is OPEN and UNENABLED and in use by other transactions, but a close request against the file has been received.

System action: The transaction redisplay the main menu with this message.

User response: Use the CEMT transaction to ensure that the CMAC file is in the OPEN ENABLED state.

Module: DFHCMAC

Destination: Terminal End User

DFHME0506 REQUESTED MESSAGE NUMBER/ABEND CODE NOT FOUND

Explanation: The attempt to retrieve the specified message number or abend code has been unsuccessful.

System action: The transaction redisplay the main menu with this message.

User response: Ensure that the correct message number or abend code has been entered.

If no message numbers or abend codes appear to be valid, check that the correct DSName has been specified on the CMAC file definition.

Module: DFHCMAC

Destination: Terminal End User

DFHME0507 CHECK THAT THE CORRECT DSNAME IS BEING USED.

Explanation: An attempt to retrieve a record from the CMAC data set has been unsuccessful because the CMAC DSName is incorrectly specified.

System action: The transaction redisplay the main menu with this message.

User response: Ensure that the correct DSName has been specified on the CMAC file definition.

Module: DFHCMAC

Destination: Terminal End User

DFHME0508 THE CMAC TRANSACTION IS INVALID FOR THE CONSOLE.

Explanation: You have tried to invoke the CMAC transaction from a CONSOLE. This is not permitted.

System action: The CMAC transaction ends with this message.

User response: Ensure that CMAC is invoked from a terminal that is not being used as a CONSOLE.

Module: DFHCMAC

Destination: Terminal End User

DFHME9993I UNABLE TO DETERMINE LENGTH OF MESSAGE *msgno* - *response reason*

Explanation: The message DFH*msgno* could not be found by the message (ME) domain in the message tables.

System action: CICS continues.

User response: If you are using a message table which has been created using the message editing

utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMGPME

Destination: Terminal End User

DFHME9994I UNABLE TO RETRIEVE MESSAGE
msgno - response reason

Explanation: The message DFHmsgno could not be retrieved by the message (ME) domain from the message tables.

System action: CICS continues.

User response: If you are using a message table which has been created using the message editing utility, ensure that all relevant PTFs have been correctly applied.

If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMGPME

Destination: Terminal End User

DFHME9996I MESSAGE PARAMETER LIST ERROR
- CHECK PLIST

Explanation: The parameter list for the message generation process is not valid.

System action: CICS continues but the message in error cannot be issued.

User response: Ensure that the DFHMGT entry for the message has been built correctly.

Module: DFHMGP00

Destination: Terminal End User

DFHME9997I MESSAGE FIND ERROR - CHECK
THE MESSAGE MODULE

Explanation: The message being issued could not be found by the message generation process in the DFHMGT table entry for this message set.

System action: CICS continues but the message in error cannot be issued.

User response: Ensure that an entry exists for the message number in the appropriate DFHMGT tables.

Module: DFHMGP00

Destination: Terminal End User

DFHME9998I MESSAGE NUMBERS GREATER
THAN 9999 ARE INVALID

Explanation: The message being issued has a message number greater than 9999. Message numbers should be in the range 1 through 9999.

System action: CICS continues but the message in error cannot be issued.

User response: Redefine the message number.

Module: DFHMGP00

Destination: Terminal End User

DFHME9999I THE MESSAGE INDEX MODULE
'DFHMGT' IS MISSING

Explanation: The message generation process cannot find an index module in the DFHMGT table for the message it is trying to issue. This can occur where a message defined as being destined for either a console or a TDQ is being issued as a terminal end user message.

System action: CICS continues but the message in error cannot be issued.

User response: Ensure that the destination is correct for the message being issued.

Module: DFHMGP00

Destination: Terminal End User

DFHMNnnnn messages

DFHMN0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abend or program check has occurred in module *modname*. This implies an error in CICS code. Alternatively, it is possible that unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the *OS/390 MVS System Codes* manual.

Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning a user response.

If module *modname* is not crucial to the running of your CICS system, you have the option to continue to run and to bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMNDM, DFHMNMN, DFHMNNT, DFHMNSR, DFHMNST, DFHMNSU, DFHMNTI, DFHMNUE, DFHMNXM

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*, *modname*

Destination: Console

DFHMN0002 *applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point id which uniquely identifies what the error is and where the error was detected. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS will continue unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Inform the system programmer. This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *module* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMNDM, DFHMNMN, DFHMNNT, DFHMNSR, DFHMNST, DFHMNSU, DFHMNTI, DFHMNUE, DFHMNXM

XMEOUT Parameters: *applid*, *X'code'*, *modname*

Destination: Console

DFHMN0003 *applid* Insufficient storage to satisfy Getmain (code *X'code'*) in module *modname*.

Explanation: A CICS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request.

The code *X'code'* is the exception trace point ID which uniquely identifies the place where the error was detected.

System action: An exception entry is made in the trace table (code *code* in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table. This is a critical error.

If DFHMNDM issues this message, CICS terminates, even if you have specified in the dump table that CICS should not terminate.

If DFHMNMN, DFHMNST or DFHMNXM issues this message, an exception trace and a system dump is taken and CICS continues.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the user response for these messages.

If CICS is still running, the problem may be a temporary one which will right itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

Try increasing the size limits of the DSAs or EDSAs. See the *CICS System Definition Guide* or the *CICS Performance Guide* for further information on CICS storage.

Module: DFHMNDM, DFHMNMN, DFHMNST, DFHMNXM

XMEOUT Parameters: *applid, X'code', modname*

Destination: Console

DFHMN0004 *applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset *X'offset'*. This is the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it will be necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS will purge a CICS function which exceeds the

runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* will be terminated and CICS will continue.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMNDM, DFHMNMN, DFHMNSR, DFHMNST, DFHMNSU, DFHMNTI, DFHMNUE, DFHMNXM

XMEOUT Parameters: *applid, X'offset', modname*

Destination: Console

DFHMN0005 *applid* **A hardware error has occurred (module *modname*, code *X'code'*). The Time-of-Day clock is invalid.**

Explanation: A hardware error has occurred during the running of module *modname*. The MVS Store Clock facility is the timing mechanism for the operating system. The code *X'code'* is the exception trace point ID which uniquely identifies the place where the error was detected.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. CICS will continue unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. This is in all probability a hardware error and you should in the first instance investigate the MVS Store Clock and find out whether it is working properly. If this is the cause, you should take the appropriate action to have it repaired or replaced.

In the unlikely event that this is not a hardware problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

DFHMN0101 • DFHMN0105I

Module: DFHMNDM, DFHMNMN, DFHMNST, DFHMNUE, DFHMNXM

XMEOUT Parameters: *applid, modname, X'code'*

Destination: Console

DFHMN0101 *applid* SMF error - SMF return code X'rc'.

Explanation: The monitoring domain authorized services routine issued a SMFEWMT macro to write a record to the MVS system management facilities (SMF) data set and encountered a non-zero return code.

System action: The request is ignored and the SMF record is lost. An exception entry is made in the trace table. CICS operation continues.

If the same error condition occurs continuously, the error messages are suppressed but tracing continues. The message is reissued if a different error condition occurs or if a zero return code has been received since the message was last issued.

User response: Consult the *OS/390 MVS System Programming Library System Management Facilities (SMF)* manual for a detailed explanation of the return codes.

Module: DFHMNSU

XMEOUT Parameters: *applid, X'rc'*

Destination: Console

DFHMN0103I *applid* Monitoring control table for suffix 'xx' not found.

Explanation: The monitoring control table for suffix xx could not be found in the library described by the DFHRPL DD statement. This suffix is specified as a system initialization parameter.

System action: Control is returned to the parameter manager for interaction with the operator. Further action depends upon which PARMERR= parameter is specified. The operator may enter another suffix or continue with system initialization.

If initialization continues without an override, monitoring domain uses the default monitoring control table.

User response: There are three likely causes of this error

- The monitoring control table is not in the library.
- The monitoring control table name has been misspelled.
- An incorrect suffix has been used at startup.

Ensure that the suffix specified is correct and that a library described in the DFHRPL DD statement contains a copy of the named monitoring control table.

If the suffix is incorrect and PARMERR=INTERACT is specified, the operator is prompted to enter an alternative suffix.

If the suffix is incorrect and PARMERR=IGNORE is specified, the monitoring domain uses the default monitoring control table.

If the monitoring control table is missing or misspelled and you want to reinstall it, CICS has to be terminated. Reassemble the monitoring control table into the relevant library.

Module: DFHMNSR

XMEOUT Parameters: *applid, xx*

Destination: Console

DFHMN0104 *applid* Monitoring Control Table with suffix 'xx' required for restart not found.

Explanation: The monitoring domain has determined the monitoring control table suffix xx from the last CICS execution, but was unable to locate the monitoring control table in the library described by the DFHRPL DD statement and no override suffix has been specified.

Subsequent executions of CICS will continue to use the suffix specified in the message until it is changed in the SIT.

System action: Initialization continues with the monitoring domain using the default monitoring control table.

User response: Ensure that a library described in the DFHRPL DD statement contains a copy of the named monitoring control table. If the monitoring control table is missing, it must have been deleted. If you want to reinstall the table, CICS must be terminated. Reassemble the monitoring control table into the relevant library.

Module: DFHMNDM

XMEOUT Parameters: *applid, xx*

Destination: Console

DFHMN0105I *applid* Using default Monitoring Control Table.

Explanation: The monitoring domain is initializing with default monitoring control table settings. This occurs

1. If the user has specified MCT=NO, or
2. Following message DFHMN0104, or
3. After message DFHMN0103 or DFHMN0106 has been issued, but no corrective action has been taken.

System action: System initialization continues.

User response: None.

Module: DFHMNDM

XMEOUT Parameter: *applid*

Destination: Console

DFHMN0106 *applid* **Unable to read the catalog record for the Monitoring Domain.**

Explanation: The monitoring domain has attempted to re-establish the status of the monitoring classes and the monitoring control table suffix under which it was running during the last execution of CICS. But it was unable to successfully read the record from the global catalog.

System action: An exception entry is made in the trace table.

System initialization continues with the supplied system initialization parameters.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the cause of the error using any dump or other diagnostic messages which have been issued (for example, from VSAM or MVS).

If the problem has been caused by an I/O error, there will be an earlier CICS message from the catalog. Follow the user response for this message.

If the problem has been caused by an invalid data length, there will be an exception trace entry in the trace table.

Module: DFHMNDM

XMEOUT Parameter: *applid*

Destination: Console

DFHMN0107 *applid* **Unable to update the catalog record for the Monitoring Domain.**

Explanation: The monitoring domain has attempted to update either the status of the monitoring classes or the monitoring control table suffix in the CICS global catalog, but was unable to successfully complete the request.

System action: An exception entry is made in the trace table, and CICS operation continues with the updated values. Since the updates are not saved across a restart, the subsequent execution of CICS will restart with values recorded before the updates were applied.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the cause of the error using any dump or other diagnostic messages which have been issued (for example, from VSAM or MVS).

If the problem has been caused by an I/O error, there will be an earlier CICS message from the catalog.

Follow the user response for this message.

If the problem has been caused by an invalid data length, there is an exception trace entry in the trace table.

Module: DFHMNSU

XMEOUT Parameter: *applid*

Destination: Console

DFHMN0108I *applid* **Using Monitoring Control Table suffix 'xx'.**

Explanation: The monitoring control table with the suffix *xx* is used for this CICS run.

System action: Processing continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHMNDM

XMEOUT Parameters: *applid, xx*

Destination: Console

DFHMN0109I *applid* **CICS Monitoring is active.**

Explanation: The CICS monitoring facility is currently active for this run of CICS.

System action: Processing continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHMNDM

XMEOUT Parameter: *applid*

Destination: Console

DFHMN0110I *applid* **CICS Monitoring is inactive.**

Explanation: The CICS monitoring facility is currently inactive for this run of CICS.

System action: Processing continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHMNDM

XMEOUT Parameter: *applid*

Destination: Console

DFHMN0112I *date time applid* **CICS Monitoring compression status has been changed to {NOCOMPRESS | COMPRESS} by USERID *userid*.**

Explanation: The CICS monitoring facility compression status has been changed by the *userid* as indicated by this informational message.

System action: Processing continues. If the compression status is COMPRESS, the monitoring data records written from now on will be compressed. If the compression status is NOCOMPRESS, the records will not be compressed.

User response: None.

Module: DFHMNSR

XMEOUT Parameters: *date, time, applid, {1=NOCOMPRESS, 2=COMPRESS}, userid*

Destination: CSMT

DFHMN0201S **Invalid parameter. The equals sign is missing.**

Explanation: A SYSIN parameter has been encountered that does not contain an equals sign. Equals signs are mandatory for every keyword supported by the monitoring dictionary utility.

System action: The job step is terminated with a return code of 12.

User response: Correct the SYSIN keyword that does not have an equals sign and resubmit the job. For further guidance on the syntax of DFHMNDUP keywords, see the *CICS Operations and Utilities Guide*.

Module: DFHMNDUP

Destination: SYSPRINT

DFHMN0202S **Invalid parameter. MCT incorrectly specified**

Explanation: Following the equals sign of the MCT= keyword there must be a 2-character operand or a delimiter. Neither has been found. The 2-character operand is treated as the suffix for an MCT to load.

System action: The job step is terminated with a return code of 12.

User response: Correct the MCT= keyword with a valid operand or delimiter.

If you do not wish to have a dictionary record constructed from a particular MCT, you can use a default MCT image by specifying a blank or a comma after the equals sign, or by specifying MCT=NO. For further guidance, see the *CICS Operations and Utilities Guide*.

Module: DFHMNDUP

Destination: SYSPRINT

DFHMN0203S **Invalid parameter. SYSID must be four characters or less.**

Explanation: A SYSID of greater than 4 characters, or a SYSID keyword without an operand has been specified.

System action: The job step is terminated with a return code of 12.

User response: Specify a valid SYSID of up to 4 characters. For further guidance, see the *CICS Operations and Utilities Guide*.

Module: DFHMNDUP

Destination: SYSPRINT

DFHMN0204S **Invalid parameter. GAPPLID must be eight characters or less.**

Explanation: A generic APPLID (GAPPLID) of greater than 8 characters, or a GAPPLID keyword without an operand has been specified.

System action: The job step is terminated with a return code of 12.

User response: Specify a valid GAPPLID of up to 8 characters. For further guidance, see the *CICS Operations and Utilities Guide*.

Module: DFHMNDUP

Destination: SYSPRINT

DFHMN0205S **Invalid parameter. SAPPLID must be eight characters or less.**

Explanation: A specific APPLID (SAPPLID) of greater than 8 characters has been specified.

System action: The job step is terminated with a return code of 12.

User response: Specify a valid SAPPLID of up to 8 characters or allow the SAPPLID to default to the GAPPLID by not specifying SAPPLID. For further guidance, see the *CICS Operations and Utilities Guide*.

Module: DFHMNDUP

Destination: SYSPRINT

DFHMN0206S **Invalid parameter. DATE must be of format yyddd or yyyyddd.**

Explanation: The date has been specified incorrectly. There are three possible reasons for this

- The date specified is not in the correct format of yyddd or yyyyddd
- The date contains nonnumeric characters
- 'ddd' is not in the range 1 through 366.

System action: The job step is terminated with a return code of 12.

User response: Ensure that the date is in the format 'yyddd' or 'yyyyddd' and that the values are valid.

If you want DATE to default to the current date, do not specify this parameter. For further guidance, see the *CICS Operations and Utilities Guide*.

Module: DFHMNDUP

Destination: SYSPRINT

DFHMN0207S Invalid parameter. TIME must be of format hhmmss.

Explanation: The time has been specified incorrectly. There are three possible reasons for this

- More than 6 characters have been specified
- The value specified contains nonnumeric characters
- The hours (hh), minutes (mm), or seconds (ss) are outside of the valid range.

System action: The job step is terminated with a return code of 12.

User response: Ensure that the time specified is in the format 'hhmmss' and that the values are valid.

If you want TIME to default to the current time, do not specify this parameter. For further guidance, see the *CICS Operations and Utilities Guide*.

Module: DFHMNDUP

Destination: SYSPRINT

DFHMN0208S Invalid parameter. Keyword is unknown.

Explanation: A SYSIN parameter has been processed and found to contain an unrecognized keyword.

System action: The job step is terminated with a return code of 12.

User response: Rename the unrecognized keyword. See the *CICS Operations and Utilities Guide* for a complete list of supported keywords. Also, ensure that there are no blanks preceding any of the keywords in the SYSIN data set.

Module: DFHMNDUP

Destination: SYSPRINT

DFHMN0209S No SYSIN parameters have been specified.

Explanation: There are no SYSIN parameters specified in the JCL.

System action: The job step is terminated with a return code of 12.

User response: Check the JCL for the existence of SYSIN parameters. If SYSIN does not exist or has no

parameters, see the *CICS Operations and Utilities Guide* for guidance on coding DFHMNDUP parameters.

Module: DFHMNDUP

Destination: SYSPRINT

DFHMN0210S applid Load for MCT has failed. MCT cannot be found. A dump will be provided.

Explanation: DFHMNDUP attempted to load 'DFHMCTxx' from STEPLIB, where 'xx' is the suffix provided via the MCT= keyword. This MCT was not found in the STEPLIB concatenation.

System action: The job step is abended with a dump.

User response: Ensure that the MCT suffix is correct and that the library that contains it is in the STEPLIB concatenation for the job step.

Module: DFHMNDUP

Destination: Console

DFHMN0211S Getmain storage for control blocks has failed.

Explanation: An MVS GETMAIN for the utilities global storage has failed. There is not enough MVS storage below the line available in the region.

System action: The job step is terminated with a return code of 12.

User response: Increase the REGION= parameter of your JCL and try again. If this fails, consult your MVS system programmer.

Module: DFHMNDUP

Destination: SYSPRINT

DFHMN0212S Getmain storage for output record has failed.

Explanation: An MVS GETMAIN for the 32KB record buffer storage has failed. There is not enough MVS storage below the line available in the region.

System action: The job step is terminated with a return code of 12.

User response: Increase the REGION= parameter of your JCL and try again. If this fails, consult your MVS system programmer.

Module: DFHMNDUP

Destination: SYSPRINT

**DFHMN0213S The MVS TIME macro has failed.
There is a clock error.**

Explanation: Because DATE and/or TIME have not been specified, DFHMNDUP has attempted to retrieve the current DATE and/or TIME from MVS using the TIME macro. The TIME macro has reported that the MVS clocks are damaged.

System action: The job step is terminated with a return code of 12.

User response: Inform your MVS system programmer of the failure.

Module: DFHMNDUP

Destination: SYSPRINT

DFHMN0214S Invalid parameter. Missing delimiter detected.

Explanation: DFHMNDUP parameter syntax requires keyword/operand pairs to be separated by a delimiter in the form of a comma or a blank space. A delimiter has been found missing from a keyword/operand.

System action: The job step is terminated with a return code of 12.

User response: If the SYSIN data set has been coded such that there are multiple parameters on one line, then ensure that there is one blank or one comma between each parameter. If the SYSIN data set has been coded such that there is only one parameter on a line, ensure that it is terminated with a blank or a comma. For further guidance on the syntax of DFHMNDUP parameters, see the *CICS Operations and Utilities Guide*.

Module: DFHMNDUP

Destination: SYSPRINT

DFHMN0215S Mandatory SYSIN parameter(s) missing.

Explanation: The two mandatory parameters are for the generic APPLID (GAPPLID) and the MVS system identifier (SYSID). These two parameters have not been specified and there are no defaults.

System action: The job step is terminated with a return code of 12.

User response: Specify the following

- the generic APPLID of the CICS system that DFHMNDUP is going to produce a dictionary record for
- the MVS system identifier for the MVS system that produced the monitoring performance class records you are going to process.

For further guidance on the syntax of DFHMNDUP parameters, see the *CICS Operations and Utilities Guide*.

Module: DFHMNDUP

Destination: SYSPRINT

DFHMN0216S Invalid parameter. JOBNAME must be eight characters or less.

Explanation: A JOBNAME has been specified with more than eight characters.

System action: The job step is terminated with a return code of 12.

User response: Specify a valid JOBNAME of up to eight characters. For further guidance, see the *CICS Operations and Utilities Guide*.

Module: DFHMNDUP

Destination: SYSPRINT

DFHMN0217S Invalid parameter. JOBDATE must be of format yyddd or yyyyddd.

Explanation: The JOBDATE parameter has been specified incorrectly. There are three possible reasons for this

- The date specified is not in the correct format of yyddd or yyyyddd
- Nonnumeric characters have been specified
- The number of days 'ddd' is not in the range 1 through 366.

System action: The job step is terminated with a return code of 12.

User response: Ensure that JOBDATE consists of valid characters in the format 'yyddd' or 'yyyyddd'.

If you want JOBDATE to default to the current date, do not specify this parameter. For further guidance, see the *CICS Operations and Utilities Guide*.

Module: DFHMNDUP

Destination: SYSPRINT

DFHMN0218S Invalid parameter. JOBTIME must be of format hhmmss.

Explanation: The JOBTIME parameter has been specified incorrectly. There are three possible reasons for this

- More than six characters have been specified
- Nonnumeric characters have been specified
- The hours (hh), minutes (mm), or seconds (ss) are outside of the valid range.

System action: The job step is terminated with a return code of 12.

User response: Ensure that JOBTIME consists of valid characters in the format 'hhmmss'.

If you want JOBTIME to default to the current time, do not specify this parameter. For further guidance, see the *CICS Operations and Utilities Guide*.

Module: DFHMNDUP

Destination: SYSPRINT

DFHMN0219S Invalid parameter. USERID must be eight characters or less.

Explanation: A USERID has been specified with more than eight characters.

System action: The job step is terminated with a return code of 12.

User response: Specify a valid USERID of up to eight characters. For further guidance, see the *CICS Operations and Utilities Guide*.

Module: DFHMNDUP

Destination: SYSPRINT

DFHMN0220 DFHMNDUP CANNOT OPEN THE SYSPRINT FILE.

Explanation: The SYSPRINT file cannot be opened because the SYSPRINT DD statement is missing or incorrectly defined.

DFHMQnnnn messages

DFHMQ0100 E *date time applid* **Cannot retrieve data from a START command.**
EIBFN=X'eibfn' **EIBRESP=eibresp**
EIBRESP2=eibresp2.

Explanation: CKTI has attempted to retrieve data from a CICS START command, but the retrieve is unsuccessful.

System action: CKTI ends.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values. Use the data contained in these fields to resolve the problem, and retry.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0101 E *date time applid* **Cannot open the initiation queue. MQCC=mqcc**
MQRC=mqrc.

Explanation: CKTI has attempted to open an initiation queue, but the attempt is unsuccessful (for example,

System action: The job step is terminated with a return code of 12.

User response: Ensure that the SYSPRINT DD statement has been correctly defined. For further guidance, see the *CICS Operations and Utilities Guide*.

Module: DFHMNDUP

Destination: Console

DFHMN0221 DFHMNDUP CANNOT OPEN THE SYSIN FILE.

Explanation: The SYSIN file cannot be opened because the SYSIN DD statement is missing or incorrectly defined.

System action: The job step is terminated with a return code of 12.

User response: Ensure that the SYSIN DD statement has been correctly defined. For further guidance, see the *CICS Operations and Utilities Guide*.

Module: DFHMNDUP

Destination: Console

because the queue is not defined). *mqcc* and *mqrc* give the reason for the problem.

System action: CKTI ends.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc* and *mqrc*, and use CKQC to restart CKTI.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, mqcc, mqrc*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0102 E *date time applid* **Cannot start the CICS transaction tran-id. EIBFN=X'eibfn'**
EIBRESP=eibresp **EIBRESP2=eibresp2.**

Explanation: A trigger message has been retrieved from the initiation queue which defines a CICS transaction to be started. However the transaction cannot be started (for example, it cannot be found).

System action: The trigger message is sent to the dead-letter queue. CKTI processes the next message.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values. Determine the reason for the problem, and restart the transaction.

DFHMQ0103 E • DFHMQ0108D

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, tran-id, X'eibfn', eibresp, eibresp2*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0103 E *date time applid* **CKTI has read a trigger message with an incorrect MQTM-Strucld of *struc-id*.**

Explanation: A trigger message has been retrieved, but the structure identifier of the message is not MQTM_STRUC_ID and so is not compatible with this version of DFHMQTSK.

System action: The trigger message is sent to the dead-letter queue. CKTI processes the next message.

User response: Check the header of the message on the dead-letter queue. This will tell you where the trigger message came from. Correct the process that created the trigger message.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, struc-id*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0104 E *date time applid* **CKTI does not support version *version-id*.**

Explanation: A trigger message has been retrieved, but the version identifier in MQTM is not version 1 and so is not compatible with this version of DFHMQTSK.

System action: The trigger message is sent to the dead-letter queue. CKTI processes the next message.

User response: Check the header of the message on the dead-letter queue. This will tell you where the trigger message came from. Correct the process that created the trigger message.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, version-id*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0105 E *date time applid* **CKTI cannot start a process type of *process-type*.**

Explanation: A trigger message has been retrieved, but the process type in MQTM is not CICS and so cannot be processed by this version of DFHMQTSK.

System action: The trigger message is sent to the dead-letter queue. CKTI processes the next message.

User response: Check the header of the message on the dead-letter queue. This will tell you where the trigger

message came from. Correct the process that created the trigger message.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, process-type*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0106D *date time applid* **MQGET failure. CKTI will end. MQCC=*mqqc* MQRC=*mqrc*.**

Explanation: An attempt to issue an MQGET call on the initiation queue has been unsuccessful.

System action: CKTI ends.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqqc* and *mqrc*, and use CKQC to restart CKTI.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, mqqc, mqrc*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0107 I *date time applid* **A request to end CKTI has been received. CKTI ended.**

Explanation: A request to end CKTI has been sent from the CICS-MQ adapter. This is a normal completion of CKTI.

System action: CKTI ends.

User response: None.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0108D *date time applid* **Unexpected invocation. CKTI terminated.**

Explanation: An attempt has been made to start CKTI, but not from CKCN or CKSQ. This is not allowed.

System action: CKTI ends.

User response: Start CKTI from either CKCN or CKSQ.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0109D *date time applid MQCLOSE failed.*
MQCC=mqcc MQRC=mqrc.

Explanation: An attempt has been made to close a queue, but the MQCLOSE call was unsuccessful. This message is followed by message DFHMQ0110 indicating the name of the queue.

System action: An implicit close of the queue will take place when the transaction ends.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc* and *mqrc* to determine the cause of the problem.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, mqcc, mqrc*

Destination: Console and Transient Data Queue
 CMQM and Terminal End User

DFHMQ0110 I *date time applid Queue name =*
q-name.

Explanation: This message is issued to indicate the queue in error if an operation on a queue (for example, an MQOPEN) is unsuccessful. The accompanying messages indicate the cause of the problem.

System action: Processing continues.

User response: Refer to earlier messages.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, q-name*

Destination: Console and Transient Data Queue
 CMQM and Terminal End User

DFHMQ0111D *date time applid CKTI has read a*
trigger message with an incorrect
length of length.

Explanation: This message is issued if the transaction CKTI receives a trigger message that does not match the MQTM control block.

System action: The trigger message is sent to the dead-letter queue. CKTI processes the next message.

User response: Look at the message on the dead-letter queue to establish why it did not match the MQTM.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, length*

Destination: Console and Transient Data Queue
 CMQM and Terminal End User

DFHMQ0112D *date time applid MQOPEN error.*
MQCC=mqcc MQRC=mqrc.

Explanation: An MQOPEN call has been unable to open a queue. This message is followed by message DFHMQ0110 indicating the name of the queue.

System action: CKTI ends.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc* and *mqrc* to determine the cause of the problem.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, mqcc, mqrc*

Destination: Console and Transient Data Queue
 CMQM and Terminal End User

DFHMQ0113 I *date time applid This message cannot*
be processed.

Explanation: When an attempt to process a message using a MQ API call is unsuccessful, an attempt is made to put the message on the dead-letter queue. This is also unsuccessful and the message-id is sent to the system console.

System action: Processing continues.

User response: Check the console for previous messages explaining why the dead-letter queue was not available (if a dead-letter queue has not been defined, no other messages relating to the problem will have been issued).

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
 CMQM and Terminal End User

DFHMQ0114D *date time applid MQINQ failed.*
MQCC=mqcc MQRC=mqrc.

Explanation: An attempt to use the MQINQ call to inquire about the attributes of a queue is unsuccessful. This message is followed by message DFHMQ0110 indicating the name of the queue.

System action: CKTI ends.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc* and *mqrc* to determine why a MQINQ call could not be made on the queue.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, mqcc, mqrc*

Destination: Console and Transient Data Queue
 CMQM and Terminal End User

DFHMQ0116D *date time applid* **Cannot open the queue manager. MQCC=mqcc MQRC=mqrc.**

Explanation: An MQOPEN call to the queue manager is unsuccessful.

System action: CKTI ends.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc* and *mqrc* to determine the cause of the problem.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, mqcc, mqrc*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0117D *date time applid* **Cannot query the queue manager. MQCC=mqcc MQRC=mqrc.**

Explanation: An MQINQ call to the queue manager is unsuccessful.

System action: CKTI ends.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc* and *mqrc* to determine the cause of the problem.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, mqcc, mqrc*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0118 I *date time applid* **MsgID=X'msg-id'.**

Explanation: This message follows message DFHMQ0113, indicating the hexadecimal identifier of the message that could not be processed.

System action: Processing continues.

User response: Refer to earlier DFHMQ0113 message.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, X'msg-id'*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0119D *date time applid* **CICS detected an IRC failure. Cannot start transaction tran-id.**

Explanation: A trigger message is retrieved from the initiation queue which defines a CICS transaction to be started, and the transaction is defined to run in a remote CICS region. The EXEC CICS START request for this transaction ends abnormally because of a failure in the IRC connection between the local and remote CICS regions.

System action: The trigger message is sent to the dead-letter queue, and CKTI continues processing the next message.

User response: Investigate the reason for the IRC failure.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, tran-id*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0120D *date time applid* **MQPUT failed. MQCC=mqcc MQRC=mqrc.**

Explanation: An attempt is made to put a message on a queue with a MQPUT call, but the attempt is unsuccessful. This message is followed by message DFHMQ0110 indicating the name of the queue.

System action: CKTI ends.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc* and *mqrc* to determine why a MQPUT call could not be made for the queue.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, mqcc, mqrc*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0121D *date time applid* **No dead-letter queue defined for queue manager.**

Explanation: A dead-letter queue has not been defined for the queue manager.

System action: The trigger message is discarded, and the process cannot be started.

User response: Define a dead-letter queue if one is required.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0122D *date time applid* **Cannot close the queue manager. MQCC=mqcc MQRC=mqrc.**

Explanation: CKTI is unable to close the queue manager after inquiring about the dead-letter queue.

System action: CKTI ends.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc* and *mqrc* to determine the cause of the problem.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid, mqcc, mqrc*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0123D *date time applid* **The dead-letter queue is not of type local.**

Explanation: The dead-letter queue defined is not of type local. This message is followed by message DFHMQ0110, indicating the name of the queue.

System action: The message is not put to the dead-letter queue.

User response: Define the dead-letter queue as a local queue.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0124D *date time applid* **The dead-letter queue is not of usage normal.**

Explanation: The dead-letter queue defined is not of usage type normal. This message is followed by message DFHMQ0110I indicating the name of the queue.

System action: The message is not put to the dead-letter queue.

User response: Define the dead-letter queue to have usage type normal.

Module: DFHMQTSK

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0211 E *date time applid* **Unable to LINK to program DFHMQRPM. EIBFN=X'eibfn' EIBRESP=eibresp EIBRESP2=eibresp2 EIBRCODE=X'eibrcode'.**

Explanation: An attempt to link to DFHMQRPM is unsuccessful.

System action: The connection process is terminated, and control returns to CICS.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values. Determine the reason for the problem, and use the CICS-MQ adapter control panels (the CKQC transaction) to retry the connection process.

Module: DFHMQPUL

XMEOUT Parameters: *date, time, applid, X'eibfn',*

eibresp, eibresp2, X'eibrcode'

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0212 E *date time applid* **DFHMQRPM missing in SIT/SIT Override INITPARM.**

Explanation: DFHMQQCN attempts to connect to WMQ, but the attempt is unsuccessful because the DFHMQRPM keyword in the INITPARM statement is not found in the system initialization table (SIT) (or the SIT override INITPARM statement).

System action: The connection process terminates, and control returns to CICS.

User response: Add the DFHMQRPM keyword to the INITPARM statement of the SIT table (or the SIT override), restart CICS, and use the CICS-MQ adapter control panels (the CKQC transaction) to retry the connection process. See the *CICS Integration with WebSphere MQ Guide* for information about the the DFHMQRPM keyword in the required INITPARM statement.

Module: DFHMQQCN

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0213 E *date time applid* **Queue manager name missing in DFHMQRPM. Command rejected.**

Explanation: An attempt is made to connect to WMQ, but it is unsuccessful because the DFHMQRPM keyword in the INITPARM statement does not contain the name of the required queue manager.

System action: The connection process terminates, and control returns to CICS.

User response: Use the CICS-MQ adapter control panels (the CKQC transaction) to specify the queue manager name, and retry the connection process. See the *CICS Integration with WebSphere MQ Guide* for information about the DFHMQRPM keyword in the required INITPARM statement.

Module: DFHMQQCN

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0214 E *date time applid* **Initiation queue name not found. CKTI not started.**

Explanation: A connection is made to WMQ but CKTI cannot be started as no initiation queue name is specified.

DFHMQ0216 E • DFHMQ0223 E

System action: The queue manager is connected, but CKTI is not started.

User response: Use the CICS-MQ adapter control panels (the CKQC transaction) to start CKTI. Add the initiation queue name to the DFHMQRPM keyword of the INITPARM statement if you want to start CKTI automatically next time you connect CICS to WMQ.

Module: DFHMQQCN

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0216 E *date time applid* **Queue manager name invalid. Connection rejected.**

Explanation: An attempt is made to connect to WMQ, but it is unsuccessful because the queue manager name given is more than 4 characters long.

System action: The connection process terminates, and control returns to CICS.

User response: Use the CICS-MQ adapter control panels to specify the correct queue manager name, or correct the DFHMQRPM keyword in the INITPARM statement, and retry the connection process. See the *CICS Integration with WebSphere MQ Guide* for information about the DFHMQRPM keyword in the required INITPARM statement.

Module: DFHMQQCN

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0217 E *date time applid* **Initiation queue name invalid. CKTI not started.**

Explanation: An attempt is made to connect to WMQ, but it is unsuccessful because the initiation queue name given is more than 48 characters long.

System action: The connection process terminates and control returns to CICS.

User response: Use the CICS-MQ adapter control panels (the CKQC transaction) to specify the correct initiation queue name, and retry the connection process.

Module: DFHMQQCN

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0220 E *date time applid* **Unable to LINK to program DFHMQCON. EIBFN=X'eibfn' EIBRESP=eibresp EIBRESP2=eibresp2 EIBRCODE=X'eibrcode'.**

Explanation: An attempt to link to DFHMQCON is unsuccessful.

System action: The connection process is terminated and control returns to CICS.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values. Use the CICS-MQ adapter control panels (the CKQC transaction) to retry the connection process.

Module: DFHMQQCN

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0221 E *date time applid* **Unable to INQUIRE SYSTEM CICSSTATUS. EIBFN=X'eibfn' EIBRESP=eibresp EIBRESP2=eibresp2 EIBRCODE=X'eibrcode'.**

Explanation: An attempt to issue EXEC CICS INQUIRE SYSTEM CICSSTATUS is unsuccessful.

System action: The connection process is terminated and control returns to CICS.

User response: The EIB fields contain information about the cause of the problem. See the *CICS System Programming Reference* manual for an explanation of these values. Use the CICS-MQ adapter control panels (the CKQC transaction) to retry the connection process.

Module: DFHMQQCN

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0223 E *date time applid* **Unable to LINK to program DFHMQQCN. EIBFN=X'eibfn' EIBRESP=eibresp EIBRESP2=eibresp2 EIBRCODE=X'eibrcode'.**

Explanation: An attempt to link to DFHMQQCN is unsuccessful.

System action: The connection process is terminated and control returns to CICS.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values. Use the CICS-MQ adapter

control panels (the CKQC transaction) to make the connection.

Module: DFHMQMON

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0230 E *date time applid* **Unable to receive input. EIBFN=X'eibfn' EIBRESP=eibresp EIBRESP2=eibresp2 EIBRCODE=X'eibrcode'.**

Explanation: The CICS adapter is unable to receive input from the CKQC transaction.

System action: The requested function is not performed.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and take the appropriate action. DFHMQCTL

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrcode'*

DFHMQ0232 E *date time applid* **Unable to RETURN TRANSID *tran-id* IMMEDIATE. EIBFN=X'eibfn' EIBRESP=eibresp EIBRESP2=eibresp2 EIBRCODE=X'eibrcode'.**

Explanation: An attempt is made to issue an EXEC CICS RETURN TRANSID *tran-id* IMMEDIATE command, but it is unsuccessful.

System action: The function terminates and control returns to CICS.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and reissue the command.

Module: DFHMQRET

XMEOUT Parameters: *date, time, applid, tran-id, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0235 E *date time applid* **Unrecognizable screen. Re-submit CKQC.**

Explanation: CICS cannot determine the identifier of the screen currently displayed. Because of this, it cannot interpret the screen contents (including any input fields).

System action: Resubmit CKQC to restart from the

beginning of the CICS transaction. If this problem occurs frequently, contact your IBM support center.

User response: None.

Module: DFHMQBAS, DFHMQPOP

Destination: Terminal End User

DFHMQ0236 E *date time applid* **Display functions only supported using panel interface.**

Explanation: The display function is requested; this function can only be used from the CICS-MQ adapter control panels (the CKQC transaction).

System action: The request is ignored.

User response: Use the CICS-MQ adapter control panels to access the display functions.

Module: DFHMQCTL, DFHMQDIS

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CMQM

DFHMQ0237 E *date time applid* **Panel interface not supported on console.**

Explanation: The CICS-MQ adapter control panels (the CKQC transaction) are not supported on the console.

System action: The panel request is ignored.

User response: Use a 3270 device to display the CICS-MQ adapter control panels.

Module: DFHMQCTL

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CMQM

DFHMQ0239 E *date time applid* **Unable to LINK to program DFHMQBAS. EIBFN=X'eibfn' EIBRESP=eibresp EIBRESP2=eibresp2 EIBRCODE=X'eibrcode'.**

Explanation: CKQC could not display the panel because it could not link to DFHMQBAS.

System action: CKQC ends.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and retry the operation.

Module: DFHMQCTL

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0240 I *date time applid* **Task not associated with a terminal. Request rejected.**

Explanation: The request is issued by a task that is not associated with a terminal. This is not allowed.

System action: The request is ignored.

User response: Reissue the request from a task that has a 3270 device or console associated with it.

Module: DFHMQDIS,DFHMQDSC, DFHMQDSL, DFHMQQCN, DFHMQRS, DFHMQSSQ

XMEOUT Parameters: *date, time,applid*

Destination: Console and Transient Data Queue CMQM

DFHMQ0241 E *date time applid* **Unable to receive input. EIBFN=X'eibfn' EIBRESP=eibresp EIBRESP2=eibresp2 EIBRCODE=X'eibrcode'.**

Explanation: The system cannot receive input from the screen.

System action: The input is ignored, and the transaction is finished.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values. Determine the reason for the problem, and retry the operation.

Module: DFHMQDIS, DFHMQDSL, DFHMQQCN, DFHMQRS, DFHMQSSQ

XMEOUT Parameters: *date, time,applid, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0242D *date time applid* **Invalid input. Connect rejected.**

Explanation: A connection request is issued with incorrect parameters specified.

System action: The request is ignored.

User response: Use the CICS-MQ adapter control panels (the CKQC transaction) to request the function, or check the request syntax in the *CICS Integration for WebSphere MQ Guide* and enter it again.

Module: DFHMQQCN

XMEOUT Parameters: *date, time,applid*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0243D *date time applid* **Unsupported terminal type. Must be a console or 3270 device.**

Explanation: A request is made by a task that is not associated with a console or 3270 device.

System action: The request is ignored.

User response: Reissue the request from a task that has a 3270 device or console associated with it.

Module: DFHMQDIS, DFHMQDSC, DFHMQDSL, DFHMQQCN, DFHMQRS, DFHMQSSQ

XMEOUT Parameters: *date, time,applid*

Destination: Console and Transient Data Queue CMQM

DFHMQ0244 E *date time applid* **CICS is being quiesced. Connect rejected.**

Explanation: An attempt is made to connect to WMQ but CICS is shutting down so the connection request has been rejected.

System action: The connection process terminates and control returns to CICS.

User response: None.

Module: DFHMQQCN

XMEOUT Parameters: *date, time,applid*

Destination: Console and Transient Data Queue CMQM

DFHMQ0300 I *date time applid* **Already connected to queue manager *qmgr-name*. Connect rejected.**

Explanation: An attempt is made to connect to a queue manager but CICS is already connected to another queue manager, so the connection request has been rejected.

System action: The connection process terminates and control returns to CICS.

User response: To connect to the new queue manager shut down the current connection and reissue the connection request.

Module: DFHMQCON

XMEOUT Parameters: *date, time,applid, qmgr-name*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0301 I *date time applid* **API exit CSQCAPX found and will be used.**

Explanation: The CICS API exit program CSQCAPX is activated.

System action: Processing continues normally.

User response: None.

Module: DFHMQRS

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0302 E *date time applid* **Unable to EXTRACT EXIT DFHMQRTRU. EIBFN=X'eibfn'**
EIBRESP=eibresp EIBRESP2=eibresp2
EIBRCODE=X'eibrancode'.

Explanation: An attempt to issue an EXEC CICS EXTRACT EXIT for the CICS-MQ TRUE DFHMQRTRU command is unsuccessful.

System action: The function terminates and control returns to CICS.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and take the appropriate action (for example, use CKQC to restart the connection).

Module: DFHMQCON

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrancode'*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0304 E *date time applid* **Failed to ENABLE DFHMQRTRU. EIBFN=X'eibfn'**
EIBRESP=eibresp EIBRESP2=eibresp2
EIBRCODE=X'eibrancode'.

Explanation: An attempt to issue an EXEC CICS ENABLE DFHMQRTRU command is unsuccessful during connect processing.

System action: The connection process terminates and control returns to CICS.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and take the appropriate action.

Module: DFHMQCON

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrancode'*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0305 E *date time applid* **Unable to INQUIRE MAXTASKS. EIBFN=X'eibfn'**
EIBRESP=eibresp EIBRESP2=eibresp2
EIBRCODE=X'eibrancode'.

Explanation: An attempt to issue an EXEC CICS INQUIRE MAXTASKS command is unsuccessful.

System action: The connection process terminates, and control returns to CICS.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and take the appropriate action.

Module: DFHMQCON

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrancode'*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0306 E *date time applid* **Unable to START transaction CKTI. EIBFN=X'eibfn'**
EIBRESP=eibresp EIBRESP2=eibresp2
EIBRCODE=X'eibrancode'.

Explanation: During the connection process, the CICS-MQ adapter is unable to start CKTI.

System action: The queue manager is connected, but CKTI is not started.

User response: Issue the CKQC transaction, and use the panels to start CKTI after the cause of the problem has been corrected.

The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and take the appropriate action.

Module: DFHMQCON, DFHMQSSQ

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrancode'*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0307 I *date time applid* **Successful connection to queue manager ssnm.**

Explanation: The connection to queue manager *ssnm* is successful.

System action: Processing continues normally.

User response: None.

Module: DFHMQCON

XMEOUT Parameters: *date, time, applid, ssnm*

Destination: Console and Transient Data Queue

CMQM and Terminal End User

DFHMQ0308 I *date time applid* **Queue manager *qmgr-name* is stopped. Connect request deferred.**

Explanation: An attempt to connect to queue manager *qmgr-name* is unsuccessful because *qmgr-name* is not active.

System action: The connection is made when *qmgr-name* becomes active.

User response: Check that you entered the correct queue manager name (*qmgr-name*). If required, either

- Start the queue manager (the connection will then be made automatically), or
- Use CKQC to connect to an active queue manager.

Module: DFHMQCON

XMEOUT Parameters: *date, time, applid, qmgr-name*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0309 E *date time applid* **Unable to connect to queue manager *qmgr-name*. MQCC=*mqqc* MQRC=*mqrc*.**

Explanation: An attempt to connect to queue manager *qmgr-name* is unsuccessful.

System action: The connection process terminates and control returns to CICS.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqqc* and *mqrc*, and take the appropriate action.

Module: DFHMQCON, DFHMQTRU

XMEOUT Parameters: *date, time, applid, qmgr-name, mqqc, mqrc*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0310 I *date time applid* **Duplicate connect to queue manager *qmgr-name*. Connect rejected.**

Explanation: An attempt to connect to a queue manager is unsuccessful because the queue manager is already connected.

System action: The connection process terminates and control returns to CICS.

User response: None.

Module: DFHMQCON

XMEOUT Parameters: *date, time, applid, qmgr-name*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0311 E *date time applid* **Unable to start alert monitor CKAM. EIBFN=*X'eibfn'*
EIBRESP=*eibresp* EIBRESP2=*eibresp2*
EIBRCODE=*X'eibrcode'*.**

Explanation: During the connection process, the CICS-MQ adapter is unable to start the alert monitor CKAM.

System action: The queue manager is connected, but CKAM is not started so the function of the CICS-MQ adapter is restricted.

User response: Without the alert monitor, the CICS-MQ adapter is unable to perform the following functions

- It cannot handle a deferred connection
- It cannot respond to a queue manager failure
- It cannot perform a warm or immediate shutdown if it needs to wait (that is, the last task carries out shutdown)

It is recommended that you use CKQC to terminate the connection using a forced shutdown of the CICS adapter.

The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and take the appropriate action.

Module: DFHMQCON

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0312 E *date time applid* **Unable to GETMAIN DFHMQLOC storage. EIBFN=*X'eibfn'*
EIBRESP=*eibresp* EIBRESP2=*eibresp2*
EIBRCODE=*X'eibrcode'*.**

Explanation: The CICS-MQ adapter is unable to obtain storage for the DFHMQLOC control block.

System action: The connection process terminates and control returns to CICS.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values. This is probably a CICS 'short on storage' problem. Use the procedure followed at your installation to resolve the problem.

Module: DFHMQCON

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0313 I *date time applid *UOWID=conn-name.X'uow-id'* **is in doubt.**

Explanation: This message is issued at connection time. The unit of work shown is in doubt. An asterisk character preceding the unit-of-work identifier indicates that the unit of work will not be resolved automatically.

System action: The units of work will be resolved by the distributed queuing component when remote queuing starts.

User response: See the *WebSphere MQ for z/OS System Administration Guide* for information about resolving the WMQ unit of recovery associated with the in-doubt CICS unit of work.

Module: DFHMQCON

XMEOUT Parameters: *date, time, applid, conn-name, X'uow-id'*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0314 I *date time applid UOWIDs highlighted with * will not be automatically resolved.*

Explanation: This message appears when there are unresolved in-doubt units of work. Refer to message DFHMQ0313I.

System action: None.

User response: None.

Module: DFHMQCON

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0315 E *date time applid Unable to LOAD API exit CSQCAPX. EIBFN=X'eibfn' EIBRESP=eibresp EIBRESP2=eibresp2 EIBRCODE=X'eibrcode'.*

Explanation: The CICS-MQ adapter is unable to use the API-crossing exit program CSQCAPX. This can be a normal situation if you do not intend to use the API-crossing exit, and have disabled the program CSQCAPX.

System action: The API-crossing exit is not used.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values. If you are trying to use the API-crossing exit, use the data contained in these fields to resolve the problem.

Module: DFHMQCON, DFHMQRS

XMEOUT Parameters: *date, time, applid, X'eibfn',*

eibresp, eibresp2, X'eibrcode'

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0316 I *date time applid More messages. Check console for full display.*

Explanation: This message is displayed if too many messages have been issued to be displayed on the screen.

System action: Processing continues normally.

User response: Check the console for further messages.

Module: DFHMQDIS, DFHMQDSC, DFHMQDSL, DFHMQQCN, DFHMQRS, DFHMQSSQ

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0318 I *date time applid UOWID=conn-name.X'uow-id' created by Transid transid Taskid taskid is in doubt.*

Explanation: This message is issued at connection time. The unit of work shown is in doubt.

System action: The units of work will be resolved via resynchronization with CICS.

User response: See the *WebSphere MQ for z/OS System Administration Guide* for information about resolving the WMQ unit of recovery associated with the in-doubt CICS unit of work.

Module: DFHMQCON

XMEOUT Parameters: *date, time, applid, conn-name, X'uow-id', transid, taskid*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0319 E *date time applid Unable to INQUIRE SYSTEM RELEASE. EIBFN=X'eibfn' EIBRESP=eibresp EIBRESP2=eibresp2 EIBRCODE=X'eibrcode'.*

Explanation: An attempt to issue an EXEC CICS INQUIRE SYSTEM RELEASE command is unsuccessful.

System action: The connection process terminates and control returns to CICS.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and take the appropriate action.

Module: DFHMQCON

DFHMQ0321 I • DFHMQ0332 I

XMEOUT Parameters: *date, time,applid, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0321 I *date time applid* **There is no active connection. Stop connection rejected.**

Explanation: An attempt is made to shut down a connection but there is no connection active. This could be caused by one of the following

- A connection had not been made
- The connection had already been shut down
- The connection is still being made (that is, it is pending)

System action: The request is ignored, and control returns to CICS.

User response: None.

Module: DFHMQDSC

XMEOUT Parameters: *date, time,applid*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0322D *date time applid* **Invalid input. Stop connection rejected.**

Explanation: A request to shut down the CICS-MQ adapter is made, but it is rejected because the syntax of the shutdown request is not valid.

System action: The request is ignored.

User response: Issue the request again. See the *CICS Integration with WebSphere MQ guide* for details of the correct syntax.

Module: DFHMQDSC

XMEOUT Parameters: *date, time,applid*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0323 I *date time applid command* **received from TERMID=*termid* TRANID=*trandid* USERID=*userid*.**

Explanation: The request to connect or disconnect is received from terminal *termid*. The originating transaction is *trandid* (this could be CKAM). *userid* is the user ID of the operator who used the terminal to initiate the operation. This message is also issued on the console for audit trail purposes.

System action: Processing continues normally.

User response: None.

Module: DFHMQQCN, DFHMQDSC

XMEOUT Parameters: *date, time,applid, command, termid, trandid, userid*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0326 E *date time applid* **Connection status {*Connecting* | *Pending* | *Connected* | *Quiescing* | *Stopping-Force* | *Disconnected* | *Inactive* | *Unknown*} is not valid for *command* Command rejected.**

Explanation: A request to shut down the CICS-MQ adapter is made, but it is rejected because a STOP FORCE shutdown has already been requested.

System action: The request is ignored.

User response: None.

Module: DFHMQDSC

XMEOUT Parameters: *date, time,applid, {1=*Connecting*, 2=*Pending*, 3=*Connected*, 4=*Quiescing*, 5=*Stopping-Force*, 6=*Disconnected*, 7=*Inactive*, 8=*Unknown*}, command*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0331 I *date time applid* **Adapter shutdown completed.**

Explanation: The CICS-MQ adapter is shut down. However, it is not able to disconnect from WMQ (for example, because the queue manager has already shut down).

System action: Processing continues normally.

User response: Look for other messages explaining why the CICS_MQ adapter could not disconnect from WMQ.

Module: DFHMQDSC

XMEOUT Parameters: *date, time,applid*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0332 I *date time applid* **Queue manager *qmgr-name* is already stopped. MQCC=*mqcc* MQRC=*mqrc*.**

Explanation: A request is made to shut down the CICS-MQ adapter, but the queue manager is already shut down. For example, the operator shuts down both the queue manager and the CICS-MQ adapter simultaneously. If the queue manager stops first, it cannot receive the disconnect request from the CICS adapter.

System action: The adapter shutdown process continues.

User response: If the queue manager is already shut

down, you can ignore this message. Refer to the *in WebSphere MQ for z/OS Messages* manual for information about *mqcc* and *mqrq*, and take the appropriate action.

Module: DFHMQDSC

XMEOUT Parameters: *date, time, applid, qmgr-name, mqcc, mqrq*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0333 E *date time applid* **Unable to disconnect from queue manager**
qmgr-name . MQCC=mqcc MQRC=mqrq.

Explanation: A request is made to disconnect from queue manager *qmgr-name* but it is unsuccessful.

System action: The adapter shutdown process continues.

User response: If the queue manager is already shut down, you can ignore this message. Refer to the *in WebSphere MQ for z/OS Messages* manual for information about *mqcc* and *mqrq*, and take the appropriate action.

Module: DFHMQDSC

XMEOUT Parameters: *date, time, applid, qmgr-name, mqcc, mqrq*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0334 I *date time applid* **Adapter shutdown successful.**

Explanation: The shutdown process has completed successfully.

System action: Processing continues normally.

User response: None.

Module: DFHMQDSC

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0336 I *date time applid* **command received from a PLT program.**

Explanation: The *command* request is received from a PLT program.

System action: Processing continues normally.

User response: None.

Module: DFHMQQCN

XMEOUT Parameters: *date, time, applid, command*

Destination: Console and Transient Data Queue CMQM

DFHMQ0341 I *date time applid shutdown-type*
requested by alert monitor CKAM.

Explanation: The request to shut down the CICS-MQ adapter is issued by the alert monitor CKAM.

System action: Processing continues.

User response: None.

Module: DFHMQDSC

XMEOUT Parameters: *date, time, applid, shutdown-type*

Destination: Console and Transient Data Queue CMQM

DFHMQ0342 I *date time applid* **request received from alert monitor.**

Explanation: Request *request* is received from the alert monitor (CKAM).

System action: Processing continues normally.

User response: None.

Module: DFHMQQCN

XMEOUT Parameters: *date, time, applid, request*

Destination: Console and Transient Data Queue CMQM

DFHMQ0343 E *date time applid* **MQOPEN failed.**
MQCC=mqcc MQRC=mqrq.

Explanation: A MQOPEN call for the queue manager object failed. The CICS-MQ adapter is opening the queue manager object to determine the release of WMQ.

System action: The connection continues without determining the WMQ release.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc* and *mqrq*, and take the appropriate action.

Module: DFHMQCON

XMEOUT Parameters: *date, time, applid, mqcc, mqrq*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0344 E *date time applid* **MQINQ failed.**
MQCC=mqcc MQRC=mqrq.

Explanation: A MQINQ call against the queue manager object failed. The CICS-MQ adapter is issuing the inquire to determine the release of WMQ.

System action: The connection continues without determining the WMQ release.

DFHMQ0345 E • DFHMQ0362D

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqqc* and *mqrc*, and take the appropriate action.

Module: DFHMQCON

XMEOUT Parameters: *date, time, applid, mqqc, mqrc*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0345 E *date time applid* **MQCLOSE failed.**
MQCC=mqqc MQRC=mqrc.

Explanation: A MQCLOSE call for the queue manager object failed. The CICS-MQ adapter is closing the queue manager object following an inquire to determine the release of WMQ.

System action: The connection continues.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqqc* and *mqrc*, and take the appropriate action.

Module: DFHMQCON

XMEOUT Parameters: *date, time, applid, mqqc, mqrc*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0350 I *date time applid* **Unable to LOAD API exit CSQCAPX. Program not found.**

Explanation: The CICS_MQ adapter is unable to use the API-crossing exit program CSQCAPX because it cannot be found. This is a normal situation if you do not intend to use the API-crossing exit.

System action: Processing continues normally.

User response: None.

Module: DFHMQCON, DFHMQRS

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0351 I *date time applid* **Unable to LOAD API exit CSQCAPX. Program is disabled.**

Explanation: The connection to queue manager *ssnm* is successful. The CICS-MQ adapter is unable to use the API-crossing exit program CSQCAPX because it is disabled. This is a normal situation if you do not intend to use the API-crossing exit, and have therefore disabled the program CSQCAPX.

System action: The API-crossing exit is not used.

User response: If you wish to use the API-crossing exit

- Ensure that CSQCAPX is in the DFHRPL concatenation

- Issue the CICS command CEMT SET PROGRAM(CSQCAPX) NEWCOPY ENABLE
- Activate the exit using the Modify Connection option of the CKQC transaction

Module: DFHMQCON, DFHMQRS

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0360D *date time applid* **Unable to RETRIEVE RTRANSID. Monitor terminated.**
EIBFN=X'eibfn' EIBRESP=eibresp
EIBRESP2=eibresp2
EIBRCODE=X'eibrcode'.

Explanation: An attempt to issue an EXEC CICS RETRIEVE RTRANSID is unsuccessful (for example, an unauthorized user has tried to start the alert monitor).

System action: Processing continues (including the alert monitor if one is already running).

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values.

Module: DFHMQMON

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0361D *date time applid* **Unexpected invocation. Monitor terminated.**

Explanation: An attempt is made to start the alert monitor by an unrecognized transaction.

System action: The request is ignored.

User response: None.

Module: DFHMQMON

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0362D *date time applid* **Unable to EXTRACT EXIT DFHMQRU. Monitor terminated.**
EIBFN=X'eibfn' EIBRESP=eibresp
EIBRESP2=eibresp2
EIBRCODE=X'eibrcode'.

Explanation: An attempt to issue an EXEC CICS EXTRACT EXIT command for the CICS-MQ TRUE DFHMQRU is unsuccessful.

System action: The alert monitor terminates.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and take the appropriate action (for example, use CKQC to restart the CICS-MQ adapter).

Module: DFHMQMON

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0363D *date time applid* **Unable to perform WAIT EXTERNAL. Monitor terminated.**
EIBFN=X'eibfn' EIBRESP=eibresp
EIBRESP2=eibresp2
EIBRCODE=X'eibrcode'.

Explanation: An attempt to perform an EXEC CICS WAIT EXTERNAL is unsuccessful.

System action: The alert monitor terminates.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and take the appropriate action.

Module: DFHMQMON

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0364 I *date time applid* **Monitor terminated normally.**

Explanation: There are no remaining active or deferred connections, so the alert monitor has terminated.

System action: Processing continues.

User response: None.

Module: DFHMQMON

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0365 E *date time applid* **Unable to LINK to program DFHMQQCN. EIBFN=X'eibfn'**
EIBRESP=eibresp EIBRESP2=eibresp2
EIBRCODE=X'eibrcode'.

Explanation: The alert monitor has detected that a deferred connection has been activated, but it cannot link to DFHMQQCN.

System action: The connection process is terminated, and control returns to CICS.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values. Use the CICS-MQ adapter control panels (the CKQC transaction) to make the connection.

Module: DFHMQMON

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0366 E *date time applid* **Unable to LINK to program DFHMQDSC. EIBFN=X'eibfn'**
EIBRESP=eibresp EIBRESP2=eibresp2
EIBRCODE=X'eibrcode'.

Explanation: The alert monitor has detected that the CICS-MQ adapter is ready to shut down but cannot link to DFHMQDSC.

System action: The disconnection process continues and control returns to CICS.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values. Use the CICS-MQ adapter control panels (the CKQC transaction) to disconnect from WMQ.

Module: DFHMQMON

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0368 E *date time applid* **Invalid PEB type X'type' at location X'location'. PEB ignored.**

Explanation: A pending event is not of the type expected by the alert monitor.

System action: The pending event is discarded.

User response: If this problem occurs frequently, collect the following diagnostic items, and contact your IBM support center

- A note of the values returned in the message
- Any trace information collected

Module: DFHMQMON

XMEOUT Parameters: *date, time, applid, X'type', X'location'*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0369 E *date time applid* **More than 99 notify messages outstanding. This message is postponed temporarily.**

Explanation: More than 99 pending events have been established. (For example, attempts have been made to connect to more than 99 systems that are not running.)

System action: The event is not processed until one of the other 99 events has expired.

User response: If you want to clean up the system, shut down and restart CICS.

Module: DFHMQMON

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0380 E *date time applid* **No active connection. {STARTCKTI | STOPCKTI | RESET | DISPLAY} rejected.**

Explanation: An attempt to start or stop CKTI or to use the DISPLAY/RESET function, is unsuccessful because there is no active connection between CICS and WMQ.

System action: The request is ignored.

User response: Establish a connection and reissue the request.

Module: DFHMQDIS, DFHMQDSL, DFHMQRS, DFHMQSSQ

XMEOUT Parameters: *date, time, applid, {1=STARTCKTI, 2=STOPCKTI, 3=RESET, 4=DISPLAY}*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0381D *date time applid* **No initiation queue name specified at connect time. {STARTCKTI | STOPCKTI} rejected.**

Explanation: An attempt is made to start or stop CKTI using the default queue name, but the default queue name is not found. This is because the current connection does not have an initiation queue name associated with it.

System action: The request is ignored.

User response: Specify the queue name explicitly. If you require a default queue name, specify one when you perform the connection process.

Module: DFHMQSSQ

XMEOUT Parameters: *date, time, applid, {1=STARTCKTI, 2=STOPCKTI}*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0382D *date time applid* **CKTI with the same initiation queue name is being started. {STARTCKTI | STOPCKTI} rejected.**

Explanation: An attempt is made to start CKTI specifying the name of an initiation queue that is used by another CKTI being started.

System action: The request is ignored.

User response: Review the console for messages in the range DFHMQ0100D through DFHMQ0109D for further information, or use CICS operator commands (for example CEMT INQ TASK) to determine why the CKTI started earlier is not running. If the review indicates the earlier CKTI has terminated:

1. Issue STOP CKTI specifying the same Initiation Queue Name to resolve the pending start.
2. Allow the reissue of START CKTI for the same Initiation Queue Name.

Module: DFHMQSSQ

XMEOUT Parameters: *date, time, applid, {1=STARTCKTI, 2=STOPCKTI}*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0383D *date time applid* **Another CKTI with the same initiation queue name is still running. {STARTCKTI | STOPCKTI} rejected.**

Explanation: An attempt is made to start CKTI specifying the name of an initiation queue that is already used by a CKTI which is still running.

System action: The request is ignored.

User response: If required, use the CICS-MQ adapter control panels (the CKQC transaction) to stop the existing CKTI, and restart.

Module: DFHMQSSQ

XMEOUT Parameters: *date, time, applid, {1=STARTCKTI, 2=STOPCKTI}*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0384D *date time applid* **Another CKTI with the same initiation queue name is being stopped. {STARTCKTI | STOPCKTI} rejected.**

Explanation: Either

- An attempt is made to start CKTI with an initiation queue name the same as the one that is currently being stopped, or
- An attempt was made to stop an initiation queue that is already in the process of stopping.

System action: The request is ignored.

User response: Wait until the initiation queue has stopped, and then reissue the start request if required.

Module: DFHMQSSQ

XMEOUT Parameters: *date, time, applid*,
{1=STARTCKTI, 2=STOPCKTI}

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0385D *date time applid* **CKTI not found.**
{STARTCKTI | STOPCKTI} **rejected.**

Explanation: An attempt to stop CKTI is unsuccessful because the queue name specified is not found. This is because either

- The name of the initiation queue is specified incorrectly, or
- The CKTI has already stopped

System action: The request is ignored.

User response: Verify the name of the initiation queue, and reissue the request if necessary.

Module: DFHMQSSQ

XMEOUT Parameters: *date, time, applid*,
{1=STARTCKTI, 2=STOPCKTI}

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0386 I *date time applid* {STARTCKTI |
STOPCKTI | RESET} **initiated from**
TERMID=termid TRANID=tranid
USERID=userid and is accepted.

Explanation: The CICS-MQ adapter has processed the *command* request. However, the CICS task might not have completed its processing yet (for example, CKTI could be waiting for a certain event to occur before it can be stopped). *command* can be STARTCKTI, STOPCKTI, or RESET.

System action: Processing continues.

User response: None.

Module: DFHMQRS, DFHMQSSQ

XMEOUT Parameters: *date, time, applid*,
{1=STARTCKTI, 2=STOPCKTI, 3=RESET}, *termid*,
tranid, *userid*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0389 I *date time applid* **Invalid input.**
Start/Stop CKTI rejected.

Explanation: The syntax of the CICS adapter request entered is incorrect.

System action: The request is rejected.

User response: See the *CICS Integration with Websphere MQ Guide* for details of the correct syntax, or use the CICS-MQ adapter control panels (the CKQC transaction) to request the function.

Module: DFHMQSSQ

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0400 I *date time applid* **UOWID=conn-**
name.X'uow-id'

Explanation: This message gives the connection name and the identifier of a unit of work and appears with one of the following messages

- DFHMQ0402
- DFHMQ0403
- DFHMQ0404
- DFHMQ0405
- DFHMQ0406
- DFHMQ0407

You can use the connection name when using WMQ commands (for example, RESOLVE INDOUBT).

System action: Processing continues.

User response: See associated messages.

Module: DFHMQTRU

XMEOUT Parameters: *date, time, applid, conn-name*,
X'uow-id'

Destination: Console and Transient Data Queue
CMQM

DFHMQ0402 I *date time applid* **Resolved with**
COMMIT.

Explanation: The syncpoint coordinator has informed WMQ that the unit of work indicated by the accompanying DFHMQ0400 message has been committed.

System action: Processing continues.

User response: None.

Module: DFHMQTRU

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CMQM

DFHMQ0403 I *date time applid* **Resolved with**
BACKOUT.

Explanation: The syncpoint coordinator has informed WMQ that the unit of work indicated by the

DFHMQ0404 E • DFHMQ0408 I

accompanying DFHMQ0400 message has been backed out.

System action: Processing continues.

User response: None.

Module: DFHMQTRU

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CMQM

DFHMQ0404 E *date time applid* Resolve failed. MQCC=mqcc MQRC=mqrc.

Explanation: The syncpoint coordinator requested that the unit of work indicated by the accompanying DFHMQ0400 message be committed or backed out. However, WMQ is unable to do this. *mqrc* gives the reason for the problem.

System action: The unit of work remains in doubt.

User response: If you want to resolve the unit of work

- Diagnose the cause of the problem and correct it (refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc* and *mqrc*, and use the CICS-MQ adapter control panels (the CKQC transaction) to reconnect WMQ.

Module: DFHMQTRU

XMEOUT Parameters: *date, time, applid, mqcc, mqrc*

Destination: Console and Transient Data Queue
CMQM

DFHMQ0405 E *date time applid* Execute resolve failed. MQCC=mqcc MQRC=mqrc.

Explanation: The syncpoint coordinator requested that resolution of the units of work be executed. However, WMQ was unable to do this.

System action: The unit of work remains in doubt.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc* and *mqrc*, to determine the cause of the problem. See the *CICS Integration with WebSphere MQ Guide* for information about resolving the WMQ unit of recovery associated with the CICS unit of work.

Module: DFHMQTRU

XMEOUT Parameters: *date, time, applid, mqcc, mqrc*

Destination: Console and Transient Data Queue
CMQM

DFHMQ0406 E *date time applid* Cannot resolve, syncpoint disposition lost.

Explanation: The syncpoint coordinator has been subjected to an initial start, and information regarding units of work has been lost (syncpoint state UERTDGCS). The coordinator cannot inform the CICS-MQ adapter whether to commit or back out the unit of work indicated by the accompanying DFHMQ0400 message. For information about UERTDGCS, see the *CICS Customization Guide*.

System action: The unit of work remains in doubt.

User response: Determine how to resolve the in-doubt unit of work. See the *CICS Integration with WebSphere MQ Guide* for information about resolving the WMQ unit of recovery associated with the CICS unit of work.

Module: DFHMQTRU

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CMQM

DFHMQ0407 E *date time applid* Cannot resolve, syncpoint disposition unknown.

Explanation: The syncpoint coordinator cannot find a decision about resolving the unit of work indicated by the accompanying DFHMQ0400 message (syncpoint state UERTDGNK). The coordinator cannot inform the CICS-MQ adapter whether to commit or back out the unit of work. For information about UERTDGNK, see the *CICS Customization Guide*.

System action: The unit of work remains in doubt.

User response: Determine how to resolve the in-doubt unit of work. See the *CICS Integration with WebSphere MQ Guide* for information about resolving the WMQ unit of recovery associated with the CICS unit of work.

Module: DFHMQTRU

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CMQM

DFHMQ0408 I *date time applid* Only partial resynchronization achieved. Check above messages.

Explanation: Total resynchronization is not achieved; some units of work remain in doubt.

System action: Processing continues.

User response: Action any messages received before this one which indicate units of work that have not been resolved. When there are no more in-doubt units of work message DFHMQ0409 is issued.

Module: DFHMQTRU

XMEOUT Parameters: *date, time,applid*

Destination: Console and Transient Data Queue
CMQM

DFHMQ0409 I *date time applid* **Resynchronization completed successfully.**

Explanation: Resynchronization has completed successfully; all units of work have been resolved.

System action: Processing continues.

User response: None.

Module: DFHMQTRU

XMEOUT Parameters: *date, time,applid*

Destination: Console and Transient Data Queue
CMQM

DFHMQ0410 I *date time applid* **CICS immediate shutdown detected. Adapter terminated.**

Explanation: CICS has notified the CICS-MQ adapter that it is shutting down immediately.

System action: The CICS-MQ adapter initiates an immediate shutdown. Any in-flight tasks using WMQ are backed out when the connection is broken by CICS.

User response: See the *CICS Integration with WebSphere MQ Guide* for more information about CICS-MQ adapter shutdown.

Module: DFHMQTRU

XMEOUT Parameters: *date, time,applid*

Destination: Console and Transient Data Queue
CMQM

DFHMQ0411 I *date time applid* **CICS warm shutdown detected. Adapter is quiescing.**

Explanation: CICS has notified the CICS-MQ adapter that it has initiated a warm shutdown.

System action: The CICS-MQ adapter initiates a quiesced shutdown.

User response: See the *CICS Integration with WebSphere MQ Guide* for more information about CICS-MQ adapter shutdown.

Module: DFHMQTRU

XMEOUT Parameters: *date, time,applid*

Destination: Console and Transient Data Queue
CMQM

DFHMQ0412 I *date time applid* **CICS abend detected. Adapter terminated.**

Explanation: The CICS-MQ adapter detected a CICS abend.

System action: The CICS-MQ adapter is terminated.

User response: None.

Module: DFHMQTRU

XMEOUT Parameters: *date, time,applid*

Destination: Console and Transient Data Queue
CMQM

DFHMQ0414 I *date time applid* **Abending task ID task-id** **Abend Code** *abend-code*.

Explanation: The referenced task is force purged by the operator and abends with shown abend code.

System action: The outstanding task has been completed and, because it is not in a must-commit state, the CICS-MQ adapter ends the task abnormally. For more information about the CICS abend code, see the *CICS Message and Codes* manual.

User response: None.

Module: DFHMQTRU

XMEOUT Parameters: *date, time,applid, task-id, abend-code*

Destination: Console and Transient Data Queue
CMQM

DFHMQ0415 I *date time applid* **Task ID task-id will continue. Force purge ignored.**

Explanation: The referenced task is force purged by the operator.

System action: The outstanding task has been completed but, because it is in a must-commit state (for example, syncpoint), the CICS-MQ adapter does not end the task.

User response: None.

Module: DFHMQTRU

XMEOUT Parameters: *date, time,applid, task-id*

Destination: Console and Transient Data Queue
CMQM

DFHMQ0416 I *date time applid* **Address X'address' is out of range. Area of length length is not traced.**

Explanation: An address *address* passed from an application is out of range for one of the following reasons

DFHMQ0418 E • DFHMQ0423 E

- The address plus the length of the area to be traced exceeds the 2GB addressing limit
- The address is not within the private area storage of the CICS region as regarded by z/OS

Because of this, the CICS trace facility is unable to trace the area.

System action: Processing continues.

User response: If the address is in error, correct the application.

Module: DFHMQTRU

XMEOUT Parameters: *date, time, applid, X'address', length*

Destination: Console and Transient Data Queue
CMQM

DFHMQ0418 E *date time applid* **Unable to LOAD program CSQAVICM. EIBFN=X'eibfn' EIBRESP=eibresp EIBRESP2=eibresp2 EIBRCODE=X'eibrcode'.**

Explanation: An attempt to load CSQAVICM is unsuccessful.

System action: The process terminates, and control returns to CICS.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values.

Module: DFHMQCON

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue
CMQM

DFHMQ0420 E *date time applid* **Unable to send map map-id mapset DFHMQ1x. EIBFN=X'eibfn' EIBRESP=eibresp EIBRESP2=eibresp2 EIBRCODE=X'eibrcode'.**

Explanation: The program is unable to send map *map-id* from the map set DFHMQ1x to the screen.

System action: The task is terminated.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and take the appropriate action.

Module: DFHMQBAS, DFHMQPOP, DFHMQPUL, DFHMQRET

XMEOUT Parameters: *date, time, applid, map-id, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0421 I *applid* **Tab cursor was not on a valid object.**

Explanation: The cursor is not in the correct position when the enter key is pressed.

System action: The input is ignored.

User response: Use the tab key to move the cursor to a valid position.

Module: DFHMQBAS

Destination: Terminal End User

DFHMQ0422 E *date time applid* **Unable to RETURN TRANSID CKBM. EIBFN=X'eibfn' EIBRESP=eibresp EIBRESP2=eibresp2 EIBRCODE=X'eibrcode'.**

Explanation: An attempt is made to issue an EXEC CICS RETURN TRANSID CKBM command, but it is unsuccessful.

System action: The transaction terminates, and control returns to CICS.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and take the appropriate action.

Module: DFHMQBAS, DFHMQPOP, DFHMQPUL, DFHMQRET

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0423 E *date time applid* **Unable to XCTL to program pgm-name. EIBFN=X'eibfn' EIBRESP=eibresp EIBRESP2=eibresp2 EIBRCODE=X'eibrcode'.**

Explanation: An attempt to transfer control to program *pgm-name* is unsuccessful.

System action: The transaction terminates and control returns to CICS.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and take the appropriate action.

Module: DFHMQBAS

XMEOUT Parameters: *date, time, applid, pgm-name, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0424 I *applid* **Invalid key entered.**

Explanation: An attempt is made to issue an EXEC CICS RETURN TRANSID CKBM command, but it is unsuccessful.

System action: The key is ignored.

User response: Use one of the function keys shown at the bottom of the panel.

Module: DFHMQBAS, DFHMQPOP, DFHMQPUL, DFHMQRET

Destination: Terminal End User

DFHMQ0425 E *applid* **No parameter window for this function.**

Explanation: An attempt is made to display a parameter window. There are no parameters for the function selected, so there is no parameter window to display.

System action: The request is ignored.

User response: None.

Module: DFHMQRET

Destination: Terminal End User

DFHMQ0430 E *date time applid* **Unknown map name**
map-id. EIBFN=X'eibfn'
EIBRESP=eibresp EIBRESP2=eibresp2
EIBRCODE=X'eibrcoef'.

Explanation: CICS is unable to locate the map specified (for example, because the map is not defined during the installation procedure). *map-name* is the name of the map in question.

System action: The transaction terminates.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and take the appropriate action.

Module: DFHMQPUL

XMEOUT Parameters: *date, time, applid, map-id, X'eibfn', eibresp, eibresp2, X'eibrcoef'*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0431 E *applid* **Invalid action number.**
Re-enter.

Explanation: The action number specified is out of the range available.

System action: The request is ignored.

User response: Specify an action number in the range displayed.

Module: DFHMQPUL

Destination: Terminal End User

DFHMQ0432 E *applid* **Invalid task number. Re-enter.**

Explanation: The task number specified is out of the range requested.

System action: The request is ignored.

User response: Specify a task number in the range displayed.

Module: DFHMQPUL

Destination: Terminal End User

DFHMQ0433 E *date time applid* **Invalid option. Must be 1, 2, or 3.**

Explanation: The value entered was not 1, 2, or 3.

System action: The value is rejected.

User response: Enter a value of 1, 2, or 3 on the pop-up screen.

Module: DFHMQPOP

Destination: Terminal End User

DFHMQ0434 E *date time applid* **Queue manager name missing. Must be entered.**

Explanation: The queue manager name is not specified on the connection parameter panel.

System action: The connection request is rejected.

User response: Enter the name of the required queue manager on the panel. If a default name is required, specify the queue manager name in DFHMQPRM. See the *CICS Integration with WebSphere MQ Guide* for information about how to do this.

Module: DFHMQPOP

Destination: Terminal End User

DFHMQ0439 E *date time applid* **Invalid Stop option.**
Must be 1 or 2.

Explanation: The shutdown option number is not a valid value.

System action: The request is ignored.

User response: Specify either 1 or 2.

Module: DFHMQPOP

Destination: Terminal End User

DFHMQ0440 E *date time applid* **Unable to send map**
map-id **mapset DFHMQHx.**
EIBFN=X'eibfn' **EIBRESP=eibresp**
EIBRESP2=eibresp2
EIBRCODE=X'eibrcode'.

Explanation: The program is unable to send map *map-id* from the map set DFHMQHx to the screen.

System action: The task is terminated.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and take the appropriate action.

Module: DFHMQBAS, DFHMQPOP, DFHMQPUL, DFHMQRET

XMEOUT Parameters: *date, time, applid, map-id, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0443 E *date time applid* **Unable to RETURN**
TRANSID CKRT. EIBFN=X'eibfn'
EIBRESP=eibresp EIBRESP2=eibresp2
EIBRCODE=X'eibrcode'.

Explanation: An attempt to issue an EXEC CICS RETURN TRANSID CKRT command is unsuccessful.

System action: The command is ignored.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and take the appropriate action.

Module: DFHMQRET

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrcode'*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0451 I *date time applid* **Nothing to reset.**
Reset completed.

Explanation: A reset request is made, but no values are specified to indicate what should be reset.

System action: Nothing is reset.

User response: If you want to reset anything, specify values in the required fields.

Module: DFHMQRS

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0452 I *date time applid* **Invalid input. Reset**
rejected.

Explanation: A request is made to the reset function without using the CICS-MQ adapter control panels, but the syntax is incorrect.

System action: The request is ignored.

User response: See the *CICS Integration with WebSphere MQ Guide* for details the correct syntax.

Module: DFHMQRS

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0453 I *applid* **Status of connection to**
qmgr-name **is {Connecting | Pending |**
Connected |Quiescing | Stopping-Force |
Disconnected | Inactive | Unknown},
number tasks are in flight.

Explanation: This message is issued as the reply to the CKQC DISPLAY request, and gives the status of the connection to queue manager *qmgr-name* and the number of tasks that are in-flight on that connection.

System action: Processing continues.

User response: None.

Module: DFHMQDSL

Destination: Terminal End User

DFHMQ0455 E *date time applid* **Unable to WRITEQ**
TS. EIBFN=X'eibfn' **EIBRESP=eibresp**
EIBRESP2=eibresp2
EIBRCODE=X'eibrcode'. **Queue name is**
q-name.

Explanation: An attempt to issue an EXEC CICS WRITEQ TS command is unsuccessful.

System action: The display function is terminated.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values, and take the appropriate action.

Module: DFHMQDIS

XMEOUT Parameters: *date, time, applid, X'eibfn', eibresp, eibresp2, X'eibrcode', q-name*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0456 I *applid* **No tasks found. Display completed.**

Explanation: A request is made to display tasks, but there are no current tasks using WMQ services.

System action: Processing continues.

User response: None.

Module: DFHMQDIS

Destination: Terminal End User

DFHMQ0457 I *applid* **No CKTI found. Display rejected.**

Explanation: A request is made to display CKTI, but there are no instances of CKTI started.

System action: Processing continues.

User response: None.

Module: DFHMQDIS

Destination: Terminal End User

DFHMQ0458 E *date time applid* **Invalid input. Display rejected.**

Explanation: An attempt is made to request a display function, but not using the CICS-MQ adapter control panels. This is not supported.

System action: The request is rejected. .

User response: Use the CICS-MQ adapter control panels to request the display function.

Module: DFHMQCON, DFHMQDIS, DFHMQDSL

XMEOUT Parameters: *date, time, applid*

Destination: CMQM and Terminal End User

DFHMQ0460 I *applid* **Bottom of display.**

Explanation: An attempt is made to scroll forward, but the bottom of the display has already been reached.

System action: Processing continues.

User response: None.

Module: DFHMQRET

Destination: Terminal End User

DFHMQ0461 I *applid* **Top of display.**

Explanation: An attempt is made to scroll backward, but the top of the display has already been reached.

System action: Processing continues.

User response: None.

Module: DFHMQRET

Destination: Terminal End User

DFHMQ0462 E *date time applid* **Invalid input. Request rejected.**

Explanation: An attempt is made to issue the internal transaction CKRT by direct terminal input, or in an otherwise invalid way.

System action: The request is rejected.

User response: Do not use CKRT in this way.

Module: DFHMQRET

XMEOUT Parameters: *date, time, applid*

Destination: CMQM and Terminal End User

DFHMQ0480 E *date time applid* **MQCC=mqcc MQRC=mqrc QRPL at X'qrpl-address' FRB at X'frb-address'.**

Explanation: This message is issued prior to a CICS-MQ adapter dump if an unexpected error occurs.

System action: Processing continues.

User response: Refer to the dump.

Module: DFHMQTRU

XMEOUT Parameters: *date, time, applid, mqcc, mqrc, X'qrpl-address', X'frb-address'*

Destination: Console and Transient Data Queue CMQM

DFHMQ0481 *date time applid* **Unexpected error. MQCC=mqcc MQRC=mqrc FRB at X'frb-address'.**

Explanation: This message is used as the title for a CICS-MQ adapter dump if an unexpected error occurs. *frb-address* is the address of the function request block.

System action: None.

User response: None.

Module: DFHMQCON, DFHMQDSC

XMEOUT Parameters: *date, time, applid, mqcc, mqrc, X'frb-address'*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0500 *{Connecting | Pending | Connected | Quiescing | Stopping-Force | Disconnected | Inactive | Unknown }*

Explanation: For IBM internal use.

System action: None.

User response: None.

DFHMQ0700 I date time applid tranid trannum
**CICS-MQ Bridge initialization in
progress.**

Explanation: Initialization of the CICS-MQ bridge is in progress.

System action: Processing continues.

User response: None.

Module: DFHMQBR0

XMEOUT Parameters: date, time, applid, tranid,
trannum

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0702 I date time applid tranid trannum
**CICS-MQ bridge monitor initialization
complete.**

Explanation: Bridge monitor initialization completed successfully.

System action: Processing continues.

User response: None.

Module: DFHMQBR0

XMEOUT Parameters: date, time, applid, tranid,
trannum

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0703 I date time applid tranid trannum
**WaitInterval=interval, Auth=auth-option
Q=q-name.**

Explanation: This confirms the bridge monitor start options. Although the WAIT parameter is supplied in seconds, Interval is shown in milliseconds; -1 implies WaitUnlimited.

System action: Processing continues.

User response: None.

Module: DFHMQBR0

XMEOUT Parameters: date, time, applid, tranid,
trannum, interval, auth-option, q-name

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0704 E date time applid tranid trannum
**EIBRESP=eibresp EIBRESP2=eibresp2
returned for EXEC CICS call.
EIBFN=eibfn.**

Explanation: An error occurred in a CICS call issued by the CICS-MQ bridge.

System action: Processing continues.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values.

Module: DFHMQBP1, DFHMQBP2, DFHMQBR0,
DFHMQBR2

XMEOUT Parameters: date, time, applid, tranid,
trannum, eibresp, eibresp2, eibfn

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0705 E *date time applid tranid trannum*
Parameter at offset nn in input string is invalid.

Explanation: The parameter at offset nn in the start parameter string for the bridge monitor is invalid. The incorrect parameter is shown in message DFHMQ0784.

System action: Processing continues.

User response: Correct the parameter and restart the bridge monitor.

Module: DFHMQBR0

XMEOUT Parameters: *date, time,applid, tranid, trannum, nn*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0707 I *date time applid tranid trannum*
CICS-MQ Bridge is not supported on non-z/OS platforms.

Explanation: The bridge is being run on a platform other than z/OS. This is not supported.

System action: The bridge monitor terminates abnormally.

User response: None.

Module: DFHMQBR0

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0710 E *date time applid tranid trannum*
MQCC=mqcc MQRC=mqrc returned for mq-call.

Explanation: An error occurred in an MQ API call issued by the CICS-MQ bridge.

System action: Processing continues.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc* and *mqrc*.

Module: DFHMQBP0, DFHMQBP2, DFHMQBR0, DFHMQBR2

XMEOUT Parameters: *date, time,applid, tranid, trannum, mqcc, mqrc, mq-call*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0711 E *date time applid tranid trannum*
Unable to open bridge queue q-name.

Explanation: The bridge queue specified is not known to the queue manager.

System action: The CICS-MQ bridge task terminates.

User response: Check the bridge queue is defined correctly and specified on the Q= parameter of the bridge startup for CKBR.

Module: DFHMQBR0

XMEOUT Parameters: *date, time,applid, tranid, trannum, q-name*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0712 I *date time applid tranid trannum*
CICS-MQ Bridge quiescing.

Explanation: Quiesce of the CICS-MQ Bridge monitor been initiated. This would normally be because CICS or the queue manager is shutting down or because the operator has set the bridge queue GET(DISABLED).

System action: Processing continues.

User response: None.

Module: DFHMQBR0

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0713 I *date time applid tranid trannum*
CICS-MQ Bridge terminated normally.

Explanation: The CICS-MQ Bridge monitor shutdown completed normally.

System action: Processing continues.

User response: None.

Module: DFHMQBR0

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0714 I *date time applid tranid trannum*
CICS-MQ Bridge task starting.

Explanation: The CICS-MQ Bridge monitor is starting.

System action: Processing continues.

User response: None.

Module: DFHMQBR0

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0715 E *date time applid tranid trannum* **Invalid COMMAREA length** *length in message.*

Explanation: The COMMAREA length calculated by the bridge is not valid. It probably exceeds the maximum of 32767. This error can also occur if a negative length was calculated.

System action: The bridge task terminates abnormally.

User response: If OutputDataLength is set within the MQCIH, check it does not exceed 32759 (allowing 8 bytes for the program name). If it is not set, check the total request message length (also allowing 8 bytes for the program name). The length of any MQCIH must not exceed 32767. Note that the length of the MQCIH is taken from the MQCIH length field.

Module: DFHMQBP0

XMEOUT Parameters: *date, time, applid, tranid, trannum, length*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0716 E *date time applid tranid trannum* **MQCIH required for UOW middle and last messages.**

Explanation: A bridge task has received a message for a second or subsequent MQGET call within a multipart unit of work. The correlation identifier matches the message identifier of the first message within the unit of work, but the message does not contain an MQCIH.

System action: The unit of work is backed out.

User response: Make sure that all messages within a multipart unit of work contain an MQCIH and rerun the unit of work.

Module: DFHMQBP0

XMEOUT Parameters: *date, time, applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0717 E *date time applid tranid trannum* **UOW first or only received when UOW middle or last expected.**

Explanation: A bridge task has received a message for a second or subsequent MQGET call within a multipart unit of work. The correlation identifier matches the message identifier of the first message within the unit of work, but the UOWControl field within the MQCIH is invalid. It is set to MQCUOWC_FIRST or MQCUOWC_ONLY when MQCUOWC_MIDDLE, MQCUOWC_LAST, MQCUOWC_COMMIT, or MQCUOWC_BACKOUT is required.

System action: The unit of work is backed out.

User response: Correct the UOWControl field and rerun the unit of work.

Module: DFHMQBP0

XMEOUT Parameters: *date, time, applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0718 E *date time applid tranid trannum* **UOW middle or last received when UOW first or only expected.**

Explanation: The bridge monitor has received a request message for a new unit of work, the correlation identifier is set to MQCI_NEW_SESSION but the UOWControl field within the MQCIH is set to something other than MQCUOWC_FIRST or MQCUOWC_ONLY.

System action: Processing continues.

User response: Correct the UOWControl field and rerun the unit of work.

Module: DFHMQBP0, DFHMQBR0

XMEOUT Parameters: *date, time, applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0720 E *date time applid tranid trannum* **Authentication option IDENTIFY or VERIFY_ requires a security manager to be active.**

Explanation: An attempt has been made to start the bridge monitor with AUTH=IDENTIFY or VERIFY_ but security is not active for the CICS system.

System action: The bridge monitor terminates.

User response: Activate security, or choose a different authentication option.

Module: DFHMQBR0

XMEOUT Parameters: *date, time, applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0721 E *date time applid tranid trannum* **Invalid MQCIH.**

Explanation: A message has been received by the bridge with an MQMD format field of MQFMT_CICS but the data does not begin with a valid MQCIH. Either the StrucId, Version, or StrucLength is incorrect.

System action: Processing continues.

User response: Check the version of the header and compare with the level supported by the bridge. Correct the format or the user data as appropriate.

Module: DFHMQBP0, DFHMQBR0

XMEOUT Parameters: *date, time, applid, tranid, trannum*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0724 E *date time applid tranid trannum* **Bridge queue q-name is not defined as local.**

Explanation: The bridge queue specified is not defined as a local queue.

System action: The CICS-MQ bridge task terminates.

User response: Redefine the bridge request queue as a local queue.

Module: DFHMQBR0

XMEOUT Parameters: *date, time, applid, tranid, trannum, q-name*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0725 I *date time applid tranid trannum*
Messages on bridge queue are not persistent by default.

Explanation: The bridge queue is defined with DEFPSIST(NO). Request messages should be persistent to guarantee that they will be processed. The message is for information only.

System action: Processing continues.

User response: Change the queue definition if necessary.

Module: DFHMQBR0

XMEOUT Parameters: *date, time, applid, tranid, trannum*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0729 I *date time applid tranid trannum* **No dead-letter queue defined to queue manager.**

Explanation: There is no dead-letter queue defined to the queue manager. The CICS-MQ bridge will be terminated if any error occurs that would result in a message being sent to the dead-letter queue.

System action: Processing continues.

User response: Alter the queue manager to define a dead-letter queue if dead-letter processing is required.

Module: DFHMQBR2

XMEOUT Parameters: *date, time, applid, tranid, trannum*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0730 I *date time applid tranid trannum* **Unable to open dead-letter queue.**
MQRC=mqrc.

Explanation: The dead-letter queue defined to the queue manager could not be opened. The CICS-MQ bridge will be terminated if any error occurs that would result in a message being sent to the dead-letter queue.

System action: Processing continues.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc*.

Module: DFHMQBR2

XMEOUT Parameters: *date, time, applid, tranid, trannum, mqrc*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0731 I *date time applid tranid trannum* **Unable to inquire on dead-letter queue,**
MQRC=mqrc.

Explanation: An MQINQ call on the dead-letter queue failed. The CICS-MQ bridge will be terminated if any error occurs that would result in a message being sent to the dead-letter queue.

System action: Processing continues.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc*.

Module: DFHMQBR2

XMEOUT Parameters: *date, time, applid, tranid, trannum, mqrc*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0732 I *date time applid tranid trannum* **Unable to put message to dead-letter queue.**
MQRC=mqrc.

Explanation: An MQPUT to the dead-letter queue failed.

System action: If this error occurs in a bridge task, the unit of work is backed out. If this error occurs in the bridge monitor, it will be abnormally terminated. The response message will be sent to the dead-letter queue.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc*.

Module: DFHMQBP2, DFHMQBR2

DFHMQ0733 I • DFHMQ0738 E

XMEOUT Parameters: *date, time,applid, tranid, trannum, mqrc*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0733 I *date time applid tranid trannum*
Dead-letter queue not defined with USAGE(NORMAL).

Explanation: The dead-letter queue is not defined correctly. The CICS-MQ bridge will be terminated if any error occurs that would result in a message being sent to the dead-letter queue.

System action: Processing continues.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc*.

Module: DFHMQBR2

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0734 I *date time applid tranid trannum*
Dead-letter queue max message length length is too small.

Explanation: The maximum message length allowed for the dead-letter queue is less than the size of the dead-letter header, MQDLH. The CICS-MQ bridge will be terminated if any error occurs that would result in a message being sent to the dead-letter queue.

System action: Processing continues.

User response: Increase the MAXMSGL of the dead-letter queue to at least the size of the MQDLH but, to be effective, make it large enough to hold the largest request message expected plus the MQDLH.

Module: DFHMQBR2

XMEOUT Parameters: *date, time,applid, tranid, trannum, length*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0735 I *date time applid tranid trannum CICS*
or queue manager quiesced before bridge task started.

Explanation: The bridge task received a quiescing return code from an MQOPEN call for the request queue or an MQGET call for the first message within a unit of work.

System action: The request will be processed when CICS, the queue manager, or the CICS-MQ bridge monitor are restarted.

User response: Restart CICS, the queue manager or the bridge monitor.

Module: DFHMQBP0

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0736 I *date time applid tranid trannum* **Bridge quiesced before task started.**

Explanation: The bridge quiesced before a bridge task could get the first message within a unit of work.

System action: The request will be processed when the bridge monitor is restarted.

User response: Restart the bridge monitor.

Module: DFHMQBP0

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0737 E *date time applid tranid trannum CICS*
or queue manager quiesced, bridge task backed out.

Explanation: The bridge task received a quiescing return code from an MQGET for a second or subsequent message within a unit of work.

System action: The unit of work is backed out and the bridge task terminated.

User response: Rerun the unit of work when one or both CICS and the queue manager are restarted

Module: DFHMQBP0

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0738 E *date time applid tranid trannum*
CICS-MQ Bridge quiesced, task backed out.

Explanation: The bridge task quiesced while a bridge task was waiting to get a second or subsequent message within a unit of work because the queue was not enabled for getting messages.

System action: The unit of work is backed out and the bridge task terminated.

User response: Rerun the unit of work when one or both CICS and the queue manager are restarted.

Module: DFHMQBP0

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0739 E *date time applid tranid trannum* **Bridge terminated, timeout interval expired before middle or lastUOW message received.**

Explanation: The bridge task did not receive a second or subsequent message for a unit of work within the wait interval specified (or as overridden on the first request for the unit of work) at bridge monitor startup.

System action: The bridge task terminates.

User response: Perform one of the following

- Increase the WAIT parameter on bridge monitor startup.
- Correct the program that failed to send a subsequent request for a unit of work.
- Set the UOWControl field correctly for the previous request.

Module: DFHMQBP0

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0740 E *date time applid tranid trannum* **Client application requested backout.**

Explanation: An MQCUOWC_BACKOUT request was received from the client.

System action: The bridge task backed out a unit of work.

User response: None.

Module: DFHMQBP0

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0745 E *date time applid tranid trannum* **Unable to put message to reply queue. MQRC=mqrc.**

Explanation: An MQPUT call to the reply-to queue failed.

System action: The response message will be sent to the dead-letter queue.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc*.

Module: DFHMQBP0, DFHMQBP2, DFHMQBR0

XMEOUT Parameters: *date, time,applid, tranid, trannum, mqrc*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0746 E *date time applid tranid trannum* **Invalid CCSID. ccsid1 expected but ccsid2 received.**

Explanation: A request message was received with an invalid value for the CCSID field in the MQMD.

System action: Processing continues.

User response: Correct the MQMD and reissue the request.

Module: DFHMQBR0

XMEOUT Parameters: *date, time,applid, tranid, trannum, ccsid1, ccsid2*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0747 E *date time applid tranid trannum* **Invalid encoding. encoding1 expected but encoding2 received.**

Explanation: A request message was received with an invalid value for the encoding field in the MQMD.

System action: Processing continues.

User response: Correct the MQMD and reissue the request.

Module: DFHMQBR0

XMEOUT Parameters: *date, time,applid, tranid, trannum, encoding1, encoding2*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0748 E *date time applid tranid trannum* **Message removed from the request queue during backout processing.**

Explanation: The bridge has sent this request message to the dead-letter queue during backout processing.

System action: The task is backed out.

User response: See the associated messages to determine the cause of the problem.

Module: DFHMQBP2

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0749 E *date time applid tranid trannum*
Authentication error. MQCC=mqcc
MQRC=mqrc Userid=user-id.

Explanation: The bridge monitor is being run with AUTH=VERIFY_UOW or AUTH=VERIFY_ALL. Validation of the userid failed.

System action: The task is terminated.

User response: Check that the correct user ID was specified, and that the appropriate authorizations are defined for it.

Module: DFHMQBP0, DFHMQBR0

XMEOUT Parameters: *date, time, applid, tranid, trannum, mqcc, mqrc, user-id*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0750 E *date time applid tranid trannum*
CICS-MQ Bridge internal error.

Explanation: An unexpected condition was detected by the bridge.

System action: The bridge monitor terminates abnormally.

User response: Contact your IBM support center if the problem persists.

Module: DFHMQBR0

XMEOUT Parameters: *date, time, applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0751 E *date time applid tranid trannum*
EIBRESP=eibresp EIBRESP2=eibresp2
.Unable to LINK to program
program-name.

Explanation: An EXEC CICS LINK command for the user requested program failed.

System action: The bridge task terminates abnormally.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values.

Module: DFHMQBP0

XMEOUT Parameters: *date, time, applid, tranid, trannum, eibresp, eibresp2, program-name*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0753 E *date time applid tranid trannum*
Message has been processed
previously and returned to the queue
using backout.

Explanation: The bridge already attempted to process this request but the request failed and was backed out. This could be because backout processing failed for a bridge task that ended abnormally or because there was a CICS failure while this request was in progress. No attempt is made to process the request a second time.

System action: Processing continues.

User response: Look at previous error messages for this message on the CSMT log to determine the cause for the previous failure, and rerun the request.

Module: DFHMQBR0

XMEOUT Parameters: *date, time, applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0754 E *date time applid tranid trannum* **Bridge**
task abend abend-code in program
program-name.

Explanation: A bridge task ended abnormally.

System action: The task is terminated.

User response: The associated transaction dump can be used to assist problem determination. Correct the problem and rerun the unit of work. If the program name begins with DFHMQB and the problem persists, contact your IBM support center.

Module: DFHMQBP1

XMEOUT Parameters: *date, time, applid, tranid, trannum, abend-code, program-name*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0755 E *date time applid tranid trannum* **Bridge**
queue is not shareable.

Explanation: The bridge request queue does not have the SHARE attribute.

System action: The bridge monitor terminates.

User response: Alter the queue definition and restart the bridge monitor.

Module: DFHMQBR0

XMEOUT Parameters: *date, time, applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0756 E *date time applid tranid trannum*
Dead-letter queue not defined as local.

Explanation: The dead-letter queue is not defined as a local queue. The CICS-MQ bridge will be terminated if any error occurs that would result in a message being sent to the dead-letter queue.

System action: Processing continues.

User response: Redefine the dead-letter queue as a local queue.

Module: DFHMQBR2

XMEOUT Parameters: *date, time, applid, tranid, trannum*

Destination: Console and Transient Data Queue
 CMQM and Terminal End User

DFHMQ0757 E *date time applid tranid trannum*
Unable to open reply-to queue.
MQRC=mqrc.

Explanation: The reply-to queue specified is not known to the queue manager.

System action: The response message will be sent to the dead-letter queue.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc*.

Module: DFHMQBP0

XMEOUT Parameters: *date, time, applid, tranid, trannum, mqrc*

Destination: Console and Transient Data Queue
 CMQM and Terminal End User

DFHMQ0758 E *date time applid tranid trannum*
Unable to START bridge task.
EIBRESP=eibresp EIBRESP2=eibresp2.
Userid userid is not authorized.

Explanation: The bridge monitor is being run with the IDENTIFY or VERIFY authorization option. An EXEC CICS START command for the bridge task failed with NOTAUTH or USERIDERR because the user ID is not authorized to start bridge transactions or has been revoked.

System action: Processing continues.

User response: The EIB fields contain information about the cause of the problem. See the *CICS Application Programming Reference* manual for an explanation of these values. Correct the security definitions if this userid should be authorized to run requests using the bridge.

Module: DFHMQBP0, DFHMQBR0

XMEOUT Parameters: *date, time, applid, tranid, trannum, eibresp, eibresp2, userid*

Destination: Console and Transient Data Queue
 CMQM and Terminal End User

DFHMQ0759 E *date time applid tranid trannum*
Transaction transid is transid not defined to CICS.

Explanation: An request has been received to run the transaction listed but it is not defined to this CICS system.

System action: The bridge monitor terminates abnormally.

User response: Correct the request or define the transaction.

Module: DFHMQBP0, DFHMQBR0

XMEOUT Parameters: *date, time, applid, tranid, trannum, transid*

Destination: Console and Transient Data Queue
 CMQM and Terminal End User

DFHMQ0760 I *date time applid tranid trannum*
MsgId=msgid.

Explanation: This message gives the identifier of a message to which a previous error message relates.

System action: Processing continues.

User response: See the associated message.

Module: DFHMQBR2

XMEOUT Parameters: *date, time, applid, tranid, trannum, msgid*

Destination: Console and Transient Data Queue
 CMQM and Terminal End User

DFHMQ0761 I *date time applid tranid trannum*
Correlld=Correlld.

Explanation: This message gives the correlation identifier of a message to which a previous error message relates.

System action: Processing continues.

User response: See the associated message.

Module: DFHMQBR2

XMEOUT Parameters: *date, time, applid, tranid, trannum, Correlld*

Destination: Console and Transient Data Queue
 CMQM and Terminal End User

DFHMQ0762 I *date time applid tranid trannum* **Queue**
name=q-name.

Explanation: This message gives the name of the queue to which a previous error message relates.

DFHMQ0763 I • DFHMQ0769 I

System action: Processing continues.

User response: See associated message.

Module: DFHMQBR0, DFHMQBR2

XMEOUT Parameters: *date, time, applid, tranid, trannum, q-name*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0763 I *date time applid tranid trannum* **Queue manager=queue-manager-name.**

Explanation: This message gives the name of the queue manager to which a previous error message relates.

System action: Processing continues.

User response: See associated message.

Module: DFHMQBR2

XMEOUT Parameters: *date, time, applid, tranid, trannum, queue-manager-name*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0764 E *date time applid tranid trannum* **Invalid userid. user-id1 expected but user-id2 received.**

Explanation: A user ID is required in all request messages when AUTH=VERIFY_ALL is being used; this must be the same for all requests within a unit of work. This message is issued because the bridge task detected a missing or changed user ID.

System action: The bridge task terminates abnormally.

User response: Correct the user ID and rerun the unit of work.

Module: DFHMQBP0

XMEOUT Parameters: *date, time, applid, tranid, trannum, user-id1, user-id2*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0766 I *date time applid tranid trannum* **Bridge queue not defined with INDXTYPE(CORRELID).**

Explanation: The bridge queue should be defined with an index type of CORRELID. This is required if the queue is a shared queue and is recommended for private queues.

System action: If the bridge queue is shared, the bridge monitor does not start. Otherwise, processing continues.

User response: Alter the queue definition to specify the required index type and restart the bridge monitor.

Module: DFHMQBR0

XMEOUT Parameters: *date, time, applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0767 I *date time applid tranid trannum* **Unable to open backout-requeue queue. MQRC=mqrc.**

Explanation: The backout-requeue queue defined to the bridge queue could not be opened.

System action: Messages will be sent to the dead-letter queue instead.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc*.

Module: DFHMQBR2

XMEOUT Parameters: *date, time, applid, tranid, trannum, mqrc*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0768 E *date time applid tranid trannum* **Backout-requeue queue not defined as local.**

Explanation: The backout-requeue queue is not defined as a local queue.

System action: Messages will be sent to the dead-letter queue instead.

User response: Redefine the backout-requeue queue as a local queue.

Module: DFHMQBR2

XMEOUT Parameters: *date, time, applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0769 I *date time applid tranid trannum* **Unable to inquire on backout-requeue queue. MQRC=mqrc.**

Explanation: An MQINQ call on the backout-requeue queue failed.

System action: Messages will be sent to the dead-letter queue instead.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc*.

Module: DFHMQBP2

XMEOUT Parameters: *date, time,applid, tranid, trannum, mqrc*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0770 I *date time applid tranid trannum*
Backout-requeue queue not defined with USAGE(NORMAL).

Explanation: The backout-requeue queue is not defined correctly.

System action: Messages will be sent to the dead-letter queue instead.

User response: Ensure the backout-requeue queue is not defined as a transmission queue.

Module: DFHMQBR2

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0771 I *date time applid tranid trannum* **Unable to put message to backout-requeue queue. MQRC=mqrc.**

Explanation: An MQPUT to the backout-requeue queue failed.

System action: Messages will be sent to the dead-letter queue instead.

User response: Refer to the *WebSphere MQ for z/OS Messages* manual for information about *mqcc*.

Module: DFHMQBP2

XMEOUT Parameters: *date, time,applid, tranid, trannum, mqrc*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0772 E *date time applid tranid trannum* **Invalid FacilityLike value xxx in message.**

Explanation: The CICS Link3270 program DFHL3270 returned code BRIHRC_FACILITYLIKE_INVALID, because the FacilityLike field of the MQCIH header in the input message was invalid. It must correspond to an installed terminal that is to be used as a model for the bridge facility.

System action: The input messages are backed out to the backout-requeue queue or dead-letter queue.

User response: Correct the FacilityLike field to specify the name of a terminal installed on the CICS system or install a terminal with the required name.

Module: DFHMQBP0

XMEOUT Parameters: *date, time,applid, tranid, trannum, xxx*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0773 E *date time applid tranid trannum* **Invalid or expired Facility token in message.**

Explanation: The CICS Link3270 program DFHL3270 returned code BRIHRC_INVALID_FACILITYTOKEN or BRIHRC_FACILITYTOKEN_IN_USE, because the Facility field of the MQCIH header in the input message was invalid. The value must be zero on the first request of a sequence of 3270 bridge messages, and the value that is returned in the reply message must then be used in subsequent messages. The token expires after the time specified in the FacilityKeepTime field of the first message. The token cannot be used by more than one sequence of bridge messages.

System action: The input messages are backed out to the backout-requeue queue or dead-letter queue.

User response: Check the application to ensure that the correct Facility token is being used and that it has not expired. If necessary, increase the FacilityKeepTime so that the token does not expire before the sequence of messages has been processed.

Module: DFHMQBP0

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0774 E *date time applid tranid trannum*
Unable to start transaction on CICS system sys-name.

Explanation: The RemoteSysId field of the MQCIH message header is non-blank, but the specified name *sys-name* is not known to CICS or there is no active CICS connection to that remote system.

System action: The input messages are backed out to the backout-requeue queue or dead-letter queue.

User response: Ensure that the specified CICS system is running and that there is an active CICS Intersystem communication connection to it from the system running the bridge monitor.

Module: DFHMQBR0

XMEOUT Parameters: *date, time,applid, tranid, trannum, sys-name*

Destination: Console and Transient Data Queue
CMQM and Terminal End User

DFHMQ0775 I *date time applid tranid trannum* **Unable to start transaction on this CICS system.**

Explanation: The RemoteSysId field of the MQCIH message header is blank, but the specified Facility token is not known to CICS.

System action: The bridge monitor does not know which CICS system allocated the token and so leaves the message on the queue for another bridge monitor to process. If the token is invalid or expired this may result in the message never being processed. Processing continues.

User response: Ensure that the RemoteSysId field of all messages except the first of a sequence contains the RemoteSysId returned in the previous reply message. This will ensure messages are routed directly to the correct CICS region improve performance, and prevent the possibility of unprocessed messages. None.

Module: DFHMQBR0

XMEOUT Parameters: *date, time, applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0776 E *date time applid tranid trannum* **Invalid FacilityKeepTime value xxx in message.**

Explanation: The CICS Link3270 program DFHL3270 returned code BRIHRC_INVALID_KEEPTIME, because the FacilityKeepTime field of the MQCIH message header was zero or greater than the maximum allowed keep time (as controlled by the BRMAXKEEPTIME CICS system initialization parameter).

System action: The input messages are backed out to the backout-requeue queue or dead-letter queue.

User response: Ensure that the FacilityKeepTime field of the first message in a 3270 transaction sequence contains a value within the valid range.

Module: DFHMQBP0

XMEOUT Parameters: *date, time, applid, tranid, trannum, xxx*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0777 E *date time applid tranid trannum* **Link3270 error. RC=code.**

Explanation: The CICS Link3270 program DFHL3270 returned an unexpected return code.

System action: The input messages are backed out to the backout-requeue queue or dead-letter queue.

User response: Use the CICS COBOL copybook

DFHBRIHO to find the symbolic name of the return code from the numeric value code reported in the message. Refer to 'BRIH-RETURNCODE values' in the *CICS External Interfaces Guide* to determine the meaning of the return code from DFHL3270. Correct the input message accordingly.

Module: DFHMQBP0, DFHMQBP2

XMEOUT Parameters: *date, time, applid, tranid, trannum, code*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0778 E *date time applid tranid trannum* **Abend abend-code in transaction tran-id.**

Explanation: A CICS abend occurred in a transaction running under the CICS link3270 bridge.

System action: The input messages are backed out to the backout-requeue queue or dead-letter queue.

User response: Determine the cause of the abend and correct the underlying problem using normal CICS diagnostic techniques.

Module: DFHMQBP0

XMEOUT Parameters: *date, time, applid, tranid, trannum, abend-code, tran-id*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0779 E *date time applid tranid trannum* **Mapset does not match. mapset-id1 expected but mapset-id2 received.**

Explanation: The mapset name in a receive map vector does not match the name requested. The bridge task cannot interpret the application data structure.

System action: The input messages are backed out to the backout-requeue queue or dead-letter queue.

User response: Ensure the mapset name in the input message matches the name expected by the CICS transaction and returned in the preceding receive map request vector.

Module: DFHMQBP0

XMEOUT Parameters: *date, time, applid, tranid, trannum, mapset-id1, mapset-id2*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0780 E *date time applid tranid trannum* **Map name does not match. map-id1 expected but map-id2 received.**

Explanation: The map name in a receive map vector does not match the name requested. The bridge task cannot interpret the application data structure.

System action: The input messages are backed out to the backout-requeue queue or dead-letter queue.

User response: Ensure the map name in the input message matches the name expected by the CICS transaction and returned in the preceding receive map request vector.

Module: DFHMQBP0

XMEOUT Parameters: *date, time, applid, tranid, trannum, map-id1, map-id2*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0781 E *date time applid tranid trannum* **Invalid bridge vector.**

Explanation: The bridge input vector was invalid. Possible errors are

- The vector length is greater than the message length
- The vector type is not recognized
- A field length is greater than its defined length
- A field input data length is greater than the defined length of the field

The ErrorOffset field of the MQCIH header indicates the position within the message where the error was detected (although the actual error may have been caused by a problem earlier in the message).

System action: The input messages are backed out to the backout-requeue queue or dead-letter queue.

User response: Ensure the bridge input vector is defined correctly.

Module: DFHMQBP0

XMEOUT Parameters: *date, time, applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0782 E *date time applid tranid trannum* **File DFHBRNSF is not available.**

Explanation: The CICS Link3270 program DFHL3270 returned code BRIHRC_DHFBRNSF_UNAVAILABLE, because the CICS bridge facility name space file, DFHBRNSF, was not available for use by CICS.

System action: The input messages are backed out to the backout-requeue queue or dead-letter queue.

User response: Ensure the DFHBRNSF file is defined and available to CICS. For information about defining this file, see the *CICS External Interfaces Guide*.

Module: DFHMQBP0

XMEOUT Parameters: *date, time, applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0783 I *date time applid tranid trannum*
Msg=BOTH, PassTktA=applid.

Explanation: This confirms the bridge monitor start options. User settings of MSG= are ignored, MSG=BOTH is always used.

System action: Processing continues.

User response: None.

Module: DFHMQBR0

XMEOUT Parameters: *date, time, applid, tranid, trannum, applid*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0784 E *date time applid tranid trannum*
Input=parm_string.

Explanation: An error was found in the bridge start input parameters. parm_string shows the input parameters starting at the point where the error was detected.

System action: The bridge monitor terminates.

User response: Correct the parameter in error and restart the bridge monitor.

Module: DFHMQBR0

XMEOUT Parameters: *date, time, applid, tranid, trannum, parm_string*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0785 E *date time applid tranid trannum*
Link3270 routing failed - not supported by CICS system.

Explanation: The CICS Link3270 program DFHL3270 returned code BRIHRC_ROUTING_BACKLEVEL_CICS, because the Link3270 request was routed to a CICS system that does not support Link3270.

System action: The bridge transaction terminates abnormally.

User response: Correct the CICS transaction routing definitions. The target CICS system must be CICS Transaction Server Version 2 Release 2 or higher. For information about Link3270 see the *CICS External Interfaces Guide*.

Module: DFHMQBP0

XMEOUT Parameters: *date, time, applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0786 E • DFHMQ0791 E

DFHMQ0786 E *date time applid tranid trannum*
Link3270 routing failed - connection error.

Explanation: The CICS Link3270 program DFHL3270 returned code BRIHRC_ROUTING_CONNECTION, because a connection error did not allow the Link3270 request to be routed to the remote region.

System action: The bridge transaction terminates abnormally.

User response: Correct the CICS transaction routing definitions. The target CICS system must be active and connected. For information about Link3270 see the *CICS External Interfaces Guide*.

Module: DFHMQBP0

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0787 E *date time applid tranid trannum*
Link3270 routing failed - TERMERR.

Explanation: The CICS Link3270 program DFHL3270 returned code BRIHRC_ROUTING_TERMERR, because the EXEC CICS LINK from the DFHL3270 to the target region failed with TERMERR.

System action: The bridge transaction terminates abnormally.

User response: Correct the CICS transaction routing definitions. For information about Link3270 see the *CICS External Interfaces Guide*.

Module: DFHMQBP0

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0788 E *date time applid tranid trannum*
Link3270 routing failed - TRANDEF error.

Explanation: The CICS Link3270 program DFHL3270 returned code BRIHRC_ROUTING_TRANDEF_ERROR, because the TRANSACTION resource definition in the routing region did not allow the transaction to be routed to the chosen target region.

System action: The bridge transaction terminates abnormally.

User response: Correct the CICS transaction routing definitions. For information about Link3270 see the *CICS External Interfaces Guide*.

Module: DFHMQBP0

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0789 E *date time applid tranid trannum*
Link3270 routing failed - URM error.
RC=code CompCode=compcode.

Explanation: The CICS Link3270 program DFHL3270 returned code BRIHRC_ROUTING_URM_LINK_FAILED or BRIHRC_ROUTING_URM_REJECTED, because the link to the dynamic routing User Replaceable Module (URM) failed or was rejected by the URM.

System action: The bridge transaction terminates abnormally.

User response: Correct the CICS transaction routing definitions. For information about the codes *code* and *compcode* from Link3270 see the *CICS External Interfaces Guide*.

Module: DFHMQBP0

XMEOUT Parameters: *date, time,applid, tranid, trannum, code, compcode*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0790 E *date time applid tranid trannum*
Transaction not running.

Explanation: The CICS Link3270 program DFHL3270 returned code BRIHRC_TRANSACTION_NOT_RUNNING, because there was no transaction currently running on the bridge facility so the data from the WebSphere MQ message could not be passed to the transaction.

System action: The bridge transaction terminates abnormally.

User response: Check the state of the CICS system. For information about Link3270 see the *CICS External Interfaces Guide*.

Module: DFHMQBP0

XMEOUT Parameters: *date, time,applid, tranid, trannum*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0791 E *date time applid tranid trannum* **Invalid header format found in message.**

Explanation: The length field in the header is less than the minimum header length or greater than the actual message length.

System action: Processing continues.

User response: Ensure that the input message

contains only valid WebSphere MQ headers. Only MQH-type headers with standard header-chaining fields may appear in a bridge message before one or both MQCIH header and application data. Correct the MQMD and reissue the request.

Module: DFHMQBP0, DFHMQBR0

XMEOUT Parameters: *date, time, applid, tranid, trannum, format*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMQ0792I *transid taskid* RouteMEM=Y/N

Explanation: This message confirms the bridge start monitor options.

System action: Processing continues

DFHMSnnnn messages

DFHMS0101S INCORRECT NUMBER OF RUNTIME PARAMETERS SUPPLIED.

Explanation: The Scanner was called with an incorrect number of parameters.

System action: None.

User response: Refer to the documentation for correct usage of the Scanner.

Module: DFHEISUP

Destination: SYSPRINT

DFHMS0102S PRIMARY PARAMETER *PARAMETER* WAS NOT RECOGNIZED.

Explanation: The Scanner failed to recognize the first parameter passed.

System action: None.

User response: Refer to the documentation for correct usage of the Scanner.

Module: DFHEISUP

Destination: SYSPRINT

DFHMS0103S SECONDARY PARAMETER *PARAMETER* WAS NOT RECOGNIZED.

Explanation: The Scanner failed to recognize the second parameter passed.

System action: None.

User response: Refer to the documentation for correct usage of the Scanner.

Module: DFHEISUP

Destination: SYSPRINT

User response: None

DFHMQ0999I *date time applid tranid tasknum* Trace point: *trace function*

Explanation: This message displays the name of the function being traced.

System action: Processing continues.

User response: None

Module: DFHMQBR2

XMEOUT Parameters: *date, time, applid, tranid, tasknum, trace function*

Destination: Console and Transient Data Queue CMQM and Terminal End User

DFHMS0104S UNABLE TO OPEN INPUT FILE LIST *FILELIST*.

Explanation: The Scanner has been asked to scan the list of modules in dataset *FILELIST* but that dataset could not be opened.

System action: None.

User response: Check the definition of DD DFHLIST in the calling JCL.

Module: DFHEISUP

Destination: SYSPRINT

DFHMS0105S CONVERT OF DD TO FULLY QUALIFIED DSNAME FAILED.

Explanation: The Scanner needs to convert a name given on a DD back to its Fully Qualified Name in order to access members. This conversion process failed.

System action: None.

User response: You may need further assistance from IBM to resolve this problem.

Module: DFHEISUP

Destination: SYSPRINT

DFHMS0106S FAILED TO OPEN *PDS* DURING DD CONVERT.

Explanation: The Scanner encountered an error whilst attempting to open the PDS *PDS* to retrieve its Fully Qualified Name.

System action: None.

User response: Refer to the documentation for correct usage of the Scanner.

Module: DFHEISUP

Destination: SYSPRINT

DFHMS0107S PDS, MALLOC FAILED FOR *N* BYTES.

Explanation: During PDS processing, there was not sufficient memory remaining to allocate *N* bytes.

System action: None.

User response: Increase the size of the region allocated to the Scanner at runtime.

Module: DFHEISUP

Destination: SYSPRINT

DFHMS0108S PDS, FAILED TO OPEN PDS: *PDS*.

Explanation: The Scanner was asked to deal with PDS *PDS*, but was unable to open the PDS for access.

System action: None.

User response: Check the accessibility of datasets specified in the JCL.

Module: DFHEISUP

Destination: SYSPRINT

DFHMS0109S PDS, FAILED TO READ PDS.

Explanation: The Scanner was asked to deal with a PDS, but was unable to retrieve data from the PDS.

System action: None.

User response: Ensure the Scanner has access to datasets specified in the JCL.

Module: DFHEISUP

Destination: SYSPRINT

DFHMS0110S UNABLE TO OPEN THE FILTER INPUT DATASET: *FILTER*.

Explanation: The Scanner was instructed to use dataset *FILTER* as its filter input table, but was unable to open the dataset for processing.

System action: None.

User response: Ensure the Scanner has access to DD DFHFLTR specified in the JCL.

Module: DFHEISUP

Destination: SYSPRINT

DFHMS0111S FILTER VALIDATION HAS WARNINGS ABOUT *FILTERLINE*. THE FOLLOWING WARNINGS APPLY: *WARNINGS*.

Explanation: The Scanner found problems during validation of the specified filter. The filter line

FILTERLINE was found to have the following warnings.
WARNINGS

System action: None.

User response: Correct the errors in the offending filter lines, and rerun the Scanner. Refer to the documentation for assistance with specifying filters.

Module: DFHEISUP

Destination: SYSPRINT

DFHMS0112S FILTER VALIDATION HAS FAILED TO VALIDATE *FILTERLINE*. THE FOLLOWING PROBLEMS WERE FOUND: *PROBLEMS*.

Explanation: The Scanner found problems during validation of the specified filter. The filter line *FILTERLINE* was found to have the following problems.
PROBLEMS

System action: None.

User response: Correct the errors in the offending filter lines, and rerun the Scanner. Refer to the documentation for assistance with specifying filters.

Module: DFHEISUP

Destination: SYSPRINT

DFHMS0113S UNEXPECTED VERB *VERB* WITH NO PARAMETERS FOUND.

Explanation: The Scanner has encountered an internal error with Verb *VERB*.

System action: None.

User response: You may need further assistance from IBM to resolve this problem.

Module: DFHEISUP

Destination: SYSPRINT

DFHMS0114S INSUFFICIENT STORAGE SCANNING *MODULE*, NUMBER SCANNED.

Explanation: The Scanner was unable to allocate sufficient storage to complete the scan and stopped whilst scanning *MODULE*.

System action: None.

User response: Increase the region size for the Scanner job, or decrease the number of modules to be scanned.

Module: DFHEISUP

Destination: SYSPRINT

DFHMUnnnn messages

DFHMU0102 SOURCE DATA FILE NOT FOUND, OR RECORD FORMAT OR LENGTH NOT VALID.

Explanation: Either the input file has been deleted or has not been defined correctly.

System action: Processing terminates.

User response: Ensure the input file exists and has been defined as RECFM F LRECL 80.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0103 UNRECOGNIZED CONTROL WORD ON INPUT DATA RECORD.

Explanation: An unrecognized control word was encountered during processing. The line printed following this message contains the word in error.

System action: Processing continues.

User response: Correct or remove the incorrect control word.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0104 MISPLACED INPUT RECORD IN DATA SEQUENCE.

Explanation: An input record has been placed incorrectly. The record in error is printed after this message.

System action: Processing continues.

User response: Place the record in error in the correct position.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0105 PREMATURE END OF FILE REACHED IN 'SCANPARAMS' DATA SEQUENCE.

Explanation: End of file (EOF) was detected while processing the SCANPARAMS section of the message source (DFHMExxE) file.

System action: Processing terminates.

User response: Check the message source file for corruption and ensure that the SCANPARAMS section and subsequent message definitions have been completed.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0106 PREMATURE END OF FILE REACHED IN 'MEMBERLIST' DATA SEQUENCE.

Explanation: Processing of a link-edit (DFHMETxx) file has ended because of an unexpected end-of-file (EOF) condition in the MEMBERLIST section.

System action: Processing terminates.

User response: Correct and complete the MEMBERLIST section of the link-edit file.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0107 PREMATURE END OF FILE REACHED IN 'GLOBALS' DATA SEQUENCE.

Explanation: Processing of the DFHME00x file (where x is the current language suffix identifier) GLOBALS section was terminated due to an end-of-file (EOF) condition.

System action: Processing terminates.

User response: Check DFHME00x for corruption, and ensure that the GLOBALS section is complete and valid.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0108 MESSAGE *msgno*: PREMATURE END OF FILE REACHED IN 'MSGDEF' DATA SEQUENCE.

Explanation: An end-of-file (EOF) condition was encountered during the processing of message *msgno*. This is due to an incomplete message definition.

System action: Processing terminates.

User response: Complete the message definition for *msgno*.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0109 NEXT LINE IS INCORRECT. IT MUST BE 'MEMBERLIST', 'SCANPARAMS', 'GLOBALS', OR 'MSGDEF'.

Explanation: The next line in the message source file being processed has not been recognized.

System action: Processing terminates after the validation routine.

User response: Ensure that the following parameters are present.

- MEMBERLIST in message link-edit (DFHMETxx) files.

DFHMU0110 • DFHMU0117

- SCANPARAMS as the first parameter in all message source (DFHMExxE) files.
- GLOBALS in the NLS module DFHMET00x (where x is the current language suffix identifier).
- MSGDEF at the start of all message definition groups.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0110 MISPLACED RECORD IN 'SCANPARAMS' SEQUENCE.

Explanation: A record is not recognized as being part of the SCANPARAMS sequence. The record is printed after this message.

System action: Processing terminates after the validation routine.

User response: Reposition the incorrect parameter from the SCANPARAMS sequence in its correct position in the file. If the parameter is unknown, remove it from the file.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0111 INCORRECT INPUT RECORD FOUND WHEN 'MEMBER' EXPECTED.

Explanation: The keyword encountered on the record being processed is invalid for the link-edit (DFHMETxx) files. The record is printed after this message.

System action: Processing continues.

User response: Correct or remove the invalid record.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0112 MISPLACED RECORD IN 'GLOBALS' SEQUENCE

Explanation: A keyword has been encountered that is not valid in the GLOBALS section of the message file. The record in error is printed after this message.

System action: Processing continues.

User response: Correct or remove the record containing the invalid keyword.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0113 MISPLACED RECORD IN 'MSGDEF' SEQUENCE

Explanation: A record is out of sequence in the message definition. The record in error is printed after this message.

System action: Processing continues.

User response: Sequence the message definition records correctly.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0114 NUMBER OF MEMBERS IN MEMBERLIST EXCEEDS MAXIMUM ALLOWED.

Explanation: The maximum of 150 message members has been exceeded in the link-edit DFHMETxx module.

System action: Processing continues.

User response: Reduce the number of members in the MEMBERLIST section.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0115 MESSAGE *msgno*: TOO MANY SOURCE LINES.

Explanation: The maximum of 80 non-null and non-comment source lines has been exceeded in message *msgno*.

System action: Processing continues.

User response: Reduce the number of source lines in message *msgno*.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0116 'MEMBER' RECORD IS NOT A VALID 2-CHARACTER MESSAGE COMPONENT IDENTIFIER.

Explanation: The DFHMETxx member record printed after this message has an incorrect identifier.

System action: Processing continues.

User response: Ensure that all message component identifiers (MEMBER records) are correct.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0117 VALUE MISSING FOR KEYWORD ON GLOBAL OR PARAMETER RECORD.

Explanation: The keyword on the record printed after this message requires a value.

System action: Processing continues.

User response: Enter the required value for the keyword.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0118 MESSAGE *msgno*: NO DATA DEFINED BETWEEN 'MSGDEF' AND 'ENDMSG'.

Explanation: The message definition for message *msgno* is incomplete. Only the MSGDEF and ENDMSG records have been created.

System action: Processing continues.

User response: Complete or remove the definition of message *msgno*.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0119 MESSAGE *msgno*: INVALID KEYWORD FOUND ON 'MSGDEF' DATA RECORD.

Explanation: A keyword specified on the MSGDEF record is not known to the system.

System action: Processing continues.

User response: Ensure that the spelling of the MSGDEF keywords is correct.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0120 MESSAGE NUMBER IS MISSING OR NOT A VALID 4-DIGIT NUMBER.

Explanation: A message number is missing or does not consist of 4 digits.

System action: Processing continues.

User response: Specify a valid 4-digit message number after the MSGNO keyword.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0121 MESSAGE *msgno*: DESTINATION NAME MISSING FROM 'DEST' RECORD.

Explanation: The destination identifier is missing from the DEST keyword in message *msgno*.

System action: Processing continues.

User response: Specify a valid destination identifier.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0122 MESSAGE *msgno*: NO DELIMITERS FOUND FOR TEXT STRING.

Explanation: Opening and closing delimiters are missing from a text string in message *msgno*. The text string is printed after this message.

System action: Processing continues.

User response: Ensure all text strings are enclosed in delimiters.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0123 MESSAGE *msgno*: AN OPENING OR CLOSING DELIMITER IS MISSING FROM A TEXT STRING.

Explanation: An opening or closing delimiter is missing from a text string in message *msgno*. The text string is printed after this message.

System action: Processing continues.

User response: Ensure that all text strings are enclosed in delimiters.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0124 MESSAGE *msgno*: SUFFIX FOR 'INS#NN','REPLY#NN' OR 'VALUE#NN' IS INCORRECT. 'NN' MUST BE IN RANGE 1 TO 10.

Explanation: A maximum of 10 inserts is permitted for each message definition. The insert number *nn* in INS#*nn*, REPLY#*nn*, or VALUE#*nn* in message *msgno* has been mistyped or exceeds the maximum value.

System action: Processing continues.

User response: Correct the insert number.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0125 MESSAGE *msgno*: INSERT DATA RECORD HAS 'FORMAT' KEYWORD MISPLACED OR MISSPELLED.

Explanation: The FORMAT keyword for the record that defines an insert has either been misplaced or misspelled. FORMAT must always be the first keyword of the insert definition.

The incorrect record is printed after this message.

System action: Processing continues.

User response: Correct the spelling or position of the FORMAT keyword.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0126 MESSAGE *msgno*: INVALID FORMAT TYPE. FORMAT MUST BE CHAR, HEX, DEC, TIME, OR DATE.

Explanation: The format type which is specified after the FORMAT keyword for message *msgno* is not valid. The FORMAT record at fault is printed after this message.

System action: Processing continues.

User response: Specify CHAR, HEX, DEC, TIME, or DATE after the FORMAT keyword.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0127 MESSAGE *msgno*: 'FORMAT' OPERAND IS INCOMPLETE. 'FORMAT' MUST BE CHAR, HEX, DEC, TIME, OR DATE.

Explanation: The FORMAT record in message *msgno* is incomplete. The record at fault is printed after this message.

System action: Processing continues.

User response: Complete the FORMAT record details.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0128 MESSAGE *msgno*: VALUE#*nn* KEYWORD INCORRECT OR MISSING ON INS#*nn* DATA RECORD.

Explanation: The keyword VALUE has been misspelled or is missing on the INSERT record of message *msgno*. The record at fault is printed after this message.

System action: Processing continues.

User response: Correct the record.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0129 MESSAGE *msgno*: INVALID KEYWORD *keyword* ON 'SPECIAL_INSERT/TIMESTAMP' CARD.

Explanation: An invalid keyword *keyword* follows the TIME special insert record.

System action: Processing continues.

User response: Correct or remove the invalid keyword.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0130 MESSAGE *msgno*: INTERNAL LOGIC ERROR CONVERTING FULLWORD TO CHARACTER FORMAT.

Explanation: The value of the message number being processed is greater than 9999. This is an internal error caused by the corruption of DFHMEU.

System action: Processing terminates.

User response: Restore DFHMEU and retry the process. If the process fails again, you will need further assistance. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0131 MESSAGE *msgno*: DESTINATION IS NOT VALID.

Explanation: The destination for message *msgno* is not recognized.

System action: Processing terminates at the end of the validation routine.

User response: Specify a valid message destination after the DEST keyword for message '*msgno*'.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0132 MESSAGE *msgno*: ONE OR MORE SHIFT-OUT OR SHIFT-IN SYMBOLS MISPLACED OR MISSING.

Explanation: One or more Shift-Out or Shift-In symbols have not been found in the double-byte character set (DBCS) message *msgno*.

System action: Processing continues.

User response: Ensure all text strings in DBCS messages are surrounded by Shift-Out and Shift-In symbols.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0133 INVALID VALUE FOR GLOBAL FORMAT DEFINITION.

Explanation: The value listed for the keyword on the record printed after this message is not valid.

System action: Processing continues.

User response: Correct the keyword value.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0134 MESSAGE *msgno* IS OUT OF SEQUENCE IN SOURCE FILE.

Explanation: The definition of message *msgno* is out of sequence in the message file. Message definitions must be positioned in ascending order of their message numbers.

System action: Processing continues.

User response: Move the definition of message *msgno* to its correct position in the source file.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0135 MESSAGE *msgno*: DUPLICATE MESSAGE NUMBER IN SOURCE FILE.

Explanation: The message *msgno* has already been defined in the message file.

System action: Processing continues.

User response: Remove the duplicate message definition or reassign with a unique message number.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0136 MESSAGE *msgno*: PREMATURE END OF FILE IN 'SYMDEF' DATA SEQUENCE.

Explanation: End of file (EOF) was detected while processing the SYMDEF section of the message definition. The SYMDEF section should be terminated by an ENDSYM record.

System action: Processing terminates.

User response: Insert an ENDSYM record to terminate the SYMDEF section of message *msgno*.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0137 MESSAGE *msgno*: UNRECOGNIZED SYMPTOM KEYWORD.

Explanation: The record being processed is not recognized as a symptom keyword.

System action: All records up to the next ENDSYM keyword are rejected. If a record with an ENDSYM is not found, all records are rejected until end of file.

User response: Ensure that an ENDSYM record exists for the symptom section and that all keywords are valid.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0138 MESSAGE *msgno*: MISSING SYMPTOM ARGUMENT.

Explanation: The SYMPTOM keyword printed after this message does not have an associated argument.

System action: Processing continues.

User response: Add a valid argument to the SYMPTOM keyword for message *msgno*.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0139 MESSAGE *msgno*: INVALID SYMPTOM ARGUMENT: INS#n | SPECIAL_INSERT | TEXT STRING.

Explanation: The argument specified for the SYMPTOM keyword printed after this message is not valid.

System action: Processing continues.

User response: Correct the SYMPTOM keyword argument for message *msgno*.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0140 MESSAGE *msgno*: UNDEFINED INSERT IN SYMPTOM OR EXIT RECORD.

Explanation: The insert number specified on the SYMPTOM or EXIT record printed after this message has not been defined in the message definition.

System action: Processing continues.

User response: Correct the SYMPTOM or EXIT keyword insert.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0141 MESSAGE *msgno*: SYMPTOM DATA ARGUMENT IS NOT VALID.

Explanation: The argument specified for the SYMPTOM keyword shown following this message is incorrect for this symptom.

System action: Processing continues.

User response: Ensure that the specified argument is the correct one for the SYMPTOM keyword.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0142 MESSAGE *msgno*: SPECIAL INSERT IS NOT VALID AS A SYMPTOM ARGUMENT.

Explanation: The special insert specified as an argument to the SYMPTOM keyword for message *msgno* is not valid in the symptom string. The symptom record is printed after this message.

System action: Processing continues.

User response: Correct the symptom record.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0143 MESSAGE *msgno*: TEXT SYMPTOM ARGUMENT CONTAINS INVALID CHARACTERS.

Explanation: The text specified in the SYMPTOM argument contains one or more characters that are not allowed in IBM's RETAIN system.

System action: Processing continues.

User response: Ensure text arguments for SYMPTOM keywords contain only the following characters **A** to **Z**, **0** to **9**, **@**, **#**, **,** and **&**.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0144 MESSAGE *msgno*: NO ROUTECODES SPECIFIED. DEFAULTING TO 2 AND 11.

Explanation: The ROUTECODES keyword has been specified without any routecodes and has defaulted to routecodes 2 and 11.

System action: Processing continues.

User response: Accept the defaults or specify alternate valid routecodes.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0145 MESSAGE *msgno*: INVALID DESTINATION KEYWORD. IT SHOULD BE *x*.

Explanation: The system encountered an invalid destination keyword. The valid keyword should be *x*. The line in error is printed after this message.

System action: Processing continues.

User response: Correct the destination keyword.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0146 MESSAGE *msgno* ROUTECODE *x* IS OUT OF RANGE. VALID RANGE IS >0 TO <=*n*.

Explanation: An invalid value has been specified for a routecode.

System action: Processing continues.

User response: Correct the routecode value. The routecode should be greater than 0 and less than or equal to *n*.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0147 MESSAGE *msgno*: TRANSIENT DATA QUEUE *qname* IS NOT VALID.

Explanation: The destination transient data queue (TDQ) *qname* in message *msgno* is unknown to the system.

System action: Processing continues.

User response: Correct the TDQ name.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0148 MESSAGE *msgno*: THE VALUE *x* IS NOT VALID. IT MUST BE NUMERIC.

Explanation: An EXIT parameter has been specified with a nonnumeric value.

System action: Processing continues.

User response: Ensure all EXIT parameters are defined with numeric values.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0149 MESSAGE *msgno*: INVALID ARGUMENT GIVEN FOR EXIT PARAMETER *n*.

Explanation: The insert argument specified on EXIT parameter *n* is unknown.

System action: Processing continues.

User response: Specify a valid argument for the exit parameter *n*.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0150 MESSAGE *msgno*: EXIT PARAMETER *n* SPECIFIES AN INSERT NOT IN THE MESSAGE DEFINITION.

Explanation: The EXIT parameter *n* has specified an

insert which does not exist in the definition template of message *msgno*.

System action: Processing continues.

User response: Specify only existing inserts for the EXIT parameters.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0151 MESSAGE *msgno*: NO EXIT PARAMETERS HAVE BEEN SPECIFIED.

Explanation: No EXIT parameters have been specified for this message. These are required because the message contains inserts.

System action: Processing continues.

User response: Add user exit information to the message definition.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0152 MESSAGE *msgno*: EXIT PARAMETER *n* IS MISSING.

Explanation: The EXIT parameter for insert *n* is missing.

System action: Processing continues.

User response: Insert the missing EXIT parameter.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0153 MESSAGE *msgno*: EXIT PARAMETER NUMBER IS NOT VALID. IT MUST BE GREATER THAN ZERO.

Explanation: An EXIT parameter number was defined with a number of zero. These parameter numbers should start from 1.

System action: Processing continues.

User response: Renumber the EXIT parameters correctly.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0154 MESSAGE *msgno*: INSERT *n* DOES NOT HAVE AN EXIT PARAMETER.

Explanation: A mismatch was found between the number of inserts and the user exit parameters defined for this message. There must be an EXIT parameter defined for each message insert.

System action: Processing continues.

User response: Correct the user exit parameters defined for this message.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0155 MESSAGE *msgno*: QUEUE NAME MISSING FROM TDQ DESTINATION.

Explanation: Message *msgno* has a transient data queue (TDQ) destination type but no TDQ name has been specified.

System action: Processing continues.

User response: Enter a valid TDQ name.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0156 MESSAGE *msgno*: 'QUEUES' KEYWORD IS MISSING.

Explanation: The TDQ destination QUEUES keyword has been omitted from the definition of message *msgno*.

System action: Processing continues.

User response: Specify the QUEUES keyword and a valid TDQ name.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0157 MESSAGE *msgno*: KEYWORD *keyword* HAS ALREADY BEEN SPECIFIED.

Explanation: The destination keyword *keyword* has already been specified for message *msgno*.

System action: Processing continues.

User response: Remove the duplicate entry or merge the destinations with the previous destination definition for this message.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0158 MESSAGE *msgno*: TOO MANY INSERTS ON SPECIAL INSERT LINE.

Explanation: More than four special inserts have been specified on one line.

System action: Processing continues.

User response: If you need more than four special inserts, create another SPECIAL_INSERT line with the extra inserts.

Module: DFHMEU

Destination: SYSPRINT

DFHMMU0159 MESSAGE *msgno* **DESTINATION** *destid*:
TDQ NAME OR ROUTE CODE *destname*
IS REPEATED.

Explanation: The destination *destid*, (either console or TDQ), has a duplicate *destname* entry. The *destname* is a route code if *destid* is console, or a transient data queue name if *destid* is TDQ.

System action: Processing continues.

User response: Correct the destination information for this message by removing the duplicate entry.

Module: DFHMEU

Destination: SYSPRINT

DFHMMU0160 MESSAGE *msgno*: **INSERT** *n* **HAS**
ALREADY BEEN SPECIFIED.

Explanation: The insert *n* has been repeated in the definition of the exit parameters. There should only be one exit parameter per insert.

System action: Processing continues.

User response: Correct the insert definition in the exit parameter section of message *msgno*.

Module: DFHMEU

Destination: SYSPRINT

DFHMMU0162 'MEXDEF' KEYWORD IS MISSING OR
MISPLACED.

Explanation: The MEXDEF keyword is either missing or in the wrong place. This keyword signifies the start of the user exit parameters definition section. It should appear after the definition of the message text and before the ENDMSG keyword.

System action: Processing continues.

User response: Ensure the MEXDEF keyword is present and in the correct place.

Module: DFHMEU

Destination: SYSPRINT

DFHMMU0163 MESSAGE *msgno*: **'MEXDEF' IS**
SPECIFIED BUT NO INSERTS EXIST IN
THE MESSAGE DEFINITION..

Explanation: The MEXDEF keyword has been included in the definition of message *msgno* but there are no inserts defined for it. MEXDEF indicates the start of the user exit parameter definition section, and user exit parameters are only needed when a message contains inserts.

System action: Processing continues.

User response: Remove the MEXDEF keyword or

ensure that message inserts have not been omitted from the message template.

Module: DFHMEU

Destination: SYSPRINT

DFHMMU0165 MESSAGE *msgno*: **'MEXDEF'**
SPECIFIED FOR A MESSAGE THAT IS
NEITHER CONSOLE NOR TDQ.

Explanation: A MEXDEF record has been included in a message definition when the output destination is not Console or TDQ. The MEXDEF record implies that the message is available for the message user exit. Only messages to a console or TDQ destination can go through the message user exit.

System action: Processing continues.

User response: Either remove the MEXDEF record or change the message destination.

Module: DFHMEU

Destination: SYSPRINT

DFHMMU0166 MESSAGE *msgno*: **USER EXIT DATA**
SPECIFIED FOR A BOOKONLY OR
OFFLINE MESSAGE.

Explanation: User exit parameters have been specified for message *msgno* which is not produced by the message domain because it is a bookonly or offline message. This message does not need user exit parameters as it is not available for the message user exit.

System action: Processing continues.

User response: Ensure that message *msgno* has been correctly defined as bookonly or offline. If it has, remove the user exit parameters.

Module: DFHMEU

Destination: SYSPRINT

DFHMMU0167 MESSAGE *msgno*: **'ROUTE CODES' OR**
'QUEUES' KEYWORD IS OUT OF
SEQUENCE.

Explanation: A ROUTE CODES or QUEUES keyword is in the wrong position in the message definition template.

System action: Processing continues.

User response: Correct the keyword sequence. The ROUTE CODES keyword should be on the DEST line after the CONSOLE keyword. The QUEUES keyword should be on the DEST line after the TDQ keyword.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0169 MESSAGE *msgno*: 'APPLID' SPECIAL INSERT MISSING ON CONSOLE MESSAGE.

Explanation: Console messages must have the APPLID special insert specified before the message text. This special insert is either missing or misspelled.

System action: Processing continues.

User response: Add the APPLID special insert to the message definition before the start of the message text.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0170 MESSAGE *msgno*: DATE, TIME, OR APPLID SPECIAL INSERTS MISSING OR INCORRECT ON TDQ MESSAGE.

Explanation: Messages with a destination of TDQ should be defined with DATE, TIME, and APPLID special inserts before the message text. One or more of these special inserts is missing or incorrect.

System action: Processing continues.

User response: Ensure that the three special inserts are present and correct.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0171 MESSAGE: *msgno* RESP2 VALUE IS TOO LONG. THE MAXIMUM IS 4 DIGITS.

Explanation: Message *msgno* is being defined with an associated RESP2 value that will be returned as EIBRESP2 by the CICS command that issues the message. The value specified for RESP2 exceeds the maximum length of four decimal digits.

System action: Processing continues.

User response: Ensure that the RESP2 value is correct.

Module: DFHMEU

Destination: SYSPRINT

DFHMU0999 INTERNAL LOGIC ERROR: NO MESSAGE FOR ERROR CODE *code*.

Explanation: The system attempted to display an error message that has not been defined in the internal message table.

System action: Processing of the utility program terminates.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHMEU

Destination: SYSPRINT

DFHMVnnnn message

DFHMV0001E SEVERE ERROR IN CICS SVC SERVICES DURING RESMGR EXIT CLEAN-UP PROCESSING, R15OUT = X'X'xxxxxxxx', R0OUT = X'X'xxxxxxxx', R1OUT = X'X'xxxxxxxx', R15IN = X'X'xxxxxxxx', R0IN = X'X'xxxxxxxx', SVC NUMBER = X' X'xx'.

Explanation: The CICS RESMGR exit stub has twice called the CICS SVC to perform clean-up for a particular functional area during normal or abnormal termination of a CICS TCB or address space. However, the SVC return code was nonzero both times. The message inserts identify the functional area concerned (*R0IN*), the SVC number, and the inputs and outputs.

System action: CICS termination continues. Subsequently, other CICS regions might encounter severe errors in the functional area for which termination clean-up has failed.

User response: Inform the system programmer. Keep any dumps, the system log, and the output from the failing job. If other CICS systems are being seriously degraded by persistent errors in the functional area affected, it is usually necessary to re-IPL MVS to correct the problem.

Module: DFHMRMS

Destination: Console

DFHNCnnnn messages

DFHNC0101I Named counter server initialization is in progress.

Explanation: The named counter sequence number server program has started execution.

System action: Initialization continues.

User response: None.

Module: DFHNCMN

Destination: Console and SYSPRINT

DFHNC0102I Named counter server for pool
poolname is now active.

Explanation: The named counter sequence number server for the named pool has completed initialization and is now ready to accept connections.

System action: The server waits for connection requests or operator commands.

User response: None.

Module: DFHNCMN

Destination: Console and SYSPRINT

DFHNC0103 Named counter server initialization failed because the POOLNAME parameter was not specified.

Explanation: The named counter sequence number server program needs to know the name of the associated named counter pool in order to complete initialization, but no pool name was specified in the SYSIN or PARM field parameters.

System action: The server is terminated.

User response: Ensure that the parameter **POOLNAME=***name* is specified either in the SYSIN parameters or in the PARM field of the JCL for the server.

Module: DFHNCMN

Destination: Console and SYSPRINT

DFHNC0104 Named counter server initialization failed because program DFHNCMN is not APF authorized.

Explanation: The named counter sequence number server main program DFHNCMN cannot complete initialization because it is not running with APF authorization.

System action: The server is terminated.

User response: Ensure that the named counter sequence number server program DFHNCMN is loaded from an APF authorized library and has been link-edited with the option AC(1).

Module: DFHNCMN

Destination: Console and SYSPRINT

DFHNC0111I Named counter server for pool
poolname is terminating.

Explanation: The named counter sequence number server has started termination processing, so no further requests will be processed.

System action: Termination continues.

User response: None.

Module: DFHNCMN

Destination: Console and SYSPRINT

DFHNC0112I Named counter server has terminated, return code *retcode*, reason code *rsncode*.

Explanation: The named counter sequence number server has completed termination processing. For normal termination, the return code and reason code are both zero. If the termination was caused by an error, the return code will be 8 and the reason code will be the number of the previous DFHNCnnnn message giving the reason for termination.

System action: The named counter sequence number server program returns control (via the AXM termination routines) to MVS for job step termination.

User response: None.

Module: DFHNCMN

Destination: Console and SYSPRINT

DFHNC0113 Named counter server completion code is *cmrcode*, reason code *rsncode*.

Explanation: The named counter sequence number server has terminated after intercepting an abnormal termination (ABEND) request. If the completion code is a system completion code, it is shown as three hexadecimal digits, otherwise it is shown as four decimal digits for a user completion code. Any associated reason code is shown as a four byte hexadecimal value, which will be zero if no reason code was provided.

System action: The named counter sequence number server program returns control (via the AXM termination routines) to MVS for job step termination.

User response: None.

Module: DFHNCMN

Destination: Console and SYSPRINT

DFHNC0121I Automatic restart support is not available because &SYSCClone may not be unique within the sysplex.

Explanation: The server attempted to generate a default ARM element identifier to use for automatic restart registration, using the one or two character &SYSCClone value to identify the MVS system. Normally, MVS verifies during start-up that &SYSCClone is unique within the sysplex. However, the server is running on a level of MVS where this check is optional and has not been performed, so the server is unable to generate a unique element identifier.

System action: The server is terminated.

User response: Servers should not normally be run

on a level of MVS which does not enforce unique &SYSCONE values. However, the problem can be bypassed by specifying an ARM element name explicitly on the server ARMELEMENT parameter.

Module: DFHNCRS

Destination: Console and SYSPRINT

DFHNC0122 IXCARM REQUEST=*reqtype* **failed, return code** *retcode***, reason code** *rsncode*.

Explanation: A request to the MVS automatic restart manager (ARM) gave an unexpected return code. The return code and reason code are shown in hexadecimal notation.

System action: The server is terminated.

User response: See the IXCARM macro in *OS/390 MVS Programming Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Module: DFHNCRS

Destination: Console and SYSPRINT

DFHNC0123 IXCARM REQUEST=*reqtype* **failed, return code** *retcode***, reason code** *rsncode*.

Explanation: Automatic restart support is not available. The MVS automatic restart manager (ARM) gave a return code and reason code which indicates that ARM services are not available, but the reason could possibly be intentional or unavoidable, so the server is being allowed to continue execution without automatic restart support. The return code and reason code are shown in hexadecimal notation.

System action: The server continues initialisation without automatic restart support.

User response: See the IXCARM macro in *OS/390 MVS Programming Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Module: DFHNCRS

Destination: Console and SYSPRINT

DFHNC0201I Processing *type parameters*

Explanation: The named counter sequence number server parameter processing routine is interpreting the specified parameter string. The first word gives the type of parameter (SYSIN/PARM/SET/DISPLAY/PRINT) and the rest is the specified parameters optionally followed by descriptive comment text after one or more spaces. If the parameters start with an asterisk or a space, the whole line is taken as descriptive comments.

System action: Any specified parameters will be processed.

User response: None.

Module: DFHNCPR

Destination: Console and SYSPRINT

DFHNC0202 Unknown parameter keyword: *keyword*

Explanation: This parameter keyword did not match any of the defined parameter keywords for the named counter sequence number server.

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter keyword (or remove the incorrect parameter) and reenter the command or restart the server.

Module: DFHNCPR

Destination: Console and SYSPRINT

DFHNC0203 Value *value* **for parameter** *keyword* **is incorrect. It must be a name of up to** *maxlength* **characters.**

Explanation: The value of this named counter sequence number server parameter should have been specified as a name containing not more than the indicated number of characters.

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value and reenter the command or restart the server.

Module: DFHNCPR

Destination: Console and SYSPRINT

DFHNC0204 Value *value* **for parameter** *keyword* **is incorrect. It must be a decimal number.**

Explanation: The value of this named counter sequence number server parameter should have been specified as a decimal number but was not in a valid format. (Numeric parameters can optionally be followed by the letter K, M, G or T to denote the appropriate powers of 1024).

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter

DFHNC0205 • DFHNC0209

specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value and reenter the command or restart the server.

Module: DFHNCPR

Destination: Console and SYSPRINT

DFHNC0205 Value *value* for parameter *keyword* is greater than the maximum allowed value *maximum*.

Explanation: The value of this named counter sequence number server parameter exceeded the maximum allowed value, given in the message. This message also occurs if the numeric part of a decimal value exceeds the maximum unsigned 32-bit integer (4294967295) even if a larger value is allowed to be specified by using a suffix "K", "M", "G" or "T".

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value and reenter the command or restart the server.

Module: DFHNCPR

Destination: Console and SYSPRINT

DFHNC0206 Value *value* for parameter *keyword* is less than the minimum allowed value *minimum*.

Explanation: The value of this named counter sequence number server parameter was less than the minimum allowed value, given in the message.

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value and reenter the command or restart the server.

Module: DFHNCPR

Destination: Console and SYSPRINT

DFHNC0207 Value *value* for parameter *keyword* is incorrect. It should be a time hh:mm:ss or hh:mm or a number of seconds.

Explanation: The value of this named counter sequence number server parameter did not conform to the correct syntax for a time interval.

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value and reenter the command or restart the server.

Module: DFHNCPR

Destination: Console and SYSPRINT

DFHNC0208 Parameter keyword *keyword* is not supported for *command*.

Explanation: A named counter sequence number server parameter keyword was specified in a context where it is not valid, such as an attempt to **SET** a parameter which can only be specified at initialization time, or to specify at initialization time a parameter which is only valid on **DISPLAY**.

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: If the error occurred at initialization, remove the incorrect parameter and restart the server. If it occurred on a server command, check that the command and parameter were correctly entered.

Module: DFHNCPR

Destination: Console and SYSPRINT

DFHNC0209 Parameter text contains invalid character: *text*

Explanation: The named counter sequence number server parameter processing routine found some unexpected text when attempting to process parameters.

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameters (or remove the incorrect parameter) and reenter the command or restart the server.

Module: DFHNCPR

Destination: Console and SYSPRINT

DFHNC0210 Parameter keyword *keyword* should not have a value for *command*.

Explanation: A named counter sequence number server parameter keyword was specified in the form *keyword=value* in a context where it was not expected, for example on a **DISPLAY** command.

System action: Processing of the current line of parameters is terminated.

User response: Reenter the command without specifying a value for the parameter to be displayed.

Module: DFHNCPR

Destination: Console and SYSPRINT

DFHNC0211I Parameter value: *keyword=value*

Explanation: This message is issued to show the current value of a named counter sequence number server parameter setting in response to a **DISPLAY** or **PRINT** command.

System action: Processing continues normally.

User response: None.

Module: DFHNCPR

Destination: Console and SYSPRINT

DFHNC0212 Value *value* for parameter *keyword* is incorrect. It must be one of *validlist*.

Explanation: The value of this named counter sequence number server parameter was not recognized. It should have been specified as one of the indicated list of values.

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Correct the parameter value and reenter the command or restart the server.

Module: DFHNCPR

Destination: Console and SYSPRINT

DFHNC0213 Value for parameter *keyword* is missing. The correct form is *keyword=value*.

Explanation: A parameter keyword was specified without an associated parameter value on a named counter sequence number server **SET** command or in a SYSIN or PARM parameter string. Note that the only character which should appear between the parameter keyword and its intended value is the equals sign, without any extra spaces.

System action: Processing of the current parameter string (command parameter list, PARM field or SYSIN input line) is terminated. For an initialization parameter specified in SYSIN or the PARM field, a return code is set which will cause the server to terminate when initialization parameter processing is complete.

User response: Reenter the parameter specification in the correct form *keyword=value*.

Module: DFHNCPR

Destination: Console and SYSPRINT

DFHNC0301I Console operator *consname* issued command: *command*

Explanation: A named counter sequence number server operator command has been issued via the MVS **MODIFY** or **STOP** command. This message identifies the console name (or TSO userid) from which the command was issued and the text of the command.

System action: Processing continues.

User response: None.

Module: DFHNCOP

Destination: SYSPRINT

DFHNC0302I *command* command ignored because no valid parameters were given.

Explanation: A named counter sequence number server command was issued which had no valid parameters on it but was otherwise syntactically valid. The command has had no effect.

System action: Processing continues normally.

User response: Ensure that the command was entered correctly.

Module: DFHNCOP

Destination: Console and SYSPRINT

DFHNC0303I *command* command has been processed.

Explanation: A named counter sequence number server command has been processed successfully.

System action: Processing continues.

User response: None.

Module: DFHNCOP

Destination: Console and SYSPRINT

DFHNC0304I STOP command is waiting for connections to be closed. Number of active connections = *connections*.

Explanation: A named counter sequence number server **STOP** command has been issued (either via an

MVS **STOP** command or via an MVS **MODIFY** command with the text **STOP**) but there are still active connections to the server, so the **STOP** command has not yet taken effect.

System action: The server rejects any further attempts to establish new connections, but continues processing requests for existing connections. Each time a connection is terminated, this message will be repeated as long as there are more active connections.

User response: Further information about the connections which are still active may be obtained using the command **DISPLAY CONNECTIONS**.

If the server needs to be shut down without waiting for connections to be closed, issue the server **CANCEL** command. Note that this will immediately terminate any active connections, causing any further requests for that server to be given a SYSIDERR indication. (The MVS **CANCEL** command can also be used, but should preferably be avoided because it will prevent the server from producing its normal closedown statistics and reports).

Note that if a CICS region is abnormally terminated while server connect or disconnect processing is in progress, or is terminated without going through end of task processing (for example using the **FORCE** command) there is a slight chance that the server will not be notified that the connection has been terminated. In this case the server will not be able to be closed down with the server **STOP** command, but only with the server **CANCEL** command.

Module: DFHNCOP

Destination: Console and SYSPRINT

DFHNC0305I STOP command has been processed.

Explanation: Processing of a named counter sequence number server **STOP** command has now been successfully completed. This means that there are no longer any active connections and the server is ready to close down.

System action: The named counter sequence number server starts termination processing.

User response: None.

Module: DFHNCOP

Destination: Console and SYSPRINT

DFHNC0306 Named counter server does not support this command: *command*

Explanation: An operator command was addressed to the named counter sequence number server using the MVS **MODIFY** command, but the first word of the **MODIFY** parameter text is not a recognized server command (**SET**, **DISPLAY**, **PRINT**, **STOP**, **CANCEL** or an accepted abbreviation for one of these).

System action: The command is ignored.

User response: Correct and reenter the command.

Module: DFHNCOP

Destination: Console and SYSPRINT

DFHNC0307I CANCEL *parm* command has been processed. Number of active connections = *connections*.

Explanation: A named counter sequence number server **CANCEL** command has been issued, either from an operator console or internally by the server in response to a severe error such as coupling facility failure. This message includes any restart parameter specified on the command and the number of active connections which may be affected by this command.

System action: The server terminates immediately, without waiting to close connections.

User response: None.

Module: DFHNCOP

Destination: Console and SYSPRINT

DFHNC0308 Named counter server does not support CICS commands. To close it down, you can use the STOP command.

Explanation: An operator command which appears to be a CICS command (a four-character transaction code of the form 'CExx') was addressed to the named counter sequence number server using the MVS **MODIFY** command.

System action: The command is ignored.

User response: Correct and reenter the command. If the intention is to close down the server, use the server **STOP** or **CANCEL** command.

Module: DFHNCOP

Destination: Console and SYSPRINT

DFHNC0309 Parameter *parm* on CANCEL command is incorrect. The only valid parameters are RESTART=YES or RESTART=NO.

Explanation: A named counter sequence number server **CANCEL** command was issued with a parameter which did not match the valid parameter keywords.

System action: The command is ignored.

User response: Correct and reenter the command.

Module: DFHNCOP

Destination: Console and SYSPRINT

DFHNC0310 Parameter *parm* on STOP command is incorrect. No parameters should be specified.

Explanation: A named counter sequence number server STOP command was issued with parameters, but the STOP command does not support any parameters.

System action: The command is ignored.

User response: Correct and reenter the command.

Module: DFHNCOP

Destination: Console and SYSPRINT

DFHNC0351I Connection: Job *jobname* Applid *applid*
Idle *idletime*

Explanation: This describes a single connection from a CICS region to the named counter sequence number server, in response to the server command **DISPLAY CONNECTIONS** or **PRINT CONNECTIONS**. The information shows the job name, the generic APPLID and the time in hours, minutes and seconds since the most recent request was issued using the connection.

System action: A message in this form is issued for each active connection to the current server, then message DFHNC0352I is issued to show the total number of active connections.

User response: None.

Module: DFHNCN

Destination: Console and SYSPRINT

DFHNC0352I Total connections to this server:
connections.

Explanation: This describes the total number of active connections from CICS regions to the named counter sequence number server, in response to the server command **DISPLAY CONNECTIONS** or **PRINT CONNECTIONS**.

System action: Processing continues.

User response: None.

Module: DFHNCN

Destination: Console and SYSPRINT

DFHNC0361I Counter names: *counter1 counter2*

Explanation: This message lists one or two counter names in response to the named counter sequence number server command **DISPLAY COUNTERS** or **PRINT COUNTERS**.

System action: This message is issued as many times as is necessary to list all current counter names, then message DFHNC0362I is issued to show the total number of counters.

User response: None.

Module: DFHNCRQ

Destination: Console and SYSPRINT

DFHNC0362I The total number of named counters in the pool is *counters.*

Explanation: This describes the total number of counters within the the pool, in response to the named counter sequence number server command **DISPLAY COUNTERS** or **PRINT COUNTERS**.

System action: Processing continues.

User response: None.

Module: DFHNCRQ

Destination: Console and SYSPRINT

DFHNC0363I Details for named counter *counter*

Explanation: This message shows counter details in response to the named counter sequence number server command **DISPLAY COUNTER=name** or **PRINT COUNTER=name**.

The detailed message layout is as follows

```
g'.
Current value  Minimum value  Maximum value
              n              n              n
Options: x y
```

System action: Processing continues.

User response: The output shows the current counter value, the minimum counter value that can be assigned and the maximum counter that can be assigned. If the maximum value has just been assigned, the counter will be at its limit value, which is one greater than the maximum value that can be assigned.

Module: DFHNCRQ

Destination: Console and SYSPRINT

DFHNC0364 No named counter was found matching *counter.*

Explanation: A counter name specified on the named counter sequence number server command **DISPLAY COUNTER=name** or **PRINT COUNTER=name** did not match any existing counter in the pool.

System action: The command is ignored.

User response: Ensure that the counter name was entered correctly, and that the command was addressed to the correct pool server.

Module: DFHNCRQ

Destination: Console and SYSPRINT

DFHNC0365I The number of named counters in the pool matching *counter* is *counters*.

Explanation: This indicates the number of matching named counters within the pool for which details were displayed in response to the named counter sequence number server command **DISPLAY COUNTERS** or **PRINT COUNTERS** where the counter name contained one or more wild card characters.

System action: Processing continues.

User response: None.

Module: DFHNCRQ

Destination: Console and SYSPRINT

DFHNC0401I Connected to CF structure *strname*.

Explanation: The named counter sequence number server has successfully established a connection to the coupling facility list structure for the named counter pool, using the IXLCONN macro.

System action: Processing continues.

User response: None.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0402I CF structure *strname* was allocated by this connection.

Explanation: The named counter pool list structure did not previously exist and was allocated as part of the connection process.

System action: List structure initialization will be performed if necessary.

User response: None.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0403 Connection to CF structure *strname* failed, IXLCONN return code *retcode*, reason code *rsncode*.

Explanation: The IXLCONN macro to connect the named counter sequence number server to its pool list structure failed.

System action: The named counter sequence number server is terminated.

User response: See the documentation of the IXLCONN macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code. If the reason code is of the form xxxx0C08, indicating structure allocation failure, this message will be followed by message DFHNC0409 giving the facility reason code for each coupling facility

in which allocation was attempted.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0404 CF structure *strname* cannot be used because it has been allocated with attribute *attribute*.

Explanation: The named counter sequence number server has successfully connected to its pool list structure but has found that the structure has been allocated using an IXLCONN structure attribute keyword which is not supported by the server.

System action: The server is terminated.

User response: This probably indicates that the structure has been allocated or modified by some program other than the named counter sequence number server program. In this case, the incorrect structure should be deleted (using the MVS **SETXCF FORCE** command) so that it will be reallocated correctly when the server is restarted.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0406 Initialization failed for CF structure *strname* with response *response*.

Explanation: The named counter sequence number server processing to initialize the pool list structure failed with an abnormal internal response code.

System action: The server is terminated.

User response: If the response code is 6 (I/O error), it indicates that an IXLLIST macro gave an abnormal return code, in which case a previous DFHNC0441 message will have been issued giving the IXLLIST return code and reason code. If this response code is any other value, this indicates that the list structure is in a state which should not occur, probably indicating that it was allocated or modified by a program other than the named counter sequence number server. In this case the structure may need to be deleted (using the MVS **SETXCF FORCE** command) so that it will be reallocated when the server is restarted.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0407 CF structure *strname* is not available for shared use.

Explanation: The named counter sequence number pool is currently locked for exclusive use by some other job such as a pool unload or reload job. (This serialization uses an MVS ENQ with scope SYSTEMS, major name 'SYSZDFH' and minor name equal to the structure name, 'DFHNCLS_poolname').

System action: The server is terminated.

User response: Check whether a pool maintenance job is currently running. If it is, wait until it has finished before trying to start the server again. You can find out what jobs are currently using the pool using this MVS command

```
DISPLAY GRS,RES=(SYSZDFH,'DFHNCLS_poolname')
```

Note that for this command the pool name must be exactly eight characters, padded with trailing spaces if necessary.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0408 CF structure *strname* is not available for exclusive use.

Explanation: The current named counter sequence number unload or reload job requires exclusive use of the pool, but some other job is running which already has shared or exclusive use of the pool. (This serialization uses an MVS ENQ with scope SYSTEMS, major name 'SYSZDFH' and minor name equal to the structure name, 'DFHNCLS_poolname').

System action: The server is terminated.

User response: Check whether a named counter sequence number server or maintenance job is currently running. If it is, wait until it has finished before trying to run the current job again. You can find out what jobs are currently using the pool using this MVS command

```
DISPLAY GRS,RES=(SYSZDFH,'DFHNCLS_poolname')
```

Note that for this command the pool name must be exactly eight characters, padded with trailing spaces if necessary.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0409 CF structure *strname* could not be allocated in facility *cfname*, reason code *rsncode*.

Explanation: If a previous named counter sequence number server message DFHNC0403 indicated an IXLCONN failure because the structure could not be allocated, this message is issued for each coupling facility in which allocation was attempted to show the facility reason code indicating why structure allocation failed. If the reason code is known to the server, the name of the reason code is given (as defined in the MVS macro IXLYCONA, but without the 'ConaRsn' prefix), otherwise its decimal value is shown.

If the response indicates InvalidStructureSize, this means that the initial list structure size (specified on the server **POOLSIZE** parameter or in the CFRM policy **INITSIZE** parameter) is not large enough to contain the

required structure control information. The size of the control information is affected by the maximum structure size specified in the CFRM policy.

System action: The server is terminated.

User response: If further details are required, see the descriptions of the reason codes in the source of the MVS macro IXLYCONA which maps the connect answer area.

If the response was InvalidStructureSize, increase the initial structure size specification in the server **POOLSIZE** parameter or the CFRM policy **INITSIZE** parameter to ensure that there is enough space for data in addition to the structure control information. Also, check that the maximum structure size specified in the CFRM policy is not unnecessarily large. See the CICS *System Definition Guide* for more information on how to estimate pool sizes.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC04111 CF structure *strname* now has *percentage%* of entries in use.

Explanation: This message is issued by the named counter sequence number server when the percentage of list entries in use within the list structure increases past certain set threshold levels, or when it decreases past a threshold level after previously being at a higher level. This message is also issued immediately after a structure alter request has completed in order to show how the percentage has been affected by changes in the structure size. The percentage is calculated using information that is returned by successful coupling facility access requests, so if the message was triggered by structure alter completion and the current server has not processed any successful requests recently, the information may not be accurate.

System action: The warning threshold is increased to the next higher level (normally 5% higher if less than 95%, otherwise 1% higher), or decreased to the previous lower level depending on whether the usage is increasing or decreasing.

User response: Note that the structure may soon become full, preventing new counters from being created. If the structure is currently allocated at less than its maximum size and the coupling facility has enough free space, the size of the structure can be increased dynamically using the MVS **SETXCF** command with the **START,ALTER** option, and any active servers will be able to use the increased space immediately.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0417I Alter request completed normally for CF structure *strname*.

Explanation: The named counter sequence number server has been notified by the system that a structure alter request has completed normally.

System action: New values for the structure size and number of entries are stored. This message is followed by message DFHNC0411 to indicate the new usage percentage.

User response: None.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0418I Alter request ended abnormally for CF structure *strname* with status *status*.

Explanation: The named counter sequence number server has been notified by the system that a structure alter request has ended abnormally. The two bytes of status information in this message are taken from EEPLALTERENDSTATEFLAGS in the event exit parameter list (defined in the MVS macro IXLYEEPL).

System action: No action is taken as a result of this notification, but any problem which caused the alter request to fail may result in other related problems.

User response: If further information is required, look for MVS messages on the system log indicating the reason for the structure alter request failure. For further information about the status flags, see the source of the MVS macro IXLYEEPL.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0419I Alter request ended normally for CF structure *strname* but target was not attained.

Explanation: The named counter sequence number server has been notified by the system that a structure alter request has ended normally but the target size was not attained.

System action: New values for the structure size and number of entries are stored. This message is followed by message DFHNC0411 to indicate the new usage percentage.

User response: None.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0424 Connectivity has been lost to CF structure *strname*. The named counter server cannot continue.

Explanation: The named counter sequence number server has been notified by the system that connectivity has been lost to the coupling facility containing the pool list structure.

System action: The server issues an internal **CANCEL** command to terminate itself immediately.

User response: Restart the server when connectivity to the coupling facility from the current system has been reestablished. If connectivity is still available from other systems, CICS transactions which require access to the affected pool should be diverted to those systems if possible.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0425 CF structure *strname* has failed. The named counter server cannot continue.

Explanation: The named counter sequence number server has been notified by the system that the named counter pool list structure has been lost due to coupling facility structure failure. All named counters in the pool have been lost.

System action: Each server for the affected pool issues an internal **CANCEL** command to terminate itself immediately.

User response: If another coupling facility is available and is included in the CFRM preference list for the failed structure, restart the servers to cause a fresh copy of the list structure to be allocated on the alternate coupling facility. If no other coupling facility is available, wait until the original coupling facility has been made available again before restarting the servers.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0431I Access statistics for CF structure *strname*

Explanation: This message gives a summary of coupling facility access statistics. It is issued in response to a named counter sequence number server **DISPLAY** or **PRINT** command which includes the **CFSTATS** parameter, and may also be produced on the SYSPRINT file during interval statistics if the statistics options include print file output.

The detailed message layout is as follows

9'.

Requests: Create Get Set Delete Inquire Browse

n n n n n n

Responses: Asynch Unavail

		n		n						
Normal	Not	fld	Vers	chk	List	chk	Str	Full	I/O	err
	n		n		n		n		n	

System action: Processing continues.

User response: The statistics are described in detail in the DFHNC4D data area. The individual fields have the following meanings

- Response counts

Asynch

Number of requests for which completion was asynchronous.

Unavail

Number of times requests were deferred because the structure was temporarily unavailable, for example because system-managed rebuild was in progress.

Normal

Number of normal responses.

Not fld

The specified entry (table or item) was not found.

Vers chk

A version check failed for an entry being updated. This occurs when a duplicate name is found while creating a new entry, or when an assign request finds the counter has reached its limit, or when a compare and swap type request (assign with increment, rewind or update) finds that the counter changed before the attempt to set the new value, in which case the request is retried until successful.

List chk

A list authority comparison failed. This should only be possible during server initialization.

Str full The list structure became full.

I/O err Some other error code was returned by IXLLIST.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0432I Pool statistics for CF structure *strname*

Explanation: This message gives a summary of the usage statistics for the named counter pool list structure. It is issued in response to a named counter sequence number server **DISPLAY** or **PRINT** command which includes the **POOLSTATS** parameter, and may also be produced on the SYSPRINT file during interval statistics if the statistics options include print file output.

The detailed message layout is as follows

9'.

Structure:	Size	Max size
	nK	nK

Entries:	Total	In use	Max used	Free	Min free
	n	n	n	n	n
	100%	n%	n%	n%	n%

System action: Processing continues.

User response: The statistics are described in detail in the DFHNC6D data area. Pool usage statistics are calculated from information returned by recent coupling facility requests, and are not always very accurate, especially if the pool has not been accessed recently by the current server.

The individual fields have the following meanings

- Structure

Size Current allocated size of the list structure.

Max size

Maximum size to which this structure could be altered.

- Entries

Total Total entries in the currently allocated structure (initially set at structure connection time and updated on completion of any structure alter request).

In Use Number of entries currently in use.

Max Used

Maximum number in use (since last reset).

Free Number of entries currently free (total minus used).

Min Free

Minimum number of free entries (since last reset).

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0441 CF structure *strname* request failed, IXLLIST return code *retcode*, reason code *rsncode*.

Explanation: A coupling facility access request issued by the named counter sequence number server using the IXLLIST macro gave an abnormal return code.

System action: The failing request is given a return code indicating a coupling facility access error.

User response: See the documentation of the IXLLIST macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0442 CF structure *strname* request failed, structure is full.

Explanation: A coupling facility access request issued by the named counter sequence number server using the IXLLIST macro failed because there is no free entry to create a new named counter.

System action: The failing request is given a return code indicating that there is no space available in the pool. This message will not be issued for further failures until the the number of entries in use has fallen well below the warning threshold.

User response: Any named counters which are no longer in use should be deleted so that the space can be reused. If the structure is currently allocated at less than its maximum size and the coupling facility has enough free space, the size of the structure can be increased dynamically using the MVS **SETXCF** command with the **START,ALTER** option, and any active servers will be able to use the increased space immediately. However, if this action is possible it should normally have been taken in response to earlier warning message before the structure became full.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0451 Purge for CF structure *strname* failed, IXLPURGE return code *retcode*, reason code *rsncode*.

Explanation: A named counter sequence number access request was terminated abnormally and the server issued an IXLPURGE macro to ensure any active IXLLIST request was purged before releasing the I/O buffer, but the IXLPURGE macro gave a non-zero return code.

System action: The error is ignored because this only occurs when a request is already being terminated abnormally.

User response: See the documentation of the IXLPURGE macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0461I Disconnected from CF structure *strname*.

Explanation: The named counter sequence number server has successfully disconnected from the pool list structure (using the IXLDISC macro) during termination.

System action: Processing continues.

User response: None.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0462 Disconnect from CF structure *strname* failed, IXLDISC return code *retcode*, reason code *rsncode*.

Explanation: The IXLDISC macro to disconnect the named counter sequence number server from its pool list structure failed.

System action: The error is ignored, as disconnection only occurs when the server is already terminating.

User response: See the documentation of the IXLDISC macro in *OS/390 MVS Programming: Sysplex Services Reference* (GC28-1772) for the explanation of the return and reason code.

Module: DFHNCCF

Destination: Console and SYSPRINT

DFHNC0481I Waiting for structure *strname* to become available.

Explanation: The named counter sequence number server was unable to connect to its coupling facility structure because of an environmental error, such as the structure being unavailable, as described in a previous DFHNC0403 message. The server is now waiting for this problem to be fixed, and will retry the connection request when it is notified via the ENF facility that the specific structure may now be available or that some change has occurred in the status of general coupling facility resources.

System action: The server waits to be notified of a relevant event.

User response: No action is required, but the waiting server can optionally be terminated using the MVS **CANCEL** command if it is no longer required.

Module: DFHNCEN

Destination: Console and SYSPRINT

DFHNC0482I Retrying connection to structure *strname*.

Explanation: The named counter sequence number server has been notified via ENF that its list structure may now be available or that a change has occurred in the status of some general coupling facility resources, so it is about to make another attempt to connect to the structure.

System action: The original IXLCONN request is retried.

User response: None.

Module: DFHNCEN

Destination: Console and SYSPRINT

DFHNC0491 ENFREQ ACTION=action failed, return code *retcode*.

Explanation: An ENF request issued by the named counter sequence number server gave an unexpected return code.

System action: If this occurs on the ENFREQ ACTION=LISTEN request and the server is subsequently unable to connect to the list structure, the server will be terminated instead of waiting for the structure to become available.

User response: See the documentation of the ENFREQ macro in *OS/390 MVS Programming: Authorized Assembler Services Reference, Volume 2 (ENFREQ-ITTFMTB)* (GC28-1765) for the explanation of the return and reason code.

Module: DFHNCEN

Destination: Console and SYSPRINT

DFHNC0601I Starting statistics collection for interval since *lasttime*.

Explanation: The named counter sequence number server is about to collect interval, end of day or closedown statistics. This message identifies the start of the time interval to which the statistics apply, which is either the time that the server was started up or the time of the last reset, which occurs whenever interval or end of day statistics are produced. The format of the timestamp is yyyy-mm-dd hh:mm:ss.

System action: The server proceeds with statistics collection.

User response: None.

Module: DFHNCST

Destination: SYSPRINT

DFHNC0602I Statistics collection completed, reset performed.

Explanation: Named counter sequence number server statistics have been collected and counters have been reset. This occurs for interval or end of day statistics.

System action: Processing continues.

User response: None.

Module: DFHNCST

Destination: SYSPRINT

DFHNC0603I Statistics collection completed.

Explanation: Named counter sequence number server statistics have been collected but counters have not been reset. This normally occurs at server closedown.

System action: Processing continues.

User response: None.

Module: DFHNCST

Destination: Console and SYSPRINT

DFHNC0604 Timer SET failed, return code *retcode*, reason code *rsncode*.

Explanation: The statistics subtask in the named counter sequence number server tried to set up a timer wait interval but failed.

System action: The interval statistics function is terminated with message DFHNC0606.

User response: Check the return code and reason code. A return code of 4 indicates an attempt to set up more than one concurrent timer interval, which indicates a logic error in the server. The reason code in this case is the MVS STIMERM identifier for the existing timer interval. A return code of 8 indicates that the MVS STIMERM macro failed, in which case the reason code indicates the return code received from STIMERM SET.

Module: DFHNCST

Destination: Console and SYSPRINT

DFHNC0605 Timer CANCEL failed, return code *retcode*, reason code *rsncode*.

Explanation: The statistics subtask in the named counter sequence number server tried to cancel a timer wait interval but failed.

System action: The interval statistics function is terminated with message DFHNC0606.

User response: Check the return code and reason code. A return code of 4 indicates an attempt to cancel a nonexistent timer interval, which indicates a logic error in the server. A return code of 8 indicates that the MVS STIMERM macro failed, in which case the reason code indicates the return code received from STIMERM CANCEL.

Module: DFHNCST

Destination: Console and SYSPRINT

DFHNC0606 Statistics collection function is no longer available.

Explanation: The statistics collection subtask in the named counter sequence number server was unable to continue processing and has terminated. The reason will have been indicated by an earlier message.

System action: The interval statistics subtask terminates and no further interval statistics or end of day statistics will be produced for this run of the server.

User response: See the earlier message indicating the reason for the termination of the subtask.

Module: DFHNCST

DFHNC0610I • DFHNC0801I

Destination: Console and SYSPRINT

DFHNC0610I Statistics written to SMF, return code was *retcode*.

Explanation: Named counter sequence number server statistics have been sent to SMF. The return code from the SMFEWTM macro is indicated in this message. A non-zero return code usually indicates that SMF recording was suppressed because of current SMF options or an installation exit.

System action: Processing continues.

User response: If the return code is non-zero but SMF statistics were expected to be successfully written, see the documentation of the SMFEWTM macro in *OS/390 MVS System Management Facilities (SMF)* (GC28-1783) for more information about return codes.

Module: DFHNCST

Destination: SYSPRINT

DFHNC0701I Named counter pool *poolname* is to be unloaded.

Explanation: The named counter sequence number server program has been started with the **UNLOAD** option requesting that the named counter pool is unloaded to a sequential data set.

System action: The server starts to process the unload request. In this case, the rest of cross-memory server initialization is bypassed as it will not be needed.

User response: None.

Module: DFHNCUL

Destination: Console and SYSPRINT

DFHNC0702I Named counter pool *poolname* has been successfully unloaded.

Explanation: The named counter pool has been unloaded successfully.

System action: The server closes down normally.

User response: None.

Module: DFHNCUL

Destination: Console and SYSPRINT

DFHNC0703I Number of unloaded counters: *counters*. Blocks written *blocks*.

Explanation: This message provides additional information about the results of the named counter pool unload process, giving the number of named counters which were unloaded and the number of 4K data blocks written to the unloaded named counter pool data set.

System action: Server termination continues.

User response: None.

Module: DFHNCUL

Destination: Console and SYSPRINT

DFHNC0704 DFHNCUL data set for unload could not be opened.

Explanation: The data set to contain the unloaded named counter pool could not be opened.

System action: Unload processing is terminated and the server is closed down with message DFHNC0706.

User response: Check that the DFHNCUL DD statement is present in the JCL for the unload job.

Module: DFHNCUL

Destination: Console and SYSPRINT

DFHNC0705 Unload access to CF structure *strname* failed with response *response*.

Explanation: The named counter pool unload process failed because of a problem with coupling facility access.

System action: Unload processing is terminated and the server is closed down with message DFHNC0706.

User response: If the response code is 6, this indicates that an unexpected IXLLIST error occurred, for which a previous message DFHNC0441 will have been issued. Any other response code indicates an internal logic error.

Module: DFHNCUL

Destination: Console and SYSPRINT

DFHNC0706 Unload for named counter pool *poolname* was unsuccessful.

Explanation: The named counter pool unload process failed. The reason will have been described in a previous message.

System action: The server is terminated.

User response: See the previous message giving the reason for the unload failure. Note that any unload data set produced in this case will be incomplete and will not be valid for reload purposes.

Module: DFHNCUL

Destination: Console and SYSPRINT

DFHNC0801I Named counter pool *poolname* is to be reloaded.

Explanation: The named counter sequence number server program has been started with the **RELOAD** option requesting that the named counter pool is to be

reloaded from a sequential data set produced using the **UNLOAD** option.

System action: The server starts to process the reload request. In this case, the rest of cross-memory server initialization is bypassed as it will not be needed.

User response: None.

Module: DFHNCRL

Destination: Console and SYSPRINT

DFHNC0802I Named counter pool *poolname* has been successfully reloaded.

Explanation: The named counter pool has been reloaded successfully.

System action: The server closes down normally.

User response: None.

Module: DFHNCRL

Destination: Console and SYSPRINT

DFHNC0803I Counters reloaded: *counters*. Counters bypassed *duplicates*. Blocks read: *blocks*.

Explanation: This message provides additional information about the results of the named counter pool reload process. Named counters on the unloaded data set are bypassed during reload processing if they already exist in the pool (for example as a result of a previous reload which could not be completed due to lack of space).

System action: Server termination processing continues.

User response: None.

Module: DFHNCRL

Destination: Console and SYSPRINT

DFHNC0804 DFHNCRL data set for reload could not be opened.

Explanation: The data set containing the named counter pool to be reloaded could not be opened.

System action: Reload processing is terminated and the server is closed down with message DFHNC0808.

User response: Check that the DFHNCRL DD statement is present in the JCL for the reload job.

Module: DFHNCRL

Destination: Console and SYSPRINT

DFHNC0805 Reload access to CF structure *strname* failed with response *response*.

Explanation: The named counter pool reload process failed because of a problem with coupling facility access.

System action: Reload processing is terminated and the server is closed down with message DFHNC0808.

User response: If the response code is 6, this indicates that an unexpected IXLLIST error occurred, for which a previous message DFHNC0441 will have been issued. Any other response code indicates an internal logic error.

Module: DFHNCRL

Destination: Console and SYSPRINT

DFHNC0806 Unexpected end of file encountered on reload data set.

Explanation: End of file was encountered on the data set containing the unloaded named counter pool before the logical end of the unloaded data was encountered.

System action: Reload processing is terminated and the server is closed down with message DFHNC0808.

User response: This indicates that the unloaded data set is incomplete, perhaps because the unload process was abnormally terminated.

Module: DFHNCRL

Destination: Console and SYSPRINT

DFHNC0807 Reload data set contains incorrect data near block *block*, offset *offset*.

Explanation: The named counter pool reload process failed because the unloaded pool data set is not in the correct format.

System action: Reload processing is terminated and the server is closed down with message DFHNC0808.

User response: Check that the correct data set is being used and that the unload process completed normally.

Module: DFHNCRL

Destination: Console and SYSPRINT

DFHNC0808 Reload for named counter pool *poolname* was unsuccessful.

Explanation: The named counter pool reload process could not be completed. The reason will have been described in a previous message.

System action: The program is terminated.

User response: See the previous message giving the reason for the reload failure.

DFHNC0809 • DFHNC0941I

Module: DFHNCRL

Destination: Console and SYSPRINT

DFHNC0809 Reload for CF structure *strname* failed, structure is full.

Explanation: Named counter pool reload processing failed because there are insufficient free entries or elements to store the new data in the structure.

System action: Reload processing is terminated and the server is closed down with message DFHNC0808.

User response: If the structure is currently allocated at less than its maximum size and the coupling facility has enough free space, the size of the structure can be increased dynamically using the MVS **SETXCF** command with the **START,ALTER** option, and the reload job can then be run again as soon as the alter request completes, in which case it will skip over duplicate information which has already been successfully reloaded. If the structure is at its maximum size, use the MVS **SETXCF FORCE** command to delete the structure, then increase the **SIZE** and **INITSIZE** parameters in the current CFRM policy and activate the updated policy, and rerun the reload job. The approximate amount of information which could not be reloaded can be estimated by comparing the numbers of blocks read and named counters reloaded, as described by following message DFHNC0803, with the corresponding numbers from message DFHNC0703 in the unload job.

DFHNQnnnn messages

DFHNQ0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The

OK Normal completion.

LEN ERROR

Data to be read exceeds buffer length.

NOT FOUND

No entry was found with the given key.

DUPLICATE

Add was rejected because counter name already exists.

WRONG VER

Change was rejected because version did not match.

AUTH FAIL

List authority value did not match.

I/O ERROR

IXLLIST error other than any of the above.

System action: Processing continues.

User response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Module: DFHNCCF

Destination: SYSPRINT

DFHNC0999I Trace *text*

Explanation: This message is used by the named counter sequence number server for non-specific debugging traces in multiple modules, for use by service personnel. It should not appear in normal execution unless debugging traces were deliberately activated, or an internal logic error was encountered.

System action: Processing continues.

User response: This message is intended primarily for diagnostic use as advised by your IBM Support Center.

Module: various

Destination: SYSPRINT

CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

DFHNQ0002 • DFHNQ0004

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Next, look up the CICS alphanumeric code in this manual. for further guidance.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHNQDM, DFHNQED, DFHNQIB, DFHNQNQ

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

Destination: Console

DFHNQ0002 *applid* **A severe error (code X'code') has occurred in module *modname*.**

Explanation: An error has been detected in module *modname*. The code X'code' is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code X'code' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHNQDM, DFHNQED, DFHNQIB, DFHNQNQ

XMEOUT Parameters: *applid, X'code', modname*

Destination: Console

DFHNQ0004 *applid* **A possible loop has been detected at offset X'offset' in module *modname*.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'offset'. This is the offset of the instruction which happened to be executing at the time when the error was detected.

System action: An exception entry is made in the trace table.

A system dump is taken unless you have specifically suppressed the dump (by a user exit program at the XDUREQ exit, in the dump table or by global system dump suppression). CICS processing continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that execution of module *modname* is terminated and CICS continues.

If you have specified ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If the runaway has occurred in module DFHNQIB, it is probably the result of a long-running UOWENQ browse. If there are many enqueues in the system (particularly if many are owned by the same task), CICS can take a long time to process the browse. This can be resolved by increasing the runaway interval associated with the task performing the browse. To do this change the RUNAWAY attribute of the associated transaction definition.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online using the CEMT transaction.

If raising the ICVR time does not solve the problem, you may need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHNQDM, DFHNQED, DFHNQIB, DFHNQNQ

XMEOUT Parameters: *applid, X'offset', modname*

Destination: Console

DFHNQ0101 *date time applid* **ENQMODEL model has been installed.**

Explanation: The ENQMODEL resource *model* has been installed on the local system.

System action: The enqmodel is installed and CICS continues normally.

User response: None required.

Module: DFHNQRN

XMEOUT Parameters: *date, time,applid, model*

Destination: CSMT

DFHNQ0102 *date time applid* **ENQMODEL model has been discarded.**

Explanation: The ENQMODEL resource *model* has been discarded from the local system.

System action: The enqmodel is discarded and CICS continues normally.

User response: None required.

Module: DFHNQRN

XMEOUT Parameters: *date, time,applid, model*

Destination: CSMT

DFHNQ0103 *date time applid* **The limit for the number of concurrent sysplex resource ENQ requests has been reached. Transaction *tran* detected return code *X'code'* from MVS ENQ.**

Explanation: Code *X'code'* was returned by MVS when transaction *tran* attempted to Enqueue on a sysplex-wide resource. This indicates that the limit for the number of concurrent sysplex resource ENQ requests has been reached.

System action: The task does not have control of the resource. The task issuing the EXEC ENQ request is abended ABCODE ANQC.

User response: Retry the transaction one or more times. If the problem persists, consult your system programmer, who might be able to tune the system so that the limit is no longer exceeded.

Module: DFHNQED

XMEOUT Parameters: *date, time,applid, tran, X'code'*

Destination: CSMT

DFHNQ0104 *applid* **MVS returned code *X'code'* when transaction *tran* attempted to enqueue on a sysplex-wide resource. This indicates that an unexpected environmental error has been detected.**

Explanation: Code *code* was returned by MVS when transaction *tran* attempted to Enqueue on a sysplex-wide resource. This indicates that an unexpected environmental error has been detected.

System action: The task does not have control of the resource. The task issuing the EXEC ENQ request is abended ABCODE ANQD.

User response: Retry the transaction one or more times. If the problem persists, consult your system programmer.

Module: DFHNQED

XMEOUT Parameters: *applid, X'code',tran*

Destination: Console

DFHNQ0105 *date time applid* **ENQMODEL model was either disabled or in the waiting state when transaction *tran* attempted to enqueue on a matching resource name.**

Explanation: An EXEC ENQ has been issued on a resource for which the enqmodel is either disabled or in the waiting state.

System action: The ENQ request is rejected, and the issuing task abended abcode ANQE ENQ_DISABLED.

User response: To avoid multiple transaction abends, such transactions should be disabled before disabling the enqmodel.

Module: DFHNQRN

XMEOUT Parameters: *date, time,applid, model, tran*

Destination: CSMT

DFHNQ0106 *date time applid* **ENQMODEL model has been replaced.**

Explanation: The ENQMODEL resource *model* has been replaced on the local system.

System action: The enqmodel is replaced and CICS continues normally.

User response: None required.

Module: DFHNQRN

XMEOUT Parameters: *date, time,applid, model*

Destination: CSMT

DFHNQ0107 *date time applid* ENQMODEL *model1*
must be disabled before enabling
 ENQMODEL *model2*.

Explanation: An attempt to enable an enqmodel failed, because a less specific enqmodel is enabled. Enqmodels forming nested generic enqnames must be enabled in order, from the most to the least specific.

ENQMODEL *model1* must be disabled before enabling ENQMODEL *model2*.

System action: The enqmodel is not installed, but CICS continues normally.

User response: Review the enqmodel definitions. If an enqmodel containing AB* is enabled, it must be disabled before enabling one with ABCD*. If enqmodels containing AB* and ABC* are installed, one must be discarded before installing an enqmodel with ABCD*.

Module: DFHNQRN

XMEOUT Parameters: *date, time, applid, model1, model2*

Destination: CSMT

DFHOTnnnn messages

DFHOT0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code.

Alternatively

- Unexpected data has been input,
- Storage has been overwritten, or
- There has been a program check within a user program.

The code *aaa* is, if applicable, a 3-digit hexadecimal MVS system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The 4-digit code *bbbb*, which follows *aaa*, is a user abend code produced either by CICS or by another product on the user's system.

If *X'offset'* contains the value X'FFFF, then module *modname* was in control at the time of the abend, but the program status word (PSW) was not addressing this module.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer.

Look up the MVS code *aaa*, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

If the *modname* insert contains the value *????*, then CICS was unable to determine which module has abnormally terminated. In this case, examine the system

dump to determine which area of code has caused the program check.

The user should examine other messages to determine what the module which issued this message was doing at the time the abend occurred. From these messages they can deduce which product has produced the abend code *bbbb*. If *bbbb* is identified as a CICS code, it may be either alphameric or numeric.

- If the CICS code is alphameric (for example AKEA) then it is a CICS transaction abend code.
- If the CICS code is numeric (for example 1310), it refers to a CICS message (DFHTS1310 in our example).

If the user abend code is from another product (for example, IMS), refer to the appropriate messages and codes manual to determine the cause of the abend.

The entries in the appropriate manuals will give the user guidance regarding the nature of the error, and may also give some guidance concerning the appropriate user response. The program check may have occurred in a user program. If this is the case, the program check is usually followed by an ASRA or an ASRB transaction abend and a transaction dump.

If you want to suppress system dumps that precede ASRA and ASRB abends, you must specify this on an entry in the dump table, using either CEMT or an EXEC CICS command. Further guidance on suppressing system dumps can be found in the *CICS System Definition Guide*.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHOTxx

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

Destination: Console

DFHOT0002 *applid* A severe error (code *X'code'*) has occurred in module *module*.

Explanation: The OT domain has received an unexpected error response from some other part of CICS. The operation requested by OT is described by code *X'code*.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: A system dump is taken and the system attempts to continue operation unless specifically inhibited by dump table entries.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the cause of the problem as follows

1. Determine if the problem can be explained by any previous messages issued from some other CICS component.
2. Examine the symptom string.
3. Examine the dump.

If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHOTDM, DFHOTTR, DFHOTCO, DFHOTSU

XMEOUT Parameters: *applid, X'code', module*

Destination: Console

DFHOT0004 *applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset *X'offset*. This is the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate.

User response: Notify the system programmer. If CICS has not been terminated, it will be necessary to decide whether the problem is serious enough to bring CICS down.

This may not be an error as some CICS functions can use a lot of processor time, and this message may have been caused by a long-running function.

Usually, CICS will purge a CICS function which exceeds the runaway task time interval which you have specified

in the SIT (this is the ICVR parameter, which is measured in milliseconds). This means that the module *modname* will be terminated and CICS will continue.

If you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway function, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time to do this permanently. You can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you need further assistance from IBM to resolve this problem.

Module: DFHOTRM

XMEOUT Parameters: *applid, X'offset', modname*

Destination: Console

DFHOT0101 *applid* **A severe error has occurred. The description is '*description*'. The error occurred in class *classname*/*methodname*.**

Explanation: A Java class of the OT domain has detected an unexpected error condition. The description of the error is described in *description*. The class and method are described in *classname* and *methodname*.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: A system dump is taken and the system attempts to continue operation unless specifically inhibited by dump table entries.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the cause of the problem as follows

1. Determine if the problem can be explained by any previous messages issued from some other CICS component.
2. Examine the symptom string.
3. Examine the dump.

If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHOTDM, DFHOTTR, DFHOTCO, DFHOTSU, dfhjts.jar

XMEOUT Parameters: *applid, description, classname/methodname*

Destination: Console

DFHOT0102 *applid* Task running transaction *tranid* could not be purged for OTS timeout. Transaction token: *X'tran_token'*.

Explanation: The task with transaction token *tran_token* has been executing with an inflight OTS transaction for a period of time exceeding its timeout value. An attempt was made to purge the task, but this failed either because the task was protected from being purged at this time, or the transaction definition for *tranid* specifies SPURGE(NO).

System action: The task continues to execute with no further attempts to purge the task.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Consider making the transaction definition for *tranid* specify SPURGE(YES). See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHOTIS2

XMEOUT Parameters: *applid, tranid, X'tran_token'*

Destination: Console

DFHOT0103 *applid* A system exception has occurred while processing a GIOP request. The server that was processing the request can be identified by the hostname *hostname*.

Explanation: A system exception was thrown while a GIOP request was being processed by this server. The *hostname* identifies the server.

System action: The system exception is returned to the client of the GIOP request.

User response: Investigate the cause of the problem as follows

1. Determine if the problem can be explained by any previous messages issued from some other CICS component. Look especially for DFHEJxxx or DFHllxxx messages.
-

DFHPAnnnn messages

DFHPA0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An unexpected program check or operating system abend with abend code *aaa/bbbb* occurred at offset *X'offset'* in module *modname*. This can be caused by corruption of CICS code or control blocks.

During initialization, CICS might not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

2. If a trace is available look for OT, EJ or II exception trace points.

Also look for II trace points 0132, 0714 and 0201. II 0132 and 0714 trace GIOP requests and replies. If a reply contains a system exception the II 0132 or 0714 is followed by an II 0201 with SYSTEM_EXCEPTION in the trace interpretation.

If you cannot resolve the problem, you need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: dfhjts.jar

XMEOUT Parameters: *applid, hostname*

Destination: Console

DFHOT0105 *applid* Task running transaction *tranid* has been purged as it exceeded its specified OTS timeout. Transaction token: *X'tran_token'*.

Explanation: The task with transaction token *tran_token* has been executing with an inflight OTS transaction for a period of time exceeding its timeout value.

System action: The task is purged.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate why the transaction exceeded the OTSTimeout value specified in the transaction definition. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHOTIS2

XMEOUT Parameters: *applid, tranid, X'tran_token'*

Destination: Console

System action: A system dump is taken unless specifically suppressed for this system abend code, and the system attempts to continue operation unless termination has been requested via the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the cause of the abend or program check using the dump, the abend code, the trace table, and any other diagnostic messages which may have been issued.

Module: DFHPAGP, DFHPADM, DFHPAIO

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

Destination: Console

DFHPA0002 *applid* **A severe error (code X'code') has occurred in module *modname*.**

Explanation: An error has been detected in module *modname*

The code X'code' is the exception trace point id which uniquely identifies what the error is and where the error was detected.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: An exception entry (code X'code' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHPADM

XMEOUT Parameters: *applid, X'code', modname*

Destination: Console

DFHPA0004 *applid* **A possible loop has been detected at offset X'offset' in module *modname*.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'offset'. This is the offset of the instruction which was executing when the error was detected.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that the CICS module identified in the message is terminated and CICS continues..

However, if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. However, you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHPADM

XMEOUT Parameters: *applid, X'offset', modname*

Destination: Console

DFHPA1100 *applid* **OVERRIDE PARAMETERS FROM JCL EXEC STATEMENT** *parm*

Explanation: This message is displayed during CICS initialization to show the SIT overrides obtained from the PARM parameter of the JCL EXEC statement for the CICS job. If the parameter string *parm* contains 40 characters or less, it is shown on this message. Otherwise it is shown on a DFHPA1927 message following this message.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: System initialization continues.

User response: None.

Module: DFHPAIO

Destination: Console

DFHPA1101 *applid* **DFHSITxx IS BEING LOADED.**

Explanation: This is an informational message displayed during CICS initialization.

xx, if present, represents the 1- or 2-character suffix for the SIT being used.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: System initialization continues.

User response: None.

Module: DFHPADM

Destination: Console

DFHPA1102 *applid* **OVERRIDE PARAMETERS FROM SYSIN**

Explanation: This message is displayed during CICS initialization before displaying the SIT overrides obtained from the SYSIN data set. The message is followed by a series of DFHPA1927 messages that show the actual contents of the SYSIN records.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: System initialization continues.

User response: None.

Module: DFHPAIO

Destination: Console

DFHPA1103 *applid* **END OF FILE ON SYSIN.**

Explanation: This is an informational message displayed when CICS has reached the end of the SYSIN data set.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: System initialization continues.

User response: None.

Module: DFHPAIO

Destination: Console

DFHPA1104 *applid* **SPECIFY ALTERNATIVE SIT PARAMETERS, IF ANY, AND THEN TYPE '.END'.**

Explanation: If the word "CONSOLE" or "CN" was detected in either the parameter input stream on the EXEC statement of the CICS JCL, or in the SYSIN data set, then this prompt message will be displayed when the parameter (PA) manager is ready to accept console overrides.

System action: The system initialization program waits for a response from the operator.

User response: Enter the required parameter changes, separated by commas. Terminate your reply by entering '.END'.

Module: DFHPAIO

Destination: Console

DFHPA1105 *applid* **CONTINUE SPECIFYING SIT PARAMETERS AND THEN TYPE '.END'.**

Explanation: While SIT overrides are being entered on the console, this prompt message will be displayed to request more overrides if the previous line did not end with ".END".

System action: The system initialization program waits for more override parameters to be entered by the operator.

User response: Continue entering the required parameter changes, separated by commas. Terminate your reply by entering '.END'.

Module: DFHPAIO

Destination: Console

DFHPA1106 *applid* **MODULE DFHSITxx COULD NOT BE LOADED. SPECIFY NEW SUFFIX, 'NONE'(UNSUFFIXED) OR 'CANCEL'.**

Explanation: During PA domain initialization, a SIT with a suffix of *xx* could not be loaded.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: The PA domain initialization routines wait for the operator to enter an alternative 1- or 2-character suffix, or YES to request the unsuffixed SIT, or CANCEL. If CANCEL is entered, CICS is abnormally terminated.

User response: Determine whether the suffix is correct. If it is not, enter the correct suffix or enter 'YES' for the unsuffixed version. Otherwise enter 'CANCEL', correct the error (by adding the module to the appropriate library) and restart CICS.

Module: DFHPADM

Destination: Console

DFHPA1107 *applid* A level VERSION OF MODULE DFHSIT xx WAS LOADED. CICS CAN ONLY INITIALIZE WITH THE CURRENT LEVEL SIT.

Explanation: During PA domain initialization, a SIT with a suffix of *xx* and a release level of *level* was loaded. Since this version is not compatible with current CICS code, CICS is abnormally terminated.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates abnormally.

User response: To correct the error, reassemble the SIT at the current CICS level. Refer to the *CICS Transaction Server for z/OS Migration from CICS TS Version 3.1*. for guidance on changes to the SIT that may be required for the new release. CICS should then be restarted.

Alternatively, the system may have been pointing to the wrong SIT. To correct this second case, check the bring up JCL to make sure that the 'SIT=' override is correct. Refer to the *CICS System Definition Guide* for guidance on coding system initialization parameters. Furthermore, check the library search order to make sure that stray SITs, which may be unknowingly present, are removed or renamed.

Module: DFHPADM

Destination: Console

DFHPA1108 *applid* DFHSIT xx HAS BEEN LOADED. (GENERATED AT MM/DD= *mm/dd* HH/MM= *hh/mm*).

Explanation: This is an informational message displayed during CICS initialization. It displays the date

and time that the loaded system initialization table was generated.

- *xx* is the suffix of the SIT being used.
- *mm/dd* is the date (month and day) that the SIT was generated.
- *hh/mm* is the time (hours and minutes of the 24 hour clock) that the SIT was generated.

System action: CICS Initialization continues.

User response: None.

Module: DFHPADM

Destination: Console

DFHPA1901 *applid modname* COULD NOT BE FOUND OR IS IN A NON-APF LIBRARY/CONCATENATION. CICS IS TERMINATED.

Explanation: An error has occurred while attempting to load either DFHPASYL or DFHPAIO.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates abnormally.

User response: Correct the problem with the module that failed to load.

For example, check that a module *modname* actually exists in the program libraries used by CICS. Check the JCL and that the correct name, the correct library and the correct member in the library are used.

Module: DFHPADM

Destination: Console

DFHPA1902 *applid* UNABLE TO OPEN SYSIN DATA SET. CICS IS TERMINATED.

Explanation: An error has occurred while attempting to open the SYSIN data set. This occurs if the SYSIN data set does not exist.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates abnormally.

User response: Ensure that the SYSIN data set exists and is correct.

Module: DFHPAIO

Destination: Console

DFHPA1903 *applid* ERROR WHILE READING FROM SYSIN DATA SET. CICS IS TERMINATED.

Explanation: An error has occurred while attempting to read a record from the SYSIN data set. This can occur if the SYSIN data set has been corrupted, or has been incorrectly defined (for example, has not been defined with a logical record length, LRECL, of 80).

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates abnormally.

User response: Correct the problem in the SYSIN data set.

Module: DFHPAIO

Destination: Console

DFHPA1907 *applid* DATA *data* IS INVALID FOR KEYWORD *keyword*. KEYWORD IS IGNORED.

Explanation: This message is displayed if the data specified, either for a keyword in the SIT or for a SIT override, is invalid, AND the PARMERR=IGNORE option is specified in the SIT or as an override. The message inserts are as follows

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data.

System action: The keyword is ignored. CICS will attempt to initialize without the keyword in error.

User response: Correct the error by specifying a valid value for the keyword wherever it has been specified, either in the SIT or in the CICS input JCL, prior to restarting CICS. Refer to the *CICS System Definition Guide* for information on how to do this.

Module: DFHPAGP

Destination: Console

DFHPA1908 *applid* DATA *data* IS INVALID FOR KEYWORD *keyword*. CICS IS TERMINATED.

Explanation: This message is displayed if the data specified, either for a keyword in the SIT or for a SIT override, is invalid, and the PARMERR=ABEND option is specified in the SIT or as an override. The message inserts are as follows

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data.

This message is issued only if the data for keyword MCT is in error.

System action: CICS terminates abnormally.

User response: Correct the error by specifying a valid value for the keyword wherever it has been specified, either in the SIT or in the CICS input JCL, prior to restarting CICS. Refer to the *CICS System Definition Guide* for information on how to do this.

Module: DFHPAGP

Destination: Console

DFHPA1909 *applid* DATA *data* IS INVALID FOR KEYWORD *keyword*. RESPECIFY KEYWORD AND DATA.

Explanation: This message is displayed if the data specified, either for a keyword in the SIT or for a SIT override, is invalid, and the PARMERR=INTERACT option is specified in the SIT or as an override. The message inserts are as follows

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data.

invalid keyword data.

System action: CICS waits for the corrected keyword and data to be entered as an override on the console by the operator, and analyzes this override.

User response: Enter the corrected SIT keyword and data on the console, or bypass by typing '.END', or just supply a blank line.

Refer to the *CICS System Definition Guide* for information on how to do this.

Module: DFHPAGP

Destination: Console

DFHPA1910 *applid* SIT OVERRIDE *keyword* IS NOT RECOGNIZED. OVERRIDE IS IGNORED. (MODULE *modname*).

Explanation: This message is displayed if a keyword specified in the input override parameter stream is invalid, and the PARMERR=IGNORE option is specified in the SIT, or as an override. The insert *keyword* is the invalid keyword.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: The keyword is ignored, and CICS attempts to initialize without the keyword in error.

User response: Ensure the keyword specified is correct and update CICS input JCL with the corrected keyword prior to the next initialization of CICS.

Module: DFHPADM, DFHPAGP

Destination: Console

DFHPA1911 *applid* **SIT OVERRIDE keyword IS NOT RECOGNIZED. CICS IS TERMINATED.**

Explanation: This message is displayed if a keyword specified in the input override parameter stream is invalid, and the PARMERR=ABEND option is specified in the SIT, or as an override. the insert *keyword* is the invalid keyword.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates abnormally.

User response: Correct the error by specifying a valid keyword in the SIT overrides, then restart CICS. Refer to the *CICS System Definition Guide*. for information on how to do this.

Module: DFHPADM

Destination: Console

DFHPA1912 *applid* **SIT OVERRIDE keyword IS NOT RECOGNIZED. SPECIFY CORRECT SIT OVERRIDE.**

Explanation: This message is displayed if a keyword specified in the input override parameter stream is invalid, and the PARMERR=INTERACT option is specified in the SIT, or as an override. The insert *keyword* is the invalid keyword. Note that PARMERR=INTERACT is the default action for invalid SIT overrides.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS waits for the corrected override to be entered on the console by the operator, and analyzes this override.

User response: On the console enter the corrected SIT override, bypass the override in error and all overrides that follow by typing '.END', or supply a blank line to bypass only the override in error.

Module: DFHPADM

Destination: Console

DFHPA1913 *applid* **INVALID DATA HAS BEEN DETECTED FOR SIT OVERRIDE keyword BY MODULE modname. OVERRIDE IS IGNORED.**

Explanation: This message can be issued in the following situations

- If the data supplied for a SIT override is syntactically invalid, and the PARMERR=IGNORE system

initialization parameter is specified. The insert *keyword* is the keyword for which the value is in error.

- In response to invalid data when PARMERR=INTERACT is specified but the user has been attempting to correct a previous invalid SIT keyword or value. In this case, message DFHPA1912 or DFHPA1915 follows this message to prompt for the correction to the original error.
- When PARMERR=INTERACT is specified if invalid data has been passed in PARM or SYSIN for a keyword that cannot be entered from the console (and therefore cannot be corrected by interaction with the console). This typically applies to security keywords.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: The keyword is ignored, and CICS attempts to initialize without the keyword in error.

User response: Ensure the value specified is correct and update CICS input JCL with the corrected keyword prior to the next initialization of CICS.

Module: DFHPADM, DFHPAGP

Destination: Console

DFHPA1914 *applid* **INVALID DATA HAS BEEN DETECTED FOR SIT OVERRIDE keyword. CICS IS TERMINATED.**

Explanation: This message is displayed if the data specified for a SIT override is syntactically invalid, and the PARMERR=ABEND option is specified in the SIT, or as an override.

The insert *keyword* is the keyword for which the value is in error.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS terminates abnormally.

User response: Correct the error by specifying a valid value for the keyword in the SIT overrides, then restart CICS.

Refer to the *CICS System Definition Guide* for information on how to do this.

Module: DFHPADM

Destination: Console

DFHPA1915 *applid* **INVALID DATA HAS BEEN DETECTED FOR SIT OVERRIDE**
keyword. **RESPECIFY THE OVERRIDE.**

Explanation: This message is displayed if the data specified for a SIT override is syntactically invalid or is a numeric value of 2 gigabytes or greater. It is only displayed if the PARMERR=INTERACT option is specified in the SIT, or as an override.

The insert *keyword* is the keyword for which the value is in error.

invalid SIT overrides.

System action: CICS waits for the corrected override to be entered on the console by the operator, and then analyzes this override.

User response: Enter the corrected SIT override on the console, or bypass by typing '.END', or just supply a blank line.

Module: DFHPADM

Destination: Console

DFHPA1916 *applid* **SIT OVERRIDE DATA *data* IS OUT OF RANGE FOR KEYWORD**
keyword. **OVERRIDE IS IGNORED.**

Explanation: This message is displayed if the data supplied for a SIT override is out of range, and the PARMERR=IGNORE option is specified in the SIT, or as an override. The message inserts are as follows

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data.

System action: The keyword is ignored. CICS will attempt to initialize without the keyword in error.

User response: Ensure the value specified is correct and update CICS input JCL with the corrected keyword prior to the next initialization of CICS.

Module: DFHPAGP

Destination: Console

DFHPA1917 *applid* **SIT OVERRIDE DATA *data* IS OUT OF RANGE FOR KEYWORD**
keyword. **CICS IS TERMINATED.**

Explanation: This message is displayed if the data specified for a SIT override is out of range, and the PARMERR=ABEND option is specified in the SIT, or as an override. The message inserts are as follows

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data.

System action: CICS terminates abnormally.

User response: Correct the error by specifying a valid

value for the keyword in the SIT overrides, and restart CICS.

Refer to the *CICS System Definition Guide* for information on how to do this.

Module: DFHPAGP

Destination: Console

DFHPA1918 *applid* **SIT OVERRIDE DATA *data* IS OUT OF RANGE FOR KEYWORD**
keyword. **RESPECIFY THE OVERRIDE.**

Explanation: This message is displayed if the data specified for a SIT override is out of range, and the PARMERR=INTERACT option is specified in the SIT, or as an override. The message inserts are as follows

- *keyword* is the keyword for which the value is in error.
- *data* is the invalid data.

Note: PARMERR=INTERACT is the default action for invalid SIT overrides.

System action: CICS waits for the corrected override to be entered on the console by the operator, and analyzes this override.

User response: Enter the corrected SIT override on the console, or bypass by typing '.END', or just supply a blank line.

Module: DFHPAGP

Destination: Console

DFHPA1919I *applid* **SPECIFIED DATA IS INCORRECT. ALL SUBSEQUENT OVERRIDES ON THIS LINE IGNORED.**

Explanation: An invalid value for a keyword has been entered after message DFHPA1912 or DFHPA1915 has been issued. CICS has been unable to analyze the overrides following the invalid one.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS continues to prompt for the corrected override using either message DFHPA1912 or message DFHPA1915.

User response: Enter the corrected SIT override, ensuring that the data is in the valid range for that keyword.

You cannot suppress this message with the system initialization parameter MSGLVL=0.

Module: DFHPADM

Destination: Console

DFHPA1920I *applid* **SIT KEYWORD** *keyword* **AND ALL SUBSEQUENT OVERRIDES ON THIS LINE IGNORED.**

Explanation: An invalid keyword has been entered in response to message DFHPA1912 or DFHPA1915. CICS has been unable to analyze the overrides following the invalid one.

The insert *keyword* is the invalid keyword.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS continues to prompt for the corrected keyword using message DFHPA1912 or message DFHPA1915.

User response: Enter the corrected SIT override, ensuring that the keyword is valid.

Refer to the *CICS System Definition Guide* for information on how to do this.

You cannot suppress this message with the SIT parameter, MSGLVL=0.

Module: DFHPADM

Destination: Console

DFHPA1921 *applid* **PLEASE SPECIFY THE REQUIRED SIT SUFFIX, OR SPECIFY 'NONE'(UNSUFFIXED).**

Explanation: The System Initialization Table (SIT) holds information needed for CICS to initialize. This is loaded during preinitialization. The user specifies a 1- or 2-character suffix to identify which SIT to load. To use the unsuffixed default SIT, reply with 'SIT=NO'.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: The system loads and uses the specified SIT if it can be found. Otherwise the user is prompted to enter a valid suffix.

User response: Type 'SIT=xx' in response to the message, where xx represents the SIT suffix to be used. (A suffix of 'NO' causes the system to load an unsuffixed SIT).

Module: DFHPADM.

Destination: Console

DFHPA1922I *applid* **SPECIAL KEYWORD** *keyword* **HAS BEEN REPEATED AND IS IGNORED.**

Explanation: There are 2 special keywords, each with an abbreviation. The first is SYSIN, which has the

abbreviation SI. The second is CONSOLE, which has the abbreviation CN. These keywords direct CICS to read SIT overrides from the SYSIN data stream and from the console respectively.

The system has found a duplication of one of these keywords. The JCL should be amended.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: System initialization continues.

User response: Correct the JCL by removing the second occurrence of the special keyword specified. (Refer to the *CICS Operations and Utilities Guide* for more information on coding CICS system initialization parameters).

You cannot suppress this message with the system initialization parameter MSGLVL=0.

Module: DFHPADM

Destination: Console

DFHPA1923I *applid* **SPECIAL KEYWORD** *keyword* **HAS BEEN DEFINED OUT OF CONTEXT.**

Explanation: There are 2 special keywords, each with an abbreviation. The first is SYSIN, which has the abbreviation SI. The second is CONSOLE, which has the abbreviation CN. These keywords direct CICS to read SIT overrides from the SYSIN data stream and from the console respectively.

SYSIN cannot be specified from either the SYSIN data stream, or from the console. CONSOLE cannot be specified from the console.

The system has found the specified keyword *keyword* in one of the situations described above, and so the JCL should be amended.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: System initialization continues.

User response: Correct the JCL by removing the special keyword specified (Refer to the *CICS Operations and Utilities Guide* for more information on coding CICS system initialization parameters).

You cannot suppress this message with the system initialization parameter MSGLVL=0.

Module: DFHPADM

Destination: Console

DFHPA1924I *applid* Initialization parameter *parm1* exceeds *parm2*. Both are defaulted. (module *modname*).

Explanation: One of two situations may have occurred

- In the first, parameter *parm1* has been set as greater than parameter *parm2* by override.
- In the second, parameter *parm1* may have been set to a certain level in the SIT macro, but parameter *parm2* has been changed by override so that it is now less than parameter *parm1*.

In either case, the condition is invalid, and so default values are applied to both parameters.

System action: Both parameters are set to their default values and system initialization continues.

User response: The system initialization parameters should be altered so that *parm2* is greater than *parm1* for the next bring up of CICS. (Refer to the *CICS System Definition Guide* for more information about system initialization parameters.)

CICS initialization continues with the default values. The user can then change the defaulted values using the CICS supplied transaction.

You cannot suppress this message with the system initialization parameter, MSGLVL=0, unless it has been issued from DFHPAGP via the message domain.

Module: DFHPADM, DFHPAGP

XMEOUT Parameters: *applid*, *parm1*, *parm2*, *modname*

Destination: Console

DFHPA1926 *applid* A MISSING DELIMITER HAS BEEN DETECTED FOR OVERRIDE keyword (MODULE *modname*).

Explanation: The data supplied for a SIT override keyword has not been delimited correctly.

System action: CICS terminates abnormally.

User response: Correct the specified override in the SYSIN data set by entering the opening or the closing delimiter on its data.

Restart CICS.

Refer to the *CICS System Definition Guide* for the required delimiter for keyword *keyword*.

Module: DFHPADM

Destination: Console

DFHPA1927 *applid* *text*

Explanation: This message is displayed during CICS initialization to show parameters that will override the system initialization parameters coded on the DFHSIT macro. If it is preceded by message DFHPA1100, *text*

shows the contents of the PARM parameter from the JCL EXEC statement. If it is preceded by message DFHPA1102, *text* shows the contents of a record read from the SYSIN data set.

During initialization, CICS may not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: System initialization continues.

User response: None.

Module: DFHPAIO

Destination: Console

DFHPA1928 *applid* IF XRF=YES, THE GENERIC AND SPECIFIC APPLIDS MUST BE DIFFERENT. CICS IS TERMINATED.

Explanation: In an XRF CICS system, a generic and a specific *applid* must be defined. They must also be unique.

This message is displayed and CICS is terminated if both these *applids*, which are defined as SIT overrides, are found to be identical in an XRF environment.

This message is also displayed if only the generic *applid* is defined.

System action: CICS terminates abnormally.

User response: Correct the error by defining both the generic and the specific *applids* as SIT overrides. Ensure that they are unique. Refer to the *CICS System Definition Guide* for further information on how to do this.

Module: DFHPADM

Destination: Console

DFHPA1929 *applid* CSDBKUP=DYNAMIC REQUIRES CSDRECOV=ALL. CSDBKUP HAS BEEN DEFAULTED TO STATIC.

Explanation: When the value DYNAMIC is specified for the CSDBKUP keyword the CSDRECOV keyword must have the value ALL. However, the override parameter stream has overridden the SIT values and this requirement has not been fulfilled.

System action: To enable initialization to continue, CSDBKUP is set to the default value STATIC. Because CSDBKUP is set to STATIC, the CICS CSD as defined in the input JCL, or by dynamic allocation, is not eligible for backup while open for update.

User response: Update CICS input JCL with the correct values for CSDBKUP and CSDRECOV keywords prior to the next initialization of CICS.

Module: DFHPADM

Destination: Console

DFHPA1930 *applid* CSDFRLOG=*nn* HAS BEEN IGNORED AS CSDRECOV=ALL HAS NOT BEEN SPECIFIED.

Explanation: When a forward recovery log value is specified for the CSDFRLOG keyword, the CSDRECOV keyword must have the value ALL. However, the override parameter stream has overridden the SIT values and this requirement has not been fulfilled.

System action: To enable initialization to continue, the CSDFRLOG value has been ignored. Because CSDFRLOG is ignored, the CICS CSD as defined in the input JCL, or by dynamic allocation, is not eligible for forward recovery logging.

User response: Update CICS input JCL with the correct values for the CSDFRLOG and CSDRECOV keywords prior to the next initialization of CICS.

Module: DFHPADM

Destination: Console

DFHPA1931 *applid* keyword IS A SECURITY KEYWORD AND CANNOT BE ENTERED AT THE CONSOLE. THE KEYWORD IS IGNORED.

Explanation: A SIT override has been entered at the console which is deemed to be a member of the set of security system initialization parameters. Security system initialization parameters cannot be entered at the console.

During initialization, CICS might not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS ignores the security SIT override, and initialization continues.

User response: Update CICS input JCL so that security keywords are included in the SIT, SYSIN or PARM prior to the next initialization of CICS.

Module: DFHPADM

Destination: Console

DFHPA1932 *applid* A PSDINT VALUE GREATER THAN ZERO WAS SPECIFIED WITH XRF=YES. PSDINT HAS BEEN RESET TO 0.

Explanation: A conflict of options has been detected. You have requested Persistent Session Support by specifying a nonzero value for the PSDINT system initialization parameter. This parameter is used to set the Persistent Sessions delay interval. However, you have also requested XRF support by specifying XRF=YES. Persistent Sessions Support and XRF are mutually exclusive.

System action: The PSDINT value defaults to 0. CICS attempts to continue with XRF support.

User response: Before you next initialize CICS, alter the system initialization parameters so that either PSDINT=0 or XRF=NO. See the *CICS System Definition Guide* for further information.

Module: DFHPADM

Destination: Console

DFHPA1934I *applid* START TYPE CHANGED TO *type*.

Explanation: The start type specified in the SIT has been changed to that shown in the message.

System action: Initialization continues with the new start type.

User response: None.

Module: DFHPAGP

Destination: Console

DFHPA1935 *applid* keyword IS A SECURITY KEYWORD. THIS KEYWORD AND ALL SUBSEQUENT KEYWORDS ON THIS LINE ARE IGNORED.

Explanation: A SIT override has been entered at the console which is deemed to be a member of the set of security system initialization parameters. Security system initialization parameters cannot be entered at the console. CICS has been unable to analyze the overrides following the security keyword.

During initialization, CICS might not have access to the user's *applid* coded in the SIT. If CICS produces this message in these circumstances, it uses the default *applid* value DBDCCICS.

System action: CICS ignores the security SIT override and all subsequent overrides entered on this line. Initialization continues.

User response: Update CICS input JCL so that security keywords are included in the SIT, SYSIN or PARM prior to the next initialization of CICS.

Module: DFHPADM

Destination: Console

DFHPA1936 *applid* A VALUE WAS SPECIFIED FOR GRNAME WITH XRF=YES. GRNAME HAS BEEN RESET TO BLANKS.

Explanation: A conflict of options has been detected. You have requested generic resource support by specifying a value for the GRNAME system initialization parameter. This parameter is used to register CICS as a VTAM generic resource. However, you have also requested XRF support by specifying XRF=YES.

Generic resource support and XRF are mutually exclusive.

System action: The GRNAME value is reset to blanks. CICS attempts to continue with XRF support but without generic resource support.

User response: Before you next initialize CICS, alter the system initialization parameters so that either GRNAME is not specified or XRF=NO. See the *CICS System Definition Guide* for further information.

Module: DFHPADM

Destination: Console

DFHPA1937 *applid* **GRNAME SPECIFIED WITH SPECIFIC AND GENERIC APPLIDS. THE GENERIC APPLID HAS BEEN SET EQUAL TO THE SPECIFIC.**

Explanation: A conflict of options has been detected. You have requested generic resource support by specifying a value for the GRNAME system initialization parameter. This parameter is used to register CICS as a VTAM generic resource. However, you have also specified different values for the generic and specific applids. Generic resource support requires that only one value should be specified for the APPLID parameter.

System action: The generic applid is set to the value of the specific. CICS continues and attempts to register as a VTAM generic resource.

User response: If you intended that CICS should register as a VTAM generic resource, take no action. If you did not, remove the GRNAME parameter before you next initialize the system.

Module: DFHPADM

Destination: Console

DFHPA1938 *applid* **GRNAME AND APPLID ARE THE SAME. GRNAME RESET TO BLANKS.**

Explanation: A conflict of options has been detected. You have requested generic resource support by specifying a value for the GRNAME system initialization parameter. This parameter is used to register CICS as a VTAM generic resource. However, the value specified for GRNAME is the same as the CICS applid. VTAM requires that the generic resource name must be different from the CICS applid.

System action: The generic resource name is set to blanks. CICS will not attempt to register as a VTAM generic resource.

User response: If you intended that CICS should register as a VTAM generic resource, specify the correct GRNAME when you next initialize the system.

Module: DFHPADM

Destination: Console

DFHPA1940 *applid* **CSDINTEG=CONSISTENT AND CSDINTEG=REPEATABLE REQUIRE CSDRLS=YES. CSDINTEG HAS BEEN SET TO UNCOMMITTED.**

Explanation: Read integrity on the CICS system definition (CSD) file has been requested by specifying either CSDINTEG=CONSISTENT or CSDINTEG=REPEATABLE. However, these read integrity options are not available because the CSD has been defined to be opened in non-RLS mode. Read integrity is only available to files defined in RLS mode.

System action: CICS startup continues. The CSD is read without read integrity.

User response: Do one of the following to correct the error

- Specify CSDRLS=YES to make the CSD eligible to be opened in RLS mode.
- Remove the CSDINTEG keyword if you do not wish to open the CSD in RLS mode.

Module: DFHPADM

XMEOUT Parameter: *applid*

Destination: Console

DFHPA1941 *applid* **VTAM=NO HAS BEEN SPECIFIED BUT NO UOWNETQL PARAMETER HAS BEEN SPECIFIED. A DEFAULT UOWNETQL WILL BE USED.**

Explanation: VTAM=NO has been specified as a system initialization parameter but the UOWNETQL system initialization parameter is missing.

On a non-VTAM system, CICS requires the UOWNETQL parameter in order to construct a default qualified LUNAME to be passed to the recovery manager domain. On a VTAM system, the name is obtained at OPEN ACB time. Recovery manager uses the default qualified LUNAME when constructing unit of work (UOW) identifiers.

System action: If this is an initial start, CICS continues processing using a dummy default UOWNETQL of '9UNKNOWN'. This dummy UOWNETQL is invalid because the first character is a number. UOWNETQL is given this invalid name to highlight the problem.

If this is a cold, warm or emergency start, the name used on the previous run is restored and used.

User response: Specify a valid UOWNETQL system initialization parameter.

Module: DFHPADM

Destination: Console

DFHPA1942 *applid* CSDRLS=YES BUT RLS=NO.
CSDRLS=NO WILL BE USED.

Explanation: The system initialization parameter CSDRLS=YES has been specified but RLS=YES has not been specified. This means that if initialization were to continue with these parameter settings the open of the CSD in record level sharing (RLS) mode would fail because RLS is not available in the system.

CICS requires that if you specify CSDRLS=YES, RLS must be enabled by specifying RLS=YES.

System action: CICS continues processing but forces CSDRLS=NO.

User response: If CSDRLS is required, bring CICS up with RLS=YES.

Module: DFHPADM

Destination: Console

DFHPA1943 *applid* START=COLD OR START=INITIAL MAY NOT BE SPECIFIED WITH OFFSITE=YES. CICS IS TERMINATED.

Explanation: The system initialization override OFFSITE=YES has been specified but START=COLD or START=INITIAL has also been specified. OFFSITE=YES means that CICS is being restarted in offsite recovery mode, but recovery is not possible on a cold or initial start, so this combination of system initialization parameters is incompatible.

System action: CICS initialization is terminated.

User response: You should specify START=AUTO when restarting CICS in OFFSITE recovery mode.

If you intended to perform a cold or initial start, and specified OFFSITE=YES in error, either change the OFFSITE override to NO, or remove it and allow it to default to NO.

Module: DFHPADM

Destination: Console

DFHPA1944 *applid* CSDRECOV=ALL CANNOT BE SPECIFIED WITHOUT A CSDFRLOG IF CSDRLS=NO. CICS IS TERMINATED.

Explanation: The system initialization parameter CSDRECOV=ALL has been specified together with CSDRLS=NO, but CSDFRLOG has either not been specified, or has been specified as NO.

If the CSD is to be accessed in non-RLS mode (CSDRLS=NO) and forward recovery is specified (CSDRECOV=ALL), a forward recovery log must also be specified using the CSDFRLOG system initialization parameter.

If the CSD is to be accessed in RLS mode

(CSDRLS=YES), the recovery attributes are obtained from the VSAM catalog and CSDRECOV and CSDFRLOG are ignored. For this reason, the check for CSDFRLOG when CSDRECOV=ALL is not carried out when CSDRLS=YES.

System action: CICS initialization is terminated.

User response: You should specify CSDFRLOG=*nn* when you specify CSDRECOV=ALL together with CSDRLS=NO, where *nn* is a number between 1 and 99.

If you want to access the CSD in non-RLS mode, but also choose to specify the recovery attributes for the CSD in the VSAM catalog, the system initialization parameters relating to CSD recovery attributes are not used. However, you are still required to have a consistent set of these parameters.

Module: DFHPADM

Destination: Console

DFHPA1945 *applid sitname* MUST BE LINKEDITED WITH THE NORENT OPTION. CICS IS TERMINATED.

Explanation: The system initialization table *sitname* has been link-edited with the RENT option, which means CICS will not have write access to it.

System action: CICS initialization is terminated.

User response: You should re-link the system initialization table with the NORENT option.

Module: DFHPADM

Destination: Console

DFHPA1946 *applid* APPLID is already in use by another CICS in the sysplex. CICS is terminated.

Explanation: The specific *applid* specified in the SIT or the SIT overrides is already in use by another CICS system in the sysplex. The specific applids for different CICS systems in the sysplex must be distinct.

System action: CICS initialization is terminated.

User response: You should ensure that a unique applid is provided for each CICS system within the sysplex.

Module: DFHPADM

XMEOUT Parameter: *applid*

Destination: Console

DFHPCnnnn messages

DFHPC0401 *applid* **Abend** *abcode* issued by *yyy* task.

Explanation: A CICS task has abnormally terminated with CICS transaction abend code *abcode*. *yyy* identifies the task, for example TCP (terminal control).

A task abend has been requested for a system task. CICS is abnormally terminated with a system dump.

System action: CICS terminates abnormally with a dump.

User response: See the description of abend *abcode* for further guidance.

Module: DFHABAB

XMEOUT Parameters: *applid, abcode,yyy*

Destination: Console

DFHPC0402 *applid* **Error with kernel error code** *errorcode* has occurred while processing transaction abend *abcode* in transaction *tranid*

Explanation: A program check, abend, loop, or a second transaction abend has occurred while processing a transaction abend and CICS is unable to complete the original transaction abend.

System action: CICS processing is terminated.

User response: This is a severe error in CICS internal processing. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHABAB

XMEOUT Parameters: *applid, errorcode, abcode, tranid*

Destination: Console

DFHPC0405 *applid* **Abend** *abcode2* has been issued while processing abend *abcode1* for the same task, transaction *tranid*.

Explanation: Transaction *tranid* has abnormally terminated with abend code *abcode1*. While CICS was backing out transaction *tranid*, another abend (namely *abcode2*) occurred. CICS was unable to process the original *abcode* abend correctly.

System action: CICS is terminated with a dump.

User response: Investigate why abend *abcode1*

occurred. It may be due to an error in CICS abend handling.

Module: DFHABAB

XMEOUT Parameters: *applid, abcode2,abcode1, tranid*

Destination: Console

DFHPC0408 *applid* **Abend** *abcode* has been issued during post commit processing, transaction *tranid*.

Explanation: During post commit processing for transaction *tranid*, the transaction issued abend *abcode*. An abend during transaction post commit processing implies that a resource manager cannot syncpoint correctly, and thus that data integrity is at risk.

System action: CICS terminates abnormally with a system dump.

User response: See the description of abend *abcode* for further guidance.

Module: DFHABAB

XMEOUT Parameters: *applid, abcode,tranid*

Destination: Console

DFHPC0409 *applid* **Abends** *abcode2* and *abcode3* have been issued while processing abend *abcode1* for the same task, transaction *tranid*.

Explanation: A task has abnormally terminated with abend code *abcode1*. While processing this abend, the task abnormally terminated twice more (in CICS code) with abends *abcode2* and *abcode3* in that sequence. This may be a permanent abend loop.

System action: CICS terminates abnormally with a system dump.

User response: See the description of abend *abcode1* for further guidance. You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHABAB

XMEOUT Parameters: *applid, abcode2,abcode3, abcode1, tranid*

Destination: Console

DFHPDnnnn messages

DFHPD0101 **Pointer to** *xxxxxxx* **at offset** *X'offset'* **is invalid.**

Explanation: A pointer to a block of type *xxxxxxx*,

whose address is at offset *offset* in the block just formatted, is invalid.

System action: Dump formatting continues after

skipping any sections affected by the error.

User response: Either the pointer to the required area was corrupted, the pointer has not been initialized, or the address was valid but the area was not present in the dump. In the latter case, if the area is essential for diagnosing the problem, a fresh dump which includes the missing area has to be obtained.

It is possible that the storage is present in the dump, and the pointer has been initialized with its address, but the storage has not been referred to by CICS code. You can check this by browsing the storage in the dump at this address.

Module: DFHDUFFT, DFHDUFUT, DFHXRDUF

Destination: SYSPRINT

DFHPD0102 Pointer to xxxxxxxx at offset X'offset' is zero.

Explanation: A pointer to a block of type xxxxxxxx, whose address is at offset *offset* in the block just formatted, is zero.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: The area may have been corrupted or not set up correctly. It is also possible that the zero value is valid. This depends on the circumstances or timing of the dumps collection; for example, a zero value is valid before the block is initialized.

Module: DFHDUFFT, DFHDUFUT, DFHXRDUF

Destination: SYSPRINT

DFHPD0103 xxxxxxxx address X'address' is invalid.

Explanation: The address *address* of a block of type xxxxxxxx is invalid.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: Either the pointer to the required area was corrupted, the pointer has not been initialized, or the address was valid but the area was not present in the dump. In the latter case, if the area is essential for diagnosing the problem, a fresh dump which includes the missing area has to be obtained.

Module: DFHDUFFT, DFHDUFUT, DFHXRDUF

Destination: SYSPRINT

DFHPD0104 Address of xxxxxxxx is zero.

Explanation: The address of a block of type xxxxxxxx is zero.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: The area may have been corrupted or

not set up correctly. It is also possible that the zero value is valid. This depends on the circumstances or timing of the dumps collection; for example, a zero value is valid before the block is initialized.

Module: DFHDUFFT, DFHDUFUT, DFHXRDUF

Destination: SYSPRINT

DFHPD0105 A loop has been detected. xxxxxxxx at address X'address' already encountered.

Explanation: The formatting program avoids loops resulting from corrupted control block chains by checking for duplicate addresses. The block xxxxxxxx at address *address* has already been encountered and may already have been formatted.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: Check the chain fields in control blocks of the same type which have already been processed. Otherwise the problem may be caused by the timing of the dumps collection, if for example this occurs before the block is initialized.

Module: DFHDUFFT, DFHDUFUT

Destination: SYSPRINT

DFHPD0106 An error has occurred while formatting xxxxxxxx.

Explanation: An error has occurred during the formatting of a block of type xxxxxxxx.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: If no data has been formatted for the block then the block address was probably invalid. In this case see message DFHPD0101.

If part of the block has been successfully formatted then it is possible that the length of the control block is incorrect. The length may have been overwritten which may provide a clue to the problem.

Module: DFHDUFUT, DFHDUFFT

Destination: SYSPRINT

DFHPD0107 Eyecatcher for xxxxxxxx at X'address' is invalid.

Explanation: The eyecatcher field of a control block of type xxxxxxxx at address *address* has an incorrect value.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: Investigate why the eyecatcher has been overwritten or why the control block has not been set up correctly. For more information on how to solve

DFHPD0108 • DFHPD0115

storage overwrite problems, see the *CICS Problem Determination Guide*.

Module: DFHDUFFT, DFHDUFUT

Destination: SYSPRINT

DFHPD0108 Unable to start browse of xxxxxxxx.

Explanation: An error has occurred when attempting to start browsing a table of type xxxxxxxx.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: This error may be due to the Table Manager Program (TMP) control blocks being invalid. Check the TMP control blocks for the table in question.

Module: DFHDUFUT

Destination: SYSPRINT

DFHPD0109 Unable to get next entry in xxxxxxxx table.

Explanation: An error has occurred when attempting to access the next entry in a table of type xxxxxxxx.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: This error may be due to the Table Manager Program (TMP) control blocks being invalid. Check the TMP control blocks for the table in question.

Module: DFHDUFUT

Destination: SYSPRINT

DFHPD0110 Unable to access data for xxxxxxxx

Explanation: The Interactive Problem Control System (IPCS) service routine ADPLMEMA was unable to find the requested data for control block xxxxxxxx in the dump.

System action: Dump formatting continues after skipping any sections impacted by the lack of data.

User response: Either the pointer to the required area was corrupted, which may in itself be a clue to the problem, or the address was valid but the area was not present in the dump. In the latter case, if the area is essential for diagnosing the problem obtain a fresh dump which includes the missing area.

Module: DFHPDX1

Destination: SYSPRINT

DFHPD0111I Pointer to xxxxxxxx at offset X'offset' is zero.

Explanation: A pointer to a block of type xxxxxxxx, whose address is at offset *offset* in the block just formatted, is zero.

System action: Dump formatting continues after skipping any sections affected by the zero pointer.

User response: The message is informative, indicating that the area was zero at the time the dump was taken.

Module: DFHDUFFT, DFHDUFUT, DFHXRDUF

Destination: SYSPRINT

DFHPD0112I Address of xxxxxxxx is zero.

Explanation: The address of a block of type xxxxxxxx is zero.

System action: Dump formatting continues after skipping any sections affected by the block.

User response: The message is informative, indicating that the area did not contain an address at the time the dump was taken.

Module: DFHDUFFT, DFHDUFUT, DFHXRDUF

Destination: SYSPRINT

DFHPD0113 This block has already been processed.

Explanation: The block whose heading line has just been printed has already been formatted in this section of the dump.

System action: The block is formatted again then any sections which may be impacted by the probable control block chain loop are skipped.

User response: Check the chain fields in the control blocks processed so far. This may provide a clue to the problem.

Module: DFHPD650

Destination: SYSPRINT

DFHPD0114 Invalid keyword *keyword*

Explanation: The keyword *keyword* is not valid for the CICS650 verb.

System action: The keyword is ignored.

User response: Correct the keyword and retry.

Module: DFHPDKW

Destination: SYSPRINT

DFHPD0115 CICS job not found during ASCB scan.

Explanation: The dump formatting program searched the dump for CICS jobs satisfying the specified JOB criterion (if any), but found none.

System action: There is only a severe problem when this message is followed by message DFHPD0120.

User response: If this is a severe error, ensure that the dump is the correct one, that the JOB keyword is correctly specified, and that the dump contains the necessary MVS and CICS data areas.

Module: DFHPDX1

Destination: SYSPRINT

DFHPD0116 Cannot access the AFCB.

Explanation: The formatting program was unable to access data for the AFCB.

System action: No formatting is performed.

User response: Ensure that the dump is the correct one, and that the dump contains the necessary MVS data areas.

Module: DFHPDX1

Destination: SYSPRINT

DFHPD0117 An error has occurred while formatting xxxxxxx.

Explanation: An error has occurred during the formatting of a block of type xxxxxxx.

Either the user has performed a GETMAIN for the storage, but the storage has not been referenced. Unreferenced storage may not be present in the dump.

Or the block address is invalid,

Or the length of the control block is incorrect.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: If no data has been formatted for the block then either the storage has not been referenced, or the block address was invalid. If the block address was invalid, refer to message DFHPD0101.

If part of the block has been successfully formatted then it is possible that the length of the control block is incorrect. The length may have been overwritten which may provide a clue to the problem.

Module: DFHDUFFT, DFHDUFUT

Destination: SYSPRINT

DFHPD0118 Invalid argument for JOB=, CURRENT assumed

Explanation: The argument for the JOB operand of the CICS650 verb is invalid.

System action: The keyword is ignored.

User response: Correct the invalid argument and retry.

Module: DFHPDKW

Destination: SYSPRINT

DFHPD0119 Duplicate keyword *keyword* found. Value *value* accepted

Explanation: The CICS650 keyword *keyword* has already been encountered.

System action: The value *value* specified in the message overrides any value previously specified for keyword *keyword*. Processing continues with the new value *value*.

User response: Remove the duplicate keyword specified on the CICS650 verb.

Module: DFHPDKW

Destination: SYSPRINT

DFHPD0120 CICS IPCS exit is terminating.

Explanation: The CICS exit is terminating.

System action: The exit is returning to the Interactive Problem Control System (IPCS) without performing the requested function. A previous message gives the reason for this.

User response: To determine what action is necessary, refer to the message immediately preceding this one on the dump.

Module: DFHPDX1

Destination: SYSPRINT

DFHPD0121I Formatting control blocks for job *jobname*

Explanation: This shows the job name for the CICS system from which the dump was taken.

System action: Processing continues.

User response: None.

Module: DFHPDX1

Destination: SYSPRINT

DFHPD0122I End of dump for job *jobname*

Explanation: This marks the end of the output from the CICS print dump exit.

System action: None. The formatting job has just completed.

User response: None.

Module: DFHPDX1

Destination: SYSPRINT

DFHPD0123 A program check has occurred while processing keyword *keyword*

Explanation: A program check has occurred during processing of the keyword identified in the message.

System action: Dump formatting continues after skipping any sections affected by the error.

Note that the maximum possible number of occurrences of this message is five. If a sixth program check occurs, the dump formatting program terminates abnormally with a DFHPD650 abend code.

User response: A dump should accompany this message, but if no dump is produced, rerun the job with //DFHSNAP DD SYSOUT=A included in the JCL job stream.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHPDX1

Destination: SYSPRINT

DFHPD0124 Storage violation detected at *X'address'*. Leading SAA is invalid.

Explanation: The Storage Accounting Area (SAA) in the first eight bytes of the user storage element at address *X'address'* has been found to be invalid. However, the trailing SAA is valid.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: Investigate why the storage has been overwritten or has not been set up correctly. For more information on how to solve storage overwrite problems, refer to the *CICS Problem Determination Guide*.

Module: DFHDUFUT

Destination: SYSPRINT

DFHPD0125 Storage violation detected at *X'address'*. Trailing SAA is invalid.

Explanation: The Storage Accounting Area (SAA) in the first eight bytes of the user storage element at address *X'address'* has been found to be invalid. However, the leading SAA is valid.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: Investigate why the storage has been overwritten or has not been set up correctly. For more information on how to solve storage overwrite problems, refer to the *CICS Problem Determination Guide*.

Module: DFHDUFUT

Destination: SYSPRINT

DFHPD0126 Storage violation detected at *X'address'*. Leading and trailing SAAs are invalid.

Explanation: The Storage Accounting Areas (SAAs) in the first and last eight bytes of the user storage element at address *X'address'* are invalid.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: Investigate why the storage has been overwritten or has not been set up correctly. For more information on how to solve storage overwrite problems, refer to the *CICS Problem Determination Guide*.

Module: DFHDUFUT

Destination: SYSPRINT

DFHPD0127 Storage violation detected at *X'address'*. Leading and trailing SAAs differ.

Explanation: Although the Storage Accounting Areas (SAAs) in the first and last eight bytes of the user storage element at address *X'address'* are valid, they do not match.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: Investigate why the storage has been overwritten or has not been set up correctly. For more information on how to solve storage overwrite problems, refer to the *CICS Problem Determination Guide*.

Module: DFHDUFUT

Destination: SYSPRINT

DFHPD0128 Invalid data length *X'length'* specified for address *X'address'*.

Explanation: The offline utility DFHPD650 has detected a request for a block of data of invalid length *X'length'* while formatting a system dump.

System action: Dump formatting usually continues after skipping any sections affected by this error.

User response: This message indicates a probable error in CICS code. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHDUFUT, DFHDUFFT

Destination: SYSPRINT

DFHPD0129 CICS Domain Anchor Blocks not found for AFCB. Scan will continue.

Explanation: The dump formatter has attempted to find a CICS dump in a TCB chain but has failed. The scan will continue. This is because DFHPD650 could not find the addresses of the CICS domain anchor blocks in the kernel global storage. Possible causes for this are

- Scanning the wrong TCB on the TCB chain. The scan will continue.
- The kernel global storage being overwritten or freemained.
- The dump being taken so early on in CICS initialization that the kernel global storage has not yet been set up.

System action: There is only a severe problem when this message is followed by message DFHPD0120.

User response: If this is a severe error. Try to recreate the original error and produce a valid system dump against which the dump formatter can be rerun.

If the problem recurs, you will need further assistance from IBM. Collect the sysprint output from the dump formatter and note any relevant messages. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHPDX1

Destination: SYSPRINT

DFHPD0130 Keyword *keyword1* is no longer valid. Replace with keyword *keyword2*

Explanation: In CICS Transaction Server for z/OS, Version 3 Release 2 the keyword *keyword1* has been replaced by *keyword2* for the CICS650 verb.

For example, the keyword PCP has been replaced by PG.

System action: The keyword *keyword1* is ignored.

User response: Correct the keyword and retry.

Module: DFHPDKW

Destination: SYSPRINT

DFHPD0131 CICS job *jobname* is for CICS version *version1*. CICS IPCS exit is for CICS version *version2*.

Explanation: The CICS job *jobname* being processed by the dump formatting program was executing under CICS version *version1*, but the dump formatting program was the one distributed with CICS version *version2*.

System action: Dump formatting continues for the CICS job.

User response: Unless formatting MRO control

blocks, retry dump formatting for the CICS job using the dump formatting program for CICS version *version1*.

Module: DFHPDX1

Destination: SYSPRINT

DFHPD0133 Specified task not found.

Explanation: No transaction could be found for the task identifier specified in the taskid keyword parameter.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: Correct the invalid taskid and retry.

Module: DFHPD650

Destination: SYSPRINT

DFHPD0134 Link to module CEEERRIP has failed.

Explanation: While formatting dump data an attempt was made to link to the Language Environment IPCS Verbexit program CEEERRIP. The link failed.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: CEEERRIP is supplied on SYS1.MIGLIB. Ensure that SYS1.MIGLIB is in the concatenation for the MVS linklist or LPA.

Module: DFHPD650

Destination: SYSPRINT

DFHPD0135 Program check occurred with CEEERRIP in control.

Explanation: While formatting dump data a program check occurred in the Language Environment IPCS verbexit module CEEERRIP.

System action: Dump formatting continues after skipping any sections affected by the error.

User response: A dump should accompany this message. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHPD650

Destination: SYSPRINT

DFHPGnnnn messages

DFHPG0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHPGAI, DFHPGAQ, DFHPGDD, DFHPGDM, DFHPGEX, DFHPGHM, DFHPGIS, DFHPGLD, DFHPGLK, DFHPGLU, DFHPGPG, DFHPGRP, DFHPGST, DFHPGXM.

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*, *modname*

Destination: Console

DFHPG0002 *applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHPGAI, DFHPGAQ, DFHPGDD, DFHPGDM, DFHPGEX, DFHPGHM, DFHPGIS, DFHPGLD, DFHPGLK, DFHPGLU, DFHPGPG, DFHPGRP, DFHPGST, DFHPGXM.

XMEOUT Parameters: *applid*, *X'code'*, *modname*

Destination: Console

DFHPG0004 *applid* A possible loop has been detected at offset *X'offset'* in module *modname*.

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset *X'offset'*. This is

the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* in the message is terminated and CICS continues.

If you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you need to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHPGAI, DFHPGAQ, DFHPGDD, DFHPGDM, DFHPGEX, DFHPGHM, DFHPGIS, DFHPGLD, DFHPGLK, DFHPGLU, DFHPGPG, DFHPGRP, DFHPGST, DFHPGXM.

XMEOUT Parameters: *applid, X'offset', modname*

Destination: Console

DFHPG0101 *date time applid terminal userid tranid*
PPT entry for *progname* has been added.

Explanation: This is an audit log message indicating that program entry *progname* has been added to the PPT using the INSTALL command. Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message.

If there is no terminal associated with the transaction, the terminal name is suppressed.

- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Module: DFHPGDD

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, progname*

Destination: CSPL

DFHPG0102 *date time applid terminal userid tranid*
PPT entry for *progname* has been deleted.

Explanation: This is an audit log message indicating that program entry *progname* has been deleted from the PPT using the REMOVE command. Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Module: DFHPGDD

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, progname*

Destination: CSPL

DFHPG0103 *date time applid terminal userid tranid*
PPT entry for *progname* has been replaced.

Explanation: This is an audit log message indicating that program entry *progname* has been replaced in the PPT using the INSTALL command. Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Module: DFHPGDD

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, progname*

Destination: CSPL

DFHPG0104 *date time applid* Program *progrname* is defined with DATALOCATION(ANY) but is linkedited with AMODE(24).

Explanation: Program entry *progrname* has been loaded. It is defined (using RDO or by program autoinstall) with DATALOCATION(ANY), but was linkedited with AMODE(24). Addresses returned to the program by EXEC CICS commands using the SET option may be above the 16MB line and not accessible by the AMODE(24) program.

The definition is accepted as the program can pass the storage on to another program which is linkedited with AMODE(31). See the description of DATALOCATION in the *CICS Resource Definition Guide*.

This message is issued the first time the program is loaded, linked to or XCTLed to, after being defined.

System action: The system continues normally.

User response: None.

Module: DFHPGLD, DFHPGLE, DFHPGLK, DFHPGLU, DFHPGPG, DFHPGXE, DFHPGEX

XMEOUT Parameters: *date, time, applid, progrname*

Destination: CSPL

DFHPG0201 *date time applid terminal userid tranid* Program autoinstall exit *urmname* indicated that program *progrname* should not be added to the PPT.

Explanation: An attempt has been made to autoinstall a program during link, XCTL, load or exit processing but the autoinstall exit set a return code indicating that the program should not be installed. Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: Control is returned to the caller with an error response. For EXEC commands, EIBRESP is set to PGMIDERR and EIBRESP2 is set to indicate the cause of the error.

User response: None

Module: DFHPGAI

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, urmname, progrname*

Destination: CSPL

DFHPG0202 *date time applid terminal userid tranid* Program autoinstall exit *urmname* has abended with code *abcode*. The program autoinstall function has been disabled.

Explanation: An attempt has been made to autoinstall a program during link, XCTL, load or exit processing but the program autoinstall exit program abended with code *abcode*. Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: Control is returned to the caller with an error response. For EXEC commands, EIBRESP is set to PGMIDERR and EIBRESP2 is set to indicate the cause of the error. The autoinstall function is disabled.

User response: Continue processing without program autoinstall or correct the error in the autoinstall exit program and reenable the autoinstall function using CEMT or the SPI.

Module: DFHPGAI

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, urmname, abcode*

Destination: Console and Transient Data Queue CSPL

DFHPG0203 *date time applid terminal userid tranid* Program autoinstall exit *urmname* failed, reason *reason*. The program autoinstall function has been disabled.

Explanation: An attempt has been made to autoinstall a program during link, XCTL, load, or exit processing but the program autoinstall exit program is incorrectly defined or cannot be found on the load libraries. Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.
- *reason* is one of the following
 - Program not defined
 - Program not enabled
 - Program not loadable
 - Remote program
 - AMODE error
 - Invalid COMMAREA
 - Recursion in autoinstall exit.

System action: Control is returned to the caller with an error response. For EXEC commands, EIBRESP is

set to PGMIDERR and EIBRESP2 is set to indicate the cause of the error. The autoinstall function is disabled.

User response: Continue processing without program autoinstall or correct the problem and reenable the autoinstall function using CEMT or the SPI. Take the appropriate action to correct the problem

Program not defined

Install the autoinstall exit program.

Program not enabled

Reset the status of the autoinstall exit program.

Program not loadable

Ensure that the autoinstall exit program is in the load libraries.

Remote program

Ensure that the autoinstall exit program is defined as a local program.

AMODE error

Ensure that the autoinstall exit program is AMODE 31.

Invalid COMMAREA

Ensure that if the program autoinstall exit program passes the COMMAREA to another program, the COMMAREA is correctly passed.

Recursion in autoinstall exit

The autoinstall user-replaceable module has attempted to link to XCTL or to load another program which is not defined. Autoinstall cannot be attempted with the autoinstall exit. Ensure that the program being referred to is defined using RDO.

Module: DFHPGAI

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, urmname, reason*

Destination: Console and Transient Data Queue CSPL

DFHPG0204 *date time applid terminal userid tranid*
Autoinstall for program *progname* failed. Program autoinstall model *modelname* is not defined.

Explanation: An attempt has been made to autoinstall a program during link, XCTL, load or exit processing but the model selected for the autoinstall is not defined.

Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: Control is returned to the caller with an error response. For EXEC commands, EIBRESP is

set to PGMIDERR and EIBRESP2 is set to indicate the cause of the error.

User response: Ensure that all programs to be used as models for the autoinstall function have been defined.

Module: DFHPGAI

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, progname, modelname*

Destination: CSPL

DFHPG0205 *date time applid terminal userid tranid*
Invalid value: *value* returned by program autoinstall exit *urmname* for field *fieldname*.

Explanation: An attempt has been made to autoinstall a program during link, XCTL, load, or exit processing but the program autoinstall exit returned an invalid value for a program definition field or the return code via the commarea. Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.
- *value* is the returned value. This may be invalid or there may be a conflict between the load attribute specified and the load type of the model program. If the program type is shared, the load attribute must be resident.

System action: Control is returned to the caller with an error response. For EXEC commands, EIBRESP is set to PGMIDERR and EIBRESP2 is set to indicate the cause of the error.

User response: Ensure that the data returned by the autoinstall exit program is correct.

Module: DFHPGAI

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, value, urmname, fieldname*

Destination: CSPL

DFHPG0206 *date time applid terminal userid tranid*
Autoinstall for program *progname* failed. Programs starting with 'DFH' cannot be defined as remote programs.

Explanation: An attempt has been made to autoinstall a program during link, XCTL, load, or exit processing with remote attributes but the program starts with the characters 'DFH'. Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.

DFHPG0207 • DFHPG0210

- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: Control is returned to the caller with an error response. For EXEC commands, EIBRESP is set to PGMIDERR and EIBRESP2 is set to indicate the cause of the error.

User response: Ensure that the autoinstall model program selected for programs starting 'DFH' is defined as a local program and that no remote attributes are specified by the program autoinstall exit program.

Module: DFHPGAI

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, progname*

Destination: CSPL

DFHPG0207 *date time applid terminal userid tranid*
Autoinstall for program *progname* failed. The program name is not valid.

Explanation: An attempt has been made to autoinstall a program during link, XCTL, load or exit processing but the program name includes invalid characters. Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: Control is returned to the caller with an error response. For EXEC commands, EIBRESP is set to PGMIDERR and EIBRESP2 is set to indicate the cause of the error.

User response: Ensure that the program name is valid.

Module: DFHPGAI

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, progname*

Destination: CSPL

DFHPG0208 *date time applid terminal userid tranid*
Autoinstall for program *progname* failed.

Explanation: An attempt has been made to autoinstall a program during link, XCTL, load, or exit processing but the install of the definition failed. Either the AMODE/RMODE combination is invalid or the load attribute and type combination is invalid. Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.

- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: Control is returned to the caller with an error response. For EXEC commands, EIBRESP is set to PGMIDERR and EIBRESP2 is set to indicate the cause of the error.

User response: Ensure the AMODE and RMODE are compatible and the program attribute is specified as resident if the program type is shared.

Module: DFHPGAI

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, progname*

Destination: CSPL

DFHPG0209 *date time applid terminal userid tranid*
PPT entry for *progname* has been autoinstalled using model *modelname*.

Explanation: This is an audit log message indicating that program entry *progname* has been added to the PPT by the AUTOINSTALL function using the model *modelname*.

Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Module: DFHPGAI

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, progname, modelname*

Destination: CSPL

DFHPG0210 *date time applid terminal userid tranid*
PPT entry for *progname* has been system autoinstalled.

Explanation: This is an audit log message indicating that program entry *progname* has been added to the PPT by the system AUTOINSTALL function.

Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

Destination: Console

DFHPI0002 *applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point ID which uniquely identifies what the error is and where the error was detected. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: An exception entry (code *code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS will continue unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for

example, the domain manager, DFHDMDM). A message will be issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Inform the system programmer. This indicates a possible error in CICS code. The severity of its impact will depend on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHPIDM, DFHPIST, DFHPIWT

XMEOUT Parameters: *applid, X'code',modname*

Destination: Console

DFHPI0004 *applid* **A possible loop has been detected at offset X'offset' in module *modname*.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'offset'. This is the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it will be necessary to decide whether the problem is serious enough to bring CICS down.

This may not be an error as some CICS functions can use a lot of processor time, and this message may have been caused by a long-running function.

Usually, CICS will purge a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR parameter, which is measured in milliseconds). This means that the module

modname will be terminated and CICS will continue.

If you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway function, you should increase the ICVR time interval in the SIT. You will have to bring CICS down at a suitable time to do this permanently. You can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you need further assistance from IBM to resolve this problem.

Module: DFHPIRM

XMEOUT Parameters: *applid, X'offset', modname*

Destination: Console

DFHPI0110 *date time applid* **An attempt to start transaction CPIH by something other than an attach request from web domain has been made. This is not allowed.**

Explanation: An attempt has been made to start transaction CPIH by some method other than a transaction attach from web domain. Transaction CPIH is a system task and cannot be entered from a terminal.

System action: The CPIH transaction has not been started.

User response: Do not attempt to enter CPIH from a terminal or from any other device. CICS will start the transaction if a PIPELINE request is made via a TCP/IP attached client. No user action is required.

Module: DFHPIDSH

XMEOUT Parameters: *date, time,applid*

Destination: CPIO

DFHPI0111 *date time applid tranid* **Call to Websphere MQ function *function* returned with reason code *reason_code*. Transaction abended.**

Explanation: A Websphere MQ function call issued by transaction CPIL was unsuccessful and has set a non-zero reason code. The transaction CPIL is used to start a PIPELINE for a message received from Websphere MQ.

System action: The transaction is abended with abend code APIJ.

User response: Check the Websphere MQ reason code in the MQ Messages and Codes manual, and examine the trace to determine why the MQ function

call failed. You may need help from IBM to resolve this problem.

Module: DFHPILSQ

XMEOUT Parameters: *date, time,applid, trandid, function, reason_code*

Destination: CPIO

DFHPI0112 *date time applid trandid* **Unable to locate URIMAP to match HOST *hostname* and PATH *pathname*. Unable to process inbound MQ message.**

Explanation: A Websphere MQ message has been received on queue *hostname* and with targetService *pathname*, but no match was found when attempting to locate a URIMAP with this host and path. No pipeline processing can be done for this Websphere MQ message.

System action: The inbound message is placed on the Dead Letter Queue and a report message is sent to the ReplyTo queue.

User response: Define and install a suitable URIMAP to match this combination of host and path which will identify the PIPELINE (and optionally WEBSERVICE) to process requests using this combination of queue name and targetService.

Module: DFHPILSQ

XMEOUT Parameters: *date, time,applid, trandid, hostname, pathname*

Destination: CPIO

DFHPI0113 *date time applid trandid* **URIMAP *urimapname* has been located for HOST *hostname* and PATH *pathname*, but does not have USAGE(PIPELINE). Unable to process inbound MQ message.**

Explanation: A Websphere MQ message has been received on queue *hostname* and with targetService *pathname*, and a matching URIMAP *urimapname* was found. However, this URIMAP was not defined with USAGE(PIPELINE). Therefore, no pipeline processing can be done for this Websphere MQ message.

System action: The inbound message is placed on the Dead Letter Queue and a report message is sent to the ReplyTo queue.

User response: Define and install a suitable URIMAP to match this combination of host and path with USAGE(PIPELINE) which will identify the PIPELINE (and optionally WEBSERVICE) to process requests using this combination of queue name and targetService.

Module: DFHPILSQ

XMEOUT Parameters: *date, time,applid, trandid, urimapname, hostname, pathname*

Destination: CPIO

DFHPI0114 *date time applid trandid* **The pipeline MQ transport mechanism failed because a call to Websphere MQ function *function* returned with reason code *reason_code*.**

Explanation: A Websphere MQ function call issued by the pipeline MQ transport mechanism was unsuccessful and has set a non-zero reason code.

System action: The pipeline MQ transport mechanism returns an exception response to the pipeline manager which performs further error processing.

User response: Check the Websphere MQ reason code in the MQ Messages and Codes manual, and examine the trace to determine why the MQ function call failed. You may need help from IBM to resolve this problem.

Module: DFHPITQ1

XMEOUT Parameters: *date, time,applid, trandid, function, reason_code*

Destination: CPIO

DFHPI0115 *date time applid trandid* **The service provider pipeline has returned a response message to the MQ transport, but the inbound request did not expect a response. The response message is ignored.**

Explanation: The Websphere MQ transport module has been called by a provider pipeline to return a response. However, the inbound request did not expect a response, and was sent as a one-way request. There is no reply-to queue on which to place the response. There is probably a mismatch between the service requester and the service provider definitions of the service, as the service requester specified that the request was a one-way request.

System action: The response is ignored by the Websphere MQ transport module. The transport module returns control to the pipeline manager with no error indication, and pipeline processing will complete normally.

User response: Check the definitions of the web service in the service requester and service provider and ensure that both indicate one-way request, or both indicate a reply is expected.

Module: DFHPITQ1

XMEOUT Parameters: *date, time,applid, trandid*

Destination: CPIO

DFHPI0116 *date time applid* A one-way request has been received as a Websphere MQ persistent message, but the provider pipeline has abended or backed out changes to recoverable resources. The BTS process *processname* of *processtype* *processtype* has completed with status ABENDED and this process can be retried or used to provide information for reporting the failure.

Explanation: A one way SOAP message has been received as a persistent Websphere MQ message, but the provider pipeline has abended or forced a backout of changes to recoverable resources. As there is no reply to queue, there is no way of informing the requester of the failure. A BTS process *processname* in completion state ABENDED contains information about the original Websphere MQ message, and this process and its containers can be used to retry the failing provider pipeline, or to report the failure appropriately.

System action: CICS has kept the information necessary to retry the failing provider pipeline in the named process. CICS takes no further action for the process.

User response: A user written transaction can ACQUIRE the process named in the message and take appropriate installation defined action. This could include one or more of the following.

- Retry the failing process by issuing RESET ACQPROCESS followed by RUN ACQPROCESS ASYNC. Of course, the process could fail again in exactly the same way, and so an installation might wish to limit the number of retries. This can be done by using a container to contain a retry count, which would be incremented on each attempt, and taking a different action when the count exceeds an installation defined threshold.
- Recover information about the original Websphere MQ message received and record this on an installation defined log file. There are a number of containers associated with the process, DFHMQRORIGINALMSG contains the message as received from Websphere MQ, DFHMQMSG contains the inbound message with RFH2 header removed, that is, the SOAP message. DFHMQCONT contains the MQMD control block with data relating to the MQGET that was issued by CICS pipeline processing Websphere MQ transport. After recovering any necessary information for reporting or logging the failure, the process can be cancelled (CANCEL ACQPROCESS).

Module: DFHPIDSQ

XMEOUT Parameters: *date, time, applid, processname, processtype*

Destination: CPIO

DFHPI0117 *date time applid* BTS Process *processname* of *processtype* *processtype*, which has completed with status ABENDED, has been cancelled. A provider pipeline started with a persistent Websphere MQ message has abended or backed out, but a response has been sent to the requester.

Explanation: A provider pipeline was started by a persistent Websphere MQ message, and so a BTS process was created to ensure the information was not lost on a system failure. The provider pipeline abended or backed out changes to recoverable resources, and the BTS process completed with status ABENDED. As a response message has been returned to the requester (a Websphere MQ message on the reply-to queue) the requester will be aware of the failure and can take appropriate action. The BTS process in the provider system has been cancelled as there is no longer any need to retain it. An earlier message DFHBA0104 reported the ABENDED state of the process.

System action: CICS cancels the process that had completed with status ABENDED. All the data associated with the process is removed.

User response: None. This is an informative message, indicating that the process which completed with status ABENDED has been cancelled. CICS has sent a response to the requester indicating the failure.

Module: DFHPIDSQ

XMEOUT Parameters: *date, time, applid, processname, processtype*

Destination: CPIO

DFHPI0118 *applid* CICS has attempted to use BTS processes to support pipelines started with Websphere MQ persistent messages. This attempt failed. CICS will continue, using channel based containers for the pipeline, but there is a risk of data loss in the event of a system failure. Ensure that BTS *processtype*, repository and local request queue are correctly defined and installed.

Explanation: A persistent Websphere MQ message has been received to start a CICS provider pipeline, and CICS has attempted to create a BTS process to reliably hold the message data until the provider pipeline completes. However an error occurred when attempting to create the BTS process. CICS will continue processing persistent Websphere MQ messages to start provider pipelines, using channel based containers, but there is a risk that data from the persistent message may be lost in the event of a system failure.

System action: CICS continues to process inbound

Websphere MQ persistent messages to drive provider pipelines, but in the event of a system failure, data originating in the persistent messages may be lost. This message is issued once on the first occurrence of a failure to create a BTS process. It is not issued for every occurrence of such a failure.

User response: Check that the steps stated in the section "Configuring your CICS system for Web Services" in the *CICS Web Services Guide*.

Module: DFHPILSQ

XMEOUT Parameter: *applid*

Destination: Console

DFHPI0300 *date time applid* **CICS could not invoke WEBSERVICE *WebService* because it was unable to find container *container_name*.**

Explanation: The WEBSERVICE *WebService* could not be invoked because the container *container_name* was not found. An exception response from the program which gets the container was received.

System action: An exception response will be returned to the exec interface module which requested the INVOKE WEBSERVICE.

User response: None.

Module: DFHPIIW

XMEOUT Parameters: *date, time, applid, WebService, container_name*

Destination: CPIO

DFHPI0301 *date time applid* **CICS was unable to link to PROGRAM *program_name* while attempting to invoke WEBSERVICE *WebService*. {The program abended. | The program was not defined. | The program was not enabled. | The program was not loadable. | No further details are available.}**

Explanation: CICS was attempting to perform an INVOKE WEBSERVICE command for *webservice WebService* but was unable to link to the given program *program_name*, or the linked program *program_name* abended.

System action: The link is abandoned and the INVOKE WEBSERVICE command returns appropriate EIBRESP and EIBRESP2 codes to the application program. Error processing will continue.

User response: Ensure that the program definition for *program_name* is correct. Correct the problem identified in the message. If the message reports no further information is available then trace can be referred to.

Module: DFHPIIW

XMEOUT Parameters: *date, time, applid, program_name, WebService, {1=The program abended., 2=The program was not defined., 3=The program was not enabled., 4=The program was not loadable., 5=No further details are available.}*

Destination: CPIO

DFHPI0400 *date time applid tranid* **The CICS pipeline HTTP transport mechanism failed to send a request because {the request was using an invalid host codepage | there was a socket error | the URL was invalid | the connection was closed | a socket request timed out | a proxy error was detected | there was an HTTP error | an invalid media type was used | there was an authorization problem | there was a problem with the client certificate | there was a URIMAP problem | SSL is not supported in CICS | there was a error with exit XWBAUTH | the URIMAP is disabled}.**

Explanation: The CICS pipeline HTTP transport mechanism was unable to successfully handle the outbound request because of one of the following reasons:

- The transport mechanism encountered a socket error.
- The connection that the request was trying to use was closed.
- A socket request timed out.
- A write request failed because an invalid codepage was used.
- The URL being parsed was invalid because an invalid escape character was encountered on the URI specified as input.
- There was a problem communicating with the HTTP proxy.
- There was an HTTP protocol error.
- An invalid media type was encountered.
- The current user is not authorized to submit the request.
- There was a problem with the client SSL certificate.
- The URIMAP that was used cannot be found or is invalid.
- SSL has not been enabled for CICS.
- There was a problem with global user exit XWBAUTH.
- The URIMAP that was used is disabled.

System action: The request is not sent. Error processing will continue.

User response: Depending on the error indicated in the message, ensure the host codepage you are using is correct or check for any socket errors indicated by examining any exception trace entries issued from sockets (SO) domain, or check that the URI specified as

input does not contain any invalid characters or null delimiters, or check the XWBAUTH user global exit program for problems handling this request.

Module: DFHPITH

XMEOUT Parameters: *date, time, applid, tranid, {1=the request was using an invalid host codepage, 2=there was a socket error, 3=the URL was invalid, 4=the connection was closed, 5=a socket request timed out, 6=a proxy error was detected, 7=there was an HTTP error, 8=an invalid media type was used, 9=there was an authorization problem, 10=there was a problem with the client certificate, 11=there was a URIMAP problem, 12=SSL is not supported in CICS, 13=there was a error with exit XWBAUTH, 14=the URIMAP is disabled}*

Destination: CPIO

DFHPI0401 *date time applid tranid* **The CICS pipeline HTTP transport mechanism failed to send a response or receive a request because** *{the codepage was not found | there was a socket error | the connection was closed | the client codepage was invalid}*.

Explanation: The CICS pipeline HTTP transport mechanism was unable to successfully handle the inbound request due to one of four reasons as indicated in the message. For instance, the transport may be unable to send a response due to the connection being closed or a sockets error. Also, the error could be caused by the request specifying a codepage which was either invalid or not found.

System action: The response is not sent. Error processing will continue.

User response: Depending on the error indicated in the message, ensure that the codepage you are using is correct, the connection being used is open, or check for any socket errors indicated by examining any exception trace entries issued from sockets (SO) domain.

Module: DFHPITH

XMEOUT Parameters: *date, time, applid, tranid, {1=the codepage was not found, 2=there was a socket error, 3=the connection was closed, 4=the client codepage was invalid}*

Destination: CPIO

DFHPI0402 *date time applid tranid* **The CICS pipeline HTTP transport mechanism failed to send a request because the URI specified an unknown host:** *hostname.*

Explanation: The CICS pipeline HTTP transport mechanism was unable to successfully handle the outbound request because the host *hostname* from the URI is unknown.

System action: The request is not sent. Error processing will continue.

User response: Ensure that the URI specifies a host which is known and available.

Module: DFHPITH

XMEOUT Parameters: *date, time, applid, tranid, hostname*

Destination: CPIO

DFHPI0403 *date time applid tranid* **The CICS pipeline HTTP transport mechanism failed to receive a response because** *{the socket receive was timed out | the task was purged}*.

Explanation: The CICS pipeline HTTP transport mechanism did not successfully receive a response to the outbound request due to the reason indicated in the message:

- | • The socket receive was timed out.
- | • The task was purged.

System action: The request is abandoned. Error processing will continue.

User response: For a timeout error, investigate why the remote server failed to respond in a timely manner. Consider changing the RESPWAIT value for the pipeline which processes these web service requests. For a task purged error, use the transaction dump from the AEXY abend to establish why the task was purged.

Module: DFHPITH

XMEOUT Parameters: *date, time, applid, tranid, {1=the socket receive was timed out, 2=the task was purged}*

Destination: CPIO

DFHPI0500 *date time applid tranid* **The CICS Pipeline Manager DFHPIPM encountered an error while trying to link to program** *program_name. {The program abended. | The program was not defined. | The program was not loadable. | No further details are available.}* **PIPELINE:** *pipeline.*

Explanation: The CICS Pipeline Manager, DFHPIPM, was unable to link to the given program, or the linked program abended.

System action: The link is abandoned. Error processing will continue.

User response: Ensure that the program definition is correct. Correct the problem identified in the message. If the message reports no further information is available then trace can be referred to.

Module: DFHPIPM

XMEOUT Parameters: *date, time, applid, tranid, program_name, {1=The program abended., 2=The program was not defined., 3=The program was not enabled., 4=The program was not loadable., 5=No further details are available.}, pipeline*

Destination: CPIO

DFHPI0501 *date time applid tranid* **The CICS Pipeline Manager cannot proceed as the pipeline is unusable.** *{The pipeline was not found. | The pipeline is disabled. | The pipeline was of the wrong type.}*
PIPELINE: *pipeline.*

Explanation: The CICS Pipeline Manager DFHPIPM was unable to begin processing as the pipeline it has been invoked for is unusable. If the message indicates that the pipeline is of the wrong type then this means that a Requester pipeline was used where a Provider pipeline was expected or a Provider pipeline was used in place of a Requester one.

System action: In the requester case the transaction is abended with abend code APIB. In the provider case the transaction is abended with abend code API1.

User response: Correct the problem identified in the message.

Module: DFHPIPM

XMEOUT Parameters: *date, time, applid, tranid, {1=The pipeline was not found., 2=The pipeline is disabled., 3=The pipeline was of the wrong type.}, pipeline*

Destination: CPIO

DFHPI0502 *date time applid tranid* **The CICS Pipeline Manager has failed to receive a request from the underlying transport.**
TRANSPORT *transport, PIPELINE:* *pipeline.*

Explanation: The CICS Pipeline Manager DFHPIPM was unable to receive a request from the underlying transport. This is due to a error in that transport.

System action: The transaction is abended with abend code API2.

User response: Check the previous messages issued by the transport to identify the cause of the problem.

Module: DFHPIPM

XMEOUT Parameters: *date, time, applid, tranid, transport, pipeline*

Destination: CPIO

DFHPI0503 *date time applid tranid* **The CICS Pipeline Manager has failed to send a response on the underlying transport.**
TRANSPORT *transport, PIPELINE:* *pipeline.*

Explanation: The CICS Pipeline Manager DFHPIPM was unable to send a response on the underlying transport. This is due to a previous error in that transport.

System action: The request is abandoned. Error processing continues.

User response: Check the previous messages issued by the transport to identify the cause of the problem.

Module: DFHPIPM

XMEOUT Parameters: *date, time, applid, tranid, transport, pipeline*

Destination: CPIO

DFHPI0504 *date time applid tranid* **The CICS Pipeline Manager has failed to communicate with a remote server due to an error in the underlying transport.**
TRANSPORT: *transport, PIPELINE* *pipeline.*

Explanation: The CICS Pipeline Manager DFHPIPM failed to communicate with a remote server due to an error in the underlying transport.

System action: The request is abandoned. Error processing continues.

User response: Check the previous messages issued by the transport to identify the cause of the problem.

Module: DFHPIPM

XMEOUT Parameters: *date, time, applid, tranid, transport, pipeline*

Destination: CPIO

DFHPI0505 *date time applid tranid* **The CICS Pipeline Manager has failed to communicate with a remote server as no URI was provided.**
PIPELINE: *pipeline.*

Explanation: The CICS Pipeline Manager DFHPIPM failed to communicate with a remote server as no URI was provided. Before CICS can make and a request to a remote server it must be provided with a URI identifying that server. This URI must either be provided in the container 'DFHWS-URI' or in the Pipeline configuration file.

System action: An exception trace entry is written. Error processing continues.

User response: Correct either the application logic or the configuration file so that the URI is provided.

Module: DFHPIPM

XMEOUT Parameters: *date, time, applid, tranid, pipeline*

Destination: CPIO

DFHPI0506 *date time applid tranid* **The CICS Pipeline Manager has failed to communicate with a remote server due to an invalid URI scheme being specified. URI: *uri*, PIPELINE: *pipeline*.**

Explanation: The CICS Pipeline Manager DFHPIPM failed to communicate with a remote server as a URI with an invalid scheme was provided. Before CICS can make and a request to a remote server it must be provided with a URI identifying that server.

System action: An exception trace entry is written. Error processing continues.

User response: Correct either the application logic or the configuration file so that a URI with a supported scheme is provided.

Module: DFHPIPM

XMEOUT Parameters: *date, time, applid, tranid, uri, pipeline*

Destination: CPIO

DFHPI0507 *date time applid tranid* **The CICS Pipeline Manager has failed to receive a response from an application handling task.**{The request timed out. | The application task abended. | The connection to the application task was closed.} **PIPELINE** *pipeline*.

Explanation: The CICS Pipeline Manager DFHPIPM was unable to receive a response from an application task. A separate task was used for the application handler as a context switch was required. The message indicates the reason the response was not received.

System action: The request will be treated as failed and error processing will continue.

User response: Check the message logs for the region in which the application task was running to determine the detailed cause of the problem.

Module: DFHPIPM

XMEOUT Parameters: *date, time, applid, tranid, {1=The request timed out., 2=The application task abended., 3=The connection to the application task was closed.}, pipeline*

Destination: CPIO

DFHPI0508E *date time applid* **The pipeline manager is unable to create or join a request stream because it is unable to reach the target for transaction *tranid* with userid *userid*.**

Explanation: The CICS pipeline manager attempted to create or join a request stream for transaction *tranid*. The transaction specifies a REMOTESYSTEM which cannot be contacted. This might be because IRC is not open or the target system is unavailable.

System action: The SOAP Handler attempting to create this request stream will create a SOAP server fault to return to the client. Error processing continues.

User response: Determine the remote system name from the *tranid* definition. Ensure that IRC is open and the IRC connection named is in service.

Module: DFHPIPM

XMEOUT Parameters: *date, time, applid, tranid, userid*

Destination: CPIO

DFHPI0509E *date time applid* **The pipeline manager is unable to create or join a request stream because transaction *tranid* is not installed.**

Explanation: The CICS pipeline manager attempted to create or join a request stream for transaction *tranid* which is not installed.

System action: The SOAP Handler that attempted to create the request stream will create a SOAP server fault to return to the client. Error processing continues.

User response: Add an RDO definition for *tranid* with a program name of DFHPIAP.

Module: DFHPIPM

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CPIO

DFHPI0510E *date time applid* **The pipeline manager is unable to create or join a request stream because it has encountered a severe error for transaction *tranid* with userid *userid*.**

Explanation: The CICS pipeline manager attempted to create or join a request stream for transaction *tranid*. CICS encountered a severe error.

System action: A system dump is taken. The SOAP Handler attempting to create this request stream will create a SOAP server fault to return to the client. Error processing continues.

User response: None

Module: DFHPIPM

XMEOUT Parameters: *date, time, applid, tranid, userid*

Destination: CPIO

DFHPI0511 *date time applid tranid* **The CICS Pipeline Manager has failed to receive a response from the target Secure Token Service *sts_uri*. The response message failed to parse.**

Explanation: The CICS pipeline manager trust handler, DFHPITC, was unable to parse a response from the security token service identified.

System action: A fault is created and the pipeline returns it to the requester.

User response: Check the CICS trace and the secure token service logs to identify the cause of the XML error.

Module: DFHPITC

XMEOUT Parameters: *date, time, applid, tranid, sts_uri*

Destination: CPIO

DFHPI0512 *date time applid tranid* **The CICS Pipeline Manager has received a fault from the target Secure Token Service: *sts_uri*. The fault had a fault code of *fault_code*.**

Explanation: The CICS pipeline manager trust handler, DFHPITC, received a fault message from the security token service identified. This may indicate a problem with the secure token service.

System action: A fault is created and the pipeline returns it to the requester.

User response: Check the CICS trace and the secure token service logs to identify the cause of the fault and correct it if necessary.

Module: DFHPITC

XMEOUT Parameters: *date, time, applid, tranid, sts_uri, fault_code*

Destination: CPIO

DFHPI0513 *date time applid tranid* **The CICS Pipeline Manager has failed to find the required credentials in a response from the Secure Token Service: *sts_uri*.**

Explanation: The CICS pipeline manager trust handler, DFHPITC, failed to find the required credentials in a response from the secure token service identified. This is commonly caused by a token, other than a UsernameToken, being returned when a UsernameToken was expected.

System action: A fault is created and the pipeline returns it to the requester.

User response: Check the CICS trace and the secure token service logs to identify the cause of the error.

Module: DFHPITC

XMEOUT Parameters: *date, time, applid, tranid, sts_uri*

Destination: CPIO

DFHPI0514 *date time applid tranid* **The CICS Pipeline Manager has failed to find the required credentials in a request. An element *local_name*, in namespace: *namespace*, was expected.**

Explanation: The CICS pipeline manager trust handler, DFHPITC, failed to find the required credentials in a request, when it was expecting a specific type of identity token. This is commonly due to the expected token type not being present in the message, but may be caused by a configuration error in the security handler.

System action: A fault is created and the pipeline returns it to the requester.

User response: Check the CICS trace and the security handler configuration to determine the cause of the error.

Module: DFHPITC

XMEOUT Parameters: *date, time, applid, tranid, local_name, namespace*

Destination: CPIO

DFHPI0600 *date time applid* **The CICS SOAP handler has been passed a container that is not DATATYPE(CHAR).**

Explanation: The CICS soap handler DFHPISN was unable to convert the container to UTF-8 as the container does not have a datatype of CHAR.

System action: The soap handler is unable to process the input and returns a SOAP fault to the client/sender.

User response: Ensure that the DFHREQUEST and DFHWS-BODY containers use the DATATYPE(CHAR) option on the EXEC CICS PUT CONTAINER call.

Module: DFHPISN

XMEOUT Parameters: *date, time, applid*

Destination: CPIO

DFHPI0601 *date time applid* **The CICS SOAP handler has been passed data that does not begin with a '<' character.**

Explanation: The CICS soap handler DFHPISN has detected that the data in container DFHWS-BODY passed to it does not begin with a '<' character.

System action: The soap handler attempts to continue processing using the contents of the DFHWS-BODY container.

User response: If the contents of the DFHWS-BODY container is not expected to begin with a '<' character

DFHPI0602 • DFHPI0704I

no further action is required. If the contents of the DFHWS-BODY container is expected to begin with a '<' character then check the data being put into it is correct and that the fromccsid parameter is set correctly.

Module: DFHPISN

XMEOUT Parameters: *date, time,applid*

Destination: CPIO

DFHPI0602 *date time applid* **The CICS SOAP handler failed to parse a message. The parser error code is *errcode*. The DFHPIEP return code is *retcode*. The error was found at offset *offset* into the message.**

Explanation: The CICS SOAP handler, DFHPISN, has failed to parse a message.

System action: The SOAP handler stops processing the SOAP message and creates a SOAP fault to return to the requester.

User response: Look up the parser error code *errcode* in the Enterprise PL/I Programming Guide to determine the type of parsing failure. If the parser error code is 0, the XML is valid but the SOAP is not. Use the offset *offset* into the SOAP message to determine the precise location of the failure.

XMEOUT Parameters: *date, time,applid, errcode, retcode, offset*

DFHPI0700S *date time applid userid PIPELINE pipeline* **failed to install completely because PL/I support is not available and is required for pipeline usage.**

Explanation: The final stage of the installation of PIPELINE *pipeline* has failed because PL/I support is not available in this region. PL/I language support is a pre-requisite for using pipelines.

System action: The PIPELINE is disabled, but CICS continues normally.

User response: Add PL/I language support to your region and restart CICS. For instructions on how to do this, see *z/OS V1R4.0 Language Environment Customization*.

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline*

Destination: CPIO

DFHPI0701I *date time applid userid PIPELINE pipeline* **has been created.**

Explanation: The Pipeline *pipeline* has been created. It now needs to undergo resolution processing. The CPIR transaction is attached automatically to do this.

Once resolution is complete, the pipeline will become available for use.

System action: CICS continues normally.

User response: None.

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline*

Destination: CPIO

DFHPI0702E *date time applid userid PIPELINE pipeline* **encountered an error in the configuration file *filename* for pipeline at offset *X'offset'*. The element name is *elementname*.**

Explanation: During the pipeline resolution process, the configuration file is parsed and control blocks are built. During this process, an error was encountered. The error is at the offset indicated and starts with the element name shown.

System action: The pipeline is set to a DISABLED state and normal processing continues.

User response: Correct the configuration file. Ensure that the corrected file has been validated before discarding the pipeline (*pipeline*) and then re-installing it.

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline, filename, X'offset', elementname*

Destination: CPIO

DFHPI0703I *date time applid userid PIPELINE pipeline* **is about to scan the WSDIR directory.**

Explanation: A scan is about to begin for pipeline *pipeline*. This will cause a WebService to be created for each of any wsbind files found in the directory specified in the WSDIR parameter of the pipeline.

System action: The system continues normally.

User response: None.

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline*

Destination: CPIO

DFHPI0704I *date time applid userid PIPELINE pipeline* **Implicit scan has completed. Number of wsbind files found in the WSDIR directory: *num_files*. Number of successful WEBSERVICE creates: *num_ok*. Number of failed WEBSERVICE creates: *num_failed*.**

Explanation: The scan for pipeline *pipeline* has

completed. The number of wsbind files found in the directory specified for this pipeline by the WSDIR parameter is reported by *num_files*. The number that successfully created WebService resources is reported by *num_ok* and the number that failed WebService creation is reported by *num_failed*.

System action: CICS continues normally.

User response: If *num_failed* is non-zero, look for previous messages that may describe the errors. PI domain trace entries will also have been written to aid in diagnosing the problem(s).

Module: DFHPIPL

XMEOUT Parameters: *date, time, applid, userid, pipeline, num_files, num_ok, num_failed*

Destination: CPIO

DFHPI0705E *date time applid userid PIPELINE pipeline* encountered an error writing the configuration to the derived shelf. The response code from the HFS write was *X'uss-response'* and the reason code was *X'uss-reason'*.

Explanation: While doing an HFS write for pipeline *pipeline*, a bad response code was received. The HFS filename is *hfs_file*. The response code was *hfs_rs* and the reason code was *hfs_rc*.

System action: The pipeline is disabled and CICS continues normally.

User response: See the *z/OS UNIX System Services Messages and Codes* manual for the specified response and reason codes.

Module: DFHPIPL

XMEOUT Parameters: *date, time, applid, userid, pipeline, derived-shelf, X'uss-response', X'uss-reason'*

Destination: CPIO

DFHPI0706E *date time applid userid PIPELINE pipeline* resolution failed because it cannot be determined if this is a requester or provider pipeline.

Explanation: After the pipeline has been created, it undergoes the resolution process in a separate transaction. CICS has been unable to determine if the pipeline is a requester or a provider. The first element name must be *requester_pipeline* or *provider_pipeline*.

System action: The pipeline is set to a DISABLED state and CICS continues normally.

User response: Correct the configuration file. Pipeline *pipeline_name* must be discarded and then re-installed.

Module: DFHPIPL

XMEOUT Parameters: *date, time, applid, userid, pipeline*

Destination: CPIO

DFHPI0707E *date time applid userid PIPELINE pipeline* resolution failed because namespace prefixes are not supported in the XML configuration file.

Explanation: An XML element was discovered that had a namespace prefix specified. This is not supported.

System action: The pipeline is set to a DISABLED state and CICS continues normally.

User response: Correct the configuration file. Pipeline *pipeline_name* must be discarded and then re-installed.

Module: DFHPIPL

XMEOUT Parameters: *date, time, applid, userid, pipeline*

Destination: CPIO

DFHPI0708E *date time applid userid PIPELINE pipeline* resolution failed because the XML configuration file cannot be found.

Explanation: After the pipeline has been created, it undergoes the resolution process in a separate transaction. This transaction has been unable to find the file specified in the *cfgfile* parameter of the resource definition, or in the EXEC CICS CREATE PIPELINE command.

System action: The pipeline is set to a DISABLED state.

User response: Ensure that the HFS filename is being specified correctly. A fully-qualified name must be used. Usual HFS restrictions, such as case-sensitivity and access rights, apply to the filename.

Module: DFHPIPL

XMEOUT Parameters: *date, time, applid, userid, pipeline*

Destination: CPIO

DFHPI0709E *date time applid userid PIPELINE pipeline* resolution failed because the XML configuration file cannot be copied to the derived shelf.

Explanation: After the pipeline has been created, it undergoes the resolution process in a separate transaction. Part of this transaction is to copy the XML configuration file to the derived shelf. The derived shelf is the shelf name with */<applid>/PIPELINE/<pipeline>/* appended to it.

System action: The pipeline is set to a DISABLED state.

User response: Determine the reason for this failure and correct it, before discarding and then re-installing the pipeline.

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline*

Destination: CPIO

DFHPI0710I *date time applid userid PIPELINE pipeline*
was successfully discarded.

Explanation: The PIPELINE was successfully discarded and is no longer available for use.

System action: Processing continues.

User response: None.

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline*

Destination: CPIO

DFHPI0711E *date time applid userid PIPELINE pipeline*
resolution failed because the SAX
parser returned error code *X'errcode'*.
The error was at offset *X'offset'* in the
CONFIGFILE. The first eight bytes of
data at this offset are: *'hexdata'*.

Explanation: After the pipeline has been created, it undergoes the resolution process in a separate transaction. This transaction invokes a SAX parser. The parser has detected an error (*errcode*) at offset *offset* into the CONFIGFILE, as specified in RDO or in the EXEC CICS CREATE PIPELINE command. The first eight bytes of data (*hexdata*) are printed in hexadecimal to aid problem resolution.

System action: The pipeline is set to a DISABLED state and CICS continues normally.

User response: Refer to *Enterprise PL/I for z/OS Programming Guide* for the terminating exception code *errcode*. Correct the configuration file. Pipeline *pipeline_name* must be discarded and then re-installed.

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline, X'errcode', X'offset', hexdata*

Destination: CPIO

DFHPI0712E *date time applid userid PIPELINE pipeline*
failed to install due to insufficient
access rights to a HFS file.

Explanation: A NOTAUTH condition was raised when an attempt to read the configuration file (CONFIGFILE) for this pipeline was made.

System action: The pipeline is disabled and CICS continues normally.

User response: Correct the access for the userid or ensure the correct userid is used for the installation of this pipeline.

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline*

Destination: CPIO

DFHPI0713E *date time applid userid PIPELINE*
pipelinename The pipeline resolution
transaction CPIR did not attach.

Explanation: After the pipeline has been created, it undergoes the resolution process in a separate transaction. However, this transaction was not successfully attached. The pipeline is not installed.

System action: Processing continues.

User response: Examine the exception trace entry that shows the cause of the attachment error. Ensure that the CPIR transaction is defined and installed on your CICS system and that the program DFHPIITL is also defined and available.

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipelinename*

Destination: CPIO

DFHPI0714E *date time applid userid PIPELINE pipeline*
failed to install. The directory specified
in the WSDIR p arameter is invalid.

Explanation: The HFS directory specified in the WSDIR parameter is invalid.

System action: The pipeline is NOT installed. CICS continues normally.

User response: Inspect the data specified and ensure that it is correct. Remember that case is important in specifying any HFS filename. Once correct, re-install the pipeline.

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline*

Destination: CPIO

DFHPI0715I *date time applid userid PIPELINE pipeline explicit scan has completed. Number of wsbind files found in the WSDIR directory: num_files. Number of WEBSERVICES created or updated: num_ok. Number of WEBSERVICES not requiring an update: num_nun. Number of failed WEBSERVICE creates or updates: num_failed.*

Explanation: The explicit scan for pipeline *pipeline* has completed. The number of wsbind files found in the directory specified for this pipeline by the WSDIR parameter is reported by *num_files*. The number that successfully created or updated WebService resources is reported by *num_ok*, the number that did not require any update is reported by *num_nun* and the number that failed WebService creation is reported by *num_failed*.

System action: CICS continues normally.

User response: If *num_failed* is non-zero, look for previous messages that may describe the errors. PI domain trace entries will also have been written to aid in diagnosing the problem(s).

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline, num_files, num_ok, num_nun, num_failed*

Destination: CPIO

DFHPI0716E *date time applid userid Unable to dynamically create a WEBSERVICE for PIPELINE pipeline. The complete WSBIND file name is too long.*

Explanation: An attempt was made to dynamically create a webservice using the name of a wsbind file found in the WSDIR directory. The fully-qualified filename is longer than the maximum 255 characters.

System action: The webservice is NOT created. CICS continues normally.

User response: Use a shorter value for the WSDIR directory. The pipeline will need to be discarded and re-installed once the WSDIR parameter has been altered and any wsbind files either copied or re-generated to this new directory.

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline*

Destination: CPIO

DFHPI0720E *date time applid userid PIPELINE pipeline encountered an error in the configuration file filename at offset X'offset'. Found : element_found yet expected : {<service> | <transport> or <service> | a transport handler list |<service_handler_list> or <terminal_handler> | <handler> | <program> | <handler_parameter_list> | <name> | <cics_soap_1.1_handler> | <cics_soap_1.2_handler> |<header_program> | <service> | <service_handler_list> | <default_target> or a default handler list | <program_name> | <namespace> | <localname> | <mandatory> | true, false, 1 or 0 | <terminal_handler> | <service_parameter_list> |<service>, <transport> or <service_parameter_list> |/}.*

Explanation: During the pipeline resolution process, the configuration file is parsed and control blocks are built. During this process, an error was encountered. The error was at offset *offset*. *element_found* was found when *element_expected* was expected.

System action: The pipeline is set to a DISABLED state and normal processing continues.

User response: Correct the configuration file. Ensure that the corrected file has been validated before discarding the pipeline (*pipeline*) and then re-installing it.

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline, filename, X'offset', element_found, {1=<service>, 2=<transport> or <service>, 3=a transport handler list, 4=<service_handler_list> or <terminal_handler>, 5=<handler>, 6=<program>, 7=<handler_parameter_list>, 8=<name>, 9=<cics_soap_1.1_handler>, 10=<cics_soap_1.2_handler>, 11=<header_program>, 12=<service>, 13=<service_handler_list>, 14=<default_target> or a default handler list, 15=<program_name>, 16=<namespace>, 17=<localname>, 18=<mandatory>, 19=true, false, 1 or 0, 20=<terminal_handler>, 21=<service_parameter_list>, 22=<service>, <transport> or <service_parameter_list>, 23=/}*

Destination: CPIO

DFHPI0721E *date time applid userid PIPELINE pipeline encountered an error in the configuration file filename for pipeline at offset X'offset'. The value attribvalue for attribute attribname is not valid.*

Explanation: During the pipeline resolution process, the configuration file is parsed and control blocks are built. During this process, an error was encountered.

DFHPI0722E • DFHPI0725E

The error is at the offset indicated. The named attribute was encountered with a value which is not allowed.

System action: The pipeline is set to a DISABLED state and normal processing continues.

User response: Correct the configuration file. Ensure that the corrected file is validated before discarding the pipeline (*pipeline*) and re-installing it. The schema can be checked to find the valid values.

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline, filename, X'offset', attribvalue, attribname*

Destination: CPIO

DFHPI0722E *date time applid userid PIPELINE pipeline* encountered an error in the configuration file *filename* for the pipeline. The WSSE_Handler configuration has values specified for mode and trust that are not valid in this pipeline.

Explanation: During the pipeline resolution process, the configuration file is parsed and control blocks are built. During this process, an error was encountered. The combination of values specified for the mode and trust attribute are not allowed for this pipeline. The allowed combinations are different for Provider and Requester pipelines.

System action: The pipeline is set to a DISABLED state and normal processing continues.

User response: Correct the configuration file. Ensure that the corrected file is validated before discarding the pipeline (*pipeline*) and re-installing it.

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline, filename*

Destination: CPIO

DFHPI0723E *date time applid userid PIPELINE pipeline* encountered an error in the configuration file *filename* for the pipeline. The value for the algorithm specified for the *element* is not supported.

Explanation: During the pipeline resolution process, the configuration file is parsed and control blocks are built. During this process, an error was encountered. The algorithm URI specified is not supported by CICS.

System action: The pipeline is set to a DISABLED state and normal processing continues.

User response: Correct the configuration file. Ensure that the corrected file is validated before discarding the pipeline (*pipeline*) and re-installing it. Check the

documentation for supported algorithms.

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline, filename, element*

Destination: CPIO

DFHPI0724E *date time applid userid PIPELINE pipeline* encountered an error in the configuration file *filename* for the pipeline. The WSSE_Handler configuration has both <authentication> and <sts_authentication> elements specified. You must only specify one of these elements.

Explanation: During the pipeline resolution process, the configuration file is parsed and control blocks are built. During this process, an error was encountered. It is an error to specify both <authentication> and <sts_authentication> elements.

System action: The pipeline is set to a DISABLED state and normal processing continues.

User response: Correct the configuration file. Ensure that the corrected file is validated before discarding the pipeline (*pipeline*) and re-installing it.

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline, filename*

Destination: CPIO

DFHPI0725E *date time applid userid PIPELINE pipeline* encountered an error in the configuration file *filename* for the pipeline. The element *element* must be specified.

Explanation: During the pipeline resolution process, the configuration file is parsed and control blocks are built. During this process, an error was encountered. Based on your current configuration values, CICS has determined that the indicated element is not present.

System action: The pipeline is set to a DISABLED state and normal processing continues.

User response: Correct the configuration file. Ensure that the corrected file is validated before discarding the pipeline (*pipeline*) and re-installing it. Check the documentation for supported algorithms.

Module: DFHPIPL

XMEOUT Parameters: *date, time,applid, userid, pipeline, filename, element*

Destination: CPIO

DFHPI0726E *date time applid userid* **PIPELINE** *pipeline*
encountered an error in the configuration file *filename* for the pipeline. The element *element* is a duplicate or unrecognized element.

Explanation: During the pipeline resolution process, the configuration file is parsed and control blocks are built. During this process, an error was encountered. Based on your current configuration values, CICS has determined that the indicated element is either a duplicate of an existing element, or, it is an unrecognized element.

System action: The pipeline is set to a DISABLED state and normal processing continues.

User response: Correct the configuration file. Ensure that the corrected file is validated before discarding the pipeline (*pipeline*) and re-installing it. Check the documentation for supported elements.

Module: DFHPIPL

XMEOUT Parameters: *date, time, applid, userid, pipeline, filename, element*

Destination: CPIO

DFHPI0730 *date time applid* **An attempt to register a remote Web service as a participant in unit of work - *X'uwowid'* has failed.**

Explanation: An error has been encountered while attempting to register a remote webservice as a participant in an atomic transaction, under the coordination of a local unit of work.

System action: The local unit of work, is not updated with a link for the remote webservice and a registration response is not sent to the remote webservice's registration end point. The remote webservice then times out and backs out any recoverable updates it has made.

User response: The problem may be the result of the coordinating unit of work timing out before the registration message is delivered to the region where it ran. If this is the case then consider extending the coordinating transaction's DTIMOUT value if set, or the coordinating region's FTIMOUT setting if DTIMOUT is set to NO. If the problem persists then you need further assistance from IBM to resolve this problem.

Module: DFHPIRS

XMEOUT Parameters: *date, time, applid, X'uwowid'*

Destination: Console and Transient Data Queue CPIO

DFHPI0731 *date time applid* **An attempt to register unit of work - *X'uwowid'* with a remote WSAT coordinating transaction has failed.**

Explanation: An error has been encountered while attempting to register a local webservice as a participant in an atomic transaction, under the coordination of a remote unit of recovery.

System action: The local unit of work is not updated with a link for the remote coordinating transaction, and the local webservice is not invoked. Instead a SOAP fault is returned to the coordinating transaction.

User response: The problem may be the result of a configuration error for one of the pipeline resources that the local region uses. The DFHWSATR pipeline is used to send the registration request and the DFHWSATP pipeline is used to receive a registration response. If either of these are not installed, disabled or incorrectly configured then the message processing that they are intended for may not take place. Alternatively, the error may be caused by the participant transaction timing out before a registration response is received. This interval is controlled by the value of the wscor:Expires element in the coordination context that resulted in the registration attempt. Consider extending this time to allow registration to complete successfully. If the problem persists then you need further assistance from IBM to resolve this problem.

Module: XMEOUT **Parameters:** *date, time, applid, X'uwowid'*

Destination: Console and Transient Data Queue CPIO

| **DFHPI0732** *date time applid* **A request to roll back unit of work - *X'uwowid'* has been received from a remote WS-AT coordinating transaction.**

| **Explanation:** During processing of an atomic transaction the remote WS-AT coordinating task has requested that CICS rolls back the specified unit of work.

| **System action:** The specified unit of work will be rolled back.

| **User response:** None.

| **Module:** DFHPIRS

| **XMEOUT Parameters:** *date, time, applid, X'uwowid'*

| **Destination:** CPIO

| **DFHPI0733** *date time applid* **A transaction timed out while waiting for a prepare message from a remote WS-AT coordinator. The unit of work - *X'uwowid'* will be rolled back.**

| **Explanation:** A CICS transaction waiting for a Prepare message from a remote WS-AT coordinator has timed out.

| **System action:** The specified unit of work will be rolled back.

| **User response:** None
 | **Module:** DFHPIPM
 | **XMEOUT Parameters:** *date, time, applid, X'uwoid'*
 | **Destination:** CPIO

DFHPI0800E *date time applid userid* **Atomic Transaction processing failed because the SAX parser returned error code X'errcode'. The error was at offset X'offset' in the SOAP message.**

Explanation: During processing for an Atomic Transaction, the SOAP message is parsed by a SAX parser. The parser has detected an error (*errcode*) at offset *offset* into the message. The first eight bytes of data (*hexdata*) are printed to aid problem resolution.

System action: The transaction abends.

User response: Obtain trace entries (level 2 for the PI domain is required) and pass these onto your IBM service representative.

You will need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHPIAT

XMEOUT Parameters: *date, time, applid, userid, X'errcode', X'offset'*

Destination: CPIO

DFHPI0801I E *date time applid* **A one way message has been found in an atomic transaction message exchange for transaction *tran*.**

Explanation: The Web service atomic transactions header handler in the pipeline has detected that a one way message flow has been sent as part of the atomic transaction message flows. This is not permitted.

System action: The Web service atomic transactions handler has issued a trace and abended with an APIR abend. A SOAP fault message has also been sent to the client to indicate that CICS has detected an error.

User response: The error is in the client that sent an invalid atomic transactions message to CICS. If you have control over the client system, investigate why it is attempting to use one way messages as part of the atomic transaction.

Module: DFHWSATH

XMEOUT Parameters: *date, time, applid, tran*

Destination: CPIO

DFHPI0901I *date time applid userid* **New WEBSERVICE *WebService* is being created during a scan against PIPELINE *Pipeline*.**

Explanation: A new WSBIND file has been discovered on HFS during a scan. A corresponding CICS WEBSERVICE resource is being automatically created to represent it.

System action: None.

User response: None.

Module: DFHPISC

XMEOUT Parameters: *date, time, applid, userid, WebService, Pipeline*

Destination: CPIO

DFHPI0902I *date time applid userid* **WEBSERVICE *WebService* is being updated during a scan against PIPELINE *Pipeline*.**

Explanation: An update has been detected for a WEBSERVICE resource. CICS compares the last modification time of the WSBIND file on HFS with the last modification time stored in the WEBSERVICE resource definition. If the WSBIND file on HFS is newer than the currently installed resource, the WEBSERVICE resource is updated. This process involves discarding the existing definition and installing a new one.

System action: If there is 'inflight' activity outstanding for this WEBSERVICE then the update will complete after that workload has ended.

User response: None.

Module: DFHPISC

XMEOUT Parameters: *date, time, applid, userid, WebService, Pipeline*

Destination: CPIO

DFHPI0903I *date time applid userid* **New URIMAP *UriMap* is being created during a scan against PIPELINE *Pipeline* for WEBSERVICE *WebService*.**

Explanation: A new URIMAP resource is being installed during a scan of a PIPELINE.

System action: None.

User response: None.

Module: DFHPISC

XMEOUT Parameters: *date, time, applid, userid, UriMap, Pipeline, WebService*

Destination: CPIO

DFHPI0904I *date time applid userid* **URIMAP UriMap could not be created for WEBSERVICE WebService in PIPELINE Pipeline. The URI that could not be allocated is: 'Uri'.**

Explanation: An attempt to automatically create a URIMAP for a scanned WEBSERVICE failed. This is probably because the URI specified in the wsbind file is already in use by another URIMAP.

System action: None.

User response: None.

Module: DFHPISC

XMEOUT Parameters: *date, time, applid, userid, UriMap, WebService, Pipeline, Uri*

Destination: CPIO

DFHPI0910I *date time applid userid* **WEBSERVICE WebService within PIPELINE Pipeline has been created.**

Explanation: A WEBSERVICE has been created and is now in the INITING state. It is not available for use until it has reached INSERVICE state.

System action: Processing continues. The WEBSERVICE will complete installation shortly.

User response: None.

Module: DFHPIWR

XMEOUT Parameters: *date, time, applid, userid, WebService, Pipeline*

Destination: CPIO

DFHPI0911E *date time applid userid* **WEBSERVICE WebService within PIPELINE Pipeline was not created because: {there is insufficient storage | there is a directory domain error | the specified PIPELINE is not installed | a lock cannot be obtained | there is a duplicate resource error}.**

Explanation: WEBSERVICE WebService was not created. This error may be caused if the specified PIPELINE is not installed.

System action: The WEBSERVICE is not created.

User response: Ensure that the specified PIPELINE resource is installed and try again.

Destination

CPIO

Module: DFHPIWR

XMEOUT Parameters: *date, time, applid, userid, WebService, Pipeline, {1=there is insufficient storage, 2=there is a directory domain error, 3=the specified*

PIPELINE is not installed, 4=a lock cannot be obtained, 5=there is a duplicate resource error}

Destination: CPIO

DFHPI0912I *date time applid userid* **WEBSERVICE WebService was successfully discarded.**

Explanation: The WEBSERVICE was successfully discarded and is no longer available for use.

System action: Processing continues.

User response: None.

Module: DFHPIWR

XMEOUT Parameters: *date, time, applid, userid, WebService*

Destination: CPIO

DFHPI0913I *date time applid userid* **WEBSERVICE WebService is being discarded.**

Explanation: A discard of a WEBSERVICE has been started but cannot complete at this time as 'inflight' work is outstanding.

System action: The WEBSERVICE discard will complete when the 'inflight' activity has ended.

User response: None.

Module: DFHPIWR

XMEOUT Parameters: *date, time, applid, userid, WebService*

Destination: CPIO

DFHPI0914E *date time applid userid* **WEBSERVICE WebService is UNUSABLE because: {the WSBind file was not found | CICS is not authorized to read the WSBind file | there is insufficient storage to load the WSBind file | the HFS read for the WSBind file failed | writing the WSBind file to the shelf failed | the PIPELINE is incompatible with this WEBSERVICE | the CPIR resolution transaction could not be attached | the direction of the PIPELINE can't be determined | the WSBind file is corrupt | the WSBind file has an invalid version number | the WSBind file has an out of date version number | the WSBind file product number was not recognised | the PIPELINE is not a SOAP PIPELINE | the PIPELINE does not support SOAP version 1.2 | the PIPELINE is not configured for SOAP version 1.1}.**

Explanation: The WEBSERVICE failed to complete initialization.

System action: The WEBSERVICE has been put into the UNUSABLE state.

User response: Check that the CICS region id has permission to write to the PIPELINE resource's shelf directory structure. Check that the WSBInd file exists and that CICS has read permission for it. Check that the WSDL file, if specified, exists and that CICS has read permission for it.

Check that the PIPELINE resource into which the WEBSERVICE is being installed is enabled and valid. Ensure that the correct definitions exist in the CICS CSD for the Language Environment version currently in use.

Consider how the WSBInd file has been produced. It must be recognized as a valid WSBInd file. If it is transferred between systems then this must be done in binary mode in order to avoid corruption of the file.

If there is a version error reported then regenerate the WSBInd file using the correct version of the Web services assistants.

Check that if the WEBSERVICE represents an application in CICS that is going to implement a WebService then the PIPELINE is also configured in provider mode. Conversely, if the WEBSERVICE represents a WebService running on a remote server then the PIPELINE is configured in requester mode. Check that the PIPELINE has been installed without errors.

A provider mode WEBSERVICE is one for which a PROGRAM has been specified. A requester mode WEBSERVICE is one for which no PROGRAM has been specified. The PROGRAM name (if needed) must be specified at the time that the WSBInd file is generated.

Discard and reinstall the WEBSERVICE.

If the problem persists you may need to use the trace facility to determine the cause of the problem.

Module: DFHPIWR

XMEOUT Parameters: *date, time, applid, userid, WebService, {1=the WSBInd file was not found, 2=CICS is not authorized to read the WSBInd file, 3=there is insufficient storage to load the WSBInd file, 4=the HFS read for the WSBInd file failed, 5=writing the WSBInd file to the shelf failed, 6=the PIPELINE is incompatible with this WEBSERVICE, 7=the CPIR resolution transaction could not be attached, 8=the direction of the PIPELINE can't be determined, 9=the WSBInd file is corrupt, 10=the WSBInd file has an invalid version number, 11=the WSBInd file has an out of date version number, 12=the WSBInd file product number was not recognised, 13=the PIPELINE is not a SOAP PIPELINE, 14=the PIPELINE does not support SOAP version 1.2, 15=the PIPELINE is not configured for SOAP version 1.1}*

Destination: CPIO

DFHPI0915I *date time applid userid* **WEBSERVICE**
WebService is now INSERVICE and is ready for use.

Explanation: The WEBSERVICE has completed initialization and is ready for use.

System action: Processing continues.

User response: None.

Module: DFHPIWR

XMEOUT Parameters: *date, time, applid, userid, WebService*

Destination: CPIO

DFHPI0916E *date time applid userid* **WEBSERVICE**
WebService within PIPELINE Pipeline
was not created because it clashes
with another WEBSERVICE of the
same name in PIPELINE Pipeline.

Explanation: WEBSERVICE *WebService* was not created. This error was caused by a name clash with an existing WEBSERVICE that is already installed. The clash can occur if the same wsbind file is installed in two different PIPELINES or if a wsbind file matches another wsbind file with a sufficiently similar name from any PIPELINE.

System action: The WEBSERVICE is not CREATED, the PIPELINE SCAN processing continues.

User response: Rename the wsbind file and retry the operation.

Module: DFHPISC

XMEOUT Parameters: *date, time, applid, userid, WebService, Pipeline, Pipeline*

Destination: CPIO

DFHPI0917 W *date time applid userid* **WEBSERVICE**
webservice might perform
unpredictably as the PIPELINE pipeline
is non-SOAP.

Explanation: The WEBSERVICE has been installed into a non-SOAP PIPELINE and might not work as expected.

System action: Processing continues.

User response: Examine the PIPELINE definition to determine if SOAP support has been correctly configured.

Module: DFHPIWR

XMEOUT Parameters: *date, time, applid, userid, WebService, Pipeline.*

Destination: CPIO

DFHPI0995 *date time applid tranid* **The CICS pipeline manager has encountered a problem with file DFHPIDIR:** {The file was not found | the file key length was too small | the file record size was too small | the file is full | the file control record is full | file recovery mode was not backout | there was an internal error | file failed to open or connect}.

Explanation: The pipeline manager encountered a problem attempting to open file DFHPIDIR. This might be due to one of the following:

- The file might not exist.
- The file definition might not have been installed.
- The file key length is too small.
- The file record length is too small.
- The file is full.
- The file control record is full.
- The file recovery mode was not specified as backout.
- The file could not be connected to or opened.
- An internal error occurred.

System action: Processing is terminated. A SOAP fault is returned to the client.

User response: Examine the trace to determine why the pipeline manager failed.

Destination

CPIO

Module: **XMEOUT parameters:** *date, time, applid, tranid, {1=the file was not found, 2=the file key length was too small, 3=the file record size was too small, 4=the file is full, 5=the file control record is full, 6=file recovery mode was not backout, 7=there was an internal error, 8=file failed to open or connect}*

Destination: CPIO

DFHPI0996 *date time applid* **The Outbound Router program, DFHPIRT, has received a non-NORMAL response while attempting to read a container. The resulting error code is X'code' and the container name is container_name.**

Explanation: The outbound router program, DFHPIRT, was unable to successfully operate as a trust client as it was unable to read a required container. A non-NORMAL response was returned from the EXEC CICS GET CONTAINER call. If the *code* was '099D'X a CONTAINERERR was returned. The *code* '099E'X indicates that a LENGERR was returned.

System action: The program abends.

User response: Ensure that the named container has been created and populated correctly before linking to the outbound router program.

Module: DFHPIRT

XMEOUT Parameters: *date, time, applid, X'code', container_name*

Destination: CPIO

DFHPI0997 *date time applid tranid pipeline* **The CICS pipeline manager has encountered an error:** {PIPELINE not found | PIPELINE not active | PIPELINE mode mismatch | unhandled node failure | context switch failed | request stream creation failure | request stream transport error | target program unavailable | channel error | channel not found | URI not found | invalid URI | authorization failure | program abend | unidentified problem | timeout occurred | no request message | there was a problem with file PIDIR | attempt to register a WS-AT context twice}.

Explanation: The Pipeline Manager encountered a problem whilst attempting to process a message. This can be due to one of the following;

- A configuration error or an unexpected event.
- An exceeded timeout.
- An abandoned connection attempt due to an exceeded DTIMEOUT. This causes message DFHPI0400 to be issued.
- An exceeded RESPWAIT timeout while waiting for a response.

System action: None.

User response: Examine the trace to determine why the Pipeline Manager failed.

Destination

CPIO

Module: DFHPIPM

XMEOUT Parameters: *date, time, applid, tranid, pipeline, {1=PIPELINE not found, 2=PIPELINE not active, 3=PIPELINE mode mismatch, 4=unhandled node failure, 5=context switch failed, 6=request stream creation failure, 7=request stream transport error, 8=target program unavailable, 9=channel error, 10=channel not found, 11=URI not found, 12=invalid URI, 13=authorization failure, 14=program abend, 15=unidentified problem, 16=timeout occurred, 17=no request message, 18=there was a problem with file PIDIR, 19=attempt to register a WS-AT context twice}*

Destination: CPIO

DFHPI0998 *date time applid* **The Outbound Router program, DFHPIRT, has received a non-NORMAL response while attempting to get the pipeline name from the DFHWS-PIPELINE container. The resulting error code is X'code'.**

Explanation: The Outbound Router program, DFHPIRT, was unable to successfully start the pipeline as it was unable to obtain the pipeline name from the DFHWS-PIPELINE container. A non-NORMAL response was returned from the EXEC CICS GET CONTAINER call. If the *code* was '099D'X then a CONTAINERERR was returned. The *code* '099E'X indicates that a LENGERR was returned.

System action: The program abends with an APIC abend.

User response: Examine the trace to determine why the Outbound Router failed. Ensure that the DFHWS-PIPELINE container has been created correctly before linking to the Outbound Router program, DFHPIRT, and that the pipeline name placed in this container is not larger than eight characters.

Module: DFHPIRT

XMEOUT Parameters: *date, time, applid, X'code'*

Destination: CPIO

DFHPI1000 *date time applid* **The Outbound Router program, DFHPIRT, has detected an invalid URI in the DFHWS-STSACTION container. The URI was 'uri'.**

Explanation: The outbound router program, DFHPIRT, was unable to successfully operate as a trust client. It was unable to recognize the URI contained in the DFHWS-STSACTION container.

System action: The program abends.

User response: Ensure that the DFHWS-STSACTION container has been created and populated correctly before linking to the outbound router program.

Module: DFHPIRT

XMEOUT Parameters: *date, time, applid, uri*

Destination: CPIO

DFHPI1001 *date time applid* **Validation of a {request / response} message for WEBSERVICE webservicename and operation operationname failed. The failure response contains the following message: 'message'.**

Explanation: Validation was requested for operation *operationname* of WEBSERVICE *webservicename*. The validation has been attempted and failed. Either the incoming SOAP message does not match the WSDL

specified or there was a problem reading the WSDL.

System action: None.

User response: Consider the detailed *message*. It will indicate the nature of the problem. Usually this will include a message from the XML parser used to do the validation and will indicate a rule that has been broken by the SOAP message. If the problem is with a SOAP message sent to CICS then change the partner system to correct the SOAP message. If the problem is with a SOAP message generated by CICS then determine if the problem can be fixed by changing the CICS application. If the problem is caused by CICS then contact your IBM support representative for further assistance.

If the *message* indicates that the WSDL document cannot be found then this may be because the WEBSERVICE resource does not indicate the 'Wsdfile' to use. The WSDL document must be specified when the WEBSERVICE resource is created. If you use the PIPELINE scan mechanism to create WEBSERVICE resources then you should ensure that a copy of the WSDL is included in the PIPELINE's 'Wmdir' directory along with the WSBind file.

Module: DFHPITL, DFHPIIW

XMEOUT Parameters: *date, time, applid, {1=request, 2=response}, webservicename, operationname, message*

Destination: CPIO

DFHPI1002 *date time applid* **Validation of a {request / response} message for WEBSERVICE webservicename and operation operationname was successful.**

Explanation: Validation was requested for a particular operation, *operationname*, for webservice *webservicename*. The validation has been performed successfully.

System action: None.

User response: None.

Module: DFHPITL, DFHPIIW

XMEOUT Parameters: *date, time, applid, {1=request, 2=response}, webservicename, operationname*

Destination: CPIO

DFHPI1003 *date time applid* **No current channel located. Validation cannot occur.**

Explanation: Validation was requested for a particular operation. This requires that a channel exists with containers present. No current channel could be found. Validation cannot occur in this situation.

System action: Validation is not attempted. The application program is invoked as though validation had not been requested.

User response: None.

Module: DFHPITL

XMEOUT Parameters: *date, time, applid*

Destination: CPIO

DFHPI1004 *date time applid* **The attempt to link to DFHPIVAL to perform validation failed.**

Explanation: Validation was requested for a particular operation. This requires linking to program DFHPIVAL. The link to the program failed. Validation cannot occur without this program.

System action: Validation is not attempted. Processing continues. The application program is invoked as though validation had not been requested.

User response: Ensure that the CSD in use has the definition for DFHPIVAL included.

Module: DFHPITL, DFHPIIW

XMEOUT Parameters: *date, time, applid*

Destination: CPIO

DFHPI1005 *date time applid* **Attempt to link to program *prognam* failed. SOAP conversions cannot be performed. Module *modname***

Explanation: SOAP conversion to a format suitable for a CICS application failed. The link to a vendor supplied program *prognam* failed. The webservice cannot be used without this program.

System action: The attempt to use the webservice is aborted. A soap fault is returned to the client. If the failure occurs during an INVOKE WEBSERVICE API command, i.e. the issuing module for this message is DFHPIIW, appropriate EIBRESP and EIBRESP2 codes are returned to the application program.

User response: Ensure that the WEBSERVICE definition refers to the correct WSBIND file and that the vendor program *prognam* required is available to CICS.

Module: DFHPITL, DFHPIIW

XMEOUT Parameters: *date, time, applid, prognam, modname*

Destination: CPIO

DFHPI1006 *date time applid* **The WSBIND file used for WEBSERVICE *WebService* is not a type which CICS can use. Module *modname***

Explanation: The product which produced the WSBIND file is not one which CICS knows how to handle. As such, it is not possible to invoke the webservice *WebService*.

System action: The attempt to use the webservice is aborted. A soap fault is returned to the client. If the failure occurs during an INVOKE WEBSERVICE API command, i.e. the issuing module for this message is DFHPIIW, appropriate EIBRESP and EIBRESP2 codes are returned to the application program.

User response: Ensure that the WEBSERVICE definition for *WebService* refers to the correct WSBIND file and that the file has been properly produced.

Module: DFHPITL, DFHPIIW

XMEOUT Parameters: *date, time, applid, WebService, modname*

Destination: CPIO

DFHPI1007 *date time applid tranum* **XML to data transformation failed because of incorrect input (*{XML_FORMAT_ERROR | UNEXPECTED_CONTENT | HEADER_FORMAT_ERROR | UNDEFINED_ELEMENT | UNDEFINED_NAME_SPACE | ARRAY_OVERFLOW | NAME_TOO_LONG | PREFIX_TOO_LONG | NAME_SPACE_TOO_LONG | UNEXPECTED_XOP_INCLUDE | XOP_INCLUDE_ERROR | DUPLICATE_CHOICE | MISSING_XSI_TYPE | UNKNOWN_XSI_TYPE}* *error_qualifier*).**

Explanation: CICS has failed to convert some XML data into application data. This XML may be the body of a SOAP message received from a partner process. The reason for the failure is due to a problem with the content of the XML. The XML is either not well formed, invalid with respect to the XML schema or does not conform to one of the internal constraints of the CICS XML transformation service. An *error_qualifier* may be provided to help identify the source of the problem. In some cases the *error_qualifier* will be empty.

The possible error codes and qualifiers associated with this message are

XML_FORMAT_ERROR

The XML is not well formed. See the trace for further details.

UNEXPECTED_CONTENT

Character data has been found between two XML tags at a place where such text was not expected.

HEADER_FORMAT_ERROR

There is a problem reading the namespace attributes from the XML namespaces container.

UNDEFINED_ELEMENT *element_name*

The XML includes an unexpected XML tag.

UNDEFINED_NAME_SPACE *name_space*

The XML includes an XML namespace prefix that has not been defined.

DFHPI1008

ARRAY_OVERFLOW array_name

Too many instances of an array or list of tags has been found in the XML.

NAME_TOO_LONG

An XML tag name longer than 255 characters has been found.

PREFIX_TOO_LONG

An XML namespace prefix longer than 255 characters has been found.

NAME_SPACE_TOO_LONG

An XML namespace name longer than 255 characters has been found.

UNEXPECTED_XOP_INCLUDE

An xop:include element should only appear in place of the data for a base64binary field, but was found in some other context.

XOP_INCLUDE_ERROR

An xop:include element was found in a valid context, but the referenced attachment could not be found.

DUPLICATE_CHOICE element_name

A second entry has been found from a mutually exclusive group of options. Only the first option that was found was expected.

MISSING_XSI_TYPE element_name

An xsi:type attribute was expected for the XML tag but could not be found.

UNKNOWN_XSI_TYPE type_name

An xsi:type attribute was found for a data-type that is not supported. Data-types are only supported if they were present in the original XML schema.

System action: The XML conversion process halts.

If CICS is acting as a Web service provider then the task is terminated with an APIG abend. If CICS is a Web service requester then a response code of INVREQ is returned to the caller of the INVOKE WEBSERVICE API with a resp2 code of 14.

An exception entry is written to the trace table.

User response: Examine the exception trace entry for further information. Consider using the WEBSERVICE validation option to test a SOAP message for validity with respect to the XML schema.

XML is case sensitive. Ensure that the XML element, attribute and namespace names used within the XML are correct with respect to the schemas that describe the XML.

Correct or change the partner process to ensure that the XML sent to CICS is appropriate to be consumed by CICS.

If a SOAP message is changed by a handler program as part of the CICS PIPELINE processing then ensure that the handler has not introduced this problem.

Module: DFHPICC

XMEOUT Parameters: *date, time, applid, trannum*, {1=*XML_FORMAT_ERROR*,

2=UNEXPECTED_CONTENT,
3=HEADER_FORMAT_ERROR,
4=UNDEFINED_ELEMENT,
5=UNDEFINED_NAME_SPACE,
6=ARRAY_OVERFLOW, *7=NAME_TOO_LONG*,
8=PREFIX_TOO_LONG,
9=NAME_SPACE_TOO_LONG,
10=UNEXPECTED_XOP_INCLUDE,
11=XOP_INCLUDE_ERROR,
12=DUPLICATE_CHOICE, *13=MISSING_XSI_TYPE*,
14=UNKNOWN_XSI_TYPE}, *error_qualifier*

Destination: CPIO

DFHPI1008 *date time applid trannum* **XML generation failed because of incorrect input**

{*ARRAY_CONTAINER_TOO_SMALL* |
INPUT_STRUCTURE_TOO_SMALL |
INPUT_ARRAY_TOO_LARGE |
INPUT_ARRAY_TOO_SMALL |
CONTAINER_NOT_FOUND |
CONTAINER_NOT_BIT |
CONTAINER_NOT_CHAR |
BAD_CHOICE_ENUM} *error_qualifier*).

Explanation: CICS has failed to generate XML due to a problem with the data received from the CICS application. An *error_qualifier* may be provided to help identify the source of the problem. In some cases the *error_qualifier* will be empty.

The possible error codes and qualifiers associated with this message are

ARRAY_CONTAINER_TOO_SMALL array_name

A CICS container does not hold sufficient data given the number of instances of the data expected and the length of one instance of the data.

INPUT_STRUCTURE_TOO_SMALL

The container passed to CICS does not hold sufficient data given the length of the language structure.

INPUT_ARRAY_TOO_LARGE array_name

Too many instances of a structure have been supplied in a container given the maximum value specified in the XML schema.

INPUT_ARRAY_TOO_SMALL array_name

Too few instances of a structure have been supplied in a container given the minimum value specified in the XML schema.

CONTAINER_NOT_FOUND container_name

A container named in the input structure cannot be found.

CONTAINER_NOT_BIT container_name

A container named in the input structure exists but is of the wrong type. The container must be created in BIT mode rather than CHAR mode.

CONTAINER_NOT_CHAR container_name

A container named in the input structure exists but is of the wrong type. The container must be created in CHAR mode rather than BIT mode.

BAD_CHOICE_ENUM enum_name

An enumerated value in the input structure has been set to an invalid value.

System action: The XML conversion process halts.

If CICS is acting as a Web service provider then the task is terminated with an APIG abend. If CICS is a Web service requester then a response code of INVREQ is returned to the caller of the INVOKE WEBSERVICE API with, in most cases, a resp2 code of 14.

An exception entry is written to the trace table.

User response: Examine the exception trace entry for further information.

Correct the CICS application to ensure that the data presented to CICS is appropriate to be converted into XML.

Module: DFHPIII

XMEOUT Parameters: *date, time, applid, trannum,*
{1=ARRAY_CONTAINER_TOO_SMALL,
2=INPUT_STRUCTURE_TOO_SMALL,
3=INPUT_ARRAY_TOO_LARGE,
4=INPUT_ARRAY_TOO_SMALL,
5=CONTAINER_NOT_FOUND,
6=CONTAINER_NOT_BIT,
7=CONTAINER_NOT_CHAR,
8=BAD_CHOICE_ENUM}, error_qualifier

Destination: CPIO

DFHPI1009 *date time applid trannum SOAP message processing failed. A conversion error* (*{UNKNOWN_CONVERSION | INPUT_TOO_LONG | OUTPUT_OVERFLOW | NEGATIVE_UNSIGNED | NO_FRACTION_DIGITS | FRACTION_TOO_LONG | INVALID_CHARACTER | ODD_HEX_DIGITS | INVALID_BASE64 | NOT_PURE_DBCS | INVALID_FIELD_SIZE | EXPONENT_OVERFLOW | EXPONENT_UNDERFLOW}*) **occurred when converting field** *fieldname.*

Explanation: CICS has failed to convert the body of a SOAP message received from a partner process. The reason for the failure is due to a problem converting a value from the SOAP message.

The possible error codes associated with this message are

INPUT_TOO_LONG

The value of an XML tag that was declared as numeric contains more than 31 digits.

OUTPUT_OVERFLOW

An XML tag contains a value that is too long to fit in the associated field of the commarea, or

an XML tag contains a numeric value which is outside the permitted range for the associated field in the commarea.

NEGATIVE_UNSIGNED

A negative number has been found in an XML tag that was declared as unsigned.

NO_FRACTION_DIGITS

An XML tag contains a number which contains a decimal point but is not followed by any valid fractional digits.

FRACTION_TOO_LONG

An XML tag contains a number with more non-zero fractional digits than the WSDL allows.

INVALID_CHARACTER

An XML tag contains a character that is inconsistent with the declared type of that tag. For example, a tag declared as hexBinary contains a value that is not in the range 0-9 + a-f + A-F.

ODD_HEX_DIGITS

An XML tag that was declared as hexBinary contains an odd number of hexadecimal characters.

INVALID_BASE64

An XML tag that was declared as base64Binary contains a value that is not consistent with the base64 encoding.

NOT_PURE_DBCS

An XML tag that maps to a pure DBCS language structure field contains a value that cannot be represented in pure DBCS.

INVALID_FIELD_SIZE

A floating point type with an unsupported precision level has been discovered.

EXPONENT_OVERFLOW

An overflow condition has been encountered whilst transforming a floating point value.

EXPONENT_UNDERFLOW

An underflow condition has been encountered whilst transforming a floating point value.

UNKNOWN_CONVERSION

An unrecognized conversion type has been requested.

System action: The XML conversion process halts.

If CICS is acting as the Web service provider a SOAP fault is created and returned to the client. If CICS is the Web service requester then a response code of INVREQ is returned to the caller of the INVOKE WEBSERVICE API with a resp2 code of 14.

Explanation: CICS has failed to generate the body of a SOAP message using application supplied data. The reason for the failure is due to a problem converting a value from the application data.

The possible error codes associated with this message are

NEGATIVE_UNSIGNED

A negative number has been found in the application data that was declared as unsigned.

INVALID_CHARACTER

An XML tag contains a character that is inconsistent with the declared type of that tag. For example, a tag declared as hexBinary contains a value that is not in the range 0-9 + a-f + A-F.

INVALID_PACKED_DEC

A packed decimal field in the application data contains an illegal value that can't be converted to XML.

INVALID_ZONED_DEC

A zoned decimal field in the application data contains an illegal value that can't be converted to XML.

INCOMPLETE_DBCS

A DBCS sequence in the application data is missing a shift in (SI) character.

ODD_DBCS_BYTES

A DBCS sequence in the application data is an odd number of bytes in length.

INVALID_FIELD_SIZE

A floating point type with an unsupported precision level has been discovered.

EXPONENT_OVERFLOW

An overflow condition has been encountered whilst transforming a floating point value.

EXPONENT_UNDERFLOW

An underflow condition has been encountered whilst transforming a floating point value.

UNKNOWN_CONVERSION

An unrecognized conversion type has been requested.

System action: The XML conversion process halts.

Destination: CPIO

DFHPI1100E *date time applid userid* **PIPELINE pipeline encountered an error while processing an inbound MIME message. The problem with the MIME message is:** *{it contained an invalid character / it had an invalid header / it had an invalid MIME header / it had a boundary error / it did not contain a root part / it used an unsupported encoding / it caused an unexpected response}*.

Explanation: During HTTP processing of an inbound MIME request, CICS detected an error in the format or content of the MIME message. Possible reasons for this could be

- It contained an invalid character
- It had an invalid header
- It had an invalid MIME header
- It had a boundary error
- It did not contain a root part

- It used an unsupported encoding
- It caused an unexpected response

The specific cause of the error is indicated in the message.

System action: The PIPELINE returns in error. For a provider PIPELINE the HTTP connection is closed. An exception trace point is issued with the details of the error.

User response: Check the trace for details of the MIME error. This error will need to be corrected in the MIME generation of the sender.

Module: DFHPITH

XMEOUT Parameters: *date, time,applid, userid, pipeline, {1=it contained an invalid character, 2=it had an invalid header, 3=it had an invalid MIME header, 4=it had a boundary error, 5=it did not contain a root part, 6=it used an unsupported encoding, 7=it caused an unexpected response}*

Destination: CPIO

DFHPI1101E *date time applid userid PIPELINE pipeline encountered an error while processing an inbound MIME message in compatibility mode. The problem with the MIME message was it contained: {a body that could not be parsed / an include for which there was no attachment}.*

Explanation: During HTTP processing of an inbound MIME request, in compatibility mode, CICS detected an error in the content of the MIME message. Possible causes for this error include the MIME message contains a body that could not be parsed or an include for which there was no attachment. The message issued will indicate the cause of the error.

System action: The pipeline returns in error. For a provider pipeline the HTTP connection is closed. An exception trace point will have been issued with the details of the error.

User response: Trace can be checked to obtain the details of the MIME error. This error will need to be corrected in the MIME generation of the sender.

Module: DFHPITH

XMEOUT Parameters: *date, time,applid, userid, pipeline, {1=a body that could not be parsed, 2=an include for which there was no attachment}*

Destination: CPIO

DFHPI1102E *date time applid userid PIPELINE pipeline encountered an error while processing an outbound MIME message in compatibility mode. Generation of the MIME message failed because: {it contained a body that could not be parsed / a container had an invalid ccsid / a container had the wrong type}.*

Explanation: During HTTP processing of an outbound MIME request, in compatibility mode, CICS detected an error in the content of the MIME message or pipeline channel. Possible reasons for this failure include the message contained a body that could not be parsed, the channel had a MIME container with an invalid ccsid or the channel had a container with the wrong type. The cause of the error will be indicated in the issued message.

System action: The pipeline returns in error. For a provider pipeline the HTTP connection is closed. An exception trace point will have been issued with the details of the error.

User response: Trace can be checked to obtain the details of the MIME error. This error will need to be corrected in the MIME generation of the sending party.

Module: DFHPITH

XMEOUT Parameters: *date, time,applid, userid, pipeline, {1=it contained a body that could not be parsed, 2=a container had an invalid ccsid, 3=a container had the wrong type}*

Destination: CPIO

DFHPI1103E *date time applid userid PIPELINE pipeline encountered an error while processing an outbound message in MIME compatibility mode. The problem with the MIME message was {it contained a body that could not be parsed / it had an include for which there was no attachment / it caused an unexpected exception}.*

Explanation: During Websphere MQ processing of an outbound MIME request, in compatibility mode, CICS detected an error in the content of the MIME message. This could be because it contained a body that could not be parsed or it had an include for which there was no attachment. Other internal MIME syntax and processing problems could also be the cause. The message identifies which of these caused it to be issued.

System action: The PIPELINE returns in error. An exception trace point will have been issued with the details of the error.

User response: Trace can be checked to obtain the details of the MIME error. This error will need to be corrected in the MIME generation of the sender.

Module: DFHPITQ

DFHPI9002E A WSDL operation name is too long to be supported by CICS: *value.*

Explanation: CICS imposes a limit on the maximum length of each operation name in a WSDL document. This limit is 255 characters. Operation name *value* is too long.

System action: The Web services assistant continues processing.

User response: Edit the WSDL document and reduce the length of the operation name. Resubmit the DFHWS2LS job to re-process the WSDL.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9003E A WSDL part name is too long to be supported by CICS: *value.*

Explanation: CICS imposes a limit on the maximum length of each part name in a WSDL document. This limit is 255 characters. Part name *value* is too long.

System action: The Web services assistant continues processing.

User response: Edit the WSDL document and reduce the length of the part name. Resubmit the DFHWS2LS job to re-process the WSDL.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9004E The WSDL specifies a style value of document and contains a part name that refers to an XML type. Document style WSDL must only refer to XML elements.

Explanation: There is an error in the WSDL document. The WSDL binding element specifies the use of 'document' style encoding but the associated message element points to an XML type. If document style bindings are used then the message elements may only point to XML elements.

System action: The Web services assistant continues processing.

User response: Correct the WSDL document and then resubmit the DFHWS2LS job to re-process the WSDL.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9010E Simple data type *type* is not atomic. List and union data types are not supported.

Explanation: DFHWS2LS only supports simple primitive XML data types at mapping level 1.0. Type *type* is either a list or a union data type.

System action: The Web services assistant continues processing.

User response: Consider specifying a MAPPING-LEVEL of at least 1.1.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9011E Unsupported super type *super_type* found for type *base_type*.

Explanation: XML data type *base_type* is derived from XML data type *super_type*. The super type is not supported by DFHWS2LS.

System action: The Web services assistant continues processing.

User response: Consider changing the WSDL document or XML schema to avoid this problem. For example, you could:

1. Change the problematic XML construct for a different one that is supported by DFHWS2LS. For example, the `xsd:any` construct is supported by

DFHWS2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist:

1. At runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformations service. This results in a WSBind file being generated that tells CICS that the application will work directly with the DFHWS-BODY container.
2. Other products may exist that support the required XML constructs. For example, IBM's Rational Developer for System Z (RDz) product can generate WSBind files that use a different underlying transformation service and are subject to a different set of restrictions.
3. If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP 'apphandler'.
4. If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Note: This message cannot be changed with the message editing utility.

SYSPRINT

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9012E Schema wild cards (<any> tags) are only supported at mapping level 2.1 and later.

Explanation: A XML schema referenced within WSDL document contains an 'any' tag. The 'any' tag is supported by DFHWS2LS, but only at mapping level 2.1 or later. A mapping level prior to 2.1 is currently in use.

System action: The Web services assistant continues processing.

User response: Consider specifying the use of mapping level 2.1 or later.

At mapping level 2.1 CICS will allocate a container into which the XML data associated with the 'any' tag will be stored at runtime. If this behaviour is not acceptable then consider changing the XML schema to specify a 'choice' construct that lists all of the possible options that may be used at runtime.

Note: This message cannot be changed with the message editing utility.

Destination

SYSPRINT

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9013E Schema model groups with maxOccurs or minOccurs not equal to 1 are not supported. Problem found for type: *value*.

Explanation: An XML model group has been found within the XML schema referenced from the WSDL document which specifies occurrence information. The term 'model group' refers to one of the following XML tags: 'all', 'sequence' or 'choice'. DFHWS2LS only supports these tags if they do not specify minOccurs or maxOccurs values. This problem has been identified within data type *value*.

System action: The Web services assistant continues processing.

User response: Consider changing the WSDL document or XML schema to avoid this problem. For example, you could:

1. Change the problematic XML construct for a different one that is supported by DFHWS2LS. For example, the xsd:any construct is supported by DFHWS2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist:

1. At runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformations service. This results in a WSBind file being generated that tells CICS that the application will work directly with the DFHWS-BODY container.
2. Other products may exist that support the required XML constructs. For example, IBM's Rational Developer for System Z (RDz) product can generate WSBind files that use a different underlying transformation service and are subject to a different set of restrictions.
3. If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP 'apphandler'.

4. If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

DFHPI9020W Schema attribute *attribute* has been found and ignored for type *type*.

Explanation: An XML schema referenced within the WSDL document contains an XML type definition with an attribute. DFHWS2LS does not support XML attributes at mapping level 1.0, though it does tolerate their presence. XML attributes are fully supported at mapping level 1.1.

System action: The Web services assistant continues processing. If the attribute is present in a SOAP message sent to CICS at runtime then it will be ignored.

User response: Consider specifying a MAPPING-LEVEL of at least 1.1.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9021E A schema type with unrecognized content has been found: *value*.

Explanation: There is an error in an XML schema referenced from the WSDL document. An XML type *value* has been found with unrecognized content.

System action: The Web services assistant continues processing.

User response: Correct the XML schema and then resubmit the DFHWS2LS job to re-process the WSDL.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9022W Schema type *type* is being restricted to a total of *value* digits in the response message of operation *operation*.

Explanation: An XML schema referenced from the WSDL document contains type definition *type*. This type specifies a total number of digits which is too large for the target programming language to support. DFHWS2LS is restricting the type definition to a total of *value* digits. This type appears in the response

message for operation *operation*.

System action: The Web services assistant continues processing. If at runtime a SOAP message is received with a value which is too large for the target field in the language structure then a conversion error will be indicated.

User response: Consider whether you need to be able to support numbers which require more digits than are allowed in the DFHWS2LS mappings. If it is acceptable for CICS to impose this maximum length then you may safely ignore this message.

Consider changing the WSDL document or XML schema to avoid this problem. For example, you could:

1. Change the problematic XML construct for a different one that is supported by DFHWS2LS. For example, the `xsd:any` construct is supported by DFHWS2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist:

1. At runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformations service. This results in a WSBIND file being generated that tells CICS that the application will work directly with the DFHWS-BODY container.

DFHPI9025E Required schema type *type* cannot be found.

Explanation: There is an error in an XML schema referenced from the WSDL document. A schema type definition referenced either from the WSDL or from within the XML schema cannot be found. The missing type is *type*.

System action: The Web services assistant continues processing.

User response: Correct the XML schema or the WSDL and then resubmit the DFHWS2LS job to re-process the WSDL.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9026E URI *uri* cannot be resolved. Consider checking that the HTTP Proxy is correct.

Explanation: A namespace reference within either the WSDL document or an XML schema referenced from the WSDL document cannot be resolved. DFHWS2LS has attempted to use the URI from the namespace to resolve the reference but has not been able to do so. This may be because a HTTP proxy service has not been specified or because there is no content available at the location implied by the URI. The URI is *uri*.

System action: The Web services assistant continues processing.

User response: Specify the location of the HTTP proxy to use via the HTTPPROXY parameter. If the correct proxy has already been specified or if there is genuinely no content available at the location implied by the URI then add a schemaLocation XML attribute to the WSDL or schema in order to allow DFHWS2LS to locate the included content.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9027E The XML parser has found an error: *value* at line *line* and column *column* in document *document*.

Explanation: The XML parser that is used to read the WSDL document and the XML schemas referenced from the WSDL document has encountered a problem. The problem has been found in document *document* at line *line* and column *column*. The message issued by the XML parser is: *value*.

System action: The Web services assistant continues processing.

User response: Correct the XML schema or the

WSDL and then resubmit the DFHWS2LS job to re-process the WSDL.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9028E The length of schema element *element* is set to *value* characters. CICS only supports up to *value2* characters.

Explanation: An XML schema referenced from the WSDL document contains element *element*. This element specifies a maximum size which is too large for DFHWS2LS to support. The XML schema has requested a length of up to *value* characters but the largest number supported by DFHWS2LS is *value2* characters.

System action: The Web services assistant continues processing.

User response: Consider changing the WSDL document or XML schema to avoid this problem. For example, you could:

1. Change the problematic XML construct for a different one that is supported by DFHWS2LS. For example, the `xsd:any` construct is supported by DFHWS2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist:

DFHPI9029E Implicit padding (slack bytes) are not supported for PL/I. Please change the language structure to ensure that all slack bytes are explicitly referenced and that top level structures start on a double-word boundary. Slack bytes are needed near or around field *field*.

Explanation: DFHLS2WS is unable to determine the location of where slack bytes (also known as filler bytes) should be placed when PL/I is used to define a language structure. DFHLS2WS has determined that one or more slack bytes are needed somewhere near to field *field* but is unsure of precisely where.

System action: The Web services assistant continues processing.

User response: Change the language structure to ensure that every byte is explicitly referenced and so that the first entry in the language structure starts on a double word boundary. If you are unable to predict precisely where filler fields must be placed to meet these requirements you could consider marking the fields as UNALIGNED and recompiling the application.

Any sub-structures within the language structure must begin on the same alignment as the most aligned item within the structure.

An alternative solution is to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9030E Implicit padding (slack bytes) are not supported for PL/I. Please change the language structure to ensure that all slack bytes are explicitly referenced and that top level structures start on a double-word boundary. Slack bytes are needed near or around structure *structure*.

Explanation: DFHLS2WS is unable to determine the location of where slack bytes (also known as filler bytes) should be placed when PL/I is used to define a language structure. DFHLS2WS has determined that one or more slack bytes are needed somewhere near to structure *structure* but is unsure of precisely where.

System action: The Web services assistant continues processing.

User response: Change the language structure to ensure that every byte is explicitly referenced and so that the first entry in the language structure starts on a double word boundary. If you are unable to predict precisely where filler fields must be placed to meet these requirements you could consider marking the fields as UNALIGNED and recompiling the application.

It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9031E A structure or array is unexpectedly empty.

Explanation: DFHLS2WS has encountered a problem whilst parsing a language structure. It has reached the end of the language structure and has either found insufficient closing statements to match the number of opening statements or has found an empty sub-structure. Usually this implies an internal processing error has occurred that requires a fix to DFHLS2WS.

DFHLS2WS is unable to determine which line in the language structure starts the sub-structure that is empty or unclosed. This message is generated as a back-stop condition to prevent an erroneous WSBIND file being deployed to CICS.

The conditions under which this message may be issued are

- A field in a PL/I language structure has been defined without specifying the data type. In this scenario DFHLS2WS may assume that the field is the start of an empty sub-structure.
- A sub-structure exists in the language structure, but each entry within the sub-structure is unsupported.
- DFHLS2WS has failed to understand an entry in the language structure. This may perhaps be due to a spelling mistake in the language structure, or the presence of an unsupported keyword.

System action: The Web services assistant continues processing.

User response: Change the language structure to correct any other reported problems. Supply explicit definitions for any fields which have been defined with default characteristics.

Ensure that the language structure is well formed. Check that the compiler is able to understand the language structure.

If these changes do not resolve the problem then contact your IBM support representative for further assistance.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9032W Schema attribute wild cards (<anyAttribute> tags) are not supported.

Explanation: An XML schema referenced from the WSDL document contains a schema attribute wild card (the <anyAttribute> XML schema tag). DFHWS2LS does not support attributes that are referenced in this way.

System action: The Web services assistant continues processing and the schema attribute wild card is ignored. If at runtime a message containing unrecognized attributes is received these attributes are ignored.

User response: Consider whether the value of these attributes is important to your application. If it is acceptable for CICS to ignore these attributes then you may safely ignore this message.

Consider changing the WSDL document or XML schema to avoid this problem. For example, you could:

1. Change the problematic XML construct for a different one that is supported by DFHWS2LS. For example, the xsd:any construct is supported by DFHWS2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist:

1. At runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformations service. This results in a WSBIND file being generated that tells CICS that the application will work directly with the DFHWS-BODY container.
2. Other products may exist that support the required XML constructs. For example, IBM's Rational Developer for System Z (RDz) product can generate WSBIND files that use a different underlying transformation service and are subject to a different set of restrictions.
3. If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP 'apphandler'.

4. If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Note: This message cannot be changed with the message editing utility.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9033E Duplicate elements with the same name in the same scope are not supported. The duplicate name is *name*.

Explanation: An XML element has been defined twice within the same construct in the WSDL. This is not supported by DFHWS2LS except through the use of minOccurs and maxOccurs attributes. DFHWS2LS does support arrays of elements with the same name, but not a sequence of two or more identically named elements.

System action: The Web services assistant continues processing.

User response: Consider changing the WSDL document or XML schema to avoid this problem. For example, you could:

1. Change the problematic XML construct for a different one that is supported by DFHWS2LS. For example, the xsd:any construct is supported by DFHWS2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist:

1. At runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformations service. This results in a WSBind file being generated that tells CICS that the application will work directly with the DFHWS-BODY container.
2. Other products may exist that support the required XML constructs. For example, IBM's Rational Developer for System Z (RDz) product can generate WSBind files that use a different underlying transformation service and are subject to a different set of restrictions.
3. If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP 'apphandler'.
4. If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Note: This message cannot be changed with the message editing utility.

DFHPI9035E XML Schema element cannot be found in document *document*.

Explanation: An XML schema cannot be found within the specified document.

System action: The Web services or XML assistant continues processing.

User response: Correct the WSDL or SCHEMA input parameter to point to a valid document that contains XML schemas.

Consider changing the WSDL document or XML schema to avoid this problem. For example, you could

- Change the problematic XML construct for a different one that is supported. For example, the xsd:any construct is supported by both DFHWS2LS and DFHSC2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist

- If you are using DFHWS2LS, then at runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformation service. This results in a WSBind file being generated that tells CICS that the application will work directly with the SOAP Body in the DFHWS-BODY container.
- If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP application handler.
- If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.
- Other products may exist that can help process or omit the problematic XML constructs. For example, IBM's Rational Developer for System Z (RDz) product supports a "meet-in-middle" mapping scenario that allows omitting of specific XML constructs.

Module: DFHWS2LS, DFHSC2LS

Destination: SYSPRINT

DFHPI9036W Abstract Data Types are not supported. Problems may be experienced with type *type* in element *element*.

Explanation: An XML schema contains an abstract data type. Abstract data types are supported at mapping level 2.2. At earlier mapping levels they are tolerated, but the mappings used are unlikely to be acceptable.

System action: The Web services or XML assistant continues processing and the abstract data type is treated as a non-abstract data type.

User response: Consider using mapping level 2.2.

Consider changing the WSDL document or XML schema to avoid this problem. For example, you could

- Change the problematic XML construct for a different one that is supported. For example, the `xsd:any` construct is supported by both DFHWS2LS and DFHSC2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist

- If you are using DFHWS2LS, then at runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformation service. This results in a WSBIND file being generated that tells CICS that the application will work directly with the SOAP Body in the DFHWS-BODY container.
- If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP application handler.
- If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.
- Other products may exist that can help process or omit the problematic XML constructs. For example, IBM's Rational Developer for System Z (RDz) product supports a "meet-in-middle" mapping scenario that allows omitting of specific XML constructs.

Module: DFHWS2LS, DFHSC2LS

Destination: SYSPRINT

DFHPI9037E XML Schema model groups are not supported within <choice> structures. Problem found in type *type*.

Explanation: An XML model group (`xsd:choice`, `xsd:sequence`, `xsd:all` or `xsd:group`) has been found within an `xsd:choice` structure. This is not supported at mapping levels 2.1 and below. Some of these restrictions are removed at mapping level 2.2.

`xsd:choice` constructs are not supported within other `xsd:choice` constructs at any mapping level.

System action: The Web services or XML assistant continues processing.

User response: Consider changing the WSDL document or XML schema to avoid this problem. For example, you could

- Change the problematic XML construct for a different one that is supported. For example, the `xsd:any` construct is supported by both DFHWS2LS and DFHSC2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist

- If you are using DFHWS2LS, then at runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformation service. This results in a WSBIND file being generated that tells CICS that the application will work directly with the SOAP Body in the DFHWS-BODY container.
- If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP application handler.
- If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.
- Other products may exist that can help process or omit the problematic XML constructs. For example, IBM's Rational Developer for System Z (RDz) product supports a "meet-in-middle" mapping scenario that allows omitting of specific XML constructs.

Module: DFHWS2LS, DFHSC2LS

Destination: SYSPRINT

DFHPI9038E The number of options for an enumerated set of options exceeds the maximum supported value of 255.

Explanation: An XML schema referenced within the input document contains an enumerated construct with more than 255 possible substitutable values. This may be an `xsd:choice` construct, a substitution group or an abstract data type.

System action: The Web services or XML assistant continues processing.

User response: Consider changing the WSDL document or XML schema to avoid this problem. For example, you could

- Change the problematic XML construct for a different one that is supported. For example, the `xsd:any`

construct is supported by both DFHWS2LS and DFHSC2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist

- If you are using DFHWS2LS, then at runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformation service. This results in a WSBIND file being generated that tells CICS that the application will work directly with the SOAP Body in the DFHWS-BODY container.
- If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP application handler.
- If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.
- Other products may exist that can help process or omit the problematic XML constructs. For example, IBM's Rational Developer for System Z (RDz) product supports a "meet-in-middle" mapping scenario that allows omitting of specific XML constructs.

Module: DFHWS2LS, DFHSC2LS

Destination: SYSPRINT

DFHPI9039E Substitution groups within xsd:choice constructs are not supported. The substitution group name is *name*.

Explanation: An xsd an xsd:choice construct. This combination of constructs is not supported.

System action: The Web services or XML assistant continues processing.

User response: Consider changing the WSDL document or XML schema to avoid this problem. For example, you could

- Change the problematic XML construct for a different one that is supported. For example, the xsd:any construct is supported by both DFHWS2LS and DFHSC2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist

- If you are using DFHWS2LS, then at runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformation

service. This results in a WSBIND file being generated that tells CICS that the application will work directly with the SOAP Body in the DFHWS-BODY container.

- If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP application handler.
- If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.
- Other products may exist that can help process or omit the problematic XML constructs. For example, IBM's Rational Developer for System Z (RDz) product supports a "meet-in-middle" mapping scenario that allows omitting of specific XML constructs.

Module: DFHWS2LS, DFHSC2LS

Destination: SYSPRINT

DFHPI9500E An internal error has occurred. Please contact IBM Support.

Explanation: The Web services assistant has caught an unexpected exception.

System action: The Web services assistant continues processing.

User response: Review any other messages that have been issued by the Web services assistant. If those messages suggest remedies to the problem then act on them.

If after resolving any other problems this message is still being issued, you should contact your IBM support representative for further assistance. You are likely to be asked to supply the LOGFILE that was generated by the Web services assistants.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9501E The HTTPPROXY parameter is invalid. The correct format is *proxy.hostname.com:8080* or similar.

Explanation: The value of the HTTPPROXY parameter is invalid.

System action: The Web services assistant continues processing.

User response: Correct or remove the HTTPPROXY parameter.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9502E One or more incorrect parameters have been specified.

Explanation: The Web services assistant cannot continue as one or more errors have been detected in the input parameters.

System action: The Web services assistant fails with a return code of 8.

User response: Correct the errors in the input parameters details of which can be found in the previous messages issued.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9503E Required parameter *parameter* is missing.

Explanation: A required parameter is missing from the input parameters. The missing parameter is *parameter*.

System action: The Web services assistant continues processing.

User response: Provide a value for the missing parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9504E Parameter *parameter* has been specified but is not valid for program *program*.

Explanation: A parameter has been specified that was not expected. For example, a value may have been provided for the BINDING parameter in DFHLS2WS. A BINDING is only valid as input to DFHWS2LS. The unexpected parameter is *parameter*.

System action: The Web services assistant continues processing.

User response: Remove the unexpected parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9505E Invalid value specified for the LANG parameter. Valid values are COBOL, PLI-ENTERPRISE, PLI-OTHER, C or CPP.

Explanation: An invalid value has been specified for the LANG parameter.

System action: The Web services assistant continues processing.

User response: Correct the value of the LANG parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9506E Parameter *parameter* exceeds the maximum valid length of *value* characters.

Explanation: The value of parameter *parameter* is too long.

System action: The Web services assistant continues processing.

User response: Change the value to be no longer than *value* characters long.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9507W Parameter *parameter* is not set therefore parameter *parameter2* is ignored.

Explanation: Parameter *parameter2* has been ignored because parameter *parameter* is not set. For example, a PGMINT value only makes sense if a PROGRAM value has also been supplied.

System action: The Web services assistant continues processing.

User response: Consider removing the unexpected parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9509E Parameter *parameter* contains invalid characters.

Explanation: One or more invalid characters have been found in parameter *parameter*.

System action: The Web services assistant continues processing.

User response: Correct the value of the parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9510W Invalid value specified for the PGMINT parameter. Valid values are CHANNEL or COMMAREA. The default value of CHANNEL is assumed.

Explanation: An invalid value has been specified for the PGMINT parameter.

System action: The Web services assistant continues processing.

User response: Correct the value of the PGMINT parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9511W Parameter PGMINT is set to CHANNEL but parameter CONTID is not set. The default value of *value* is assumed.

Explanation: The program interface has been defined as 'Channel' but a container name has not been provided to indicate the name of the container that CICS should populate at runtime. A default value of *value* has been assumed.

System action: The Web services assistant continues processing.

User response: Consider whether the default container name is acceptable. If you are enabling an existing channel based application as a Web service then it is likely that the default container name is incorrect. If the default container name is acceptable then you can safely ignore this message.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9512W Parameter CONTID is set but not needed for PGMINT=COMMAREA. Parameter CONTID is ignored.

Explanation: The CONTID input parameter has been specified but is ignored as the program interface has been defined to be a commarea.

System action: The Web services assistant continues processing.

User response: Consider either removing the CONTID parameter or changing the PGMINT to CHANNEL.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9513W The value of parameter WSBIND is missing a file extension, .wsbind is assumed.

Explanation: A file extension has not been provided for the WSBIND file. If you wish to use the PIPELINE scan mechanism for automatically creating WEBSERVICE resources from WSBIND files then you must use an extension of '.wsbind'. This file extension has therefore been assumed.

System action: The Web services assistant continues processing.

User response: Consider adding '.wsbind' to the end of your WSBIND parameter value.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9514W The value of parameter WSBIND specified a file extension other than

Explanation: A file extension other than '.wsbind' has been used for the WSBIND file. If you wish to use the PIPELINE scan mechanism for automatically creating WEBSERVICE resources from WSBIND files then you must use an extension of '.wsbind'.

System action: The Web services assistant continues processing.

User response: Consider changing the extension of the WSBIND parameter to '.wsbind'.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9515E PDS library *library* cannot be found.

Explanation: The PDS library specified in the PDSLIB input parameter cannot be found.

System action: The Web services assistant continues processing.

User response: Correct the PDSLIB input parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9516E PDS library *library* exists but cannot be read.

Explanation: The PDS library specified in the PDSLIB input parameter exists but cannot be read. This may be because the userid under which the Web services assistant is executing does not have permission to view the PDS or because an exclusive lock is being held by another process.

System action: The Web services assistant continues processing.

User response: Ensure that permission is assigned to allow the Web services assistant to read from the PDSLIB. Ensure that no other process has a lock on the PDSLIB.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9517E PDS library *library* exists but cannot be written to.

Explanation: The PDS library specified in the PDSLIB input parameter exists but cannot be written to. This may be because the userid under which the Web services assistant is executing does not have permission to alter the PDS or because an exclusive lock is being held by another process.

System action: The Web services assistant continues processing.

User response: Ensure that permission is assigned to allow the Web services assistant to alter the PDSLIB. Ensure that no other process has a lock on the PDSLIB.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9518W PDS library *library* specifies a record length less than 80 characters, output may be truncated.

Explanation: The PDS library specified in the PDSLIB input parameter specifies a record length less than 80 characters. DFHWS2LS requires 80 characters for the creation of language structures, it is therefore likely that truncation will occur.

System action: The Web services assistant continues processing.

User response: Consider changing the PDSLIB to a fixed record data set with a logical record length of 80 characters.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9519E Codepage *codepage* is not recognized.

Explanation: The codepage indicated in the PDSCP input parameter is not recognized. The Web services assistants use the codepage support built in to Java, Java does not recognize the named code page.

System action: The Web services assistant continues processing.

User response: Remove or correct the PDSCP parameter. If the PDSCP parameter is not set then the same codepage is used when reading from and writing to the PDS library as is used when reading from and writing to HFS. This codepage is determined according to the default codepage configured for Unix System Services.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9520E Parameter RESPMEM and parameter REQMEM must supply different values.

Explanation: The same language structure name has been used for both the request and the response messages. DFHWS2LS requires that these names be unique even if it is likely that the generated language structures will be identical.

System action: The Web services assistant continues processing.

User response: Change one of the REQMEM and RESPMEM input parameters in order to make them unique.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9521E The record format of PDS member *member* must be FB and have a record length of 80.

Explanation: The location at which the language structures are to be written to or read from is not a fixed block PDS member.

System action: The Web services assistant continues processing.

User response: Change the location of the PDSLIB input parameter to indicate a FB data set.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9522E File *file* cannot be read.

Explanation: File *file* exists but cannot be read. This may be because the userid under which DFHLS2WS is executing does not have access permission to the specified resource.

System action: The Web services assistant continues processing.

User response: Correct the problem.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9523E An unexpected error occurred whilst processing file *file*. The problem is: *value*.

Explanation: An exception was caught whilst attempting to process file *file*. The exception included a message to identify the problem which is indicated in *value*.

DFHWS2LS requires an exclusive lock on the partitioned data set to which it is writing language structures. This message may be issued if an exclusive lock is not currently available.

System action: The Web services assistant continues processing.

User response: Correct the identified problem.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9524E File *file* cannot be written to.

Explanation: File *file* exists but cannot be written to. This may be because the userid under which DFHWS2LS is executing does not have alter permission to the specified resource.

DFHPI9525E • DFHPI9531E

System action: The Web services assistant continues processing.

User response: Correct the problem.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9525E Cannot write a file because directory *directory* does not exist.

Explanation: Directory *directory* does not exist. Therefore the Web services assistant is unable to create an output file that should be written to that directory.

System action: The Web services assistant continues processing.

User response: Either create the directory or change the input parameters to indicate a different output location.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9526E Cannot write a file because directory *directory* is not writable.

Explanation: Directory *directory* exists but the userid under which the Web services assistant is executing does not have write permission to create a new file within it.

System action: The Web services assistant continues processing.

User response: Either change the permissions for the directory or change the input parameters to indicate a different output location.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9527E Cannot write to the log file, *file*, is not writable.

Explanation: File *file* exists but the userid under which the Web services assistant is executing does not have write permission to change it.

System action: The Web services assistant continues processing.

User response: Either change the permissions for the file or change the input parameters to indicate a different output location.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9528E Cannot find or read file *file*.

Explanation: File *file* either does not exist or the userid under which the Web services assistant is executing does not have permission to read it.

System action: The Web services assistant continues processing.

User response: Either change the permissions for the file or correct the input parameters to indicate a different input file.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9529W Characters beyond column *column* have been truncated for line *line*.

Explanation: The input parameters extend beyond character 72. The problematic line identified is *line*.

System action: The Web services assistant continues processing.

User response: Either change the indicated line to use less than 72 characters of data; or use the '*' line continuation character and continue on the next line.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9530I Parameter *parameter* is not recognized and has been ignored.

Explanation: An unrecognized parameter has been found amongst the input parameters.

System action: The Web services assistant continues processing.

User response: Consider removing the named parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9531E Parameter STRUCTURE must only contain (or) characters in the first or last position.

Explanation: The STRUCTURE input parameter is not well formed. It may only contain bracket characters at the start and end of the value.

System action: The Web services assistant continues processing.

User response: Correct the value of the STRUCTURE input parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9532E Parameter STRUCTURE must be of the form
STRUCTURE=(request_structure_name, response_structure_name).

Explanation: The STRUCTURE input parameter is not well formed. It should contain two structure names separated by a comma and entirely enclosed within rounded brackets as in the following example

STRUCTURE=(request_structure_name,response_structure_name)

System action: The Web services assistant continues processing.

User response: Correct the value of the STRUCTURE input parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9533E Parameter *parameter* contains an invalid character *character* at position *position* in value *value*.

Explanation: An invalid character has been found in parameter *character*.

System action: The Web services assistant continues processing.

User response: Correct the value of the named input parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9534E Non-unique operation signature found: *value*.

Explanation: The wire signature for two or more WSDL operations is identical. CICS needs the wire signatures to be different in order to determine which operation is being invoked.

The wire signature is determined by the immediate child elements of the SOAP body tag. If RPC style SOAP messages are used then the name of the WSDL Operation is included in the SOAP message and CICS can therefore determine the operation that is being invoked at runtime. If document style WSDL is used then the operation name is only included in the SOAP message if the WSDL conforms to the 'wrapped' pattern - in which case the first tag within the body of the SOAP envelope is the name of the operation.

If the operation name is not included in the SOAP message then CICS requires that each of the operations in the WSDL have unique signatures. If the request message for an operation is empty then the signature is reported as 'null'. If two or more operations share the same signature then this message is issued. This requirement is also present in the WSi Basic Profile specification which defines the rules to follow if

you wish your WSDL to work with most Web services implementations.

System action: The Web services assistant continues processing.

User response: Either remove or exclude one of the WSDL operations, or change the WSDL to specify RPC encoding or to conform to the 'wrapped document' style of encoding.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9535E WSDL operation *operation* has an operation signature greater than *value* characters long and therefore is not supported by CICS.

Explanation: Operation *operation* in the WSDL document has a wire signature that is longer than *value* characters. DFHWS2LS can not process this operation. The wire signature is used to determine the operation that is being invoked based on the sequence of XML child elements found within the SOAP:body element at runtime. If there are a large number of such child elements or the child elements have unusually long names then the generated signature may be too large.

System action: The Web services assistant continues processing.

User response: Consider changing the WSDL document or XML schema to avoid this problem. For example, you could:

1. Change the problematic XML construct for a different one that is supported by DFHWS2LS. For example, the xsd:any construct is supported by DFHWS2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist:

1. At runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformations service. This results in a WSBind file being generated that tells CICS that the application will work directly with the DFHWS-BODY container.
2. Other products may exist that support the required XML constructs. For example, IBM's Rational Developer for System Z (RDz) product can generate WSBind files that use a different underlying transformation service and are subject to a different set of restrictions.
3. If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP 'apphandler'.

4. If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Note: This message cannot be changed with the message editing utility.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9536E User Defined Type *type* cannot be found.

Explanation: DFHLS2WS is unable to locate a required user defined type with the C or C++ header file.

System action: The Web services assistant continues processing.

User response: Change the C header file to include the required user defined type.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9537W Compiler directive *directive* has been ignored.

Explanation: DFHLS2WS has found a compiler directive within the C or C++ header file. Compiler directives are not supported.

System action: The Web services assistant continues processing.

User response: Consider removing the compiler directive from the header file. If the compiler directive is important to how the compiler processes the structures within the header file then it may be necessary to change those structures in order to ensure that DFHLS2WS interprets them correctly.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9538E The required struct entry cannot be found.

Explanation: DFHLS2WS is unable to locate a required structure which is referenced in the C or C++ header file.

System action: The Web services assistant continues processing.

User response: Change the C header file to include the required structure.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9539E An invalid character *character* has been found.

Explanation: An invalid character has been found in the C or C++ header file.

System action: The Web services assistant continues processing.

User response: Correct the header file.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9540E Unsupported keyword *keyword* has been found.

Explanation: DFHLS2WS has detected a keyword *keyword* that is not currently supported.

System action: The Web services assistant continues processing.

User response: Consider removing the unsupported keyword from the input file. If the keyword is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9541E Fixed point decimal types are not supported.

Explanation: DFHLS2WS has detected an unsupported data type in a C or C++ header file.

System action: The Web services assistant continues processing.

User response: Consider removing the unsupported data type from the input file. If the data type is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9542E Unsupported macro *macro* has been found.

Explanation: DFHLS2WS has found a macro within the C or C++ header file. Macros are not supported.

System action: The Web services assistant continues processing.

User response: Consider removing the unsupported macro from the input file. If the macro is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9543E Constant *constant* is not supported in array dimension.

Explanation: DFHLS2WS has found a constant within an array declaration. This is not supported.

System action: The Web services assistant continues processing.

User response: Consider removing the unsupported constant from the input file. If the constant is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9544W Unsupported keyword *keyword* has been found and ignored.

Explanation: DFHLS2WS has detected a keyword *keyword* that is not currently supported, it has been ignored.

System action: The Web services assistant continues processing.

User response: Consider whether it is acceptable that this keyword has been ignored. If it is acceptable then you can safely ignore this message. If it is not acceptable then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format

needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9545W Assignment operator detected and ignored.

Explanation: DFHLS2WS has detected and ignored an assignment operator within a C or C++ header file.

System action: The Web services assistant continues processing.

User response: Consider removing the assignment operator from the header file.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9546W Initialization operator detected and ignored.

Explanation: DFHLS2WS has detected and ignored an initialization operator within a C or C++ header file.

System action: The Web services assistant continues processing.

User response: Consider removing the initialization operator from the header file.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9547E Top level variables are not supported: *value*.

Explanation: DFHLS2WS has encountered a variable *value* within a C or C++ header file that is not part of a structure or part of a type definition. This is not supported.

System action: The Web services assistant continues processing.

User response: Consider removing the named variable from the header file.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9548E Top-level structure *structure* must be named *value*.

Explanation: DFHLS2WS has been unable to locate a requested structure within the C or C++ header file.

System action: The Web services assistant continues processing.

DFHPI9549E • DFHPI9555E

User response: Correct or supply a value for the STRUCTURE input parameter.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9549E A type definition has been found with no instance and no label.

Explanation: DFHLS2WS has detected a type definition in the C or C++ header file that is either missing a label or is missing an instance name.

System action: The Web services assistant continues processing.

User response: Correct the header file.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9550E Duplicate type name *name* found.

Explanation: DFHLS2WS has detected a duplicate type definition in the C or C++ header file.

System action: The Web services assistant continues processing.

User response: Correct the header file.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9551E Structure *structure* cannot be found.

Explanation: DFHLS2WS has been unable to locate the main structure within the C or C++ header file.

System action: The Web services assistant continues processing.

User response: Correct or supply a value for the STRUCTURE input parameter.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9552E Value *value* is not a valid integer.

Explanation: DFHLS2WS has encountered a value that should be numeric but does not appear to be a valid integer. The problematic value is *value*.

System action: The Web services assistant continues processing.

User response: Correct the language structure.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9553E PICTURE *picture* is not supported for BINARY or DISPLAY types.

Explanation: DFHLS2WS has detected a PICTURE clause that it does not currently support for BINARY or DISPLAY data types.

System action: The Web services assistant continues processing.

User response: Consider removing the unsupported PICTURE from the input file. If the PICTURE is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9554E PICTURE *picture* is not supported.

Explanation: DFHLS2WS has detected a PICTURE clause that it does not currently support.

System action: The Web services assistant continues processing.

User response: Consider removing the unsupported PICTURE from the input file. If the PICTURE is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9555E Top level structure found within the main structure.

Explanation: DFHLS2WS has detected an error in one of the language structures. 01 level identifiers should not be present within the main language structure.

System action: The Web services assistant continues processing.

User response: Remove the 01 level identifier from within the language structure.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9556E An unexpected error occurred whilst writing to file *file*. The problem is: *value*.

Explanation: An exception was caught whilst attempting to write to file *file*. The exception included a message to identify the problem which is indicated in *value*.

System action: The Web services assistant continues processing.

User response: Correct the identified problem.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9557E ERRORS and WARNINGS have been generated processing file *file*.

Explanation: One or more error messages and one or more warning messages have been issued by the Web services assistant.

System action: The web services assistant fails with return code 12.

User response: Resolve the previously issued error messages and consider addressing the warning messages.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9558E ERRORS have been generated processing file *file*.

Explanation: One or more error messages have been issued by the Web services assistant.

System action: The web services assistant fails with return code 12.

User response: Resolve the previously issued error messages.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9559W Illegal character *character* has been found at the start of a name and replaced with X.

Explanation: DFHLS2WS has found a character at the start of a field name in the language structure that is not valid in XML. It has been replaced with a substitute character.

System action: The Web services assistant continues processing.

User response: Consider whether the new name is

appropriate to expose in the WSDL. If you are unhappy with the name chosen you can either change the language structure and re-run DFHLS2WS or change the WSDL and run DFHWS2LS.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9560W Illegal character *character* has been found in a name and replaced with X.

Explanation: DFHLS2WS has found a character in a field name in the language structure that is not valid in XML. It has been replaced with a substitute character.

System action: The Web services assistant continues processing.

User response: Consider whether the new name is appropriate to expose in the WSDL. If you are unhappy with the name chosen you can either change the language structure and re-run DFHLS2WS or change the WSDL and run

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9561I Identifier *identifier* has generated a name-clash for operation *operation*. Subsequent declarations have been renamed to ensure their uniqueness.

Explanation: DFHLS2WS has detected a field name in the language structure which will clash with another name when converted to XML. The name has been changed to ensure that this does not happen.

System action: The Web services assistant continues processing.

User response: Consider whether the new name is appropriate to expose in the WSDL. If you are unhappy with the name chosen you can either change the language structure and re-run DFHLS2WS or change the WSDL and run

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9562E Parameter PGMINT is specified with value COMMAREA but there is too much data required for a COMMAREA.

Explanation: DFHLS2WS has been asked to process language structures for a commarea based PROGRAM. The language structures processed require more than 32K of data and therefore are too large for use with a commarea.

System action: The Web services assistant continues processing.

User response: Consider changing the PGMINT input

DFHPI9563E • DFHPI9569E

parameter to CHANNEL rather than COMMAREA.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9563E Unsupported PL/I source code detected in line *line*.

Explanation: DFHLS2WS has spotted a line of PL/I based code that it does not support at line *line*.

System action: The Web services assistant continues processing.

User response: Consider removing the unsupported line from the input file. If the line is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9564W A terminating ; is missing, it is assumed to be at the end of the file.

Explanation: The termination character for a language structure is missing. It is assumed that the end of file indicates the end of the language structure.

System action: The Web services assistant continues processing.

User response: Correct the language structure.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9565E ALIGNED and UNALIGNED keywords are not supported for an entire structure.

Explanation: An ALIGNED keyword or an UNALIGNED keyword has been applied to a structure in a PL/I language structure. This is not supported in DFHLS2WS.

System action: The Web services assistant continues processing.

User response: Change each entry within the language structure to specify ALIGNED or UNALIGNED individually.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9566E The FIXED and FLOAT attributes are both missing: *value*.

Explanation: DFHLS2WS has determined that a DECIMAL or BINARY field in a PL/I language structure does not declare whether it is of type FIXED or type FLOAT. DFHLS2WS requires that the language structure explicitly states the data type.

System action: The Web services assistant continues processing.

User response: Change the field to explicitly specify either FIXED or FLOAT. FLOAT data types are only supported if a mapping level of at least 1.2 is specified.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9567E Too many digits have been specified for a packed decimal field *value*.

Explanation: DFHLS2WS has spotted an error in a PL/I language structure. A packed decimal field has specified a greater number of digits than can be supported for that language.

System action: The Web services assistant continues processing.

User response: Correct the language structure.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9568E The UNSIGNED attribute is not supported unless PLI-ENTERPRISE is specified: *value*.

Explanation: DFHLS2WS has spotted an error in a PL/I language structure. The UNSIGNED keyword has been used even though it is not available before Enterprise level PL/I.

System action: The Web services assistant continues processing.

User response: Either correct the language structure or change the LANG input parameter to specify PLI-ENTERPRISE.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9569E Unsupported PL/I source code detected after line *line*.

Explanation: DFHLS2WS has spotted a line of PL/I based code that it does not support after line *line*.

System action: The Web services assistant continues processing.

User response: Consider removing the unsupported

line from the input file. If the line is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9570E FIXED BINARY types with length greater than 31 are not supported unless PLI-ENTERPRISE is specified: *value*.

Explanation: DFHLS2WS has detected an error in a PL/I language structure. A FIXED BINARY length greater than 31 has been specified. This is not allowed for versions of PL/I prior to Enterprise PL/I.

System action: The Web services assistant continues processing.

User response: Either correct the language structure or change the LANG input parameter to specify PLI-ENTERPRISE.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9571W ORDINAL references are always treated as SIGNED FIXED BINARY (7) data types. If this is incorrect then please replace the ordinal reference with an equivalent FIXED BINARY variable: *value*.

Explanation: DFHLS2WS has detected an Ordinal data type in a PL/I language structure. These are always treated as though they are SIGNED FIXED BINARY (7) data types.

System action: The Web services assistant continues processing.

User response: Consider whether or not this assumption is appropriate. If it is not then you should either change the language structure to replace the ordinal data type with an equivalent data type or you should write a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9572E ORDINAL types are only supported if PLI-ENTERPRISE is specified *value*.

Explanation: DFHLS2WS has detected an error in a PL/I language structure. An ordinal data type has been specified. This is not allowed for versions of PL/I prior to Enterprise PL/I.

System action: The Web services assistant continues processing.

User response: Either correct the language structure or change the LANG input parameter to specify PLI-ENTERPRISE.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9573E BIT fields are only supported if they are in multiples of 8 *value*.

Explanation: DFHLS2WS has detected a BIT field in a PL/I language structure which specifies a number of bits that are not exactly divisible by 8. This is not supported by DFHLS2WS.

System action: The Web services assistant continues processing.

User response: Consider changing the language structure to remove this field or to change its length to a multiple of 8. If this change is not appropriate then consider writing a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9574E Lengths less than one are not supported for array data types *dataType*.

Explanation: DFHLS2WS has detected a problem in a language structure. A data type specifies an array with a length less than one byte or character.

System action: The Web services assistant continues processing.

User response: Correct the problem.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9575E The length of a PICTURE cannot be found: *value*.

Explanation: DFHLS2WS has detected a problem in a PL/I language structure. The length of a PICTURE clause can not be determined.

System action: The Web services assistant continues processing.

User response: Correct the problem.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9576E FIXED BINARY data types with a scaling factor of the form (p,q) with q not equal to 0 are not supported: *value*.

Explanation: DFHLS2WS has detected an unsupported data type in a PL/I language structure. FIXED BINARY scaling factors are not supported.

System action: The Web services assistant continues processing.

User response: Consider removing the unsupported data type from the input file. If the data type is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9577E Precision factor *factor* is out of supported range *value*.

Explanation: DFHLS2WS has detected an error in a PL/I language structure. A precision factor is either too large or too small to be supported.

System action: The Web services assistant continues processing.

User response: Correct the problem.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9578E FIXED DECIMAL data types with a scaling factor of the form (p,q) with q greater than p are not supported: *value*.

Explanation: DFHLS2WS has detected an unsupported data type in a PL/I language structure. DFHLS2WS is unable to support scaling factors in the

form (p,q) where q is greater than p.

System action: The Web services assistant continues processing.

User response: Consider removing the unsupported data type from the input file. If the data type is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9579E FIXED DECIMAL data types with a scaling factor of the form (p,q) with q less than 0 are not supported: *value*.

Explanation: DFHLS2WS has detected an unsupported data type in a PL/I language structure. DFHLS2WS is unable to support scaling factors in the form (p,q) where q is less than 0.

System action: The Web services assistant continues processing.

User response: Consider removing the unsupported data type from the input file. If the data type is important to the shape of the language structure in memory then it may be necessary to create a wrapper program. A wrapper program is a program which accepts input in a format that is suitable for use with DFHLS2WS and maps that input to the format needed by the target program. It then issues a LINK to the target program before converting the response back to an output format which is also suitable for use with DFHLS2WS.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9580I PDS member *member* has been replaced.

Explanation: The Web services assistant as replaced existing PDS member *member*.

System action: The Web services assistant continues processing.

User response: No user action is required. You may safely ignore this message.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9581E An unexpected exception occurred when writing to the PDS.

Explanation: The Web services assistant has been unable to write to the PDS library. This may be because another process has a lock on the PDS.

System action: The Web services assistant continues processing.

User response: Ensure that all other processes which have locks on the PDS release those locks.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9582I File *file* has been replaced.

Explanation: The Web services assistant has replaced existing file *file*.

System action: The Web services assistant continues processing.

User response: No user action is required. You may safely ignore this message.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9583E The supplied WSDL contains an element with different minOccurs and maxOccurs values. This is only supported when PGMINT is set to CHANNEL or when 'INLINE-MAXOCCURS-LIMIT' is set to a higher value than maxOccurs.

Explanation: DFHWS2LS has detected an XML element which will occur in a SOAP message an unknown number of times. This is supported at mapping level 2.1 if the INLINE-MAXOCCURS-LIMIT parameter is set to a value greater than the maxOccurs value.

If maxOccurs is set to 'unbounded', or if the mapping level is less than 2.1, or if INLINE-MAXOCCURS-LIMIT is less than maxOccurs then DFHWS2LS will cause the runtime data to be stored in a separate container. This in turn requires the use of PGMINT=CHANNEL.

System action: The Web services assistant continues processing.

User response: Consider changing the value of INLINE-MAXOCCURS-LIMIT.

If that is not an appropriate action then change the value of the PGMINT input parameter to CHANNEL.

Note: This message cannot be changed with the message editing utility.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9584E The WSDL file contains at least one request message but the REQMEM parameter has not been set.

Explanation: DFHWS2LS needs to generate one or more language structures for request messages but the REQMEM input parameter has not been set.

System action: The Web services assistant continues processing.

User response: Specify a value for the REQMEM input parameter.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9585E The WSDL file contains at least one response message but the RESPMEM parameter has not been set.

Explanation: DFHWS2LS needs to generate one or more language structures for response messages but the RESPMEM input parameter has not been set.

System action: The Web services assistant continues processing.

User response: Specify a value for the RESPMEM input parameter.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9586W A reserved word *word* has been detected in the WSDL, it has been changed to *value*.

Explanation: DFHWS2LS has detected an element name in the WSDL document that is not valid as a keyword in the target programming language. It has been renamed as indicated.

System action: The Web services assistant continues processing.

User response: You may safely ignore this message.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9587I Program *program* has completed SUCCESSFULLY.

Explanation: The Web services assistant has completed processing. No error or warning messages have been issued.

System action: The Web services assistant ends with return code 0.

User response: You may safely ignore this message.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9588E WSDL binding *binding* has no operation elements in the WSDL.

Explanation: DFHWS2LS has not found any WSDL operations associated with WSDL binding *binding*.

System action: The Web services assistant continues processing.

User response: Either correct the WSDL document or supply a different value for the BINDING input parameter.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9589E The supplied WSDL requires too much data for a CICS Commarea. The PGMINT parameter must be set to CHANNEL.

Explanation: DFHWS2LS has been asked to generate language structures for a commarea based PROGRAM. The language structures generated require more than 32K of data and therefore are too large for use with a commarea.

System action: The Web services assistant continues processing.

User response: Consider changing the PGMINT input parameter to CHANNEL rather than COMMAREA.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9590E A style attribute has not been specified for WSDL operation *operation*.

Explanation: DFHWS2LS has detected an error in the WSDL document. The binding for WSDL operation *operation* must have a 'style' specified. The style may be either 'rpc' or 'document'.

System action: The Web services assistant continues processing.

User response: Correct the WSDL.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9591E No input message has been found for WSDL operation *operation*.

Explanation: DFHWS2LS has encountered a problem with the WSDL document. Operation *operation* is missing a WSDL input message. DFHWS2LS does not support response only Web services.

System action: The Web services assistant continues processing.

User response: Either correct the WSDL document or specify a different BINDING input parameter.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9592W An expected soapAction attribute is missing for WSDL operation *operation*.

Explanation: DFHWS2LS has detected an error in the WSDL document. The WSDL binding is missing a soapAction attribute for operation *operation*. In WSDL 2.0 the soapAction is specified using an attribute called 'action'.

System action: The Web services assistant continues processing.

User response: Consider whether the absence of the soapAction is a problem. If your application does not require the soapAction attribute then you can safely ignore this message.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9593W An unexpected soapAction attribute has been found for WSDL operation *operation*. This can only be used with SOAP version 1.1.

Explanation: DFHWS2LS has detected an error in the WSDL document. The WSDL binding specifies a soapAction attribute for use with SOAP 1.2.

System action: The Web services assistant continues processing.

User response: Consider removing the soapAction attribute or changing the WSDL to indicate the use of SOAP 1.1.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9594E An unexpected soapAction attribute has been found for WSDL operation *operation*. This can only be used with SOAP version 1.1.

Explanation: DFHWS2LS has detected an error in the WSDL document. The WSDL binding specifies a soapAction attribute, a concept that only applies to SOAP version 1.1. However, the WSDL binding requests the use of SOAP version 1.2.

System action: The Web services assistant continues processing.

User response: Remove the soapAction attribute from the WSDL document.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9595E The WSDL binding contains a mixture of rpc and document style attributes. This is not supported.

Explanation: DFHWS2LS has encountered a problem processing the WSDL document. The WSDL binding specifies a mixture of 'rpc' style messages and 'document' style messages. DFHWS2LS does not support mixed styles within a binding.

System action: The Web services assistant continues processing.

User response: Consider changing the WSDL document or XML schema to avoid this problem. For example, you could:

1. Change the problematic XML construct for a different one that is supported by DFHWS2LS. For example, the `xsd:any` construct is supported by DFHWS2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist:

1. At runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformations service. This results in a WSBIND file being generated that tells CICS that the application will work directly with the DFHWS-BODY container.
2. Other products may exist that support the required XML constructs. For example, IBM's Rational Developer for System Z (RDz) product can generate WSBIND files that use a different underlying transformation service and are subject to a different set of restrictions.
3. If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP 'apphandler'.
4. If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Note: This message cannot be changed with the message editing utility.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9596E The WSDL Binding for operation *operation* is missing an input message.

Explanation: DFHWS2LS has encountered a problem with the WSDL document. Binding *binding* for operation *operation* is missing a WSDL input binding. DFHWS2LS does not support response only Web services.

System action: The Web services assistant continues processing.

User response: Either correct the WSDL document or specify a different BINDING input parameter.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9597E The WSDL file specifies a 'use' attribute value of *value*. Only literal WSDL is supported.

Explanation: DFHWS2LS has encountered a problem with the WSDL document. The WSDL binding specifies a 'use' attribute value of *value*. DFHWS2LS only supports a value of 'literal'.

System action: The Web services assistant continues processing.

User response: Consider changing the WSDL document or XML schema to avoid this problem. For example, you could:

1. Change the problematic XML construct for a different one that is supported by DFHWS2LS. For example, the `xsd:any` construct is supported by DFHWS2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist:

1. At runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformations service. This results in a WSBIND file being generated that tells CICS that the application will work directly with the DFHWS-BODY container.
2. Other products may exist that support the required XML constructs. For example, IBM's Rational Developer for System Z (RDz) product can generate WSBIND files that use a different underlying transformation service and are subject to a different set of restrictions.
3. If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP 'apphandler'.

- If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Note: This message cannot be changed with the message editing utility.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9598E WSDL binding *binding* references more than one transport protocol. Only one protocol is supported.

Explanation: DFHWS2LS has encountered a problem with the WSDL document. The WSDL binding specifies more than one transport protocol. DFHWS2LS only supports one transport protocol per binding.

System action: The Web services assistant continues processing.

User response: Consider changing the WSDL document or XML schema to avoid this problem. For example, you could:

- Change the problematic XML construct for a different one that is supported by DFHWS2LS. For example, the xsd:any construct is supported by DFHWS2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist:

- At runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformations service. This results in a WSBIND file being generated that tells CICS that the application will work directly with the DFHWS-BODY container.
- Other products may exist that support the required XML constructs. For example, IBM's Rational Developer for System Z (RDz) product can generate WSBIND files that use a different underlying transformation service and are subject to a different set of restrictions.
- If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP 'apphandler'.
- If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Note: This message cannot be changed with the message editing utility.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9599E WSDL binding *binding* is not associated with a transport protocol.

Explanation: DFHWS2LS has encountered a problem with the WSDL document. The WSDL binding specifies no transport protocols. DFHWS2LS requires one transport protocol per binding.

System action: The Web services assistant continues processing.

User response: Consider changing the WSDL document or XML schema to avoid this problem. For example, you could:

- Change the problematic XML construct for a different one that is supported by DFHWS2LS. For example, the xsd:any construct is supported by DFHWS2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist:

- At runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformations service. This results in a WSBIND file being generated that tells CICS that the application will work directly with the DFHWS-BODY container.
- Other products may exist that support the required XML constructs. For example, IBM's Rational Developer for System Z (RDz) product can generate WSBIND files that use a different underlying transformation service and are subject to a different set of restrictions.
- If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP 'apphandler'.
- If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Note: This message cannot be changed with the message editing utility.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9600E The WSDL file contains multiple binding elements. The BINDING parameter must be set to specify which one to use.

Explanation: The WSDL document contains more than one binding element. The BINDING input parameter was not set therefore DFHWS2LS cannot determine which WSDL binding to process.

System action: The Web services assistant continues processing.

User response: Specify a value for the BINDING input parameter.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9601E Binding element *element* cannot be found in the WSDL file. Only one of the following values may be specified: *value*.

Explanation: The value of the BINDING input parameter does not identify a binding element in the WSDL document.

System action: The Web services assistant continues processing.

User response: Correct the value of the BINDING input parameter.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9602E WSDL binding *binding* is not a SOAP binding.

Explanation: DFHWS2LS has detected that the WSDL binding does not indicate the use of SOAP. DFHWS2LS only supports Web services that use SOAP.

System action: The Web services assistant continues processing.

User response: Consider changing the WSDL document or XML schema to avoid this problem. For example, you could:

1. Change the problematic XML construct for a different one that is supported by DFHWS2LS. For example, the `xsd:any` construct is supported by DFHWS2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist:

1. At runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformations service. This results in a WSBind file being generated that tells CICS that the application will work directly with the DFHWS-BODY container.
2. Other products may exist that support the required XML constructs. For example, IBM's Rational Developer for System Z (RDz) product can generate WSBind files that use a different underlying transformation service and are subject to a different set of restrictions.
3. If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP 'apphandler'.
4. If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Note: This message cannot be changed with the message editing utility.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9603E Multiple WSDL service elements exist for a single binding element. Only one is supported unless the 'WSDL-SERVICE' parameter is set.

Explanation: DFHWS2LS has encountered a problem processing the WSDL document. The WSDL specifies more than one WSDL service element for use with the WSDL binding. DFHWS2LS only supports a single WSDL service per binding.

System action: The Web services assistant continues processing.

User response: Specify the specific WSDL service element to be used. Do this by setting an appropriate value for the WSDL-SERVICE parameter.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9604E File *file* does not contain valid WSDL.

Explanation: The WSDL document does not appear to contain WSDL. It may have been corrupted in transit or it may not contain XML.

System action: The Web services assistant continues processing.

User response: Ensure that the value of the WSDL input parameter identifies the correct file. Ensure that the WSDL document has been stored in the correct codepage.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9605E The value of the XML encoding tag must match that of the underlying file system. For example, the value UTF-8 may be appropriate.

Explanation: The XML encoding pseudo-attribute in the prolog of the WSDL document appears to be incorrect. The value of this attribute must match the encoding in which the WSDL document is stored in the file system.

System action: The Web services assistant continues processing.

User response: Either correct or remove the encoding attribute. It is likely that the correct value should be UTF-8.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9606E The value of the XML encoding tag must match that of the underlying file system. For example, the value EBCDIC-CP-US may be appropriate.

Explanation: The XML encoding pseudo-attribute in the prolog of the WSDL document appears to be incorrect. The value of this attribute must match the encoding in which the WSDL document is stored in the file system.

System action: The Web services assistant continues processing.

User response: Either correct or remove the encoding attribute. It is likely that the correct value should be EBCDIC-CP-US.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9607E An unexpected error occurred whilst processing WSDL operation *operation*. The problem is: *value*.

Explanation: DFHWS2LS has encountered a problem whilst processing the WSDL document. An exception has been caught which includes a message the details of which are available in *value*.

System action: The Web services assistant continues processing.

User response: Correct the identified problem.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9608W WARNINGS have been generated processing file *file*.

Explanation: The Web services assistant has completed and has issued one or more warning messages.

System action: The Web services assistant ends with return code 4.

User response: Read the previously issued warning messages and decide on what if any actions must be taken.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9609I Parameter *parameter* has value *value*.

Explanation: The value of parameter *parameter* is *value*.

System action: The Web services assistant continues processing.

User response: You may safely ignore this message.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9610W Platform *platform* is not a supported platform for this API.

Explanation: The Web services assistant has detected that it is executing on a platform that is not currently supported. If you experience any problems whilst executing the Web services assistant on this platform you may receive a reduced level of support from IBM.

System action: The Web services assistant continues processing.

User response: Consider hosting the Web services assistant on a platform that is supported such as z/OS.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9611W All content after the first ';' for line *line* is ignored.

Explanation: DFHLS2WS has spotted a line termination character part way through what appears to be a line of PL/I code. DFHLS2WS does not process the remainder of the line.

System action: The Web services assistant continues processing.

User response: Consider whether DFHLS2WS is correct in ignoring the end of the line. If there is significant data still to be processed then edit the input file in order to supply the data in a format that

DFHLS2WS can understand.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9612E Provider mode Web services with more than one operation must specify 'PGMINT=CHANNEL'.

Explanation: DFHWS2LS has determined that there is more than one operation associated with the binding in the WSDL document. If there is more than one operation supported by a provider mode WEBSERVICE then the CICS application which implements the Web service will have to determine the operation invoked using the contents of the DFHWS-OPERATION container.

This container is only available if the CICS application is linked to with a channel rather than a commarea.

System action: The Web services assistant continues processing.

User response: Consider changing the PGMINT input parameter to CHANNEL rather than COMMAREA.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9613E Mapping level *level* is not recognized.

Explanation: An invalid value has been specified for the MAPPING-LEVEL parameter.

System action: The Web services assistant continues processing.

User response: Correct the value of the MAPPING-LEVEL parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9614I Mapping level *old* has been requested. The most current mapping level available is *new*.

Explanation: An old mapping level has been requested. More recent mapping levels have enhanced support for WSDL and language structures that may not be available at the mapping level requested.

System action: The Web services assistant continues processing.

User response: Consider switching to the most current mapping level.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9615E The version of Java in use is *current*. The minimum version of Java required is *required*.

Explanation: The Web services assistants require a more recent version of Java in order to execute.

System action: The Web services assistant continues processing.

User response: Ensure you have the correct minimum version of Java installed. The 'JAVADIR' option of the JCL procedure used to launch the Web services assistant may be used to specify a version of Java other than the default.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9616W National characters in COBOL are assumed to be DBCS characters *line*.

Explanation: A language structure processed by DFHLS2WS contains fields which are declared to contain National characters. National characters are only partially supported. DFHLS2WS assumes that all fields defined to contain National values do so using DBCS.

System action: The Web services assistant continues processing.

User response: Consider whether you intend these fields to contain pure DBCS data. If this is expected then you can safely ignore this message. If you intend the field to contain UTF-16 data then you cannot make use of the Web services assistants to expose your application as a Web service. You should instead consider writing your own XML capable SOAP 'apphandler'.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9617E The supplied WSDL contains an element with unknown length content which should be stored in a separate CONTAINER. This is only supported when PGMINT is set to CHANNEL.

Explanation: DFHWS2LS has detected a schema element with content that must be mapped to a container. This is only supported if the PGMINT input parameter is set to CHANNEL.

System action: The Web services assistant continues processing.

User response: Change the value of the PGMINT input parameter to CHANNEL.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9618E The *keyword* keyword has been specified. This requires the use of LANG=PLI-ENTERPRISE.

Explanation: DFHLS2WS has detected a PL/I data type which is invalid in versions of PL/I prior to Enterprise PL/I. The LANG input parameter was set to PLI-OTHER.

System action: The Web services assistant continues processing.

User response: Change the value of the LANG input parameter to PLI-ENTERPRISE.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9619E Parameter *parameter* has been specified. It is not supported at mapping level *level*.

Explanation: A parameter has been specified that is not supported at the requested mapping level.

System action: The Web services assistant continues processing.

User response: Either change the mapping level to one where the parameter is supported, or remove the parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9620E CCSID *CCSID* is not recognized.

Explanation: The value of the CCSID parameter is not recognized as a valid CCSID. The Web services assistant attempts to determine the codepage name associated with the CCSID by pre-pending 'Cp' to the front of the CCSID. If the resultant codepage name is not supported by Java then this message will be issued.

System action: The Web services assistant continues processing.

User response: Change the value of the CCSID parameter to one supported by Java.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9621W CCSID *CCSID* is not recognized as an EBCDIC CCSID. Use of this CCSID may cause problems when the Web service is executed.

Explanation: The value of the CCSID parameter is not recognized as one of the family of EBCDIC code pages. The CICS XML transformation service only supports EBCDIC code pages.

Use of the requested CCSID may lead to incorrect

behavior in CICS and in some cases may result in internal error messages being issued by the Web services assistant.

System action: The Web services assistant continues processing.

User response: Consider changing the value of the CCSID parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9622E Invalid value specified for the *parameter* parameter. The length specified must be a positive integer between *min* and *max*.

Explanation: An invalid value has been specified for a parameter. The value must be a number between the specified minimum and maximum values.

System action: The Web services assistant continues processing.

User response: Correct the value of the parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9623E Invalid value specified for the CHAR-VARYING parameter. Valid values are: NULL, NO or YES.

Explanation: An invalid value has been specified for the CHAR-VARYING parameter.

System action: The Web services assistant continues processing.

User response: Correct the value of the CHAR-VARYING parameter.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9624E Invalid value specified for the FLOAT parameter. Valid values are IEEE, HEX or HEXADEC.

Explanation: An invalid value has been specified for the FLOAT parameter.

System action: The Web services assistant continues processing.

User response: Correct the value of the FLOAT parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9625E Invalid value specified for the CHAR-VARYING parameter. Valid values are: NULL, NO, COLLAPSE or BINARY.

Explanation: An invalid value has been specified for the CHAR-VARYING parameter.

System action: The Web services assistant continues processing.

User response: Correct the value of the CHAR-VARYING parameter.

Note: This message cannot be changed with the message editing utility.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9626W Parameter *parameter* has been specified but is not valid when parameter *parameter2* is set. The parameter is ignored.

Explanation: Parameter *parameter* has been ignored because parameter *parameter2* is set. For example, a CHAR-VARYING value is not allowed if the value of the LANG parameter is PLI-ENTERPRISE.

System action: The Web services assistant continues processing.

User response: Consider removing the unexpected parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9627E Minimum runtime level *level* is not recognized.

Explanation: The value of the MINIMUM-RUNTIME-LEVEL parameter is invalid.

System action: The Web services assistant continues processing.

User response: Correct the value of the MINIMUM-RUNTIME-LEVEL parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9628E Parameter *parameter* has been specified but it is not compatible with the specified minimum runtime level.

Explanation: Parameter *parameter* is not allowed to be used at the specified minimum runtime level.

System action: The Web services assistant continues processing.

User response: Either remove the unexpected parameter or specify a different value for the MINIMUM-RUNTIME-LEVEL parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9629I The minimum runtime level required for this Web service is *level*.

Explanation: The Web service binding file (WSBind file) created by the Web services assistant requires a particular minimum level of runtime capability from CICS. This minimum level of capability is called the 'minimum runtime level'. Any attempt to install the WSBind file into a version of CICS that does not support the *level* runtime level will result in a WEBSERVICE resource in the UNUSABLE state.

System action: The Web services assistant continues processing.

User response: No action is required.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9630W The minimum runtime level required for this Web service is greater than the mapping level due to the use of the *parameter* parameter.

Explanation: The Web service binding file (WSBind file) created by the Web services assistant requires a particular minimum level of runtime capability from CICS. This level of runtime capability is higher than might be assumed based on the value of the MAPPING-LEVEL parameter. For example, the MAPPING-LEVEL may be set to 1.0 but the required runtime level may be 1.2.

The reason for this discrepancy is due to the value of the *parameter* input parameter.

System action: The Web services assistant continues processing.

User response: Consider whether the selected runtime level is appropriate. If you wish to suppress this message then set a value for the MINIMUM-RUNTIME-LEVEL parameter. If the selected minimum runtime level is unacceptable then remove the *parameter* parameter from the input parameters.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9631E Field *field* requires a character array length of *length* but the largest length that can be used in *language* is *maxlength*.

Explanation: There is a maximum length for an array

DFHPI9632E • DFHPI9637W

of characters in the target programming language. A character array is required that exceeds this length.

System action: The Web services assistant continues processing.

User response: Several options exist for addressing this problem. Consider changing the value of the LANG parameter to a language that does support this length of character array. Consider changing the MAPPING-LEVEL if a higher level is available. Consider changing the WSDL for the field that triggered this message to indicate a shorter *length* or *maxLength*.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9632E URI *uri* is invalid. The reported problem is: *problem*.

Explanation: An invalid URI has been specified. This may be the value of the URI parameter or a URI within a WSDL document.

System action: The Web services assistant continues processing.

User response: The value of the URI must be corrected.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9633E Invalid value specified for the SOAPVER parameter. Valid values are: 1.1, 1.2 or ALL.

Explanation: An invalid value has been specified for the SOAPVER parameter.

System action: The Web services assistant continues processing.

User response: Correct the value of the SOAPVER parameter.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9634E WSDL service element *service* cannot be found in the WSDL document.

Explanation: Either the WSDL service element defined by the SERVICE parameter cannot be found in the WSDL document or it is not associated with the requested BINDING.

System action: The Web services assistant continues processing.

User response: Correct the value of the SERVICE parameter.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9635E WSDL reusable binding *binding* may only be used if the WSDL-SERVICE parameter is specified.

Explanation: The BINDING that has been specified is not associated with a specific WSDL interface. The WSDL-SERVICE parameter must also be set in order to indicate which interface the BINDING is used with.

System action: The Web services assistant continues processing.

User response: Specify a value for the WSDL-SERVICE parameter.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9636E WSDL operation *operation* cannot be found.

Explanation: An operation specified using the OPERATIONS parameter cannot be located within the WSDL document.

System action: The Web services assistant continues processing.

User response: Correct the value of the OPERATIONS parameter.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9637W One or more WSDL operations have not been processed for a provider mode Web service.

Explanation: A WSDL service with multiple operations has been processed by DFHWS2LS. One or more WSDL operations described within that WSDL document have been ignored due to the value of the OPERATIONS parameter.

System action: The Web services assistant continues processing.

User response: Consider whether it is acceptable or possible that a request may be sent to CICS for one of the ignored operations. If this happens then CICS will be unable to process that request.

If this is unacceptable then consider removing the OPERATIONS parameter.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9638W The minimum runtime level required for this Web service is greater than the mapping level due to the use of WSDL 2.0

Explanation: DFHWS2LS has been executed against a WSDL 2.0 document. The generated WSBIND file can only be installed into a CICS region at runtime level 2.0 or above. A mapping level prior to 2.0 has been requested which implies that backwards compatibility with a prior version of CICS is required.

System action: The Web services assistant continues processing.

User response: Consider whether it is acceptable for the Web service to require runtime level 2.0. Consider using a mapping level that exploits the capabilities of a runtime 2.0 environment.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9639E WSDL 2.0 has been used but it is not compatible with the specified minimum runtime level.

Explanation: DFHWS2LS has been executed against a WSDL 2.0 document. The generated WSBIND file can only be installed into a CICS region at runtime level 2.0 or above. A minimum runtime level prior to 2.0 has been requested.

System action: The Web services assistant continues processing.

User response: Change the minimum runtime level to allow the use of runtime level 2.0 capabilities.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9640I This Web service should be installed into a PIPELINE that uses SOAP version *soapver*.

Explanation: The WSDL for this this Web service specifies a specific version of SOAP is required. In order to satisfy this requirement the WSBIND file produced must be installed into an appropriately configured PIPELINE.

CICS may enforce this requirement at the time that the WSBIND file is installed into CICS.

If DFHLS2WS was used with a SOAPVER value of ALL then the WSBIND file must be installed into a SOAP 1.2 PIPELINE. This is because a provider mode PIPELINE for SOAP 1.2 is able to support both SOAP 1.2 and SOAP 1.1 concurrently.

System action: The Web services assistant continues processing.

User response: This message is for informational purposes only. The Web service deployer should be aware of the requirement for a specific SOAP version at the time that the Web service is deployed.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9641E Unsupported message content model *contentModel* found whilst processing operation *operation*.

Explanation: A WSDL operation processed by DFHWS2LS specifies a content model that is not supported by CICS. CICS only supports content models of 'ELEMENT' and 'NONE'. Any other value implies that a content model other than XML Schema is used.

System action: The Web services assistant continues processing.

User response: The CICS Web services assistants cannot be used to process this WSDL document.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9642E WSDL Message Exchange Pattern *mep* is unsupported. This pattern is specified for operation *operation*.

Explanation: A WSDL operation processed by DFHWS2LS specifies a message exchange pattern that is not supported by CICS. CICS only supports MEPs of 'In-Only', 'Robust-In-Only', 'In-Optional-Out' and 'In-Out'.

System action: The Web services assistant continues processing.

User response: Consider removing the unsupportable operation from the WSDL document.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9643I This Web service requires a capability implied by URI *uri*. It must be installed into an appropriate PIPELINE.

Explanation: A WSDL service processed by DFHWS2LS indicates that a particular runtime capability is required for the service. This capability is identified with a URI. This capability is mandatory.

An example of a capability that may be identified in the WSDL is the use of MTOM/XOP.

System action: The Web services assistant continues processing.

User response: This message is for informational purposes only. The Web service deployer should identify the capability implied by the URI and ensure that the

WSBind file is installed into an appropriately configured PIPELINE.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9644I This Web service supports a capability implied by URI *uri*.

Explanation: A WSDL service processed by DFHWS2LS indicates that a particular runtime capability is supported for the service. This capability is identified with a URI. This capability is optional.

An example of a capability that may be indentified in the WSDL is the use of MTOM/XOP.

System action: The Web services assistant continues processing.

User response: This message is for informational purposes only. The Web service deployer should identify the capability implied by the URI and consider deploying the WSBind file into a PIPELINE that is configured to implement this capability.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9645I Operation *operation* requires a capability implied by URI *uri*. It must be installed into an appropriate PIPELINE.

Explanation: A WSDL operation processed by DFHWS2LS indicates that a particular runtime capability is required for the operation. This capability is identified with a URI. This capability is mandatory.

An example of a capability that may be indentified in the WSDL is the use of MTOM/XOP.

System action: The Web services assistant continues processing.

User response: This message is for informational purposes only. The Web service deployer should identify the capability implied by the URI and ensure that the WSBind file is installed into an appropriately configured PIPELINE.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9646I Operation *operation* supports a capability implied by URI *uri*.

Explanation: A WSDL operation processed by DFHWS2LS indicates that a particular runtime capability is supported for the operation. This capability is identified with a URI. This capability is optional.

An example of a capability that may be indentified in the WSDL is the use of MTOM/XOP.

System action: The Web services assistant continues processing.

User response: This message is for informational purposes only. The Web service deployer should identify the capability implied by the URI and consider deploying the WSBind file into a PIPELINE that is configured to implement this capability.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9647I The request message for operation *operation* requires a capability implied by URI *uri*. It must be installed into an appropriate PIPELINE.

Explanation: A WSDL message processed by DFHWS2LS indicates that a particular runtime capability is required for the message. This capability is identified with a URI. This capability is mandatory.

An example of a capability that may be indentified in the WSDL is the use of MTOM/XOP.

System action: The Web services assistant continues processing.

User response: This message is for informational purposes only. The Web service deployer should identify the capability implied by the URI and ensure that the WSBind file is installed into an appropriately configured PIPELINE.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9648I The request message for operation *operation* supports a capability implied by URI *uri*.

Explanation: A WSDL message processed by DFHWS2LS indicates that a particular runtime capability is supported for the message. This capability is identified with a URI. This capability is optional.

An example of a capability that may be indentified in the WSDL is the use of MTOM/XOP.

System action: The Web services assistant continues processing.

User response: This message is for informational purposes only. The Web service deployer should identify the capability implied by the URI and consider deploying the WSBind file into a PIPELINE that is configured to implement this capability.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9649I The response message for operation *operation* requires a capability implied by URI *uri*. It must be installed into an appropriate PIPELINE.

Explanation: A WSDL message processed by DFHWS2LS indicates that a particular runtime capability is required for the message. This capability is identified with a URI. This capability is mandatory.

An example of a capability that may be indentified in the WSDL is the use of MTOM/XOP.

System action: The Web services assistant continues processing.

User response: This message is for informational purposes only. The Web service deployer should identify the capability implied by the URI and ensure that the WSBind file is installed into an appropriately configured PIPELINE.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9650I The response message for operation *operation* supports a capability implied by URI *uri*.

Explanation: A WSDL message processed by DFHWS2LS indicates that a particular runtime capability is supported for the message. This capability is identified with a URI. This capability is optional.

An example of a capability that may be indentified in the WSDL is the use of MTOM/XOP.

System action: The Web services assistant continues processing.

User response: This message is for informational purposes only. The Web service deployer should identify the capability implied by the URI and consider deploying the WSBind file into a PIPELINE that is configured to implement this capability.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9651E The value of parameter *parameter1* is incompatible with the value of parameter *parameter2*.

Explanation: Two conflicting parameter values have been specified in the input parameters for the Web services assistant. At least one of these values must be changed before processing can continue.

For example, the WSDL_1_1 and WSDL_2_0 parameters cannot both indicate the same file name.

System action: The Web services assistant continues processing.

User response: Correct the specified input

parameters and retry the operation.

Module: DFHWS2LS DFHLS2WS

Destination: SYSPRINT

DFHPI9652W A required but unsupported WSDL extensibility element has been detected. The element is of type *type*.

Explanation: DFHWS2LS has processed a WSDL document that includes unrecognized extensions. These extensions demand that they must be understood.

DFHWS2LS is unaware of what these WSDL extensions mean. They could potentially affect the runtime behavior of the Web service. For example, they could indicate that some form of extra processing is required.

System action: The Web services assistant continues processing.

User response: Consider whether the required extensions indicated in the WSDL are important. If they are then it may be necessary to perform further configuration to the PIPELINE in which the WSBind file is deployed.

It may be necessary to implement handler programs on the PIPELINE to perform the processing that the WSDL document indicates is required.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9653W An unresolved PolicyReference element has been found and ignored. The URI associated with this PolicyReference is *uri*.

Explanation: DFHWS2LS has processed a WSDL document that includes WS-Policy PolicyReference elements. One of these references includes a URI that points to a location DFHWS2LS is unable to resolve.

DFHWS2LS only supports PolicyReference URIs that resolve to a Policy in the current WSDL document. This element must be a child of the root XML element.

System action: The Web services assistant continues processing. The unresolved policy reference is not included in the CICS WS-Policy file.

User response: Consider whether the target Policy is important. If it is then you can either change the WSDL document so that the target policy does resolve locally, or you can edit the appropriate CICS WS-Policy file manually to include the relevant WS-Policy statement.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9654W An unsupported Policy element has been found. The element is of type *type* in namespace *namespace*.

Explanation: DFHWS2LS has processed a WSDL document that includes WS-Policy Policy elements. One of these Policy elements is of a type which is not directly supported by CICS.

CICS only implements support for WS-Security policies.

System action: The Web services assistant continues processing. The unsupported Policy elements are included in the CICS WS-Policy file.

User response: It may be necessary to configure the PIPELINE into which the WSBIND file is deployed in order to ensure that the requirements of the Policy statement are enforced. This may require the creation of new handler programs for the PIPELINE.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9655E The supplied WSDL file contains a message exchange pattern of in-opt-out. This is only supported when PGMINT is set to CHANNEL.

Explanation: DFHWS2LS has processed a WSDL document that includes an operation defined as having an optional response. This form of WSDL operation requires the use of a CICS Channel.

System action: The Web services assistant continues processing.

User response: Change the value of the PGMINT parameter to specify a value of CHANNEL.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9656E The WSDL file does not contain any binding elements. There must be at least one WSDL binding.

Explanation: DFHWS2LS has processed a WSDL document that does not include any binding elements. DFHWS2LS requires that there is at least one SOAP binding in the WSDL document.

System action: The Web services assistant continues processing.

User response: Alter the WSDL document so that it does include a WSDL binding.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9657W The WSDL file contains *elementType* elements but the *parameter* parameter has not been specified. These elements are ignored.

Explanation: DFHWS2LS has processed a WSDL document that includes a type of content that is only supported when a specific input parameter is set. For example, WS-Policy content is only supported if a WSPOLICY-DIRECTORY is set.

System action: The Web services assistant continues processing. The unsupported content is ignored.

User response: Consider using the specified parameter in order to ensure that the WSDL document is fully processed.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9658E Directory *directory* cannot be read.

Explanation: A directory in the Unix file system cannot be accessed. This is probably because the userid the Web services assistant is executing under does not have read permission for the directory (or one of its parent directories).

System action: The Web services assistant continues processing.

User response: Ensure that the userid used is granted permission to read the directory indicated.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9659E Directory *directory* is not a valid directory.

Explanation: A directory in the Unix file system is invalid. This is probably because the name specified indicates a specific file rather than a directory.

System action: The Web services assistant continues processing.

User response: Ensure that the directory used is valid.

Module: DFHWS2LS, DFHLS2WS

Destination: SYSPRINT

DFHPI9660I WS-Policy file *file* has been processed.

Explanation: A WS-Policy file from the WSPOLICY-DIRECTORY has been processed by DFHLS2WS.

System action: The Web services assistant continues processing.

User response: This informational message can be safely ignored.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9661E File *file* is not a CICS WS-Policy file.

Explanation: The content of the specified file is not recognized as being a CICS WS-Policy file.

System action: The Web services assistant continues processing.

User response: The files within the WSPOLICY-DIRECTORY should all be CICS WS-Policy files. Consider correcting the file or removing it from the directory.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9662E An exception was thrown whilst processing WS-Policy file *file*. The exception message is: *exception*.

Explanation: A problem occurred during the processing of a CICS WS-Policy file. The nature of the problem is indicated in the exception.

System action: The Web services assistant continues processing.

User response: Consider the message from the exception. It probably indicates a problem within the WS-Policy file that requires correction.

Module: DFHLS2WS

Destination: SYSPRINT

DFHPI9663E Operation *Operation* specified a SOAP MEP of *specified_MEP*. The only SOAP MEP supported is *supported_MEP*.

Explanation: A WSDL 2.0 document contained an Operation that specified a SOAP Message Exchange Pattern (MEP) that is not supported.

System action: The Web services assistant continues processing.

User response: Consider changing the WSDL document to use a supported SOAP Message Exchange Pattern.

Module: DFHWS2LS

Destination: SYSPRINT

DFHPI9664E The value specified for parameter *parameter* is invalid. Valid values are *values*.

Explanation: A value has been specified for one of the parameters to DFHLS2WS or DFHWS2LS that is invalid.

System action: The Web Services assistant continues processing.

User response: Correct the parameter value passed to the CICS Web Services assistant before retrying. More information on the permissible values for this parameter can be found in the CICS Web Services assistant's log file and the *CICS Web Services* manual.

Note: This message cannot be changed with the message editing utility.

Module: DFHLS2WS, DFHWS2LS

Destination: SYSPRINT

DFHPI9665E The WSDL binding for operation *operation* specifies an invalid message. *messagefound* was found, but *messageexpected* was expected.

Explanation: A WSDL document contained a Binding for an Operation. There is a mismatch between the Messages specified in the BindingOperation and the Messages specified in the Operation.

System action: The Web services assistant continues processing.

User response: Correct the error in the WSDL document and reprocess it using DFHWS2LS.

Note: This message cannot be changed with the message editing utility.

Destination

SYSPRINT

Module: DFHWS2LS

DFHPI9666E A complextype can not contain more than one 'any' type.

Explanation: An XML 'any' has been defined twice within the same construct in the WSDL. This is not supported by DFHWS2LS except through the use of minOccurs and maxOccurs attributes.

System action: The Web services assistant continues processing.

User response: Consider changing the WSDL document or XML schema to avoid this problem. For example, you could:

1. Change the problematic XML construct for a different one that is supported by DFHWS2LS. For example, the `xsd:any` construct is supported by DFHWS2LS and can be used as a replacement for most other constructs at mapping level 2.1 onwards. A change of this type can usually be made without breaking interoperability with partner processes that are implemented using the original XML schema or WSDL document.

If changing/simplifying the XML schema or WSDL is not acceptable then other options exist:

1. At runtime level 2.1 onwards you can use the XML-ONLY parameter to opt-out of the CICS supplied XML transformations service. This results in a WSBIND file being generated that tells CICS that the application will work directly with the DFHWS-BODY container.
2. Other products may exist that support the required XML constructs. For example, IBM's Rational Developer for System Z (RDz) product can generate WSBIND files that use a different underlying transformation service and are subject to a different set of restrictions.
3. If you are implementing a Web service provider application then you could consider writing your own XML capable SOAP 'apphandler'.
4. If you are implementing a Web service requester application then you could consider writing an XML capable application that uses the DFHPIRT channel linkable SOAP interface.

Note: This message cannot be changed with the message editing utility.

Destination

SYSPRINT

Module: DFHWS2LS

DFHPI9667E The supplied WSDL contains an 'any' or 'anytype' element. This is only supported when 'PGMINT' is set to 'CHANNEL'

Explanation: DFHWS2LS has processed a WSDL document that includes an `xsd:any` element or an `xsd:anyType` element. These constructs are supported by DFHWS2LS but they result in the XML content being stored in a separate container at runtime. This in turn requires the use of PGMINT=CHANNEL.

DFHPRnnnn messages

DFHPR0101I *date time applid* The table entry for partner *ptnrname* has been replaced.

Explanation: This is an informational message indicating that the partner resource manager has

System action: The Web services assistant continues processing.

User response: Change the value of the PGMINT parameter to specify a value of CHANNEL.

Note: This message cannot be changed with the message editing utility.

Destination

SYSPRINT

Module: DFHWS2LS

DFHPI9668E Invalid value specified for the XML-ONLY parameter. Valid values are: TRUE or FALSE.

Explanation: An invalid value has been specified for the XML-ONLY parameter.

System action: The Web services assistant continues processing.

User response: Correct the value of the XML-ONLY parameter.

Note: This message cannot be changed with the message editing utility.

Destination

SYSPRINT

Module: DFHWS2LS, DFHLS2WS

DFHPI9676E The supplied WSDL contains constructs that are only supported when 'PGMINT' is set to 'CHANNEL'.

Explanation: DFHWS2LS has processed an XML schema that includes a construct that results in CICS containers being used. This in turn requires the use of PGMINT=CHANNEL.

System action: The Web services assistant continues processing.

User response: Change the value of the PGMINT parameter to specify a value of CHANNEL.

Module: DFHWS2LS

Destination: SYSPRINT

replaced the existing table entry for the *ptnrname* partner, with a new table entry.

System action: The system continues normally.

User response: None.

Module: DFHPRPT

Destination: CSRL

DFHPR0102I *date time applid* **The table entry for partner *ptnrname* has been added.**

Explanation: This is an informational message indicating that the partner resource manager has added a new table entry for the *ptnrname* partner.

System action: The system continues normally.

User response: None.

Module: DFHPRPT

XMEOUT Parameters: *date, time,applid, ptnrname*

Destination: CSRL

DFHPR0103I *date time applid* **The table entry for partner *ptnrname* has been deleted.**

Explanation: This is an informational message indicating that the partner resource manager has deleted the table entry for the *ptnrname* partner.

System action: The system continues normally.

User response: None.

Module: DFHPRPT

XMEOUT Parameters: *date, time,applid, ptnrname*

Destination: CSRL

DFHPR0104I *applid* **Partner resource manager initialization has started.**

Explanation: This is an informational message indicating that partner resource manager initialization has started.

System action: Initialization continues.

User response: None.

Module: DFHPRIN1

DFHPSnnnn messages

DFHPS5366 *applid* **The system spooling interface initialization program DFHPSIP is not present.**

Explanation: CICS attempted to link to DFHPSIP but the attempt failed because DFHPSIP was not in the CICS program library.

System action: CICS terminates system spooler initialization.

User response: Place DFHPSIP in the CICS program library.

XMEOUT Parameter: *applid*

Destination: Console

DFHPR0105I *applid* **Partner resource manager initialization has ended.**

Explanation: This is an informational message indicating that partner resource manager initialization has completed successfully.

System action: Initialization continues.

User response: None. You can suppress this message with SIT parameter, MSGLVL=0.

Module: DFHPRIN1

XMEOUT Parameter: *applid*

Destination: Console

DFHPR0106I *applid* **Partner resource manager initialization has failed.**

Explanation: The partner resource manager has failed to initialize successfully.

System action: Message DFHSI1522 is issued following this message. CICS terminates or continues initialization depending upon the operator's response to message DFHSI1522. An exception trace entry is written at the time the failure is detected. Other CICS components called by partner resource manager initialization may also issue messages or write trace entries.

User response: Decide whether CICS can continue execution without the partner resource manager, and respond accordingly to message DFHSI1522. You should also investigate why the partner resource manager failed to initialize, starting from the data contained in the exception trace entry.

Module: DFHPRIN1

XMEOUT Parameter: *applid*

Destination: Console

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHPS5393 *date time applid* **Transaction *tranid* ended without closing data set on system spool.**

Explanation: The transaction *tranid* did not close a JES interface data set. Since only one transaction at a time can use the JES input interface, other transactions may be unnecessarily delayed.

System action: CICS executes a default CLOSE with the KEEP option for an INPUT data set or the DELETE option for an output data set.

User response: Change the program so that the transaction issues a SPOOLCLOSE before it terminates, and preferably immediately after the ENDFILE condition occurs on an input data set.

Module: DFHPSPDW

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CSMT

DFHPS5394 *date time applid* **A storage error has occurred in JES interface subtask, the JES interface has been disabled.**

Explanation: An MVS FREEMAIN macro, issued by the CICS JES interface subtask, has failed. To keep dynamic storage area (DSA) storage usable, CICS has terminated the JES interface subtask with MVS user abend 0170.

System action: CICS rejects subsequent SPOOL commands with the NOSPOOL response.

User response: CICS will continue running normally (apart from the rejection of SPOOL commands), and you can let it continue unless your spooling requirements are critical. To reinitiate the JES interface, shut down CICS and perform a warm restart (START=AUTO in the SIT or as an initialization override). Use the MVS dump to find the source of the problem. In the dump, register 6 addresses the instruction before the ABEND. Normally, register 2 contains the address and register 0 the length of the area to be released.

Module: DFHPSPST

XMEOUT Parameters: *date, time,applid*

Destination: CSMT

DFHPTnnnn messages

DFHPT0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code.

Alternatively

- Unexpected data has been input,
- Storage has been overwritten, or
- There has been a program check within a user program.

The code *aaa* is, if applicable, a 3-digit hexadecimal MVS system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The 4-digit code *bbbb*, which follows *aaa*, is a user abend code produced either by CICS or by another product on the user's system.

If *X'offset* contains the value X'FFFF, then module *modname* was in control at the time of the abend, but the program status word (PSW) was not addressing this module.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer.

Look up the MVS code *aaa*, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

If the *modname* insert contains the value *????*, then CICS was unable to determine which module has abnormally terminated. In this case, examine the system dump to determine which area of code has caused the program check.

The user should examine other messages to determine what the module which issued this message was doing at the time the abend occurred. From these messages they can deduce which product has produced the abend code *bbbb*. If *bbbb* is identified as a CICS code, it may be either alphameric or numeric.

- If the CICS code is alphameric (for example AKEA) then it is a CICS transaction abend code.
- If the CICS code is numeric (for example 1310), it refers to a CICS message (DFHTS1310 in our example).

If the user abend code is from another product (for example, IMS), refer to the appropriate messages and codes manual to determine the cause of the abend.

The entries in the appropriate manuals will give the user guidance regarding the nature of the error, and may also give some guidance concerning the appropriate user response. The program check may have occurred in a user program. If this is the case, the program check is usually followed by an ASRA or an ASRB transaction abend and a transaction dump.

If you want to suppress system dumps that precede ASRA and ASRB abends, you must specify this on an

entry in the dump table, using either CEMT or an EXEC CICS command. Further guidance on suppressing system dumps can be found in the *CICS System Definition Guide*.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHPTDM, DFHPTTW

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

Destination: Console

DFHPT0002 *applid* **A severe error (code *X'code*) has occurred in module *modname*.**

Explanation: An error has been detected in module *modname*. The code *X'code* is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System action: An exception entry is made in the trace table (*X'code* in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system administrator. This failure indicates a serious error in CICS. If you have not requested termination in the dump table, you may want to terminate CICS. For further information about CICS exception trace entries, see the *CICS Problem Determination Guide*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

DFHREGxx EJBROLE generator utility messages

The RACF EJBROLE generator utility (DFHREG) is a Java application program that extracts security role information from deployment descriptors, and generates a REXX program which can be used to define security roles to RACF.

DFHREG01E Invalid option: *argument*

Explanation: One or more invalid options were specified for the RACF EJBROLE generator utility.

System action: The utility terminates and does not generate an output file.

User response: Use the correct options. Valid options are `-seoprxf`, `-out`, `-f`, `-force`, `-v`, `-verbose`, and `-help`.

User response: Use the stack trace to determine possible causes of the problem.

DFHREG05E EJBROLE prefix exceeds 16 characters

Explanation: The prefix specified in the `-seoprxf` option is longer than 16 characters.

System action: The utility terminates and does not generate an output file.

User response: Check that you have specified the correct EJBROLE prefix. The prefix must not exceed 16 characters in length, and must match the EJBROLEPREFIX system initialization parameter for your CICS system.

DFHREG02E Unable to open file *fname*

Explanation: The input file does not exist.

System action: The utility terminates and does not generate an output file.

User response: Check that you have entered the file name correctly.

DFHREG06E Output file *fname* already exists

Explanation: You have specified an output file that already exists.

System action: The utility terminates and does not generate an output file.

User response: If you wish to overwrite an existing file, use the `-force` option. If not, specify a different name for the output file.

DFHREG03E Deployment descriptor in file *fname* is missing or invalid

Explanation: The deployment descriptor in the input file is either missing, or is invalid.

System action: The utility terminates and does not generate an output file.

User response: Check that the application assembler has provided a correctly constructed deployment descriptor in the input file.

DFHREG07E Unable to write to file *fname*

Explanation: A class used by the RACF EJBROLE generator has thrown an unexpected Java exception when attempting to write to its output file.

System action: The utility terminates and produces a stack trace. It does not generate an output file.

User response: Use the stack trace to determine possible causes of the problem.

DFHREG04E An unexpected error occurred while processing file *fname*

Explanation: A class used by the RACF EJBROLE generator has thrown an unexpected Java exception.

System action: The utility terminates and produces a stack trace. It does not generate an output file.

DFHRMnnnn messages

DFHRM0001 *applid* An abend (code *code*) has occurred at offset *X'offset'* in module *module*.

Explanation: An unexpected program check or abend occurred with abend code *aaa/bbbb*.

The program status word (PSW) at the time of the

program check or abend indicated that CICS was executing at offset *X'offset'* in module *modname*. This may have been caused by corruption of CICS code or control blocks.

System action: A system dump is taken and the system attempts to continue operation unless otherwise directed by entries in the dump table.

DFHRM0002 • DFHRM0104

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the cause of the program check or abend using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRMCD, DFHRMCD1, DFHRMCD2, DFHRMCI2, DFHRMCI3, DFHRMCI4, DFHRMDM, DFHRMLKQ, DFHRMLK1, DFHRMLK2, DFHRMLK3, DFHRMLK5, DFHRML1D, DFHRMLN, DFHRMRS, DFHRMLSF, DFHRMLSP, DFHRMLSD, DFHRMLSO, DFHRMLSS, DFHRMLSU, DFHRMNM, DFHRMNM1, DFHRMNS1, DFHRMNS2, DFHRMOFI, DFHRMRO, DFHRMROO, DFHRMROV, DFHRMRO1, DFHRMROS, DFHRMROU, DFHRMRO2, DFHRMRO3, DFHRMRO4, DFHRMR1D, DFHRMR1E, DFHRMR1K, DFHRMR1S, DFHRMSL, DFHRMSLF, DFHRMSLJ, DFHRMSLL, DFHRMSLD, DFHRMSLV, DFHRMSL1, DFHRMSL2, DFHRMSL3, DFHRMSL4, DFHRMSL5, DFHRMSL6, DFHRMSL7, DFHRMST, DFHRMST1, DFHRMUO, DFHRMUW, DFHRMUWB, DFHRMUWE, DFHRMUWF, DFHRMUWH, DFHRMUWJ, DFHRMUWL, DFHRMUWN, DFHRMUWP, DFHRMUWQ, DFHRMUWS, DFHRMUWU, DFHRMUWV, DFHRMUWW, DFHRMUW0, DFHRMUW1, DFHRMUW2, DFHRMUW3, DFHRMU1C, DFHRMU1D, DFHRMU1E, DFHRMU1F, DFHRMU1G, DFHRMU1J, DFHRMU1K, DFHRMU1N, DFHRMU1R, DFHRMU1S, DFHRMU1U, DFHRMU1V, DFHRMU1W, DFHRMU1Q, DFHRMU1L, DFHRMVP1, DFHRMXNE, DFHRMXN2, DFHRMXN4, DFHRMXN5

XMEOUT Parameters: *applid, code, X'offset', module*

Destination: Console

DFHRM0002 *applid* **A severe error (code X'code') has occurred in module module.**

Explanation: The recovery manager domain has received an unexpected error response from some other part of CICS. The operation requested by recovery manager is described by code X'code'.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: A system dump is taken and the system attempts to continue operation unless specifically inhibited by dump table entries.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the cause of the problem as follows

1. Determine if the problem can be explained by any previous messages issued from some other CICS component.

2. Examine the symptom string.
3. Examine the dump.

If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRMDM, DFHRMCD1, DFHRMCD, DFHRMCI2, DFHRMCI3

XMEOUT Parameters: *applid, X'code', module*

Destination: Console

DFHRM0104 *date time applid Intersystem communication failure. Resource updates are being committed. Local resources may be out of sync with those on the remote system. Failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been interrupted. The remote system contains the coordinator of this unit of work and the notification of the outcome of the distributed unit of work has not been received.

The unit of work is unilaterally committing the local resource updates rather than waiting for the return of the coordinator system. The unit of work may not shunt for one of the following reasons

- The transaction definition specifies WAIT(NO).
- The unit of work includes an MRO session to a back-level CICS system which does not support the WAIT(YES) option, and the role of the session in the unit of work is such that it cannot await the return of the coordinator system.
- The unit of work includes an LU6.1 session, and the role of the session in the unit of work is such that it cannot await the return of the coordinator system.
- The unit of work involves a task related user exit which is not enabled with the INDOUBTWAIT option.
- The unit of work has updated a recoverable transient data destination, which is defined with WAIT(NO).
- The unit of work involves the installation of CICS resource definitions from the CSD (CICS system definition) file.

Even if the unit of work was shunted, one of the following reasons will cause it to take unilateral action

- The WAITTIME specified in the transaction definition has expired.
- Resynchronization has been preempted by either
 - Setting the connection with the remote system NOTPENDING.

- Setting the connection with the remote system NORECOVDATA.
- The XLNACTION attribute of the connection definition of the remote system specifying FORCE.
- Forcing the unit of work.

The local resource updates are being committed since either

- The unit of work has been explicitly forced to commit.
- The ACTION attribute of the definition of the locally executing transaction specified COMMIT.

One system may have committed its resource updates and the other backed out, leaving updates out of synchronization. This is checked for when communication is re-established, and one of the following messages is issued

DFHRM0110
DFHRM0111
DFHRM0112
DFHRM0113
DFHRM0114
DFHRM0115
DFHRM0116
DFHRM0117
DFHRM0118
DFHRM0119
DFHRM0120
DFHRM0121
DFHRM0122
DFHRM0123

The original failure information provides correlation between this message and its follow-up.

System action: The system commits the local resource updates and releases the locks associated with those updates.

User response: Take user-defined action, if any, to protect data integrity until the remote and the local data can be synchronized.

Module: DFHRMLSO

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0105 *date time applid Intersystem communication failure. Resource updates are being backed out. Local resources may be out of sync with those on the remote system. Failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been interrupted. The remote system contains the

coordinator of this unit of work and the notification of the outcome of the distributed unit of work has not been received.

The unit of work is unilaterally backing out the local resource updates rather than waiting for the return of the coordinator system. The unit of work may not shunt for one of the following reasons

- The transaction definition specifies WAIT(NO).
- The unit of work includes an MRO session to a back-level CICS system which does not support the WAIT(YES) option, and the role of the session in the unit of work is such that it cannot await the return of the coordinator system.
- The unit of work includes an LU6.1 session, and the role of the session in the unit of work is such that it cannot await the return of the coordinator system.
- The unit of work involves a task related user exit which is not enabled with the INDOUBTWAIT option.
- The unit of work has updated a recoverable transient data destination, which is defined with WAIT(NO).
- The unit of work involves the installation of CICS resource definitions from the CSD (CICS system definition) file.

Even if the unit of work was shunted, one of the following reasons will cause it to take unilateral action

- The WAITTIME specified in the transaction definition has expired.
- Resynchronization has been preempted by either
 - Setting the connection with the remote system NOTPENDING.
 - Setting the connection with the remote system NORECOVDATA.
 - The XLNACTION attribute of the connection definition of the remote system specifying FORCE.
 - Forcing the unit of work.

The local resource updates are being backed out since either

- The unit of work has been explicitly forced to backout.
- The ACTION attribute of the definition of the locally executing transaction specified BACKOUT.

One system might have committed its resource updates and the other backed out, leaving updates out of synchronization. This is checked for when communication is re-established, and one of the following messages is issued

DFHRM0110
DFHRM0111
DFHRM0112
DFHRM0113
DFHRM0114
DFHRM0115
DFHRM0116
DFHRM0117
DFHRM0118
DFHRM0119

DFHRM0120
DFHRM0121
DFHRM0122
DFHRM0123

The original failure information provides correlation between this message and its follow-up.

System action: The system backs out the local resource updates and releases the locks associated with those updates.

User response: Take user-defined action, if any, to protect data integrity until the remote and the local data can be synchronized.

Module: DFHRMLSO

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0106 *date time applid Intersystem communication failure. Resource updates will not be committed or backed out until session recovery. Failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been interrupted. The remote system that contains the coordinator of this unit of work failed and the notification of the outcome of the distributed unit of work has not been received. The definition if the locally executing transaction specifies WAIT(YES) so the local resource updates are being held locked. When communication with the remote system is re-established, the resource updates will be committed or backed out, according to the actions of the other system, and one of the following messages is issued

DFHRM0108
DFHRM0109
DFHRM0112
DFHRM0113
DFHRM0115
DFHRM0116
DFHRM0118
DFHRM0119
DFHRM0121
DFHRM0122

If the time specified by the WAITTIME in the transaction definition of the locally executing transaction expires before communication is re-established then the resource updates are committed or backed out in accordance with the ACTION attribute and one of the following messages is issued

DFHRM0104
DFHRM0105

If a decision to preempt resynchronization activity is taken at the local system by either

- Setting the connection with the remote system NOTPENDING.
- Setting the connection with the remote system NORECOVDATA.
- The XLNACTION attribute of the connection definition of the remote system specifying FORCE.
- Forcing the unit of work.

then again the resource updates are committed or backed out accordingly and one of the following messages is issued

DFHRM0125
DFHRM0126

System action: Processing continues. Locks associated with the resource updates are preserved.

User response: Re-establish communication with the remote system as soon as possible.

Module: DFHRMLSS

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0107 *date time applid Intersystem communication failure. Resource updates may be out of sync. Failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with a remote system has been interrupted. This may be due to the failure of a session to a remote system or the failure of a CFDT server system. The resource updates in the local system are committing or backing out. The notification of the outcome of the distributed unit of work might not reach the remote system or server. One system might commit its resource updates while the other backs them out leaving updates out of synchronization. This is checked for at session or server recovery, and one of the following messages is issued

DFHRM0110
DFHRM0111
DFHRM0114
DFHRM0117
DFHRM0120
DFHRM0123
DFHRM0135

If a decision to preempt resynchronization activity is taken at the local system by either

- Setting the connection with the remote system NOTPENDING.

- Setting the connection with the remote system NORECOVDATA.
- The XLNACTION attribute of the connection definition of the remote system specifying FORCE.
- Forcing the unit of work.

then again the resource updates are committed or backed out accordingly and DFHRM0127 is issued.

System action: The system commits or backs out the local resource updates and releases the locks associated with those updates. Information is retained to enable resynchronization with the remote system.

User response: Re-establish communication with the remote system as soon as possible.

Module: DFHRMLSO

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0108 *date time applid Intersystem communication recovery. Suspended resource updates now being committed. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: This message is issued during intersystem communication recovery as a follow up to message DFHRM0106. Communication with the remote system that is the coordinator of this unit of work has been re-established and resynchronization is taking place. It has now been established that the remote system completed the synchronization point. The local resource updates are being committed accordingly.

System action: The system commits the local resource updates and releases the locks associated with those updates.

User response: None.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0109 *date time applid Intersystem communication recovery. Suspended resource updates now being backed out. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: This is an informatory message issued during intersystem communication recovery as a follow up to message DFHRM0106. Communication with the remote system that is the coordinator of this unit of work has been re-established and resynchronization is taking place. It has now been established that the remote system did not complete the synchronization point. The local resource updates are being backed out accordingly.

System action: The system backs out the local resource updates and releases the locks associated with those updates.

User response: If required, restart the interrupted transaction.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0110 *date time applid Intersystem communication recovery. Unit of work found to be synchronized. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Resynchronization with the remote system which is a subordinate in the unit of work has occurred following the resumption of communication, or the unshunting of the unit of work on the local system. It was found either the local or remote system (or both) had already taken a decision for their parts of the distributed unit of work. It has now been established that the decisions in the local and remote systems are synchronized.

System action: Processing continues.

User response: None

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0111 *date time applid Intersystem communication recovery. Distributed unit of work found to be not synchronized. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Resynchronization with the remote system which is a subordinate in the unit of work has occurred following the resumption of communication, or the unshunting of the unit of work on the local system. It was found either the local or remote system (or both) had already taken a decision for their part of the distributed unit of work. It has now been established that the decisions of the local and remote systems are out of synchronization.

System action: Processing continues.

User response: Take user-defined action to resynchronize the resources in the local and remote systems if necessary.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0112 *date time applid Intersystem communication recovery. The remote system has reinitialized. The local unit of work is committed. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been resumed. Resynchronization with the remote system was attempted. It was found that the remote system has reinitialized and now has no knowledge of the unit of work. The resource updates of the distributed unit of work in the remote system might have committed or backed out.

If the session is an MRO session to a pre-CICS Transaction Server system, this message may be issued even if the remote system was not reinitialized. This can only occur if the session failed during its first unit of work since connection.

The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. This will never be received.

The local unit of work is committed in accordance with the ACTION attribute in the transaction definition.

System action: The system commits the unit of work and releases the locks associated with any resource updates.

User response: Take user-defined action to resynchronize the resources in the local and remote systems if necessary.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0113 *date time applid Intersystem communication recovery. The remote system has reinitialized. The local unit of work is backed out. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been resumed. Resynchronization with the remote system was attempted. It was found that the remote system has reinitialized and now has no knowledge of the unit of work. The resource updates of the distributed unit of work in the remote system might have committed or backed out.

If the session is an MRO session to a pre-CICS Transaction Server system, this message may be issued even if the remote system was not reinitialized. This can only occur if the session failed during its first unit of work since connection.

The unit of work in the local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. This will never be received.

The local unit of work is backed out in accordance with the ACTION attribute in the transaction definition.

System action: The system backs out the local resource updates and releases the locks associated with those updates.

User response: Take user-defined action to resynchronize the resources in the local and remote systems if necessary.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0114 *date time applid Intersystem communication recovery. The remote system has reinitialized. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been resumed. Resynchronization with the remote system was attempted. It was found that the remote system has reinitialized and now has no knowledge of the unit of work. The resource updates of the distributed unit of work in the remote system might have committed or backed out. The unit of work in the local system had previously committed or backed out.

System action: Processing continues.

User response: Take user-defined actions to resynchronize resources in local and remote systems if necessary.

Module: DFHRMLN

Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been resumed. Resynchronization with the remote system was attempted. The local system detected a protocol violation during resynchronization. The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. The local system cannot determine whether to commit or back out the resource updates to be consistent other resource changes in the distributed unit of work. The definition of the locally executing transaction will be used to decide whether to commit or back out the local resource updates. The local resource updates are committed in accordance with the ACTION attribute in the transaction definition.

System action: The system commits the local resource updates and releases the locks associated with those updates.

User response: Take user-defined action to resynchronize the resources in the local and remote systems.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0122 *date time applid Intersystem communication recovery. A protocol violation was detected during resynchronization with the remote system. Resource updates will be backed out. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been resumed. Resynchronization with the remote system was attempted. The local system detected a protocol violation during resynchronization. The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. The local system cannot determine whether to commit or back out the resource updates to be consistent other resource changes in the distributed unit of work. The definition of the locally executing transaction is used to decide whether to commit or back out the local resource updates. The local resource updates are backed out in accordance with the ACTION attribute in the transaction definition.

System action: The system backs out the local resource updates and releases the locks associated with those updates.

User response: Take user-defined action to resynchronize the resources in the local and remote systems.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0123 *date time applid Intersystem communication recovery. A protocol violation was detected during resynchronization with the remote system. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been resumed. Resynchronization with the remote system was attempted. The local system detected a protocol violation during resynchronization. The resource updates in the local system had previously committed or backed out.

System action: Processing continues.

DFHRM0124 • DFHRM0126

User response: Take user-defined action to resynchronize the resources in the local and remote systems.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0124 *date time applid* **Intersystem communication recovery. Resource updates are out of sync. network UOW**
netuowid remote system name.

Explanation: Intersystem communication recovery is in progress. The remote system has attempted to resynchronize a unit of work but the local system no longer has any knowledge of that unit of work. This is because the last agent or the presumed abort protocol is being used and the local system backed out the resource updates associated with the unit of work. The remote system has sent notification that the resource updates in the remote system did not back out.

System action: Processing continues.

User response: Take user-defined action to resynchronize the resources in the local and remote systems.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, netuowid, name*

Destination: CSMT

DFHRM0125 *date time applid* **Clear pending issued. The connection to the remote system has been set NOTPENDING. Resource updates will be committed. Original failure date** *mm/dd/yy* **failure time** *hh:mm:ss* **remote system name**
transaction *tranid task number trannum*
terminal *termid user userid network*
UOW *netuowid local UOW X'localuowid'.*

Explanation: The connection with the remote system has been set NOTPENDING or NORECOVDATA, or the connection is defined with XLNACTION(FORCE). The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. Setting the connection with the remote system NOTPENDING or NORECOVDATA preempts the notification of the outcome from the remote system. The definition of the locally executing transaction is used to decide whether to commit or back out the local resource updates. The local resource updates are committed in accordance with the ACTION attribute in the transaction definition.

System action: The system commits the local resource updates and releases the locks associated with those updates.

User response: Take user-defined action to resynchronize the resources in the local and remote systems.

Module:
DFHRMLN,DFHRMLK4,DFHRMLSO,DFHRMLSS

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0126 *date time applid* **Clear pending issued. The connection to the remote system has been set NOTPENDING. Resource updates will be backed out. Original failure date** *mm/dd/yy* **failure time** *hh:mm:ss* **remote system name**
transaction *tranid task number trannum*
terminal *termid user userid network*
UOW *netuowid local UOW X'localuowid'.*

Explanation: The connection with the remote system has been set NOTPENDING or NORECOVDATA, or the connection is defined with XLNACTION(FORCE). The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. Setting the connection with the remote system NOTPENDING or NORECOVDATA preempts the notification of the outcome from the remote system. The definition of the locally executing transaction is used to decide whether to commit or back out the local resource updates. The local resource updates are backed out in accordance with the ACTION attribute in the transaction definition.

System action: The system backs out the local resource updates and releases the locks associated with those updates.

User response: Take user-defined action to resynchronize the resources in the local and remote systems.

Module:
DFHRMLN,DFHRMLK4,DFHRMLSO,DFHRMLSS

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0127 *date time applid* **Clear pending issued. The connection to the remote system has been set NOTPENDING. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.**

Explanation: Communication between the systems had previously failed during a syncpoint. Resynchronization between the systems has been preempted. The connection with the remote system has been

- Set NOTPENDING,
- Set NORECOVDATA,
- Reestablished and is defined with XLNACTION(FORCE).

If the unit of work in the local system was in-doubt about the outcome of the distributed unit of work, local resource updates are committed or backed out in accordance with the ACTION attribute in the transaction definition.

Since no resynchronization with the remote system is attempted, the resource updates in the local and remote systems might be out of synchronization.

System action: Processing continues.

User response: Take user-defined action to resynchronize the resources in the local and remote systems.

Module:
DFHRMLN,DFHRMLK4,DFHRMLSO,DFHRMLSS

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

Destination: CSMT

DFHRM0128 *date time applid* **Intersystem communication failure. Resource updates are being committed. Local resources may be out of sync with those on the remote system. Failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.**

Explanation: Communication with the remote system has failed. The resource updates in the local system are committing. The notification of the outcome of the distributed unit of work might not reach the remote system. One system might commit its resource updates while the other backs them out leaving updates out of synchronization. There will be no resolution message

when the local and remote systems resynchronize, because the remote system does not provide the local system with resynchronization information.

System action: The system commits the local resource updates and releases the locks associated with those updates. Information is retained to enable resynchronization with the remote system.

User response: Reestablish communication with the remote system as soon as possible. The local system is the coordinator, and will provide indoubt resolution information for the remote system when communication is reestablished. If the remote system has taken a heuristic decision regarding the unit of work, then it should have provided diagnostic information to indicate this.

Module: DFHRMLSO

XMEOUT Parameters: *date, time,applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid,X'localuowid'*

Destination: CSMT

DFHRM0129 *date time applid* **Intersystem communication failure. Resource updates are being backed out. Local resources may be out of sync with those on the remote system. Failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.**

Explanation: Communication with the remote system has failed. The resource updates in the local system are backing out. The notification of the outcome of the distributed unit of work might not reach the remote system. One system might commit its resource updates while the other backs them out leaving updates out of synchronization. There will be no resolution message when the local and remote systems resynchronize, because the remote system does not provide the local system with resynchronization information.

System action: The system backs out the local resource updates and releases the locks associated with those updates. Information is retained to enable resynchronization with the remote system.

User response: Reestablish communication with the remote system as soon as possible. The local system is the coordinator, and will provide indoubt resolution information for the remote system when communication is reestablished. If the remote system has taken a heuristic decision regarding the unit of work, then it should have provided diagnostic information to indicate this.

Module: DFHRMLSO

XMEOUT Parameters: *date, time,applid, mm/dd/yy,*

DFHRM0130 • DFHRM0134

hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'

Destination: CSMT

DFHRM0130 *applid* **Recovery manager has successfully quiesced.**

Explanation: The recovery manager has quiesced.

The warm keypoint has been taken.

System action: Shutdown continues.

User response: None.

Module: DFHRMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRM0131 *applid* **Resynchronization required with protocol resources.**

Explanation: This system contained unquiesced state when shutdown was performed. The state may consist of units of work or lognames (lognames can exist for communications protocols IRC and APPC only). This system may need to perform resynchronization with other systems to resolve the outcome of any distributed units of work. This can be done as part of the work of a subsequent CICS system.

The systems with which resynchronization is necessary are reported in messages DFHRM0132 or DFHRM0133.

A subsequent CICS start which reinitializes the catalog and system log data would discard the units of work and/or lognames and cause a possible loss of data integrity.

System action: Shutdown continues.

User response: To maintain data integrity, perform an AUTO start and enable resynchronization with the appropriate systems.

Module: DFHRMNS2

XMEOUT Parameters: *applid, protocol*

Destination: Console

DFHRM0132 *date time applid* **Resynchronization is required with protocol system system.**

Explanation: A unit of work active in the system at shutdown requires resynchronization with the named system. The unit of work was part of a distributed unit of work and resynchronization is necessary to resolve the outcome.

Resynchronization occurs after a subsequent start unless catalog and system log information is reinitialized.

System action: Shutdown continues.

User response: If necessary, take user-defined action to protect data integrity until the remote and the local data can be synchronized.

Module: DFHRMLKQ, DFHRMNS2

XMEOUT Parameters: *date, time, applid, protocol, system*

Destination: CSMT

DFHRM0133 *date time applid* **Resynchronization may be required with protocol system system.**

Explanation: This system exchanged lognames with the remote system and so may require resynchronization with that system.

Resynchronization occurs after a subsequent CICS start unless catalog or system log information is reinitialized.

System action: Shutdown continues.

User response: If necessary, take user-defined action to protect data integrity until resynchronization takes place.

Module: DFHRMNS2

XMEOUT Parameters: *date, time, applid, protocol, system*

Destination: CSMT

DFHRM0134 *applid* **Recovery manager domain failed reading the global catalog, or did not find its control record.**

Explanation: The recovery manager domain has failed while reading the global catalog. Either it was trying to establish the status of the system at the termination of the last execution of CICS and the control record was missing or invalid, or else it could not read the catalog successfully.

System action: CICS terminates abnormally with a dump.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the cause of the error using the dump or other diagnostic messages which have been issued (for example, from VSAM or MVS).

If the problem has been caused by an I/O error, see the description of the CICS message already issued from the catalog for guidance.

If the problem has been caused by an invalid data length, see the exception trace entry in the trace table.

If the problem has been caused by a missing control record, the catalog is not suitable for a recoverable start and you should perform an initial start.

Module: DFHRMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRM0135 *date time applid Intersystem communication recovery. Resource updates found to be synchronized. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Resynchronization with the remote system which is a subordinate in the unit of work has occurred following the resumption of communication, or the unshunting of the unit of work on the local system. Either the remote system had already taken a decision for its local resource updates in the distributed unit of work, or the remote system was waiting for the decision from this system. In either case, it has now been established that the resource updates in the local and remote systems are synchronized.

System action: Processing continues.

User response: None

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0136 *applid The applid has changed from old_applid to new_applid. Recovery cannot continue.*

Explanation: Recovery is requested, but the applid recovered by the recovery manager domain from the CICS catalog is different from that specified for the system. This implies that the identity of the system on the network has changed. The system must maintain the same identity on the network for resynchronization to be performed with other systems.

System action: The system is terminated.

User response: If recovery and resynchronization is required, correct the applid in the SIT and restart the system. Do not reinitialize catalog or system log information unless you wish to change the identity of the CICS system.

Module: DFHRMDM

XMEOUT Parameters: *applid, old_applid, new_applid*

Destination: Console

DFHRM0137 *applid Recovery of local logname failed. Recovery cannot continue.*

Explanation: Recovery is requested, but the local logname could not be recovered by the Recovery Manager domain from the CICS catalog.

System action: The system is terminated.

User response: Investigate the possible causes of the failure to read the required data from the CICS catalog. Was the correct Catalog dataset being used? Could the Catalog dataset have been corrupted?

Module: DFHRMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRM0139 *date time applid UOWLINK deleted by user action. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: This message is issued to confirm the deletion of a UOW-link (UOWLINK) by a CEMT or EXEC CICS SET UOWLINK ACTION(DELETE) command. This command is used to delete links that were created by connections that have since been discarded.

System action: The system continues normally.

User response: None.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0140 *applid Recovery manager autostart override found with value: 'autofield'.*

Explanation: Recovery manager has located an autostart override record in the global catalog data set which has one of the values AUTOINIT, AUTOCOLD, or AUTOASIS.

System action: The system continues. If this is an AUTO start, the autostart override value in the message is used to determine the type of start to be performed.

User response: No action is necessary.

Module: DFHRMDM

XMEOUT Parameters: *applid, autofield*

Destination: Console

DFHRM0141 *applid* Recovery manager autostart override record is not present. Normal processing continues.

Explanation: There is no autostart override record in the global catalog data set. If you have not used the utility DFHRMUTL this message is normal for an AUTO start and does not represent a problem.

System action: The default auto start processing continues. This is equivalent to an AUTOASIS value in an autostart override record.

User response: No action is necessary.

Module: DFHRMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRM0142 *applid* Recovery manager autostart override record found to be: '*autofield*', and this is not a valid value. AUTOASIS is assumed instead.

Explanation: Recovery manager has located an autostart override record in the global catalog data set which does not have one of the values AUTOINIT, AUTOCOLD, or AUTOASIS.

System action: AUTOASIS is assumed, a dump is taken, and the system continues. The override record will be removed at startup as usual.

User response: No action is necessary. To correctly set the autostart override record the utility DFHRMUTL should be used prior to starting CICS.

Module: DFHRMDM

XMEOUT Parameters: *applid, autofield*

Destination: Console

DFHRM0143 *applid* Recovery manager autostart override record is invalid. 'AUTOASIS' is assumed.

Explanation: Recovery manager has found an autostart override record in the global catalog data set, but it has an invalid length or is in the wrong format.

System action: A dump is taken and the system continues. The autostart override value is assumed to be AUTOASIS. The autostart override record is removed from the catalog at startup as usual.

User response: Investigate why the global catalog data set should have been incorrectly modified. The DFHRMUTL utility is used to correctly set the autostart override record prior to starting CICS.

Module: DFHRMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRM0144 *applid* Recovery manager catalog record indicates that no recovery is possible. An initial start is required.

Explanation: Recovery manager has read its catalog record from the global catalog data set and this indicates that no recovery is possible. The most likely reason is that CICS detected a corrupted log before the last CICS shutdown. Startup cannot continue with these start parameters.

System action: CICS terminates abnormally with a dump.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Determine whether the CICS startup job correctly identifies the global catalog data set. If it does, the system log may be unusable and you must perform an initial start of CICS.

If the global catalog data set was incorrectly identified, retry the job with the correct global catalog data set.

Module: DFHRMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRM0145 *applid* Recovery manager does not recognize the form of start requested by SIT parameters and overrides.

Explanation: Recovery manager cannot determine what sort of CICS start to perform. The parameters on the SIT and any settings read from the catalog data set are inconsistent with a valid start type.

System action: CICS terminates abnormally with a dump.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This failure is caused by an internal CICS inconsistency. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRM0146D *applid* Global catalog data set recovery data not found. System log data will be lost. Reply 'GO' or 'CANCEL'.

Explanation: A cold start has been requested, and no recovery control record information was found in the global catalog data set. Either this is the first execution of CICS with this global catalog data set, the wrong

global catalog data set is being used, or the global catalog data set has been initialized without information necessary for recovery.

System action: The system waits for a response.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If this is the first time CICS has been run with this global catalog data set, or if it is intended to delete all recovery information from the system log, reply 'GO'. This forces an initial start with no system log information retained from previous CICS executions. In particular, information used to resynchronize with remote CICS systems is cleared as well as all local recovery information.

If this is not the first time, or if you wish to retain system log information and try with another global catalog data set, reply 'CANCEL' to terminate this CICS execution. Nothing is discarded in this case. Check the global catalog data set and try again.

Module: DFHRMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRM0147 *applid* Reply CANCEL was received.

Explanation: A reply of 'CANCEL' was received in response to message DFHRM0146.

System action: CICS terminates.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: None.

Module: DFHRMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRM0148 *date time applid* Intersystem communication recovery. Resource updates are in sync. network UOW id *netuowid* remote system *name*.

Explanation: Intersystem communication recovery is in progress. The remote system has attempted to resynchronize a unit of work and the local system no longer has any knowledge of that unit of work. This is because the local system was the coordinator, and the last agent or presumed abort protocols were being used. Any local resource updates associated with the unit of work were backed out. The remote system has sent notification that the resource updates in the remote system are still indoubt (and will be backed out following resynchronization) or have already been backed out.

System action: Processing continues.

User response: None.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, netuowid, name*

Destination: CSMT

DFHRM0149I *applid* Recovery manager autostart override record will be deleted.

Explanation: Recovery manager has found an autostart override record in the global catalog data set. It is deleted after the correct startup type is determined unless this is a diagnostic run. If this is a diagnostic run the recovery manager global catalog records are not altered.

System action: Unless this is a diagnostic run the record is removed from the global catalog data set and will not influence subsequent starts.

User response: None.

Module: DFHRMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRM0150 *applid* Diagnostic run due to AUTODIAG override is finished. CICS will now terminate.

Explanation: Recovery manager has performed a diagnostic run and now terminates with a dump. This is a result of an AUTODIAG override in the auto override record.

System action: The system terminates. A dump is taken.

User response: No further action is necessary.

Module: DFHRMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRM0151 *applid* Diagnostic run is initiated. A simulated AUTO start is performed for diagnostic purposes only.

Explanation: Recovery manager has detected a diagnostic run override (AUTODIAG) on the global catalog. This run of CICS will not perform any application processing and is for diagnostic purposes only.

System action: The system continues. A dump is taken later prior to terminating.

User response: No further action is necessary at this time. See the *CICS Problem Determination Guide* for details of the reasons you might want to perform a diagnostic run, and for other diagnostics you may wish to preserve at the same time.

DFHRM0152 • DFHRM0201

Module: DFHRMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRM0152 *applid* **Recovery manager autostart override record is set to AUTODIAG.**

Explanation: The recovery manager auto override record on the global catalog has been set to AUTODIAG to allow a diagnostic run before the next initial start.

System action: Processing continues.

User response: No action is necessary. See the *CICS Problem Determination Guide* for information about how to perform a diagnostic run.

Module: DFHRMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRM0154 *applid* **Uncommitted local resource updates found on the System Log. COLD start is NOT preserving data integrity.**

Explanation: A cold start has been requested, but units of work containing uncommitted local resource updates have been found on the system log. The cold start will ignore this information and so data integrity will not be preserved for the affected resources.

System action: The cold start continues.

Message DFHME0116 should be produced containing the symptom string for this problem.

Module: DFHRMU1E

XMEOUT Parameter: *applid*

Destination: Console

DFHRM0156 *applid* **This COLD start will NOT cause any damage to local resources.**

Explanation: The recovery manager established that there were no uncommitted resource updates recorded on the system log from a previous execution of CICS. Thus there is no local recovery necessary.

System action: System initialization continues.

User response: None.

Module: DFHRMU1E

XMEOUT Parameter: *applid*

Destination: Console

DFHRM0200 *applid indoubt_uows* **indoubt UOWs were reconstructed.**

Explanation: This message displays the number of indoubt units of work (UOWs), *indoubt_uows*, which were reconstructed on a warm or emergency restart.

It is issued only if there is at least one UOW which is indoubt. It is issued before any of the reconstructed UOWs are unshunted and processed in parallel.

System action: The system has performed the backwards scan of the system log and is about to start unshunting UOWs which need further processing.

The system commits or backs out UOWs which were indoubt and for which either of the following conditions apply

- The transaction is defined with WAIT(NO)
- The transaction is defined with WAIT(YES) and the WAITTIME has expired.

Note: A WAITTIME of zero implies an indefinite wait.

Where communications with the coordinator systems is possible, UOWs are unshunted and updates are committed or backed out on the local system. These updates are synchronized with the updates made on the coordinator system.

Where communications with the coordinator systems is not immediately possible, UOWs are preserved until resynchronization with the coordinator system is possible or until the WAITTIME expires. The suspension of these indoubt UOWs causes updated recoverable resources to remain locked against subsequent updates.

User response: None.

If further investigation is required, use the CEMT INQUIRE UOW INDOUBT and CEMT INQUIRE UOWENQ RETAINED commands once CICS has initialized. These commands detail the indoubt UOWs and the associated retained enqueues.

Module: DFHRMU1E.

XMEOUT Parameters: *applid, indoubt_uows*

Destination: Console

DFHRM0201 *date time applid bfail_uows* **backout-failed and cfail_uows commit-failed UOWs were reconstructed.**

Explanation: This message displays the number of backout-failed units of work (UOWs), *bfail_uows*, and the number of commit-failed UOWs, *cfail_uows*, which were reconstructed on a warm or emergency restart.

This message is issued only if there is at least one such UOW. It is issued before any of the reconstructed UOWs are unshunted and processed in parallel. and

backout-failed UOWs are processed. Many of these UOWs are likely to be resolved during CICS initialization. Any true commit-failed or backout-failed UOWs are highlighted by further messages issued during CICS initialization. Also, once CICS is fully initialized, the master terminal transaction (CEMT) can be used to determine whether there are any outstanding commit-failed or backout-failed UOWs.

System action: The system has performed the backwards scan of the system log and is about to start unshunting UOWs which need further processing.

UOWs which have failed to back out locally or commit locally are retried.

User response: None.

Module: DFHRMU1E

XMEOUT Parameters: *date, time, applid, bfail_uows, cfail_uows*

Destination: CSMT

DFHRM0202 *date time applid inflight_uows* **inflight UOWs were reconstructed.**

Explanation: This message displays the number of inflight units of work (UOWs), *inflight_uows*, which were reconstructed on an emergency restart.

It is issued only if there is at least one UOW which is inflight. It is issued before any of the reconstructed UOWs are unshunted and processed in parallel.

System action: The system has performed the backwards scan of the system log and is about to start unshunting UOWs which need further processing.

User response: None.

Module: DFHRMU1E.

XMEOUT Parameters: *date, time, applid, inflight_uows*

Destination: CSMT

DFHRM0203 *applid* **There are *indoubt_uows* indoubt, *cfail_uows* commit-failed and *bfail_uows* backout-failed UOWs.**

Explanation: This message displays the numbers of indoubt units of work (UOWs) *indoubt_uows*, backout-failed UOWs *bfail_uows*, and commit-failed UOWs *cfail_uows* in the CICS system at the time of the normal shutdown.

It is issued only if there is at least one such UOW. If there are none, message DFHRM0204 is issued instead.

Messages DFHRM0203 and DFHRM0204 can be used to determine whether or not it is safe to cold start CICS following a normal shutdown without losing resynchronization information. See DFHRM0204 for more information.

System action: Shutdown processing continues.

User response: None.

Module: DFHRMU1K

XMEOUT Parameters: *applid, indoubt_uows, cfail_uows, bfail_uows*

Destination: Console

DFHRM0204 *applid* **There are no indoubt, commit-failed or backout-failed UOWs.**

Explanation: There are no indoubt, commit-failed, or backout-failed units of work (UOWs) in the CICS system at the time of the normal shutdown.

If there are any such units of work, message DFHRM0203 is issued.

This message indicates that it safe to do a cold start of CICS without losing any resynchronization information.

System action: Shutdown processing continues.

User response: None.

Module: DFHRMU1K

XMEOUT Parameter: *applid*

Destination: Console

DFHRM0205 *date time applid* **An activity keypoint has been successfully taken.**

Explanation: CICS has successfully taken an activity keypoint. This message is also issued for the shutdown keypoint.

System action: Normal processing continues..

User response: None.

Module: DFHRMR1K

XMEOUT Parameters: *date, time, applid*

Destination: CSMT

DFHRM0208 *date time applid* **Intersystem communication recovery. A unit of work recovered only for remote resynchronization is now being committed. Local resources are not synchronized with the unit of work. Original failure date *mm/dd/yy* failure time *hh:mm:ss* remote system name *transaction tranid* task number *trannum* terminal *termid* user *userid* network UOW *netuowid* local UOW *X'localuowid'*.**

Explanation: This message is issued during intersystem communication recovery as a follow up to message DFHRM0106. Communication with the remote system that is the coordinator of this unit of work has been re-established and resynchronization is taking

place. It has now been established that the remote system completed the synchronization point. Since this unit of work was recovered as part of a cold start, no local resources were locked pending this resynchronization and local resources are not synchronized with this decision.

System action: The system allows the unit of work to commit for the purposes of resynchronization with remote systems. No local resources are changed.

User response: None.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0209 *date time applid Intersystem communication recovery. A unit of work recovered only for remote resynchronization is now being backed out. Local resources are not synchronized with the unit of work. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: This message is issued during intersystem communication recovery as a follow up to message DFHRM0106. Communication with the remote system that is the coordinator of this unit of work has been re-established and resynchronization is taking place. It has now been established that the remote system did not complete the synchronization point. Since this unit of work was recovered as part of a cold start, no local resources were locked pending this resynchronization and local resources are not synchronized with this decision.

System action: The system allows the unit of work to back out for resynchronization with remote systems. No local resources are changed.

User response: None.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0212 *date time applid Intersystem communication recovery. The remote system has reinitialized. The unit of work is treated as committed. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been re-established. Resynchronization with the remote system was attempted. It was found that the remote system has restarted and has no knowledge of the unit of work. The distributed unit of work in the remote system might have committed or backed out.

The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. This will never be received.

Since this unit of work was recovered only for remote resynchronization, no local resources were locked pending this decision and local resources are not synchronized with the distributed unit of work. The unit of work is treated as committed in accordance with the ACTION attribute in the transaction definition.

If communication was via an MRO session to a pre-CICS Transaction Server system, this message may be issued even if the remote system was not restarted. This can only occur if the session failed during its first unit of work since connection.

System action: The system continues. Further remote resynchronization treats this unit of work as committed.

User response: Take user-defined action to resynchronize the resources in the local and remote systems if necessary.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0213 *date time applid Intersystem communication recovery. The remote system has reinitialized. The unit of work is treated as backed out. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been re-established. Resynchronization with the remote system was attempted. It was found that the remote system has restarted and has no knowledge of the unit of work. The distributed unit of work in the

remote system might have committed or backed out. The unit of work in the local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. This will never be received.

Since the unit of work was recovered only for remote resynchronization no local resources were locked pending this outcome and local resources are not synchronized with the distributed unit of work.

The local unit of work is treated as backed out in accordance with the ACTION attribute in the local transaction definition.

If communication was via an MRO session to a pre-CICS Transaction Server system, this message may be issued even if the remote system was not reinitialized. This can only occur if the session failed during its first UOW since connection.

System action: The system continues. Further remote resynchronization treats this unit of work as backed out.

User response: Take user-defined actions to resynchronize resources in local and remote systems if necessary.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0214 *date time applid Intersystem communication recovery. The remote system has reinitialized. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been re-established. Resynchronization with the remote system was attempted. It was found that the remote system has restarted and has no knowledge of the unit of work. The distributed unit of work in the remote system might have committed or backed out.

Since this unit of work was recovered only for remote resynchronization, no local resources were locked pending a decision and so local resources are not synchronized with the distributed unit of work.

System action: Processing continues.

User response: Take user-defined actions to resynchronize resources in local and remote systems if necessary.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy,*

hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'

Destination: CSMT

DFHRM0215 *date time applid Intersystem communication recovery. The remote system sent mixed heuristic outcome. The unit of work is treated as committed. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been re-established. Resynchronization with the remote system was attempted. It was found that some resource updates in the distributed unit of work committed and some backed out. The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. The notification received does not determine whether the unit of work should be committed or backed out. The unit of work is treated as committed in accordance with the ACTION attribute in the transaction definition.

Since this unit of work was recovered only for remote resynchronization, no local resources were locked pending this outcome and local resources are not synchronized with this decision.

System action: The system continues. Further remote resynchronization treats this unit of work as committed.

User response: Take user-defined action to resynchronize resources in local and remote systems if necessary.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0216 *date time applid Intersystem communication recovery. The remote system sent mixed heuristic outcome. The unit of work is treated as backed out. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been re-established. Resynchronization with the remote system was attempted. It was found that some resource updates in the distributed unit of work

DFHRM0218 • DFHRM0219

committed and some backed out. The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. The notification received does not determine whether to commit or back out the resource updates. The local unit of work is treated as backed out in accordance with the ACTION attribute in the transaction definition.

Since this unit of work was recovered only for remote resynchronization, no local resources were locked pending this decision and local resources are not synchronized with the distributed unit of work.

System action: The system continues. Further remote resynchronization treats this unit of work as backed out.

User response: Take user-defined actions to resynchronize resources in local and remote systems if necessary.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0218 *date time applid Intersystem communication recovery. Resynchronization information from the remote system was not sufficient to determine the outcome of the unit of work. Local resources are not synchronized. The distributed unit of work is committed. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW uowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been re-established. Resynchronization with the remote system was attempted. The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. Information received from the remote system did not determine whether to commit or back out the unit of work.

The unit of work is committed in accordance with the ACTION attribute in the local transaction definition.

Because this unit of work was recovered only for remote resynchronization, no local resources were locked pending resolution of the unit of work, and local resources are not synchronized with this commit.

Any further remote resynchronization treats this unit of work as committed.

System action: The system commits the unit of work for the purposes of remote resynchronization.

User response: Take user-defined actions to resynchronize resources in local and remote systems, if necessary.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, uowid, X'localuowid'*

Destination: CSMT

DFHRM0219 *date time applid Intersystem communication recovery. Resynchronization information from the remote system was not sufficient to determine the outcome of the unit of work. The distributed unit of work is backed out. Local resources are not synchronized. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.*

Explanation: Communication with the remote system has been re-established. Resynchronization with the remote system was attempted. The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. Information received from the remote system did not determine whether to commit or back out the unit of work.

The unit of work is backed out in accordance with the ACTION attribute in the local transaction definition.

Because this unit of work was recovered only for remote resynchronization, no local resources were locked pending resolution of the unit of work, and local resources are not synchronized with this back out.

Any further remote resynchronization treats this unit of work as backed out.

System action: The system backs out the unit of work for the purposes of remote resynchronization.

User response: Take user-defined action to resynchronize resources in local and remote systems, if necessary.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Local resources are not synchronized. Original failure date *mm/dd/yy* failure time *hh:mm:ss* remote system name transaction *tranid* task number *trannum* terminal *termid* user *userid* network UOW *netuowid* local UOW *X'localuowid'*.**

Explanation: The connection with the remote system has been set NOTPENDING or NORECOVDATA, or the connection is defined with XLNACTION(FORCE). The local system was in-doubt about the outcome of the distributed unit of work and expected to receive notification of the outcome from the remote system. Setting the connection with the remote system NOTPENDING or NORECOVDATA preempts the notification of the outcome from the remote system.

Since this unit of work was recovered only for remote resynchronization, no local resources were locked pending resolution, and local resources are not synchronized with this decision.

The distributed unit of work is treated as backed out in accordance with the ACTION attribute in the local transaction definition.

System action: The system continues. Further remote resynchronization treats this unit of work as backed out.

User response: Take user-defined actions to resynchronize resources in local and remote systems if necessary.

Module: DFHRMLK4

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0227 *date time applid* **Clear pending issued. The connection to the remote system has been set NOTPENDING. Original failure date mm/dd/yy failure time hh:mm:ss remote system name transaction tranid task number trannum terminal termid user userid network UOW netuowid local UOW X'localuowid'.**

Explanation: The connection with the remote system has been set NOTPENDING. The unit of work is recorded as committed or backed out, but since this unit of work was recovered only for remote resynchronization, local resources might not be synchronized with this decision.

The local system did not receive acknowledgment that the remote system had received notification of the outcome of the unit of work.

No further resynchronization with this remote system is attempted and the distributed unit of work in the local and remote systems may not be synchronized.

System action: Processing continues.

User response: Take user-defined action to resynchronize resources in local and remote systems if necessary.

Module: DFHRMLK4

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0228 *applid indoubt_uows* **indoubt UOWs have been recovered for the purpose of remote resynchronization. Local resources are not synchronized with these UOWs.**

Explanation: This message displays the number of indoubt units of work (UOWs), *indoubt_uows*, which have been recovered for resynchronization with remote systems. This message is only issued on cold starts. Local resources may not be kept synchronized with remote resources because CICS is cold starting.

It is issued only if there is at least one UOW which is indoubt. It is issued before any of the reconstructed UOWs are unshunted and processed in parallel.

System action: The system has performed the backwards scan of the system log and is about to start unshunting UOWs where resynchronization is possible.

Where communications with the remote system or systems is not immediately possible, UOWs are preserved until resynchronization is possible or until WAITTIME (defined on the transaction definition) expires.

This message is followed by message DFHRM0208 if

the UOW has been committed, or by DFHRM0209 if the UOW has been backed out on the remote system or systems.

User response: None.

Module: DFHRMU1E.

XMEOUT Parameters: *applid, indoubt_uows*

Destination: Console

DFHRM0229 *date time applid bfail_uows* **backout-failed and cfail_uows commit-failed UOWs have been recovered for the purpose of remote resynchronization. Local resources are not synchro nized with these UOWs.**

Explanation: This message displays the number of backout-failed units of work (UOWs), *bfail_uows*, and the number of commit-failed UOWs, *cfail_uows*, which have been recovered for resynchronization with remote systems. These UOWs may now be in backout-waiting or commit-waiting states after cold start recovery processing. This message is only issued on cold starts. Local resources may not be kept synchronized with remote resources because CICS is cold starting.

This message is issued only if there is at least one such UOW. It is issued before any of the reconstructed UOWs are processed.

System action: The system has performed the backwards scan of the system log and is about to start resynchronization for UOWs that require this.

Where communications with the remote system or systems is not immediately possible, UOWs are preserved until resynchronization is possible or until WAITTIME (defined on the transaction definition) expires.

This message is followed by message DFHRM0208 if the UOW has been committed, or by DFHRM0209 if the UOW has been backed out on the remote system or systems.

User response: None.

Module: DFHRMU1E

XMEOUT Parameters: *date, time, applid, bfail_uows, cfail_uows*

Destination: CSMT

DFHRM0230 *date time applid inflight_uows* **inflight UOWs have been recovered for the purpose of remote resynchronization. Local resources are not synchronized with these UOWs.**

Explanation: This message displays the number of inflight units of work (UOWs), *inflight_uows*, which have been recovered for resynchronization with remote

DFHRM0235 • DFHRM0302

systems. This message is issued only on cold starts. Local resources may not be kept synchronized with remote resources because CICS is cold starting.

It is issued only if there is at least one UOW which is in flight. It is issued before any of the reconstructed UOWs are unshunted and processed in parallel.

System action: The system has performed the backwards scan of the system log and is about to start unshunting UOWs where resynchronization is possible.

Where communications with the remote system or systems is not immediately possible, UOWs are preserved until resynchronization is possible or until WAITTIME (defined on the transaction definition) expires.

This message is followed by message DFHRM0208 if the UOW has been committed, or by DFHRM0209 if the UOW has been backed out on the remote system or systems.

User response: None.

Module: DFHRMU1E.

XMEOUT Parameters: *date, time, applid, inflight_uows*

Destination: CSMT

DFHRM0235 *date time applid* **Intersystem communication recovery. Local resources are not synchronized. Original failure date *mm/dd/yy* failure time *hh:mm:ss* remote system *name* transaction *tranid* task number *trannum* terminal *termid* user *userid* network UOW *netuowid* local UOW *X'localuowid'*.**

Explanation: Communication with the remote system that is a subordinate of this unit of work failed and has been re-established. Resynchronization with the remote system has occurred. Either the remote system has already taken a decision for its local resource updates in the distributed unit of work, or the remote system was waiting for the decision from this system. In either case, since this unit of work was recovered only for remote resynchronization, the local resources are not synchronized.

System action: Processing continues.

User response: Take action to resynchronize resources in the local and remote systems, if necessary.

Module: DFHRMLN

XMEOUT Parameters: *date, time, applid, mm/dd/yy, hh:mm:ss, name, tranid, trannum, termid, userid, netuowid, X'localuowid'*

Destination: CSMT

DFHRM0300 **KEYWORD '*keyword*' IS INVALID OR MISUSED.**

Explanation: The SYSIN data set for DFHRMUTL contains an unrecognized keyword or a keyword which is used incorrectly.

System action: The DFHRMUTL job terminates.

User response: Correct the invalid keyword and retry.

Module: DFHRMUTL

Destination: SYSPRINT

DFHRM0301 *applid* **Force purge of transaction ID *tranid* task number *taskno* has been deferred because unit of work *X'uowid'* is in post commit syncpoint processing.**

Explanation: CICS has received a request to force purge task *taskno*. The unit of work, *uowid*, associated with the target of the force purge request is in a critical phase of syncpoint processing. The target task cannot be purged while it is in this state.

System action: CICS attempts to defer the purge until the target task is no longer protected against purge.

If the syncpoint occurs at the end of the task, the task is permanently protected against purge.

User response: Normally the task should remain in this critical phase of syncpoint for only a short time. If the target task still has not ended, investigate why unit of work *uowid* has still to complete syncpoint processing.

See the *CICS Problem Determination Guide* for guidance about diagnosing task waits. It can only be issued to the console. It should not be rerouted to a transient data queue.

Module: DFHRMU1N

XMEOUT Parameters: *applid, tranid, taskno, X'uowid'*

Destination: Console

DFHRM0302 **ERROR {*OPENING* | *READING* | *WRITING* | *CLOSING*} THE {*DFHGCD* | *INWGCD*} DATA SET RETURN CODE: *X'vsam_retcode'*, REASON: *X'vsam_reason'*.**

Explanation: An error occurred when processing a VSAM data set. The VSAM return and reason codes are *X'vsam_retcode'* and *X'vsam_reason'*.

System action: The DFHRMUTL job terminates.

User response: See the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets* manual for the meaning of the return and reason codes. Check the syslog for associated data services messages.

If the error is in opening the NEWGCD data set, ensure that the VSAM cluster

- Has the REUSE attribute
- Has a DD card in the JCL
- Does not name the same data set as the DFHGCD DD card
- Is not currently open to another job.

Module: DFHRMUTL

Destination: SYSPRINT

DFHRM0303 ERROR {OPENING | READING | WRITING} THE {SYSIN | SYSPRINT} DATA SET.

Explanation: An error occurred when processing a QSAM data set.

System action: The DFHRMUTL job terminates.

User response: Ensure that the data set DD card is properly defined. Look for associated syslog messages to identify the source of the problem.

Module: DFHRMUTL

Destination: SYSPRINT

DFHRM0304 INVALID OR MISSING SET_AUTO_START PARAMETER.

Explanation: The SET_AUTO_START parameter in the SYSIN data set for DFHRMUTL is missing or incorrectly specified.

System action: The DFHRMUTL job terminates.

User response: Ensure that the parameter is in the *first* line of SYSIN, and the keywords are separated by commas without intervening blanks.

Module: DFHRMUTL

Destination: SYSPRINT

DFHRM0305 SYSIN DATA SET CAN HAVE AT MOST ONE RECORD.

Explanation: The SYSIN data set should contain either no records or else a single record specifying the parameters for DFHRMUTL.

System action: The DFHRMUTL job terminates.

User response: Correct the records in the SYSIN data set and retry.

Module: DFHRMUTL

Destination: SYSPRINT

DFHRM0306 CANNOT COPY A GCD WITH NO CONTROL INFORMATION.

Explanation: The COLD_COPY keyword has been specified for a global catalog data set which has no recovery manager control information in it. It is not possible to create a reduced new catalog from an empty catalog.

System action: The DFHRMUTL job terminates.

User response: You should use COLD_COPY only to copy a catalog that has been used by CICS. To initialize a catalog for an initial start, use DFHRMUTL with the SET_AUTO_START=AUTOINIT parameter without attempting to copy it with COLD_COPY.

Module: DFHRMUTL

Destination: SYSPRINT

DFHRM0307 KEYWORD '*keyword*' IS REPEATED IN THE SYSIN DATA SET.

Explanation: Keyword *keyword* has been repeated in the first line of the SYSIN data set for DFHRMUTL.

System action: The DFHRMUTL job terminates.

User response: Remove the duplicate keyword and retry.

Module: DFHRMUTL

Destination: SYSPRINT

DFHRM0308 SET_AUTO_START=AUTOASIS INVALID. GCD IS A COLD_COPY AND HAS NOT BEEN USED BY CICS.

Explanation: The keyword SET_AUTO_START specified AUTOASIS, but the global catalog supplied in data set DFHGCD has been copied with the DFHRMUTL COLD_COPY function and has not yet been used by CICS. This change is not allowed because the catalog no longer has the necessary records to allow an emergency or warm start.

System action: The DFHRMUTL job terminates.

User response: If you need to perform an emergency or warm start, use a restored copy of the global catalog taken before the run of DFHRMUTL which performed the COLD_COPY. If you do not need an emergency or warm start, change the parameter to AUTOINIT or AUTOCOLD and retry.

Module: DFHRMUTL

Destination: SYSPRINT

DFHRM0309 GCD HAS NOT BEEN USED BY CICS. YOU MUST SPECIFY SET_AUTO_START=AUTOINIT

Explanation: The keyword SET_AUTO_START specified AUTOCOLD or AUTOINIT, but the global catalog supplied in data set DFHGCD has never been used by CICS.

System action: The DFHRMUTL job terminates.

User response: Change the SET_AUTO_START parameter to AUTOINIT and retry.

Module: DFHRMUTL

Destination: SYSPRINT

DFHRM0311 COLD_COPY KEYWORD INVALID WITH SET_AUTO_START=AUTOASIS.

Explanation: The input parameters specified keyword COLD_COPY, but also contained SET_AUTO_START=AUTOASIS. This combination is not supported because CICS can only perform a COLD or INITIAL start using a catalog data set that has been cold-copied, because all definitional records have been removed.

System action: The DFHRMUTL job terminates.

User response: Either specify AUTOCOLD or AUTOINIT as the SET_AUTO_START value, or remove the COLD_COPY keyword and retry.

Module: DFHRMUTL

Destination: SYSPRINT

DFHRM0312 AUTODIAG WITH COLD_COPY NOT ALLOWED.

Explanation: In the parameters for the DFHRMUTL job the option COLD_COPY was specified with SET_AUTO_START=AUTODIAG. This is not allowed.

System action: The DFHRMUTL job terminates.

User response: Resubmit the job with the correct parameters.

Module: DFHRMUTL

Destination: SYSPRINT

DFHRM0313 AUTODIAG CANNOT BE USED.

Explanation: The keyword SET_AUTO_START specified AUTODIAG, but the global catalog supplied in data set DFHGCD has been copied with the DFHRMUTL COLD_COPY function and has not yet been used by CICS. This change is not allowed because the catalog no longer has the necessary records to allow a diagnostic run.

System action: The DFHRMUTL job terminates.

User response: If you need to perform a diagnostic run, use a restored copy of the global catalog taken before the run of DFHRMUTL which performed the COLD_COPY. If you do not need a diagnostic run then change the parameter to AUTOINIT or AUTOCOLD and retry.

Module: DFHRMUTL

Destination: SYSPRINT

DFHRM0315I AUTOCOLD OR AUTOINIT SHOULD NOT BE USED.

Explanation: This is an informational message.

The global catalog indicates that the previous shutdown of CICS was not controlled (i.e. not a Warm shutdown), or that log information that pertains to shunted Units Of Work (UOWs) is present on the system log. In either case, CICS should not be restarted Cold or Initial, since to do so would threaten data integrity. As such, AUTOCOLD or AUTOINIT should not be specified by the use of the SET_AUTO_START keyword.

System action: The DFHRMUTL job continues.

User response: None.

Module: DFHRMUTL

Destination: SYSPRINT

DFHRM0400 *applid* A unit of work was incompletely reconstructed from the system log.

Explanation: A unit of work has been only partially reconstructed from the log records on the system log.

The first log record that the unit of work wrote to the system log was not browsed during CICS restart although processing of the unit of work has not completed its syncpoint processing.

The probable cause is that the primary system log stream has been truncated incorrectly or that the secondary system log stream has been truncated or deleted incorrectly. Alternatively, the data on either log stream may have been corrupted so that the chain representing the unit of work was not completely processed during CICS restart.

These effects may be due to the log stream being modified between CICS runs, problems in the MVS logger, or problems in CICS itself. The most likely cause is that the logstream was deleted or modified between CICS runs. If it was deleted, the CICS logger will have issued a message during the CICS restart reporting that it was creating the logstream.

System action: CICS makes an exception trace entry including the unit of work in which the problem was detected, issues this message, takes a dump, and then terminates abnormally.

Message DFHME0116 should be produced containing

the symptom string for this problem.

User response: Ensure that the primary and secondary system logstreams are valid. If a problem can be rectified, auto-start CICS again.

If the problem cannot be rectified, you should perform an initial start of CICS.

If you are certain that the system log streams have not been deleted or modified between CICS runs, there may be an error in the MVS logger or in CICS. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. It would be helpful to keep the failing logstream or a report of its contents.

Module: DFHRMU1E.

XMEOUT Parameter: *applid*

Destination: Console

DFHRM0401 *applid* **There is no system log or an empty system log has been detected.**

Explanation: An empty system log has been detected on a CICS restart which requires the log for recovery processing. This is unexpected because there should always be one or more log records on the system log when CICS has started previously. Alternatively, there is no CICS system log because DUMMY has been specified in the definition of the log stream, and a start that requires a valid system log has been requested.

The probable cause is that the primary system log stream has been destroyed or cleared incorrectly. The data on the primary log stream may have been corrupted so that the CICS logger could not find any

valid records on it. Alternatively, the system log has been defined as a DUMMY log inappropriately.

These effects may be due to the log stream being modified between CICS runs, problems in the MVS logger, or problems in CICS itself. The most likely cause is that the logstream was deleted or emptied between CICS runs. If it was deleted, the CICS logger will have issued a message during the CICS restart reporting that it was creating the logstream.

System action: CICS makes an exception trace entry including the unit of work in which the problem was detected, issues this message, takes a dump, and then terminates abnormally.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Ensure that the primary system logstream is valid, and that it is not defined as DUMMY. If the problem can be rectified, start CICS again in the same way.

If the problem cannot be rectified, perform an initial start of CICS.

If you are certain that the system log streams have not been deleted or modified between CICS runs, there may be an error in the MVS logger or in CICS. In this case, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. It would be helpful to keep the failing logstream or a report of its contents.

Module: DFHRMSL5

XMEOUT Parameter: *applid*

Destination: Console

DFHRPnnnn messages

DFHRP0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump

table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem. If you cannot run without the full use of

DFHRP0002 • DFHRP0102

module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPRP

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

Destination: Console

DFHRP0002 *applid* **A severe error (code X'code') has occurred in module *modname*.**

Explanation: An error has been detected in module *modname*. The code X'code' is the exception trace point ID, which gives an indication of the cause of the error:

- 9F49—error in the C environment
- 9F4A—no storage for the RPC caller
- 9F4C—error from **socket** call to TCP/IP for MVS
- 9F4D—error from **gethostid** call to TCP/IP for MVS
- 9F4F—error from **select** call to TCP/IP for MVS
- 9F55—error from **svc_register** call to TCP/IP for MVS
- 9F58—error from **svcudp_create** call to TCP/IP for MVS
- 9F59—error from **svctcp_create** call to TCP/IP for MVS
- 9F5B—error from **svc_sendreply** call to TCP/IP for MVS
- 9F5C—invalid **aup_gids** from client
- 9F5D—machine name from client too long
- 9F5E—error from **svc_getargs** call to TCP/IP for MVS
- 9F5F—error from **svc_freeargs** call to TCP/IP for MVS
- 9F60—error from **getsockopt** call to TCP/IP for MVS
- 9F63—error from **maxdesc** call to TCP/IP for MVS (unknown error)
- 9F64—error from **maxdesc** call to TCP/IP for MVS (not enough sockets)
- 9F65—error from **maxdesc** call to TCP/IP for MVS (EFAULT)
- 9F66—error from **maxdesc** call to TCP/IP for MVS (EALREADY)
- 9F67—error from **maxdesc** call to TCP/IP for MVS (EINVAL)
- 9F68—error from **maxdesc** call to TCP/IP for MVS (EMFILE)
- 9F69—error from **maxdesc** call to TCP/IP for MVS (ENOMEM)
- 9F6A—error from **maxdesc** call to TCP/IP for MVS (EIBMIUCVERR)
- 9F6B—error from **svcerr_auth** call to TCP/IP for MVS
- 9F6C—error from **svcerr_decode** call to TCP/IP for MVS
- 9F6D—error from **svcerr_noproc** call to TCP/IP for MVS

- 9F6E—error from **svcerr_systemerr** call to TCP/IP for MVS
- 9F6F—error from **dfhsvc_getreqset**.

System action: An exception entry (code X'code' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table. If a client request is being processed, and the code is 9F4A, no reply is sent to the client.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: There are some specific user actions that can be taken for certain values of *code*:

- 9F4A—Retry the current action if possible. If the shortage of storage persists, reduce the number of tasks that can run concurrently, or increase the DSA limits.
- 9F49—Check that the C run-time environment is derived from the same product, version, and release as was used for link-editing at installation time.
- 9F5C—Check the TCP/IP for MVS configuration and release level.
- 9F5D—Check the TCP/IP for MVS configuration and release level.
- 9F6A—Check that TCP/IP for MVS has been started.

.pc.For other TCP/IP for MVS problems, look at the TCP/IP for MVS diagnostics.

You may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPRP

XMEOUT Parameters: *applid, X'code',modname*

Destination: Console

DFHRP0102 *date time applid tranid* **A CICS ONC RPC alias has received an incorrect response on a call made to CICS during alias initialization.**

Explanation: The alias has received a response that indicates a logic error in the alias while calling CICS to establish its initialization information.

System action: The client request is abandoned, and no reply is sent to the client. A system dump is taken. The alias abends with abend code ARPK. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: See the associated CICS messages for problem diagnosis.

Module: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0103 *date time applid tranid* **A CICS ONC RPC alias has been started incorrectly.**

Explanation: The alias has been invoked by a means other than the server controller, possibly by a user at a terminal.

System action: There was no client request to process. The alias abends with abend code ARPF.

User response: Check that the alias was not started by a terminal user.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP0104 *date time applid tranid* **A CICS ONC RPC alias has received an incorrect response on a call made to CICS during alias initialization.**

Explanation: The alias has received a response while calling CICS to establish its initialization information that indicates that the alias may not have been started by server controller.

System action: There is no client request to process. The alias abends with abend code ARPF.

User response: Check that the alias has not been started by a means other than the server controller.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP0105 *date time applid tranid* **A CICS ONC RPC alias has received an incorrect response on a call made to CICS during alias initialization.**

Explanation: The alias has received a response that indicates that CICS has experienced a temporary error while trying to pass the alias its initialization information from temporary storage.

System action: The client request is abandoned, and no reply is sent to the client. The alias abends with abend code ARPJ.

User response: See the associated CICS messages for problem diagnosis.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP0106 *date time applid tranid* **A CICS ONC RPC alias has received an incorrect response on a call made to CICS during alias initialization.**

Explanation: The alias cannot find its initialization information in CICS temporary storage. This is probably due to the retrieval of data from temporary storage by another application.

System action: The client request is abandoned, and no reply is sent to the client. The alias abends with abend code ARPF.

User response: Check that no other application is using the same temporary storage queue as the alias.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP0107 *date time applid tranid* **A CICS ONC RPC alias has received an incorrect response on a call made to CICS during alias initialization.**

Explanation: The alias has received a response that indicates a logic error in the alias while calling CICS to establish its initialization information.

System action: The client request is abandoned, and no reply is sent to the client. A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: See the associated CICS messages for problem diagnosis.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP0108 *date time applid tranid* **A CICS ONC RPC alias has been started incorrectly.**

Explanation: The alias has detected an error while validating its initialization information. This probably means that the alias has been started by a means other than the server controller.

System action: There was no client request to process. The alias abends with abend code ARPF.

User response: Check that the alias was not started by a transient data trigger level or by a CECI user.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP0113 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing because the corresponding alias list entry has been deleted. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *X'port'* Socket: *X'socket'*.**

Explanation: The alias has attempted to update its alias list entry to indicate that it has successfully started. The alias list component has returned a NOT FOUND response.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPF.

User response: This situation is almost certainly due to an alias starting after immediate disable of CICS ONC RPC or after its alias list entry has been explicitly deleted by the connection manager.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, X'port', X'socket'*

Destination: CRPO

DFHRP0114 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing because it is unable to update the corresponding alias list entry. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *X'port'* Socket: *X'socket'*.**

Explanation: The alias has attempted to update its alias list entry to indicate that it has successfully started. The alias list component has returned an error response other than NOT FOUND. This is due to an error in another component of CICS.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPJ.

User response: Proceed as indicated in the messages issued by the CICS component in error.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, X'port', X'socket'*

Destination: CRPO

DFHRP0118 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: The alias has detected that CICS ONC RPC may have been disabled since this client request was scheduled by the server controller. This is indicated by an incorrect reference to the GWA used by CICS ONC RPC.

System action: The client request is abandoned, and no reply is sent to the client. The alias abends with abend code ARPH.

User response: Check that CICS ONC RPC has not been disabled since this client request was first scheduled. This problem may arise when long-running CICS programs are being used. It may also occur if CICS ONC RPC is disabled and immediately re-enabled.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0119 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing because it cannot authenticate this client request. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: The alias has detected an error with the response returned from the external security manager while attempting to authenticate this client request.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPJ.

User response: Check that the external security manager is still available.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0120 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing because this client request is not authenticated. Client IP address:** *clientaddr* **Host IP address** *hostaddr*
Program: *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'*
Protocol: *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has received a response while authenticating the userid and password associated with this client request which indicates that this client request is not authenticated to CICS.

System action: An **svcerr_auth** call with a why-value of AUTH_TOOWEAK is used to send a reply to the client. The alias abends with abend code ARPL.

User response: Check the userid/password combination associated with this client request. See the associated CICS messages relating to the security error for help with problem diagnosis.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0121 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing because it cannot authenticate this client request. Client IP address:** *clientaddr* **Host IP address** *hostaddr*
Program: *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'*
Protocol: *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has received a response while authenticating the userid and password associated with this client request which indicates that the external security manager does not recognize the userid.

System action: An **svcerr_auth** call with a why-value of AUTH_TOOWEAK is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Check the userid associated with this client request. See the associated CICS messages relating to the security error for help with problem diagnosis.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0122 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request. Client IP address** *clientaddr* **Host IP address:** *hostaddr*
Program *X'prognum'* **Version:** *X'versnum'*
Procedure: *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket** *socket*.

Explanation: The alias has encountered an internal error while authenticating the userid and password associated with this client request.

System action: An **svcerr_systemerr** call is used to send a reply to the client. A system dump is taken. The alias abends with abend code ARPJ. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0123 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request. Client IP address** *clientaddr* **Host IP address:** *hostaddr*
Program *X'prognum'* **Version:** *X'versnum'*
Procedure: *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket** *socket*.

Explanation: The alias has detected a temporary error in the remote CICS region while communicating with the resource checker.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPJ.

User response: Investigate the error in the remote CICS region.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0124 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request. Client IP address *clientaddr* Host IP address: *hostaddr* Program *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.**

Explanation: The alias has encountered an internal error while trying to link to the resource checker.

System action: An **svcerr_systemerr** call is used to send a reply to the client. A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0125 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing as it cannot link to the resource checker program. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: The alias has received a response while trying to link to the resource checker which indicates that it is not defined to CICS.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Check that the resource checker is defined to CICS.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0126 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing as it cannot link to the resource checker program. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: The alias has received a response while trying to link to the resource checker that indicates that the remote system on which the program resides is not defined or available to CICS.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Ensure that the remote CICS region in which the resource checker resides is defined to CICS. If it is, check that the connection is available for use by CICS.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0127 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request. Client IP address *clientaddr* Host IP address: *hostaddr* Program *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.**

Explanation: The alias has detected a rollback in the resource checker in a remote CICS region.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPJ.

User response: Investigate the problem in the remote CICS region. You should consider changing the resource checker so that it does not update any CICS recoverable resources because this is not its primary design intent. Retry the client request.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0128 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing because it cannot link to the resource checker program. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: The alias has received a response while trying to link to the resource checker that indicates that it is not authorized to do so. This error has occurred because either the local alias transaction has been defined with RESSEC=YES, or the resource checker is in a remote CICS region and the mirror transaction in the remote region is defined with RESSEC=YES.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: If the alias or mirror transaction must run with RESSEC=YES, add a profile to the external security manager that allows users to access the resource checker. If you do not require resource level security in the CICS program, set RESSEC=NO in the alias or mirror transaction definition.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0129 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: The alias has received an incorrect response from CICS while trying to link to the resource checker.

System action: An `svcerr_systemerr` call is used to send a reply to the client. A system dump is taken. The alias abends with abend code ARPK. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum',*

X'procnum', protocol, port, socket

Destination: CRPO

DFHRP0130 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing. The resource checker has rejected this client request. Response: *response* Reason: *reason*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: The resource checker has returned the response and reason codes *response* and *reason*. This client request is not authorized to continue.

System action: An `svcerr_auth` call with a why-value of AUTH_BADCRED is used to send a reply to the client. The alias abends with abend code ARPL.

User response: Determine from the resource checker the meaning of the response and reason codes, and amend the program if necessary.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, response, reason, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0131 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request as it cannot query the authorization of the CICS program program. EIBRESP2: *eibresp2* Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: The alias issued an EXEC CICS QUERY SECURITY command for the CICS program *program*, but received an INVREQ response.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Use the EIBRESP2 value to determine the exact cause of the problem.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, eibresp2, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0132 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request as it cannot query the authorization of the CICS program program. EIBRESP2 eibresp2 Client IP address: clientaddr Host IP address: hostaddr Program: X'prognum' Version X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket: socket.**

Explanation: The alias issued an EXEC CICS QUERY SECURITY command for the CICS program *program*, but received a NOTFND response.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Use the EIBRESP2 value to determine the exact cause of the problem.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, eibresp2, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0133 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request. Client IP address clientaddr Host IP address: hostaddr Program X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket socket.**

Explanation: The alias has received an incorrect response on a call to CICS while trying to test the authorization level of the client.

System action: An `svcerr_systemerr` call is used to send a reply to the client. A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0134 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request because the client is not authorized to access the CICS program program. Client IP address: clientaddr Host IP address: hostaddr Program X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket socket.**

Explanation: The alias has rejected this client request because the client is not authorized to access the CICS program *program*.

System action: An `svcerr_auth` call with a why-value of AUTH_TOOWEAK is used to send a reply to the client. The alias abends with abend code ARPL.

User response: None

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0135 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request. Client IP address clientaddr Host IP address: hostaddr Program X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket socket.**

Explanation: The alias has detected an internal arithmetic error with the parameters passed by the server controller while processing this client request and is unable to link to the CICS program.

System action: The client request is abandoned, and a SYSTEMERR reply is sent to the client. A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0136 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request. Client IP address** *clientaddr* **Host IP address:** *hostaddr* **Program** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket** *socket*.

Explanation: The alias has detected a temporary error in the remote CICS region while communicating with the CICS program.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPJ.

User response: Investigate the problem in the remote CICS region.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0137 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request. Client IP address** *clientaddr* **Host IP address:** *hostaddr* **Program** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket** *socket*.

Explanation: The alias has encountered an internal error while trying to link to the CICS program.

System action: An **svcerr_systemerr** call is used to send a reply to the client. A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0138 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing as it cannot link to the CICS program** *program*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has received a response while trying to link to the CICS program *program* that indicates that the program is not defined to CICS.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Check that the CICS program is defined to CICS.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0139 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing as it cannot link to the CICS program** *program*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has received a response while trying to link to the CICS program *program* that indicates that the remote system in which the program resides is not defined or is not available to CICS.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Ensure that the remote CICS region in which the server program resides is defined to CICS. If it is, ensure that the connection is available for use by CICS.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0140 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request. Client IP address** *clientaddr* **Host IP address:** *hostaddr* **Program** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol*

DFHRP0141 • DFHRP0144

protocol Port: port Socket socket.

Explanation: The alias has detected a rollback in the CICS program in the remote CICS region.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPJ.

User response: Investigate why the CICS program rolled back.

Module: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0141 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing as it cannot link to the CICS program program. Client IP address: clientaddr Host IP address: hostaddr Program: X'prognum' Version X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket: socket.**

Explanation: The alias has received a response while trying to link to the CICS program *program* that indicates that it is not authorized to do so.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: If the CICS program must run with resource level security, add a profile to the external security manager that grants access to the CICS program to its clients. If you do not require resource level security in the CICS program, set `RESSEC=NO` in the alias or mirror transaction definition.

Module: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0142 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request. Client IP address clientaddr Host IP address: hostaddr Program X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket socket.**

Explanation: The alias has received an incorrect response from CICS while trying to link to the CICS program.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend

code ARPK. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0143 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request. Client IP address clientaddr Host IP address: hostaddr Program X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket socket.**

Explanation: The alias has encountered an internal error and cannot determine how to send a reply to the client. The CICS program has run successfully, and may have updated CICS resources.

System action: An `svcerr_systemerr` call is used to send a reply to the client. A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0144 *date time applid tranid* **A CICS ONC RPC alias is unable to send a reply to the client because of a length error.**

Explanation: The alias is unable to send a reply to client because the communication area length is zero, but the client was expecting data to be sent in the reply.

System action: The client request is abandoned, and no reply is sent to the client. A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: See the associated CICS messages for problem diagnosis.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP0145 *date time applid tranid* **A CICS ONC RPC alias is unable to send a reply to the client due to an error in TCP/IP for MVS svc_sendreply processing. Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias cannot send a reply to the client. A problem has occurred in the TCP/IP for MVS **svc_sendreply** processing.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPJ.

User response: Examine the diagnostics to determine the reason for the error. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0146 *date time applid tranid* **A CICS ONC RPC alias is unable to send a reply to the client due to an error in send reply processing. The transport handle was invalid or was not found. Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias cannot send a reply to the client. A problem has occurred in send reply processing. The transport handle was in error or was not found.

System action: The client request is abandoned, and no reply is sent to the client. The alias abends with abend code ARPJ.

User response: Examine the diagnostics to determine the reason for the error. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0147 *date time applid tranid* **A CICS ONC RPC alias is unable to send a reply to the client because CICS ONC RPC is disabling. Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias cannot send a reply back to the client because CICS ONC RPC is disabling.

System action: The client request is abandoned, and no reply is sent to the client. The alias abends with abend code ARPJ.

User response: Examine the diagnostics to determine the reason for the error.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0148 *date time applid tranid* **A CICS ONC RPC alias is unable to send a reply to the client due to an error in send processing. Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias cannot send a reply back to the client. The alias received an unexpected response from the RPC caller.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPI.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0149 *date time applid tranid* **A CICS ONC RPC alias is unable to send a reply to the client. Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias cannot send a reply back to the client. The alias received an unexpected response from the RPC caller.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPI.

User response: If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. You may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0150 *date time applid tranid* **A CICS ONC RPC alias is unable to send data to the client.**

Explanation: The alias is unable to send reply to the client. An unexpected response was returned from RPC caller.

System action: The client request is abandoned, and no reply is sent to the client. The alias abends with abend code ARPJ.

User response: See the associated CICS messages for problem diagnosis.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP0151 *date time applid tranid* **A CICS ONC RPC alias has encountered a severe internal error while processing this client request. Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias is unable to switch TCB modes to allow it to send a reply to the client. The RP TCB is not active.

System action: The client request is abandoned, and no reply is sent to the client. A system dump is taken. The alias abends with abend code ARPJ. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: See any associated CICS messages to help with problem diagnosis. If you cannot determine why the TCB mode could not be switched, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0155 *date time applid tranid* **A CICS ONC RPC alias encountered an error while attempting to access the converter converter_program_name. Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket* **Client IP address:** *clientaddr*.

Explanation: An error has prevented the alias from accessing the converter *converter_program_name*.

System action: An **svcerr_systemerr** call is used to send a reply to the client. A system dump is taken. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket, clientaddr*

Destination: CRPO

DFHRP0156 *date time applid tranid* **A CICS ONC RPC alias could not link to converter** *converter_program_name*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias used EXEC CICS LINK for converter *converter_program_name* to perform the **Encode** function, but received a PGMIDERR response.

System action: An **svcerr_systemerr** call is used to send a reply to the client.

User response: Use CEDA to check that you have defined your converter program correctly to CICS.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0157 *date time applid tranid* **A CICS ONC RPC alias could not link to converter** *converter_program_name* **because it is remote.** **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias cannot work with a converter located in a remote CICS region. Data pointers are passed to and from the converter, and the referenced data can only be used if the converter runs in the local CICS region.

System action: An **svcerr_systemerr** call is used to send a reply to the client. A system dump is taken.

User response: Install and define the converter in the same CICS region as CICS ONC RPC.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0159 *date time applid tranid* **A CICS ONC RPC alias is not authorized to link to converter** *converter_program_name*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias cannot access the converter. An authorization error has occurred.

System action: An **svcerr_systemerr** call is used to send a reply to the client. A system dump is taken.

User response: Either redefine the alias transaction with RESSEC=NO, or change the external security manager to allow the user to access the converter.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0160 *date time applid tranid* **A CICS ONC RPC alias received an incorrect response from CICS when attempting to access the converter** *converter_program_name*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias received an unexpected response when trying to link to the converter for **Encode** processing.

System action: An **svcerr_systemerr** call is used to send a reply to the client. A system dump is taken. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: See the associated messages issued by CICS for problem diagnosis.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0161 *date time applid tranid* **A CICS ONC RPC alias encountered an error during Encode processing in the converter program. Client IP address:** *clientaddr*
Host IP address: *hostaddr* **Program:** *X'prognum'* **Version** *X'versnum'*
Procedure: *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: Encode returned URP_EXCEPTION.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: Examine the diagnostics to determine the reason for the error.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0162 *date time applid tranid* **A CICS ONC RPC alias encountered an error during Encode processing in the converter program. Client IP address:** *clientaddr*
Host IP address: *hostaddr* **Program:** *X'prognum'* **Version** *X'versnum'*
Procedure: *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: Encode returned URP_INVALID.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: Examine the diagnostics to determine the reason for the error.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0163 *date time applid tranid* **A CICS ONC RPC alias encountered an error during Encode processing in the converter program. Client IP address:** *clientaddr*
Host IP address: *hostaddr* **Program:** *X'prognum'* **Version** *X'versnum'*
Procedure: *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: Encode returned an unexpected return code.

System action: An `svcerr_systemerr` call is used to send a reply to the client. A system dump is taken. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Examine the diagnostics to determine the reason for the error.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0164 *date time applid tranid* **A CICS ONC RPC alias is unable to send an error reply to the client due to a logic error. Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'*
Protocol: *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias cannot send an error reply to the client due to a logic error.

System action: No reply is sent to the client. A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0166 *date time applid tranid* **A CICS ONC RPC alias is unable to send a reply to the client because the transport handle was invalid or was not found. Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version** *X'versnum'* **Procedure:** *X'procnum'*
Protocol: *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias cannot send a reply to the client. The transport handle was invalid or was not found.

System action: No reply is sent to the client. The alias abends with abend code ARPJ.

User response: If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. You may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0167 *date time applid tranid* **A CICS ONC RPC alias is unable to send an error reply to the client. CICS ONC RPC is disabling. Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias cannot send a reply to the client because CICS ONC RPC is disabling.

System action: No reply is sent to the client. The alias abends with abend code ARPJ.

User response: Examine the diagnostics to determine the reason for the error.

Module: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0168 *date time applid tranid* **A CICS ONC RPC alias is unable to send an error reply to the client. Client IP address** *clientaddr* **Host IP address:** *hostaddr* **Program** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket** *socket*.

Explanation: The alias cannot send a reply to the client. The alias received an error response from the RPC caller.

System action: No reply is sent to the client. The alias abends with abend code ARPI.

User response: If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. Examine the diagnostics to determine the reason for the error. You may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0169 *date time applid tranid* **A CICS ONC RPC alias encountered an error during Encode processing in the converter program. Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: Encode returned URP_DISASTER.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: Examine the diagnostics to determine the reason for the error.

Module: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0170 *date time applid tranid* **A CICS ONC RPC alias has detected an error.**

Explanation: The alias has detected an error.

System action: A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Examine the diagnostics to determine the reason for the error.

Module: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0171 *date time applid tranid* **A CICS ONC RPC alias has detected a FREEMAIN error.**

Explanation: The alias has detected a FREEMAIN error when freeing the communication area used by the CICS program. This FREEMAIN occurs after Encode processing.

System action: Processing continues.

User response: Examine the diagnostics to determine the reason for the error.

Module: DFHRPAS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0172 *date time applid tranid* **A CICS ONC RPC alias has detected a FREEMAIN error.**

Explanation: The alias has detected an error while freeing the data area created by **Encode** processing. The FREEMAIN occurs after outbound XDR processing.

System action: Processing continues.

User response: Examine the diagnostics to determine the reason for the error.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP0173 *date time applid tranid* **A CICS ONC RPC alias cannot find its alias list entry for deletion at task end. Client IP address: clientaddr Host IP address: hostaddr Program X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: X'port' Socket: X'socket'.**

Explanation: The alias has attempted to delete its alias list entry at task end. The alias list component has returned a NOT FOUND response. This is because either a connection manager user has started immediate disable processing, or because a connection manager user has deleted the entry.

System action: The alias abends with abend code ARPJ.

User response: None.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, X'port', X'socket'*

Destination: CRPO

DFHRP0174 *date time applid tranid* **A CICS ONC RPC alias received an error response while attempting to delete its alias list entry. Client IP address: clientaddr Host IP address: hostaddr Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: X'port' Socket: X'socket'.**

Explanation: The alias has attempted to delete its alias list entry at task end. It received a response that indicated a severe error had occurred.

System action: The alias abends with abend code ARPJ.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem*

Determination Guide for guidance on how to proceed. response.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, X'port', X'socket'*

Destination: CRPO

DFHRP0175 *date time applid tranid* **A CICS ONC RPC alias sent an error reply to the client, but cannot free storage associated with the error call to the client. Client IP address: clientaddr Host IP address: hostaddr Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket socket.**

Explanation: The alias sent an error reply to the client. After this reply was sent, the alias received an error response when attempting to free storage associated with the error call to the client.

System action: The alias abends with abend code ARPJ.

User response: Examine the diagnostics to determine the reason for the error. If the problem persists, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0176 *date time applid tranid* **A CICS ONC RPC alias sent a reply to the client, but cannot free storage associated with the svc_sendreply call. Client IP address: clientaddr Host IP address: hostaddr Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket: socket.**

Explanation: The alias sent a reply back to the client. After this reply was sent, the alias received an error response when attempting to free storage associated with the **svc_sendreply** call.

System action: The alias abends with abend code ARPJ.

User response: Examine the diagnostics to determine the reason for the error. You need further assistance from IBM to resolve this problem. See the *CICS*

External Interfaces Guide and Part 4 of the CICS Problem Determination Guide for guidance on how to proceed.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0180 *date time applid tranid* **A CICS ONC RPC alias has detected an abend issued by the resource checker program. Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has detected an abend by the resource checker.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPO.

User response: Examine the diagnostics to determine the reason for the error.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0181 *date time applid tranid* **A CICS ONC RPC alias has detected an abend issued by the CICS program program. Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has detected an abend by the CICS program that was servicing the client request.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPO.

User response: Examine the diagnostics to determine the reason for the error.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0182 *date time applid tranid* **A CICS ONC RPC alias has detected an abend issued in the Encode function of the converter program. Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has detected an abend by the converter **Encode** function.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPO.

User response: Examine the diagnostics to determine the reason for the error.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0183 *date time applid tranid* **A CICS ONC RPC alias has detected an abend. Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias has detected an abend.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPO.

User response: Examine the diagnostics to determine the reason for the error.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0184 *date time applid tranid* **A CICS ONC RPC alias has found that the resource checker has rejected this client request. Response:** *response* **Reason:** *reason*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The resource checker has returned the response *response* and reason *reason*. This client request is not authorized to continue.

System action: An `svcerr_auth` call with a why-value of `AUTH_TOOWEAK` is used to send a reply to the client. The alias abends with abend code `ARPL`.

User response: If you suspect an error in the resource checker, use the response and reason codes to debug it.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, response, reason, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0185 *date time applid tranid A CICS ONC RPC alias has detected an error in the resource checker. Response: response Reason: reason. Client IP address: clientaddr Host IP address: hostaddr Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket socket.*

Explanation: The resource checker has returned the response *response* and reason *reason*. This client request is not authorized to continue.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code `ARPM`.

User response: If you suspect an error in the resource checker, use the response and reason codes to debug it.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, response, reason, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0186 *date time applid tranid A CICS ONC RPC alias has detected an error in the resource checker program. Response: response Reason: reason. Client IP address: clientaddr Host IP address: hostaddr Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket socket.*

Explanation: The resource checker has returned the response *response* and reason *reason*. This client request is not authorized to continue.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code `ARPM`.

User response: If you suspect an error in the

resource checker, use the response and reason codes to debug it.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, response, reason, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0187 *date time applid tranid A CICS ONC RPC alias detected an error in the resource checker. Response: response Reason: reason. Client IP address: clientaddr Host IP address: hostaddr Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket socket.*

Explanation: The resource checker has returned the response *response* and reason *reason*. This client request is not authorized to continue.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code `ARPM`.

User response: If you suspect an error in the resource checker, use the response and reason codes to debug it.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, response, reason, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0188 *date time applid tranid A CICS ONC RPC alias has detected an error in the resource checker. Response: response Reason: reason. Client IP address: clientaddr Host IP address: hostaddr Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket socket.*

Explanation: The resource checker has returned the response *response* and reason *reason*. This client request is not authorized to continue.

System action: An `svcerr_systemerr` call is used to send a reply to the client. A system dump is taken. The alias abends with code `abend ARPM`. Message `DFHME0116` should be produced containing the symptom string for this problem.

User response: If you suspect an error in the resource checker, use the response and reason codes to debug it.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, response, reason, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0189 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request as it cannot load the CICS program *program*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.**

Explanation: The alias has received an INVREQ response while trying to EXEC CICS LOAD the CICS program *program* for security checking. This indicates that the program manager domain has not yet been initialized and may be due to this request having been made in a first stage PLT.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Ensure that the program manager domain is initialized.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0190 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request as it cannot load the CICS program *program*. EIBRESP2: *eibresp2* Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.**

Explanation: The alias has received a PGMIDERR response while trying to EXEC CICS LOAD the CICS program *program* for security checking. This indicates that the program cannot be found or cannot be autoinstalled.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: Ensure that the load module is in the DFHRPL concatenation and can be autoinstalled.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, eibresp2, clientaddr, hostaddr, X'prognum',*

X'versnum', X'procnum', protocol, port, socket

Destination: CRPO

DFHRP0191 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request as it cannot load the CICS program *program*. EIBRESP2: *eibresp2* Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.**

Explanation: The alias has received a PGMIDERR response while trying to EXEC CICS LOAD the CICS program *program* for security checking. This indicates that the program autoinstall control program has failed.

System action: An **svcerr_systemerr** call is used to send a reply to the client. The alias abends with abend code ARPJ.

User response: Use the EIBRESP2 value to determine why the program autoinstall control program failed and correct the problem.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, eibresp2, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0192 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request as it cannot load the CICS program *program*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.**

Explanation: The alias has detected an internal error while trying to load the CICS program *program* for security checking.

System action: An **svcerr_systemerr** call is used to send a reply to the client. A system dump is taken. The alias abends with abend code ARPI.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0193 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request as it cannot load the CICS program *program*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.**

Explanation: The alias has received a NOTAUTH response while trying to EXEC CICS LOAD the CICS program *program* for security checking. This indicates that it is not authorized to access this program. This error may have occurred because the local alias transaction has been defined with RESSEC=YES.

System action: An `svcerr_systemerr` call is used to send a reply to the client. The alias abends with abend code ARPG.

User response: If the alias transaction must run with RESSEC=YES, add a profile to the external security manager that allows users to access the program. If you do not require resource level security, set RESSEC=NO in the alias transaction definition.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0194 *date time applid tranid* **A CICS ONC RPC alias is unable to continue processing this client request as it cannot load the CICS program *program*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.**

Explanation: The alias has received an incorrect response while trying to load the CICS program *program* for security checking.

System action: An `svcerr_systemerr` call is used to send a reply to the client. A system dump is taken. The alias abends with abend code ARPI. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid, program, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0500 *date time applid tranid* **CICS ONC RPC enable processing is complete. Host IP address: *hostaddr*.**

Explanation: The enable process has completed successfully.

System action: Processing continues.

User response: None.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, hostaddr*

Destination: Console and Transient Data Queue
CRPO

DFHRP0501 *date time applid tranid* **CICS ONC RPC normal disable processing has started. Host IP address: *hostaddr*.**

Explanation: The server controller has started normal disable processing following a request by a connection manager user.

System action: Processing continues.

User response: None.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, hostaddr*

Destination: CRPO

DFHRP0502 *date time applid tranid* **CICS ONC RPC immediate disable processing has started. Host IP address: *hostaddr*.**

Explanation: The server controller has started immediate disable processing following a request by a connection manager user.

System action: Processing continues.

User response: None.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, hostaddr*

Destination: CRPO

DFHRP0503 *date time applid tranid* **CICS ONC RPC disable processing is complete.**

Explanation: The server controller has completed the disable processing.

System action: Processing continues.

User response: None.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid*

Destination: Console and Transient Data Queue
CRPO

DFHRP0508 *date time applid tranid* **The CICS ONC RPC task related user exit (DFHRPTRU) has been disabled before the server controller could start.**

Explanation: DFHRPTRU is enabled by the connection manager during enable processing. but DFHRPTRU was found to be disabled when the server controller started. This is probably caused by an operator manually disabling DFHRPTRU.

System action: The server controller abends with abend code ARP2. CICS ONC RPC remains disabled. A system dump is taken. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Reenable CICS ONC RPC. Consider taking steps to avoid future manual interference with the TRUE.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP0509 *date time applid tranid* **CICS ONC RPC has received an incorrect response on a call made to CICS during server controller startup.**

Explanation: CICS ONC RPC has received a response indicating an error in CICS.

System action: The server controller abends with abend code ARP2. CICS ONC RPC remains disabled. A system dump is taken. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: See the associated CICS message or messages for problem diagnosis.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP0510 *date time applid tranid* **The CICS ONC RPC task related user exit (DFHRPTRU) has been deleted or disabled before the server controller could start.**

Explanation: DFHRPTRU is enabled by the connection manager during enable processing, but the server controller received an indication that

- DFHRPTRU is not defined to CICS, or
- it has no load module, or
- the load module is disabled.

This is probably caused by operator intervention.

System action: The server controller abends with abend code ARPQ. A system dump is taken.

User response: Reenable CICS ONC RPC. Consider taking steps to prevent future operator interference.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP0513 *date time applid tranid* **The CICS ONC RPC server controller could not link to the converter *converter_program_name*. EIBRESP2: *resp2val*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.**

Explanation: The server controller used EXEC CICS LINK for converter *converter_program_name* to perform Decode, but received a PGMIDERR response.

System action: An *svcerr_systemerr* call is used to send a reply to the client.

User response: If the converter name is wrong, use the connection manager to unregister and reregister the 4-tuple with the correct converter name.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, resp2val, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0516 *date time applid tranid* The CICS ONC RPC server controller obtained data length information from the Decode function of converter *converter_program_name* that gives a communication area length that is too great. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.

Explanation: The communication area length calculated from the **decode_server_data_format**, **decode_server_input_data_len**, and **decode_server_output_data_len** parameters exceeds the permitted maximum. See the *CICS Application Programming Guide* for more information about the **Decode** function and its parameters.

System action: An **svcerr_systemerr** call is used to send a reply to the client.

User response: Correct and replace the erroneous converter.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0517 *date time applid tranid* The CICS ONC RPC server controller does not have resource-level security authorization to start alias transaction *alias-tranid*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.

Explanation: The server controller cannot start the alias because it does not have the necessary resource-level security authorization.

System action: An **svcerr_auth** call with a why-value of AUTH_TOOWEAK is used to send a reply to the client.

User response: You should specify only the alias transaction IDs that server controller has resource-level security authorization to start. When CICS ONC RPC is next disabled, redefine the server controller transaction with RESSEC=NO.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, alias-tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0518 *date time applid tranid* CICS ONC RPC cannot process a client request because the associated terminal ID *alias_termid* is not in the terminal control table. Client IP address: *clientaddr* Host IP address: *hostaddr* Program *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.

Explanation: A client request has arrived, and the corresponding 4-tuple refers to a terminal ID that is not in the terminal control table.

System action: An **svcerr_systemerr** call is used to send a reply to the client.

User response: Either define the missing terminal, or change the 4-tuple definition to refer to a terminal ID that is in the terminal control table.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, alias_termid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0520 *date time applid tranid* A CICS ONC RPC internal error has occurred while the server controller was polling for client work. Host IP address: *hostaddr*.

Explanation: This is an internal error.

System action: CICS ONC RPC enters exception disable processing.

User response: If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. You may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, hostaddr*

Destination: CRPO

DFHRP0521 *date time applid tranid* The CICS ONC RPC server controller detected an internal error while accessing an internal table. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*

Explanation: An internal error has occurred in the server controller while it was accessing an internal table.

System action: Processing continues.

User response: None.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0522 *date time applid tranid* **The CICS ONC RPC server controller detected an internal error while accessing an internal table. Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*

Explanation: An internal error has occurred in the server controller while accessing an internal table.

System action: Processing continues.

User response: None.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0528 *date time applid tranid* **The CICS ONC RPC server controller detected an initialization error.**

Explanation: This is an internal error.

System action: A system dump is taken. The server controller abends with abend code ARP2. CICS ONC RPC remains disabled. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP0540 *date time applid* **The CICS ONC RPC server controller received an error response from TCP/IP for MVS after an svc_freeargs call issued for XDR routine: *xdrname* Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'progname'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: The server controller cannot free storage allocated by the inbound XDR routine. An **svc_freeargs** returned an error response. This may be because the client associated with the call has timed out and the storage has already been freed by TCP/IP for MVS.

System action: The server controller continues to process this client request. If the message is not a result of client time-out, MVS storage associated with the request will not be freed; if errors of this kind occur frequently, they may lead to storage problems.

User response: Examine the diagnostics to determine the reason for the error. If a user-written XDR routine is being used, there may be an error in the code associated with the FREE function. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, xdrname, clientaddr, hostaddr, X'progname', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0545 *date time applid tranid* **The CICS ONC RPC server controller is unable to send an error reply to the client due to an error in reply processing. The transport handle was invalid or not found. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: The server controller cannot send an error reply to the client because the transport handle is not valid.

System action: The client request is abandoned, and no reply is sent to the client.

User response: Examine the diagnostics to determine the reason for the error. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. You may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

DFHRP0546 • DFHRP0559

Module: DFHRPM

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0546 *date time applid tranid* **The CICS ONC RPC server controller is unable to send an error reply to the client because CICS ONC RPC is disabling. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: The server controller cannot send an error reply to the client. CICS ONC RPC is disabling.

System action: The client request is abandoned, and no reply is sent to the client.

User response: Examine the diagnostics to determine the reason for the disable request.

Module: DFHRPM

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0547 *date time applid tranid* **The CICS ONC RPC server controller is unable to send an error reply to the client. Client IP address: *clientaddr* Host IP address: *hostaddr* Program *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.**

Explanation: The server controller cannot send a reply to the client, because it received an error response from the RPC caller.

System action: The client request is abandoned, and no reply is sent to the client. The server controller attempts to deal with requests from other clients, but may experience further RPC caller errors.

User response: Examine the exception trace to determine the reason for the error. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. You may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPM

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum',*

X'procnum', protocol, port, socket

Destination: CRPO

DFHRP0548 *date time applid tranid* **The CICS ONC RPC server controller sent an error reply to the client but cannot free storage associated with the client call. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.**

Explanation: The server controller sent an error reply to the client. After this reply was sent, the server controller received an error response when attempting to free storage associated with the client call.

System action: Processing continues as if the error had not occurred.

User response: Examine the diagnostics to determine the reason for the error. You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0559 *date time applid tranid* **The CICS ONC RPC server controller has encountered an internal error while trying to disable its task related user exit.**

Explanation: An attempt to disable the task-related user exit during disable processing has failed because of an internal error.

System action: A system dump is taken. Disable processing continues. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0570 *date time applid tranid* **The CICS ONC RPC server controller found that the RP task control block is not available.**
Host IP address: *hostaddr*.

Explanation: The RP TCB is not available.

System action: A system dump is taken. The server controller abends with abend code ARP2. CICS ONC RPC is disabled. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

Destination: CRPO

DFHRP0574 *date time applid tranid* **The CICS ONC RPC server controller has encountered an internal error while waiting for work.**
Host IP address: *hostaddr*.

Explanation: CICS ONC RPC is unable to continue because of an internal error in the server controller.

System action: In some circumstances, a system dump is taken. CICS ONC RPC is disabled. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

Destination: CRPO

DFHRP0589 *date time applid tranid* **The CICS ONC RPC server controller cannot enable CICS ONC RPC because it is not defined with the authority to access the task-related user exit.**

Explanation: The server controller cannot access the task-related user exit. This error can arise only if the supplied definitions for the server controller have been changed.

System action: The server controller abends with

abend code ARP2. CICS ONC RPC remains disabled.

User response: Ensure that the supplied definitions for the server controller are used, and reenables CICS ONC RPC.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0590 *date time applid tranid* **The CICS ONC RPC server controller has received an unexpected response on a call to CICS during CICS ONC RPC enable processing.**

Explanation: CICS ONC RPC enable processing cannot continue because of an error in CICS.

System action: A system dump is taken. The server controller abends with abend code ARP2. CICS ONC RPC remains disabled. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0591 *date time applid tranid* **CICS ONC RPC could not be enabled because of an internal error in the server controller.**

Explanation: The server controller cannot start because of an internal error.

System action: A system dump is taken. The server controller abends with abend code ARP2. CICS ONC RPC remains disabled. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0592 *date time applid tranid* The CICS ONC RPC server controller detected an error while polling for client work. Host IP address: *hostaddr*.

Explanation: The server controller cannot continue because of an internal error.

System action: CICS ONC RPC is disabled.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, hostaddr*

Destination: CRPO

DFHRP0618 *date time applid tranid* The CICS ONC RPC server controller cannot link to remote converter *converter_program_name*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.

Explanation: The server controller used EXEC CICS LINK to access the converter for **Decode** processing, but got an error response that indicated that the converter was defined as remote. Data pointers are passed to and from the converter, and the referenced data can only be used if the converter runs in the local CICS region.

System action: A system dump is taken. An **svcerr_systemerr** call is used to send a reply to the client. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Install and define the converter program in the same CICS region as CICS ONC RPC.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0620 *date time applid tranid* The CICS ONC RPC server controller received an unexpected response from CICS when attempting to access converter *converter_program_name*. Client IP address *clientaddr* Host IP address: *hostaddr* Program *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.

Explanation: A client request has failed because of an error in CICS.

System action: A system dump is taken. An **svcerr_systemerr** call is used to send a reply to the client. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: See the associated diagnostics issued by CICS for problem determination.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0621 *date time applid tranid* The CICS ONC RPC server controller is not authorized to link to converter *converter_program_name*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.

Explanation: The server controller cannot access the converter. This error can arise only if the supplied definitions for the server controller have been changed.

System action: A system dump is taken. An **svcerr_systemerr** call is used to send a reply to the client. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Ensure that the supplied definitions for the server controller are used, and reenable CICS ONC RPC.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0625 *date time applid tranid* The CICS ONC RPC server controller encountered an error during Decode processing in converter *converter_program_name*.
Client IP address: *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'*
Version: *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port*
Socket *socket*.

Explanation: **Decode** returned an unexpected response.

System action: An **svcerr_systemerr** call is used to send a reply to the client.

User response: Correct and replace the converter program in question.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0626 *date time applid tranid* The CICS ONC RPC server controller encountered an error during Decode processing in converter *converter_program_name*.
Client IP address: *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'*
Version: *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port*
Socket *socket*.

Explanation: **Decode** returned URP_EXCEPTION with a reason of URP_CORRUPT_CLIENT_DATA.

System action: An **svcerr_decode** call is used to send a reply to the client.

User response: Compare the client program and the converter program and change one or the other to make the data formats consistent.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0628 *date time applid tranid* The CICS ONC RPC server controller encountered an error during Decode processing in converter *converter_program_name*.
Client IP address: *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'*
Version: *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port*
Socket *socket*.

Explanation: **Decode** returned URP_EXCEPTION with a reason of URP_AUTH_BADCRED.

System action: An **svcerr_auth** call with a why-value of AUTH_BADCRED is used to send a reply to the client.

User response: If the client should be authorized to make this request, compare the client program and the converter, and change one or the other so that authentication requirements match.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0629 *date time applid tranid* The CICS ONC RPC server controller encountered an error during Decode processing in converter *converter_program_name*.
Client IP address: *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'*
Version: *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port*
Socket *socket*.

Explanation: **Decode** returned URP_EXCEPTION with a reason of URP_AUTH_TOOWEAK.

System action: An **svcerr_auth** call with a why-value of AUTH_TOOWEAK is used to send a reply to the client.

User response: If the client should be authorized to make this request, compare the client program and the converter, and change one or the other so that authentication requirements match.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0631 *date time applid tranid* The CICS ONC RPC server controller encountered an error in Decode processing in converter *converter_program_name*. The response was URP_EXCEPTION, but the reason *decode_reason* was not recognized. Client IP address *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.

Explanation: Decode returned URP_EXCEPTION with an unrecognized reason code.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: If the reason code returned has a user-defined meaning act accordingly. If the reason code does not have a user-defined meaning, fix the problem with the converter and replace it.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, decode_reason, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0632 *date time applid tranid* The CICS ONC RPC server controller encountered an error during Decode processing in converter *converter_program_name*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.

Explanation: Decode returned URP_INVALID.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: The Decode parameter area will have been traced. If the values passed were correct, and the error is in the converter, correct and replace the converter. If the values passed were incorrect, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0635 *date time applid tranid* The CICS ONC RPC server controller encountered an error during Decode processing in converter *converter_program_name*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.

Explanation: Decode returned URP_DISASTER.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: Correct and replace the converter.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0636 *date time applid tranid* The CICS ONC RPC server controller was unable to process an incoming client request due to lack of storage. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: An incoming client request could not be processed because there was insufficient storage available.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: If this error occurs persistently, you may need to customize your CICS system to cure the lack of storage.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0637 *date time applid tranid* The CICS ONC RPC server controller was unable to process an incoming client request due to an internal error. *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.

Explanation: An internal error has forced CICS ONC

RPC to abandon a client request.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: You need further assistance from IBM to resolve this problem.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0638 *date time applid tranid* **The CICS ONC RPC server controller was unable to process an incoming client request due to an unexpected error detected when acquiring storage. eibresp eibresp eibresp2 eibresp2 Client IP address clientaddr Host IP address: hostaddr Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket socket.**

Explanation: An incoming client request could not be processed because an unexpected error occurred when obtaining storage to process the request.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: You need assistance from IBM to resolve this problem.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, eibresp, eibresp2, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0639 *date time applid tranid* **The CICS ONC RPC server controller received an incorrect response on a call made to CICS.**

Explanation: The server controller has received a response that indicates a logic error while calling CICS to establish its initialization information.

System action: The server controller abends with abend code ARP2. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPAS

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP0640 *date time applid tranid* **The CICS ONC RPC server controller has been started incorrectly.**

Explanation: The server controller transaction CRPM has been started by a means other than the connection manager program, possibly by a user at a terminal.

System action: The server controller abends with abend code ARP5.

User response: Check that the CRPM transaction id was not entered by a terminal user.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP0663 *date time applid tranid* **The CICS ONC RPC server controller could not start alias transaction alias_tranid. Host IP address: hostaddr Program: prognum Version: versnum Protocol: protocol Port port Socket: socket Client IP address: clientaddr**

Explanation: An internal error has prevented the server controller from starting the alias transaction.

System action: An `svcerr_systemerr` call is used to send a reply to the client.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, alias_tranid, hostaddr, prognum, versnum, protocol, port, socket, clientaddr*

Destination: CRPO

DFHRP0686 *date time applid tranid* **The CICS ONC RPC server controller encountered an internal error while attempting to start an alias transaction. Client IP address: clientaddr Host IP address: hostaddr Program: X'prognum' Version X'versnum' Procedure: X'procnum' Protocol: protocol Port: port Socket: socket.**

Explanation: An internal error has prevented the server controller from starting an alias transaction.

System action: A system dump is taken. An `svcerr_systemerr` call is used to send a reply to the client. Message DFHME0116 should be produced

containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0687 *date time applid tranid* The CICS ONC RPC server controller could not start alias transaction *alias_tranid* because the CICS default temporary storage data set is full. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The server controller cannot start the alias transaction because temporary storage is not available.

System action: A system dump is taken. An **svcerr_systemerr** call is used to send a reply to the client. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Determine why the CICS default temporary storage data set is full. Enlarge the data set, or alter your CICS load to free space on it.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, alias_tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0688 *date time applid tranid* The CICS ONC RPC server controller detected an error while starting alias transaction *alias_tranid*. The error indicated that the transaction is remote. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: The alias transaction is defined as remote, but aliases must run in the same CICS region as CICS ONC RPC.

System action: A system dump is taken. An

svcerr_systemerr call is used to send a reply to the client. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Define the alias as a local transaction.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, alias_tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0689 *date time applid tranid* The CICS ONC RPC server controller tried to start alias transaction *alias_tranid*, but the surrogate user security check failed. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: An attempt by a user ID to access an alias transaction failed because of a security check. This may not be an error as you may wish to prevent the client involved from accessing the alias transaction.

System action: An **svcerr_auth** call with a why-value of AUTH_TOOWEAK is used to send a reply to the client.

User response: If you wish the user ID to access the alias, reenable CICS ONC RPC with a different value for CRPM Userid, or alter your surrogate user ID tables.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, alias_tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0690 *date time applid tranid* The CICS ONC RPC server controller received an unexpected response from CICS while starting alias transaction *alias_tranid*. **Client IP address:** *clientaddr* **Host IP address:** *hostaddr* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol* **Port:** *port* **Socket:** *socket*.

Explanation: A client request has failed because of an error in CICS.

System action: A system dump is taken. An **svcerr_systemerr** call is used to send a reply to the client. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: See the associated diagnostics issued by CICS for problem determination.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, alias-tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0691 *date time applid tranid* **The CICS ONC RPC server controller found that the user ID attempting to access alias transaction *alias-tranid* is not known to the external security manager. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

Explanation: The server controller could not start the alias with the user ID because the user ID is not known to the external security manager.

System action: An **svcerr_auth** call with a why-value of AUTH_TOOWEAK is used to send a reply to the client.

User response: If you wish the alias to run under this user ID, define the userid to the external security manager, and change your surrogate user ID tables.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, alias-tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0692 *date time applid tranid* **The CICS ONC RPC server controller found that the external security manager cannot validate the user ID for alias transaction *alias-tranid*. Client IP address *clientaddr* Host IP address: *hostaddr* Program *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.**

Explanation: An attempt to start the alias with an alias user ID failed as the external security manager cannot determine whether the user ID is valid.

System action: An **svcerr_systemerr** call is used to send a reply to the client.

User response: Determine the reason why the external security manager was unable to perform the request.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, alias-tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0694 *date time applid tranid* **The CICS ONC RPC server controller could not start alias transaction *alias-tranid* because it is not defined. Client IP address: *clientaddr* Host IP address: *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.**

Explanation: The alias transaction *alias-tranid* is missing or is not correctly defined.

System action: An **svcerr_systemerr** call is used to send a reply to the client.

User response: Define the alias transaction correctly, or change the definitions of the 4-tuples that refer to it.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, alias-tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0697 *date time applid tranid* **The CICS ONC RPC server controller has started exception disable of CICS ONC RPC. Host IP address: *hostaddr*.**

Explanation: The server controller has started an exception disable of CICS ONC RPC following an error during its operation. The error has already been reported.

System action: Disable processing continues.

User response: See the associated diagnostics for further information about the error.

Module: DFHRPMS

XMEOUT Parameters: *date, time, applid, tranid, hostaddr*

Destination: CRPO

DFHRP0723 *date time applid tranid* **The CICS ONC RPC server controller has detected an error when attempting to shut down the RPC caller.**

Explanation: During CICS ONC RPC disable processing, the server controller shuts down the RPC Caller, but received an error response.

System action: Disable processing continues.

User response: If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. If the problem is not a symptom of a wider problem, you need further

DFHRP0724 • DFHRP0728

assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0724 *date time applid tranid* **The CICS ONC RPC server controller has detected an error when attempting to issue a FREEMAIN for the RPC caller program.**

Explanation: During CICS ONC RPC disable processing, the server controller issues a FREEMAIN for the RPC caller program to remove it from storage, but received an error response. This could either be as a result of problems with CICS which will probably be reflected in CICS diagnostics, or as a result of problems with CICS ONC RPC, which will probably be reflected in other CICS ONC RPC diagnostics.

System action: Disable processing continues.

User response: It might not be possible to reenable CICS ONC RPC without restarting CICS. If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0725 *date time applid tranid* **The CICS ONC RPC server controller has detected an error when attempting to issue a RELEASE for the alias list program.**

Explanation: During CICS ONC RPC disable processing, the server controller releases the alias list program, but received an error response.

System action: Disable processing continues.

User response: It might not be possible to reenable CICS ONC RPC without restarting CICS. If this error is not associated with others, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0726 *date time applid tranid* **During disable processing, the CICS ONC RPC server controller found that the task-related user exit was already disabled.**

Explanation: During disable processing, the server controller found that the task-related user exit was already disabled or that it has not been defined as an exit. This is probably the result of operator intervention.

System action: Disable processing continues.

User response: Take steps to prevent operator interference with the task-related user exit.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0727 *date time applid tranid* **During disable processing, the CICS ONC RPC server controller found that the task-related user exit is in use by another task.**

Explanation: During disable processing, the server controller found that the task-related user exit is currently invoked by another task. This may be a temporary condition, or it may be that the task related user exit has already been disabled.

System action: Disable processing continues.

User response: Investigate whether the operator has disabled the task related user exit DFHRPTRU for any reason.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0728 *date time applid tranid* **The CICS ONC RPC server controller received an unexpected response from CICS while disabling the task-related user exit.**

Explanation: An error occurred in CICS when the server controller tried to disable the task-related user exit during CICS ONC RPC disable processing.

System action: A system dump is taken. Disable processing continues. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: See the associated diagnostics issued by CICS for problem determination.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0729 *date time applid tranid* **The CICS ONC RPC server controller has detected an internal error during disable processing.**

Explanation: CICS ONC RPC has detected an internal error during disable processing.

System action: Disable processing continues.

User response: If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0730 *date time applid tranid* **The CICS ONC RPC server controller does not have authorization to access the task-related user exit.**

Explanation: During disable processing, the server controller found that it did not have the authorization to access the task-related user exit. This problem arises if the supplied definitions of the server controller are changed. Changes to these definitions are not allowed.

System action: Disable processing continues.

User response: Ensure that the supplied definitions for the server controller are used, and reenable CICS ONC RPC.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0731 *date time applid tranid* **The CICS ONC RPC server controller has detected an internal error during disable processing.**

Explanation: CICS ONC RPC has detected an internal error during disable processing.

System action: Disable processing continues.

User response: If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0732 *date time applid tranid* **The CICS ONC RPC server controller has detected an internal error during disable processing.**

Explanation: During disable processing, the server controller attempted to unregister for problem determination, but received an error response.

System action: Disable processing continues.

User response: If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0735 *date time applid tranid* **The CICS ONC RPC server controller HANDLE ABEND code was entered as a result of an error in the Decode function in converter *converter_program_name*. Client IP address: *clientaddr* Host IP address: *hostaddr* Program *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket *socket*.**

Explanation: An error has occurred in **Decode** in converter *converter_program_name*. Because the converter does not contain HANDLE ABEND logic, the error has percolated to the server controller.

System action: An **svcerr_systemerr** call is used to send a reply to the client.

User response: Correct the error in the converter. Add handle abend logic to the converter so that it can handle its own errors, and replace it.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, converter_program_name, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum',protocol, port, socket*

Destination: CRPO

DFHRP0736 *date time applid tranid* **The CICS ONC RPC server controller has encountered an internal error while processing a client request. Client IP address: *clientaddr* Host IP address *hostaddr* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol* Port: *port* Socket: *socket*.**

DFHRP0737 • DFHRP0749

Explanation: An internal error has forced CICS ONC RPC to abandon a client request.

System action: A system dump is taken. An `svcerr_systemerr` call is used to send a reply to the client. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, clientaddr, hostaddr, X'prognum', X'versnum', X'procnum', protocol, port, socket*

Destination: CRPO

DFHRP0737 *date time applid tranid* **The CICS ONC RPC server controller has encountered an internal error. Host IP address** *hostaddr.*

Explanation: The server controller has encountered an internal error and cannot continue.

System action: A system dump is taken. CICS ONC RPC is disabled. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

Destination: CRPO

DFHRP0741 *date time applid tranid* **The CICS ONC RPC server controller is abending with abend code ARP4.**

Explanation: The server controller encountered an error and cannot continue.

System action: CICS ONC RPC is disabled. CICS ONC RPC has already issued other diagnostics giving further information about the error. The server controller abends with abend code ARP4.

User response: See the associated diagnostics and the description of abend code ARP4 for further guidance.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0746 *date time applid tranid* **The CICS ONC RPC server controller is abending with abend code ARP2.**

Explanation: The server controller encountered an error and cannot continue.

System action: The server controller abends with abend code ARP2. CICS ONC RPC is disabled.

User response: See the associated diagnostics and the description of abend code ARP2 for further guidance.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0747 *date time applid tranid* **The CICS ONC RPC server controller is abending with abend code ARP2.**

Explanation: The server controller has encountered an error and cannot continue.

System action: The server controller abends with abend code ARP2. CICS ONC RPC is disabled.

User response: See the associated diagnostics and the description of abend code ARP2 for further guidance.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP0749 *date time applid tranid* **The CICS ONC RPC server controller has encountered an internal error when no client request was being processed. Host IP address:** *hostaddr.*

Explanation: An internal error has occurred in the server controller. No client requests are affected.

System action: A system dump is taken. The server controller continues. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPMS

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

Destination: CRPO

DFHRP1000 *date time applid* **The CICS ONC RPC RPC caller is initializing.**

Explanation: The server controller has started initialization of the RPC caller.

System action: Processing continues.

User response: None.

Module: DFHRPRP

XMEOUT Parameters: *date, time,applid*

Destination: CRPO

DFHRP1001 *date time applid* **The CICS ONC RPC RPC caller has been initialized successfully.**

Explanation: The RPC caller has been initialized, and it is now ready for use.

System action: Processing continues.

User response: None.

Module: DFHRPRP

XMEOUT Parameters: *date, time,applid*

Destination: CRPO

DFHRP1002 *date time applid* **The CICS ONC RPC RPC caller is shutting down.**

Explanation: Termination of the RPC caller has started.

System action: Processing continues.

User response: None.

Module: DFHRPRP

XMEOUT Parameters: *date, time,applid*

Destination: CRPO

DFHRP1003 *date time applid* **The CICS ONC RPC RPC caller has successfully shutdown.**

Explanation: Termination of the RPC caller has completed.

System action: Processing continues.

User response: None.

Module: DFHRPRP

XMEOUT Parameters: *date, time,applid*

Destination: CRPO

DFHRP1500 *date time applid tranid* **Invalid data has been entered in field *fieldname*.**

Explanation: Invalid data was entered on a connection manager panel in field *fieldname*.

System action: The panel is redisplayed and the field in error is highlighted.

User response: Enter valid data in the field indicated. See the *CICS External Interfaces Guide* for further guidance.

Module: DFHRPC06, DFHRPC10, DFHRPC0A, DFHRPC1B

Destination: Terminal End User

DFHRP1501 *date time applid tranid* **The value entered in field *fieldname* exceeds the maximum allowed.**

Explanation: The value entered on a connection manager panel in field *fieldname* exceeds the maximum allowed.

System action: The panel is redisplayed and the field in error is highlighted.

User response: Enter valid data in the field indicated. See the *CICS External Interfaces Guide* for further guidance.

Module: DFHRPC0B

Destination: Terminal End User

DFHRP1505 *date time applid tranid* **The CICS ONC RPC connection manager has not been started correctly.**

Explanation: The connection manager has been started from a non-BMS terminal but is not being used to enable or disable CICS ONC RPC.

System action: The connection manager terminates.

User response: The connection manager can be used as follows from a non-BMS terminal

- If CICS ONC RPC is disabled, the connection manager can be used for automatic enable, either by setting automatic enable to YES on the CICS ONC RPC data set or by entering a fast path command with YES for automatic enable.
- If CICS ONC RPC is enabled, the connection manager can be used for disable by entering a valid disable fast path command.

See the *CICS External Interfaces Guide* for guidance on how to start the connection manager.

Module: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1506 *date time applid tranid* **The CICS ONC RPC connection manager detected an error attempting to retrieve any fast path data. EIBRESP: eibresp.**

Explanation: The connection manager was attempting to retrieve any fast path commands that may have been specified when it was initiated. The connection manager issued an EXEC CICS GETMAIN command, but received the response *eibresp*.

System action: A system dump is taken. The connection manager continues but any fast path commands are ignored. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC01

XMEOUT Parameters: *date, time, applid, tranid, eibresp*

Destination: CRPO

DFHRP1507 *date time applid tranid* **An invalid CICS ONC RPC fast path command has been entered: fastpath_command**

Explanation: The connection manager was started by entering a fast path command, but the format of the command was invalid.

System action: The connection manager is started, but fast path commands are ignored.

User response: Enter a valid fast path command. See the *CICS External Interfaces Guide* for further guidance.

Module: DFHRPC01

XMEOUT Parameters: *date, time, applid, tranid, fastpath_command*

Destination: CRPO

DFHRP1508 *date time applid tranid* **The CICS ONC RPC connection manager has not been started correctly.**

Explanation: The connection manager was attempting to retrieve any fast path commands that may have been specified when it was initiated, but detected an invalid STARTCODE indicator.

System action: The connection manager continues but any fast path commands are ignored.

User response: See the *CICS External Interfaces Guide* for guidance on how to start the connection manager. If the connection manager was started

correctly, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC01

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP1509 *date time applid tranid* **The CICS ONC RPC connection manager detected an error attempting to retrieve any fast path data. EIBRESP: eibresp.**

Explanation: The connection manager was attempting to retrieve any fast path commands that may have been specified when it was initiated using an EXEC CICS START command. The connection manager issued an EXEC CICS RETRIEVE command, but received the response *eibresp*.

System action: A system dump is taken. The connection manager continues but any fast path commands are ignored. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC01

XMEOUT Parameters: *date, time, applid, tranid, eibresp*

Destination: CRPO

DFHRP1510 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file filename. EIBRESP: eibresp.**

Explanation: The connection manager could not access the CICS ONC RPC data set, CICS file *filename*. An EXEC CICS READ was issued, but received the response *eibresp*. The data set has not been correctly defined to CICS for one of the following reasons

- No file definition has been found for *filename*. CICS ONC RPC has therefore not been installed correctly.
- READ operations are not allowed on the file.
- The file is DISABLED, either due to an incorrect file definition, or due to operator intervention.
- The file cannot be opened because it has not been defined correctly, or because it has been closed by operator intervention.

- The connection manager transaction, or the user running it, does not have the necessary level of authority to access the file.

System action: The requested operation is not performed.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Module: DFHRPC09

XMEOUT Parameters: *date, time, applid, tranid, filename, eibresp*

Destination: CRPO

DFHRP1511 *date time applid tranid* **The CICS ONC RPC connection manager has detected a logic error accessing the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager received an unexpected error when accessing the CICS ONC RPC data set, CICS file *filename*. This is a logic error. The connection manager has received an unexpected response from CICS following an EXEC CICS command.

System action: A system dump is taken. The requested operation is not performed. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC09

XMEOUT Parameters: *date, time, applid, tranid, filename*

Destination: CRPO

DFHRP1512 *date time applid tranid* **The CICS ONC RPC connection manager cannot access the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager could not access the CICS ONC RPC data set, CICS file *filename*. The data set has not been correctly defined to CICS for one of the following reasons

- No file definition has been found for *filename*. CICS ONC RPC has therefore not been installed correctly.
- READ operations are not allowed on the file.
- The file has been disabled, either due to an incorrect data set definition, or due to operator intervention.

- The file cannot be opened because it has not been defined correctly, or because it has been closed by operator intervention.
- The connection manager transaction, or the user running the connection manager, does not have the necessary level of authority to access the file.

System action: The message is displayed at the terminal.

User response: Ensure that all the CEDA groups for CICS ONC RPC have been installed correctly.

Investigate whether the operator has changed the status of the file for any reason.

Module: DFHRPC01

XMEOUT Parameters: *date, time, applid, tranid, filename*

Destination: CRPO

DFHRP1513 *date time applid tranid* **The CICS ONC RPC connection manager has detected invalid data in the definition record of the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager detected an error in the definition record in the CICS ONC RPC data set.

System action: A system dump is taken. CICS ONC RPC is disabled. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Ensure that the first record in the data set has been correctly initialized. You can do this by manually updating the record (see the *CICS External Interfaces Guide* for further guidance), or by deleting the first record in the data set, and rerunning the connection manager. This creates a new definition record using the default settings which can then be updated using the connection manager panels.

Module: DFHRPC01

XMEOUT Parameters: *date, time, applid, tranid, filename*

Destination: CRPO

DFHRP1514 *date time applid tranid* **The CICS ONC RPC connection manager has detected that the CICS ONC RPC global work area does not have the expected length.**

Explanation: The connection manager detected that the length of the associated global work area is not correct.

System action: A system dump is taken. CICS ONC RPC is disabled. It is not possible to enable CICS ONC

DFHRP1515 • DFHRP1519

RPC until the problem is resolved. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Make sure that no user-written version of program DFHRPTRU is being used. Only the CICS ONC RPC supplied program can be used with CICS ONC RPC. Similarly, the CICS ONC RPC supplied task-related user exit DFHRPTRU should only be enabled and disabled by the connection manager. It should not be necessary to enable or disable DFHRPTRU in any other way.

Module: DFHRPC01

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP1515 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file *filename*. EIBRESP: *eibresp*.**

Explanation: The connection manager could not access the CICS ONC RPC data set, CICS file *filename*. An EXEC CICS READ was issued, but received the response *eibresp*. The error can occur for one of the following reasons

- The file is defined as remote, and there is an error on the connection to the owning system.
- VSAM has returned an unexpected response to CICS.
- An I/O error occurred on the READ.

System action: A system dump is taken. The requested operation is not performed. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Module: DFHRPC09

XMEOUT Parameters: *date, time, applid, tranid, filename, eibresp*

Destination: CRPO

DFHRP1516 *date time applid tranid* **The CICS ONC RPC connection manager cannot access the feature definition record in the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager found that the CICS ONC RPC definition record is missing from the CICS ONC RPC data set, CICS file *filename*, while processing a request to update this record.

System action: A system dump is taken. The connection manager panel is redisplayed. The CICS

ONC RPC definition record cannot be updated. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the reason why this record does not exist. You must create a new CICS ONC RPC definition record with the connection manager.

Module: DFHRPC09

XMEOUT Parameters: *date, time, applid, tranid, filename*

Destination: CRPO

DFHRP1518 *date time applid tranid* **The CICS ONC RPC connection manager cannot find the global work area.**

Explanation: The connection manager cannot access its global work area.

System action: A system dump is taken. The connection manager continues, but CICS ONC RPC cannot be enabled. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: End the connection manager. Ensure that all the CEDA groups containing the CICS ONC RPC definitions have been correctly installed. Then try running the connection manager again.

Investigate whether the operator has disabled the task-related user exit DFHRPTRU.

Module: DFHRPC01

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP1519 *date time applid tranid* **The CICS ONC RPC connection manager cannot find the task-related user exit.**

Explanation: The connection manager cannot access its task-related user exit for one of the following reasons

- DFHRPTRU has not been defined to CICS
- DFHRPTRU is not in the CICS load library
- DFHRPTRU has been disabled

System action: A system dump is taken. CICS ONC RPC is disabled. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: End the connection manager. Ensure that all the CEDA groups containing CICS ONC RPC definitions have been installed correctly. Then try running the connection manager again.

If CICS ONC RPC has been correctly installed, check that the operator has not disabled DFHRPTRU.

Module: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1520 *date time applid tranid* **The CICS ONC RPC connection manager is not authorized to access its task related user exit. EIBRESP2: eibresp2.**

Explanation: The connection manager used EXEC CICS EXTRACT EXIT to find the task-related user exit, but got a NOTAUTH response.

System action: A system dump is taken. CICS ONC RPC is disabled. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Use the EIBRESP2 value to identify the problem.

Module: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid, eibresp2*

Destination: CRPO

DFHRP1521 *date time applid tranid* **The CICS ONC RPC connection manager cannot access its task related user exit.**

Explanation: The connection manager cannot access the task related user exit. It received an unexpected response to an EXEC CICS EXTRACT EXIT call.

System action: A system dump is taken. CICS ONC RPC is disabled. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1522 *date time applid tranid* **The CICS ONC RPC connection manager has been started against an invalid terminal.**

Explanation: The connection manager has been started against a terminal that is not supported, for example, an LUTYPE6 terminal.

System action: The connection manager abends with abend code ARPX.

User response: Start the connection manager against a valid terminal. See the *CICS External Interfaces*

Guide for further guidance on starting the connection manager.

Module: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1523 *date time applid tranid* **CICS ONC RPC cannot be enabled because the connection manager cannot access the task-related user exit DFHRPTRU.**

Explanation: The connection manager could not enable CICS ONC RPC because an error occurred accessing the task related user exit DFHRPTRU.

System action: A system dump is taken. This instance of connection manager can only be used to inquire on, or update the CICS ONC RPC data set. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: See the CRPO transient data queue for messages indicating the nature of the error, and take the appropriate action. Then restart the connection manager transaction and select the enable option again.

Module: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1524 *date time applid tranid* **CICS ONC RPC cannot be enabled because the server controller is already running.**

Explanation: The connection manager detected that the task-related user exit DFHRPTRU is disabled, but the server controller transaction is still running.

System action: A system dump is taken. This instance of connection manager can only be used to inquire on, or update, the CICS ONC RPC data set. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate why the last attempt to disable CICS ONC RPC did not complete successfully. Investigate the possibility of operator intervention.

Once you have established that it is safe to continue, use CEMT SET TASK or EXEC CICS SET TASK to purge the server controller. Then run the connection manager again to enable CICS ONC RPC.

Module: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1525 *date time applid tranid* **The CICS ONC RPC connection manager received an unexpected response from CICS.**

Explanation: The connection manager detected a logic error. It received an unexpected response to a CICS command.

System action: A system dump is taken. Processing continues. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC01

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP1526 *date time applid tranid* **The CICS ONC RPC connection manager found that the task-related user exit is enabled, but the server controller is not running.**

Explanation: The connection manager has detected that the task-related user exit DFHRPTRU is enabled, but the server controller is not running. This means that CICS ONC RPC is in an indeterminate state.

System action: This instance of connection manager can only be used to inquire on, or update, the CICS ONC RPC data set.

User response: Investigate whether the previous attempt to disable CICS ONC RPC completed successfully. Alternatively, the server controller task may have been forcepergured by the operator.

Once you have established that it is safe to continue, try running the connection manager again and enabling CICS ONC RPC.

Module: DFHRPC01

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP1527 *date time applid tranid* **CICS ONC RPC cannot be enabled because disable processing has not completed.**

Explanation: CICS ONC RPC is being disabled.

System action: The current instance of CICS ONC RPC is disabled.

User response: Wait for disable to complete before attempting to enable the CICS ONC RPC again.

Module: DFHRPC4C

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO and Terminal End User

DFHRP1528 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while initializing the RPC caller component during CICS ONC RPC enable processing.**

Explanation: The RPC caller could not be started.

System action: The enable attempt is abandoned.

User response: If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC4C

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO and Terminal End User

DFHRP1529 *date time applid tranid* **The CICS ONC RPC connection manager detected an error in enable processing. Host IP address *hostaddr*.**

Explanation: The connection manager discovered a storage problem while trying to enable CICS ONC RPC.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: See the associated diagnostics issued by CICS for problem determination.

See the *CICS Problem Determination Guide* for guidance on dealing with storage problems.

Module: DFHRPC4C

XMEOUT Parameters: *date, time, applid, tranid, hostaddr*

Destination: CRPO and Terminal End User

DFHRP1530 *date time applid tranid* **The CICS ONC RPC connection manager detected a CICS short on storage condition during initialization of the RPC caller component. Host IP address *hostaddr*.**

Explanation: The connection manager detected a short on storage condition.

System action: The enable attempt is abandoned.

User response: See the associated diagnostics

issued by CICS for problem determination. See the *CICS Problem Determination Guide* for guidance on dealing with storage problems.

When the short on storage problem has been resolved, try to enable CICS ONC RPC again.

Module: DFHRPC4C

XMEOUT Parameters: *date, time, applid, tranid, hostaddr*

Destination: CRPO and Terminal End User

DFHRP1531 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file *filename*. EIBRESP: *eibresp*.**

Explanation: The connection manager could not access the CICS ONC RPC data set, CICS file *filename*. An EXEC CICS WRITE was issued, but received the response *eibresp*. The error can occur for one of the following reasons

- No file definition has been found for the file, implying that CICS ONC RPC has not been installed correctly.
- Write operations are not allowed, implying that CICS ONC RPC has not been installed correctly.
- The file is DISABLED, either due to an incorrect file definition, or due to operator intervention.
- The file is NOTOPEN, either due to an incorrect file definition or due to operator intervention.
- Write operations are not authorized, implying that security has not been set up correctly.

System action: The requested operation is not performed.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Module: DFHRPC09

XMEOUT Parameters: *date, time, applid, tranid, filename, eibresp*

Destination: CRPO

DFHRP1532 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file *filename*. EIBRESP: *eibresp*.**

Explanation: The connection manager could not access the CICS ONC RPC data set, CICS file *filename*. An EXEC CICS WRITE was issued, but received the response *eibresp*. The error can occur for one of the following reasons

- The file is defined as remote, and there is an error on the connection to the owning system.

- VSAM has returned an unexpected response to CICS.
- An I/O error occurred on the WRITE.
- There is insufficient space available on the DASD device containing the data set.

System action: A system dump is taken. The requested operation is not performed. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Module: DFHRPC09

XMEOUT Parameters: *date, time, applid, tranid, filename, eibresp*

Destination: CRPO

DFHRP1533 *date time applid tranid* **The CICS ONC RPC connection manager has detected a logic error while accessing the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager used EXEC CICS WRITE to update the CICS ONC RPC data set, but received an unexpected response. This is a logic error.

System action: A system dump is taken. The requested operation is not performed. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC09

XMEOUT Parameters: *date, time, applid, tranid, filename*

Destination: CRPO

DFHRP1534 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file *filename*. EIBRESP: *eibresp*.**

Explanation: The connection manager could not access the CICS ONC RPC data set, CICS file *filename*. An EXEC CICS WRITE was issued, but received the response *eibresp*. The error can occur for one of the following reasons

- The file is defined as remote, and there is an error on the connection to the owning system.

DFHRP1536 • DFHRP1539

- VSAM has returned an unexpected response to CICS.
- An I/O error occurred on the WRITE.
- There is insufficient space available on the DASD device containing this file.

System action: A system dump is taken. The 4-tuple definition is not saved in the data set. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Module: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename, eibresp*

Destination: CRPO

DFHRP1536 *date time applid tranid* **There was no entry for this 4-tuple in the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager did not find this 4-tuple in the CICS ONC RPC data set.

System action: None.

User response: Enter a 4-tuple that has already been saved in the data set.

Module: DFHRPC09

Destination: Terminal End User

DFHRP1537 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while registering 4-tuples from the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager detected an internal error while processing a request to register 4-tuples from the CICS ONC RPC data set.

System action: A system dump is taken. No 4-tuples are registered. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

Destination: CRPO

DFHRP1538 *date time applid tranid* **The CICS ONC RPC connection manager found no records on the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager was processing a request to register 4-tuples, but found no records on the CICS ONC RPC data set. The CICS ONC RPC definition record is missing.

System action: A system dump is taken. No 4-tuples are registered. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the reason why there are no records. You must use the connection manager to create a new one.

Module: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

Destination: CRPO

DFHRP1539 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file *filename*, while registering 4-tuples from the data set. EIBRESP: *eibresp*.**

Explanation: The connection manager could not access the CICS ONC RPC data set.

The error occurred while processing a request to register 4-tuples from the data set. Associated message DFHRP1545 may have been issued to indicate the number of 4-tuples that were registered.

An EXEC CICS STARTBR, EXEC CICS READNEXT, or EXEC CICS ENDBR was issued, but received the response *eibresp*. The error can occur for one of the following reasons

- No file definition has been found for the file, implying that CICS ONC RPC has not been installed correctly.
- BROWSE or READ operations are not allowed, implying that CICS ONC RPC has not been installed correctly.
- The file is DISABLED, either due to an incorrect file definition, or due to operator intervention.
- The file is NOTOPEN, either due to an incorrect file definition, or due to operator intervention.
- BROWSE or READ operations are not authorized, implying that security has not been set up correctly.

System action: A system dump is taken. The connection manager cannot register 4-tuples from the data set. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the

EIBRESP value means, and take appropriate action.

Module: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename, eibresp*

Destination: CRPO

DFHRP1540 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error.**

Explanation: The connection manager received an unexpected response from CICS following an EXEC CICS command.

System action: A system dump is taken. The connection manager abends with abend code ARPV. The other components of CICS ONC RPC continue. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1541 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error.**

Explanation: The connection manager received an unexpected response from CICS following an EXEC CICS command.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1542 *date time applid tranid* **CICS ONC RPC detected an error while accessing the CICS ONC RPC data set, CICS file filename, while registering 4-tuples from the data set. EIBRESP eibresp.**

Explanation: The connection manager could not access the CICS ONC RPC data set.

The error occurred while processing a request to register 4-tuples from the data set. Associated message DFHRP1545 may have been issued to indicate the number of 4-tuples that were registered.

An EXEC CICS STARTBR, EXEC CICS READNEXT or EXEC CICS ENDBR was issued, but received the response *eibresp*. The error can occur for one of the following reasons

- The file is defined as remote, and there is an error on the connection to the owning system.
- VSAM has returned an unexpected response to CICS.
- An I/O error occurred on the BROWSE or READ command.

System action: A system dump is taken. The connection manager cannot register 4-tuples from the data set. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename, eibresp*

Destination: CRPO

DFHRP1543 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error while accessing the CICS ONC RPC data set, CICS file filename, while registering 4-tuples from the data set.**

Explanation: The connection manager has detected an error while accessing the CICS ONC RPC data set. This is a logic error since connection manager has received an unexpected response from CICS following an EXEC CICS STARTBR, EXEC CICS READNEXT or EXEC CICS ENDBR command.

The error occurred while processing a request to register 4-tuples from the data set. Associated message DFHRP1545 may have been issued to indicate the number of 4-tuples that were registered.

System action: A system dump is taken. The connection manager cannot register 4-tuples from the

DFHRP1544 • DFHRP1548

data set. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

Destination: CRPO

DFHRP1544 *date time applid tranid* **The CICS ONC RPC connection manager found no records in the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager was processing a request to register 4-tuples, but found no records in the CICS ONC RPC data set. This indicates that the CICS ONC RPC definition record is missing.

System action: A system dump is taken. No 4-tuples are registered. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the reason why there are no records. You must use the connection manager to create a new CICS ONC RPC definition record.

Module: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

Destination: CRPO

DFHRP1545 *date time applid tranid* **The CICS ONC RPC connection manager has completed registration of 4-tuples from the CICS ONC RPC data set, CICS file *filename*. Successful registers *count1*. Unsuccessful registers: *count2*.**

Explanation: The connection manager has finished registering 4-tuples from the CICS ONC RPC data set, CICS file *filename*. *count1* indicates the number of 4-tuples that have been successfully registered. *count2* indicates the number of 4-tuples that were not registered.

System action: No further action.

User response: No further action.

Module: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename, count1, count2*

Destination: CRPO

DFHRP1546 *date time applid tranid* **The CICS ONC RPC connection manager found no 4-tuple records on the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager was processing a request to register 4-tuples from the CICS ONC RPC data, but found no 4-tuple records in it.

System action: No 4-tuples are registered.

User response: Store some 4-tuple definitions in the data set before requesting this option.

Module: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

Destination: CRPO

DFHRP1547 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while registering 4-tuples from the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager detected an internal error while processing a request to register 4-tuple from the CICS ONC RPC data set. Associated message DFHRP1545 indicates how many 4-tuples were registered.

System action: A system dump is taken. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

Destination: CRPO

DFHRP1548 *date time applid tranid* **The CICS ONC RPC connection manager detected an error attempting to retrieve any fast path data. EIBRESP: *eibresp*.**

Explanation: The connection manager was attempting to retrieve any fast path commands that may have been specified when it was initiated from a terminal. The connection manager issued an EXEC CICS RECEIVE command, but received a response in field *eibresp*.

System action: A system dump is taken. Start up of CICS ONC RPC continues but any fast path commands are ignored. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid, eibresp*

Destination: CRPO

DFHRP1549 *date time applid tranid* **The CICS ONC RPC connection manager received an error response while registering with CICS for problem determination.**

Explanation: The connection manager received an unexpected response from CICS when attempting to register for problem determination.

System action: A system dump is taken. CICS feature tracing and dump formatting cannot be used for CICS ONC RPC. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC01

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1550 *date time applid tranid* **The CICS ONC RPC connection manager received an error response while registering with CICS for problem determination.**

Explanation: The connection manager received an unexpected response from CICS when attempting to register for problem determination.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1551 *date time applid tranid* **The CICS ONC RPC connection manager could not enable CICS ONC RPC because of a CICS short on storage condition.**

Explanation: The connection manager has made a request for storage during enable processing, but has received a reply indicating that CICS is short on storage.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: See the associated diagnostics issued by CICS for problem determination. You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1552 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error during enable processing.**

Explanation: An internal error detected during enable processing has prevented the connection manager from enabling CICS ONC RPC.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1554 *date time applid tranid* **The CICS ONC RPC connection manager is not authorized to use the CICS SPI.**

Explanation: The connection manager has not been defined with the authorization necessary to execute CICS system programming interface commands. It cannot function without this authorization.

DFHRP1555 • DFHRP1559

System action: A system dump is taken. The enable attempt is abandoned.

User response: Message DFHME0116 should be produced containing the symptom string for this problem. Redefine the connection manager transaction and its associated program DFHRPC00 with the appropriate level of security to be able to use the CICS SPI.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1555 *date time applid tranid* **The CICS ONC RPC connection manager is not authorized to use the program DFHRPTRU.**

Explanation: The connection manager used the EXEC CICS ENABLE PROGRAM command for DFHRPTRU, but it has not been defined with the authorization necessary to use DFHRPTRU. It cannot function without this authorization.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Redefine the connection manager and its associated programs with the appropriate level of security to be able to use the CICS ONC RPC supplied task-related user exit DFHRPTRU.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1556 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error during enable processing.**

Explanation: An internal error detected by the connection manager during enable processing has prevented CICS ONC RPC from being enabled.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1557 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error during enable processing.**

Explanation: An internal error detected by the connection manager during enable processing has prevented CICS ONC RPC from being enabled.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1558 *date time applid tranid* **The CICS ONC RPC connection manager could not find the task-related user exit, program DFHRPTRU.**

Explanation: The connection manager cannot find the task-related user exit, DFHRPTRU, for one of the following reasons

- DFHRPTRU has not been defined to CICS
- DFHRPTRU is not in the CICS load library
- DFHRPTRU has been disabled

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Ensure that all the CEDA groups for CICS ONC RPC have been installed correctly, then try the enable request again.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1559 *date time applid tranid* **The CICS ONC RPC connection manager could not enable CICS ONC RPC because of a CICS short on storage condition.**

Explanation: The connection manager has made a request for storage during enable processing, but has received a reply indicating that CICS is short on storage.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: See the associated diagnostics issued by CICS for problem determination. See the dfhtm00l. for guidance on dealing with CICS storage problems.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1560 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error during enable processing.**

Explanation: An internal error detected by the connection manager during enable processing has prevented CICS ONC RPC from being enabled.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1561 *date time applid tranid* **The CICS ONC RPC connection manager found that the task-related user exit, program DFHRPTRU, is already enabled.**

Explanation: The connection manager found that the task-related user exit, DFHRPTRU, is already enabled.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Take steps to prevent operator intervention with the task related user exit, then try the enable request again.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1564 *date time applid tranid* **CICS ONC RPC could not be enabled due to an internal error while starting the server controller. Host IP address: *hostaddr*.**

Explanation: The connection manager attempted to start the server controller by issuing an EXEC CICS START command, but could not determine the response that was returned.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

Destination: CRPO

DFHRP1565 *date time applid tranid* **CICS ONC RPC cannot be enabled because the connection manager is not authorized to start the server controller. EIBRESP: *eibresp*. Host IP address *hostaddr*.**

Explanation: The connection manager attempted to start the server controller by issuing an EXEC CICS START command, but the NOTAUTH response was returned.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: See the *CICS System Programming Reference* for the meaning of the value returned in *eibresp*. Use CEDA to ensure that the resource definitions for the CICS ONC RPC supplied programs and transactions have been defined with the correct levels of security. The connection manager must have the correct level of authority to start the server controller in order for CICS ONC RPC to be enabled successfully.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, eibresp, hostaddr*

Destination: CRPO

DFHRP1566 *date time applid tranid* **CICS ONC RPC cannot be enabled due to an error starting the server controller. EIBRESP eibresp. Host IP address: hostaddr.**

Explanation: The connection manager attempted to start the server controller by issuing an EXEC CICS START USERID command, but the TRANSIDERR response was returned.

See the *CICS System Programming Reference* for the meaning of the value returned in *eibresp*.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Use CEDA to ensure that the resource definitions for the CICS ONC RPC supplied programs and transactions have been defined with the correct levels of security. In order to enable CICS ONC RPC, the connection manager must have the correct level of authority to start the server controller.

Module: DFHRPC4C

XMEOUT Parameters: *date, time, applid, tranid, eibresp, hostaddr*

Destination: CRPO

DFHRP1567 *date time applid tranid* **CICS ONC RPC could not be enabled due to a security error starting the server controller. User ID userid is unknown. Host IP address: hostaddr.**

Explanation: The connection manager attempted to start the server controller by issuing an EXEC CICS START USERID command, but the USERIDERR response was returned.

The user ID specified for the server controller is not known to the external security manager.

System action: The enable attempt is abandoned.

User response: Ensure that a valid user ID is specified for CRPM Userid.

Module: DFHRPC4C

XMEOUT Parameters: *date, time, applid, tranid, userid, hostaddr*

Destination: CRPO

DFHRP1568 *date time applid tranid* **CICS ONC RPC could not be enabled due to a security error starting the server controller. Host IP address: hostaddr.**

Explanation: The connection manager attempted to start the server controller by issuing an EXEC CICS

START USERID command, but the USERIDERR response was returned.

The external security manager is in a state such that it cannot validate the user ID specified for the server controller.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the reason why the external security manager cannot perform this request.

Module: DFHRPC4C

XMEOUT Parameters: *date, time, applid, tranid, hostaddr*

Destination: CRPO

DFHRP1569 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error during enable processing.**

Explanation: An internal error detected by the connection manager during enable processing has prevented CICS ONC RPC from being enabled.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC4C

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP1570 *date time applid tranid* **CICS ONC RPC storage subpool token not saved.**

Explanation: The connection manager has detected an error while saving the storage subpool token.

System action: A system dump is taken. CICS ONC RPC continues normally. However if CICS ONC RPC abends, it may not be possible to reenable CICS ONC RPC without restarting CICS. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: See the associated diagnostics issued by CICS for problem determination.

Module: DFHRPC4C

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP1571 *date time applid tranid* **The CICS ONC RPC connection manager is not authorized to load module *module*.**

Explanation: The connection manager has not been defined with the authorization necessary to issue an EXEC CICS LOAD command for the named module.

System action: The enable attempt is abandoned.

User response: Redefine the connection manager and its associated programs with the appropriate level of security to be able to issue EXEC CICS LOAD commands for the named CICS ONC RPC program.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, module*

Destination: CRPO

DFHRP1572 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while loading *module*.**

Explanation: The connection manager tried to load the module, but the response to EXEC CICS LOAD was PGMIDERR.

System action: The enable attempt is abandoned.

User response: Use the CEDA transaction to ensure that the connection manager (program DFHRPC00) and the named program are correctly defined. See the *CICS External Interfaces Guide* for the correct program definitions.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, module*

Destination: CRPO

DFHRP1574 *date time applid tranid* **The CICS ONC RPC connection manager load for *module* returned an unexpected response.**

Explanation: The connection manager has not been able to load the module into storage. A response other than NOTAUTH or PGMIDERR was returned to the EXEC CICS LOAD command.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Use the system dump to determine why the LOAD could not work.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, module*

Destination: CRPO

DFHRP1575 *date time applid tranid* **CICS ONC RPC could not be enabled due to an internal error starting the server controller. Host IP address: *hostaddr*.**

Explanation: The connection manager attempted to start the server controller by issuing an EXEC CICS START command, but received an unexpected response.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

Destination: CRPO

DFHRP1576 *date time applid tranid* **CICS ONC RPC could not be enabled due to an internal error starting the server controller. EIBRESP: *eibresp*. Host IP address: *hostaddr*.**

Explanation: The connection manager attempted to start the server controller by issuing an EXEC CICS START command, but the INVREQ response was returned.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid, eibresp, hostaddr*

Destination: CRPO

DFHRP1577 *date time applid tranid* **The CICS ONC RPC connection manager cannot access its task-related user exit DFHRPTRU.**

Explanation: The connection manager was unable to

DFHRP1579 • DFHRP1582

access its task-related user exit DFHRPTRU during enable processing.

System action: A system dump is taken. The enable attempt is abandoned. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Check that the task-related user exit has not been disabled by operator intervention. See the associated diagnostics issued by CICS for problem determination.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1579 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while registering 4-tuples from the CICS ONC RPC data set, CICS file filename.**

Explanation: The connection manager has detected an internal error while processing a request to register 4-tuples from the CICS ONC RPC data set. Associated message DFHRP1545 may have been issued to indicate the number of 4-tuples that were successfully registered.

System action: A system dump is taken. Registration of 4-tuples from the data set does not continue. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

Destination: CRPO

DFHRP1580 *date time applid tranid* **The CICS ONC RPC connection manager cannot establish whether security is active or obtain the default CICS user ID. EIBRESP: eibresp.**

Explanation: The connection manager was unable to retrieve status information about CICS, and therefore cannot establish whether security is active, or obtain the default CICS user ID.

An EXEC CICS INQUIRE SYSTEM was issued but received the response shown in the message.

System action: Processing continues under the

assumption that there is no security active.

Panel DFHRP02 is displayed with no user ID in field CRPM Userid, unless a user ID was saved in the CICS ONC RPC data set.

User response: Ensure that the connection manager has the correct level of security to use CICS system programming interface commands.

Module: DFHRPC42

XMEOUT Parameters: *date, time,applid, tranid, eibresp*

Destination: CRPO

DFHRP1581 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while accessing the CICS ONC RPC data set, CICS file filename.**

Explanation: The connection manager has detected an internal error while accessing the CICS ONC RPC data set.

System action: A system dump is taken. The panel is redisplayed. No records can be updated. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC03, DFHRPC05

XMEOUT Parameters: *date, time,applid, tranid, filename*

Destination: CRPO

DFHRP1582 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while accessing the CICS ONC RPC data set, CICS file filename.**

Explanation: The connection manager has detected an internal error while accessing the CICS ONC RPC data set.

System action: A system dump is taken. The connection manager panel is redisplayed. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC03, DFHRPC05

XMEOUT Parameters: *date, time,applid, tranid, filename*

Destination: CRPO

DFHRP1583 *date time applid tranid* **The CICS ONC RPC connection manager found no entry for this 4-tuple in the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager has not found this 4-tuple in the CICS ONC RPC data set *filename*.

System action: None.

User response: Enter a 4-tuple that has already been saved in the data set.

Module: DFHRPC09

Destination: Terminal End User

DFHRP1584 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file *filename*.**
EIBRESP: *eibresp*.

Explanation: The connection manager could not access the CICS ONC RPC data set. An EXEC CICS DELETE was issued, but received the response *eibresp*. The data set has not been correctly defined to CICS for one of the following reasons

- No file definition has been found for *filename*. CICS ONC RPC has therefore not been installed correctly.
- DELETE operations are not allowed on the file.
- The file has been disabled, either due to an incorrect file definition, or due to operator intervention.
- The file cannot be opened because it has not been defined correctly, or because it has been closed by operator intervention.
- The connection manager, or the user running it, does not have the necessary level of authority to access the file.

System action: The requested operation is not performed. The connection manager cannot perform any operation requiring access to the data set.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Investigate whether the operator has changed the status of the data set for any reason.

Module: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename, eibresp*

Destination: CRPO

DFHRP1585 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file *filename*.**
EIBRESP: *eibresp*.

Explanation: The connection manager could not access CICS ONC RPC data set, CICS file *filename*. An EXEC CICS DELETE was issued, but received the response *eibresp*. The error can occur for one of the following reasons

- The file is defined as remote, and there is an error on the connection to the owning system.
- VSAM has returned an unexpected response to CICS.
- An I/O error occurred on the DELETE.

System action: A system dump is taken. The requested operation is not performed. The connection manager cannot perform any function requiring access to the data set. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Module: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename, eibresp*

Destination: CRPO

DFHRP1586 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error accessing the CICS ONC RPC data set *filename*.**

Explanation: The connection manager detected an unexpected error when accessing the CICS ONC RPC data set. This is a logic error. The connection manager has received an unexpected response from CICS following an EXEC CICS command.

System action: A system dump is taken. The connection manager cannot perform any function requiring access to the CICS ONC RPC data set. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC09

XMEOUT Parameters: *date, time,applid, tranid, filename*

Destination: CRPO

DFHRP1596 *date time applid tranid* **The CICS ONC RPC connection manager cannot continue enable processing because it cannot determine the status of CICS ONC RPC.**

Explanation: The connection manager was trying to enable CICS ONC RPC, but detected an invalid global work area address, or found that CICS ONC RPC was enabled.

System action: The enable attempt is abandoned.

User response: Investigate whether CICS ONC RPC has been disabled. Investigate whether operator command have been issued against the task-related user DFHRPTRU.

Module: DFHRPC4C

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP1600 *date time applid tranid* **The CICS ONC RPC connection manager has completed backout of enable processing.**

Explanation: CICS ONC RPC cannot be enabled. This may be the result of an error detected by the connection manager during enable processing or it may be due to CICS shutdown. The connection manager has completed backout of enable processing.

System action: Processing continues.

User response: See associated messages for the reason why the enable request failed.

Module: DFHRPC4C

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP1601 *date time applid tranid* **The CICS ONC RPC connection manager cannot continue enable processing because it has detected that CICS is shutting down.**

Explanation: CICS ONC RPC cannot be enabled when CICS is in shutdown.

System action: The connection manager initiates backout of enable processing. If this is an immediate CICS shutdown, then transaction CRPC terminates.

User response: Exit transaction CRPC to enable CICS shutdown to continue.

Module: DFHRPC4C

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP1602 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error during backout of enable processing.**

Explanation: The connection manager has detected an error attempting to shut down the RPC caller. This is during backout of enable processing initiated by the connection manager in response to a failed enable request. This could either be as a result of problems with CICS ONC RPC, which will probably be reflected in other CICS ONC RPC diagnostics, or as a result of problems with CICS which will probably be reflected in CICS diagnostics.

System action: CICS ONC RPC continues backout of enable processing.

User response: See associated messages for the reason why the enable request failed. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC4C

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP1603 *date time applid tranid* **The CICS ONC RPC connection manager has detected an error when attempting to issue a FREEMAIN for the RPC caller program.**

Explanation: The connection manager has detected an error issuing a FREEMAIN for the RPC caller program to remove it from storage. This is during backout of enable processing initiated by the connection manager in response to a failed enable request. This could either be as a result of problems with CICS ONC RPC, which will probably be reflected in other CICS ONC RPC diagnostics, or as a result of problems with CICS which will probably be reflected in CICS diagnostics.

System action: CICS ONC RPC continues backout of enable processing.

User response: See associated messages for the reason why the enable request failed. If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC4C

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRP1604 *date time applid tranid* **The CICS ONC RPC connection manager has detected an error when attempting to issue a RELEASE for the alias list program.**

Explanation: The connection manager has detected an error issuing a release for the alias list program. This is during backout of enable processing initiated by the connection manager in response to a failed enable request. This could either be as a result of problems with CICS ONC RPC, which will probably be reflected in other CICS ONC RPC diagnostics, or as a result of problems with CICS which will probably be reflected in CICS diagnostics.

System action: CICS ONC RPC continues backout of enable processing.

User response: See associated messages for the reason why the enable request failed. If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1605 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error during backout of enable processing.**

Explanation: The connection manager has detected an internal error during backout of enable processing initiated by the connection manager in response to a failed enable request. This could either be as a result of problems with CICS ONC RPC, which will probably be reflected in other CICS ONC RPC diagnostics, or as a result of problems with CICS which will probably be reflected in CICS diagnostics.

System action: CICS ONC RPC continues backout of enable processing.

User response: See associated messages for the reason why the enable request failed. If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1606 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error during backout of enable processing.**

Explanation: The connection manager has detected an internal error during backout of enable processing initiated by the connection manager in response to a failed enable request. This could either be as a result of problems with CICS ONC RPC, which will probably be reflected in other CICS ONC RPC diagnostics, or as a result of problems with CICS which will probably be reflected in CICS diagnostics.

System action: CICS ONC RPC continues backout of enable processing.

User response: See associated messages for the reason why the enable request failed. If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1607 *date time applid tranid* **The CICS ONC RPC connection manager has detected an error when attempting to disable the ONC RPC TRUE (DFHRPTRU).**

Explanation: The connection manager detected an error attempting to disable the task-related user exit (TRUE). This is during backout of enable processing initiated by the connection manager in response to a failed enable request. It may be that the TRUE is already disabled, which may be the result of operator intervention. Alternatively, this could either be as a result of problems with CICS ONC RPC, which will probably be reflected in other CICS ONC RPC diagnostics, or as a result of problems with CICS which will probably be reflected in CICS diagnostics.

System action: CICS ONC RPC continues backout of enable processing.

User response: See associated messages for the reason why the enable request failed. Take steps to prevent operator interference with the TRUE.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1608 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error during backout of enable processing.**

Explanation: The connection manager has detected an internal error attempting to disable the task-related user exit (TRUE). This is during backout of enable processing initiated by the connection manager in response to a failed enable request. This could either be as a result of problems with CICS ONC RPC, which will probably be reflected in other CICS ONC RPC diagnostics, or as a result of problems with CICS which will probably be reflected in CICS diagnostics.

System action: CICS ONC RPC continues backout of enable processing.

User response: See associated messages for the reason why the enable request failed. If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1609 *date time applid tranid* **The CICS ONC RPC connection manager is not authorized to disable the task-related user exit (DFHRPTRU) during backout of enable processing.**

Explanation: The connection manager transaction does not have the necessary authority to use the CICS system programming interface and cannot disable its task related user exit (TRUE). This is during backout of enable processing initiated by the connection manager in response to a failed enable request. This could either be as a result of problems with CICS ONC RPC, which will probably be reflected in other CICS ONC RPC diagnostics, or as a result of problems with CICS which will probably be reflected in CICS diagnostics.

System action: CICS ONC RPC continues backout of enable processing.

User response: See associated messages for the reason why the enable request failed. If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1610 *date time applid tranid* **The CICS ONC RPC connection manager is not authorized to disable the task-related user exit (DFHRPTRU) during backout of enable processing.**

Explanation: The connection manager transaction does not have the necessary authority to disable its task-related user exit (TRUE). This is during backout of enable processing initiated by the connection manager in response to a failed enable request. This could either be as a result of problems with CICS ONC RPC, which will probably be reflected in other CICS ONC RPC diagnostics, or as a result of problems with CICS which will probably be reflected in CICS diagnostics.

System action: CICS ONC RPC continues backout of enable processing.

User response: See associated messages for the reason why the enable request failed. If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1611 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error during backout of enable processing.**

Explanation: The connection manager has detected an error attempting to unregister for problem determination. This is during backout of enable processing initiated by the connection manager in response to a failed enable request. This could either be as a result of problems with CICS ONC RPC, which will probably be reflected in other CICS ONC RPC diagnostics, or as a result of problems with CICS which will probably be reflected in CICS diagnostics.

System action: CICS ONC RPC continues backout of enable processing.

User response: See associated messages for the reason why the enable request failed. If the problem is not a symptom of a wider problem, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC4C

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1650 *date time applid tranid* **The CICS ONC RPC connection manager found that CICS ONC RPC is disabled. Requests to disable CICS ONC RPC are ignored.**

Explanation: A request has been made to disable CICS ONC RPC, but the current status indicates it is already disabled, or in the process of being disabled.

System action: The request is ignored. The connection manager panel is redisplayed.

User response: Request another option.

Module: DFHRPC01, DFHRPC04

Destination: Terminal End User

DFHRP1651 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error.**

Explanation: The connection manager has received an unexpected response from CICS following an EXEC CICS command.

System action: A system dump is taken. The connection manager abends with abend code ARPV. The rest of CICS ONC RPC continues. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC04

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1652 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error.**

Explanation: The connection manager received an unexpected response from CICS following an EXEC CICS command.

System action: A system dump is taken. The requested operation is not performed. The connection manager continues. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC04

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1750 *date time applid tranid* **The CICS ONC RPC connection manager has unregistered the 4-tuple. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address hostaddr.**

Explanation: The 4-tuple has been unregistered.

System action: Processing continues.

User response: None.

Module: DFHRPC06

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1751 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing an internal table. Host IP address: hostaddr**

Explanation: The connection manager detected an error whilst accessing the list of 4-tuples registered with CICS ONC RPC.

System action: The connection manager panel is redisplayed. The requested action is not performed

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC06

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

Destination: CRPO

DFHRP1752 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing an internal table. Host IP address: hostaddr**

Explanation: The connection manager has detected an internal error while accessing the list of 4-tuples registered with CICS ONC RPC.

System action: The connection manager panel is redisplayed.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC06

DFHRP1753 • DFHRP1757

XMEOUT Parameters: *date, time, applid, tranid, hostaddr*

Destination: CRPO

DFHRP1753 *date time applid tranid* **A CICS ONC RPC operation could not be performed because CICS is short on storage. Host IP address: *hostaddr*.**

Explanation: The connection manager could not to perform an unregister operation because CICS is short on storage.

System action: The connection manager continues.

User response: Retry the unregister operation when the CICS storage problem has been resolved.

Module: DFHRPC06

XMEOUT Parameters: *date, time, applid, tranid, hostaddr*

Destination: CRPO

DFHRP1754 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error when unregistering a 4-tuple. Host IP address: *hostaddr*.**

Explanation: The connection manager detected an internal error when unregistering a 4-tuple.

System action: A system dump is taken. The connection manager continues. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC06

XMEOUT Parameters: *date, time, applid, tranid, hostaddr*

Destination: CRPO

DFHRP1755 *date time applid tranid* **The CICS ONC RPC connection manager could not perform an unregister operation because CICS ONC RPC is not enabled. *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol*.**

Explanation: The connection manager cannot complete the current unregister operation because CICS ONC RPC it is not enabled. It might have been disabled by another connection manager transaction.

System action: The connection manager continues, but the unregister operation is not completed.

User response: None.

Module: DFHRPC06

XMEOUT Parameters: *date, time, applid, tranid, X'prognum', X'versnum', X'procnum', protocol*

Destination: CRPO

DFHRP1756 *date time applid tranid* **CICS ONC RPC is being disabled. Requested operation not performed. Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol*. Host IP address *hostaddr*.**

Explanation: The connection manager is unable to complete the current unregister operation because CICS ONC RPC is in disable processing.

System action: The connection manager continues, but the unregister operation currently being performed is not completed.

User response: None. The unregister will be performed as part of disable processing

Module: DFHRPC06

XMEOUT Parameters: *date, time, applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1757 *date time applid tranid* **The CICS ONC RPC connection manager cannot unregister the requested 4-tuple because it is not registered. Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol*. Host IP address: *hostaddr*.**

Explanation: The connection manager is unable to complete the current unregister operation because the requested 4-tuple is not registered.

System action: The connection manager continues, but the unregister operation currently being performed is not completed.

User response: If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

Module: DFHRPC06

XMEOUT Parameters: *date, time, applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1758 *date time applid tranid* The CICS ONC RPC connection manager detected an error when freeing storage associated with the requested 4-tuple. Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol*. Host IP address: *hostaddr*.

Explanation: The connection manager is unable to complete the current unregister operation because an error occurred freeing storage associated with the 4-tuple.

System action: The connection manager continues. If the requested 4-tuple was the only instance of a particular program/version/protocol 3-tuple registered with TCP/IP for MVS, then this 3-tuple has been unregistered with TCP/IP for MVS.

User response: See the associated diagnostics issued by CICS and TCP/IP for MVS for problem determination.

Module: DFHRPC06

XMEOUT Parameters: *date, time, applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1759 *date time applid tranid* The CICS ONC RPC connection manager could not perform an unregister operation because an invalid global work area was detected. Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol*.

Explanation: The connection manager cannot complete the unregister operation because it has detected an invalid global work area address. CICS ONC RPC might have been disabled by another connection manager transaction.

System action: The connection manager continues, but the unregister operation is not completed.

User response: If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

Module: DFHRPC06

XMEOUT Parameters: *date, time, applid, tranid, X'prognum', X'versnum', X'procnum', protocol*

Destination: CRPO

DFHRP1760 *date time applid tranid* The CICS ONC RPC connection manager detected an error while unregistering a program-version pair with TCP/IP for MVS. Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol*. Host IP address: *hostaddr*.

Explanation: The connection manager detected an error while unregistering a program-version pair with TCP/IP for MVS, and is unable to complete the current unregister operation.

System action: The connection manager continues, but the unregister operation is not completed.

User response: See the associated diagnostics issued by CICS and TCP/IP for MVS for problem determination. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

Module: DFHRPC06

XMEOUT Parameters: *date, time, applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1761 *date time applid tranid* The CICS ONC RPC connection manager could not unregister a 4-tuple as it was not registered Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol*. Host IP address: *hostaddr*.

Explanation: The 4-tuple cannot be unregistered as it is not registered.

System action: Processing continues.

User response: None.

Module: DFHRPC06

XMEOUT Parameters: *date, time, applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1762 *date time applid tranid* Enter the Program Number, Version Number, Procedure Number and Protocol for the 4-tuple to be unregistered.

Explanation: You have not entered all the information needed to identify the 4-tuple to be unregistered.

System action: Processing continues.

User response: Enter the required data.

Module: DFHRPC06

Destination: Terminal End User

DFHRP1763 *date time applid tranid* **The CICS ONC RPC connection manager cannot display the requested 4-tuple because it is not registered with CICS ONC RPC. Program: X'prognum' Version X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The 4-tuple is not displayed.

System action: Processing continues.

User response: None.

Module: DFHRPC06

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1764 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while processing 4-tuple definitions on the CICS ONC RPC data set, CICS file filename.**

Explanation: The connection manager detected an internal error while accessing 4-tuples on the data set.

System action: A system dump is taken. The connection manager panel is redisplayed. The requested operation is not performed. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid, filename*

Destination: CRPO

DFHRP1765 *date time applid tranid* **The CICS ONC RPC connection manager found no records in the CICS ONC RPC data set, CICS file filename, when processing a request to access 4-tuple definitions.**

Explanation: The connection manager found no records on the data set while processing a request to access 4-tuple definitions. This indicates that the CICS ONC RPC definition record is missing.

System action: A system dump is taken. The connection manager panel is displayed. No 4-tuples are displayed. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the reason why there are no records. You must use the connection manager to create a new CICS ONC RPC definition record.

Module: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid, filename*

Destination: CRPO

DFHRP1766 *date time applid tranid* **The CICS ONC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file filename. EIBRESP: eibresp.**

Explanation: The connection manager could not access the CICS ONC RPC data set.

The error occurred while processing a request to display 4-tuple definitions from the data set.

An EXEC CICS STARTBR, EXEC CICS READNEXT or EXEC CICS ENDBR was issued, but received the response *eibresp*. The error can occur for one of the following reasons

- No file definition has been found for DFHRPCD, implying that CICS ONC RPC has not been installed correctly.
- BROWSE or READ operations are not allowed, implying that CICS ONC RPC has not been installed correctly.
- The file is DISABLED, either due to an incorrect file definition, or due to operator intervention.
- The file is NOTOPEN, either due to an incorrect file definition, or due to operator intervention.
- BROWSE or READ operations are not authorized, implying that security has not been set up correctly.

System action: A system dump is taken. Without access to the data set, CICS ONC RPC cannot display 4-tuple definitions. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Module: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid, filename, eibresp*

Destination: CRPO

DFHRP1767 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while accessing the CICS ONC RPC data set, CICS file filename. EIBRESP: eibresp.**

Explanation: The connection manager cannot access

the CICS ONC RPC data set.

The error occurred while processing a request to display 4-tuple definitions from the data set.

An EXEC CICS STARTBR, EXEC CICS READNEXT or EXEC CICS ENDBR was issued, but received the response *eibresp*. The error can occur for one of the following reasons

- The file is defined as remote, and there is an error on the connection to the owning system.
- VSAM has returned an unexpected response to CICS.
- An I/O error occurred on the BROWSE or READ command.

System action: A system dump is taken. Without access to the data set, CICS ONC RPC cannot display 4-tuple definitions. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Use Appendix A of the *Application Programming Reference* manual to find out what the EIBRESP value means, and take appropriate action.

Module: DFHRPC0A

XMEOUT Parameters: *date, time, applid, tranid, filename, eibresp*

Destination: CRPO

DFHRP1768 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error while accessing the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager could not access the CICS ONC RPC data set. This is a logic error since the connection manager has received an unexpected response from CICS following an EXEC CICS STARTBR, EXEC CICS READNEXT or EXEC CICS ENDBR command.

The error occurred while processing a request to display 4-tuple definitions from the data set.

Without access to the data set, the connection manager cannot process requests to display information from it.

System action: A system dump is taken. The connection manager panel is redisplayed. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC0A

XMEOUT Parameters: *date, time, applid, tranid, filename*

Destination: CRPO

DFHRP1769 *date time applid tranid* **The CICS ONC RPC connection manager found no records on the CICS ONC RPC data set, CICS file *filename*, when processing a request to access 4-tuple information.**

Explanation: The connection manager has found no records on the CICS ONC RPC data set when processing a request to access 4-tuple definitions.

System action: A system dump is taken. The connection manager panel is redisplayed. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the reason why there are no records. You must use the connection manager to create a new CICS ONC RPC definition record.

Module: DFHRPC0A

XMEOUT Parameters: *date, time, applid, tranid, filename*

Destination: CRPO

DFHRP1770 *date time applid tranid* **The CICS ONC RPC connection manager found no 4-tuple definitions in the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager has found no 4-tuple definitions in the CICS ONC RPC data set while processing a request to access 4-tuple definitions.

System action: The connection manager panel is redisplayed. No 4-tuple definitions are displayed.

User response: Use the connection manager to save 4-tuple definitions in the data set.

Module: DFHRPC0A

XMEOUT Parameters: *date, time, applid, tranid, filename*

Destination: CRPO

DFHRP1771 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while accessing 4-tuple definitions in the CICS ONC RPC data set, CICS file *filename*.**

Explanation: The connection manager has detected an internal error while processing a request to access 4-tuple definitions in the CICS ONC RPC data set.

System action: A system dump is taken. The connection manager panel is redisplayed. Message

DFHRP1772 • DFHRP1800

DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid, filename*

Destination: CRPO

DFHRP1772 *date time applid tranid* **The CICS ONC RPC connection manager could not complete the requested operation. It could not obtain the required CICS storage.**

Explanation: A GETMAIN issued by the connection manager when attempting to build a list of 4-tuples defined in the CICS ONC RPC data set returned an error response.

System action: A system dump is taken. Processing continues. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: CICS may be temporarily short on storage. Retry the operation. If the condition persists, contact your system administrator to see if there are problems with CICS storage. If CICS is not short on storage, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1773 *date time applid tranid* **The CICS ONC RPC connection manager detected an error when freeing storage.**

Explanation: A FREEMAIN issued by connection manager returned an error response. The connection manager was trying to free storage used to build a list of 4-tuples defined in the CICS ONC RPC data set.

System action: A system dump is taken. Processing continues. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1774 *date time applid tranid* **The CICS ONC RPC connection manager cannot display the requested 4-tuple because it is not saved to the CICS ONC RPC data set. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol.**

Explanation: The 4-tuple is not displayed.

System action: Processing continues.

User response: None.

Module: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol*

Destination: CRPO

DFHRP1775 *date time applid tranid* **The CICS ONC RPC connection manager cannot register 4-tuples because CICS ONC RPC is disabled.**

Explanation: A request to register a 4-tuple cannot be performed because CICS ONC RPC was not enabled when the request was made.

System action: Processing continues.

User response: Enable CICS ONC RPC.

Module: DFHRPC0A

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1800 *date time applid tranid* **The CICS ONC RPC connection manager has purged an alias task. Task status: status Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The alias for the 4-tuple has been purged by the connection manager.

System action: *Status* indicates the status of the alias task when the purge request was issued. The following actions are taken

- *Running* indicates that the alias task was running. The connection manager removes the entry from the alias list. The alias abends with abend code ARPJ and message DFHRP0173 is issued.

- *Scheduled* indicates that the alias task was scheduled to run and may still do so. The connection manager removes the entry from the alias list. The alias abends with abend code ARPJ and messages DFHRP0113 and DFHRP0173 are issued.

User response: None.

DFHRP1864 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error while accessing an internal table. Host IP address:**
hostaddr.

Explanation: An internal error has occurred in the connection manager while accessing an internal table.

System action: A system dump is taken. Processing continues. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC08

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

Destination: CRPO

DFHRP1865 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error while accessing an internal table. Host IP address:**
hostaddr.

Explanation: An internal error has occurred in the connection manager while accessing an internal table.

System action: A system dump is taken. Processing continues. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC08

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

Destination: CRPO

DFHRP1866 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while accessing an internal table. Host IP address:**
hostaddr.

Explanation: An internal error has occurred in the connection manager while accessing an internal table.

System action: A system dump is taken. Processing continues. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

Destination: CRPO

DFHRP1867 *date time applid tranid* **The CICS ONC RPC connection manager could not complete the requested operation as an invalid CICS ONC RPC global work area address has been detected.**

Explanation: The connection manager was attempting to access or initialize the list of registered 4-tuples, but detected an invalid global work area address. This may indicate that CICS ONC RPC is disabled.

System action: A system dump is taken. The

DFHRP1868 • DFHRP1901

requested operation is not completed. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Retry the operation when CICS ONC RPC is enabled. If this occurred during enable processing, check that another connection manager transaction has not disabled CICS ONC RPC.

Module: DFHRPC08

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1868 *date time applid tranid* **The CICS ONC RPC connection manager could not complete the requested operation. It could not obtain the required CICS storage. Host IP address:** *hostaddr*.

Explanation: A GETMAIN issued by connection manager when attempting to build a list of registered 4-tuples returned an error response.

System action: A system dump is taken. Processing continues. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: CICS may be temporarily short on storage. Retry the operation. If the condition persists, contact your system administrator to see if there are problems with CICS storage. If CICS is not short on storage, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC08

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

Destination: CRPO

DFHRP1869 *date time applid tranid* **The CICS ONC RPC connection manager detected an error when freeing storage. Host IP address:** *hostaddr*.

Explanation: A FREEMAIN issued by connection manager when attempting to free storage used to build a list of registered 4-tuples returned an error response.

System action: Processing continues.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC08

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

Destination: CRPO

DFHRP1879 *date time applid tranid* **The CICS ONC RPC connection manager has detected an internal error while accessing an internal table. Host IP address:** *hostaddr*.

Explanation: An internal error has occurred in the connection manager while accessing an internal table.

System action: A system dump is taken. Processing continues. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC08

XMEOUT Parameters: *date, time,applid, tranid, hostaddr*

Destination: CRPO

DFHRP1900 *date time applid tranid* **The CICS ONC RPC connection manager could not find the global work area.**

Explanation: The connection manager could not find the global work area. The task related user exit DFHRPTRU has been wrongly defined.

System action: A system dump is taken. CICS ONC RPC remains disabled. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Ensure that all the CEDA groups for CICS ONC RPC have been installed correctly, then try to enable CICS ONC RPC again.

Investigate whether the operator has disabled DFHRPTRU for any reason.

Module: DFHRPC08

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1901 *date time applid tranid* **The CICS ONC RPC connection manager could not find the task-related user exit, program DFHRPTRU.**

Explanation: The connection manager cannot find the task-related user exit, DFHRPTRU, for one of the following reasons

- DFHRPTRU has not been defined to CICS
- DFHRPTRU is not in the CICS load library

- DFHRPTRU has been disabled

System action: A system dump is taken. CICS ONC RPC remains disabled. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Ensure that all the CEDA groups for CICS ONC RPC have been installed correctly, then try the enable request again.

Module: DFHRPC0B

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1902 *date time applid tranid* **The CICS ONC RPC connection manager does not have sufficient authority to issue the EXEC CICS EXTRACT EXIT command. EIBRESP2: eibresp2.**

Explanation: The connection manager does not have the correct authority to issue the privileged EXEC CICS EXTRACT EXIT command. It cannot function without this authority.

System action: A system dump is taken. The connection manager abends with abend code ARPZ. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Use the EIBRESP2 value to identify the problem. Ensure that the connection manager and its associated program DFHRPC00 have the necessary level of security to issue the EXEC CICS EXTRACT EXIT command for the CICS ONC RPC task related user exit DFHRPTRU.

Module: DFHRPC0B

XMEOUT Parameters: *date, time,applid, tranid, eibresp2*

Destination: CRPO

DFHRP1903 *date time applid tranid* **The CICS ONC RPC connection manager has received an unexpected response from CICS.**

Explanation: The connection manager received an unexpected response from CICS to an EXEC CICS command.

This is a logic error.

System action: A system dump is taken. CICS ONC RPC is disabled. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC0B

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1906 *date time applid tranid* **The CICS ONC RPC connection manager found an error in the length of the CICS ONC RPC global work area.**

Explanation: The connection manager found that the length of its global work area is not correct.

System action: A system dump is taken. CICS ONC RPC is disabled. It is not possible to enable CICS ONC RPC until DFHRPTRU has been correctly defined to CICS. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Ensure that DFHRPTRU has not been enabled by an operator command.

Module: DFHRPC0B

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1907 *date time applid tranid* **The CICS ONC RPC connection manager found invalid data in the global work area.**

Explanation: The connection manager found invalid data in the global work area. This is probably caused by a storage overwrite.

System action: A system dump is taken. CICS ONC RPC is disabled. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the reason for the storage overwrite

Module: DFHRPC0B

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CRPO

DFHRP1950 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address hostaddr.**

Explanation: The connection manager has received an unexpected response from CICS following an EXEC CICS command.

System action: A system dump is taken. Registration of the 4-tuple currently being processed is not possible. The 4-tuple is not registered. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC0E

XMEOUT Parameters: *date, time, applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1951 *date time applid tranid* **The CICS ONC RPC connection manager could not load the requested XDR program *xdrname*. EIBRESP: *eibresp* EIBRESP2: *eibresp2* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol*. Host IP address: *hostaddr*.**

Explanation: The connection manager used EXEC CICS LOAD for the CICS program *xdrname*, which has been requested as the XDR routine for the 4-tuple being processed, but received an error response.

System action: The 4-tuple is not registered.

User response: The problem is probably due to an error in defining the requested program *xdrname* to CICS, or to wrongly defining an XDR routine name for the 4-tuple. Use the values provided in *eibresp* and *eibresp2* to identify the reason for the error in the LOAD, and use the CICS CEDA transaction or the connection manager to rectify the problem.

Module: DFHRPC0E

XMEOUT Parameters: *date, time, applid, tranid, xdrname, eibresp, eibresp2, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1952 *date time applid tranid* **The CICS ONC RPC connection manager could not load the XDR routine *xdrname*. EIBRESP: *eibresp* EIBRESP2: *eibresp2* Program *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol*. Host IP address *hostaddr*.**

Explanation: The connection manager used EXEC CICS LOAD for CICS program with name *xdrname*, which has been requested as the XDR routine for the 4-tuple being processed, but received an error response.

System action: The 4-tuple is not registered.

User response: Use the values provided in EIBRESP and EIBRESP2 to identify the reason for the error in the LOAD.

Module: DFHRPC0E

XMEOUT Parameters: *date, time, applid, tranid, xdrname, eibresp, eibresp2, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1953 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error when loading XDR routine *xdrname*. EIBRESP: *eibresp* EIBRESP2: *eibresp2* Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol*. Host IP address: *hostaddr*.**

Explanation: The connection manager used EXEC CICS LOAD for the CICS program *xdrname*, which has been requested as the XDR routine for the 4-tuple being processed, but it received an unexpected response.

System action: A system dump is taken. The 4-tuple is not registered. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC0E

XMEOUT Parameters: *date, time, applid, tranid, xdrname, eibresp, eibresp2, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1954 *date time applid tranid* **The CICS ONC RPC connection manager detected a logic error detected while registering a 4-tuple. Program: *X'prognum'* Version: *X'versnum'* Procedure: *X'procnum'* Protocol: *protocol*. Host IP address: *hostaddr*.**

Explanation: The connection manager has received an unexpected response from CICS following an EXEC CICS command.

System action: A system dump is taken. The connection manager abends with abend code ARPV. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1955 *date time applid tranid* **The CICS ONC RPC connection manager could not register a 4-tuple because of an internal error. Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol. Host IP address:* *hostaddr.*

Explanation: The connection manager could not add an XDR routine name to an internal table.

System action: The 4-tuple is not registered.

User response: Try to register the 4-tuple again. If the condition persists, you need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1956 *date time applid tranid* **CICS ONC RPC is being disabled. Requested operation not performed. Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol. Host IP address:* *hostaddr.*

Explanation: The connection manager is unable to complete the current register operation because CICS ONC RPC is in disable processing.

System action: The 4-tuple is not registered.

User response: Once CICS ONC RPC has completed disable processing, enable it again using the connection manager, and try the register operation again.

Module: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1957 *date time applid tranid* **CICS ONC RPC is not enabled, so the register operation could not be performed. Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol. Host IP address:* *hostaddr.*

Explanation: The connection manager is unable to complete the current register operation because CICS

ONC RPC is not currently enabled. It may have been disabled by another connection manager transaction.

System action: The 4-tuple is not registered.

User response: Use the connection manager to enable CICS ONC RPC, and try the register operation again.

Module: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1958 *date time applid tranid* **The CICS ONC RPC connection manager could not register the 4-tuple because it was already registered. Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol. Host IP address:* *hostaddr.*

Explanation: The connection manager is unable to complete the current register operation because the requested 4-tuple is already registered.

System action: The connection manager continues, but the 4-tuple is not registered.

User response: This may be a temporary condition, so try the register again. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information. If the condition persists, see the *CICS External Interfaces Guide* for further guidance on how to proceed.

Module: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1959 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while registering a 3-tuple with TCP/IP for MVS. Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol. Host IP address:* *hostaddr.*

Explanation: The connection manager is unable to complete the current register operation because an error was returned by TCP/IP for MVS.

System action: The connection manager continues, but the 4-tuple is not registered.

User response: See the associated diagnostics issued by CICS and TCP/IP for MVS for problem determination. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

Module: DFHRPC0E

DFHRP1960 • DFHRP1965

XMEOUT Parameters: *date, time, applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1960 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while registering a 3-tuple with TCP/IP for MVS. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The connection manager is unable to complete the current register operation because an error was returned by TCP/IP for MVS. This may be on an **svcudp_create** or **svctcp_create** operation.

System action: The connection manager continues, but the 4-tuple is not registered.

User response: See the associated diagnostics issued by CICS and TCP/IP for MVS for problem determination. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

Module: DFHRPC0E

XMEOUT Parameters: *date, time, applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1961 *date time applid tranid* **Data entered in field *fieldname1* is incompatible with data entered in field *fieldname2*.**

Explanation: Data was entered on a connection manager panel in *fieldname1* that is incompatible with data entered in *fieldname2*.

System action: The connection manager panel is redisplayed and the field in error is highlighted.

User response: Enter compatible data in the fields indicated.

Module: DFHRPC0D, DFHRPC05

Destination: Terminal End User

DFHRP1962 *date time applid tranid* **Enter the Program Number, Version Number, Procedure Number and Protocol for the 4-tuple to be displayed.**

Explanation: To retrieve information about a 4-tuple in the CICS ONC RPC data set you must supply the program number, version number, procedure number, and protocol.

System action: None.

User response: Enter the required data.

Module: DFHRPC0D, DFHRPC03

Destination: Terminal End User

DFHRP1963 *date time applid tranid* **Enter the following fields before register or save to data set: Program Number, Version Number, Procedure Number, XDR Routines, and Program Name.**

Explanation: The following fields are required before registration or saving of the 4-tuple: the Program Number, Version Number, Procedure Number, Inbound XDR Routine, Outbound XDR Routine (if RPC Call Type of blocking), and Program Name.

System action: The connection manager panel is redisplayed.

User response: Enter valid data in the field(s) indicated.

Module: DFHRPC0D, DFHRPC05

Destination: Terminal End User

DFHRP1964 *date time applid tranid* **Data entered in the Getlengths field is incompatible with data entered in the Server Input Length or Server Output Length fields.**

Explanation: Either you have specified YES for Getlengths and put information in Server Input Length or Server Output Length, or you have specified NO for Getlengths but put no information in Server Input Length and Server Output Length.

System action: The connection manager panel is redisplayed.

User response: Decide whether the lengths are to be specified on this panel, or to be supplied by the **Getlengths** function of the converter for this 4-tuple.

Module: DFHRPC0D, DFHRPC05

Destination: Terminal End User

DFHRP1965 *date time applid tranid* **With Server Data Format of CONTIGUOUS, the Server Input Length and Server Output Length together must not exceed 32767 Bytes.**

Explanation: An invalid server data length has been detected on a CRPC panel. The maximum total data length which can pass between the alias and the CICS program that services the client request is 32767. If server data format of CONTIGUOUS is specified, the Server Input Length and the Server Output Length added together must not exceed this value.

System action: The connection manager panel is redisplayed.

User response: Enter valid data in the fields.

Module: DFHRPC0D, DFHRPC05

Destination: Terminal End User

DFHRP1966 *date time applid tranid* **Procedure Number of 0 is not allowed.**

Explanation: A value of zero has been entered in the Procedure Number field. This is not allowed.

System action: The connection manager panel is redisplayed, and the field in error is highlighted.

User response: Enter valid data in the field indicated.

Module: DFHRPC0D, DFHRPC05, DFHRPC06

Destination: Terminal End User

DFHRP1967 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while trying to register a 4-tuple. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The connection manager detected an internal error while trying to register a 4-tuple.

System action: A system dump is taken. The connection manager continues. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: See associated messages to find out whether the 4-tuple was registered. You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1968 *date time applid tranid* **The CICS ONC RPC connection manager has not performed a register operation because it detected an invalid global work area. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The connection manager is unable to complete the current register operation because it has detected an invalid global work area address. CICS ONC RPC may have been disabled by another connection manager transaction.

System action: The connection manager continues,

but the 4-tuple is not registered.

User response: Use the connection manager to enable CICS ONC RPC, and try the register operation again. If message DFHRP0002 was issued to the console, the explanation of that message might contain more information.

Module: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1969 *date time applid tranid* **The CICS ONC RPC connection manager detected an abend in converter progname during Getlengths processing. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address: hostaddr.**

Explanation: The connection manager is unable to complete the current register operation because it has detected an abend in the converter when invoking it for the **Getlengths** function.

System action: The connection manager continues, but the 4-tuple is not registered.

User response: Use CICS diagnostics to correct the converter.

Module: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, progname, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1970 *date time applid tranid* **The CICS ONC RPC connection manager has registered the 4-tuple. Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address hostaddr.**

Explanation: The 4-tuple has been registered.

System action: None.

User response: None.

Module: DFHRPC0E

XMEOUT Parameters: *date, time,applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1980 *date time applid tranid* **The CICS ONC RPC connection manager cannot register the 4-tuple because it has already been registered. Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol*. **Host IP address:** *hostaddr*.

Explanation: The 4-tuple has already been registered.

System action: The connection manager panel is redisplayed.

User response: Enter a new 4-tuple for registration.

Module: DFHRPC0E

XMEOUT Parameters: *date, time, applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1981 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error while registering a 4-tuple. Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol*. **Host IP address:** *hostaddr*.

Explanation: The connection manager has detected an internal error while registering the 4-tuple.

System action: The 4-tuple is not registered.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC0E

XMEOUT Parameters: *date, time, applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1982 *date time applid tranid* **The CICS ONC RPC connection manager detected an internal error detected while registering a 4-tuple. Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol*. **Host IP address:** *hostaddr*.

Explanation: The connection manager has detected an internal error while registering the 4-tuple.

System action: Processing continues.

User response: You need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRPC0E

XMEOUT Parameters: *date, time, applid, tranid, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1983 *date time applid tranid* **The CICS ONC RPC connection manager detected an error while linking to the converter *converter_program_name*. EIBRESP:** *eibresp* **EIBRESP2** *resp2val* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol*. **Host IP address:** *hostaddr*.

Explanation: The connection manager used EXEC CICS LINK for the converter to perform **Getlengths** processing for the 4-tuple. The response was PGMIDERR.

System action: The 4-tuple is not registered.

User response: Use the EIBRESP2 value to identify the problem.

Module: DFHRPC0E

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, eibresp, resp2val, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1984 *date time applid tranid* **The CICS ONC RPC connection manager cannot link to converter *converter_program_name* because it is remote. EIBRESP:** *eibresp* **EIBRESP2:** *resp2val* **Program:** *X'prognum'* **Version:** *X'versnum'* **Procedure:** *X'procnum'* **Protocol:** *protocol*. **Host IP address:** *hostaddr*.

Explanation: The connection manager used EXEC CICS LINK for the converter to perform **Getlengths** processing, but the response was TERMERR or SYSIDERR. The connection manager passes pointers to the converter, so the converter must be in the same CICS region as CICS ONC RPC.

System action: The 4-tuple is not registered.

User response: Install and define the converter program in the same CICS region as CICS ONC RPC.

Module: DFHRPC0E

XMEOUT Parameters: *date, time, applid, tranid, converter_program_name, eibresp, resp2val, X'prognum', X'versnum', X'procnum', protocol, hostaddr*

Destination: CRPO

DFHRP1985 *date time applid tranid* **The CICS ONC RPC connection manager received an unexpected response from CICS while linking to converter**
converter_program_name. EIBRESP eibresp EIBRESP2: resp2val Program: X'prognum' Version: X'versnum' Procedure: X'procnum' Protocol: protocol. Host IP address hostaddr.

Explanation: The connection manager used EXEC CICS LINK for the converter to perform **Getlengths** processing, but received an unexpected response.

System action: The 4-tuple is not registered.

User response: See the associated diagnostics issued by CICS for problem determination.

Module: DFHRPC0E

DFHRP2000 *date time applid tranid* **A browse of the CICS ONC RPC alias list could not be performed because another browse is active.**

Explanation: Only one task can browse the alias list at a time. This is enforced by use of an ENQ in the connection manager. However, the alias list component has been called to start a browse and has found that there is already a browse active. This is due either to a logic error in CICS ONC RPC code, or to a storage overwrite.

System action: A system dump is taken. The browse request is rejected. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If the problem is due to a storage overwrite, it is almost certain that there are errors in other CICS functions for no apparent reason. If this is not the case, you may need further assistance from IBM to resolve this problem. See the *CICS External Interfaces Guide* and Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed. Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

Module: DFHRPAL

XMEOUT Parameters: *date, time, applid, tranid*

Destination: CRPO

DFHRSnnnn messages

DFHRS2110 *date time applid* **Abnormal reply to exchange log name request received from system** *sysid*, **netname** *netname*, **protocol** *protocol*.

Explanation: An abnormal reply has been received in response to an exchange log name request sent either following a session failure or at first session initiation after system restart. The abnormal reply may indicate that

- The remote system detected a warm or cold mismatch, or a log name mismatch.
- The remote system failed to interpret the exchange log name data sent to it.

System action: For APPC protocol, any synclevel 2 attaches are inhibited. This prevents recoverable activity between the two systems.

For IRC protocol, the message indicates that resynchronization was attempted and failed.

User response: The most likely cause of the message is an initial start (as opposed to emergency restart or its equivalent) of this system when the remote system has resynchronization work outstanding. If it is a cold or warm mismatch or log name mismatch, other diagnostic messages on the local system may indicate the reason for the error. If it is not, examine the log of the remote system which should have generated diagnostic

information describing the reason for the abnormal response.

For APPC protocol where a logname mismatch is suspected, override the error situation by issuing the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection. resources which may be waiting for APPC resynchronization. In addition, CICS does not carry out any APPC resynchronization activity with the remote system.

For IRC, the message may indicate an initial start of one system when the other has resynchronization outstanding; the resynchronization was started before the initial start occurred and becomes invalid. The associated unit of work may need to be committed by using CEMT SET UOW. The message should not recur.

Module: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sysid, netname, protocol*

Destination: Console and Transient Data Queue CSMT

DFHRS2111 *date time applid* **Cold/Warm restart mismatch with system *sysid,netname netname,protocol protocol*.**

Explanation: A cold start indication was received from the remote system during an exchange log names sequence. However, this system has units of work that need resynchronizing from the previous run. An exchange log names sequence is started either following a session failure or at first session initiation after system restart; both the local and remote systems may initiate the sequence at the same time.

System action: Any synclevel 2 attaches are inhibited. This means that recovery activity between the two systems is prevented.

User response: Override the error by issuing CEMT SET CONN(*sysid*) NOTPENDING commands for the failing connection. resources which may be waiting for APPC resynchronization. In addition CICS does not carry out any APPC resynchronization with the remote system.

Module: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sysid, netname, protocol*

Destination: Console and Transient Data Queue CSMT

DFHRS2112 *date time applid* **Log name mismatch with system *sysid, netname netname, protocol protocol*. Expected LUNAME.LOGNAME *local_logname* Received LUNAME.LOGNAME *remote_logname* .**

Explanation: A failure has occurred in the exchange log names process which is carried out either following a session failure or at first session initiation after system restart. This system's memory of the remote system's log name conflicts with the log name sent by the remote system.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

For APPC protocol, any synclevel 2 attaches are inhibited. This means that recoverable activity between the two systems is prevented.

For IRC protocol, resynchronization was attempted and failed.

User response: For APPC, override the error by issuing the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection. resources which may be waiting for APPC resynchronization. In addition CICS does not carry out any APPC resynchronization activity with the remote system. The message may indicate a logic error in CICS or the remote system, and you may need assistance from IBM to prevent a recurrence. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

For IRC, the message may indicate the initial start of one system when the other has resynchronization outstanding; the resynchronization was started before the initial start occurred and becomes invalid. The associated unit of work may need to be committed by using CEMT SET UOW. The message should not recur.

Module: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sysid, netname, protocol, local_logname, remote_logname*

Destination: Console and Transient Data Queue CSMT

DFHRS2113 *date time applid* **Log name mismatch with system *sysid, netname netname, protocol protocol, local LOGNAME local_logname* , received LOGNAME *remote_logname* .**

Explanation: This message is issued when a failure has occurred in the exchange log names process which is carried out prior to resynchronization following an earlier session failure. System *sysid* has sent an

exchange log names request which contains the remote system's memory (*remote_logname*) of this system's log name (*local_logname*).

This system has detected a log name mismatch. This indicates that system *sysid* and this system do not have the correct logs for resynchronization.

System action: For APPC protocol, any synclevel 2 attaches are inhibited. This means that recoverable activity between the two systems is prevented.

For IRC protocol, the message indicates that resynchronization was attempted and failed.

User response: For APPC, override the error by issuing the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection. Resources which may be waiting for APPC resynchronization. In addition CICS does not carry out any APPC resynchronization activity with the remote system. The message may indicate a logic error in CICS or the remote system, and you may need assistance from IBM to prevent a recurrence. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

For IRC, the message may indicate the initial start of one system when the other has resynchronization outstanding; the resynchronization was started before the initial start occurred and becomes invalid. The associated unit of work may need to be committed by using CEMT SET UOW. The message should not recur.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sysid, netname, protocol, local_logname, remote_logname*

Destination: Console and Transient Data Queue CSMT

DFHRS2114 *date time applid* **Abnormal termination of exchange log names sequence received from system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: This message is issued when an FMH7 has been received in response to an exchange log name reply. An exchange log names sequence is sent either following a session failure or at first session initiation after system restart. The remote system started the sequence, and the FMH7 reply indicates that the remote system failed to interpret the exchange log name reply data sent to it.

System action: For APPC protocol, any synclevel 2 attaches are inhibited. This means that recoverable activity between the two systems is prevented.

For IRC protocol, the message indicates that resynchronization was attempted and failed. Communication continues.

User response: Investigate the cause of the error

using the system dump. Format the control blocks for the trace domain and the terminal control program. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this exchange log names conversation.

The APPC send and receive buffers for a session are clearly labelled in the dump and are printed below the TCTTE for the session to which they belong. For IRC, the TIOA contains the equivalent data. Check the data against the format of the exchange log names reply GDS variable. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

Examine the log of the remote system. If a protocol violation was detected, the remote system may have generated diagnostic information itself which may help to diagnose the cause.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sysid, netname, protocol*

Destination: Console and Transient Data Queue CSMT

DFHRS2115 *date time applid protocol* **protocol support mismatch with system *sysid*, netname *netname*. Expected support byte X'ww', received support byte X'xx', expected extended support bytes X'yyyy', received extended support bytes X'zzzz'.**

Explanation: This system's memory of the protocols previously negotiated with the remote system conflicts with the indicators sent in an exchange log names variable.

System action: For APPC protocol, any synclevel 2 attaches are inhibited. This means that recoverable activity between the two systems is prevented.

For IRC protocols, resynchronization fails. Communications continue normally.

User response: For APPC protocols, the indicators expected from a CICS Transaction Server system are: basic support, X'70; extended support, X'C000. For CICS/ESA 4.1 the expected indicators are basic support, X'40; extended support, X'0000. If this combination of the four indicator fields appears in the message, first check that you have initially started the partner system at the CICS Transaction Server level during a migration from CICS/ESA 4.1, or Cold started a CICS/ESA 4.1 system after running CICS Transaction Server. If this possibility can be ruled out, the message may indicate a logic error in CICS or in the remote system and you may need assistance from IBM to prevent a recurrence. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

You can override the error situation by issuing CEMT

SET CONN(*sysid*) NORECOVDATA commands for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection. resources which may be waiting for APPC resynchronization. In addition CICS does not carry out any APPC resynchronization activity with the remote system.

For IRC protocols, you may need to use the CEMT SET UOW command to resolve the state of any units or work which cannot be resolved by the normal resynchronization process.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, protocol, sysid, netname, X'ww', X'xx', X'yyy', X'zzzz'*

Destination: Console and Transient Data Queue CSMT

DFHRS2116 *date time applid* **Abnormal termination of exchange log names sequence received from system *sysid*, netname *netname*, protocol *protocol*. The connection was in a cold state.**

Explanation: An FMH7 has been received in response to an exchange log names reply. An exchange log names sequence is sent either following a session failure or at first session initiation after system startup. This system was either started with the SIT parameter START=INITIAL or CEMT SET CONN(*sysid*) NORECOVDATA has been issued, both of which reset the state of the connection. This means that no log name is stored for the remote system.

For APPC protocols, the FMH7 reply may indicate one of two causes

- The remote system has resynchronization work outstanding following a previous failure of a conversation during sync point processing and has detected a cold/warm mismatch.
- The remote system failed to interpret the exchange log names reply data sent to it.

For IRC protocol, the problem is caused by the failure of the remote system to interpret the exchange log names reply data.

System action: For APPC protocol, any synclevel 2 attaches are inhibited. This means that recoverable activity between the two systems is prevented.

For IRC protocol, the message indicates that resynchronization was attempted and failed. Communication continues.

User response: The most likely cause of the message is an initial start (as opposed to emergency restart or its equivalent) of this system when the other has resynchronization work outstanding. This can be confirmed by examining the message log of the remote system.

For APPC protocol, the connection on the remote system may need to be reset by issuing the CEMT SET CONN(*sysid*) NOTPENDING command against the connection entry for this system. resources which may be waiting for APPC resynchronization.

For IRC protocol, a protocol violation or logic error is the only possible cause.

If a cold/warm mismatch is eliminated as the cause of the error, you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sysid, netname, protocol*

Destination: Console and Transient Data Queue CSMT

DFHRS2117 *date time applid* **Abnormal reply to exchange log names received from system *sysid*, netname *netname*, protocol *protocol*. The connection on this system was in a cold state.**

Explanation: This message is issued when an abnormal reply has been received in response to an exchange log name request. An exchange log names sequence is sent either following a session failure or at first session initiation after system startup. This system was either started with the SIT parameter START=INITIAL, or CEMT SET CONN(*sysid*) NORECOVDATA has been issued, and no log name is stored for the remote system. The abnormal reply may indicate one of two causes in the case of APPC protocol.

- The remote system has resynchronization work outstanding following a previous failure of a conversation during sync point processing and has detected a cold/warm mismatch.
- The remote system failed to interpret the exchange log name data sent to it.

For IRC protocol, the problem is caused by the failure of the remote system to interpret the exchange log name data.

System action: For APPC protocol, any synclevel 2 attaches are inhibited. This means that recoverable activity between the two systems is prevented.

For IRC protocol, the message indicates that resynchronization was attempted and failed. Communication continues.

User response: The most likely cause of the message is an initial start (as opposed to emergency restart or its equivalent) of this system when the other has resynchronization work outstanding. This can be confirmed by examining the message log of the remote system.

For APPC protocol, the connection on the remote system may need to be reset by issuing the CEMT SET CONN(sysid) NOTPENDING command against the connection entry for this system. resources waiting for APPC resynchronization.

For IRC protocol, a protocol violation or logic error is the only possible cause.

If a cold/warm mismatch is eliminated as the cause of the error, you need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sysid, netname, protocol*

Destination: Console and Transient Data Queue CSMT

DFHRS2118 *date time applid* **Abnormal termination of exchange log names sequence received from system *sysid*, netname *netname*, protocol *protocol*. There has been previous contact with that system.**

Explanation: This message is issued when an FMH7 has been received in response to an exchange log name reply.

An exchange log names sequence is sent either following a session failure or at first session initiation after system startup. Both systems have records of previous contact and have log names stored which were being verified by the exchange log names protocol, which was initiated by the remote system.

The FMH7 may indicate one of two causes

- The remote system has detected a mismatch in the log names or protocol support indicated in the exchange log name reply sent to it.
- The remote system failed to interpret the exchange log name reply data sent to it.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

For LU6.2 protocol, any synclevel 2 attaches are inhibited. This means that recoverable activity between the two systems is prevented.

For IRC protocol, the message indicates that resynchronization was attempted and failed. Communication continues.

User response: For APPC protocol, the connection may need to be reset by issuing the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection.

resources which may be waiting for APPC resynchronization. In addition, CICS does not carry out any APPC resynchronization activity with the remote system.

The cause of the error may be indicated by diagnostic information produced by the remote system. The system dump taken by local system can be used to investigate the possibility of an error in the exchange log names reply GDS.

Format the control blocks for the trace domain and the terminal control program. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this exchange log names conversation.

The APPC send and receive buffers for a session are clearly labelled in the dump and are printed below the TCTTE for the session to which they belong. For IRC, the TIOA contains the equivalent data. Check that the data against the format of the exchange log names reply GDS variable. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sysid, netname, protocol*

Destination: Console and Transient Data Queue CSMT

DFHRS2134 *date time applid* **An error has occurred while sending an exchange log names request on session *sessid* to remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: An error has occurred during the transmission of an exchange log names request to a remote system. CICS was attempting to establish the connection on first contact with the partner, or to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

This message implies a failure of the session used to carry the transmission.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

In many cases CICS continues to operate normally, and the resynchronization or connection establishment is retried in an attempt to overcome the session failure. However for APPC protocol, a repeated failure may have resulted in exchange log names flows being unsuccessful preventing any synclevel 2 attaches between the local system and the remote system.

For IRC protocol, resynchronization has failed but the

connection continues to operate normally.

User response: Issue CEMT INQUIRE CONN(*sysid*) and look at the XOK field. If exchange log names has not been done, the exchange log names process can be retried by issuing the CEMT SET CONN(*sysid*) RESYNC command.

Investigate the cause of the error using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system, and examine the log of the remote system. If a protocol violation was detected, the remote system may have generated diagnostic information itself.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this exchange log names conversation.

If the internal trace table is available, use it to track the commands issued against that session and check that the state transitions of the User state machine are correct. If any of the state transitions are not valid, it is possible that there has been a CICS logic error.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

Destination: Console and Transient Data Queue CSMT

DFHRS2135 *date time applid* **An error has occurred while sending a compare states request on session *sessid* to remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: An error has occurred during the transmission of a compare states request to a remote system. CICS was attempting to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

This implies one of the following

- The remote system has detected a protocol violation in the local system's exchange log names GDS variable.
- Some other error in communications has occurred.

System action: For APPC protocol connections (but not IRC protocol), the failure may have prevented the completion of the exchange log names protocol and this prevents any synclevel 2 attaches between the local system and the remote system.

A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: For APPC protocol, investigate the state of the connection. Issue CEMT INQUIRE CONN(*sysid*) and look at the XOK field. If exchange log names has not been done, the exchange log names process can be retried by issuing the CEMT SET CONN(*sysid*) RESYNC command. If there has been previous successful contact between the systems the connection can be reset to its original state and retried. The state can be reset by issuing CEMT SET CONN(*sysid*) NORECOVDATA. It may be necessary to issue this command on both sides of the connection. resources which may be waiting for APPC resynchronization. In addition, CICS does not carry out any APPC resynchronization activity with the remote system.

The cause of the error may be indicated by diagnostic information produced by the remote system. Use the system dump taken by the local system to investigate the possibility of an error in the GDS variables.

Format the control blocks for the trace domain and the terminal control program. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this exchange log names conversation.

The APPC send and receive buffers for a session are clearly labelled in the dump and are printed below the TCTTE for the session to which they belong. For IRC, the TIOA contains the equivalent data. Check that the data against the format of the exchange log names and compare states GDS variables. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

Destination: Console and Transient Data Queue CSMT

DFHRS2136 *date time applid* **An error has occurred while receiving an exchange log names reply on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: An error has occurred during an attempt to receive exchange log names reply data from a remote system. CICS was attempting to initialize the connection, or to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

The message means that

- The remote system has detected a protocol violation in the local system's exchange log names GDS variable or compare states GDS variable and sent an FMH7 to indicate the error.

DFHRS2137

- Some other error in communication has occurred in either the local or the remote system.

System action: For APPC protocol the failure of exchange log names may mean that any synclevel 2 attaches are inhibited. This means that recoverable activity between the two systems is prevented.

For IRC protocol, the message indicates that resynchronization was attempted and failed. Communication continues.

A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: For APPC protocol, investigate the state of the connection. Issue CEMT INQUIRE CONN(*sysid*) and look at the XOK field. If exchange log names has not been done, the exchange log names process can be retried by issuing the CEMT SET CONN(*sysid*) RESYNC command. If there has been previous successful contact between the systems the connection may be reset to its original state and retried. The state can be reset by issuing CEMT SET CONN(*sysid*) NORECOVDATA. It may be necessary to issue this command (or its equivalent) on both sides of the connection. resources which may be waiting for APPC resynchronization. In addition CICS does not carry out any APPC resynchronization activity with the remote system.

The cause of the error may be indicated by diagnostic information produced by the remote system. Use the system dump taken by the local system to investigate the possibility of an error in the GDS variables.

Format the control blocks for the trace domain and the terminal control program. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this exchange log names conversation.

The APPC send and receive buffers for a session are clearly labelled in the dump and are printed below the TCTTE for the session to which they belong. For IRC, the TIOA contains the equivalent data. Check the data against the format of the exchange log names and compare states GDS variables. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

Destination: Console and Transient Data Queue CSMT

DFHRS2137 *date time applid* **An error has occurred while receiving a compare states reply on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: An error has occurred during the receipt of a compare states reply from a remote system. CICS was attempting to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

This implies one of the following

- The remote system has detected a protocol violation in the local system's compare states GDS variable.
- There has been an internal error in CICS APPC processing.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

CICS continues to operate normally and the resynchronization attempt is retried at the next opportunity.

User response: Investigate the cause of the error first by examining the log of the remote system which may have produced diagnostic information about the data it received. The problem can be investigated locally using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

Format the system dump to show the control blocks belonging to the trace domain and the terminal control program. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this resynchronization conversation.

If the internal trace table is available, use this to track the commands issued against that session and check that the state transitions of the user state machine are correct. If any of the state transitions are not valid, it is possible that there has been a CICS logic error.

The APPC send and receive buffers for a session are clearly labelled in the dump and are printed below the TCTTE for the session to which they belong. Similar information is contained in the TIOA for IRC sessions. Locate the data for the session in question, and check that the contents of the buffer are correct. The buffer contains the compare states GDS variable. The correct format of this SNA defined data can be found in the *SNA Formats* manual.

Module: DFHCRRSY

Destination: Console and Transient Data Queue
CSMT

DFHRS2138 *date time applid* **Invalid exchange log names reply data has been received on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: The local system has received data which it attempted to parse using the exchange log names reply GDS format. Either the data could not be parsed, or invalid data was detected.

This system was attempting to initialize the connection for synclevel 2 work, or to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing. Exchange log names was sent and an invalid reply received.

This failure implies an error in the remote system or a CICS logic error.

System action: If resynchronization was being attempted it has failed and is retried at the next opportunity.

For APPC protocol connections (but not IRC protocol) the failure prevents the completion of the exchange log names protocol and this may prevent any synclevel 2 attaches between the local system and the remote system.

A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: For APPC protocol, investigate the state of the connection. Issue CEMT INQUIRE CONN(*sysid*) and look at the XOK field. If exchange log names has not been done, the exchange log names process can be retried by issuing the CEMT SET CONN(*sysid*) RESYNC command. If there has been previous successful contact between the systems the connection may be reset to its original state and retried. The state can be reset by issuing CEMT SET CONN(*sysid*) NORECOVDATA. It may be necessary to issue this command (or its equivalent) on both sides of the connection. resources which may be waiting for APPC resynchronization. In addition, CICS does not carry out any APPC resynchronization activity with the remote system.

Investigate the cause of the error using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

An exception trace entry contains the received data, and the reason for the failure is interpreted. Check the

format of the exchange log names reply GDS variable. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

Destination: Console and Transient Data Queue
CSMT

DFHRS2139 *date time applid* **Invalid compare states reply data has been received on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: The local system has received data which it attempted to parse using the compare states reply GDS format. Either the data could not be parsed or invalid data was detected.

The local system was attempting to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing. Data from the remote system received in reply to the compare states was invalid.

This failure implies an error in the remote system or a CICS logic error.

System action: A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

The failure prevents the completion of the resynchronization of distributed resources.

User response: Investigate any units of work for which resynchronization is outstanding using the CEMT INQUIRE UOWLINK SYSID(*sysid*) command. Use the same command on the remote system to determine whether to commit or backout the unit of work. Alternatively, for APPC connections, resynchronization can be overridden by issuing the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection. resources which may be waiting for resynchronization. Also, CICS does not carry out any resynchronization activity with the remote system.

Investigate the cause of the error using the system dump. Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

An exception trace entry contains the received data, and the reason for the failure is interpreted. Check the format of the compare states reply GDS variable. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

DFHRS2140 • DFHRS2141

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

Destination: Console and Transient Data Queue
CSMT

DFHRS2140 *date time applid* **A protocol violation has occurred while resynchronizing with remote system *sysid*, netname *netname*, protocol *protocol*, via session *sessid*. The resynchronization was initiated by the local system.**

Explanation: The local system has detected a protocol violation while resynchronizing with the remote system. CICS was attempting to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing. The resynchronization was initiated by the local system.

This implies one of the following

- An error was detected by the remote system and the resynchronization sequence was abnormally terminated.
- A logic error exists in the remote system which caused it to send invalid data.
- A CICS logic error.

System action: CICS continues to operate normally and the resynchronization attempt is retried at the next opportunity.

A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Diagnostics may have been output by the local CICS system, the access methods, or the operating system. Also, investigate the cause of the error in the remote system. It may have produced diagnostic messages indicating why the resynchronization sequence was terminated.

The resynchronization sequence can be analyzed locally by formatting the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this resynchronization conversation.

The trace entries for the DFHCRRSY program show the state of the conversation which was being used and the data received. At the point of failure a confirmation was expected from the remote system as the final flow in the sequence but was not received.

Compare the resynchronization flows with those documented in the *SNA LU6.2 Reference: Peer Protocols* manual, (SC30-6808). A possible cause of this

error is that the remote system did not observe the correct protocols. Investigation at the remote system may be necessary.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sysid, netname, protocol, sessid*

Destination: Console and Transient Data Queue
CSMT

DFHRS2141 *date time applid* **A protocol violation has occurred while resynchronizing with remote system *sysid*, netname *netname*, protocol *protocol*, via session *sessid*. The resynchronization was initiated by the remote system.**

Explanation: The local system has detected a protocol violation while resynchronizing with the remote system. CICS was attempting to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing. The resynchronization was initiated by the remote system.

This implies one of the following

- An error was detected by the remote system and the resynchronization sequence was abnormally terminated.
- A logic error exists in the remote system which caused it to send invalid data.
- A CICS logic error.

System action: CICS continues to operate normally and the resynchronization attempt is retried at the next opportunity.

A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: See any diagnostics output by the local CICS system, the access methods, or the operating system. Also, investigate the cause of the error in the remote system; it may have produced diagnostic messages indicating why the resynchronization sequence was terminated.

The resynchronization sequence can be analyzed locally by formatting the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this resynchronization conversation.

The trace entries for the DFHCRRSY program show the state of the conversation which was being used and the data received. At the point of failure a request confirmation message was expected from the remote

system as the third flow in the sequence but was not received.

Compare the resynchronization flows with those documented in the *SNA LU6.2 Reference: Peer Protocols* manual, (SC30-6808). A possible cause of this error is that the remote system did not observe the correct protocols; investigation at the remote system may be necessary.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sysid, netname, protocol, sessid*

Destination: Console and Transient Data Queue CSMT

DFHRS2142 *date time applid* **Compare states request data could not be received on session sessid from remote system sysid, netname netname, protocol protocol.**

Explanation: The local system has received an exchange log names request from the remote system but failed while attempting to receive subsequent data which was assumed to be a compare states GDS variable. The remote system was probably attempting to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

This implies one of the following

- An error in the remote system
- A session failure during the resynchronization
- A CICS logic error.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

The resynchronization attempt should be retried at the next opportunity by the remote system. However, for APPC protocol connections, the failure may have resulted in exchange log names flows being unsuccessful and this prevents any synclevel 2 attaches between the local system and the remote system.

User response: Issue CEMT INQUIRE CONN(*sysid*) and look at the XOK field. If exchange log names has not been done, the error situation may be correctable by issuing CEMT SET CONN(*sysid*) RESYNC. If this fails to cure the problem, resynchronization can be canceled for an APPC connection by issuing the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection. resources which may be waiting for resynchronization. In addition, CICS does not carry out any resynchronization activity with the remote system.

Investigate the cause of the error using the system dump and any previously output diagnostic information

provided by CICS, the access methods, or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Locate the exception trace entries for the DFHCRRSY program and examine any data sent by the remote system. Also examine the state of the conversation at the point of failure. It should have been in receive state.

A possible cause is that the remote system did not send valid data or failed to follow the protocol for compare states. Compare the resynchronization flows with those documented in the *SNA LU6.2 Reference: Peer Protocols* manual, (SC30-6808). Investigation at the remote system may be necessary.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

Destination: Console and Transient Data Queue CSMT

DFHRS2143 *date time applid* **Do_know confirmation was not received on session sessid from remote system sysid, netname netname, protocol protocol.**

Explanation: The local system sent a Do_know GDS variable to the remote system but did not receive a valid reply. This indicates an earlier failure of a protected conversation during sync point processing and the resolution of the unit of work. This system was using the Do_know GDS variable to cause resynchronization to be started by the remote system.

This implies an error in the remote system or a CICS logic error.

System action: The resynchronization attempt should be retried at the next opportunity by the remote system.

A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Issue CEMT SET CONN(*sysid*) RESYNC to cause resynchronization to be retried.

Investigate the cause of the error using the system dump and any previously output diagnostic information provided by CICS, the access methods or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Locate the exception trace entries for the DFHCRRSY program and examine any data sent by the remote

DFHRS2144 • DFHRS2145

system. Also examine the state of the conversation at the point of failure.

A possible cause is that the remote system did not send valid data, or failed to follow the protocol for Do_Know in which case it may be necessary to obtain further diagnostic material from the remote system.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

Destination: Console and Transient Data Queue CSMT

DFHRS2144 *date time applid* **System_restart confirmation was not received on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: The local system sent a System_restart GDS variable to the remote system but did not receive a valid reply. This indicates that the local system has restarted and not previously contacted the remote system as part of the initiation of resynchronization protocols.

This indicates an error in the remote system or a CICS logic error.

System action: The transmission of the message is retried the next time the connection is initialized.

A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Issue CEMT SET CONN(*sysid*) RESYNC to cause transmission to be retried.

Investigate the cause of the error using the system dump and any diagnostic information provided by CICS, the access methods, or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Locate the exception trace entries for the DFHCRRSY program and examine any data sent by the remote system. Also examine the state of the conversation at the point of failure.

A possible cause is that the remote system did not send valid data or failed to follow the protocol for the System_restart message. In this case it may be necessary to obtain further diagnostic material from the remote system.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

Destination: Console and Transient Data Queue CSMT

DFHRS2145 *date time applid* **Invalid exchange log names data has been received on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: The local system has received data which it attempted to parse using the exchange log names GDS format. Either the data could not be parsed or invalid data was detected.

The remote system was attempting to initialize the connection for synclevel 2 work or to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing. Exchange log names is sent in both of these cases.

This failure indicates either an error in the remote system or a CICS logic error.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

If resynchronization was being attempted, it has failed and is retried at the next opportunity.

For APPC protocol connections (but not IRC protocol), the failure prevents the completion of the exchange log names protocol. This prevents any synclevel 2 attaches between the local system and the remote system.

User response: For APPC protocol connections, issue CEMT INQUIRE CONN(*sysid*) and look at the XOK field. If exchange log names has not been done but there has been previous contact between the systems, the error can be overridden by resetting the state of the connection. To do this, issue CEMT SET CONN(*sysid*) NORECOVDATA commands for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection. resources waiting for APPC resynchronization. Also CICS does not carry out any APPC resynchronization activity with the remote system.

Investigate the cause of the error using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

An exception trace entry contains the received data, and the reason for the failure is interpreted. Check the format of the exchange log names GDS variable. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

The format of the GDS variable is incorrect and the

cause of the error should be located. A likely cause is that the remote system did not send a valid GDS variable in which case it may be necessary to obtain further diagnostic material from the remote system.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

Destination: Console and Transient Data Queue CSMT

DFHRS2146 *date time applid* **Invalid compare states data has been received on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: The local system has received data which it attempted to parse using the compare states GDS format. Either the data could not be parsed or invalid data was detected.

The remote system was attempting to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

This failure indicates either an error in the remote system or a CICS logic error.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

The failure prevents the completion of the resynchronization of distributed resources.

User response: Investigate any units of work for which resynchronization is outstanding using the command CEMT INQUIRE UOWLINK SYSID(*sysid*). Use the same command on the remote system to determine whether to commit or backout the unit of work. Alternatively, resynchronization can be overridden by issuing the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection. resources which may be waiting for resynchronization. In addition CICS does not carry out any resynchronization activity with the remote system.

Investigate the cause of the error using the system dump and any diagnostic information provided by CICS, the access methods, or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

An exception trace entry contains the received data, and the reason for the failure is interpreted. Check the format of the compare states GDS variable. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

The format of the GDS variable is incorrect and the cause of the error should be located. A possible cause is that the remote system did not send a valid GDS variable, in which case it may be necessary to obtain further diagnostic material from the remote system.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

Destination: Console and Transient Data Queue CSMT

DFHRS2147 *date time applid* **Unrecognized data was received following transmission of an exchange log names reply on session *sessid* to remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: An exchange log names request was received from another system and a reply was sent. More data was expected from the other system but this was not recognized as part of the exchange log names protocol.

This implies one of the following

- The remote system has detected a protocol violation in the local system's exchange log names reply GDS variable.
- There has been an internal error in CICS processing.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

For APPC protocol, the failure may have resulted in no exchange log name flows being successful preventing any synclevel 2 attaches between the local system and the remote system.

For IRC protocol, resynchronization may fail but communications links remain active.

User response: For links using APPC protocol, issue CEMT INQUIRE CONN(*sysid*) and look at the XOK field. If exchange log names has not been done, the error situation can be overridden by issuing the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection. resources which may be waiting for APPC resynchronization. In addition, CICS does not carry out any APPC resynchronization activity with the remote system.

Investigate the cause of the error using the system dump and any diagnostic information provided by CICS, the access methods, or the operating system. The remote system may also have created diagnostic messages if it detected an error in the data it received.

The data sent by the local system can be investigated

by formatting the system dump to show the control blocks belonging to the trace domain and the terminal control program. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this exchange log names conversation.

If the internal trace table is available, use it to track the commands issued against that session and check that the state transitions of the user state machine are correct. If any of the state transitions are not valid, it is possible that there has been a CICS logic error.

The APPC send and receive buffers for a session are clearly labelled in the dump and are printed below the TCTTE for the session to which they belong. The TIOA contains similar information for IRC. Locate the send/receive buffer for the session in question and check that the contents of the buffer are correct. The buffer should contain a valid exchange log names GDS reply variable. The correct format of this SNA defined field can be found in the *SNA Formats* manual.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

Destination: Console and Transient Data Queue
CSMT

DFHRS2148 *date time applid* **Resynchronization with system *sysid*, netname *netname*, protocol *protocol* was attempted but was terminated because no partner log name was found.**

Explanation: CICS has initiated a resynchronization sequence following the failure of a protected conversation during syncpoint processing. No valid log name was found for the partner system. The resynchronization could not continue.

This message indicates that a CEMT SET CONNECTION NORECOVDATA command was issued before the resynchronization with the partner system could be completed. The UOW and UOWLINK describing the outstanding work have also been deleted.

System action: None

User response: None. This message is issued for information only.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sysid, netname, protocol*

Destination: CSMT

DFHRS2149 *date time applid* **Resynchronization/Exchange log names with system netname (protocol *protocol*) could not be executed because no suitable connection entry was found.**

Explanation: CICS has initiated a resynchronization sequence following the failure of a protected conversation during syncpoint processing. Data exists describing the conversation but no suitable connection definition was found for the partner system. The resynchronization could not continue because communications could not be established.

System action: Processing continues.

User response: The condition may be due to the discarding of the connection definition or to a cold start which has caused a connection definition to be deleted by CICS; the definition may have been autoinstalled. An autoinstalled definition may be reinstalled by subsequent activity in the system. Alternatively, a suitable definition can be installed manually using CEDA.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, netname, protocol*

Destination: CSMT

DFHRS2150 *date time applid* **Invalid data has been received during the resynchronization sequence on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: The local system has received data which it attempted to parse as one of the following types of SNA GDS data

Exchange log names
Do_know
System_restart

The data could not be recognized.

The remote system was attempting to initialize the connection for synclevel 2 work, or to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

This failure implies one of the following

- An error was detected by the remote system and it sent an error indication in an FMH7.
- An error has occurred in the remote system.
- A CICS logic error has occurred.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

If resynchronization was being attempted, it has failed and is retried at the next opportunity.

For APPC protocol connections (but not IRC protocol), the failure prevents the completion of the exchange log names protocol and this prevents any synclevel 2 attaches between the local system and the remote system.

User response: For APPC protocol connections, issue CEMT INQUIRE CONN(*sysid*), and examine the XOK field. If exchange log names has not been done but there has been previous contact between the systems, the error can be overridden by resetting the state of the connection. To do this, issue the CEMT SET CONN(*sysid*) NORECOVDATA command for the failing connection. It may be necessary to issue this command (or its equivalent) on both sides of the connection. resources which may be waiting for APPC resynchronization. In addition, CICS does not carry out any APPC resynchronization activity with the remote system.

Investigate the cause of the error using the system dump and any diagnostic information provided by CICS, the access methods, or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on this, see the *CICS Problem Determination Guide*.)

An trace entry contains the received data. Check the format of this data. The correct format of the SNA defined field can be found in the *SNA Formats* manual.

A possible cause is that the remote system did not send a valid GDS variable. In this case, it may be necessary to obtain further diagnostic material from the remote system.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

Destination: Console and Transient Data Queue CSMT

DFHRS2151 *date time applid* **Invalid data has been received during the resynchronization sequence on session *sessid* from remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: The local system was attempting to receive data as part of a resynchronization sequence but the conversation was in the wrong state or an error FMH was received.

The remote system was attempting to initialize the connection for synclevel 2 work or to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

The failure implies one of the following

- An error was detected by the remote system and it sent an error indication in an FMH7.
- An error occurred in the remote system
- A CICS logic error has occurred.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

If resynchronization was being attempted, it has failed and will be retried at the next opportunity.

User response: The sequence of resynchronization can be retried by issuing CEMT SET CONN(*sysid*) RESYNC.

Investigate the cause of the error using the system dump and any diagnostic information already issued by CICS, the access methods or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

The trace entries show the state of the conversation with the remote system and the arrival of any error FMH indicating an error detected in the remote system. If necessary, obtain further diagnostic material from the remote system.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

Destination: Console and Transient Data Queue CSMT

DFHRS2152 *date time applid* **A conversation error has occurred during resynchronization sequence on session *sessid* initiated to remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: The local system has initiated a sequence of resynchronization exchanges with the partner system and has completed one or more of them. The conversation is not in the right state to continue the process.

The failure indicates either an error in the remote system or a CICS logic error.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

If resynchronization was being attempted, it has failed and is retried at the next opportunity.

User response: The sequence of resynchronization can be retried by issuing CEMT SET CONN(*sysid*) RESYNC.

DFHRS2153 • DFHRS2155

Investigate the cause of the error using the system dump and any diagnostic information provided by CICS, the access methods, or the operating system.

Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

The trace entries show the state of the conversation with the remote system. The arrival of any error FMH indicates an error in the remote system. In this case it may be necessary to obtain further diagnostic material from the remote system.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

Destination: Console and Transient Data Queue
CSMT

DFHRS2153 *date time applid* **An error has occurred while sending a system_restart request on session *sessid* to remote system *sysid*, netname *netname*, protocol *protocol*.**

Explanation: An error has occurred during the transmission of a System_restart request to a remote system. CICS was attempting to resynchronize distributed resources following an earlier failure of a protected conversation during sync point processing.

This implies one of the following

- The remote system has detected a protocol violation during the preceding exchange log names sequence.
- Some other error in communications has occurred.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: The cause of the error may be indicated by diagnostic information produced by the remote system. Diagnostics issued by the local system, the access method, or the operating system may indicate a reason for the failure. Format the system dump to show the control blocks belonging to the trace domain. (For guidance on how to do this, see the *CICS Problem Determination Guide*.)

Determine from the message which session was being used for this exchange log names conversation.

If the internal trace table is available, use it to track the commands issued against the session reported in the message. Check that the state transitions of the user state machine are correct and that the conversation was in send state at the time of the error. If any of the state transitions are not valid, there may have been a CICS logic error.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sessid, sysid, netname, protocol*

Destination: Console and Transient Data Queue
CSMT

DFHRS2154 *date time applid* **A logic error has occurred during resynchronization with system *sysid*, netname *netname*.**

Explanation: A logic error has occurred during resynchronization with the partner system.

The local data associated with the resynchronization was locked at the start of processing but could not be unlocked at the end.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

An ASQL abend is subsequently issued by the transaction processing the resynchronization, and a transaction dump is taken.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHCRRSY

XMEOUT Parameters: *date, time, applid, sysid, netname*

Destination: CSMT

DFHRS2155 *date time applid* **Affinity changed by partner resource known as connection *sysid*, netname *netname*. Old LUNAME was *old-luname*, new LUNAME is *new-luname*.**

Explanation: A change in the generic resource member associated with the partner system has occurred but the local system has resynchronization work to complete.

The local system has previously made contact with the generic resource known as connection *sysid* (netname *netname*), and synclevel(2) work has been exchanged with the assigned member, identified by *old-luname*. Since that time, the affinity with *old-luname* has been changed to *new-luname* by action in the remote system. Resynchronization of the synclevel(2) work cannot take place.

System action: No system action is taken, but subsequent messages may indicate an exchange log names failure which could prevent the connection being used for synclevel(2) work. Alternatively, messages may indicate that resynchronization work has subsequently been erased by CICS as a result of the XLNACTON setting on the connection definition.

Module: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sysid, netname, old-luname, new-luname*

Destination: CSMT

DFHRS2156 *date time applid* **A logic error occurred during resynchronization with system *sysid*, netname *netname*.**

Explanation: The CLS2 transaction was processing exchange lognames or resynchronization for a connected partner identified by a netname *netname*. The connection entry associated with this netname is *sysid*, and was located and locked, but could not be unlocked in subsequent processing. This indicates a CICS internal logic error.

System action: A system dump is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

An ASQK abend is subsequently issued by the transaction processing the resynchronization, and a transaction dump is taken.

User response: The condition indicates an error in the CICS table manager (which may have produced its own exception trace records), or in the resynchronization program itself. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sysid, netname*

Destination: CSMT

DFHRS2157 *date time applid* **A logic error has occurred during resynchronization with system *sysid*, netname *netname*.**

Explanation: The CLS2 transaction was executing exchange log names and attempted to save a log name received from system *sysid* (netname *netname*) by

invoking the CICS recovery manager domain. This operation failed because of a CICS internal error in the recovery manager domain or in the resynchronization program.

System action: The transaction is terminated with a transaction dump. A system dump is taken unless you have specifically suppressed dumps in the dump table. Abend ASQI is subsequently issued.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sysid, netname*

Destination: CSMT

DFHRS2158 *date time applid* **A logic error has occurred during resynchronization with system *sysid*, netname *netname*.**

Explanation: The CLS2 transaction was executing exchange log names or resynchronization with system *sysid* (netname *netname*). A CICS internal error prevented the successful completion of the operation.

System action: The transaction is terminated with a transaction dump. A system dump is taken unless you have specifically suppressed dumps in the dump table. Abend ASQB may subsequently be issued.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHCRRSY

XMEOUT Parameters: *date, time,applid, sysid, netname*

Destination: CSMT

DFHRTnnnn messages

DFHRT0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for

example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In

DFHRT0002 • DFHRT4403

this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the *OS/390 MVS System Codes* manual.

Next, look up the CICS abend code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

For further information about *code*, see the *CICS Problem Determination Guide*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRTSU

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

Destination: Console

DFHRT0002 *applid* **A severe error (code *X'code*) has occurred in module *modname*.**

Explanation: An error has been detected in module *modname*. The code *X'code* is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code *X'code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the

importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRTSU

XMEOUT Parameters: *applid, X'code', modname*

Destination: Console

DFHRT4401 *time applid* **No transaction identification specified. Please try again.**

Explanation: The terminal operator has not entered an identifier for this transaction.

System action: CICS processing continues.

User response: Enter a valid transaction identifier.

Module: DFHRTE

Destination: Terminal End User

DFHRT4402 *time applid* **You cannot use a Program Function key to start transactions on other systems.**

Explanation: Program function keys cannot be used to initiate a transaction on another system using the routing transaction (CRTE).

System action: CICS processing continues.

User response: Enter a valid transaction identifier.

Module: DFHRTE

Destination: Terminal End User

DFHRT4403 *time applid* **The routing session to system *sysid* has been terminated. Further transactions will not be routed to the connected system.**

Explanation: The routing session has been terminated. Subsequent transaction identifiers will not be shipped to the connected system.

System action: CICS processing continues without the connection to system *sysid*.

User response: If you need to use system *sysid*, investigate why the routing session has terminated.

Module: DFHRTE

Destination: Terminal End User

DFHRT4404 *time applid* **Please change format of request to CRTE
SYSID=XXXX,TRPROF=YYYYYYYYY.**

Explanation: The request to the routing transaction CRTE contained incorrect syntax.

System action: CICS processing continues.

User response: Reenter the request to the routing transaction CRTE using the correct syntax.

Module: DFHRTE

Destination: Terminal End User

DFHRT4405 *time applid* **System sysid cannot be found. Please check that you have used the correct system name.**

Explanation: System *sysid* is not defined to CICS.

System action: CICS processing continues.

User response: Check that you have used the correct system name. Either reenter the request specifying the correct system name, or define system *sysid* to CICS.

Module: DFHRTE

Destination: Terminal End User

DFHRT4406 *time applid* **System sysid is not in service or is released.**

Explanation: The system *sysid* is not currently in service, or is released.

System action: CICS processing continues. If a routing session had been established before the connection became unavailable, it remains in force until the user enters CANCEL. If the connection becomes usable before this, transactions are again routed. If this message is in response to the initial CRTE command, no routing session is in force and no routing is attempted for subsequent terminal input.

User response: Wait until system *sysid* becomes available. Enter CANCEL to terminate an existing routing session.

Module: DFHRTE

Destination: Terminal End User

DFHRT4407 *time applid* **This system does not include support of Intersystem Communication.**

Explanation: The system has not been generated with support for intersystem communication.

System action: CICS processing continues without support for intersystem communication.

User response: Generate the system with support for intersystem communication.

Module: DFHRTE

Destination: Terminal End User

DFHRT4408 *time applid* **Terminal termid is not of the type supported by routing transaction tranid.**

Explanation: The routing transaction does not support the type of terminal being used.

System action: CICS processing continues without support for terminal *termid*.

User response: Use a terminal of the type supported by the routing transaction, that is, a 3270 display terminal or a console.

Module: DFHRTE

Destination: Terminal End User

DFHRT4409 *time applid* **The routing session to system sysid has been started.**

Explanation: The routing session has been started.

System action: CICS processing continues.

User response: None.

Module: DFHRTE

Destination: Terminal End User

DFHRT4410 *time applid* **System sysid is unavailable. The routing session to it is terminated.**

Explanation: The routing transaction has been terminated because the system became unavailable. Subsequent transaction identifiers will not be shipped to the connected system.

System action: CICS processing continues.

User response: If appropriate, re-enter the transaction when the routing session to system *sysid* becomes available.

Module: DFHRTE

Destination: Terminal End User

DFHRT4411 *time applid* **The Communication Profile cannot be found.**

Explanation: The profile, specified for a transaction invoked from the terminal to which the message is directed, is not defined to CICS.

System action: CICS stops initialization of the transaction.

User response: Define the communication profile to CICS and reinvoke the transaction. For further

DFHRT4412 • DFHRT4417

information on how to define the profile, refer to the *CICS Distributed Transaction Programming Guide*.

Module: DFHRTE

Destination: Terminal End User

DFHRT4412 *time applid* **The transaction code is not defined on the remote system.**

Explanation: A transaction identification, routed to a remote CICS system, is not an installed transaction definition in the remote system. CICS directs this message to the terminal at which the transaction identification was entered.

This message is similar to DFHAC2001 in a local system.

System action: CICS stops initialization of the transaction.

User response: Enter a valid transaction ID, or install the transaction on the remote system.

Module: DFHRTSP

Destination: Terminal End User

DFHRT4413 *time applid* **The transaction has been disabled on the remote system.**

Explanation: A transaction, routed to a remote CICS system, is disabled in the installed transaction definition of the remote system. CICS directs this message to the terminal at which the transaction identification was entered.

This message is similar to DFHAC2008 in a local system.

System action: CICS stops initialization of the transaction.

User response: Enable the transaction on the remote system.

Module: DFHRTSP

Destination: Terminal End User

DFHRT4414 *time applid* **Transaction *tranid* cannot run. CICS shutdown is in progress in the remote system.**

Explanation: A transaction *tranid* was routed to a remote CICS system that was being quiesced. CICS directs this message to the terminal at which the transaction identification was entered.

This message is similar to DFHAC2007 in a local system.

System action: The remote CICS system continues quiescing.

User response: Reenter the transaction when the remote CICS system is in normal execution mode.

Module: DFHRTSP

Destination: Terminal End User

DFHRT4415 *time applid* **Transaction CXRT was invoked directly by terminal input. This is not allowed.**

Explanation: The transaction code CXRT, which is reserved for an internal CICS transaction, was entered from a terminal.

System action: The transaction is run with no effect.

User response: Do not enter transaction code CXRT at a terminal.

Module: DFHCRT

Destination: Terminal End User

DFHRT4416 *date time applid* **Abend *abcode* has occurred in the {Dynamic | Distributed} Routing Program. Module name: *modname*.**

Explanation: Either the dynamic routing program or the distributed routing program has abnormally terminated withabend code *abcode*.

System action:

1. Transaction Routing - normal transactionabend processing continues.
2. Dynamic Distributed Program Link - a PGMIDERR condition is returned to the program issuing the Link command.
3. Non-terminal dynamically routed start requests - normal transactionabend processing continues unless theabend is during task termination. In this case message DFHRT4423 is issued.

User response: See the description ofabend code *abcode* for further guidance.

If the code is not a CICS transactionabend code, it is a userabend code. Request an explanation from the programmer responsible for this area.

Module: DFHAPRT, DFHEIIC, DFHEPC, DFHICXM

XMEOUT Parameters: *date, time, applid, abcode, {1=Dynamic,2=Distributed}, modname*

Destination: CSMT

DFHRT4417 *date time applid* **Abend *abcode* in *modname* - {Dynamic | Distributed} routing program must be AMODE=31.**

Explanation: CICS has failed to link to EITHER the dynamic routing program OR the distributed routing program because it is not AMODE 31.

System action:

1. Transaction Routing - normal transaction abend processing continues.
2. Dynamic Distributed Program Link - a PGMIDERR condition is returned to the program issuing the Link command.
3. Non-terminal dynamically routed start requests - normal transaction abend processing continues unless the abend is during task termination. In this case message DFHRT4423 is issued.

User response: Recompile, reassemble, and link edit the dynamic routing program to AMODE 31.

Module: DFHAPRT, DFHEIC, DFHEPC, DFHICXM

XMEOUT Parameters: *date, time, applid, abcode, modname, {1=Dynamic, 2=Distributed}*

Destination: CSMT

DFHRT4418 *date time applid* **Abend** *abcode in modname - {Dynamic | Distributed}*
routing program PPT entry not found.

Explanation: CICS was unable to find a PPT entry for EITHER the dynamic routing program OR the distributed routing program.

System action:

1. Transaction Routing - normal transaction abend processing continues.
2. Dynamic Distributed Program Link - a PGMIDERR condition is returned to the program issuing the Link command.
3. Non-terminal dynamically routed start requests - normal transaction abend processing continues unless the abend is during task termination. In this case message DFHRT4423 is issued.

User response: Ensure that EITHER

1. the dynamic routing program specified by the system initialization parameter DTRPGM=*program name*, or specified via the EXEC CICS SET SYSTEM DTRPROGRAM(*program name*) has been correctly defined to CICS
2. the distributed routing program specified by the system initialization parameter DSRTPGM=*program name*, or specified via the EXEC CICS SET SYSTEM DSRTPROGRAM(*program name*) has been correctly defined to CICS

Module: DFHAPRT, DFHEIC, DFHEPC, DFHICXM

XMEOUT Parameters: *date, time, applid, abcode, modname, {1=Dynamic, 2=Distributed}*

Destination: CSMT

DFHRT4419 *date time applid* **Abend** *abcode in modname - Fetch for {dynamic | distributed}* **routing program failed.**

Explanation: CICS was unable to load EITHER the dynamic routing program or the distributed routing program.

System action:

1. Transaction Routing - normal transaction abend processing continues.
2. Dynamic Distributed Program Link - a PGMIDERR condition is returned to the program issuing the Link command.
3. Non-terminal dynamically routed start requests - normal transaction abend processing continues unless the abend is during task termination. In this case message DFHRT4423 is issued.

User response: Ensure that EITHER

1. the dynamic routing program specified by the system initialization parameter DTRPGM=*program name*, or specified via the EXEC CICS SET SYSTEM DTRPROGRAM(*program name*) has been correctly defined. Ensure that it is also in a load library accessible to CICS.
2. the distributed routing program specified by the system initialization parameter DSRTPGM=*program name*, or specified via the EXEC CICS SET SYSTEM DSRTPROGRAM(*program name*) has been correctly defined. Ensure that it is also in a load library accessible to CICS.

Module: DFHAPRT, DFHEIC, DFHEPC, DFHICXM

XMEOUT Parameters: *date, time, applid, abcode, modname, {1=dynamic, 2=distributed}*

Destination: CSMT

DFHRT4420 *date time applid* **Abend** *abcode in modname - Link to the {dynamic | distributed}* **routing program failed.**

Explanation: An unexpected return code was returned from the link to the dynamic routing program.

System action:

1. Transaction Routing - normal transaction abend processing continues.
2. Dynamic Distributed Program Link - a PGMIDERR condition is returned to the program issuing the Link command.
3. Non-terminal dynamically routed start requests - normal transaction abend processing continues unless the abend is during task termination. In this case message DFHRT4423 is issued.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

DFHRT4421 • DFHRX0001

Module: DFHAPRT, DFHEIIC, DFHEPC, DFHICXM

XMEOUT Parameters: *date, time, applid, abcode, modname, {1=dynamic, 2=distributed}*

Destination: CSMT

DFHRT4421 *date time applid* **Unable to Delete remote Terminal *termid* that is connected to system *sysid*.**

Explanation: A transaction could not be started because the remote terminal definition for *termid*, system *sysid* was flagged for deletion but the DELETE failed. This might indicate a transaction looping on the terminal.

System action: The user transaction abends with abend code AZTI.

User response: See the associated DFHZCxxxx messages for further guidance. Once corrected, you can attempt to run the transaction again.

Module: DFHZTSP

XMEOUT Parameters: *date, time, applid, termid, sysid*

Destination: Console and Transient Data Queue
CSMT

DFHRT4422 *time applid* **The connection to system *sysid* does not support transaction routing. Please check that you have used the correct system name.**

Explanation: The connection to system *sysid* is not an MRO or APPC connection.

System action: CICS processing continues.

User response: Check that you have used the correct system name. Either reenter the request specifying the correct system name, or define the connection to

DFHRUnnnn message

DFHRU2816 *applid* **Exit program *programe* is not available**

Explanation: The user-defined global exit program, *programe*, is

- not defined, or
- disabled, or
- missing from the program library.

System action: CICS abnormally terminates the

DFHRXnnnn messages

DFHRX0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies

system *sysid* as an MRO or APPC connection.

Module: DFHRTE

Destination: Terminal End User

DFHRT4423 *date time applid* **An error has occurred while attempting to invoke the distributed routing program.**

Explanation: An error has been detected while attempting to invoke the distributed routing program for a non-terminal start request. This error would normally result in a transaction abend but in this case no abend is issued because doing so would result in the task being suspended indefinitely.

System action: None

User response: See the preceding DFHRTxxxx messages for further guidance.

Module: DFHICXM

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CSMT

DFHRT4480 *time applid* **The CSSF transaction is no longer supported. Please use CESF.**

Explanation: A user has attempted to run the CSSF transaction. The CSSF transaction is only invoked internally by CICS for CRTE cancel processing.

System action: The transaction terminates.

User response: Use the CESF transaction to sign off.

Module: DFHRTE

Destination: Terminal End User

recovery control restart task with transaction abend ARCB. CICS then terminates abnormally.

User response: Make program *programe* available.

Module: DFHRCEX

XMEOUT Parameters: *applid, programe*

Destination: Console

that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS

code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRXDM

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

Destination: Console

DFHRX0002 *applid* **A severe error (code X'code') has occurred in module *modname*.**

Explanation: An error has been detected in module *modname*. The code X'code' is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code X'code' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump

table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRXDM

XMEOUT Parameters: *applid, X'code', modname*

Destination: Console

DFHRX01001 *applid* **RX domain initialization has started.**

Explanation: This is an informational message indicating the start of RX domain initialization.

System action: Initialization continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHRXDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRX01011 *applid* **RX domain initialization has ended.**

Explanation: RX domain initialization has completed successfully.

System action: Initialization continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHRXDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRX0102 *applid* Errors were encountered during initialization of the RX domain. Domain initialization has ended.

Explanation: Errors have been detected by the Resource Recovery Services (RX) domain during CICS initialization. Accompanying messages describe the nature of the errors.

System action: A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

User response: If your CICS system will not use any services that depend on Resource Recovery Services, no action is necessary. Otherwise, you will need to shut CICS down, and restart it once the problems identified by the earlier messages have been corrected.

Module: DFHRXDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRX0103 *applid* An unexpected return code *X'rc'* was received from RRMS service xxxxxxxx.

Explanation: An unexpected return code was received when CICS issued a request to Recoverable Resource Management Services (RRMS). The name of the RRMS service included in the message indicates the component of RRMS as follows

CRGxxxx
Registration Services

CTXxxxx
Context Services

ATRxxxx
Resource Recovery Services (RRS)

This message may indicate a problem with RRMS.

System action: CICS continues, but - depending on the service and the return code - CICS services that depend on RRMS may not be available. Further messages will provide more information.

User response: Record the name of the RRMS service and the return code. RRMS return codes are documented in *GC28-1793 OS/390 MVS Programming: Resource Recovery*.

If you are unable to determine the cause of the problem from this information, you may need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRXDM, DFHRXUW

XMEOUT Parameters: *applid, X'rc',xxxxxxx*

Destination: Console

DFHRX0104I *applid* The Resource Recovery Services (RRS) exit manager aaaaaaaaaaaaaaaaaa is now available.

Explanation: This message is issued when CICS discovers that a Resource Recovery Services (RRS) exit manager is available. The insert aaaaaaaaaaaaaaaaaa is the name of the exit manager.

System action: CICS begins restart processing with RRS.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHRXDM

XMEOUT Parameters: *applid, aaaaaaaaaaaaaaaaaa*

Destination: Console

DFHRX0105I *applid* The Resource Recovery Services (RRS) exit manager aaaaaaaaaaaaaaaaaa is now unavailable.

Explanation: This message is issued when CICS discovers that a Resource Recovery Services (RRS) exit manager is unavailable. The insert aaaaaaaaaaaaaaaaaa is the name of the exit manager. Transactions which use RRS to coordinate their updates cannot be successfully executed.

System action: CICS continues. Message DFHRX0104 will be issued when the exit manager becomes available once more.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHRXDM

XMEOUT Parameters: *applid, aaaaaaaaaaaaaaaaaa*

Destination: Console

DFHRX0106I *applid* Restart processing with Resource Recovery Services (RRS) is beginning.

Explanation: This message is issued when CICS begins restart processing with Resource Recovery Services (RRS).

System action: CICS continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHRXDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRX0107I *applid* Restart processing with Resource Recovery Services (RRS) has ended.

Explanation: This message is issued when restart processing with Resource Recovery Services (RRS) ends. If RRS has become unavailable during restart processing (indicated by message DFHRX0105) restart processing may be incomplete.

System action: CICS continues. If RRS has become unavailable, CICS will resume restart processing when RRS becomes available once more.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHRXDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRX0108 *date time applid* Log name mismatch with Resource Recovery Services. Expected Log name *logname*. Received Log name *logname*.

Explanation: During the exchange of log names with Resource Recovery Services (RRS), which occurred when RRS restarted, this system's memory of RRS's log name did not match the log name retrieved from RRS. RRS may have performed a cold start.

System action: CICS execution continues. Units of work that are awaiting resynchronization with RRS will not be resolved automatically.

User response: The associated units of work may need to be resolved by using CEMT SET UOW. The message should not recur.

Module: DFHRXDM

XMEOUT Parameters: *date, time, applid, logname, logname*

Destination: Console and Transient Data Queue CSMT

DFHRX0109 *date time applid* Invalid pass token received on connection *sysid* session *termid*.

Explanation: A batch program using the extended External CICS Interface (EXCI) has issued a DPL request which does not include the SYNCONRETURN option. However, the value of the pass token received from the batch region does not match that which was lodged with Recoverable Resource Management Services (RRMS) in the batch region.

System action: DFHRXUW provides console message DFHRX0002, and possibly a system dump (depending on the options in the dump table). The

transactional DPL request will not be processed, and the batch job which issued the request may be suspended until it times out.

User response: Investigate why the pass token was incorrect. It is possible that an unauthorized user has attempted to guess the value of the pass token in order to influence the outcome of a Unit of Work that has expressed interest in an RRMS Unit of Recovery.

If you are satisfied that there has been no attempt to interfere with the pass token, you may need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRXUW

XMEOUT Parameters: *date, time, applid, sysid, termid*

Destination: Console and Transient Data Queue CSCS

DFHRX0110 *applid* Restart processing with Resource Recovery Services (RRS) was attempted on the wrong system.

Explanation: Resource Recovery Services (RRS) has rejected a request to begin restart processing because there is incomplete recoverable work associated with this CICS applid on another system in the sysplex.

System action: CICS execution continues, but CICS services that depend upon RRS will not be available until the problem is corrected.

User response: If your CICS system will not use any services that depend on RRS, no action is necessary. Otherwise, close CICS down and restart it on the correct system in the sysplex. Use the RRS ISPF panels to scan the RRS Resource Manager Data log in order to find the correct system on which to restart CICS.

If, for some reason, you cannot restart CICS on another system in the sysplex, you can take the following steps. However, if you do so, resources may be out of synchronization

1. Use the RRS Unit of Recovery list panels to force completion of the incomplete recoverable work
2. Restart CICS or RRS
3. Force any CICS units of work that are awaiting resolution from RRS.

Module: DFHRXDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRX0111 *applid* Resource Recovery Services (RRS) has lost logged data. Resynchronization information may be missing.

Explanation: While attempting to recover resynchronization information from its logs, Resource

Recovery Services (RRS) has discovered that some data is missing. This is due to a problem with the RRS log streams.

System action: CICS restart processing with RRS continues, but RRS may not be able to provide a decision for all indoubt units or work. In these cases, updates to local resources will be committed or backed out according to the ACTION attribute in the corresponding transaction definition.

The Recovery Manager domain will issue one of the following messages for each unit of work affected, indicating the outcome

DFHRM0112
DFHRM0113

User response: Use the information provided in the Recovery Manager message to decide what action is needed. You may need to take steps to resynchronize resources in local and remote systems.

Module: DFHRXDM

XMEOUT Parameter: *applid*

Destination: Console

DFHRZnnnn messages

DFHRZ0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code.

Alternatively

- Unexpected data has been input,
- Storage has been overwritten, or
- There has been a program check within a user program.

The code *aaa* is, if applicable, a 3-digit hexadecimal MVS system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The 4-digit code *bbbb*, which follows *aaa*, is a user abend code produced either by CICS or by another product on the user's system.

If *X'offset'* contains the value *X'FFFF'*, then module *modname* was in control at the time of the abend, but the program status word (PSW) was not addressing this module.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

Either this is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

Or CICS will continue unless you have specified in the dump table that CICS should terminate. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer.

Look up the MVS code *aaa*, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

If the *modname* insert contains the value *????*, then CICS was unable to determine which module has abnormally terminated. In this case, examine the system

dump to determine which area of code has caused the program check.

The user should examine other messages to determine what the module which issued this message was doing at the time the abend occurred. From these messages they can deduce which product has produced the abend code *bbbb*. If *bbbb* is identified as a CICS code, it may be either alphameric or numeric.

- If the CICS code is alphameric (for example AKEA) then it is a CICS transaction abend code.
- If the CICS code is numeric (for example 1310), it refers to a CICS message (DFHTS1310 in our example).

If the user abend code is from another product (for example, IMS), refer to the appropriate messages and codes manual to determine the cause of the abend.

The entries in the appropriate manuals will give the user guidance regarding the nature of the error, and may also give some guidance concerning the appropriate user response. The program check may have occurred in a user program. If this is the case, the program check is usually followed by an ASRA or an ASRB transaction abend and a transaction dump.

If you want to suppress system dumps that precede ASRA and ASRB abends, you must specify this on an entry in the dump table, using either CEMT or an EXEC CICS command. Further guidance on suppressing system dumps can be found in the *CICS System Definition Guide*.

You may need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRZxx

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

Destination: Console

DFHRZ0002 *applid* **A severe error (code *X'code'*) has occurred in module *module*.**

Explanation: The RZ domain has received an unexpected error response from some other part of CICS. The operation requested by recovery manager is described by code *X'code'*.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: A system dump is taken and the system attempts to continue operation unless specifically inhibited by dump table entries.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the cause of the problem as follows

1. Determine if the problem can be explained by any previous messages issued from some other CICS component.
2. Examine the symptom string.
3. Examine the dump.

If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHRZRT1, DFHRZRT2, DFHRZDM, DFHRZRM, DFHRZRG2

XMEOUT Parameters: *applid, X'code',module*

Destination: Console

DFHRZ0201 *date time applid* **The call to invoke the Distributed Routing Program, *program*, has failed. The program was not defined.**

Explanation: An error occurred when attempting to link to the Distributed Routing Program, identified by the DSRTPGM SIT parameter.

System action: A ARZU dump may be produced depending on type of failure.

User response: Ensure that the Distributed Routing Program is available to the system. It must be defined to Program Manager and it must be present in the DFHRPL library concatenation. Alternatively, name a new Distributed Routing Program using SET SYSTEM DSRTPROGRAM or from CEMT.

Module: DFHRZRT2

XMEOUT Parameters: *date, time,applid, program*

Destination: CSSH

DFHRZ0202 *date time applid* **The Distributed Routing Program, *program*, has returned a bad response.**

Explanation: The Distributed Routing Program, identified by the DSRTPGM SIT parameter, has

returned a bad response. The request will not be serviced.

System action: No dumps are taken.

User response: None

Module: DFHRZRT2

XMEOUT Parameters: *date, time,applid, program*

Destination: CSSH

DFHRZ0203 *date time applid* **The call to invoke the Distributed Routing Program, *program*, has failed. The Distributed Routing Program has abnormally terminated with abend Code *abcode*.**

Explanation: The Distributed Routing Program has abnormally terminated with abend code *abcode*.

System action:

1. Transaction Routing - normal transaction abend processing continues.
2. Dynamic Distributed Program Link - an abended condition is returned to the calling program.

User response: See the description of abend code *abcode* for further guidance.

If the code is not a CICS transaction abend code, it is a user abend code. Request an explanation from the programmer responsible for this area.

Module: DFHRZRT2

XMEOUT Parameters: *date, time,applid, program, abcode*

Destination: CSSH

DFHRZ0204 *date time applid* **The call to invoke the Distributed Routing Program, *program*, has failed due to an invalid AMODE.**

Explanation: An error occurred when attempting to link to the Distributed Routing Program, identified by the DSRTPGM SIT parameter. The program has an invalid AMODE specified.

System action: No dumps are taken.

User response: Ensure that the Distributed Routing Program definition is correct.

Module: DFHRZRT2

XMEOUT Parameters: *date, time,applid, program*

Destination: CSSH

DFHRZ0205 *date time applid* **The call to invoke the Distributed Routing Program, *program*, has failed. The program was not loadable.**

Explanation: An error occurred when attempting to

link to the Distributed Routing Program, identified by the DSRTPGM SIT parameter.

System action: An ARZU dump may be produced depending on type of failure.

User response: Ensure that the Distributed Routing Program is available to the system. It must be defined to Program Manager and it must be present in the

DFHRPL library concatenation. Alternatively, name a new Distributed Routing Program using SET SYSTEM DSRTPROGRAM or from CEMT.

Module: DFHRZRT2

XMEOUT Parameters: *date, time, applid, program*

Destination: CSSH

DFHSHnnnn messages

DFHSH0001 *applid* An abend (code *code*) has occurred at offset *X'offset'* in module *module*.

Explanation: An unexpected program check or abend occurred with abend code *aaa/bbbb*.

The program status word (PSW) at the time of the program check or abend indicated that CICS was executing at offset *X'offset'* in module *modname*. This may have been caused by corruption of CICS code or control blocks.

System action: A system dump is taken and the system attempts to continue operation unless otherwise directed by entries in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the cause of the program check or abend using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSHRT1, DFHSHRT2, DFHSHDM, DFHSHPR, DFHSHRQ, DFHSHSY

XMEOUT Parameters: *applid, code, X'offset', module*

Destination: Console

DFHSH0002 *applid* A severe error (code *X'code'*) has occurred in module *module*.

Explanation: The SH domain has received an unexpected error response from some other part of CICS. The operation requested by recovery manager is described by code *X'code'*.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: A system dump is taken and the system attempts to continue operation unless specifically inhibited by dump table entries.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the cause of the problem as follows

1. Determine if the problem can be explained by any previous messages issued from some other CICS component.
2. Examine the symptom string.
3. Examine the dump.

If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSHRT1, DFHSHRT2, DFHSHDM, DFHSHPR, DFHSHSY, DFHSHRE

XMEOUT Parameters: *applid, X'code', module*

Destination: Console

DFHSH0101 *date time applid* The call to invoke the Distributed Routing Program, *program*, has failed. Refer to message DFHSH0105.

Explanation: An error occurred when attempting to link to the Distributed Routing Program, identified by the DSRTPGM SIT parameter.

System action: A ASHU dump may be produced depending on type of failure.

User response: Ensure that the Distributed Routing Program is available to the system. It must be defined to Program Manager and it must be present in the DFHRPL library concatenation. Alternatively, name a new Distributed Routing Program using SET SYSTEM DSRTPROGRAM or from CEMT.

Module: DFHSHRT2

XMEOUT Parameters: *date, time, applid, program*

Destination: CSSH

DFHSH0102 *date time applid* The Distributed Routing Program, *program*, has returned a bad response. See following message DFHSH0105.

Explanation: The Distributed Routing Program, identified by the DSRTPGM SIT parameter, has returned a bad response. The request may not be serviced immediately.

System action: No dumps are taken.

User response: None

Module: DFHSHRE

XMEOUT Parameters: *date, time,applid, program*

Destination: CSSH

DFHSH0103 *date time applid* **The call to invoke the Distributed Routing Program, *program*, has failed. The Distributed Routing Program has abnormally terminated with abend Code *abcode*.**

Explanation: The Distributed Routing Program has abnormally terminated with abend code *abcode*.

System action:

1. Transaction Routing - normal transaction abend processing continues.
2. Dynamic Distributed Program Link - an abended condition is returned to the calling program.

User response: See the description of abend code *abcode* for further guidance.

If the code is not a CICS transaction abend code, it is a user abend code. Request an explanation from the programmer responsible for this area.

Module: DFHSHRT2

XMEOUT Parameters: *date, time,applid, program, abcode*

Destination: CSSH

DFHSH0104 *date time applid* **The call to invoke the Distributed Routing Program, *program*, has failed due to an invalid AMODE.**

Explanation: An error occurred when attempting to link to the Distributed Routing Program, identified by the DSRTPGM SIT parameter. The program has an invalid AMODE specified.

System action: No dumps are taken.

User response: Ensure that the Distributed Routing Program definition is correct.

Module: DFHSHRT2

XMEOUT Parameters: *date, time,applid, program*

Destination: CSSH

DFHSH0105 *date time applid* **Request (Id: *requestid*, **Processtype:** *processtype*, **Processname:** *processname*, **Activityname:** *activityname*, **Transaction:** *tranid*) cannot be serviced. It will be retried every minute and will be purged after 24 hours if not serviced then.**

Explanation: A request cannot be serviced immediately. This is either because the Distributed Routing Program, identified by the DSRTPGM SIT parameter, has returned a response which indicates that it is unable to route a request, or a temporary error occurred during an attempt to service the request locally.

The request is identified by the request id *id* (the key of the request on the Local Request Queue data set (DFHLRQ)), the process type *processtype*, the process name *processname*, the activity name *activityname*, and the transaction id *tranid*.

System action: No dumps are taken. The request is marked unserviceable, and is then retried every minute until it is either serviced, or 24 hours have elapsed in which case the request is purged and message DFHSH0107 issued.

Message DFHSH0106 is issued once every hour while the request cannot be serviced. If the request is serviced successfully, message DFHSH0108 is issued.

User response: Investigate why the request cannot be serviced. This may be caused by one of the following

- The local request queue is unavailable.
- The request refers to a resource (activity or process) which is unavailable.
- The system to which the request is to be routed is down, or the link is down.
- The Distributed Routing Program is failing or is returning an invalid target system.

Module: DFHSHRM

XMEOUT Parameters: *date, time,applid, requestid, processtype,processname, activityname, tranid*

Destination: Console and Transient Data Queue
CSSH

DFHSH0106 *date time applid* **Request (Id: *requestid*, **Processtype:** *processtype*, **Processname:** *processname*, **Activityname:** *activityname*, **Transaction:** *tranid*) still cannot be serviced. It will be retried every minute and will be purged after *hours* hours if not serviced successfully.**

Explanation: Following message DFHSH0105, this message is issued every hour while a request cannot be successfully serviced.

The request is identified by the request id *requestid* (the key of the request on the Local Request Queue data set (DFHLRQ)), the process type *processtype*, the process name *processname*, the activity name *activityname*, and the transaction id *tranid*.

System action: No dumps are taken. The request continues to be retried every minute until it is either

DFHSH0107 • DFHSH0110

serviced successfully, or 24 hours have elapsed since message DFHSH0105 was issued, in which case the request is purged and message DFHSH0107 is issued.

User response: See message DFHSH0105.

Module: DFHSHRM

XMEOUT Parameters: *date, time, applid, requestid, processtype, processname, activityname, tranid, hours*

Destination: Console and Transient Data Queue CSSH

DFHSH0107 *date time applid* **Request (Id: requestid, Processtype: processtype, Processname: processname, Activityname: activityname, Transaction: tranid) has remained unserviceable for 24 hours and has now been purged.**

Explanation: A request has been unserviceable for 24 hours and has now been purged. This message will have been preceded by message DFHSH0105 and several occurrences of message DFHSH0106.

The request is identified by the request id *requestid* (the key of the request on the Local Request Queue data set (DFHLRQ)), the process type *processtype*, the process name *processname*, the activity name *activityname*, and the transaction id *tranid*.

System action: No dumps are taken. The request is deleted.

User response: See message DFHSH0105.

Module: DFHSHRQ

XMEOUT Parameters: *date, time, applid, requestid, processtype, processname, activityname, tranid*

Destination: Console and Transient Data Queue CSSH

DFHSH0108 *date time applid* **Previously unserviceable request (Id requestid, Processtype: processtype, Processname processname, Activityname: activityname, Transaction tranid) has now been successfully serviced.**

Explanation: A request which was previously unserviceable has now been successfully serviced. This message will have been preceded by message DFHSH0105 and possibly one or more occurrences of message DFHSH0106.

The request is identified by the request id *requestid* (the key of the request on the Local Request Queue data set (DFHLRQ)), the process type *processtype*, the process name *processname*, the activity name *activityname*, and the transaction id *tranid*.

System action: No dumps are taken.

User response: None.

Module: DFHSHRM

XMEOUT Parameters: *date, time, applid, requestid, processtype, processname, activityname, tranid*

Destination: Console and Transient Data Queue CSSH

DFHSH0109 *date time applid* **An error has occurred when attempting to access the Local Request Queue data set (DFHLRQ). {The file could not be found. | The file was closed. | The file was disabled. | There was insufficient space. | An I/O error occurred. | The data set is being copied.} The Local Request Queue is now unavailable.**

Explanation: One of the following errors was detected when attempting to access the Local Request Queue data set (DFHLRQ)

- The file could not be found.
- The file was closed.
- The file was disabled.
- There was insufficient space.
- An I/O error occurred.
- The dataset is being copied.

System action: The Local Request Queue is made unavailable. CICS then attempts to access the data set every minute. If successful, message DFHSH0110 is issued to indicate the data set is now available.

User response: Investigate the error which caused the Local Request Queue to be made unavailable.

Module: DFHSHRE, DFHSHRQ, DFHSHSY

XMEOUT Parameters: *date, time, applid, {1=The file could not be found., 2=The file was closed., 3=The file was disabled., 4=There was insufficient space., 5=An I/O error occurred., 6=The data set is being copied.}*

Destination: Console and Transient Data Queue CSSH

DFHSH0110 *date time applid* **The Local Request Queue data set (DFHLRQ) is now available.**

Explanation: The Local Request Queue data set (DFHLRQ), which was previously unavailable, is now available. See message DFHSH0109.

System action: None.

User response: None.

Module: DFHSHSY

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CSSH

DFHSH0111 *date time applid tranid trannum userid* **An error has occurred in Scheduler Services during the prepare phase of syncpoint.**

Explanation: Scheduler Services domain encountered an error during the prepare phase of syncpoint.

System action: Scheduler Services returns a NO vote to the Recovery Manager. The transaction will be

abended with an ASP7 abend.

User response: Check for other Scheduler Services messages that may indicate the cause of the error. For example, message DFHSH0109 indicates problems with the Local Request Queue.

Module: DFHSHRM

XMEOUT Parameters: *date, time, applid, tranid, trannum, userid*

Destination: Console and Transient Data Queue

DFHSInnnn messages

DFHSI0914I *applid* **Unable to initiate transaction CSFU. Files will not be opened at initialization.**

Explanation: Module DFHSIJ1 could not start transaction CSFU. Execution of the DFHIC TYPE=INITIATE macro failed. Either CSFU is not an installed transaction definition, or DFHFCU is not an installed program definition.

System action: CICS does not open any files at initialization time. If a file is defined in the file control table (FCT) to be opened at initialization time, CICS will open it on first reference.

User response: Make transaction CSFU and program DFHFCU available for execution. Group DFHOPCLS in DFHLIST contains all of the definitions needed for file opening and closing (dynamically as well as at initialization time).

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1250 *applid* **VSAM error processing SHOWCAT for intrapartition data set *dsetname* R15=xxxx.**

Explanation: During SHOWCAT processing for the intrapartition data set, *dsetname*, VSAM detected an error and issued return code xxxx.

System action: CICS writes a dump and terminates abnormally.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Check the return code in the *DFSMSStvs Administration Guide* and restart CICS.

Module: DFHSID1

XMEOUT Parameters: *applid, dsetname, xxxx*

Destination: Console

DFHSI1499 *applid* **Unable to acquire special storage.**

Explanation: As part of CICS initialization, an attempt is made to acquire an area of storage from the fetch-protected subpool. The attempt has been unsuccessful.

System action: CICS terminates abnormally with a dump.

User response: This error indicates a severe problem with your operating system. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSIB1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1500 *applid element* **startup is in progress for CICS Transaction Server Version *version***

Explanation: This is an informative message indicating that *element* startup is in progress.

Element is part of CICS Transaction Server Version *version*.

Element = CICS Version = 1.3.0

System action: System initialization continues.

User response: None. This message cannot be suppressed.

Module: DFHAPSIP

XMEOUT Parameters: *applid, element, version*

Destination: Console

DFHSI1501I *applid* **Loading CICS nucleus.**

Explanation: This is an informative message indicating that the CICS nucleus is being loaded.

DFHSI1502I • DFHSI1521

System action: System initialization continues.

User response: None.

Module: DFHSIB1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1502I *applid* **CICS startup is {Cold | Warm | Emergency | Initial}.**

Explanation: During CICS initialization, the type of restart is determined and the operator notified by this message.

System action: System initialization continues.

User response: None.

Module: DFHSIC1, DFHSII1

XMEOUT Parameters: *applid*, {1=Cold, 2=Warm, 3=Emergency, 4=Initial}

Destination: Console

DFHSI1503I *applid* **Terminal data sets are being opened.**

Explanation: This is an informatory message indicating that the terminal data sets are being opened.

System action: System initialization continues.

User response: None.

Module: DFHSIF1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1506 *applid* **Unable to OPEN the global catalog.**

Explanation: During initialization, CICS issued an OPEN for the global catalog DFHGCD data set, but the OPEN failed.

System action: CICS terminates abnormally with a dump.

User response: Examine the preceding VSAM message for the reason for the OPEN failure. Note that if you specify START=AUTO, or if you define your system with journal support, you must supply a global catalog data set in the JCL.

Module: DFHSIC1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1511I *applid* **Installing group list *grplist*.**

Explanation: Group list *grplist* is being installed.

System action: System initialization continues.

User response: None.

Module: DFHAMPIL

XMEOUT Parameters: *applid*, *grplist*

Destination: Console

DFHSI1517 *applid* **Control is being given to CICS.**

Explanation: This is an informatory message indicating that control is being given to CICS.

applid is the VTAM APPLID of the CICS system issuing the message.

System action: System initialization continues.

User response: None.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1519I *applid* **The interregion communication session was successfully started in XCF group *xcfgroup***

Explanation: This is an informatory message indicating that the interregion communication (IRC) session has been successfully started and is a member of the given xcf group.

System action: System initialization continues.

User response: None.

Module: DFHSIJ1

XMEOUT Parameters: *applid*, *xcfgroup*

Destination: Console

DFHSI1521 *applid* **CICS unable to continue for reasons given above.**

Explanation: CICS initialization cannot continue because of one or more serious errors. One or more preceding messages describe these errors.

System action: CICS terminates with a dump.

User response: Refer to any preceding messages for further guidance on what the problems may be and how to solve them. Correct the errors and restart CICS.

Module: DFHSII1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1522D *applid* Restart errors reported above.
Reply 'GO' or 'CANCEL'.

Explanation: One or more error messages precede this message. CICS can continue initialization but only in degraded mode.

System action: Depending on your response to this message, CICS terminates or continues initialization in degraded mode.

User response: Consider the reported errors and their effects, and decide if you want CICS to continue in degraded mode. If you do, reply 'GO'. If you do not, then reply 'CANCEL'. Correct the errors and restart CICS.

Module: DFHSII1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1530 *applid* Purge of non-executable ATI request inoperative.

Explanation: CICS is unable to initiate the CRSQ task to delete automatic transaction initiation (ATI) requests from the system when those requests are not honored for longer than the ATI purge delay interval.

System action: System initialization continues.

User response: If ATI purge is required, ensure that the CRSQ task is available next time CICS is initialized.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1531 *applid* Terminal control incompatibility.
macro VTAM return code: *retcode* error code: *errcode* (modname: DFHZRPL).

Explanation: CICS found an inconsistency during the initialization of terminal control. *macro* is the name of the failing VTAM macro. *retcode* is the VTAM hexadecimal return code in Register 15. *errcode* contains the contents of Register 0, which is the associated error code in hexadecimal. Refer to the *ACF/VTAM Programmer's Reference* manual for a complete description of the VTAM return code *retcode* and the VTAM error code *errcode*.

The probable cause of this inconsistency is that VTAM=YES was specified (perhaps by default) in the SIT, but the VTAM macros GENCB and SHOWCB are not available.

System action: After issuing this message, CICS system initialization abnormally terminates with a system dump.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Use the VTAM return code and error code to determine the cause of failure in the VTAM macro *macro*. Correct the error using the *ACF/VTAM Programmer's Reference* manual, and restart CICS.

Module: DFHZRPL

XMEOUT Parameters: *applid, macro, retcode, errcode*

Destination: Console

DFHSI1533 *applid modname* loaded at X'address'.

Explanation: This is an informatory message indicating that CICS has loaded module *modname* at address *address*.

System action: System initialization continues.

User response: None.

Module: DFHAPSIP

XMEOUT Parameters: *applid, modname, address*

Destination: Console

DFHSI1534 *applid* Unable to link to program DFHAMP - GRPLIST parameter ignored.

Explanation: The DFHAMP program cannot be found on the load library. The GRPLIST parameter cannot be processed and so is ignored.

System action: System initialization continues.

User response: Ensure that the DFHAMP program is on the load library.

Module: DFHSII1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1535 *applid* Severe error detected in DFHAMP - CICS is terminating.

Explanation: A severe error was detected while the GRPLIST parameter was being processed.

System action: A dump is provided and CICS is terminated.

User response: This is most probably a logic error in DFHAMP. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSII1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1536D *applid* GRPLIST *grplist* does not exist.
Enter alternative name, 'GO' or
'CANCEL'.

Explanation: Group list *grplist* cannot be found on the CSD file.

System action: CICS waits for a reply. If you reply CANCEL, CICS terminates. If you reply GO, CICS ignores the specified GRPLIST and tries to install the next one. If you specify a valid list name, CICS initialization continues and the list is installed.

User response: Enter 'GO', 'CANCEL' or a valid GRPLIST.

Module: DFHAMPIL

XMEOUT Parameters: *applid*, *grplist*

Destination: Console

DFHSI1537D *applid* GRPLIST *grplist* does not exist.
Enter alternative name or 'CANCEL'.

Explanation: Group list *grplist* cannot be found on the CSD file.

System action: CICS waits for a reply. If you reply CANCEL, CICS terminates. If you specify a valid list name, CICS initialization continues and the list is installed.

User response: Enter 'CANCEL' or a valid GRPLIST.

Module: DFHAMPIL

XMEOUT Parameters: *applid*, *grplist*

Destination: Console

DFHSI1538D *applid* Install GRPLIST Errors. Is startup to be continued - Enter 'GO' or 'CANCEL'.

Explanation: Errors have been detected in DFHAMP while installing GRPLIST during CICS initialization. Accompanying messages describe the nature of the errors.

System action: CICS waits for a reply. If you reply CANCEL, CICS terminates. If you reply GO, CICS initialization continues.

User response: See the associated messages for further information about these errors. Reply with GO or CANCEL.

Module: DFHSII1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1539 *applid* Error attaching the CESC (Terminal Timeout) transaction.

Explanation: The CESC transaction failed to start during initialization of an alternate XRF region. Although CICS continues to initialize, terminals left signed on after the takeover are not timed out.

System action: A dump is produced and CICS continues initialization.

User response: Use the dump to investigate why the transaction could not be started. It may be that the system was short on storage or that the transaction has been disabled.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1542 *applid* Takeover by the CICS alternate system has failed. Emergency restart could not be performed.

Explanation: This CICS alternate system is attempting to take over from its associated active CICS system but the recovery manager component has indicated that an initial start is required because of a system log failure.

System action: CICS is abnormally terminated and a dump is provided.

User response: Look for console messages issued by the active CICS system which indicate the nature of the log failure. If no such messages have been issued, an internal CICS error may have occurred. In this case you will need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSII1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1543 *applid* Time-Of-Day clock inoperative.

Explanation: System initialization was unable to establish the time-of-day clock values for CICS.

System action: CICS is abnormally terminated and a dump is provided.

User response: The time-of-day clock is external to CICS execution and may have been disabled. Enable the time-of-day clock and restart CICS.

Module: DFHSII1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1547 *applid* **Notification of a default qualified LUNAME to the recovery manager domain has failed.**

Explanation: CICS is running with VTAM=NO, or an attempt to open the VTAM ACB has failed.

If VTAM=NO is specified, CICS uses the UOWNETQL system initialization parameter to form a default qualified LUNAME to pass to the recovery manager. If the VTAM ACB failed to open, CICS uses UOWNETQL to form the default qualified LUNAME. If UOWNETQL has not been specified, CICS sets UOWNETQL to the invalid value '9UNKNOWN' to highlight the problem.

An attempt was then made to transfer the default qualified LUNAME of the system to the recovery manager domain for use in constructing unit of work (UOW) identifiers. The attempt failed, indicating a serious error.

System action: CICS continues. UOW identifiers constructed by the recovery manager domain do not contain a qualified luname.

User response: Keep the exception trace data produced by the recovery manager domain. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSIF1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1548 *applid* **After opening the VTAM ACB, CICS has failed to transfer the fully qualified LUNAME to the recovery manager domain.**

Explanation: The VTAM ACB was opened by CICS to allow communication via VTAM. An attempt was then made to transfer the fully qualified LUNAME of the system. The LUNAME is provided to the recovery manager domain by VTAM for use in constructing unit of work (UOW) identifiers. The attempt failed, indicating a serious error.

System action: CICS continues. Unit of work identifiers constructed by the recovery manager domain do not contain a fully qualified LUNAME.

User response: Keep the exception trace data produced by the recovery manager domain. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHZSLS

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1549 *applid* **Logic error when building TCT module list.**

Explanation: Either the format of the modules DFHZCA, ZCB, ZCP, ZCW, ZCX, ZCY, ZCZ and ZCXR was not as expected, or the TCT was generated incorrectly.

System action: CICS is abnormally terminated and a dump is provided.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Possible reasons for this message are

1. The modules listed were generated without VTAM facilities, but the system initialization table (SIT) specifies VTAM=YES.
2. The TCT does not include ACCESSMETHOD=VTAM, but the system initialization table (SIT) specifies VTAM=YES.
3. The entry points of the listed modules are incorrect.
4. The module list in each of the listed modules is incorrect.

If reason 1 or 2 applies, correct the error. Otherwise, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSIF1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1550 *applid* **A severe error has occurred while making a domain domain call with response (X'response) and reason (X'reason).**

Explanation: An unexpected error was returned from the specified domain. The response and reason codes are given.

System action: A system dump is taken, unless the failing domain has previously taken diagnostics.

This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system administrator. This failure indicates a serious error in CICS.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSII1

XMEOUT Parameters: *applid, domain, X'response', X'reason'*

Destination: Console

DFHSI1551 *applid* The CICS region userid *userid* is not authorized to use the PLTPIUSR parameter userid *userid*. Initialization cannot continue, so CICS is terminated.

Explanation: The userid specified in the job control statements for the CICS region is not authorized to use the userid specified in the PLTPIUSR system initialization parameter.

System action: CICS initialization terminates.

User response: Ensure that the correct userid is specified for PLT processing.

Ensure that the userid for the CICS region has the necessary authorization. This may require the assistance of a security administrator.

When the necessary corrections have been made rerun the CICS job.

Module: DFHSII1

XMEOUT Parameters: *applid, userid,userid*

Destination: Console

DFHSI1552 *applid* **UserId *userid* specified for the PLTPIUSR parameter has not been defined correctly to the external security manager (ESM). SAF codes are (*X'safresp*,*X'safreas*). ESM codes are (*X'esmresp*,*X'esmreas*).**

Explanation: The userid specified for the PLTPIUSR initialization parameter has been defined incorrectly.

System action: CICS terminates abnormally with a dump.

User response: Ensure that the desired userid is specified for PLT processing and that external security manager (ESM) definitions have been specified correctly.

The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the *OS/390 MVS Programming: Authorized Assembler Services Guide* and in *External Security Interface (RACROUTE) Macro Reference for MVS and VM (SC28-1366)*. See these manuals for an explanation of the codes.

There may be further messages produced by CICS or the external security manager (ESM) which provide more information.

Correct the errors and restart CICS.

Module: DFHSII1

XMEOUT Parameters: *applid, userid,X'safresp', X'safreas', X'esmresp',X'esmreas'*

Destination: Console

DFHSI1553 *applid* **The unit of work network qualifier specified via the UOWNETQL parameter contains invalid characters or begins with a number. A dummy qualifier is substituted.**

Explanation: The UOWNETQL system initialization parameter has been specified incorrectly. The UOWNETQL parameter must consist of uppercase letters (A through Z), or numbers in the range 0 through 9. The first character must be a letter.

CICS is running with VTAM=NO, or an attempt to open the VTAM ACB has failed.

When VTAM=NO is specified, CICS uses UOWNETQL to form a default qualified LUNAME to pass to the recovery manager.

If the VTAM ACB fails to open, CICS uses UOWNETQL to form the default qualified LUNAME.

System action: CICS continues but with the UOWNETQL deliberately set to the invalid value '9UNKNOWN' to highlight the problem.

User response: Correct the UOWNETQL system initialization parameter.

Module: DFHSIF1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1556 *applid* **SKRP {A | F}x disabled due to extension of PGRET value.**

Explanation: The new PGRET value supplied as an initialization option has caused all the single-key retrieval values to be rebuilt. The value shown in the message exceeds 16 bytes. *x* can be a value 1 through 3 for A and 1 through 12 for F.

System action: The key given in the message (PA1-PA3 and PF1-PF12 respectively) is disabled.

User response: If it has been specified (by PARM) that initialization overrides can be entered by means of the console, the opportunity will be given to re-enter the PGRET and/or the SKRxxxx initialization option.

Module: DFHPASY

XMEOUT Parameters: *applid, {1=A, 2=F}, x*

Destination: Console

DFHSI1558 *applid* Program *progrname* cannot be found.

Explanation: Program *progrname* is essential for CICS to initialize correctly, but was not defined in a group referenced by the group list specified in the startup job stream.

System action: A dump is provided and CICS is terminated.

User response: Ensure that the program is defined in a group referenced by the group list specified in the startup job stream.

Module: DFHSIJ1

XMEOUT Parameters: *applid, progrname*

Destination: Console

DFHSI1559 *applid* Profile DFHCICSE cannot be found.

Explanation: The DFHCICSE profile is essential for CICS to initialize correctly. However it was not defined in the group list specified in the startup job stream.

System action: A dump is provided and CICS is terminated.

User response: Ensure that the DFHCICSE profile is defined in the group list specified in the startup job stream. A definition of DFHCICSE is provided in the DFHSTAND group on the CICS system definition (CSD) file.

Module: DFHXCPA, DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1562 *applid* Unable to initialize application domain statistics.

Explanation: During CICS initialization, an error was detected while the application domain (AP) statistics control module, DFHSII1, was being initialized. This could indicate a problem with the AP component of CICS.

System action: An exception trace entry is made in the trace table and CICS terminates abnormally with a system dump.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This error may have occurred because of an earlier error detected by the kernel (KE) domain of CICS. Look for earlier messages from the KE domain beginning DFHKExxxx, CICS trace table entries with the prefix KE and a dump. These indicate the type of error and the action that should be taken.

If no earlier error is detected by the KE component,

DFHSII1 makes an exception entry in the trace table (id=X'0700) and terminates CICS abnormally with code=1562 and with a system dump. In this case you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSII1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1572 *applid* Unable to OPEN VTAM ACB - RC=xxxxxxx ACB Code=yy.

Explanation: An error was encountered during system initialization while attempting to open the VTAM ACB. RC=xxxxxxx is the VTAM error code found in Register 15. yy is the hexadecimal contents of the ACB.

System action: CICS initialization continues.

User response: Refer to the *ACF/VTAM Programmer's Reference* for a complete description of the values of the ACB error field and the return code.

Use the values and the return code to determine the cause of the problem.

Decide whether to cancel or to continue. (This message appears if you bring up CICS before you bring up VTAM.)

If you want to use VTAM terminals in this CICS run, you must activate VTAM. You can open the VTAM ACB with the CEMT SET VTAM OPEN command.

Module: DFHSIF1

XMEOUT Parameters: *applid, xxxxxxxx, yy*

Destination: Console

DFHSI1573 *date time applid* Terminal Control is unavailable due to an unsupported access method.

Explanation: ACB/TCAM, and releases of VTAM prior to version 3, are not supported by this release of CICS.

System action: CICS terminates with a system dump.

User response: Update your access method.

Module: DFHZSLS

XMEOUT Parameters: *date, time, applid*

Destination: Console

DFHSI1574 *applid* TCTUA Subpool not added in DFHZRPL. CICS initialization cannot continue.

Explanation: An attempt to add a subpool by the storage manager has failed. Module DFHZRPL has failed in an attempt to add a subpool for use by the

DFHSI1575 • DFHSI1579D

TCTUA's associated with non-VTAM terminals. Since it is necessary to have the subpool present for use when needed, this is a serious error.

System action: The initialization of the CICS system which tried to perform the addition of the subpool abends. If it was not able to add the subpool, then CICS is not able to execute properly.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHZRPL

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1575 *applid* **Getmain failed for TCTUA subpool in module DFHZRPL. CICS initialization cannot continue.**

Explanation: The module DFHZRPL has failed in an attempt to GETMAIN an area of storage for use by the TCTUA subpool. This subpool has already been added but no storage yet exists for it. This is a serious error.

System action: As a result of the GETMAIN failure so early in the initialization sequence, it is not possible to continue the CICS initialization. The CICS system which tried and failed to perform the GETMAIN terminates.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHZRPL

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1576 *applid* **Unable to find VTAM ACB.**

Explanation: An error was encountered during system initialization while attempting to find the VTAM ACB.

System action: CICS continues to initialize, but VTAM is not available.

User response: If you do not require VTAM support, this message can be ignored.

If you have VTAM installed on your system, check that VTAM=NO has not been specified as a system initialization parameter. If VTAM=YES is specified, investigate why VTAM is not currently available on your system.

Module: DFHSIF1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1578D *applid* **PLTPI specified cannot be found. Reply 'GO' or 'CANCEL'.**

Explanation: The post-initialization program list table (PLTPI) cannot be found because the PLT does not exist in the CICS program library.

System action: If the response is 'CANCEL', CICS is terminated. If the response is 'GO', processing continues without PLT processing.

User response: Respond 'GO' or 'CANCEL'.

Module: DFHSIPLT

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1579D *applid* **Module *modname*{ PLT | connection }program *programe* not found. Reply 'GO' or 'CANCEL'.**

Explanation: This message indicates that either a program defined in the post-initialization program list table (PLTPI) cannot be found, or a connection program used when connecting to CICSplex SM, DBCTL, DB2 or MQ cannot be found. The attempt to invoke a connection program results from coding CPSMCONN=CMAS, or CPSMCONN=LMAAS, or CPSMCONN=WUI, or DBCTLCON=YES, or DB2CONN=YES, or MQCONN=YES in the SIT.

For PLT programs, if the message is issued during the first PLT phase in initialization, the program does not exist in the CICS program library. If the message is produced during the post-initialization PLT phase, the program did not have an installed program entry or was not found in the CICS program library.

For connection programs, the program did not have an installed program entry or was not found in the CICS program library.

modname indicates which of the modules issued the message. *programe* is the name of the program which cannot be found.

System action: If the response is 'CANCEL', CICS is terminated. If the response is 'GO', the program is bypassed.

User response: Reply 'CANCEL' or 'GO'.

Module: DFHSIPLT

XMEOUT Parameters: *applid, modname*, {1= PLT , 2= connection }, *programe*

Destination: Console

DFHSI1580D *applid*{ *PLT* | *Connection* }**program**
program-name **has abended, code**
abcode. Reply 'GO' or 'CANCEL'.

Explanation: CICS was processing either the initialization program list table (PLT) when the PLT program *program-name* abended with abend code *abcode*, or was processing connection program *program-name* and it abended with abend code *abcode*.

System action: If the response is 'CANCEL', CICS is terminated. If the response is 'GO', the program is bypassed.

User response: Reply 'CANCEL' or 'GO'.

Module: DFHSIPLT

XMEOUT Parameters: *applid*, {1=*PLT*, 2=*Connection* }, *program-name*, *abcode*

Destination: Console

DFHSI1582 *applid* **Local DLI PSBs present in the PDIR. CICS does not support local DLI.**

Explanation: CICS has detected that local PSBs are present in the user specified PDIR. CICS no longer supports local DLI. A PDIR is only required for remote DLI, and must contain only remote PSB definitions. A PDIR is not required for DBCTL.

System action: A CICS abend dump is produced, and CICS is terminated.

User response: If remote DLI is required, correct the PDIR by removing the local PSBs. Then reassemble and relinkedit the PDIR, and resubmit the CICS job.

If remote DLI support is not required, change the system initialization table (SIT) to specify PDIR=NO.

Module: DFHSIH1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1589 *applid* **VTAM is not currently active.**

Explanation: CICS initialization cannot OPEN the VTAM access method control block (ACB) because VTAM is not active.

System action: If this is an alternate system, CICS waits for 15 seconds and retries the OPEN indefinitely.

If this is not an alternate system, CICS proceeds with the rest of initialization. The Open VTAM Retry transaction COVR is attached, and retries the OPEN every 5 seconds for ten minutes.

User response: In the case of an alternate, check that VTAM is on its way up. If it is not, you can cancel this alternate.

Module: DFHSIF1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1590 *applid* **XRF alternate cannot proceed without VTAM.**

Explanation: CICS initialization cannot OPEN the VTAM access method control block (ACB). The ACB error code may be found in the preceding message DFHSI1572.

System action: CICS is terminated with a dump.

User response: Refer to DFHSI1572 and use the information to try and resolve the causes of the errors.

Module: DFHSIF1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1592 *applid* **CICS applid not (yet) active to VTAM.**

Explanation: CICS initialization cannot OPEN the VTAM access method control block (ACB) because VTAM does not recognize the APPLID (VTAM error X'5A). There may be a user error in the value of APPLID (for example, on a SIT override) or the application subarea containing APPLID may not be active in VTAM. Alternatively, it may be possible that VTAM is still coming up. If so, the problem may correct itself when VTAM completes its initialization.

System action: If this is an alternate CICS, wait for 15 seconds and retry the OPEN indefinitely. If this is not an alternate, CICS proceeds with the rest of initialization.

User response: In the case of an alternate, check that VTAM is on its way up. If it is, check that the required application sub-area is active in VTAM. If it is, you may cancel this alternate. If this is not an alternate, you can use CEMT to retry the OPEN when CICS has initialized.

Module: DFHSIF1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1594 *applid* **A xxxx level of module *progrname* is being loaded.**

Explanation: The system is loading a level of module *progrname* that was not assembled against the current level of CICS in the CICS Transaction Server product. The level xxxx shows the level of the module being used.

System action: System initialization continues.

User response: Ensure that it is valid to use an old level of module *progrname*. Usually, it will be necessary to reassemble the module for the current level of CICS being used.

Module: DFHAPSIP

XMEOUT Parameters: *applid, xxxx,progrname*

Destination: Console

DFHSI1596 *applid* **Nucleus module *progrname* cannot be located.**

Explanation: Nucleus module *progrname* was not found in the CICS library while loading the nucleus.

System action: The AP domain initialization routines continue to attempt to load the remaining nucleus modules. After trying to load all the nucleus modules, CICS is terminated.

User response: Add the missing module *progrname* to the appropriate library and restart CICS.

Module: DFHAPSIP, DFHSID1

XMEOUT Parameters: *applid, progrname*

Destination: Console

DFHSI1597 *applid* **VTAM=YES invalid with a non VTAM TCT - VTAM=NO forced.**

Explanation: The TCT loaded has not been assembled with ACCESSMETHOD=VTAM but VTAM=YES was specified on the SIT.

System action: CICS continues but without VTAM support.

User response: To use VTAM, assemble the TCT with ACCESSMETHOD=VTAM or use the CICS supplied TCT which has a suffix of DY.

Module: DFHZINT

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1599 *applid* **Region/Partition size insufficient to initialize transient data.**

Explanation: Transient data initialization failed, either because an attempt to create Storage Manager subpool failed or because an attempt to get storage failed.

System action: A system dump is produced, and CICS is abnormally terminated.

User response: Increase the region size available to CICS.

Module: DFHSID1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI1784 *applid* **The user shutdown assist transaction *tranid* has not been defined as a shutdown enabled local transaction.**

Explanation: This message is issued during CICS initialization and indicates that the user shutdown assist transaction specified on the system initialization table (SIT) has not been defined as a shutdown enabled local transaction.

System action: No action is taken. A TRANSIDERR may be returned on PERFORM SHUTDOWN.

User response: Do one of the following

- Correct the shutdown transaction definition.
- Change or remove the SIT SDTRAN option.
- Use the CEMT or EXEC CICS PERFORM SHUTDOWN SDTRAN option.

Module: DFHSIJ1

XMEOUT Parameters: *applid, tranid*

Destination: Console

DFHSI2810 *applid* **CANCEL reply received. CICS is terminating.**

Explanation: A CANCEL reply has been received.

System action: CICS terminates.

User response: Refer to previous messages to determine what action to take.

Module: DFHSII1, DFHSIPLT, DFHAMPIL

XMEOUT Parameter: *applid*

Destination: Console

DFHSI2813 *applid* **Program DFHRCEX cannot be found.**

Explanation: CICS cannot find DFHRCEX in any data set concatenated in the DFHRPL DD statement in the CICS startup job stream.

System action: CICS initialization terminates with a dump.

User response: To correct this error, place DFHRCEX in a partitioned data set in the DFHRPL DD statement.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI8420I *applid* **About to link to PLT programs during the second stage of initialization.**

Explanation: CICS is about to link to the user PLT programs defined in the PLTPI system initialization

parameter during the second stage of initialization.

System action: Control is passed to the user PLT programs.

User response: None. This message can be suppressed with the system initialization parameter MSGVL=0.

Module: DFHSIPLT

XMEOUT Parameter: *applid*

Destination: Console

DFHSI8421I *date time applid* **PLT program *programe* has been invoked during the second stage of initialization.**

Explanation: CICS has invoked user PLT program *programe* during the second stage of initialization.

System action: Control is returned to CICS.

User response: None. This message can be suppressed with the system initialization parameter MSGVL=0.

Module: DFHSIPLT

XMEOUT Parameters:

date, time, applidprograme

Destination: Console

DFHSI8424I *applid* **Control returned from PLT programs during the second stage of initialization.**

Explanation: Control is returned to CICS to continue system initialization.

System action: Control is returned to CICS.

User response: None. This message can be suppressed with the system initialization parameter MSGVL=0.

Module: DFHSIPLT

XMEOUT Parameter: *applid*

Destination: Console

DFHSI8430I *applid* **About to link to PLT programs during the third stage of initialization.**

Explanation: CICS is about to link to the user PLT programs defined in the PLTPI SIT parameter during the third stage of initialization.

System action: Control is passed to the user PLT programs.

User response: None. This message can be suppressed with the system initialization parameter MSGVL=0.

Module: DFHSIPLT

XMEOUT Parameter: *applid*

Destination: Console

DFHSI8431I *date time applid* **PLT program *programe* has been invoked during the third stage of initialization.**

Explanation: CICS has invoked user PLT program *programe* during the third stage of initialization.

System action: Control is returned to CICS.

User response: None. This message can be suppressed with the system initialization parameter MSGVL=0.

Module: DFHSIPLT

XMEOUT Parameter: *applid*

date, time, applidprograme

Destination: Console

DFHSI8434I *applid* **Control returned from PLT programs during the third stage of initialization.**

Explanation: Control is returned to CICS to continue system initialization.

System action: Control is returned to CICS.

User response: None. This message can be suppressed with the system initialization parameter MSGVL=0.

Module: DFHSIPLT

XMEOUT Parameter: *applid*

Destination: Console

DFHSI8440I *applid* **Initiating connection to *resmanager*.**

Explanation: CICS is about to connect to the specified resource manager immediately prior to running PLT programs during the third stage of initialization. The resource manager is CICSplex SM, DBCTL, DB2 or MQ. Connection is initiated because CPSPCONN=CMAS, or CPSPCONN=LMAS, or CPSPCONN=WUI, or DBCTLCON=YES, or DB2CONN=YES, or MQCONN=YES was specified in the SIT.

System action: Control is passed to the resource manager connect program.

User response: None. This message can be suppressed with the system initialization parameter MSGVL=0.

Module: DFHSIPLT

XMEOUT Parameters: *applid, resmanager*

Destination: Console

DFHSI8441I *applid* **Connection to *resmanager* qualifier successfully completed.**

Explanation: CICS has successfully connected to the specified resource manager immediately prior to running PLT programs during the third stage of initialization. The resource manager name is shown along with the resource manager qualifier.

System action: CICS processing continues.

User response: None. This message can be suppressed with the system initialization parameter MSGLVL=0.

Module: DFHSIPLT

XMEOUT Parameters: *applid, resmanager, qualifier*

Destination: Console

DFHSI8442 *applid* **Connection to *resmanager* has failed.**

Explanation: CICS was unable to connect to resource manager *resmanager* immediately prior to running PLT programs during the third stage of initialization. The resource manager is DBCTL, DB2 or MQ. Connection was initiated because DBCTLCON=YES, or DB2CONN=YES, or MQCONN=YES was specified in the SIT.

System action: CICS processing continues.

User response: Refer to previous messages issued by CICS or the resource manager adapter to determine why the connection attempt failed.

Module: DFHSIPLT

XMEOUT Parameters: *applid, resmanager*

Destination: Console

DFHSI8443 *applid* **Connection to *resmanager* not completed. Adapter is awaiting initialization of *resmanager*.**

Explanation: CICS was unable to complete connection to resource manager *resmanager* immediately prior to running PLT programs during the third stage of initialization. The resource manager is DBCTL, DB2 or MQ. Connection was initiated because DBCTLCON=YES, or DB2CONN=YES, or MQCONN=YES was specified in the SIT.

The resource manager adapter is waiting for the resource manager to be initialized.

System action: CICS processing continues. The connection is completed when the resource manager is initialized.

User response: Refer to messages issued by the

relevant resource manager adapter to determine when connection is completed.

Module: DFHSIPLT

XMEOUT Parameters: *applid, resmanager, resmanager*

Destination: Console

DFHSI8444 *applid* **Unable to initiate the Enterprise Java Resolution transaction CEJR. EJ resolution will not occur.**

Explanation: Enterprise Java domain processing uses transaction CEJR to resolve CorbaServers and DJars. This processing cannot occur before a given point in CICS processing. However, resolution can occur for CorbaServers and DJars created as part of RDO processing. Consequently, CEJR is initiated to execute EJ Resolution. Module DFHSIJ1 could not start transaction CEJR. Execution of the DFHIC TYPE=INITIATE macro failed. Either CEJR is not an installed transaction definition, or DFHEJITL is not an installed program definition.

System action: CICS processing continues. When a CorbaServer or a DJar is installed resolution will not occur.

User response: Ensure that transaction CEJR and program DFHEJITL are available for execution. Group DFHSTAND in DFHLIST contains the definitions needed for EJ resource resolution processing.

Use CECI to initiate CEJR as a non-terminal transaction. After CEJR has run once, the installation of CorbaServers and DJars should proceed.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHSI8445 *applid* **An attempt to getmain storage intended for the Language Interface work area failed.**

Explanation: An attempt to getmain storage intended for the Language Interface work area failed.

System action: CICS terminates with a system dump.

User response: Increase below the line storage available to CICS.

Module: DFHSIJ1

XMEOUT Parameter: *applid*

Destination: Console

DFHSJnnnn messages

DFHSJ0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An unexpected program check or abend occurred with abend code *aaa/bbbb*.

The program status word (PSW) at the time of the program check or abend indicated that CICS was executing at offset *X'offset'* in module *modname*. This may have been caused by corruption of CICS code or control blocks.

System action: A system dump is taken and the system attempts to continue operation unless otherwise directed by entries in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the cause of the program check or abend using the system dump and any previously output diagnostic information provided by CICS, the access methods, or the operating system.

If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSJDM, DFHSJIN, DFHSJIS

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

Destination: Console

DFHSJ0002 *applid* A severe error (code *X'code'*) has occurred in module *module*.

Explanation: The recovery manager domain has received an unexpected error response from some other part of CICS. The operation requested by recovery manager is described by code *X'code'*.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: A system dump is taken and the system attempts to continue operation unless specifically inhibited by dump table entries.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Investigate the cause of the problem as follows

1. Determine if the problem can be explained by any previous messages issued from some other CICS component.
2. Examine the symptom string.
3. Examine the dump.

If you cannot resolve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSJDM, DFHSJIN, DFHSJIS

XMEOUT Parameters: *applid, X'code', module*

Destination: Console

DFHSJ0201 *date time applid JVMProfile* A call to CEEPIPI with function code INIT_SUB_DP has failed. (Return code - *X'rc'*).

Explanation: The CICS-JVM interface attempted to initialize a Language Environment enclave using the pre-initialized interface. This failed with return code *rc*.

This message may be generated when a JVM in CICS abends.

System action: CICS takes a system dump and abends the transaction with abend code AEXZ.

User response: Ensure that the OMVS segment has been set up for the userid that the CICS region runs under.

Ensure that the OMVS RACF (or equivalent) segment has been defined for the userid that the CICS region runs under.

Review the STDERR log for any messages that may have been issued prior to the failure. The location of the STDERR file is defined in JVM profile *JVMProfile*.

Look at SYSOUT or CESE destination for Language Environment messages. Look in *Language Environment Programmers Guide (SC28-1939)* for the CEEPIPI function and find the explanation of the return code (Register 15) for that function.

Ensure that the SDFJAUTH PDSE is included in the APF authorized STEPLIB concatenation and that SCEERUN2, SCEERUN, and SDFJLOAD are in the RPL concatenation.

If the JVM abended there may be a JAVADUMP file in the working directory of the HFS file system.

If the problem persists you may need to contact your IBM support representative.

Module: DFHSJIN

XMEOUT Parameters: *date, time, applid, JVMProfile, X'rc'*

Destination: CSMT

DFHSJ0202 *date time applid JVMProfile* A call to CEEPIPI with function code TERM has failed. (Return code - *X'rc'*). See the JVM's STDERR log for further details.

Explanation: The CICS-JVM interface attempted to initialize a Language Environment enclave using the pre-initialized interface. This failed with return code *rc*.

This message may be generated when a JVM in CICS abends.

System action: CICS takes a system dump and abends the transaction with abend code AEXZ.

User response: Review the JVM's STDERR log for any messages the JVM issued prior to the failure. The location of the STDERR file is defined in JVM profile *JVMProfile*.

Look at SYSOUT or CESE destination for Language Environment messages. Look in *Language Environment Programmers Guide (SC28-1939)* for the CEEPIPI function and find the explanation of the return code (Register 15) for that function.

If the JVM abended there may be a JAVADUMP file in the working directory of the HFS file system.

If the problem persists you may need to contact your IBM support representative.

Module: DFHSJIN

XMEOUT Parameters: *date, time, applid, JVMProfile, X'rc'*

Destination: CSMT

DFHSJ0203 *date time applid JVMProfile* **A call to CEEPIPI with function code CALL_SUB has failed. (Return code - X'rc'). See the JVM's STDERR log for further details.**

Explanation: The CICS-JVM interface attempted to initialize a Language Environment enclave using the pre-initialized interface. This failed with return code *rc*.

This message may be generated when a JVM in CICS abends.

System action: CICS takes a system dump and abends the transaction with abend code AEXZ.

User response: Review the JVM's STDERR log for any messages the JVM issued prior to the failure. The location of the STDERR file is defined in JVM profile *JVMProfile*.

Look at SYSOUT or CESE destination for Language Environment messages. Look in *Language Environment Programmers Guide (SC28-1939)* for the CEEPIPI function and find the explanation of the return code (Register 15) for that function.

If the JVM abended there may be a JAVADUMP file in the working directory of the HFS file system.

If the problem persists you may need to contact your IBM support representative.

Module: DFHSJIN

XMEOUT Parameters: *date, time, applid, JVMProfile, X'rc'*

Destination: CSMT

DFHSJ0204 *date time applid JVMProfile* **A call to CEEPIPI with function code CALL_SUB has failed. (Return code - X'rc'). See the JVM's STDERR log for further details.**

Explanation: The CICS-JVM interface attempted to initialize a Language Environment enclave using the pre-initialized interface. This failed with return code *rc*.

This message may be generated when a JVM in CICS abends.

System action: CICS takes a system dump and abends the transaction with abend code AEXZ.

User response: Review the JVM's STDERR log for any messages the JVM issued prior to the failure. The location of the STDERR file is defined in JVM profile *JVMProfile*.

Look at SYSOUT or CESE destination for Language Environment messages. Look in *Language Environment Programmers Guide (SC28-1939)* for the CEEPIPI function and find the explanation of the return code (Register 15) for that function.

If the JVM abended there may be a JAVADUMP file in the working directory of the HFS file system.

If the problem persists you may need to contact your IBM support representative.

Module: DFHSJIN

XMEOUT Parameters: *date, time, applid, JVMProfile, X'rc'*

Destination: CSMT

DFHSJ0205 *date time applid JVMProfile* **A call to CEEPIPI with function code CALL_SUB has failed. (Return code - X'rc'). See the JVM's STDERR log for further details.**

Explanation: The CICS-JVM interface attempted to initialize a Language Environment enclave using the pre-initialized interface. This failed with return code *rc*.

This message may be generated when a JVM in CICS abends.

System action: CICS takes a system dump and abends the transaction with abend code AEXZ.

User response: Review the JVM's STDERR log for any messages the JVM issued prior to the failure. The location of the STDERR file is defined in JVM profile *JVMProfile*.

Look at SYSOUT or CESE destination for Language

Environment messages. Look in *Language Environment Programmers Guide (SC28-1939)* for the CEEPIPI function and find the explanation of the return code (Register 15) for that function.

If the JVM abended there may be a JAVADUMP file in the working directory of the HFS file system.

If the problem persists you may need to contact your IBM support representative.

Module: DFHSJIN

XMEOUT Parameters: *date, time,applid, JVMProfile, X'rc'*

Destination: CSMT

DFHSJ0206 *date time applid* **The runtime options specified in DFHJVMRO are too long. The Language Environment enclave cannot be initialized. The JVM was not started.**

Explanation: The Language Environment runtime options specified in DFHJVMRO are too long. The options specified in DFHJVMRO are concatenated with runtime options required by CICS for use when initializing the Language Environment enclave. The total length of the runtime options that may be specified cannot exceed 255 characters.

System action: The JVM is not started. Exception trace point SJ 0225 is issued.

User response: Data 1 in the exception trace shows the Language Environment runtime options from DFHJVMRO. Data 2 shows the Language Environment runtime options provided by CICS.

Examine the options from DFHJVMRO. Remove any unnecessary options and if possible abbreviate any Language Environment runtime options in your source for DFHJVMRO. Assemble and re-link DFHJVMRO after making your changes.

If CICS has not been restarted since the failure you will need to use CEMT SET PROGRAM(DFHJVMRO) NEWCOPY before attempting to restart the JVM.

Module: DFHSJIN

XMEOUT Parameters: *date, time,applid*

Destination: CSMT

DFHSJ0501 *date time applid JVMProfile* **An attempt to obtain the CICS Wrapper class *wrapper_name* using the JNI function 'FindClass' has failed.**

Explanation: The CICS-JVM interface attempted to obtain a reference to the the CICS Wrapper class *wrapper*, but was unsuccessful.

System action: The CICS transaction is abended with abend code ASJE.

User response: Verify that the CICS_HOME entry in JVMProfile *JVMProfile* is correct and that CICS has read permission to the HFS structure.

Check the contents of the STDERR file (as defined in the JVM profile) for the following Java security exception

```
java.security.AccessControlException
  access denied (java.lang.RuntimePermission
    loadLibrary.com_ibm_cics_server_DTC)
```

If the JVM's security manager is active (i.e the system property `java.security.manager` is specified in the JVM system properties file), check that the security policy grants permission to the CICS codebase. For further information about the JVM security policy see *Java Applications in CICS*

Module: DFHSJCS

XMEOUT Parameters: *date, time,applid, JVMProfile, wrapper_name*

Destination: CSMT

DFHSJ0502 *date time applid JVMProfile* **Attempt to change the HFS working directory to *pathname* has failed. Runtime error message is *errmsg***

Explanation: CICS was in the process of invoking a Java program. The CICS-JVM interface attempted to change the working directory to *pathname* as specified in the WORK_DIR environment variable contained in JVM profile *JVMProfile*. The change directory command failed and the runtime message *errmsg* appended to the end of this message documents why the command failed.

System action: The CICS-JVM interface is unable to change to the specified directory to open the stdin, stdout and stderr streams. The CICS transaction is abended with abend code ASJF.

User response: Examine *errmsg* to determine why the change directory command failed. If necessary correct the setting of the WORK_DIR parameter in the JVM profile. Ensure that CICS has both read and write permission to the HFS directory identified in the WORK_DIR parameter.

Module: DFHSJCS

XMEOUT Parameters: *date, time,applid, JVMProfile, pathname,errmsg*

Destination: CSMT

DFHSJ0503 *date time applid JVMProfile* **Attempt to load DLL *dllname* has failed. Runtime error message is *errmsg***

Explanation: The CICS-JVM interface attempted to load DLL *dllname*. An attempt to start a JVM failed and the runtime message *errmsg* appended to the end of

this message documents why the DLL load attempt failed.

System action: The CICS transaction is abended with abend code ASJD.

User response: Examine *errmsg* to determine why the DLL load failed. There is probably an error in JVM profile *JVMProfile*. There may be further information available in the JVM's STDERR log.

Module: DFHSJCS

XMEOUT Parameters: *date, time,applid, JVMProfile, dllname, errmsg*

Destination: CSMT

DFHSJ0504 *date time applid* **Invalid profile *sdata* specified.**

Explanation: The CICS-JVM failed to find a member in the XDFHENV dataset that matches the value in JVM profile on the program definition.

System action: CICS transaction is abended with abend code AEXZ.

User response: Create a member in the XDFHENV dataset or change the JVMProfile value

Module: DFHSJJP

XMEOUT Parameters: *date, time,applid, sdata*

Destination: CSMT

DFHSJ0505 *date time applid* **Attempt to open *jvmprofile filename* has failed. Runtime error message is *errmsg***

Explanation: The CICS-JVM interface attempted to open JVM profile *filename*. The open command failed and the runtime message *errmsg* appended to the end of this message documents why the command failed.

System action: CICS transaction is aborted with the INVREQ exception.

User response: Examine *errmsg* to determine why the open command failed.

Module: DFHSJJP

XMEOUT Parameters: *date, time,applid, filename, errmsg*

Destination: CSMT

DFHSJ0506 *date time applid* **The environment variable *env_var* found in JVM Profile *JVMprof* did not have a value specified.**

Explanation: The environment variable *env_var* specified in JVM profile *JVMProf* is incorrect because an invalid value or no value was specified for it.

System action: The environment variable is ignored.

User response: Correct the environment variable in the failing JVM profile.

Module: DFHSJCS

XMEOUT Parameters: *date, time,applid, env_var, JVMprof*

Destination: CSMT

DFHSJ0507 *date time applid JVMProfile* **The option *option* is not recognized, and has been ignored.**

Explanation: The specified option *option* is not recognized and has been ignored in JVM profile *JVMProfile*.

System action: None.

User response: Correct or remove the specified option.

Module: DFHSJJP

XMEOUT Parameters: *date, time,applid, JVMProfile, option*

Destination: CSMT

DFHSJ0508 *date time applid JVMProfile* **The maximum number of JVM options has been exceeded. Option *option* has been ignored.**

Explanation: The option *option* has been ignored because the maximum number of options has been exceeded for JVM profile *JVMProfile*.

System action: None.

User response: The maximum number of JVM options CICS can pass to the JVM has been exceeded. Review the options specified in member *JVMProfile* and the associated JVM properties file. Remove any that are not required.

Module: DFHSJJP

XMEOUT Parameters: *date, time,applid, JVMProfile, option*

Destination: CSMT

DFHSJ0509 *date time applid JVMProfile* **Attempt to open JVM system properties file *filename* has failed. Runtime error message is *errmsg***

Explanation: The CICS-JVM interface attempted to open the jvm system properties file *filename* for JVM profile *JVMProfile* held on HFS. The open command failed and the runtime message *errmsg* appended to the end of this message documents why the command failed.

System action: CICS transaction is aborted with the INVREQ exception.

User response: Examine *errmsg* to determine why the open command failed.

Module: DFHSJJP

XMEOUT Parameters: *date, time, applid, JVMProfile, filename, errmsg*

Destination: CSMT

DFHSJ0510 *date time applid* **Attempt to fetch user-replaceable module DFHJVMAT has failed.**

Explanation: The CICS-JVM interface attempted to load the user-replaceable module DFHJVMAT and failed.

System action: The CICS transaction is abended with abend code ASJG.

User response: Verify that DFHJVMAT is included in SDFHAUTH.

Module: DFHSJIN

XMEOUT Parameters: *date, time, applid*

Destination: CSMT

DFHSJ0511 *date time applid JVMProfile* **Attempt to open filename in work directory dirname for output has failed. Runtime error message is errmsg**

Explanation: The CICS-JVM interface attempted to open for output the stdout or stderr file specified or defaulted in JVM profile *JVMProfile* for the Java program. The open failed and the runtime message *errmsg* appended to the end of this message documents why.

System action: The CICS-JVM interface is unable to open the specified file. Execution of the transaction continues.

User response: Examine *errmsg* to determine why the open failed. The most likely reason is that the CICS job only has read access to the directory specified in environment variable WORK_DIR in this program's JVM profile. If necessary, change WORK_DIR to a directory to which CICS has write access.

Module: DFHSJCS

XMEOUT Parameters: *date, time, applid, JVMProfile, filename, dirname, errmsg*

Destination: CSMT

DFHSJ0512 *date time applid JVMProfile* **Unexpected end of file while concatenating lines in system properties file.**

Explanation: CICS was attempting to process the system properties file specified by JVM profile *JVMProfile* for the Java program. It unexpectedly encountered a line concatenation character on the last line of the file.

System action: CICS ignores the erroneous line concatenation character and processing continues, setting the property it had so far constructed.

User response: Remove the erroneous line concatenation character from the final line of the system properties file.

Module: DFHSJCS

XMEOUT Parameters: *date, time, applid, JVMProfile*

Destination: CSMT

DFHSJ0513 *date time applid JVMProfile* **Unable to build shareable application class path: {Either CICS_HOME or JAVA_HOME too long | CICS_HOME or JAVA_HOME or TMPREFIX too long | CICS_HOME not specified in JVM profile | JAVA_HOME not specified in JVM profile | Cannot add TMSUFFIX as class path would be too long | Cannot add ibm.jvm.shareable.application.class.path}.**

Explanation: CICS was unable to build the shareable application class path for JVM profile *JVMProfile* because of the reason specified.

System action: None.

User response: This may occur if an environment variable CICS relies on to construct the shareable application class path was not specified. The missing environment variable will be specified in the message, and it should be added to the JVM profile.

Alternatively, the length of the TMPREFIX plus the constructed shareable application class path plus the TMSUFFIX plus the `ibm.jvm.shareable.application.class.path` produces a string that is too long for CICS to handle. Either the TMPREFIX, TMSUFFIX, or the `ibm.jvm.shareable.application.class.path` should be shortened, or HFS softlinks used to shorten the CICS_HOME and JAVA_HOME locations so that the constructed portion of the shareable application class path will be shorter.

Module: DFHSJJP

XMEOUT Parameters: *date, time, applid, JVMProfile, {1=Either CICS_HOME or JAVA_HOME too long, 2=CICS_HOME or JAVA_HOME or TMPREFIX too long, 3=CICS_HOME not specified in JVM profile, 4=JAVA_HOME not specified in JVM profile, 5=Cannot*

*add TMSUFFIX as class path would be too long,
6=Cannot add ibm.jvm.shareable.application.class.path}*

Destination: CSMT

DFHSJ0514 *date time applid JVMProfile* **Problem encountered on line `line_number` of the JVM profile: {Unexpected EOF while concatenating lines | Concatenation too long}.**

Explanation: CICS encountered problems processing JVM profile *JVMProfile*. The line number where the problem occurred within the file is given, together with a reason why CICS had problems.

System action: None.

User response: Rectify the problem described in the message.

Module: DFHSJJPJ

XMEOUT Parameters: *date, time, applid, JVMProfile, line_number, {1=Unexpected EOF while concatenating lines, 2=Concatenation too long}*

Destination: CSMT

DFHSJ0515 *date time applid JVMProfile* **Problem encountered on line `line_number` of the JVM system properties file {Unexpected EOF while concatenating lines | Concatenation too long | CICS ignoring this tm classpath setting | CICS ignoring this java.class.path setting}.**

Explanation: CICS encountered problems processing the JVM system properties file specified in JVM profile *JVMProfile*. The line number where the problem occurred within the file is given, together with a reason why CICS had problems. Some combination of options are only valid when a JVM is started in a particular mode. For example, a worker JVM is not allowed to specify a shareable application class path. If it attempts to do so this message is issued.

System action: None.

User response: Rectify the problem described in the message.

Module: DFHSJJPJ

XMEOUT Parameters: *date, time, applid, JVMProfile, line_number, {1=Unexpected EOF while concatenating lines, 2=Concatenation too long, 3=CICS ignoring this tm classpath setting, 4=CICS ignoring this java.class.path setting}*

Destination: CSMT

DFHSJ0516 *date time applid JVMProfile* **An attempt to create a Java Virtual Machine using the JNI has failed. See the JVM's STDERR log for further details.**

Explanation: A CICS request to create a Java Virtual Machine (JVM) using the Java Native Interface (JNI) has failed for JVM profile *JVMProfile*.

System action: SJ domain requests a system dump, which may or may not appear depending on the system dump table settings for code SJ0516. The CICS transaction is abended with abend code ASJ1.

User response: It is probable that the JVM will have written further messages to the STDERR destination specified in the JVM profile. Review the STDERR log for such information and also refer to the explanation for the ASJ1 abend code.

Module: DFHSJCS

XMEOUT Parameters: *date, time, applid, JVMProfile*

Destination: CSMT

DFHSJ0517 *date time applid* **Required environment variable `env_var` is missing from JVM Profile *JVMprof*.**

Explanation: CICS is attempting to execute a java program whose definition specified JVM profile *JVMProf*. Environment variable *env_var* is required for successful execution of this program but is missing from this JVM profile.

System action: The attempt to run the java program fails.

User response: Add the environment variable to the failing JVM profile.

Module: DFHSJCS

XMEOUT Parameters: *date, time, applid, env_var, JVMprof*

Destination: CSMT

DFHSJ0518 *date time applid* **An attempt to obtain the JNI extension interface pointer for a JVM, has failed. A CICS request to get a pointer to the Java Native Interface (JNI) Extension Interface for a Java Virtual Machine (JVM) has failed.**

System action: SJ domain requests a system dump, which may or may not appear depending on the system dump table settings for code SJ0518. The CICS transaction is abended with abend code ASJ1.

User response: See the actions described for the ASJ1 abend.

Module: DFHSJCS

XMEOUT Parameters: *date, time, applid*

Destination: CSMT

DFHSJ0519 *date time applid* **The setting for environment variable *env_var1* conflicts with that for *env_var2* in JVM Profile *JVMprof*. The value of environment variable *env_var3* is assumed.**

Explanation: CICS is attempting to execute a Java program whose definition specified JVM profile *JVMProf*. In this profile, environment variables *env_var1* and *env_var2* have been found with settings which contradict each other.

System action: The attempt to run the java program will go ahead using the value of environment variable *env_var3*.

User response: Remove or change one of these environment variables from the JVM Profile to correct the problem for future requests.

Module: DFHSJCS

XMEOUT Parameters: *date, time, applid, env_var1, env_var2, JVMprof, env_var3*

Destination: CSMT

DFHSJ0520 *date time applid* **The setting for environment variable *env_var1* in JVM Profile *JVMprof* is not valid for a master JVM.**

Explanation: CICS is attempting to start the Classcache using definitions specified JVM profile *JVMProf*. In this Profile, environment variable *env_var1* has been specified with a setting which is not allowed for the master JVM.

System action: The attempt to start the Classcache continues. An alternative environment setting will be used if present. If no alternative is found, then the default setting will be used. The default setting is Xresettable=YES which is equivalent to REUSE=RESET.

User response: Change this environment variable's setting or remove it from the JVM Profile to correct the problem for future requests.

Module: DFHSJCS

XMEOUT Parameters: *date, time, applid, env_var1, JVMprof*

Destination: CSMT

DFHSJ0521 *date time applid* **Option TMPREFIX found in JVM profile *jvmprof* should only be used under guidance from IBM.**

Explanation: The value specified for the JVM profile option TMPREFIX is used ahead of the CICS-supplied

jar files, so classes in TMPREFIX may be used in preference to the installed CICS classes. This option should only be used under guidance from IBM.

System action: CICS continues to process the rest of the JVM profile.

User response: If this option was not requested by IBM, use the -Dibm.jvm.shareable.application.class.path or CLASSPATH_SUFFIX option instead.

Module: DFHSJCS

XMEOUT Parameters: *date, time, applid, jvmprof*

Destination: CSMT

DFHSJ0522 *date time applid* **Deprecated option TMSUFFIX found in JVM profile *jvmprof*. Value will be added to *ibm.jvm.shareable.application.class.path* after the CICS-supplied jar files.**

Explanation: The JVM profile option TMSUFFIX has been deprecated. The Trusted Middleware class path is no longer used.

System action: The value specified for TMSUFFIX is added to the *ibm.jvm.shareable.application.class.path* after the CICS-supplied jar files.

User response: Replace the TMSUFFIX option in the JVM profile with -Dibm.jvm.shareable.application.class.path or the CLASSPATH_SUFFIX option.

Module: DFHSJCS

XMEOUT Parameters: *date, time, applid, jvmprof*

Destination: CDEP

DFHSJ0523 *date time applid* **Deprecated option CLASSPATH found in JVM profile *jvmprof*. Use CLASSPATH_SUFFIX instead.**

Explanation: The JVM profile option CLASSPATH has been replaced by the options CLASSPATH_PREFIX and CLASSPATH_SUFFIX.

System action: The value specified for CLASSPATH is added to the class path after any value specified for CLASSPATH_PREFIX, and before any value specified for CLASSPATH_SUFFIX.

User response: Replace the CLASSPATH option in the JVM profile with CLASSPATH_SUFFIX.

Module: DFHSJJP

XMEOUT Parameters: *date, time, applid, jvmprof*

Destination: CDEP

DFHSJ0524 *date time applid* **Obsolete JVM option option found in JVM profile *profile*. Specify REUSE=YES or REUSE=NO. The JVM cannot be started.**

Explanation: The resettable mode of the JVM is obsolete and is no longer supported. CICS cannot start a resettable JVM.

System action: The CICS transaction is abended with abend code ASJR.

User response: If Xresettable=YES was specified in the JVM profile, or -Xresettable=YES was specified in the JVM properties file, remove it. If REUSE=RESET was specified in the JVM profile, change it to REUSE=YES to start a continuous JVM, or REUSE=NO to start a single-use JVM.

Module: DFHSJJP

XMEOUT Parameters: *date, time, applid, option, profile*

Destination: CSMT

DFHSJ0525 *date time applid* **Obsolete JVM option Xresettable found in JVM profile *profile* has been ignored.**

Explanation: The Xresettable option was found during JVM profile processing. The option is obsolete and is ignored. If no other valid REUSE option is found, CICS will start a reusable JVM.

System action: JVM profile processing continues.

User response: Remove the Xresettable option from the JVM profile. If a single-use JVM is required, specify the REUSE=NO option.

Module: DFHSJJP

XMEOUT Parameters: *date, time, applid, profile*

Destination: CSMT

DFHSJ0526 *date time applid* **Obsolete option option found in JVM properties file *jvmprops* has been ignored.**

Explanation: An obsolete option relating to the resettable JVM was found in the JVM properties file.

System action: JVM properties file processing continues.

User response: Remove the obsolete option from the JVM properties file.

Module: DFHSJJP

XMEOUT Parameters: *date, time, applid, option, jvmprops*

Destination: CSMT

DFHSJ0527 *date time applid* **Obsolete option option found in JVM profile *jvmprof* has been ignored.**

Explanation: An obsolete option related to the resettable JVM was found during JVM profile processing.

System action: JVM profile processing continues.

User response: Remove the obsolete option from the JVM profile.

Module: DFHSJJP

XMEOUT Parameters: *date, time, applid, option, jvmprof*

Destination: CSMT

DFHSJ0528 *date time applid* **Deprecated option MAX_RESETS_TO_GC found in JVM Profile *JVMprof*. Use GC_HEAP_THRESHOLD instead.**

Explanation: The deprecated MAX_RESETS_TO_GC option was found during JVM profile processing.

System action: JVM profile processing continues. The default value for GC_HEAP_THRESHOLD is assumed if it is not specified.

User response: Remove the option from the JVM profile, or replace it with the GC_HEAP_THRESHOLD option.

Module: DFHSJJP

XMEOUT Parameters: *date, time, applid, JVMprof*

Destination: CDEP

DFHSJ0529 *date time applid* **Value *value* for GC_HEAP_THRESHOLD found in JVM Profile *JVMprof* must be between 50 and 100.**

Explanation: The value specified for the GC_HEAP_THRESHOLD option is not in the valid range of 50 to 100.

System action: JVM profile processing continues. The default value of 85 for GC_HEAP_THRESHOLD is used.

User response: Correct the value specified for the GC_HEAP_THRESHOLD option.

Module: DFHSJJP

XMEOUT Parameters: *date, time, applid, value, JVMprof*

Destination: CSMT

DFHSJ0530 *date time applid* **Value value for IDLE_TIMEOUT found in JVM profile profile must be between 0 and 10080.**

Explanation: The value specified in the JVM profile option IDLE_TIMEOUT is invalid. The value must be specified as a number of minutes from 0 to 10080 (7 days).

System action: The default IDLE_TIMEOUT value of 30 is used instead of the specified value.

User response: Correct the value specified for the IDLE_TIMEOUT option.

Module: DFHSJJPJ

XMEOUT Parameters: *date, time, applid, value, profile*

Destination: CSMT

DFHSJ0531 *date time applid* **JAVA_HOME directory directory specified in JVM profile jvmprof failed to open. The JVM cannot be started. Runtime error message is errmsg.**

Explanation: The directory specified in the JVM profile option JAVA_HOME could not be opened. The opendir command failed and the runtime error message *errmsg*, appended to the end of this message, documents why the command failed.

System action: The task is abended with abend code ASJJ.

User response: Correct the directory name specified for the JAVA_HOME option, or correct the access permissions to the directory.

Module: DFHSJJPJ

XMEOUT Parameters: *date, time, applid, directory, jvmprof, errmsg*

Destination: CSMT

DFHSJ0532 *date time applid* **Insufficient permission to access the JAVA_HOME directory directory specified in the JVM profile jvmprof. The JVM cannot be started.**

Explanation: The directory specified in the JVM profile option JAVA_HOME could not be opened because CICS does not have permission to search some component of the path, or does not have read permission on the directory itself.

System action: The task is abended with abend code ASJJ.

User response: Ensure that CICS has at least read permission for all directories in the path specified for JAVA_HOME.

Module: DFHSJJPJ

XMEOUT Parameters: *date, time, applid, directory, jvmprof*

Destination: CSMT

DFHSJ0533 *date time applid* **JAVA_HOME directory directory specified in JVM profile jvmprof does not contain a valid Java installation. The JVM cannot be started.**

Explanation: The JAVA_HOME directory does not contain a correctly installed Java runtime.

System action: The task is abended with abend code ASJJ.

User response: Ensure that the JAVA_HOME option specifies the correct path to the Java runtime. If it does, then check to see if the path contains a valid Java installation by looking for a JDK_INSTALL_OK file for the correct level of Java.

Module: DFHSJJPJ

XMEOUT Parameters: *date, time, applid, directory, jvmprof*

Destination: CSMT

DFHSJ0534 *date time applid* **Deprecated option CICS_DIRECTORY found in JVM profile jvmprof. Use CICS_HOME instead. Value will be treated as CICS_HOME.**

Explanation: The JVM profile option CICS_DIRECTORY has been replaced by the option CICS_HOME.

System action: The value specified for CICS_DIRECTORY will be treated as CICS_HOME, unless CICS_HOME is also specified, in which case CICS_DIRECTORY will be ignored.

User response: Replace the CICS_DIRECTORY option in the JVM profile with CICS_HOME.

Module: DFHSJJPJ

XMEOUT Parameters: *date, time, applid, jvmprof*

Destination: CDEP

DFHSJ0535 *date time applid* **CICS_HOME directory directory specified in JVM profile jvmprof failed to open. The JVM cannot be started. Runtime error message is errmsg.**

Explanation: The directory specified in the JVM profile option CICS_HOME could not be opened. The opendir command failed and the runtime error message *errmsg*, appended to the end of this message, documents why the command failed.

System action: The task is abended with abend code ASJC.

User response: Correct the directory name specified for the CICS_HOME option, or correct the access permissions to the directory.

Module: DFHSJJP

XMEOUT Parameters: *date, time, applid, directory, jvmprof, errmsg*

Destination: CSMT

DFHSJ0536 *date time applid* **Insufficient permission to access the CICS_HOME directory directory specified in JVM profile jvmprof. The JVM cannot be started.**

Explanation: The directory specified in the JVM profile option CICS_HOME could not be opened because CICS does not have permission to search some component of the path, or does not have read permission on the directory itself.

System action: The task is abended with abend code ASJC.

User response: Ensure that CICS has at least read permission for all directories in the path specified for CICS_HOME.

Module: DFHSJJP

XMEOUT Parameters: *date, time, applid, directory, jvmprof*

Destination: CSMT

DFHSJ0537 *date time applid* **Incorrect CICS version in CICS_HOME directory directory specified in JVM profile jvmprof. The JVM cannot be started.**

Explanation: The CICS_HOME directory does not contain the correct version of CICS Java support.

System action: The task is abended with abend code ASJC.

User response: Ensure that the CICS_HOME option specifies the correct path to the Java support for this release of CICS. If it does, then check to see if the path contains a valid CICS installation by looking for a CICS_INSTALL_OK file for the current release.

Module: DFHSJJP

XMEOUT Parameters: *date, time, applid, directory, jvmprof*

Destination: CSMT

DFHSJ0538 *date time applid* **Deprecated option LIBPATH found in JVM profile jvmprof. Use LIBPATH_SUFFIX instead.**

Explanation: The JVM profile option LIBPATH has been replaced by the options LIBPATH_PREFIX and LIBPATH_SUFFIX. LIBPATH_PREFIX should only be used if requested by IBM support.

System action: The value specified for LIBPATH will be added to the library path after any value specified for LIBPATH_PREFIX, and before any value specified for LIBPATH_SUFFIX.

User response: Replace the LIBPATH option in the JVM profile with LIBPATH_SUFFIX.

Module: DFHSJJP

XMEOUT Parameters: *date, time, applid, jvmprof*

Destination: CDEP

DFHSJ0539 *date time applid* **Deprecated option option found in JVM profile profile. Use option2 instead.**

Explanation: The specified JVM profile option in the format shown has been deprecated.

System action: The option is passed to the JVM in the format displayed in the message.

User response: Replace the deprecated option in the JVM profile with the preferred option. Information about JVM options can be found in "IBM Persistent Reusable Java Virtual Machine User's Guide" SC34-6201.

Module: DFHSJJP

XMEOUT Parameters: *date, time, applid, option, profile, option2*

Destination: CDEP

DFHSJ0540 *date time applid* **CICS is running Java version current_ver .**

Explanation: This message shows the version of Java which CICS is running. It is issued when the first Java Virtual Machine is started after CICS initialization.

System action: None.

User response: None.

Module: DFHSJJP

XMEOUT Parameters: *date, time, applid, current_ver*

DFHSJ0541 *date time applid* **Java version current_ver is already active. Unable to switch to version ver2 as specified in profile profile.**

Explanation: A request has been made to start a Java program using the specified JVM profile, but the version

| of Java in the profile is not the same as the version
| which is already in use.

| **System action:** The transaction is abended with
| abend code ASJV.

| **User response:** Either change the JAVA_HOME
| option in the profile to match the current Java version in
| use, or COLD start CICS to use the version in the
| profile.

| **Module:** DFHSJJPJ

| **XMEOUT Parameters:** *date, time, applid, current_ver,*
| *ver2, profile*

DFHSJ0701 *date time applid* **Transaction *transid* can only be initiated by CICS. *transid* will terminate.**

Explanation: Transaction *transid* is a CICS system transaction used to run the master JVM of a JVMSet, and should only be ATTACHED by CICS. It must not be started by the user, either by keying in through the terminal or by a START from a user program.

System action: *transid* terminates.

User response: None

Module: DFHSJJM

XMEOUT Parameters: *date, time, applid, transid, transid*

Destination: CSNE

DFHSJ0702 *date time applid* **Transaction *transid* unsuccessfully attempted to create a JM TCB. *transid* will terminate.**

Explanation: Transaction *transid* unsuccessfully attempted to create a JM TCB on which to run a master JVM.

System action: *transid* terminates.

User response: None

Module: DFHSJJM

XMEOUT Parameters: *date, time, applid, transid, transid*

Destination: CSNE

DFHSJ0703 *date time applid* **Transaction *transid* unsuccessfully attempted to change TCB mode. *transid* will terminate.**

Explanation: Transaction *transid* unsuccessfully attempted to change mode to a JM TCB on which to run a master JVM.

System action: *transid* terminates.

User response: None

Module: DFHSJJM

XMEOUT Parameters: *date, time, applid, transid, transid*

Destination: CSNE

DFHSJ0704 *date time applid* **Transaction *transid* unsuccessfully attempted to restore its TCB mode. *transid* will terminate.**

Explanation: Transaction *transid* unsuccessfully attempted to change mode to its original TCB mode from JM.

System action: *transid* terminates.

User response: None

Module: DFHSJJM

XMEOUT Parameters: *date, time, applid, transid, transid*

Destination: CSNE

DFHSJ0705 *date time applid* **Transaction *transid* unsuccessfully attempted to delete a JM TCB. *transid* will terminate.**

Explanation: Transaction *transid* unsuccessfully attempted to delete a JM TCB on which to a master JVM has been running.

System action: *transid* terminates.

User response: None

Module: DFHSJJM

XMEOUT Parameters: *date, time, applid, transid, transid*

Destination: CSNE

DFHSJ0706 *date time applid* **During processing of transaction *transid*, a call to CEEPIPI with function code INIT_SUB_DP has failed. (Return code - X'rc').**

Explanation: The CICS-JVM interface attempted to initialize a Language Environment enclave using the pre-initialized interface. This failed with return code *rc*.

This message may be generated when a JVM in CICS abends.

System action: CICS takes a system dump and abends the transaction with abend code AEXZ.

User response: Ensure that the OMVS segment has been set up for the userid that the CICS region runs under.

Ensure that the OMVS RACF (or equivalent) segment has been defined for the userid that the CICS region runs under.

Review the STDERR log for any messages that may have been issued prior to the failure. Review the STDERR log for the master JVM and also the master JVM's class cache message log.

Look at SYSOUT or CESE destination for Language Environment messages. Look in *Language Environment*

Programmers Guide (SC28-1939) for the CEEPIPI function and find the explanation of the return code (Register 15) for that function.

If the JVM abended there may be a JAVADUMP file in the working directory of the HFS file system.

If the problem persists you may need to contact your IBM support representative.

Module: DFHSJJM

XMEOUT Parameters: *date, time,applid, tranid, X'rc'*

Destination: CSMT

DFHSJ0707 *date time applid* **During processing of transaction *tranid*, a call to CEEPIPI with function code CALL_SUB has failed. (Return code - *X'rc'*, sub-routine return code - *X'subrc'*). See the JVM's STDERR log for further details.**

Explanation: The CICS-JVM interface attempted to use a Language Environment CALL_SUB function to call DFHSJL to start a master JVM. Either this operation failed with return code *rc* and sub-routine return code *subrc*, or the JVM abended. If the JVM abends the Language Environment CALL_SUB return code is likely to be 0.

System action: CICS takes a system dump and abends the transaction with abend code AEXZ.

User response: Review the STDERR log for any messages that may have been issued prior to the failure. Review the STDERR log for the master JVM and also the master JVM's class cache message log.

If the return code is non-zero look at SYSOUT or CESE destination for Language Environment messages. Look in *Language Environment Programmers Guide (SC28-1939)* for the CEEPIPI function and find the explanation of the return code (Register 15) for that function.

If the JVM abended there may be a JAVADUMP file in the working directory of the HFS file system.

If the sub-routine return code is non-zero it may have one of the following values

'00000005'x

A dllload call for the JVM DLL has failed. Determine the reason the DLL could not be loaded from accompanying messages.

'00000006'x

An asynchronous abend has occurred in the master JVM. This may be accompanied by a system dump indicating the reason the master JVM failed.

'000003E6'x

An unexpected response was received from a

CICS domain call issued by DFHSJL. Use the CICS trace to determine the nature of the unexpected response.

If the problem persists you may need to contact your IBM support representative.

Module: DFHSJJM

XMEOUT Parameters: *date, time,applid, tranid, X'rc', X'subrc'*

Destination: CSMT

DFHSJ0708 *date time applid* **During processing of transaction *tranid*, a call to CEEPIPI with function code TERM has failed. (Return code - *X'rc'*). See the JVM's STDERR log for further details.**

Explanation: The CICS-JVM interface attempted to terminate a Language Environment enclave using the pre-initialized interface. This failed with return code *rc*.

This message may be generated when a JVM in CICS abends.

System action: CICS takes a system dump and abends the transaction with abend code AEXZ.

User response: Review the STDERR log for any messages that may have been issued prior to the failure. Review the STDERR log for the master JVM and also the master JVM's class cache message log.

Look at SYSOUT or CESE destination for Language Environment messages. Look in *Language Environment Programmers Guide (SC28-1939)* for the CEEPIPI function and find the explanation of the return code (Register 15) for that function.

If the JVM abended there may be a JAVADUMP file in the working directory of the HFS file system.

If the problem persists you may need to contact your IBM support representative.

Module: DFHSJJM

XMEOUT Parameters: *date, time,applid, tranid, X'rc'*

Destination: CSMT

DFHSJ0709 *date time applid* **The runtime options specified in DFHJVMRO are too long. The Language Environment enclave cannot be initialized. The master JVM was not started.**

Explanation: The Language Environment runtime options specified in DFHJVMRO are too long. The options specified in DFHJVMRO are concatenated with runtime options required by CICS for use when initializing the Language Environment enclave. The total length of the runtime options that may be specified cannot exceed 255 characters.

System action: The master JVM is not started. Exception trace point SJ 070B is issued.

User response: Data 1 in the exception trace shows the Language Environment runtime options from DFHJVMRO. Data 2 shows the Language Environment runtime options provided by CICS.

Examine the options from DFHJVMRO. Remove any unnecessary options and if possible abbreviate any Language Environment runtime options in your source for DFHJVMRO. Assemble and re-link DFHJVMRO after making your changes.

If CICS has not been restarted since the failure you will need to use CEMT SET PROGRAM(DFHJVMRO) NEWCOPY before attempting to restart the master JVM.

Module: DFHSJJM

XMEOUT Parameters: *date, time, applid*

Destination: CSMT

DFHSJ0801 *date time applid* **An attempt to create a master Java Virtual Machine using the JNI has failed. See the JVM's STDERR log for further details.**

Explanation: A CICS request to create a Java Virtual Machine (JVM) using the Java Native Interface (JNI) has failed.

System action: SJ domain requests a system dump, which may or may not appear depending on the system dump table settings for code SJ0801. The CICS transaction is abended with abend code ASJ1.

User response: It is probable that the JVM will have written further messages to the STDERR destination specified in the master JVM profile. Review the STDERR log for such information and also refer to the explanation for the ASJ1 abend code.

Module: DFHSJL

XMEOUT Parameters: *date, time, applid*

Destination: CSMT

DFHSJ0802 *date time applid* **Attempt to load DLL *dllname* has failed for the master JVM. Runtime error message is *errmsg***

Explanation: The CICS-JVM interface attempted to load DLL *dllname*. The dllload command failed and the runtime message *errmsg* appended to the end of this message documents why the command failed.

System action: The CICS transaction is abended with abend code ASJD.

User response: Examine *errmsg* to determine why the DLL load failed. There is probably an error in the master JVM profile. There may be further information available in the JVM's STDERR log.

Module: DFHSJJM

XMEOUT Parameters: *date, time, applid, dllname, errmsg*

Destination: CSMT

DFHSJ0803 *date time applid* **Attempt to change the HFS working directory to *pathname* has failed for the master JVM. Runtime error message is *errmsg***

Explanation: CICS was in the process of invoking a Java program. The CICS-JVM interface attempted to change the working directory to *pathname* as specified in the WORK_DIR environment variable contained in the master JVM profile. The change directory command failed and the runtime message *errmsg* appended to the end of this message documents why the command failed.

System action: The CICS-JVM interface is unable to change to the specified directory to open the stdin, stdout and stderr streams. The CICS transaction is abended with abend code ASJF.

User response: Examine *errmsg* to determine why the change directory command failed. If necessary correct the setting of environment variable WORK_DIR in the master JVM profile.

Module: DFHSJL

XMEOUT Parameters: *date, time, applid, pathname, errmsg*

Destination: CSMT

DFHSJ0900 *date time applid* **Illegal Java version. CICS requires at least Java version *min_ver* but has found Java version *current_ver*.**

Explanation: CICS has detected that the JVM does not meet the minimum version requirement for this version of CICS. The minimum version of Java required is *min_ver*. The version found at runtime is *current_ver*.

System action: The task abends with abend code ASJJ.

User response: Reconfigure the CICS JVM profile to point to a newer version of Java.

Module: DFHSJCS com.ibm.cics.server.Wrapper

XMEOUT Parameters: *date, time, applid, min_ver, current_ver*

Destination: CSMT

DFHSJ0901I *date time applid* **Current version of Java is: *current_ver*.**

Explanation: The current version of Java is displayed for informational purposes only. This message can be suppressed by setting the following property in the CICS JVM properties file `com.ibm.cics.showJavaVersion=false`.

System action: Processing continues.

User response: No action required.

Module: `com.ibm.cics.server Wrapper`

XMEOUT Parameters: *date, time, applid, current_ver*

Destination: CSMT

DFHSJ0902 *date time applid userid termid tranid program name* **Uncaught exception from application.**

Explanation: The `jcics Wrapper` class has caught an `InvocationTargetException`. This occurs when the application throws, or doesn't catch, an exception. Details of the application exception are given in accompanying message DFHCZ0358.

System action: The system writes this message to the TD queue CCZM.

User response: Correct the problem and rerun the task.

Module: `DFJCICS (com.ibm.cics.server Wrapper.java)`

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name*

Destination: CCZM

DFHSJ0903 *date time applid userid termid tranid program name* **Exception *exception* occurred invoking main method in class *className*.**

Explanation: The `jcics Wrapper` class caught exception *exception* trying to invoke the main method in class *className*.

System action: An exception trace entry is made and the task is abnormally terminated.

User response: Correct the problem and rerun the task.

Module: `DFJCICS (com.ibm.cics.server Wrapper.java)`

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, exception, className*

Destination: CCZM

DFHSJ0904 *date time applid userid termid tranid program name* **Exception *exception* occurred creating object reference for class *className*.**

Explanation: An unexpected `RuntimeException` or `Error` was thrown that has been caught in the CICS Java Wrapper class.

System action: An exception trace entry is made and the task is abnormally terminated.

User response: Correct the problem and reissue the task.

Module: `com.ibm.cics.server Wrapper`

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, exception, className*

Destination: CCZM

DFHSJ0905 *date time applid userid termid tranid program name* **Class name *className* is invalid.**

Explanation: The class name *className* is invalid. This is often caused by an erroneous leading '.' or '/' character.

System action: An exception trace entry is made and the task is abnormally terminated.

User response: Correct the problem and rerun the task.

Module: `com.ibm.cics.server Wrapper`

XMEOUT Parameters: *date, time, applid, userid, termid, tranid, program name, className*

Destination: CCZM

DFHSJ0906 *date time applid* **The CICS Java Wrapper class failed to find the requested plugin *plugin*.**

Explanation: The CICS JVM attempted to instantiate the requested plugin class *plugin* but the JVM could not find this class on the trusted middleware classpath.

System action: The plugin is not installed.

User response: Examine the value set for the `TMSUFFIX` in the JVM profile being used by the current program. The path to the requested plugin must be present as part of the `TMSUFFIX`.

Module: `com.ibm.cics.server Wrapper`

XMEOUT Parameters: *date, time, applid, plugin*

Destination: CSMT

DFHSJ0907 *date time applid tranid* program name
trannum userid termid **The CICS Java
Wrapper plugin has thrown
exception** *exception*.

Explanation: The CICS JVM Java Wrapper class caught an exception thrown from plugin *plugin*.

System action: The JVM attempts to continue processing the user application.

User response: Either contact the *plugin* vendor for

further assistance or catch the exception in the body of your plugin.

Module: com.ibm.cics.server.Wrapper

XMEOUT Parameters: *date, time, applid, tranid, program name, trannum, userid, termid, plugin, exception*

Destination: CSMT

DFHSKnnnn messages

DFHSK1101 *applid* **General purpose subtask terminated abnormally - system completion code = X'xxxx'**

Explanation: A subtask attached by DFHSKP has completed abnormally.

System action: CICS continues in degraded mode.

User response: Find out why the subtask failed. xxxx is the operating system completion code.

Module: DFHSKP

XMEOUT Parameters: *applid, X'xxxx'*

Destination: Console

Destination: Console

DFHSK1104I *applid* **General purpose subtask terminated because error threshold has been reached**

Explanation: A general purpose subtask has failed several times while executing its own code. CICS has terminated the task.

System action: CICS continues in degraded mode.

User response: Find out why the subtask failed.

Module: DFHSKP

XMEOUT Parameter: *applid*

Destination: Console

DFHSK1102 *applid* **Unable to attach general purpose subtask - system return code = X'xxxx'**

Explanation: DFHSKP has attempted to attach an operating system subtask. The ATTACH has failed.

System action: CICS continues in degraded mode.

User response: Find out why the attach failed. xxxx is the operating system completion code.

Module: DFHSKP

XMEOUT Parameters: *applid, X'xxxx'*

Destination: Console

DFHSK1106I *applid* **Unable to authorize a general purpose subtask - RC=nn**

Explanation: The CICS subtask program issued the CICS SVC to CICS authorize the TCB of an MVS subtask. The SVC returned the error response code *nn*. The possible values of *nn* and their meanings are

nn	Meaning
01	SVC service is not authorized.
02	Load of DFHASV failed.
03	Internal error in CICS SVC.
04	Internal error in CICS SVC. RB check failed.
10	DFHAUTH TYPE=CHECK macro failed.
14	Invalid TCB address passed to DFHASV.
18	DFHAUTH TYPE=subtask AFCB storage failed.
1C	GETMAIN for subtask AFCB storage failed.
20	Main task AFCB version is pre-CICS 1.7.
24	Main task AFCB version is too large for the SVC version in use.

Other The SVC has not been defined and installed as described in the *CICS Transaction Server for z/OS Installation Guide*.

DFHSK1103 *applid* **ESTAE macro failed in general purpose subtask - system return code = X'xxxx'**

Explanation: A general purpose subtask issued an MVS ESTAE macro. xxxx is the nonzero response from MVS.

System action: CICS continues in degraded mode.

User response: Find out why the macro failed (this is a failure in MVS). Response code is output with the message.

Module: DFHSKP

XMEOUT Parameters: *applid, X'xxxx'*

System action: CICS continues. The CICS SVC may fail again if reinvoked by a general purpose subtask.

User response: Use the response code in the message to determine the cause of the failure.

Module: DFHSKP

XMEOUT Parameters: *applid, nn*

Destination: Console

DFHSMnnnn messages

DFHSM0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem. If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSMAD, DFHSMAR, DFHSMCK, DFHSMDDM, DFHSMGF, DFHSMDCI, DFHSMDC2,

DFHSMDF, DFHSMMG, DFHSMPPQ, DFHSMPP, DFHSMRSR, DFHSMST, DFHSMSSU, DFHSMSSY

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

Destination: Console

DFHSM0002 *applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

See the *CICS Trace Entries* for a description of the exception trace point ID, *X'code'* and the data it contains.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSMAD, DFHSMAR, DFHSMCK, DFHSMGF, DFHSMDC2, DFHSMDF, DFHSMMG, DFHSMPPQ, DFHSMPP, DFHSMSCP, DFHSMRSR, DFHSMST, DFHSMSSU, DFHSMSSY

XMEOUT Parameters: *applid, X'code', modname*

Destination: Console

DFHSM0004 *applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset *X'offset'*. This is the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* in the message is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSMCI, DFHSMST

XMEOUT Parameters: *applid, X'offset', modname*

Destination: Console

DFHSM0006 *applid* **Insufficient storage to satisfy Getmain (code *X'code'*) in module *modname*. MVS code *mvscode*.**

Explanation: An MVS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request.

The code *X'code'* is the exception trace point ID which uniquely identifies the place where the error was detected.

The code *mvscode* is the MVS GETMAIN return code.

System action: An exception entry is made in the trace table (code *X'code'*). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the user response suggested for these messages.

If CICS is still running, the problem may be a temporary one which rights itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

See the *CICS Trace Entries* for a description of the exception trace point ID, *X'code'* and the data it contains.

You can get diagnostic information about the MVS return code by consulting the relevant MVS codes manual.

Try decreasing the limits of the CICS dynamic storage areas (DSAs), or increasing the MVS region size. You can vary the CICS DSAs dynamically using the DSALIM and EDSALIM parameters on the CEMT master terminal command. To increase the MVS region size you must bring CICS down and change the MVS JCL REGION parameter.

Module: DFHSMMDM

XMEOUT Parameters: *applid, X'code', modname, mvscode*

Destination: Console

DFHSM0102 *applid* **A storage violation (code X'code') has been detected by module modname.**

Explanation: A storage violation has been detected by module *modname*. The code X'code' is the exception trace point ID which uniquely identifies the type of storage violation.

System action: An exception entry (X'code' in the message) is made in the trace table. Use the exception trace point ID, X'code', to investigate the cause of the storage violation. A description of the exception trace point ID, and the data it contains, is in the *CICS Trace Entries*. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

If you have enabled storage recovery (by specifying the system initialization parameter STGRVCY=YES), CICS attempts to repair the storage violation. Otherwise, the storage is left unchanged.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Use the exception trace point ID, X'code', to investigate the cause of the storage violation. See the *CICS Trace Entries* for a description of the exception trace point ID and the data it contains.

Module: DFHSMAR, DFHSMCK, DFHSMGF, DFHSMC2, DFHSMF

XMEOUT Parameters: *applid*, X'code', *modname*

Destination: Console

DFHSM0103 *applid* **A storage violation (code X'code') has been detected by the storage violation trap. Trap is now inactive.**

Explanation: A storage violation has been detected by the storage violation trap, which may be enabled via the CHKSTSK or the CHKSTRM system initialization parameters or via the CSFE transaction. The code X'code' is the exception trace point ID which uniquely identifies the type of storage violation detected.

System action: CICS disables the storage violation trap. An exception entry (X'code' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

If you have enabled storage recovery (by specifying the system initialization parameter STGRVCY=YES), CICS attempts to repair the storage violation. Otherwise, the storage is left unchanged.

Message DFHME0116 should be produced containing

the symptom string for this problem. Even if CICS is able to repair the storage, the storage violation trap still remains inactive.

User response: Use the exception trace point ID, X'code', to investigate the cause of the storage violation. See the *CICS Trace Entries* for a description of the exception trace point ID and the data it contains.

Module: DFHSMCK

XMEOUT Parameters: *applid*, X'code'

Destination: Console

DFHSM0113I *applid* **Storage protection is not active.**

Explanation: This is an informative message stating that storage protection has not been requested (STGPROT=NO) and is not in effect for this execution of CICS.

System action: CICS continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0. Storage protection can be enabled by specifying the system initialization parameter STGPROT=YES.

Module: DFHSMMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0114 *applid* **Storage protection was requested but the support is not available. Storage protection is not active.**

Explanation: This is an informative message stating that although storage protection was requested, it is not in effect for this execution of CICS because the necessary hardware and/or operating system support is not available.

System action: CICS continues.

User response: None.

Module: DFHSMMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0115I *applid* **Storage protection is active.**

Explanation: This is an informative message stating that storage protection is requested (STGPROT=YES) and is in effect for this execution of CICS.

System action: CICS continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHSMMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0120I *applid* **Reentrant programs will not be loaded into read-only storage.**

Explanation: This is an informatory message stating that read-only programs will not be loaded into read-only storage for this execution of CICS. This is because RENTPGM=NOPROTECT was specified as a system initialization parameter.

System action: CICS continues.

User response: None.

You should not specify RENTPGM=NOPROTECT unless you wish to deliberately overwrite programs (to set breakpoints while testing, for example).

Module: DFHSMMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0122I *applid* **Limit of DSA storage below 16MB is *dsalimitK*.**

Explanation: This message gives the limit *dsalimit* of the dynamic storage area (DSA) below 16MB.

System action: CICS continues.

User response: None. You can suppress this message with the message level system initialization parameter, MSGLVL=0.

Module: DFHSMMDM

XMEOUT Parameters: *applid, dsalimit*

Destination: Console

DFHSM0123I *applid* **Limit of DSA storage above 16MB is *edsalimitM*.**

Explanation: This message gives the limit *edsalimit* of the dynamic storage area (DSA) above 16MB.

System action: CICS continues.

User response: None. You can suppress this message with the message level system initialization parameter, MSGLVL=0.

Module: DFHSMMDM

XMEOUT Parameters: *applid, edsalimit*

Destination: Console

DFHSM0124 *applid* **Transaction isolation was requested but the support is not available or storage protection is not active. Transaction isolation is not active.**

Explanation: The combination of system initialization parameters STGPROT(NO) and TRANISO(YES) is invalid. During a warm or emergency start of CICS, the catalogued system initialization parameters are incompatible with a SIT override. Although transaction isolation was requested, it is not in effect for this execution of CICS because the necessary hardware and/or operating system support is not available, and/or storage protection is not active.

System action: CICS continues.

User response: None.

Module: DFHSMMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0125I *applid* **Transaction isolation is active.**

Explanation: Transaction isolation is requested (TRANISO=YES) and is in effect for this execution of CICS.

System action: CICS continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHSMMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0126I *applid* **Transaction isolation is not active.**

Explanation: Transaction isolation has not been requested (TRANISO=NO) and is not in effect for this execution of CICS.

System action: CICS continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0. Transaction isolation can be enabled by specifying TRANISO=YES as a system initialization parameter.

Module: DFHSMMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0127 *applid* **Insufficient storage to allocate requested size for DSA limit storage below 16MB (dsalimitK).**

Explanation: CICS has issued an MVS GETMAIN for the requested limit *dsalimit* of DSA storage below 16MB, but the GETMAIN request failed.

System action: If the requested size is greater than the default, CICS reissues the MVS GETMAIN request using the default size for the DSALIM parameter.

If the requested size is not greater than the default, the storage manager makes an exception entry in the trace table. An error return code is sent to the domain manager DFHDMDM (the caller of the storage manager). The domain manager might then terminate CICS, in which case a message to this effect is issued.

User response: Ensure that the DSALIM system initialization parameter is specified correctly.

Ensure that the REGION parameter for the CICS job is large enough.

See the *OS/390 MVS JCL Reference* for further information about specifying storage on the REGION parameter.

Module: DFHSMMDM

XMEOUT Parameters: *applid, dsalimit*

Destination: Console

DFHSM0128 *applid* **Insufficient storage to allocate requested size for DSA limit storage above 16MB (dsalimitM).**

Explanation: CICS has issued an MVS GETMAIN for the requested limit *dsalimit* of DSA storage above 16MB, but the GETMAIN request failed.

System action: If the requested size is greater than the default, CICS reissues the MVS GETMAIN request using the default size for the EDSALIM parameter.

If the requested size is not greater than the default, the storage manager makes an exception entry in the trace table. An error return code is sent to the domain manager DFHDMDM (the caller of the storage manager). The domain manager might then terminate CICS, in which case a message to this effect is issued.

User response: Ensure that the EDSALIM parameter is specified correctly.

Ensure that the REGION parameter for the CICS job is large enough.

See the *OS/390 MVS JCL Reference* for more information about specifying storage on the REGION parameter.

Module: DFHSMMDM

XMEOUT Parameters: *applid, dsalimit*

Destination: Console

DFHSM0129 *applid* **Insufficient storage to allocate default size for DSA limit storage below 16MB (dsalimitK).**

Explanation: Following message DFHSM0127, CICS has reduced the MVS GETMAIN request to the default size for the DSALIM system initialization parameter but the GETMAIN request has still failed.

System action: The storage manager makes an exception entry in the trace table.

An error return code is sent to the domain manager, DFHDMDM, (the caller of storage manager). The domain manager might then terminate CICS, in which case a message to this effect is issued.

User response: See DFHSM0127 for further information.

Ensure that the REGION parameter for the CICS job is large enough.

See the *OS/390 MVS JCL Reference* for more information about specifying storage on the REGION parameter.

Module: DFHSMMDM

XMEOUT Parameters: *applid, dsalimit*

Destination: Console

DFHSM0130 *applid* **Insufficient storage to allocate default size for DSA limit storage above 16MB (dsalimitM).**

Explanation: Following message DFHSM0128, CICS has reduced the MVS GETMAIN request to the default size for the EDSALIM system initialization parameter but the GETMAIN request has still failed.

System action: The storage manager makes an exception entry in the trace table.

An error return code is sent to the domain manager, DFHDMDM, (the caller of storage manager). The domain manager might then terminate CICS, in which case a message to this effect is issued.

User response: See DFHSM0128 for further information.

Ensure that the REGION parameter for the CICS job is large enough.

See the *OS/390 MVS JCL Reference* for more information about specifying storage on the REGION parameter.

Module: DFHSMMDM

XMEOUT Parameters: *applid, dsalimit*

Destination: Console

DFHSM0131 *applid* CICS is under stress (short on storage below 16MB).

Explanation: This message is produced when there is a shortage of storage in any of the dynamic storage areas (DSAs) below 16MB. Either the largest free area in one of the DSAs is less than the size of the internally defined cushion for that DSA, or there is at least one transaction suspended due to insufficient contiguous free storage.

System action: An exception entry is made in the trace table to record the event.

CICS continues to operate but takes steps to alleviate the situation by, for example, slowing down the rate at which new tasks are started and by releasing storage occupied by programs which are not currently in use.

User response: No immediate action is required. However, if the problem persists you could increase the value of the DSALIMIT parameter, if possible, or reduce the storage requirements below 16MB of your CICS system. For more information about how to do this, see the *CICS Performance Guide*.

Module: DFHSMSY

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0132 *applid* CICS is no longer short on storage below 16MB.

Explanation: The short on storage condition reported by message DFHSM0131 has ceased.

System action: CICS continues.

User response: None.

Module: DFHSMSY

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0133 *applid* CICS is under stress (short on storage above 16MB).

Explanation: There is a shortage of storage in one of the dynamic storage areas (DSAs) above 16MB. Either the largest free area in one of the DSAs is less than the size of the internally defined cushion for that DSA, or there is at least one transaction suspended due to insufficient contiguous free storage.

System action: An exception entry is made in the trace table to record the event.

CICS continues to operate but takes steps to alleviate the situation by, for example, slowing down the rate at which new tasks are started and by releasing storage occupied by programs which are not currently in use.

User response: No immediate action is required.

However, if the problem persists you could, if possible, increase the value of the EDSALIMIT parameter, or reduce the storage requirements of your CICS system above 16MB. For guidance on how to do this, see the *CICS Performance Guide*.

Module: DFHSMSY

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0134 *applid* CICS is no longer short on storage above 16MB.

Explanation: The short on storage condition reported by message DFHSM0133 has ceased.

System action: CICS continues.

User response: None.

Module: DFHSMSY

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0135 *applid* Insufficient storage to allocate the requested size of *dsasizeK* for the *dsaname*.

Explanation: CICS has attempted to allocate the requested size of *dsasize* for the dynamic storage area *dsaname* but there is insufficient storage to satisfy the request. The size of a dynamic storage area (DSA) below 16MB specified via the SIT override is rounded up to a multiple of 256KB (or 1MB for the UDSA if transaction isolation is in effect). The size of a DSA above 16MB specified via the SIT override is rounded up to a multiple of 1MB.

System action: An error return code is sent to the domain manager, DFHDMDM (the caller of storage manager). The domain manager might then terminate CICS, in which case a message to this effect is issued.

User response: Either reduce the value specified in the DSASZE parameter, or increase the value specified in the DSALIM parameter.

Module: DFHSMDM

XMEOUT Parameters: *applid, dsasize, dsaname*

Destination: Console

DFHSM0136I *applid* The size of the *dsaname* was specified as *dsasizeK*.

Explanation: This is an informative message giving the size *dsasize* of the dynamic storage area (DSA) *dsaname*.

System action: CICS continues.

User response: None. You can suppress this

DFHSM0137 • DFHSM0300

message with the message level system initialization parameter, MSGLVL=0.

Module: DFHSMMDM

XMEOUT Parameters: *applid, dsaname, dsasize*

Destination: Console

DFHSM0137 *applid* The amount of MVS storage available to CICS is low.

Explanation: When MVS storage is requested by a JVM from Language Environment, CICS intercepts the request. This message is produced when the size of the largest contiguous unallocated block of storage above 16MB that is available for use by MVS has fallen below a system-defined threshold.

System action: An exception entry is made in the trace table to record the event.

CICS continues to operate but takes steps to alleviate the situation by deleting any JVMs that are currently inactive. This will have the effect of freeing any MVS storage that the inactive JVMs are holding.

User response: No immediate action is required. However, if the problem persists and if you are a user of Java transactions you could reduce the value of the MAXJVMTCBs parameter. This would reduce the number of JVMs which exist concurrently within CICS. For more information about how to do this, see the *CICS Performance Guide*.

Module: DFHSMVN

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0138 *applid* The amount of MVS storage available to CICS is no longer low.

Explanation: The MVS storage shortage reported by message DFHSM0137 has ceased.

System action: CICS continues.

User response: None.

Module: DFHSMVN

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0139 *applid* The amount of MVS storage available to CICS is critically low.

Explanation: This message is produced when there is no unallocated block of storage large enough to satisfy an MVS request for storage. When MVS storage is requested by a JVM from Language Environment, CICS will intercept these requests. The message means that insufficient contiguous storage was available to satisfy the MVS storage request. Either CICS has been forced

to attempt to satisfy the request by releasing storage from an MVS storage cushion that it keeps in reserve or there is at least one transaction suspended due to insufficient contiguous free storage.

System action: An exception entry is made in the trace table to record the event.

CICS continues to operate but takes steps to alleviate the situation by deleting JVMs as the programs that own them complete and not starting new JVMs until the storage shortage is relieved.

User response: No immediate action is required. However, if the problem persists and if you run Java transactions you could decrease the MAXJVMTCBS parameter. For more information about how to do this, see the *CICS Performance Guide*.

Module: DFHSMVN

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0140 *applid* The amount of MVS storage available to CICS is no longer critically low.

Explanation: The MVS storage shortage reported by message DFHSM0139 has ceased.

System action: CICS continues.

User response: None.

Module: DFHSMVN

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0300 DFHSMUTL ERROR REPORT

Explanation: This is the report from the local catalog storage manager domain subpool record manipulation program, DFHSMUTL. A number of lines may be written to the report Report header. ADD SUBPOOL=xxxxxxx has been processed successfully. DEL SUBPOOL=xxxxxxx has been processed successfully. Subpool record found by the LST command. An error has occurred opening the local catalog data set. The program is terminated. Only ADD, DEL and LST are allowed. The statement is ignored. Only ADD SUBPOOL=xxxxxxx or DEL SUBPOOL=xxxxxxx are allowed. The statement is ignored. FEEDBACK CODE = X'zz'. SEE DFSMS/MVS MACRO INSTRUCTIONS FOR DATA SETS A VSAM error has occurred whilst processing an ADD SUBPOOL=xxxxxxx command. For the meaning of the VSAM codes, refer to *DFSMS/MVS Macro Instructions for Data Sets*, SC26-4913. The program is terminated. FEEDBACK CODE = X'zz'. SEE DFSMS/MVS MACRO INSTRUCTIONS FOR DATA SETS A VSAM error has occurred whilst processing a DEL SUBPOOL=xxxxxxx command. For the meaning of the VSAM codes, refer to *DFSMS/MVS Macro*

Instructions for Data Sets, SC26-4913. The program is terminated. Report trailer.

System action: See Explanation.

User response: If an error is reported, correct the cause and retry.

Module: DFHSMUTL

Destination: SYSPRINT

DFHSM0601I *applid* **Limit of above the bar storage available is $gdsalimitgdsaunits\{NOLIMIT | \}$ from $gdsaloc$.**

Explanation: This is an informatory message giving the limit $gdsalimit$ value in $gdsaunits$ (M=megabytes, G=gigabytes, T= terabytes, P=petabytes, E=exabytes) of above the bar storage available and the source $gdsaloc$ of the limit.

System action: CICS continues.

User response: None. You can suppress this message with the message level system initialization parameter, MSGLVL=0.

Module: DFHSMMDM

XMEOUT Parameters: *applid*, $gdsalimit$, $gdsaunits$, $\{1=NOLIMIT, 2= \}$, $gdsaloc$

Destination: Console

DFHSM0602 *applid* **Insufficient storage to allocate the minimum above the bar memory object.**

Explanation: This is an error message indicating that the amount of above the bar storage available is less than the minimum needed for CICS to initialize.

System action: CICS terminates.

User response: Set the MEMLIMIT value in the JCL procedure used to start CICS to a value greater than or equal to the EDSALIMIT. See the *z/OS JCL Reference* for more information on specifying storage using the MEMLIMIT parameter.

Module: DFHSMMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0603 *applid* **Insufficient storage to allocate the recommended 2GB above the bar memory object.**

Explanation: This is a warning message indicating that the amount of above the bar storage available is less than the recommended 2GB.

System action: CICS continues.

User response: Set the MEMLIMIT value in the JCL

procedure used to start CICS to a value greater than or equal to 2GB. See the *z/OS JCL Reference* for more information on specifying storage using the MEMLIMIT parameter.

Module: DFHSMMDM

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0606 *applid* **The amount of MVS above the bar storage available to CICS is critically low.**

Explanation: This message is produced when CICS is unable to allocate an above the bar storage request. The message means that insufficient above the bar storage was available to satisfy the MVS storage request. CICS has been forced to suspend a transaction in process or deny starting of a new transaction due to insufficient free above the bar storage.

System action: An exception entry is made in the trace table to record the event. CICS continues to operate but take steps to alleviate the situation and not start new transactions until the above the bar storage shortage is relieved.

User response: No immediate action is required. However, if the problem persists you may want to explore if the MEMLIMIT currently in effect can be increased. For more information about how to do this, see the *CICS Performance Guide*.

Module: DFHSMYSY

XMEOUT Parameter: *applid*

Destination: Console

DFHSM0607 *applid* **The amount of MVS above the bar storage available to CICS is no longer critically low.**

Explanation: The MVS storage shortage reported by message DFHSM0606 has ceased.

System action: CICS continues.

User response: None.

Module: DFHSMYSY

XMEOUT Parameter: *applid*

Destination: Console

DFHSNnnnn messages

DFHSN0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Next, look up the description of the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSNUS, DFHSNAS, DFHSNPU, DFHSNSU, DFHSNTU, DFHSNXR,

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*, *modname*

Destination: Console

DFHSN0002 *applid* A severe error (code *X'code'*) has occurred in program *progrname*.

Explanation: CICS has detected a severe error while running module *progrname*. This error is associated with exception trace point ID *code*. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: The task issuing the signon abends.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSNUS, DFHSNAS, DFHSNPU, DFHSNSU, DFHSNTU, DFHSNXR

XMEOUT Parameters: *applid*, *X'code'*, *progrname*

Destination: Console

DFHSN0004 *applid* A possible loop has been detected at offset *X'offset'* in module *modname*.

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset *X'offset'*. This is the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* in the message is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSNUS, DFHSNAS, DFHSNPU, DFHSNSU, DFHSNTU, DFHSNXR

XMEOUT Parameters: *applid, X'offset', modname*

Destination: Console

DFHSN1100 *date time applid Signon at {netname lconsole l terminal }portname by user userid in group groupid is complete.*

Explanation: Terminal *portname* has been signed on. It now has the security attributes for userid *userid* in group *groupid*.

System action: Processing continues.

User response: The user at terminal *portname* can now use those CICS transactions permitted for this userid in group *groupid*.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid,groupid*

Destination: CSCS

DFHSN1101 *date time applid Signon at {netname lconsole l terminal }portname has failed. User userid not recognized.*

Explanation: A signon has been issued from terminal *portname* which specified a userid *userid* that is not known to the ESM.

System action: The signon request is rejected.

User response: Unless this implies a breach of security that needs investigating, contact your security administrator so that the userid can be made known to the ESM.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

Destination: CSCS

DFHSN1102 *date time applid Signon at {netname lconsole l terminal }portname by user userid has failed. Password not recognized.*

Explanation: A signon has been issued from terminal *portname* which specified an incorrect password.

This was probably caused by a misspelling of the password or because the password is not valid for this userid.

System action: The signon request is rejected.

User response: None, unless this implies a breach of security that needs investigating.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

Destination: CSCS

DFHSN1103 *date time applid Signon at {netname lconsole l terminal }portname by user userid has failed. OID card damaged or not authorized.*

Explanation: A signon has been issued from terminal *portname* which used an unauthorized or damaged operator identification (OID) card.

System action: The signon request is rejected.

User response: None, unless this implies a breach of security that needs investigating.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

Destination: CSCS

DFHSN1104 *date time applid Signon at {netname lconsole l terminal }portname by user userid has failed. New password not allowed.*

Explanation: A signon has been issued from terminal *portname* which attempted to change the password to a value that the external security manager (ESM) does not allow.

System action: The signon request is rejected.

User response: None, unless this implies a breach of security that needs investigating.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

Destination: CSCS

DFHSN1105 *date time applid* **Signon at {netname /console | terminal }portname by user userid requires a password.**

Explanation: A signon has been issued from terminal *portname* which did not specify a password. The signon has been rejected because user *userid* requires a password.

System action: The signon request is rejected.

User response: None, unless this implies a breach of security that needs investigating.

Module: DFHSNTU

XMEOUT Parameters: *date, time, applid, {1=netname , 2=console , 3=terminal }, portname, userid*

Destination: CSCS

DFHSN1106 *date time applid* **Signon at {netname /console | terminal }portname by user userid requires a new password.**

Explanation: A signon has been issued from terminal *portname* for which the external security manager (ESM) indicates the password has expired.

This does not imply a security breach. It is a normal response indicating that the ESM password has expired.

System action: The signon request is rejected.

User response: None.

Module: DFHSNTU

XMEOUT Parameters: *date, time, applid, {1=netname , 2=console , 3=terminal }, portname, userid*

Destination: CSCS

DFHSN1107 *date time applid* **Signon at {netname /console | terminal }portname by user userid requires an OID card.**

Explanation: A signon has been issued from terminal *portname* which did not use an operator identification (OID) card when the external security manager (ESM) indicates that one should have been used.

System action: The signon request is rejected.

User response: None, unless this implies a breach of security which needs investigating.

Module: DFHSNTU

XMEOUT Parameters: *date, time, applid, {1=netname , 2=console , 3=terminal }, portname, userid*

Destination: CSCS

DFHSN1108 *date time applid* **Signon at {netname /console | terminal }portname by user userid has failed. SAF codes are (X'safresp',X'safreas). ESM codes are (X'esmresp',X'esmreas).**

Explanation: A signon has been issued from terminal *portname* and has been rejected by the external security manager (ESM).

System action: The signon request is rejected.

User response: The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the *OS/390 MVS Programming: Authorized Assembler Services Guide* and in *External Security Interface (RACROUTE) Macro Reference for MVS and VM (SC28-1366)*. See these manuals for an explanation of the codes.

Module: DFHSNTU

XMEOUT Parameters: *date, time, applid, {1=netname , 2=console , 3=terminal }, portname, userid, X'safresp', X'safreas', X'esmresp', X'esmreas'*

Destination: CSCS

DFHSN1112 *date time applid* **Signon at {netname /console | terminal }portname by user userid has failed because the terminal has preset security.**

Explanation: A signon has been issued from terminal *portname*. This terminal has been defined to CICS with fixed security attributes. It does NOT support signon.

System action: The signon request is rejected.

User response: None, unless this implies a breach of security that needs investigating.

Module: DFHSNTU

XMEOUT Parameters: *date, time, applid, {1=netname , 2=console , 3=terminal }, portname, userid*

Destination: CSCS

DFHSN1113 *date time applid* **Signon at {netname /console | terminal }portname by user userid has failed because the terminal was already signed on.**

Explanation: A signon has been issued from terminal *portname* while a previous signon was still in effect for this terminal.

System action: The signon request is rejected.

User response: None, unless this implies a breach of

security which needs investigating.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

Destination: CSCS

DFHSN1114 *date time applid* **Signon by user *userid* has failed because there is no terminal associated with the requesting task.**

Explanation: A signon has been issued by user *userid* from a task that had been started without a terminal.

System action: The signon request is rejected.

User response: Investigate why a signon has been issued from a task that is not associated with a terminal.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, userid*

Destination: CSCS

DFHSN1115 *date time applid* **Signon at {*netname* | *console* | *terminal* }*portname* by user *userid* has failed. Signon is not allowed at a surrogate terminal except by use of the CRTE transaction.**

Explanation: CICS does not support the signing-on of surrogate terminals, except when done during a CRTE routing session.

System action: Processing continues.

User response: Investigate how and why users are attempting to use signon via transaction routing.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

Destination: CSCS

DFHSN1116 *date time applid* **Signon at {*netname* | *console* | *terminal* }*portname* by user *userid* has failed because the national language to be used is not supported in this run of CICS.**

Explanation: The national language specified has been recognized as a valid IBM national language. However, either this language cannot be specified as a valid national language for CICS initialization, or CICS has not been initialized with this language in the current run of CICS.

See the *CICS Application Programming Reference* for a list of national languages that CICS can be initialized to use.

System action: Signon fails.

User response: Retry signon with a national language that CICS has been initialized to use.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

Destination: CSCS

DFHSN1117 *date time applid* **Signon at {*netname* | *console* | *terminal* }*portname* by user *userid* has failed because an invalid national language was selected.**

Explanation: Signon failed because the language specified was not recognized as an IBM national language.

System action: Signon fails.

User response: Retry signon with a correct language value.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

Destination: CSCS

DFHSN1118 *date time applid* **Signon at {*netname* | *console* | *terminal* }*portname* by user *userid* has failed because the user is not authorized to use the terminal.**

Explanation: A signon has been issued from terminal *portname* which has failed. The user is not authorized to use the terminal.

System action: The signon request is rejected.

User response: Contact your security administrator, who should check if the user should be authorized to use terminal *portname*.

In particular, check if the user should be able to access the system on this particular day and time and whether the terminal may be used on this day and time.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname, userid*

Destination: CSCS

DFHSN1119 *date time applid* **Signon at {*netname* | *console* | *terminal* }*portname* by user *userid* has failed because the user is not authorized to use application *applname*.**

Explanation: A signon has been issued from terminal *portname* which has failed. The user is not authorized to use the application *applname*.

- If you are using the VTAM generic resource function, *applname* is the generic resource name specified in the GRNAME system initialization parameter.
- If you are using XRF, *applname* is the generic applid specified as the first operand of the APPLID system initialization parameter.
- Otherwise, *applname* is the application identifier specified as the single operand of the APPLID system initialization parameter.

System action: The signon request is rejected.

User response: Contact your security administrator, who should check whether the user should have authorization to use application *applid*.

Module: DFHSNTU

XMEOUT Parameters: *date, time, applid, {1=netname, 2=console, 3=terminal}, portname, userid, applname*

Destination: CSCS

DFHSN1120 *date time applid* **Signon at {netname | console | terminal }portname by user userid has failed because the {userid | group access} has been revoked.**

Explanation: Either the userid, or the user's access to the ESM group containing it, has been revoked by the ESM. This is usually the result of repeated attempts to signon with an invalid password.

System action: The signon request is rejected.

User response: For revoked userids, contact your security administrator who can reauthorize the revoked userid by issuing the ALTUSER RESUME function. For revoked group access, contact your security administrator who can restore the user's access to the group by issuing the CONNECT RESUME function.

Module: DFHSNTU

XMEOUT Parameters: *date, time, applid, {1=netname, 2=console, 3=terminal}, portname, userid, {1=userid, 2=group access}*

Destination: CSCS

DFHSN1129 *date time applid* **Signon at {netname | console | terminal }portname by user userid has failed because the user is already signed on elsewhere.**

Explanation: A signon has been issued from terminal *portname* while the user is already signed on under the restrictions imposed by the current setting of the SNSCOPE system initialization parameter.

System action: The signon request is rejected.

User response: Investigate why users are attempting to signon twice within the current signon scope.

See the *CICS System Definition Guide* for more

information about the SNSCOPE parameter.

Module: DFHSNTU

XMEOUT Parameters: *date, time, applid, {1=netname, 2=console, 3=terminal}, portname, userid*

Destination: CSCS

DFHSN1130 *date time applid* **Signon at {netname | console | terminal }portname by user userid failed because the userid was not found in the specified group.**

Explanation: A signon has been issued from terminal *portname* which has failed. Either the userid is not in the specified group, or the group specified for this user to be associated with after signon is not known to the ESM.

System action: The signon request is rejected.

User response: Check that the groupid specified is correct. If it is, contact your security administrator to ensure that this group is defined properly, and that the user is connected to this group.

Module: DFHSNTU

XMEOUT Parameters: *date, time, applid, {1=netname, 2=console, 3=terminal}, portname, userid*

Destination: CSCS

DFHSN1131 *date time applid* **Signon at {netname | console | terminal }portname by user userid has failed because security is not active in this CICS region.**

Explanation: A signon has been issued from terminal *portname* which has failed. This is because this CICS region is running without security active.

System action: The signon request is rejected.

User response: None.

Module: DFHSNTU

XMEOUT Parameters: *date, time, applid, {1=netname, 2=console, 3=terminal}, portname, userid*

Destination: CSCS

DFHSN1132 *date time applid* **Signon at terminal termid by user userid has failed because the terminal is a session.**

Explanation: A signon has been issued from terminal *termid* which is a session. The security attributes of a session can only be changed on receipt of a valid FMH-5 attach header.

System action: The signon request is rejected.

User response: Investigate how and why users are attempting to use signon for a session.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, termid, userid*

Destination: CSCS

DFHSN1133 *date time applid* **Signon at {netname
lconsole l terminal }portname by user
userid has failed because of an error
during SNSCOPE checking.**

Explanation: A signon has been issued from terminal *portname*. The SNSCOPE initialization parameter disallows signon to more than one terminal at a time. An internal failure during SNSCOPE checking means that CICS is unable to confirm if the user is already signed on elsewhere. The failure has occurred because the limit of concurrent MVS ENQ requests has been reached.

System action: The signon request is rejected. Message DFHUS0120 will have been written to the console. See the explanation of this message for further information.

User response: Please report this problem to your CICS systems programmer.

See the *CICS System Definition Guide* for more information about the SNSCOPE parameter.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname ,
2=console , 3=terminal }, portname, userid*

Destination: CSCS

DFHSN1150 *date time applid* **Signon at TCAM pool
by user userid in group groupid is
complete.**

Explanation: A TCAM pool of terminals has been signed on by user *userid*. All terminals in this TCAM pool now have the security attributes for user *userid* in group *groupid*.

System action: Processing continues.

User response: The user at any of these TCAM terminals can now use those CICS transactions permitted for this *userid* in group *groupid*.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, userid,
groupid*

Destination: CSCS

DFHSN1200 *date time applid* **Signoff at {netname
lconsole l terminal }portname by user
userid is complete. tt transactions
entered with nn errors.**

Explanation: Terminal *portname* has been signed off. It now has the default security attributes.

nn indicates the number of errors which have occurred.

System action: Processing continues.

User response: None.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname ,
2=console , 3=terminal }, portname, userid,tt, nn*

Destination: CSCS

DFHSN1211 *date time applid* **Signoff at terminal
termid has failed because the terminal
is a session.**

Explanation: A signoff has been issued from terminal *termid* which is a session. The security attributes of a session can only be changed on receipt of a valid FMH-5 attach header.

System action: The signoff request is rejected.

User response: Investigate how and why users are attempting to use signoff for a session.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, termid*

Destination: CSCS

DFHSN1212 *date time applid* **Signoff at {netname
lconsole l terminal }portname has failed
because the terminal has preset
security.**

Explanation: A signoff has been issued from terminal *portname* which has been defined to CICS with fixed security attributes and so does not support signoff.

System action: The signoff request is rejected.

User response: None, unless this implies a breach of security which needs investigating.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname ,
2=console , 3=terminal }, portname*

Destination: CSCS

DFHSN1213 *date time applid* **Signoff at {netname
lconsole l terminal }portname has failed
because the terminal was not signed
on.**

Explanation: A signoff has been issued from terminal *portname* while no previous signon was in effect.

System action: The signoff request is rejected.

User response: None, unless this implies a breach of security which needs investigating.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname*

Destination: CSCS

DFHSN1214 *date time applid* **An attempted signoff by transaction *tranid* has failed because there was no terminal associated with the requesting task.**

Explanation: A signoff has been issued from a task that had been started without a terminal.

System action: The signoff request is rejected.

User response: Investigate why a signoff has been issued from a task that is not associated with a terminal.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, tranid*

Destination: CSCS

DFHSN1215 *date time applid* **Signoff at {*netname | console | terminal*}*portname* has failed. Signoff is not allowed at a surrogate terminal except by use of the CRTE transaction.**

Explanation: CICS does not support the signing off of surrogate terminals, except when done during a CRTE routing session.

System action: Processing continues.

User response: Investigate how and why users are attempting to use signoff via transaction routing.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, {1=netname , 2=console , 3=terminal }, portname*

Destination: CSCS

DFHSN1250 *date time applid* **Signoff at TCAM pool is complete.**

Explanation: A TCAM pool of terminals has been signed off. All terminals in this TCAM pool now have default security attributes.

System action: Processing continues.

User response: None.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid*

Destination: CSCS

DFHSN1300 *date time applid* **An attempt to reschedule BMS pages for operator *opid* at {*netname | console | terminal*}*portname* has failed following a timeout. Pages on temporary storage queue *X'hexqueueid'* may require cleanup.**

Explanation: Operator *opid* has been timed out on terminal *netname* while viewing BMS pages. CICS has attempted to reschedule the pages so that they are available when the operator signs on again, but the reschedule has failed.

The pages are available on temporary storage queue *hexqueueid*. This queue continues to exist until it is explicitly disposed of.

System action: Processing continues.

User response: If you still need to view this data, repeat the processing which created the BMS pages.

Module: DFHSNTU

XMEOUT Parameters: *date, time,applid, opid, {1=netname ,2=console , 3=terminal }, portname, X'hexqueueid'*

Destination: CSCS

DFHSN1400 *date time applid* **Session signon for session *session* by user *userid* is complete.**

Explanation: The two CICS systems are connected and the MRO/ISC session is given the security authority of user *userid*.

System action: The MRO/ISC sessions are signed on.

User response: None.

Module: DFHSNSU

XMEOUT Parameters: *date, time,applid, session, userid*

Destination: CSCS

DFHSN1401 *date time applid* **Session signon for session *session* by user *userid* has failed. SAF codes are (*X'safresp',X'safreas*). ESM codes are (*X'esmresp',X'esmreas*).**

Explanation: An MRO/ISC signon is attempted by user *userid* but the signon has failed for the reason given.

System action: The session is not signed on.

User response: The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the

external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the *OS/390 MVS Programming: Authorized Assembler Services Guide*, and in *External Security Interface (RACROUTE) Macro Reference for MVS and VM (SC28-1366)*. Consult the manuals to find the cause of the codes.

Module: DFHSNSU

XMEOUT Parameters: *date, time, applid, session, userid, X'safresp', X'safreas', X'esmresp', X'esmreas'*

Destination: CSCS

DFHSN1410 *date time applid* **Session signon for session session with default security attributes is complete.**

Explanation: The two CICS systems are connected and the MRO/ISC session is given the security authority of the default user.

System action: The MRO/ISC sessions are signed on.

User response: None.

Module: DFHSNSU

XMEOUT Parameters: *date, time, applid, session*

Destination: CSCS

DFHSN1500 *date time applid* **Session signoff for session session is complete. tt transactions entered with nn errors.**

Explanation: An MRO/ISC session is signed-off.

nn indicates the number of abends which have occurred.

System action: The security authority is removed from the session.

User response: None.

Module: DFHSNSU

XMEOUT Parameters: *date, time, applid, session, tt, nn*

Destination: CSCS

DFHSN1501 *date time applid* **Session signoff for session session has failed. SAF codes are (X'safresp',X'safreas'). ESM codes are (X'esmresp',X'esmreas').**

Explanation: An MRO/ISC signoff is attempted but the signoff has failed for the reason given.

System action: Processing continues.

User response: The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and

reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the *OS/390 MVS Programming: Authorized Assembler Services Guide*, and in *External Security Interface (RACROUTE) Macro Reference for MVS and VM (SC28-1366)*. Consult the manuals to find the cause of the codes.

Module: DFHSNSU

XMEOUT Parameters: *date, time, applid, session, X'safresp', X'safreas', X'esmresp', X'esmreas'*

Destination: CSCS

DFHSN1604 *date time applid* **Attach header signon at terminal termid by user userid has failed. SAF codes are (X'safresp',X'safreas'). ESM codes are (X'esmresp',X'esmreas').**

Explanation: User *userid* has failed the implicit signon for attach security.

System action: The attach fails.

User response: The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the *OS/390 MVS Programming: Authorized Assembler Services Guide*, and in *External Security Interface (RACROUTE) Macro Reference for MVS and VM (SC28-1366)*. Consult the manuals to find the cause of the codes.

Module: DFHSNUS

XMEOUT Parameters: *date, time, applid, termid, userid, X'safresp', X'safreas', X'esmresp', X'esmreas'*

Destination: CSCS

DFHSN1605 *date time applid* **Attach header signon at terminal termid has failed. SAF codes are (X'safresp',X'safreas'). ESM codes are (X'esmresp',X'esmreas').**

Explanation: The implicit signon for local user security has failed.

System action: The attach fails.

User response: The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are

described in the *OS/390 MVS Programming: Authorized Assembler Services Guide*, and in *External Security Interface (RACROUTE) Macro Reference for MVS and VM (SC28-1366)*. Consult the manuals to find the cause of the codes.

Module: DFHSNUS

XMEOUT Parameters: *date, time, applid, termid, X'safresp', X'safreas', X'esmresp', X'esmreas'*

Destination: CSCS

DFHSN1606 *date time applid* **Attach header signoff at terminal *termid* has failed. SAF codes are (*X'safresp', X'safreas'*). ESM codes are (*X'esmresp', X'esmreas'*).**

Explanation: The user has failed the implicit signoff for attach security.

System action: Processing continues.

User response: The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the *OS/390 MVS Programming: Authorized Assembler Services Guide*, and in *External Security Interface (RACROUTE) Macro Reference for MVS and VM (SC28-1366)*. Consult the manuals to find the cause of the codes.

Module: DFHSNUS

XMEOUT Parameters: *date, time, applid, termid, X'safresp', X'safreas', X'esmresp', X'esmreas'*

Destination: CSCS

DFHSN1800 *date time applid* **Signon at {*netname* | *console* | *terminal*} *portname* by preset user *userid* in group *groupid* is complete.**

Explanation: The user *userid*, specified for preset security terminal *portname* has been signed on to the external security manager (ESM).

System action: The security attributes for this *userid* are used in all security requests issued against this terminal.

The terminal is now PRESET with this *userid* for its entire duration.

User response: None.

Module: DFHSNPU

XMEOUT Parameters: *date, time, applid, {1=*netname*, 2=*console*, 3=*terminal*}, portname, userid, groupid*

Destination: CSCS

DFHSN1801 *date time applid* **Signon at {*netname* | *console* | *terminal*} *portname* by preset user *userid* has failed. SAF codes are (*X'safresp', X'safreas'*). ESM codes are (*X'esmresp', X'esmreas'*).**

Explanation: The user *userid*, specified for a preset security terminal *portname*, could not be signed on to the external security manager (ESM).

System action: The signon request is rejected and the terminal cannot be put in service.

User response: The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the *OS/390 MVS Programming: Authorized Assembler Services Guide*, and in *External Security Interface (RACROUTE) Macro Reference for MVS and VM (SC28-1366)*. Consult the manuals to find the cause of the codes.

Module: DFHSNPU

XMEOUT Parameters: *date, time, applid, {1=*netname*, 2=*console*, 3=*terminal*}, portname, userid, X'safresp', X'safreas', X'esmresp', X'esmreas'*

Destination: CSCS

DFHSN1850 *date time applid* **Signoff at preset {*netname* | *console* | *terminal*} *portname* is complete.**

Explanation: The preset security terminal *portname* has been signed off while the terminal was being deleted. Its security has been removed.

System action: Processing continues.

User response: None.

Module: DFHSNPU

XMEOUT Parameters: *date, time, applid, {1=*netname*, 2=*console*, 3=*terminal*}, portname*

Destination: CSCS

DFHSN1851 *date time applid* **Signoff at preset {*netname* | *console* | *terminal*} *portname* has failed. SAF codes are (*X'safresp', X'safreas'*). ESM codes are (*X'esmresp', X'esmreas'*).**

Explanation: The preset security terminal *portname*, could not be signed off while the terminal was being deleted.

System action: Processing continues.

User response: The response and reason codes

(*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the *OS/390 MVS Programming: Authorized Assembler Services Guide*, and in *External Security Interface (RACROUTE) Macro Reference for MVS and*

VM (SC28-1366). Consult the manuals to find the cause of the codes.

Module: DFHSNPU

XMEOUT Parameters: *date, time, applid, {1=netname, 2=console, 3=terminal}, portname, X'safresp', X'safreas', X'esmresp', X'esmreas'*

Destination: CSCS

DFHSOnnnn messages

DFHSO0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem. If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this

problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSOCK

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

Destination: Console

DFHSO0002 *applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

If the exception entry made in the trace table has a trace ID with a value of X'0425, message DFHKE0501 was issued by the CICS Kernel earlier during CICS initialization.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

If the exception entry made in the trace table has a trace ID with a value of X'0425, further information can be found in message DFHKE0501 issued by the CICS Kernel earlier during CICS initialization.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

DFHSO0004 • DFHSO0102

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSODM, DFHSOL, DFH SOCK, DFHSORD, DFHSOIS.

XMEOUT Parameters: *applid, X'code', modname*

Destination: Console

DFHSO0004 *applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset *X'offset'*. This is the offset of the instruction which happened to be executing at the time when the error was detected.

System action: An exception entry is made in the trace table.

A system dump is taken unless you have specifically suppressed the dump (by a user exit program at the XDUREQ exit, in the dump table or by global system dump suppression). CICS processing continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function, and there may not be an error. Usually, CICS purges a CICS function which exceeds the runaway task time interval that you have specified in the ICVR system initialization parameter. This means that execution of module *modname* is terminated and CICS continues.

If you have specified system initialization parameter ICVR=0 and you consider that module *modname* is looping, you must terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the value of the ICVR system initialization parameter. You have to close down CICS at a suitable time to do this permanently. You can change the ICVR time interval temporarily online using the CEMT transaction.

If raising the ICVR time does not solve the problem, you may need further assistance from IBM to resolve the problem. See Part 4 of the *CICS Problem Determination*

Guide for guidance on how to proceed.

Module: DFH SOCK, DFH SOSE

XMEOUT Parameters: *applid, X'offset', modname*

Destination: Console

DFHSO01001 *applid* **Sockets domain initialization has started.**

Explanation: This is an informational message indicating that sockets domain initialization has started.

System action: System initialization continues.

User response: None. The message can be suppressed with the system initialization parameter MSGLVL=0.

Module: DFHSODM

XMEOUT Parameter: *applid*

Destination: Console

DFHSO01011 *applid* **Sockets domain initialization has ended.**

Explanation: This is an informational message indicating that sockets domain initialization has completed successfully.

System action: System initialization continues.

User response: None. The message can be suppressed with the system initialization parameter MSGLVL=0.

Module: DFHSODM

XMEOUT Parameter: *applid*

Destination: Console

DFHSO0102 *date time applid* **An OpenEdition Assembler Callable Service error (code *X'code'*) has occurred on receipt of a severe TCP/IP return code; the TCPIP SERVICE *tcpipservice* on port *portnumber* at IP address *ipaddress* will be closed.**

Explanation: An error has been detected in DFHSOLS. The error has been caused by a severe return code received from TCP/IP.

System action: An exception entry *X'code'* is made in the trace table. No system dump is taken, unless you have specifically requested a dump in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

The TCPIP SERVICE *tcpipservice* on port *portnumber* at the specified IP address will be shutdown. When this is complete then message DFHSO0108 will be issued.

User response: This error could have been returned if

TCP/IP had been shutdown, for example. The exception trace entry will tell you which service routine was called and the return values that were returned. Refer to OS/390 Unix System Services Message and Codes to determine the cause of the error.

The TCPIP SERVICE *tcpiplib* will be closed, and after the TCP/IP region has been restarted the closed TCPIP SERVICE should be reopened. At this point normal work can resume on the TCPIP SERVICE.

Module: DFHSOLS

XMEOUT Parameters: *date, time, applid, X'code', tcpiplib, portnumber, ipaddress*

Destination: Console and Transient Data Queue CSOO

DFHSO0103 *applid* ENCRYPTION=*level* is not available on this system.

Explanation: The ENCRYPTION=*level* system initialization parameter was specified, where *level* may be STRONG or NORMAL, but the necessary feature to implement it was not installed on your system.

System action: Sockets Domain initialization fails, and CICS terminates.

User response: If you wish to use STRONG encryption with the secure sockets layer, you must order and install the z/OS Security Level 3 feature. This z/OS feature is only available in the United States of America and Canada.

If the feature is unavailable, you must specify ENCRYPTION=NORMAL, which is the default.

In France, you must specify ENCRYPTION=WEAK unless you have ordered and installed the standard encryption feature for z/OS, when you may specify ENCRYPTION=NORMAL.

Module: DFHSODM

XMEOUT Parameters: *applid, level*

Destination: Console Routecodes 2, 9, 10 and 11

DFHSO0104 *applid* Secure sockets program *pgmname* could not be loaded. Secure Sockets Layer is not available.

Explanation: The program module *pgmname*, which is required to implement the secure sockets layer, could not be loaded.

If *pgmname* is GSKCMS, GSKSSL, or GSKX509, the System SSL component of OS/390 is not available in your release of OS/390, or it has not been installed properly. (This component is only available in OS/390 Version 2 Release 7 and later releases.)

System action: System initialization continues, but support for the secure sockets layer is not enabled.

User response: If this message is preceded by message DFHSO0103, try restarting CICS with ENCRYPTION=NORMAL.

If *pgmname* is GSKCMS, GSKSSL, or GSKX509, ensure that the System SSL library is available to CICS. This library is *prefix*..SIEALNKE, where *prefix* is defined by the installation. You should ensure that it is installed in the system linklist or referenced in the STEPLIB concatenation in the CICS JCL. If it is included in the CICS STEPLIB the library must be APF-authorized.

Module: DFHSODM

XMEOUT Parameters: *applid, pgmname*

Destination: Console Routecodes 2, 9, 10 and 11

DFHSO0105 *applid* ENCRYPTION=*level* is not available on this system. ENCRYPTION=WEAK is used instead.

Explanation: The ENCRYPTION=NORMAL system initialization parameter was specified, but the necessary feature to implement it was not installed on your system, and is not available to be ordered at your level of operating system.

System action: The lower level of encryption corresponding to ENCRYPTION=WEAK is used instead.

User response: None. The encryption support required for ENCRYPTION=NORMAL will be available in OS/390 Version 2 Release 8. With that level of operating system, the system initialization parameter will be honored and this message will not appear.

Module: DFHSODM

XMEOUT Parameters: *applid, level*

Destination: Console Routecodes 2, 9, 10 and 11

DFHSO0106 *date time applid* An OpenEdition Assembler Callable Service error (code *X'code*) has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code *X'code* is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code *X'code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing

the symptom string for this problem.

User response: This indicates a possible error in CICS code or the called Assembler Callable Service routine. The exception trace entry will tell you which service routine was called and the return values that were returned. Refer to OS/390 Unix System Services Message and Codes to determine the cause of the error. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

Module: DFHSOCK

XMEOUT Parameters: *date, time, applid, X'code', modname*

Destination: Console and Transient Data Queue CSOO

DFHSO0107 *date time applid* **TCPIP SERVICE *tcpip service* has been opened on port *portnumber* at IP address *ipaddress*.**

Explanation: The TCPIP SERVICE *tcpip service* has been opened on port *portnumber* at the IP address specified.

System action: CICS continues.

User response: None.

Module: DFHSOCK

XMEOUT Parameters: *date, time, applid, tcpip service, portnumber, ipaddress*

Destination: CSOO

DFHSO0108 *date time applid* **TCPIP SERVICE *tcpip service* on port *portnumber* at IP address *ipaddress* has been closed.**

Explanation: The TCPIP SERVICE *tcpip service* on port *portnumber* on the specified IP address has been closed.

System action: CICS continues.

User response: None.

Module: DFHSOCK

XMEOUT Parameters: *date, time, applid, tcpip service, portnumber, ipaddress*

Destination: CSOO

DFHSO0109 *date time applid* **The TCPIP SERVICE *tcpip service* could not be opened because the port *portnumber* is already in use on the IP address *ipaddress*.**

Explanation: This message is issued when the open of a TCPIP SERVICE cannot be completed. The port number specified is already in use in combination with the IP address. By default, TCP/IP only allows one server to be listening on a port at any one time.

Specifically, this message is issued when the TCP/IP bind call fails with a return code of EADDRINUSE.

System action: The TCPIP SERVICE does not open, but remains closed. An exception trace entry is written detailing the return values from the TCP/IP bind call. An application using the EXEC API to set the TCPIP SERVICE open receives an RESP(INVREQ) RESP2(9).

User response: Check that there are no other TCPIP SERVICES open using the same port number and IP address as the failing one. If there is another TCPIP SERVICE open using the port, it must be closed before the new one can be opened.

If no TCPIP SERVICES are using the requested port, there may be another OS/390 application acting as a TCP/IP server already listening on the port. For example, the Lotus Go for OS/390 web server may be installed and running on port 80 on the same TCP/IP stack as CICS. Attempting to open a TCPIP SERVICE on port 80 will fail. Use the TSO command NETSTAT to display TCP/IP servers on the system. Choose an unused port for the TCPIP SERVICE.

If your OS/390 system has more than one TCP/IP stack you may specify another stack's IP address on the TCPIP SERVICE definition. This will allow you to install multiple TCPIP SERVICES each using the same port number. You may also configure support in TCP/IP for virtual IP addresses on a single system. This will also allow more than one TCPIP SERVICE to share the same port.

Finally, TCP/IP for OS/390 can be configured with port sharing. This allows multiple servers (TCPIP SERVICES) to use the same port with TCP/IP using load balancing to direct incoming connections to the set of servers on the port. With this enabled, multiple TCPIP SERVICES can each be opened on the same IP address with the same port.

Module: DFHSOCK

XMEOUT Parameters: *date, time, applid, tcpip service, portnumber, ipaddress*

Destination: CSOO

DFHSO0110 *date time applid* **The TCPIP SERVICE *tcpip service* cannot be opened on the IP address *ipaddress* because the address is unknown to TCP/IP.**

Explanation: Opening the TCPIP SERVICE has failed because the IP address specified on the definition is not known to TCP/IP.

This message is issued when the TCP/IP bind call fails with the return value of EADDRNOTAVAIL.

System action: The IP address must be a valid address known to TCP/IP. It is possible to configure multiple TCP/IP stacks for a single OS/390 system, or to have virtual IP addresses on a single stack. If the system only has one IP address then the IP address field of the TCPIP SERVICE definition can be left blank, or specified as ANY. This causes the bind to use the default IP address for the system. To use an alternative, a valid address must be specified.

User response: Check that the address specified on the TCPIP SERVICE definition is known to TCPIP on the system. If it is not, then consult the OS/390 TCP/IP OpenEdition: Configuration Guide for information on defining IP address.

Module: DFHSOCK

XMEOUT Parameters: *date, time, applid, tcpip service, ipaddress*

Destination: CSOO

DFHSO0111 *date time applid* **Opening the TCPIP SERVICE *tcpip service* has failed because the region *jobname* is not authorized to bind to port *portnumber*.**

Explanation: Opening the TCPIP SERVICE has failed because the *jobname* of the region is not authorized to use the port number specified.

Binding to port numbers below 1024 requires TCP/IP configuration directives specifying the CICS *jobname* to TCP/IP and associating it with the specified port. This may also be done for ports greater than 1024, thus a CICS region may also fail to open a port greater than 1024 if the port has been associated with another job.

This message is issued when the TCP/IP bind call fails with a return value of EPERM.

System action: The TCPIP SERVICE is not opened. If an application has used the EXEC API to open the TCPIP SERVICE, it receives RESP(INVREQ) RESP2(3) values.

User response: The CICS region's *jobname* must be authorized to open the specified port. Consult the OS/390 TCP/IP OpenEdition: Configuration Guide for details on how to do this.

Module: DFHSOCK

XMEOUT Parameters: *date, time, applid, tcpip service, portnumber*

Destination: CSOO

DFHSO0112 *date time applid* **TCPIP SERVICE *tcpip service* cannot be opened because TCPIP status is not OPEN.**

Explanation: Opening the TCPIP SERVICE has failed because TCPIP is currently not open. Either TCPIP=NO has been specified in the SIT or TCPIP has been dynamically closed using CEMT or an SPI command.

System action: The TCPIP SERVICE is not opened. If an application has used the EXEC API to open the TCPIP SERVICE, it receives RESP(INVREQ) RESP2(4) values.

User response: Open TCPIP and re-open the TCPIP SERVICE.

Module: DFHSORD

XMEOUT Parameters: *date, time, applid, tcpip service*

Destination: CSOO

DFHSO0113 *applid* **The IP address *ip_address* cannot be resolved to a host name by the *gethostbyaddr* function.**

Explanation: CICS has issued the TCP/IP function *gethostbyaddr* to resolve the IP address *ip_address* to a host name, but the call failed.

System action: An exception trace entry is made. CICS will continue to attempt to access the name server for subsequent requests.

User response: The *gethostbyaddr* function will usually perform a name server reverse lookup to resolve the IP address into a host name. This can fail if CICS is unable to contact a name server, or the name server does not know the correct host name to IP address mapping.

Check that the name server defined to TCP/IP in the */etc/resolv.conf* file is valid and responding correctly. You can issue the TSO NSLOOKUP command to query the name server. If a SYSTCPD DD name has been defined in the CICS job, check that the file it references correctly defines the name server. If the name server is defined correctly to CICS then contact the administrator to determine why the IP address lookup has failed.

Module: DFHSOIS

XMEOUT Parameters: *applid, ip_address*

Destination: Console

DFHSO0114 *date time applid* **The socket listener cannot attach the transaction, the TCPIP SERVICE tcpipSERVICE will be closed.**

Explanation: The TCP/IP listener task has received a connection from a client but the attach for the transaction associated with the TCPIP SERVICE definition has failed. The associated transaction may not have been installed or the TCPIP SERVICE definition could have specified the wrong transaction.

System action: The TCPIP SERVICE that is defined on the port that the connection arrived on is closed. The socket accepted for the client is closed.

User response: Determine why the attach for the transaction has failed. Correct the error and re-open the TCPIP SERVICE.

Module: DFHSOCK

XMEOUT Parameters: *date, time, applid, transaction, tcpipSERVICE*

Destination: CSOO

DFHSO0115 *date time applid* **CICS has registered the group name *groupname* with Work Load Manager. The TCP/IP host name *genericname* will become available for DNS connection optimization.**

Explanation: The group name has been registered with Work Load Manager for Domain Name Service (DNS) connection optimization. This occurs when a TCPIP SERVICE is opened where its name begins with the character 'D'. The new generic TCP/IP host name becomes available for clients to use to access the CICS system, and any others that have registered with the named group name.

System action: CICS has issued the Work Load Manager macro IWMSRSRG to register the specified group name for DNS connection optimization. This only occurs when the name of the TCPIP SERVICE begins with a 'D'. Work Load manager registration only occurs once for a given group name. If multiple TCPIP SERVICES define the same group name, then registration will only occur once.

The group name registered is taken from a combination of part of the name of the TCPIP SERVICE and the transaction defined for the TCPIP SERVICE. Any characters of the name following a dot '.' are concatenated with the transaction identifier to form the group name. For example, a TCPIP SERVICE has the name D1.CICS and is defined with the transaction IIOPI (the IIOPI transaction being an alias of the CICS-supplied CIRR transaction). The group name generated is 'CICSIIOPI'. If the TCPIP SERVICE name does not contain a dot, then only the transaction identifier is used. For example, a TCPIP SERVICE with a name of 'DYNWEB' and a transaction of WWW will

generate a registration for the group 'WWW'.

The group name registered effectively becomes a new name in the sysplex TCP/IP domain. When multiple CICS systems in a sysplex each register with the same group name, the DNS server uses Work Load Manager to resolve the group name into one of the IP addresses of the associated systems. The IP address returned is that of the system that is most eligible according to Work Load Manager's load balancing rules. For example, two OS/390 systems in a sysplex are mvs1.plex.hursley.ibm.com and mvs2.plex.hursley.ibm.com; and on each system, CICS registers with the group name cicsiop. The new name cicsiop.plex.hursley.ibm.com is dynamically added to the DNS name server's tables. Client TCP/IP applications can use this name instead of the name of one of the specific OS/390 images. When a client resolves the name to an IP address using the DNS, it will get the IP address of the most eligible system. Since the DNS dynamically knows when systems register and deregister, additional CICS systems can be registered as required to expand the list of available IP addresses returned for a group name. If a system fails, its IP address will be removed from the DNS server's list of associated addresses for any groups with which it was registered.

User response: No user action is necessary.

Module: DFHSOCK

XMEOUT Parameters: *date, time, applid, groupname, genericname*

Destination: CSOO

DFHSO0116 *date time applid* **CICS has deregistered the group name *groupname* with Work Load Manager.**

Explanation: The group name has been deregistered from Work Load Manager. This CICS system will no longer participate in connection optimization in the group specified. This occurs when a TCPIP SERVICE is closed where its name begins with a 'D'.

System action: The Work Load Manager IWMSRDRS call is made to deregister the group name. This will remove the IP address of the system from the DNS server's table associated with the group name.

If more than one open TCPIP SERVICE share the same group name, then the WLM deregistration only occurs when the last one is closed.

User response: Check the availability of the name server.

Module: DFHSOCK

XMEOUT Parameters: *date, time, applid, groupname*

Destination: CSOO

DFHSO0117 *applid* **Unable to determine the TCP/IP host name. OpenEdition return code X'rcode', reason code X'rc'.**

Explanation: OpenEdition has returned a non-zero return code/reason code to a gethostname call during Listener initialization or has returned a blank hostname.

System action: Listener initialization continues.

User response: Determine the reason for the gethostname failure. The return code and reason code included in the message text are described in z/OS Unix System Services Message and Codes.

Module: DFHSOLS

XMEOUT Parameters: *applid, X'rcode', X'rc'*

Destination: Console

DFHSO0118 *applid* **The GETHOSTBYADDR call to resolve IP address IP_ADDRESS to a host name took over 3 seconds to complete.**

Explanation: CICS has issued the TCP/IP function gethostbyaddr to resolve the IP address *ip_address* to a host name. This call took greater than three seconds during which time the sockets TCB was blocked. During this time no socket IO was possible.

System action: CICS continues.

User response: The gethostbyaddr function will usually perform a name server reverse lookup to resolve the IP address into a host name. This call took over three seconds to complete. The gethostbyaddr function is most commonly driven by EXEC CICS EXTRACT TCPIP CLIENTNAME.

Check that the name server defined to TCP/IP in the */etc/resolv.conf* file is valid and responding correctly. You can issue the TSO NSLOOKUP command to query the name server. If a SYSTCPD DD name has been defined in the CICS job, check that the file it references correctly defines the name server. If the name server is defined correctly to CICS then contact the administrator to determine why the IP address lookup failed to respond in a timely fashion. The TCP/IP RESOLVERTIMEOUT parameter can be used to control the duration of a gethostbyaddr call.

Module: DFHSOIS

XMEOUT Parameters: *applid, ip_address*

Destination: Console

DFHSO0119 *applid* **Unable to register service servicename for WLM DDNS on host hostname.**

Explanation: During activation of a TCPIP SERVICE, the Sockets Domain was unable to locate a TCP/IP hostname. Without a hostname, CICS cannot obtain the

information necessary for registration with WLM DDNS.

System action: TCPIP SERVICE activation continues, but this service is not registered with WLM DDNS.

User response: Determine why no hostname was returned. Message DFHSO0113 may have preceded this message. Once the problem has been rectified, re-install the TCPIP SERVICE.

Module: DFHSOLS

XMEOUT Parameters: *applid, servicename, hostname*

Destination: Console

DFHSO0120 *applid numtcbs* **TCBs are initialized for SSL processing.**

Explanation: The specified number (*numtcbs*) of TCBs have been attached and initialized to perform Secure Sockets Layer processing for CICS.

System action: CICS can handle *numtcbs* simultaneous SSL sessions.

User response: None.

Module: DFHSOSE

XMEOUT Parameters: *applid, numtcbs*

Destination: Console Routecodes 2 and 10

DFHSO0121 *applid* **No TCBs have been initialized for SSL processing. Secure Sockets Layer has been deactivated.**

Explanation: CICS requires at least one TCB to be successfully initialized to handle the TCP/IP Secure Sockets Layer, but it has been unable to initialize any.

System action: CICS cannot handle any SSL sessions, so attempts to open TCPIP SERVICES which specify SSL(YES) or SSL(CLIENTAUTH) will fail.

User response: The REGION size of the CICS address-space is probably too small to allow CICS Secure Sockets Layer to be initialized. Restart CICS with a larger REGION size. None.

Module: DFHSOSE

XMEOUT Parameter: *applid*

Destination: Console Routecodes 2 and 10

DFHSO0122 *date time applid* **SSL request from ipaddr on TCPIP SERVICE(service) rejected because of insufficient TCBs.**

Explanation: An Secure Sockets Layer connection from a client with address *ipaddr* was received on TCPIP SERVICE(service), but there were no available TCBs to process the request.

System action: The socket for the connection is closed. No message is sent to the client because the

client expects the response to be encrypted by SSL, but SSL services cannot be provided.

User response: If this message occurs frequently, consider raising the value of the MAXSSLTCBS system initialization parameter.

Module: DFHSOISE

XMEOUT Parameters: *date, time, applid, ipaddr, service*

Destination: CSOO

DFHSO0123 *date time applid* **Return code rc received from function '{unknown | gsk_environment_init | lgsk_environment_open | gsk_environment_close | gsk_secure_socket_init | gsk_secure_socket_open | lgsk_secure_socket_close | gsk_secure_socket_read | gsk_secure_socket_write | lgsk_attribute_set_buffer | gsk_attribute_set_callback | gsk_attribute_set_enum | lgsk_attribute_set_numeric_value}' of System SSL. Reason:** {Unrecognized return code | Key database not found | Key database access not authorized | Invalid password for key database | Expired password for key database | Stashed password file not found | Session timeout value is invalid | An I/O error occurred | An unknown error occurred | Invalid distinguished name | No common ciphers negotiated | No certificate available | Server certificate rejected by client | Root certificate authority not supported | Unsupported operation | Invalid certificate signature | SSL protocol violation | Not authorized | Self-signed certificate | Invalid session state | Handle creation failed | No private key | Untrusted Certificate Authority | Certificate date invalid | Invalid cipher suite | Handshake abandoned by client | Cannot open key database | Host certificate not yet valid | Certificate parsing error | Certificate is revoked | LDAP server is inactive | Unknown Certificate Authority}. **Client:** *clientaddr*, **TCPIP SERVICE:** *tcpipservice*.

Explanation: A non-zero return code *rc* was received from the specified function of the OS/390 System SSL service. A brief interpretation of the return code is shown. The service was processing a connection from a client at IP address *clientaddr* to TCPIP SERVICE *tcpipservice*.

System action: The secure sockets operation is abandoned. A sockets domain severe error message, DFHSO0002, may be produced with error code X'080C'.

User response: If this message is not accompanied by message DFHSO0002, the error is probably due to some unexpected action by the connected client, and this message is for information only. If this message is accompanied by message DFHSO0002, the error is probably due to some sort of configuration error. Use the description in the message to determine what is wrong. For descriptions of the return code *rc*, see the *OS/390 System SSL Programming Guide and Reference*, SC24-5877. For further guidance see the *CICS Internet Guide*. If the brief interpretation of the return code is *Certificate date invalid* the certificate may either have expired or be not yet valid, and may refer to either the host or client certificate.

Module: DFHSOISE

XMEOUT Parameters: *date, time, applid, rc, {0=unknown, 11=gsk_environment_init, 12=gsk_environment_open, 13=gsk_environment_close, 14=gsk_secure_socket_init, 15=gsk_secure_socket_open, 16=gsk_secure_socket_close, 17=gsk_secure_socket_read, 18=gsk_secure_socket_write, 19=gsk_attribute_set_buffer, 20=gsk_attribute_set_callback, 21=gsk_attribute_set_enum, 22=gsk_attribute_set_numeric_value}, {0=Unrecognized return code, 1=Key database not found, 2=Key database access not authorized, 3=Invalid password for key database, 4=Expired password for key database, 5=Stashed password file not found, 6=Session timeout value is invalid, 7=An I/O error occurred, 8=An unknown error occurred, 16=Invalid distinguished name, 17=No common ciphers negotiated, 18=No certificate available, 19=Server certificate rejected by client, 20=Root certificate authority not supported, 21=Unsupported operation, 22=Invalid certificate signature, 23=SSL protocol violation, 24=Not authorized, 25=Self-signed certificate, 26=Invalid session state, 27=Handle creation failed, 28=No private key, 29=Untrusted Certificate Authority, 30=Certificate date invalid, 31=Invalid cipher suite, 32=Handshake abandoned by client, 33=Cannot open key database, 34=Host certificate not yet valid, 35=Certificate parsing error, 36=Certificate is revoked, 37=LDAP server is inactive, 38=Unknown Certificate Authority}, clientaddr, tcpipservice*

Destination: CSOO

DFHSO0124 *applid* **The MAXSOCKETS system initialization parameter has a value of mmmmm which exceeds the MAXFILEPROC value of nnnnn. The MAXSOCKETS value has been set to the lower value.**

Explanation: The value specified in the MAXSOCKETS system initialization parameter is greater than the value specified in the z/OS UNIX System Services MAXFILEPROC option.

CICS has attempted to set the MAXSOCKETS value higher than the MAXFILEPROC value, but has been

unable to do so because the userid under which CICS is running does not have superuser authority.

System action: CICS continues execution with the MAXSOCKETS value set equal to the MAXFILEPROC value.

User response: You may

- Restart CICS with a value of MAXSOCKETS that does not exceed MAXFILEPROC. This will limit the number of sockets that CICS can have active at one time.
- Increase the MAXFILEPROC value and then restart CICS. This will affect all z/OS UNIX System Services processes in this system.
- Restart CICS with a userid that has superuser authority.

Module: DFHSOIS

XMEOUT Parameters: *applid, mmmmm,nnnnn*

Destination: Console

DFHSO0125 *applid* **The MAXSOCKETS parameter retrieved from the catalog has a value of *mmmmm* which exceeds the MAXFILEPROC value of *nnnnn*. The MAXSOCKETS value has been set to the lower value.**

Explanation: The value of the MAXSOCKETS system initialization parameter retrieved from the catalog during a warm or emergency restart is greater than the value specified in the z/OS UNIX System Services MAXFILEPROC option.

CICS has attempted to set the MAXSOCKETS value higher than the MAXFILEPROC value, but has been unable to do so, because the userid under which CICS is running does not have superuser authority.

This situation may arise when

- CICS was previously running under a userid that had superuser authority, but has restarted under a different userid
- CICS was previously running under a userid that had superuser authority, but the authority was changed before CICS restarted
- CICS was previously running under a userid that did not have superuser authority, and the value of MAXFILEPROC was reduced before CICS restarted.

System action: CICS continues execution with the MAXSOCKETS value set equal to the MAXFILEPROC value.

User response: You may

- Restart CICS with a value of MAXSOCKETS that does not exceed MAXFILEPROC. This will limit the number of sockets that CICS can have active at one time.

- Increase the MAXFILEPROC value and then restart CICS. This will affect all z/OS UNIX System Services processes in this system.
- Restart CICS with a userid that has superuser authority.

Module: DFHSOIS

XMEOUT Parameters: *applid, mmmmm,nnnnn*

Destination: Console

DFHSO0126W *applid* **An attempt to create a socket has failed because the MAXSOCKETS limit has been reached.**

Explanation: An attempt to create a tcpip socket has failed as the number of open sockets in the system would exceed the current MAXSOCKETS value.

System action: The socket is not opened and failure is reported.

User response: If this behaviour is undesirable, use CEMT SET TCPIP to increase the number of sockets in the system.

Module: DFHSOMG

XMEOUT Parameter: *applid*

Destination: Console

DFHSO0128A *applid* **Information to specify a bind to an LDAP server cannot be obtained from the PROXY segment of CRLPROFILE profile.**

Explanation: The CRLPROFILE system initialization parameter has been specified, but the information required by CICS and System SSL to perform a bind to an LDAP server cannot be obtained from the profile that it identifies.

CICS has attempted to extract the following information from the PROXY segment of the profile *profile* in the LDAPBIND class of the external security manager's database

LDAPHOST

The Uniform Resource Locator (URL) of an LDAP server that contains certificate revocation information

BINDDN

The LDAP distinguished name of a user who is authorized to access certificate revocation lists in the specified LDAP server

BINDPW

The password used to authenticate the user specified by BINDDN.

Either the specified profile does not exist, or CICS does not have authority to access the profile, or one or more of the required components are missing from the profile.

System action: The CICS SSL function cannot retrieve certificate revocation lists to determine whether certificates have been revoked. To prevent further error messages, the CRLPROFILE function has been disabled. Therefore CICS will be unable to check whether SSL certificates are revoked.

User response: Ensure that the *profile* profile in the LDAPBIND class of the security manager is defined with a PROXY segment that contains all three required components. Also ensure that the CICS region userid had READ access to the profile, then restart CICS.

Module: DFHSOSE

XMEOUT Parameters: *applid, profile*

Destination: Console Routecodes 2, 9 and 10

DFHSO0129A *applid* **The LDAP server whose name was obtained from CRLPROFILE is inactive. Certificate revocation checks have been disabled.**

Explanation: The LDAP server, whose name was obtained from the PROXY segment of the external security manager's profile specified by the CRLPROFILE system initialization parameter, cannot be accessed.

System action: The CICS SSL function cannot retrieve certificate revocation lists to determine whether certificates have been revoked. To prevent further error messages, the CRLPROFILE function has been disabled. CICS will not make any further attempts to acquire certificate revocation lists from the LDAP server. Therefore CICS will be unable to check whether SSL certificates are revoked.

User response: To re-enable certificate revocation list checking, the LDAP server specified within the CRLPROFILE must be restarted. All CICS systems, that specify a CRLPROFILE definition that references this server, must then also be restarted.

Module: DFHSOSE

XMEOUT Parameter: *applid*

DFHSRnnnn messages

DFHSR0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in program *progrname*.**

Explanation: An abnormal end (abend) or program check has occurred in program *progrname*. Storage protection is active, and CICS was executing in USER key at the time of the abend or program check.

The code *aaa* is a three digit hexadecimal MVS system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The four digit code *bbbb*, which follows *aaa*, is a user abend code, produced either by CICS or by

Destination: Console Routecodes 2, 9 and 10

DFHSO0131 *date time applid* **The TCPIP SERVICE *tcpipservice* cannot be opened on the IP address *ipaddress* because the maximum number of ports has been reached.**

Explanation: Opening the TCPIP SERVICE has failed because the maximum number of ports allowed has been reached.

This message is issued when the TCP/IP bind call fails with the return value of EADDRNOTAVAIL and reason code X'744C7231.

System action: The request to open the TCPIP SERVICE will fail until a port becomes available.

User response: The request should be retried when a port is available.

Module: DFHSOCK

XMEOUT Parameters: *date, time, applid, tcpipservice, ipaddress*

Destination: CSOO

DFHSO0132 **An invalid function has been passed to DFHSOLX.**

Explanation: An internal error has been detected in the Socket TCPIP exit program. The function passed to DFHSOLX could not be recognised.

System action: CICS issues this message which could be used to trap the error and take a dump for further diagnosis.

User response: You may need further assistance from IBM to solve this problem.

Module: DFHSOLX

Destination: Console

another product on the user's system. Message DFHME0116 should be produced containing the symptom string for this problem.

System action: An exception trace entry is made giving details of the error. System dump SR0001 is taken unless you have specifically suppressed dumps for that dumpcode in the dump table.

CICS continues and abends the transaction, unless you have specified in the dump table that CICS should terminate. The transaction abend code is ASRA, ASRB, ASRD or ASRE.

User response: As the execution key was USER key,

modname is probably a customer application program. Review this program and correct the error.

Note that if the error was an 0C4 program check caused by an attempt to overwrite a CICS DSA, the exception trace entry indicates which DSA the program attempted to overwrite. If this is the case, also refer to the explanation for message DFHSR0622.

For advice on problem determination, refer to the *CICS Problem Determination Guide*.

Report the details of the symptom string given in message DFHME0116. It will aid problem determination.

If you want to suppress system dumps that precede ASRA, ASRB, ASRD or ASRE abends when the execution key is USER, you must specify this on an entry in the dump table for system dumpcode SR0001. Use either CEMT or an EXEC CICS command. Further guidance on this can be found in the *CICS System Definition Guide*.

Module: DFHSRP

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', progname*

Destination: Console

DFHSR0601 *applid* Program interrupt occurred with system task *taskid* in control

Explanation: A program check has been detected in a system task. *taskid* is the system task identifier (for example, TCP, III) as set in field TCAKCTTA.

System action: CICS abnormally terminates with system dump SR0601 and an exception trace entry which gives the kernel error data for the program check.

User response: Use the dump to determine the cause of the program check. The most likely causes are either an error in a CICS module, or an error in a user-written PLT program.

For advice on problem determination, refer to the *CICS Problem Determination Guide*.

Module: DFHSRP

XMEOUT Parameters: *applid, taskid*

Destination: Console

DFHSR0602 *applid* Program interrupt routine has been entered while processing program interrupt for same task

Explanation: A program check occurred. CICS started to abend the task with an abend code of ASRA when another program check occurred. As this is a potentially recursive situation, DFHSRP terminates CICS.

System action: CICS abnormally terminates with system dump SR0602 and exception trace entries giving the kernel error data for each program check.

User response: Try to discover where and why the first program check occurred. The most likely cause is an error in the application program. The second program check may be due to a CICS error while terminating the task.

For advice on problem determination, refer to the *CICS Problem Determination Guide*.

Module: DFHSRP

XMEOUT Parameter: *applid*

Destination: Console

DFHSR0603 *applid* Program interrupt has occurred

Explanation: A program check occurred, and CICS did not attempt to recover, because SRT=NO was specified in the system initialization table or by the operator at start-up time.

System action: CICS abnormally terminates with system dump SR0603 and an exception trace entry giving the kernel error data for the program check.

User response: Initially, check that the specification of SRT=NO is correct. If it is incorrect, change it as described in the *CICS System Definition Guide*.

For advice on problem determination, refer to the *CICS Problem Determination Guide*.

Module: DFHSRP

XMEOUT Parameter: *applid*

Destination: Console

DFHSR0605 *applid* Error from KE Domain - DFHSRP initialization

Explanation: Module DFHSRP has detected a severe error during the initialization phase of CICS. It is unlikely that any recovery functions can run until the error is found and corrected.

System action: CICS abnormally terminates with system dump SR0605.

User response: Use the dump to determine, if possible, the cause of the problem and what must be done to correct it.

For advice on problem determination, refer to the *CICS Problem Determination Guide*.

Module: DFHSRP

XMEOUT Parameter: *applid*

Destination: Console

DFHSR0606 *applid* Abend (code *aaa/bbbb*) has been detected.

Explanation: DFHSRP has detected an abnormal termination which CICS is not able to handle fully (for example, the abend code cannot be found in the SRT). In this instance it is the CICS system and not merely a transaction, that has abnormally terminated.

The code *aaa* is a three digit hexadecimal MVS system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The four digit code *bbbb*, which follows *aaa*, is a user abend code produced either by CICS or by another product on the user's system.

System action: CICS abnormally terminates. A system dump (dumpcode SR0606) can be taken with this message depending on the abend code. An exception trace entry is produced giving the kernel error data for the abend.

User response: Use the dump to determine the abnormal termination, and to investigate its cause.

Module: DFHSRP

XMEOUT Parameters: *applid*, *aaa/bbbb*

Destination: Console

DFHSR0612 *applid* Abend recovery has been entered by same task

Explanation: An operating system abnormal termination occurred. CICS started to abend the task with abend code ASRB when another operating system abnormal termination occurred. As this is a potentially recursive situation, DFHSRP terminates CICS.

System action: CICS abnormally terminates with system dump SR0612 and exception trace entries giving the kernel error data for each operating system abend.

User response: The most likely cause of the second operating system abend is an error in a global user exit program running at the XSRAB exit. This is the global user exit that can be invoked when an abend code is found in the SRT. If such a program was running, determine the cause of the second abend and take steps to prevent a recurrence.

Note that this message will also be issued if a global user exit program running at the XSRAB exit gets into a loop (runaway), or issues an unknown XPI call (kernerror). The second exception trace entry should help to diagnose this.

For advice on problem determination, see the *CICS Problem Determination Guide*.

Module: DFHSRP

XMEOUT Parameter: *applid*

Destination: Console

DFHSR0613 *applid* Abend has occurred with system task *taskid* in control

Explanation: An operating system abnormal termination has been detected in a system task. *taskid* is the system task identifier (for example, TCP, III) as set in field TCAKCTTA.

System action: CICS abnormally terminates with system dump SR0613 and an exception trace entry giving the kernel error data for the operating system abend.

User response: Use the dump to determine the cause of the abend, and take action to correct it.

For advice on problem determination, see the *CICS Problem Determination Guide*.

Module: DFHSRP

XMEOUT Parameters: *applid*, *taskid*

Destination: Console

DFHSR0615 *applid* Program interrupt has occurred in recovery task

Explanation: An operating system abnormal termination occurred. CICS started to abend the task with an abend code of ASRB when a program check occurred. DFHSRP terminates CICS.

System action: CICS abnormally terminates with system dump SR0615 and exception trace entries giving the kernel error data for the operating system abend and the program check.

User response: The most likely cause of the program check is an error in a global user exit program running at the XSRAB exit. This is the global user exit that can be invoked when an abend code is found in the SRT. If such a program was running, determine the cause of the program check and correct it.

For advice on problem determination, refer to the *CICS Problem Determination Guide*.

Module: DFHSRP

XMEOUT Parameter: *applid*

Destination: Console

DFHSR0618 *applid* An illegal macro call or reference to the CSA or TCA has caused the abend which follows

Explanation: A user program was executing which either contains an assembler macro which is no longer supported, or refers illegally to the CICS TCA or CSA. This error appears as an 0C4 program check.

System action: **Either** The transaction abends with abend code ASRD. This message is followed by message DFHAP0001 or DFHSR0001 which gives the name of the program in error and the offset into that

program at which the error occurred.

Or This is a critical error and CICS is terminated. This message is followed by a DFHSR06xx message giving the reason for the termination.

User response: Review the program and correct the error.

If the error is in the module DFHUEHC, ensure that UEPCSA and UEPTCA are not being used because these reference fetch-protected storage.

Ensure the program is not using field CSAQRTCA (previously named CSACDTA) as this references fetch-protected storage.

For advice on problem determination, refer to the *CICS Problem Determination Guide*.

Module: DFHSRP

XMEOUT Parameter: *applid*

Destination: Console

DFHSR0619 *date time applid* **An illegal reference to the RCT has caused the abend which follows.**

Explanation: A user program was executing and referred illegally to the RCT. This error appears as an 0C4 program check.

System action: The transaction abends with abend code ASRE. This message is followed by message DFHAP0001 or DFHSR0001 which gives the name of the program in error and the offset into that program at which the error occurred.

User response: Review the program and correct the error by using the CICS supplied SPI commands to retrieve data from the RCT.

For advice on problem determination, refer to the *CICS Problem Determination Guide*.

Module: DFHSRP

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CDB2

DFHSR0622 *applid* **An attempt to {*overwrite* *access*} the *dsaname* has caused the abend which follows**

Explanation: An 0C4 program interrupt (protection exception) has occurred. CICS has diagnosed the cause of the 0C4 as an attempt to either *access* or *overwrite* storage in DSA *dsaname*. The DSA is one of CDSA, RDSA, UDSA, ECDSA, ERDSA or EUDSA for *overwrite*, or either UDSA or EUDSA for *access*.

If *dsaname* is CDSA or ECDSA

CICS is running with storage protection active. Both the CDSA and the ECDSA therefore

contain CICS key storage. They are write protected from user programs executing in User key. The most likely causes of the 0C4 are

- A program executing in CICS key passed the address of CICS key storage in the CDSA or ECDSA to a user program executing in User key and this user program attempted to write to this storage.
- A user program executing in User key contains an error and accidentally attempted to write to CICS key storage in the CDSA or ECDSA.
- A user program executing in User key deliberately attempted to write to CICS key storage in the CDSA or ECDSA.

If *dsaname* is ERDSA or RDSA

CICS may be running with or without storage protection active. The ERDSA or RDSA contains only reentrant CICS and user programs. If RENTPGM=PROTECT was specified as a system initialization parameter, the ERDSA or RDSA is write protected from programs executing in both CICS key and User key. If RENTPGM=NOPROTECT, the ERDSA or RDSA is only protected from user programs executing in User key. The most likely causes of the 0C4 are

- A user program residing in the ERDSA or RDSA has attempted to modify its own storage, (that is, the program is not reentrant).
- A user program contains an error and accidentally attempted to overwrite program storage in the ERDSA or RDSA.

If *dsaname* is EUDSA or UDSA

CICS is running with both storage protection and transaction isolation active. The EUDSA and UDSA contain only USER key non-shared storage. The most likely causes of the 0C4 are

- If the action is *overwrite*, a program has attempted to modify the non-shared storage belonging to another transaction.
- If the action is *access*, a program has attempted to either read storage or execute an instruction within another transaction's non-shared storage.

System action: **Either**, the transaction abends with abend code ASRA. This message is followed by message DFHAP0001 or DFHSR0001 which gives the name of the program in error and the offset into that program at which the error occurred. Additionally, an exception trace entry is taken which gives program, offset, execution key and the DSA in question.

Or, this is a critical error and CICS is terminated. This message is followed by a DFHSR06xx message giving the reason for the termination.

User response: Depending on the cause and

dsaname, do one of the following

- Correct any error in the program.
- Redefine transactions with ISOLATE(NO) where they have to share storage.
- Change the program resource definition so that it executes in CICS key (and the basespace).
- Ensure that the program is not loaded into the ERDSA by not link-editing it with the RENT option.

Module: DFHSRP

XMEOUT Parameters: *applid*, {1=*overwrite*, 2=*access*}, *dsaname*

Destination: Console

DFHSTnnnn messages

DFHST0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code.

Alternatively, unexpected data has been input, or storage has been overwritten. There is NO *applid* for DFHSTUP modules.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table.

For modules DFHSTST and DFHSTTI, a dump is taken and the collection interval is set to 24 hours. Message DFHST0101 is also issued.

For module DFHSTDM, the action depends on the initialization error action value which is used by the domain (DM) manager. The usual action is to terminate CICS with a dump.

For module DFHSTUE, processing continues.

For modules DFHSTWR, DFHSTRD, and DFHSTUx (modules within DFHSTUP), the job step is terminated with a dump.

For ALL modules, a system dump is taken, unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the *OS/390 MVS System Codes* manual. Then look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, a runaway or a recovery percolation, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSTST, DFHSTDM, DFHSTTI, DFHSTUE, DFHSTUx (Modules within DFHSTUP), DFHSTWR, DFHSTRD

XMEOUT Parameters: *applid*, *aaa/bbbb*, *X'offset'*, *modname*

Destination: Console

DFHST0002 *applid* A severe error (code *X'code'*) has occurred in module *modname*.

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS will continue unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Inform the system programmer. This indicates a possible error in CICS code. The severity of its impact will depend on the importance of the function being executed at the time of the error.

For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

CICS may not have been terminated. If the message

occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSTST, DFHSTDM, DFHSTTI, DFHSTUE

XMEOUT Parameters: *applid, X'code',modname*

Destination: Console

DFHST0003 *applid* **Insufficient storage to satisfy GETMAIN (code X'code') in module *modname*.**

Explanation: A CICS GETMAIN was issued by module *modname*, but there was insufficient storage available to satisfy the request. The code X'code' is the exception trace point id which uniquely identifies the place where the error was detected. This error has occurred above the 16MB line.

System action: An exception entry is made in the trace table (code X'code' in the message). A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Inform the system programmer. If CICS has been terminated by another module, look out for the relevant termination messages (from, for example, the domain manager), and look up the user response suggested for these messages.

If CICS is still running, the problem may be a temporary one which will right itself if more storage becomes available. If you can manage without module *modname*, you may decide to continue and bring CICS down at a convenient time to resolve the problem. If the message recurs or if you cannot run without the full use of all CICS modules, you should bring CICS down in a controlled shutdown.

Try increasing the size limits of the DSAs or EDSAs. If CICS is not already terminated, you need to bring CICS down to do this. See the *CICS System Definition Guide* or the *CICS Performance Guide* for further information on CICS storage.

Module: DFHSTDM

XMEOUT Parameters: *applid, X'code',modname*

Destination: Console

DFHST0004 *applid* **A possible loop has been detected at offset X'offset' in module *modname*.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset X'offset'. This is the offset of the instruction which was executing at the time the error was detected.

Note that no *applid* is included for DFHSTUP modules.

System action: An exception entry is made in the trace table.

For modules DFHSTST and DFHSTTI, a system dump is taken and the collection interval is set to 24 hours. Message DFHST0101 will also be issued.

For module DFHSTDM, the action depends on the initialization error action value which is used by the domain (DM) manager. The usual action will be to terminate CICS with a dump.

For module DFHSTUE, processing continues.

For modules DFHSTWR, DFHSTRD, and DFHSTUx (modules within DFHSTUP), the job step is terminated with a dump.

For ALL modules, a system dump is taken, unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of CPU time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you will have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname*, and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

DFHST0005 • DFHST0201S

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSTST, DFHSTDM, DFHSTTI, DFHSTUE, DFHSTUx (Modules within DFHSTUP), DFHSTWR, DFHSTRD

XMEOUT Parameters: *applid, X'offset', modname*

Destination: Console

DFHST0005 *applid* **A hardware error has occurred (module *modname*, code *X'code*). The Time-of-Day clock is invalid.**

Explanation: Execution of the STCK machine instruction resulted in a non-zero condition code.

System action: A system dump is taken and interval collections are cancelled. Message DFHST0102 is also issued.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. This is in all probability a hardware error and you should in the first instance investigate the MVS Store Clock and find out whether it is working properly. If this is the cause, you should take the appropriate action to have it repaired or replaced.

In the unlikely event that this is not a hardware problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSTST, DFHSTDM

XMEOUT Parameters: *applid, modname, X'code'*

Destination: Console

DFHST0101I *applid* **The Statistics Domain has set the collection interval to 24 hours.**

Explanation: A problem has been detected by, or has been passed back to, the statistics (ST) domain. As a result, the collection interval has been set to the maximum value. The end-of-day collection time is unchanged.

A message explaining the problem has already been issued by the module in error.

System action: Other processing continues.

User response: Refer to the associated message for guidance on resolving the original problem.

Use CEMT SET STATISTICS to reset the interval when the problem has been resolved.

Module: DFHSTST, DFHSTDM, DFHSTTI

XMEOUT Parameter: *applid*

Destination: Console

DFHST0102I *applid* **The Statistics Domain has cancelled interval collections.**

Explanation: A problem has been detected by, or has been passed back to, the statistics (ST) domain. A message explaining the problem may have already been issued by the module in error.

To reduce the occurrence of this problem, the interval collections have been cancelled. The end-of-day collection time is unchanged.

System action: Other processing continues.

User response: Refer to any associated message for guidance on resolving the original problem.

If no associated message has been issued, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSTST, DFHSTDM, DFHSTTI

XMEOUT Parameter: *applid*

Destination: Console

DFHST0103 *applid* **An SMF error has occurred with return code *X'rc'*.**

Explanation: SMF has returned to the statistics (ST) domain with an error return code *X'rc* from the SMFEWTM macro.

System action: Other CICS processing continues.

User response: Refer to the *OS/390 MVS System Management Facility (SMF)* manual for a detailed explanation of the meaning of the return code.

Module: DFHSTST

XMEOUT Parameters: *applid, X'rc'*

Destination: Console

DFHST0201S **An attempt to open the statistics data set has failed.**

Explanation: DFHSTUP has tried to open the unloaded SMF data set but has failed.

System action: A dump is taken and the job step is terminated.

User response: Ensure that the JCL for the job is correct. A sample set of JCL to execute the DFHSTUP utility is contained in the *CICS Operations and Utilities Guide*.

If incorrect JCL is not the cause of the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSTRD

Destination: SYSPRINT

DFHST0202S A read error on the statistics data set has occurred

Explanation: A read error was encountered on the unloaded SMF data set.

System action: A dump is taken and the job step is terminated.

User response: Inform the system programmer. First check that the JCL for the job is correct. A sample set of JCL to execute the DFHSTUP utility is contained in the *CICS Operations and Utilities Guide*. Resubmit the job.

Module: DFHSTRD

Destination: SYSPRINT

DFHST0203W The statistics data set is empty.

Explanation: An end-of-file condition was detected during the first attempt to read the unloaded SMF data set, or the unloaded SMF dataset contained no CICS statistics from any CICS system.

System action: The job step is terminated.

User response: The most likely cause is an error in the JCL which unloads the SMF dataset. First check that the JCL is correct. A sample set of JCL to unload the SMF dataset is contained in the *CICS Operations and Utilities Guide*. Also check that you have unloaded the correct SMF dataset. Resubmit the job.

Module: DFHSTIN

Destination: SYSPRINT

DFHST0204S Invalid record id encountered on the statistics data set.

Explanation: An invalid record identifier *recid* has been encountered in the unloaded SMF data set.

System action: A dump is taken and the job step is terminated.

User response: Check that the unloaded SMF data set contains statistics records. CICS statistics records are of SMF record type 110, sub-type 2. For further information, see the *CICS Data Areas*.

If the SMF data set does contain statistics records, the most likely cause of the problem is a corrupted SMF dataset. Unload the SMF dataset again and rerun the DFHSTUP utility. If the problem persists, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSTUx (modules within DFHSTUP)

Destination: SYSPRINT

DFHST0206S An invalid parameter () has been specified for the DFHSTUP utility.

Explanation: One or more of the parameters specified in the SYSIN data set were incorrect.

System action: The job step is terminated.

User response: Correct the erroneous parameter as identified in the message and resubmit the job.

Module: DFHSTUP1

Destination: SYSPRINT

DFHST0207W An incomplete data record has been encountered on the statistics data set.

Explanation: A record input from the unloaded SMF data set specifies that the data it contains is incomplete.

System action: Processing continues.

User response: For an incomplete data record to have been encountered, there must have been an error in the running of CICS. This should result in an exception trace and perhaps a dump being issued.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSTUx (modules within DFHSTUP)

Destination: SYSPRINT

DFHST0208S An attempt to open the SYSIN data set has failed.

Explanation: DFHSTUP has tried to open the SYSIN data set but has failed.

System action: A dump is taken and the job step is terminated.

User response: Ensure that the JCL for the job is correct. A sample set of JCL to execute the DFHSTUP utility is contained in the *CICS Operations and Utilities Guide*.

If incorrect JCL is not the cause of the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSTRD

Destination: SYSPRINT

DFHST0209S A read error on the SYSIN data set has occurred.

Explanation: A read error was encountered on the SYSIN data set.

System action: A dump is taken and the job step is terminated.

User response: Inform the system programmer.

To resolve the problem, collect the dumps and any relevant messages and determine why the read failed. Resubmit the job.

Module: DFHSTRD

Destination: SYSPRINT

DFHST0210I No statistics are available for applid *applid*.

Explanation: No statistics data records exist for applid *applid* in the unloaded SMF data set. This is because

- Applid *applid* is unknown, or
- You have unloaded the wrong SMF data set, or
- You have specified a COLLECTION TYPE= parameter for which applid *applid* has no statistics, or
- No CICS statistics records were written for applid *applid*.

System action: The job step continues.

User response: Check that you have specified the correct applid. If necessary, respecify the correct applid. Check that you have unloaded the correct SMF data set. If necessary, unload the correct SMF data set. If you have specified the correct applid and unloaded the correct SMF data set, then there are no statistics data records for applid *applid*.

Module: DFHSTUP1

Destination: SYSPRINT

DFHST0211S Processing terminated. Getmain failed with a short on storage condition.

Explanation: The DFHSTUP utility detected an error from a GETMAIN macro while obtaining working storage. This was because DFHSTUP had exhausted the available storage.

System action: A dump is taken and the job step terminates.

User response: Check that you have specified the correct REGION size on the EXEC JCL command used to execute the DFHSTUP utility. A sample set of JCL to execute the DFHSTUP utility is contained in the *CICS Operations and Utilities Guide*.

If you have specified the correct REGION size, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: All DFHSTUP modules

Destination: SYSPRINT

DFHST0212S Processing terminated. DFSORT message dataset (DD=SYSOUT) is missing.

Explanation: The dataset used by the DFSORT utility to output its messages is missing.

System action: A dump is taken and the job step is terminated.

User response: Check the JCL used to execute the DFHSTUP utility to ensure that the SYSOUT DD was correctly specified. A sample set of JCL to execute the DFHSTUP utility is contained in the *CICS Operations and Utilities Guide*.

If you have specified the correct SYSOUT DD statement, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSTUP1

Destination: SYSPRINT

DFHST0213S Processing terminated. Error detected by DFSORT. Check DFSORT messages.

Explanation: An error was detected by the DFSORT utility and the DFHSTUP utility terminated.

System action: A dump is taken and the job step is terminated.

User response: The user must inspect the DFSORT message dataset and search for messages indicating the reason for the failure of the DFSORT utility. A detailed explanation of the messages produced by DFSORT can be found in the *DFSORT Application Programming Guide* (SC33-4035).

After analyzing the DFSORT error message, take the appropriate corrective actions and resubmit the job.

Module: DFHSTUP1

Destination: SYSPRINT

DFHST0214S Processing terminated. Failure to obtain system time and date.

Explanation: The DFHSTUP utility was unable to obtain the system time and date from the CICS kernel.

System action: A dump is taken and the job step is terminated.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSTUP1

Destination: SYSPRINT

DFHST0216W An incompatible statistics record version number , was detected by module .

Explanation: The statistics utility program has detected that a statistics record has a version number which is incompatible with the version number expected by the DFHSTUP utility.

System action: The statistics record containing the invalid version number is ignored. Statistics records immediately following which are of the same type and which also contain an invalid version number are also ignored. Processing continues.

User response: Obtain a dump of the SMF data set. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: All DFHSTUP modules.

Destination: SYSPRINT

DFHST0217S An attempt to open the DFHSTWRK data set has failed.

Explanation: The statistics utility program has detected an error while attempting to open the DFHSTWRK data set during non-summary statistics processing.

System action: The statistics utility program ends abnormally.

User response: Ensure that the DFHSTWRK data set has been specified on the job, and that the attributes of the data set are correct.

Module: DFHSTU17

Destination: SYSPRINT

DFHST0218S A write error has occurred on the DFHSTWRK data set.

Explanation: The statistics utility program has detected an error while attempting to write to the DFHSTWRK data set during non-summary statistics processing.

System action: The statistics utility program ends abnormally.

User response: Ensure that the DFHSTWRK data set has been specified on the job, that the attributes of the data set are correct, and that the data set is large enough.

Module: DFHSTU17

Destination: SYSPRINT

DFHST0219S A read error has occurred on the DFHSTWRK data set.

Explanation: The statistics utility program has detected an error while attempting to read from the DFHSTWRK data set during non-summary statistics processing.

System action: The statistics utility program ends abnormally.

User response: Check that the DFHSTWRK data set has been specified on the job, that the attributes of the data set are correct, and that the data set is large enough.

Module: DFHSTU17

Destination: SYSPRINT

DFHST0220S An attempt to open the DFHSTWRK data set has failed.

Explanation: The statistics utility program has detected an error while attempting to open the DFHSTWRK data set while processing summary statistics.

System action: The statistics utility program ends abnormally.

User response: Check that the DFHSTWRK data set has been specified on the job, and that the attributes of the data set are correct.

Module: DFHST17X

Destination: SYSPRINT

DFHST0221S A write error has occurred on the DFHSTWRK data set.

Explanation: The statistics utility program has detected an error while attempting to write to the DFHSTWRK data set during summary statistics processing.

System action: The statistics utility program ends abnormally.

User response: Check that the DFHSTWRK data set has been specified on the job, that the attributes of the data set are correct, and that the data set is large enough.

Module: DFHST17X

Destination: SYSPRINT

DFHST0222S A read error has occurred on the DFHSTWRK data set.

Explanation: The statistics utility program has detected an error while attempting to read from the DFHSTWRK data set during summary statistics processing.

DFHST0223I • DFHST0230E

System action: The statistics utility program ends abnormally.

User response: Check that the DFHSTWRK data set has been specified on the job, that the attributes of the data set are correct, and that the data set is large enough.

Module: DFHST17X

Destination: SYSPRINT

DFHST0223I There are no data table statistics to report.

Explanation: The file subsection of the DFHSTUP report entitled 'Data Table Requests Information' only contains formatted information if the data currently being processed contains statistics records for files accessed as data tables. This message is written to the DFHSTUP report, when the utility program detects that there are no data table statistics in this section of the statistics report.

System action: Processing continues normally.

User response: Take no action unless you expect data table statistics in the DFHSTUP report. In this case, ensure that the data tables feature is in use during the time period covered by the statistics being processed.

Module: DFHSTU17, DFHST17X

Destination: SYSPRINT

DFHST0224I There are no intrapartition queues to report.

Explanation: The transient data subsection of the DFHSTUP report entitled 'Transient Data - Intrapartition' contains no data.

System action: Processing continues normally.

User response: Take no action unless you expect TD intrapartition statistics in the DFHSTUP report.

Module: DFHSTUTQ, DFHSTTQX

Destination: SYSPRINT

DFHST0225I There are no extrapartition queues to report.

Explanation: The transient data subsection of the DFHSTUP report entitled 'Transient Data - Extrapartition' contains no data.

System action: Processing continues normally.

User response: Take no action unless you expect TD extrapartition statistics in the DFHSTUP report.

Module: DFHSTUTQ, DFHSTTQX

Destination: SYSPRINT

DFHST0226I There are no indirect queues to report.

Explanation: The transient data subsection of the DFHSTUP report entitled 'Transient Data - Indirect' contains no data.

System action: Processing continues normally.

User response: Take no action unless you expect TD indirect statistics in the DFHSTUP report.

Module: DFHSTUTQ, DFHSTTQX

Destination: SYSPRINT

DFHST0227I There are no remote queues to report.

Explanation: The transient data subsection of the DFHSTUP report entitled 'Transient Data - Remote' contains no data.

System action: Processing continues normally.

User response: Take no action unless you expect TD remote statistics in the DFHSTUP report.

Module: DFHSTUTQ, DFHSTTQX

Destination: SYSPRINT

DFHST0228S An invalid extract parameter () has been specified for the DFHSTUP utility.

Explanation: One or more of the parameters on the extract command specified in the SYSIN data set were incorrect.

System action: The job step is terminated.

User response: Correct the erroneous parameter as identified in the message and resubmit the job.

Module: DFHSTUP1

Destination: SYSPRINT

DFHST0229W A duplicate extract command has been detected. Command ignored.

Explanation: A duplicate EXTRACT USERPROGRAM command has been detected.

System action: The duplicate command is ignored and the extract exit program specified on the first command is used. Processing continues.

User response: Remove the erroneous command.

Module: DFHSTUP1

Destination: SYSPRINT

DFHST0230E Unable to locate the extract library member *member*.

Explanation: The member is not in the libraries named in the JCL.

System action: The utility terminates processing of the command that required access to library member *member*.

User response: Ensure that the member is correctly link-edited into the library and resubmit the job.

Module: DFHSTUP

Destination: SYSPRINT

DFHST0231E Unable to load the extract library member *member*.

Explanation: DFHSTUP could not load the extract library member *member*.

System action: The utility terminates processing of the command that required access to the library member.

User response: Ensure that the member is correctly link-edited into the library and resubmit the job.

Module: DFHSTUP

Destination: SYSPRINT

DFHST0232S An abend (code *aaa/bbbb*) has occurred in extract exit program *modname*. Extract exit processing has been terminated.

Explanation: During processing of an EXTRACT command, a program check or abend *aaa/bbbb* has occurred in extract exit program *modname*.

The code *aaa/bbbb* is, if applicable, a 3-digit hexadecimal MVS system completion code *aaa* (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The 4-digit code *bbbb*, which follows *aaa* is, if applicable, a user abend code produced by the extract exit program. If the user abend code is not applicable, this field is filled with four hyphens.

System action: The EXTRACT command is terminated.

User response: For a program check, refer to prior messages to resolve the error in the extract exit program. For a user abend code consult the relevant documentation of the user exit program to determine the error.

Module: DFHSTUP

Destination: SYSPRINT

DFHST0233I DFHSTUP report suppressed. Report options requested only an EXTRACT user program to be invoked.

Explanation: No report was produced by DFHSTUP due to the fact that an EXTRACT exit program was specified and no other report options. DFHSTUP

invokes the exit program to process the statistics records and suppresses all its reporting

System action: EXTRACT processing continues.

User response: If a DFHSTUP report is required in addition to the report produced from the specified EXTRACT exit, specify the necessary DFHSTUP reporting options.

Module: DFHSTUP

Destination: SYSPRINT

DFHST0234S EXTRACT terminated at user's request RC=*retcode*.

Explanation: A batch job has issued a DFHSTUP utility EXTRACT command. The EXTRACT command has been terminated because of a non-zero value in register 15 on return from an extract user exit program.

System action: Execution of the utility EXTRACT command is terminated.

User response: Determine the cause of the error detected by the user exit program using the return code *retcode* provided and the relevant documentation of the user exit program.

Module: DFHSTUP

Destination: SYSPRINT

DFHST0235S An abend (code *aaa/bbbb*) has occurred in program *modname*.

Explanation: During processing of an DFHSTUP command, a program check or abend *aaa/bbbb* has occurred in module *modname*.

The code *aaa/bbbb* is, if applicable, a 3-digit hexadecimal MVS system completion code *aaa* (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The 4-digit code *bbbb*, which follows *aaa* is, if applicable, a Language Environment abend code. If the abend code is not applicable, this field is filled with four hyphens.

System action: The DFHSTUP command is terminated.

User response: Look up the MVS code, if there is one, in the *OS/390 MVS System Codes* manual. Look up the Language Environment abend code in the *Language Environment Debugging and Run-Time Messages* manual.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSTUP

Destination: SYSPRINT

DFHST0236I DFHSTUP has reached its reporting limit of 520 applids, subsequent applid reporting is now suppressed.

Explanation: DFHSTUP has reached its limit of 520 for the number of applids it can produce a report for. Reports for subsequent applids are suppressed.

System action: Processing continues.

User response: Consider reducing the number of applids in the statistics data.

Module: DFHSTOT

Destination: SYSPRINT

DFHSZnnnn messages

DFHSZ4001I *date time applid* **FEPI initialization has started.**

Explanation: The Front End Programming Interface (FEPI) is being initialized.

This means the CSZI transaction - FEPI - has started its processing. CSZI is started as part of CICS system initialization, if the system initialization parameter FEPI is set to YES.

If you specified FEPI=YES and this message does not appear during CICS initialization, CSZI failed to start; the most common reason for this is that group DFHFPEI is not included in the list specified by the GRPLIST system initialization parameter.

If message DFHSZ4001 is not followed by message DFHSZ4002, FEPI failed to start. In this case, a DFHSZnnnn message is issued to indicate the error.

System action: FEPI initialization proceeds.

User response: None.

Module: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CSZL

DFHSZ4003 to indicate what caused FEPI to terminate.

System action: EXEC CICS FEPI commands are made unavailable.

User response: Resolve the problem indicated by the messages, then restart CICS.

Module: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CSZL

DFHSZ4004E *date time applid* **FEPI cannot be started: FEPI=YES not specified in the SIT.**

Explanation: The Front End Programming Interface (FEPI) cannot be started because the FEPI system initialization parameter was set to NO indicating that FEPI is not required.

This message usually means that you attempted to start the FEPI transaction (CSZI) manually, but did not set up the correct environment for it to run.

System action: The FEPI transaction is not run.

User response: If you require FEPI in the CICS system, restart CICS specifying the system initialization parameter FEPI=YES. You do not need to start the FEPI transaction manually.

Module: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CSZL

DFHSZ4002I *date time applid* **FEPI initialization has ended.**

Explanation: The Front End Programming Interface (FEPI) has finished initialization.

System action: EXEC CICS FEPI commands are made available.

User response: None.

Module: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue CSZL

DFHSZ4005E *date time applid* **FEPI cannot be started: FEPI is already active, in state 'X'ssssssss'.**

Explanation: The Front End Programming Interface (FEPI) cannot be started because FEPI is already active in the system.

This message usually means that you attempted to start a new instance of FEPI manually by running the FEPI transaction (CSZI), but the previous instance of FEPI failed in some way that caused an 'active' indication to be left in error.

The possible FEPI states (X'ssssssss) are:

DFHSZ4003I *date time applid* **FEPI termination complete.**

Explanation: The Front End Programming Interface (FEPI) has ended.

A DFHSZnnnn message may precede message

State Meaning**X'00000002**

FEPI is being initialized

X'00000003

FEPI is active

X'00000004

FEPI is terminating as CICS is undergoing a normal shutdown

X'00000005

FEPI is terminating as CICS is undergoing an immediate shutdown

X'00000006

FEPI is terminating as CICS is undergoing an abnormal shutdown

System action: The request to start a new instance of FEPI is rejected.**User response:** If the state suggests that a previous instance of FEPI failed, you must restart CICS to resolve the problem. You do not need to start the FEPI transaction manually.**Module:** DFHSZRMP(DFHSZSIP)**XMEOUT Parameters:** *date, time, applid, X'ssssssss'***Destination:** Console and Transient Data Queue CSZL**DFHSZ4006E** *date time applid* **FEPI initialization failed: enqueue failure, code X'rr'.****Explanation:** The Front End Programming Interface (FEPI) cannot be initialized because an attempt to enqueue on the FEPI enqueue name SZENQRMI failed, indicating that FEPI is already active in the system. FEPI initialization issues this enqueue to prevent a second instance of FEPI being present in the system.

This message usually means that you attempted to start the FEPI transaction (CSZI) manually, but there is a previous instance of CSZI still running.

The possible values of X'rr, the reason for failure, are:

Code Meaning**X'31** Duplicate enqueue on SZENQRMI attempted.**X'32** Failure during enqueue processing.**System action:** The request to start a second instance of FEPI is rejected.**User response:** None.**Module:** DFHSZRMP(DFHSZSIP)**XMEOUT Parameters:** *date, time, applid, X'rr'***Destination:** Console and Transient Data Queue CSZL**DFHSZ4007E** *date time applid* **FEPI initialization failed: storage ADD_SUBPOOL failure for subpool pppppppp, reason X'rr' response X'ee'.****Explanation:** The Front End Programming Interface (FEPI) cannot be initialized because creating the named storage subpool for FEPI use failed.

The values of X'rr, the reason for failure, are:

Reason Meaning

- X'01** Insufficient storage available for the subpool
- X'03** Subpool requested with an invalid fixed length
- X'04** Subpool requested with an invalid boundary alignment
- X'05** Subpool requested with an invalid initial number of elements
- X'06** Subpool requested with an invalid name
- X'08** Subpool requested already exists
- X'11** Access to the Storage Manager was denied

The values of X'ee, the response to the failed request, are:

Response Meaning

- X'01** Request completed successfully
- X'02** Exception response generated
- X'03** Disaster response generated
- X'04** Invalid response generated
- X'05** A kernel error was detected
- X'06** The request was purged

System action: FEPI initialization ends, and EXEC CICS FEPI commands are unavailable. An exception trace entry is generated.**User response:** The only action you can take is when there is insufficient storage, in which case you can increase the storage available to CICS on restart.All other errors are system failures, and you should consult the system programmer. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.**Module:** DFHSZRMP(DFHSZSIP)**XMEOUT Parameters:** *date, time, applid, pppppppp, X'rr', X'ee'***Destination:** Console and Transient Data Queue CSZL

DFHSZ4008E *date time applid* **FEPI initialization failed: Non-runaway task setting failure, reason X'rr' response X'ee'.**

Explanation: The Front End Programming Interface (FEPI) cannot be initialized. Because FEPI is a long-running transaction (CSZI), it must not be subject to a runaway task time out. The request to prevent this failed.

The value of X'rr, the reason for failure, is always X'00.

The values of X'ee, the response to the failed request, are:

Response

Meaning

- | | |
|-------------|--------------------------------|
| X'01 | Request completed successfully |
| X'02 | Exception response generated |
| X'03 | Disaster response generated |
| X'04 | Invalid response generated |

System action: FEPI initialization ends, and EXEC CICS FEPI commands are made unavailable. An exception trace entry is generated.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time, applid, X'rr', X'ee'*

Destination: Console and Transient Data Queue CSZL

DFHSZ4009E *date time applid* **FEPI initialization failed change-priority failure, response X'ee'.**

Explanation: The Front End Programming Interface (FEPI) cannot be initialized because changing the dispatching priority of the FEPI transaction (CSZI) failed.

Because FEPI runs as a transaction, a high priority is required. The request to set this dispatching priority failed.

The values of X'ee, the response to the failed request, are:

Response

Meaning

- | | |
|-------------|--------------------------------|
| X'01 | Request completed successfully |
| X'03 | Disaster response generated |
| X'04 | Invalid response generated |
| X'05 | A Kernel error was detected |

System action: FEPI initialization ends, and EXEC CICS FEPI commands are made unavailable. An exception trace entry is generated.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time, applid, X'ee'*

Destination: Console and Transient Data Queue CSZL

DFHSZ4010E *date time applid* **FEPI initialization failed: SZ TCB swap failure, response X'ee'.**

Explanation: The Front End Programming Interface (FEPI) usually runs under the CICS SZ TCB. Transferring the FEPI transaction (CSZI) from running under the QR TCB to the SZ TCB failed.

The values of X'ee, the response to the failed request, are:

Response

Meaning

- | | |
|-------------|--------------------------------|
| X'01 | Request completed successfully |
| X'02 | Exception response generated |
| X'03 | Disaster response generated |
| X'04 | Invalid response generated |
| X'05 | A kernel error was detected |

System action: FEPI initialization ends, and EXEC CICS FEPI commands are made unavailable. An exception trace entry is generated.

User response: The SZ TCB is created as part of the early CICS initialization and you should examine the console log to see if any messages were generated indicating a TCB creation failure.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time, applid, X'ee'*

Destination: Console and Transient Data Queue CSZL

DFHSZ4011E *date time applid* **FEPI storage GETMAIN failed in subpool NB, reason X'rr' response X'ee'.**

Explanation: The Front End Programming Interface (FEPI) issued a GETMAIN storage request in the SZSPFCNB storage subpool for NIB usage which failed.

The values of X'rr, the reason for failure, are:

Reason Meaning

- | | |
|-------------|--------------------------------------|
| X'01 | Insufficient storage for the request |
|-------------|--------------------------------------|

X'02	Invalid subpool token given
X'04	Invalid length of element requested
X'05	Length of element not specified
X'08	Access was denied to the storage subpool
X'11	Invalid initial image supplied
X'12	An abnormal end occurred in the storage manager
X'13	A loop was detected in the storage manager

The values of X'ee, the response to the failed request, are:

Response

	Meaning
X'01	Request completed successfully.
X'02	Exception response generated.
X'03	Disaster response generated.
X'04	Invalid response generated.
X'05	A Kernel error was detected.
X'06	The request was purged.

All these responses indicate that a system error has occurred.

System action: An exception trace entry is generated.

FEPI tries to recover from this error by retrying the request. However, no action is taken to prevent multiple occurrences.

User response: If this message occurs frequently, you should take a dump of the CICS system before restarting it. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSZRMP(DFHSZZNG)

XMEOUT Parameters: *date, time, applid, X'rr', X'ee'*

Destination: Console and Transient Data Queue CSZL

DFHSZ4012E *date time applid* FEPI storage GETMAIN failed in subpool DA, reason X'rr' response X'ee'.

Explanation: The Front End Programming Interface (FEPI) issued a GETMAIN storage request in the SZSPVCDA storage subpool for general usage which failed.

The values of X'rr, the reason for failure, are:

Reason Meaning

X'01	Insufficient storage for the request.
X'02	Invalid subpool token given.

X'04	Invalid length of element requested.
X'05	Length of element not specified.
X'08	Access was denied to the storage subpool.
X'11	Invalid initial image supplied.
X'12	An abnormal end occurred in the storage manager.
X'13	A loop was detected in the storage manager.

The values of X'ee, the response to the failed request, are:

Response

	Meaning
X'01	Request completed successfully.
X'02	Exception response generated.
X'03	Disaster response generated.
X'04	Invalid response generated.
X'05	A kernel error was detected.
X'06	The request was purged.

All of these responses indicate that a system error occurred.

System action: An exception trace entry is generated.

FEPI tries to recover from this error by retrying the request. However, no action is taken to prevent multiple occurrences.

User response: If this message occurs frequently, you should take a dump of the CICS system before restarting it.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSZRMP(DFHSZZAG)

XMEOUT Parameters: *date, time, applid, X'rr', X'ee'*

Destination: Console and Transient Data Queue CSZL

DFHSZ4013E *date time applid* FEPI storage GETMAIN failed in subpool RP, reason X'rr' response X'ee'.

Explanation: The Front End Programming Interface (FEPI) issued a GETMAIN storage request in the SZSPPCR storage subpool for RPL usage. The request failed.

The values of X'rr, the reason for failure, are:

Reason Meaning

X'01	Insufficient storage for the request.
X'02	Invalid subpool token given.

DFHSZ4014E • DFHSZ4015I

- X'04** Invalid length of element requested.
- X'05** Length of element not specified.
- X'08** Access was denied to the storage subpool.
- X'11** Invalid initial image supplied.
- X'12** An abnormal end occurred in the storage manager.
- X'13** A loop was detected in the storage manager.

The values of X'ee, the response to the failed request, are:

Response

- | Response | Meaning |
|-------------|---------------------------------|
| X'01 | Request completed successfully. |
| X'02 | Exception response generated. |
| X'03 | Disaster response generated. |
| X'04 | Invalid response generated. |
| X'05 | A kernel error was detected. |
| X'06 | The request was purged. |

All of these responses indicate that a system error occurred.

System action: An exception trace entry is generated.

FEPI tries to recover from this error by retrying the request. However, no action is taken to prevent multiple occurrences.

User response: If this message occurs frequently, you should take a dump of the CICS system before restarting it.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSZRMP(DFHSZZRG)

XMEOUT Parameters: *date, time, applid, X'rr', X'ee'*

Destination: Console and Transient Data Queue CSZL

DFHSZ4014E *date time applid FEPI storage FREEMAIN failed in subpool DAINBIRP, reason X'rr' response X'ee'*

Explanation: The Front End Programming Interface (FEPI) issued a FREEMAIN storage request in an SZSPxxxx storage subpool. The request failed.

The values of X'rr, the reason for failure, are:

Reason Meaning

- | | |
|-------------|--|
| X'02 | Invalid subpool token given. |
| X'03 | The address of the element to be freed is invalid. |

- X'06** Invalid length of element specified.
- X'07** Length of element not specified.
- X'08** Access was denied to the storage subpool.
- X'10** The specified storage subpool was empty.
- X'12** An abnormal end occurred in the storage manager.
- X'13** A loop was detected in the storage manager.

The values of X'ee, the response to the failed request, are:

Response

- | Response | Meaning |
|-------------|---------------------------------|
| X'01 | Request completed successfully. |
| X'02 | Exception response generated. |
| X'03 | Disaster response generated. |
| X'04 | Invalid response generated. |
| X'05 | A kernel error was detected. |
| X'06 | The request was purged. |

All of these responses indicate that a system error occurred.

System action: The request is rejected, and a retry is not attempted (perhaps leaving storage that is never subsequently accessible). An exception trace entry is generated.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSZRMP(DFHSZZFR)

XMEOUT Parameters: *date, time, applid, X'rr', X'ee'*

Destination: Console and Transient Data Queue CSZL

DFHSZ4015I *date time applid FEPI {normal | immediate | forced} termination has started.*

Explanation: The Front End Programming Interface (FEPI) has acknowledged a shutdown request and is starting to terminate.

Message DFHSZ4003 is issued when FEPI completes termination.

FEPI terminates only in response to a CICS shutdown request (such as CEMT PERFORM SHUTDOWN). Some types of CICS shutdown can result in more than one DFHSZ4015 message being issued.

System action: Certain EXEC CICS FEPI commands are made unavailable during FEPI termination.

Normal termination allows all transactions using FEPI resources to end before FEPI itself ends. However, no

new usage of FEPI resources is permitted.

Immediate termination stops usage of FEPI facilities immediately but does a controlled shutdown of communication functions.

Forced termination stops usage of FEPI facilities immediately, and does the quickest possible shutdown of communication functions (which may lead to many VTAM messages being issued).

User response: None.

Module: DFHSZRMP(DFHSZRDP)

XMEOUT Parameters: *date, time, applid, {1=normal, 2=immediate, 3=forced}*

Destination: Console and Transient Data Queue
CSZL

DFHSZ4099E *date time applid FEPI ended abnormally.*

Explanation: The Front End Programming Interface (FEPI) has ended abnormally.

System action: A system dump is taken. All EXEC CICS FEPI commands are made unavailable.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSZRMP(DFHSZSIP)

XMEOUT Parameters: *date, time, applid*

Destination: Console and Transient Data Queue
CSZL

DFHSZ4101I *date time applid FEPI node nnnnnnnn installed, for transaction xxxx.*

Explanation: The Front End Programming Interface (FEPI) has successfully installed the named node.

System action: Processing continues.

User response: None.

Module: DFHSZRMP(DFHSZRII)

XMEOUT Parameters: *date, time, applid, nnnnnnnn, xxxx*

Destination: CSZL

DFHSZ4102W *date time applid FEPI node nnnnnnnn installation failed, code rrr, for transaction xxxx.*

Explanation: The Front End Programming Interface (FEPI) cannot install the named node. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI INSTALL NODE command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Module: DFHSZRMP(DFHSZRII)

XMEOUT Parameters: *date, time, applid, nnnnnnnn, rrr, xxxx*

Destination: CSZL

DFHSZ4103I *date time applid FEPI node nnnnnnnn discarded, for transaction xxxx.*

Explanation: The Front End Programming Interface (FEPI) has successfully discarded the named node.

System action: Processing continues.

User response: None.

Module: DFHSZRMP(DFHSZRDN)

XMEOUT Parameters: *date, time, applid, nnnnnnnn, xxxx*

Destination: CSZL

DFHSZ4104I *date time applid FEPI node nnnnnnnn discard scheduled, for transaction xxxx.*

Explanation: The Front End Programming Interface (FEPI) has scheduled the discard operation for the named node.

System action: Processing continues. The node is discarded when it becomes inactive.

User response: None.

Module: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time, applid, nnnnnnnn, xxxx*

Destination: CSZL

DFHSZ4105W *date time applid FEPI node nnnnnnnn discard failed, code rrr, for transaction xxxx.*

Explanation: The Front End Programming Interface (FEPI) cannot discard the named node. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI DISCARD NODE command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Module: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time, applid, nnnnnnnn, rrr, xxxx*

Destination: CSZL

DFHSZ4106I *date time applid FEPI pool pppppppp*
(with property set yyyyyyyy) installed,
for transaction xxxx.

Explanation: The Front End Programming Interface (FEPI) has successfully installed the named pool which has the characteristics of the named property set.

System action: Processing continues.

User response: None.

Module: DFHSZRMP(DFHSZRII)

XMEOUT Parameters: *date, time,applid, pppppppp, yyyyyyyy, xxxx*

Destination: CSZL

DFHSZ4107W *date time applid FEPI pool pppppppp*
(with property set yyyyyyyy) installation
failed, code rrr, for transaction xxxx.

Explanation: The Front End Programming Interface (FEPI) cannot install the named pool, which has the characteristics of the named property set. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI INSTALL POOL command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Module: DFHSZRMP(DFHSZRII)

XMEOUT Parameters: *date, time,applid, pppppppp, yyyyyyyy, rrr, xxxx*

Destination: CSZL

DFHSZ4108I *date time applid FEPI pool pppppppp*
discarded, for transaction xxxx.

Explanation: The Front End Programming Interface (FEPI) has successfully discarded the named pool.

System action: Processing continues.

User response: None.

Module: DFHSZRMP(DFHSZRDRG)

XMEOUT Parameters: *date, time,applid, pppppppp, xxxx*

Destination: CSZL

DFHSZ4109I *date time applid FEPI pool pppppppp*
discard scheduled, for transaction
xxxx.

Explanation: The Front End Programming Interface (FEPI) has scheduled the discard operation for the named pool.

System action: Processing continues. The pool is discarded when it becomes inactive.

User response: None.

Module: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time,applid, pppppppp, xxxx*

Destination: CSZL

DFHSZ4110W *date time applid FEPI pool pppppppp*
discard failed, code rrr, for transaction
xxxx.

Explanation: The Front End Programming Interface (FEPI) cannot discard the named pool. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI DISCARD POOL command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Module: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time,applid, pppppppp, rrr, xxxx*

Destination: CSZL

DFHSZ4111I *date time applid FEPI target tttttttt*
installed, for transaction xxxx.

Explanation: The Front End Programming Interface (FEPI) has successfully installed the named target.

System action: Processing continues.

User response: None.

Module: DFHSZRMP(DFHSZRII)

XMEOUT Parameters: *date, time,applid, tttttttt, xxxx*

Destination: CSZL

DFHSZ4112W *date time applid FEPI target tttttttt*
installation failed, code rrr, for
transaction xxxx.

Explanation: The Front End Programming Interface (FEPI) cannot install the named target. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI INSTALL TARGET command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Module: DFHSZRMP(DFHSZRII)

XMEOUT Parameters: *date, time,applid, tttttttt, rrr, xxxx*

Destination: CSZL

DFHSZ4113I *date time applid FEPI target tttttttt*
discarded, for transaction xxxx.

Explanation: The Front End Programming Interface (FEPI) has successfully discarded the named target.

System action: Processing continues.

User response: None.

Module: DFHSZRMP(DFHSZRDT)

XMEOUT Parameters: *date, time, applid, ttttttt, xxxx*

Destination: CSZL

DFHSZ4114I *date time applid* **FEPI target ttttttt**
discard scheduled, for transaction
xxxx.

Explanation: The Front End Programming Interface (FEPI) has scheduled the discard operation for the named target.

System action: Processing continues. The target is discarded when it becomes inactive.

User response: None.

Module: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time, applid, ttttttt, xxxx*

Destination: CSZL

DFHSZ4115W *date time applid* **FEPI target ttttttt**
discard failed, code rrr, for transaction
xxxx.

Explanation: The Front End Programming Interface (FEPI) cannot discard the named target. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI DISCARD TARGET command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Module: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time, applid, ttttttt, rrr, xxxx*

Destination: CSZL

DFHSZ4116I *date time applid* **FEPI property set**
yyyyyyyyy **installed, for transaction xxxx.**

Explanation: The Front End Programming Interface (FEPI) has successfully installed the named property set.

System action: Processing continues.

User response: None.

Module: DFHSZRMP(DFHSZRII)

XMEOUT Parameters: *date, time, applid, yyyyyyyyy, xxxx*

Destination: CSZL

DFHSZ4117W *date time applid* **FEPI property set**
yyyyyyyyy **installation failed, code rrr, for**
transaction xxxx.

Explanation: The Front End Programming Interface (FEPI) cannot install the named property set. The code

indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI INSTALL PROPERTYSET command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Module: DFHSZRMP(DFHSZRII)

XMEOUT Parameters: *date, time, applid, yyyyyyyyy, rrr,*
xxxx

Destination: CSZL

DFHSZ4118I *date time applid* **FEPI property set**
yyyyyyyyy **discarded, for transaction**
xxxx.

Explanation: The Front End Programming Interface (FEPI) has successfully discarded the named property set.

System action: Processing continues.

User response: None.

Module: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time, applid, yyyyyyyyy, xxxx*

Destination: CSZL

DFHSZ4119W *date time applid* **FEPI property set**
yyyyyyyyy **discard failed, code rrr, for**
transaction xxxx.

Explanation: The Front End Programming Interface (FEPI) cannot discard the named property set. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI DISCARD PROPERTYSET command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Module: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time, applid, yyyyyyyyy, rrr,*
xxxx

Destination: CSZL

DFHSZ4120I *date time applid* **FEPI node nnnnnnnn**
added to pool pppppppp, for
transaction xxxx.

Explanation: The Front End Programming Interface (FEPI) has successfully added the named node to the named pool.

System action: Processing continues.

User response: None.

Module: DFHSZRMP(DFHSZRII)

DFHSZ4121W • DFHSZ4127W

XMEOUT Parameters: *date, time,applid, nnnnnnnn, pppppppp, xxxx*

Destination: CSZL

DFHSZ4121W *date time applid FEPI node nnnnnnnn*
not added to pool pppppppp, code rrr,
for transaction xxxx.

Explanation: The Front End Programming Interface (FEPI) cannot add the named node to the named pool. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI ADD POOL command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Module: DFHSZRMP(DFHSZRII)

XMEOUT Parameters: *date, time,applid, nnnnnnnn, pppppppp, rrr, xxxx*

Destination: CSZL

DFHSZ4122I *date time applid FEPI node nnnnnnnn*
deleted from pool pppppppp, for
transaction xxxx.

Explanation: The Front End Programming Interface (FEPI) has successfully deleted the named node from the named pool.

System action: Processing continues.

User response: None.

Module: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time,applid, nnnnnnnn, pppppppp, xxxx*

Destination: CSZL

DFHSZ4123W *date time applid FEPI node nnnnnnnn*
not deleted from pool pppppppp, code
rrr, for transaction xxxx.

Explanation: The Front End Programming Interface (FEPI) cannot delete the named node from the named pool. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI DELETE POOL command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Module: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time,applid, nnnnnnnn, pppppppp, rrr, xxxx*

Destination: CSZL

DFHSZ4124I *date time applid FEPI target tttttttt* **added to pool pppppppp, for transaction xxxx.**

Explanation: The Front End Programming Interface (FEPI) has successfully added the named target to the named pool.

System action: Processing continues.

User response: None.

Module: DFHSZRMP(DFHSZRII)

XMEOUT Parameters: *date, time,applid, tttttttt, pppppppp, xxxx*

Destination: CSZL

DFHSZ4125W *date time applid FEPI target tttttttt* **not added to pool pppppppp, code rrr, for transaction xxxx.**

Explanation: The Front End Programming Interface (FEPI) cannot add the named target to the named pool. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI ADD POOL command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Module: DFHSZRMP(DFHSZRII)

XMEOUT Parameters: *date, time,applid, tttttttt, pppppppp, rrr, xxxx*

Destination: CSZL

DFHSZ4126I *date time applid FEPI target tttttttt*
deleted from pool pppppppp, for
transaction xxxx.

Explanation: The Front End Programming Interface (FEPI) has successfully deleted the named target from the named pool.

System action: Processing continues.

User response: None.

Module: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time,applid, tttttttt, pppppppp, xxxx*

Destination: CSZL

DFHSZ4127W *date time applid FEPI target tttttttt* **not deleted from pool pppppppp, code rrr, for transaction xxxx.**

Explanation: The Front End Programming Interface (FEPI) cannot delete the named target from the named pool. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI DELETE POOL command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Module: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time,applid, ttttttt, pppppppp, rrr, xxxx*

Destination: CSZL

DFHSZ4128W *date time applid* **FEPI delete from pool pppppppp failed, code rrr, for transaction xxxx.**

Explanation: The Front End Programming Interface (FEPI) cannot do a delete operation on the named pool. The code indicates the reason, and is the RESP2 value returned by the EXEC CICS FEPI DELETE POOL command.

System action: Processing continues.

User response: Investigate the failure, and correct it.

Module: DFHSZRMP(DFHSZRID)

XMEOUT Parameters: *date, time,applid, pppppppp, rrr, xxxx*

Destination: CSZL

DFHSZ4151I *date time applid* **Unsolicited data received for FEPI pool pppppppp target ttttttt node nnnnnnnn. Transaction xxxx started.**

Explanation: The Front End Programming Interface (FEPI) received some unsolicited data for the named pool-target-node connection, and started the named transaction to process this data.

System action: Processing continues.

User response: None.

Module: DFHSZRMP(DFHSZBUN)

XMEOUT Parameters: *date, time,applid, pppppppp, ttttttt, nnnnnnnn, xxxx*

Destination: CSZL

DFHSZ4152I *date time applid* **Begin-session processing required for FEPI pool pppppppp target ttttttt node nnnnnnnn. Transaction xxxx started.**

Explanation: The Front End Programming Interface (FEPI) invoked begin-session processing for the named pool-target-node connection, by starting the named transaction.

System action: Processing continues.

User response: None.

Module: DFHSZRMP(DFHSZBSI)

XMEOUT Parameters: *date, time,applid, pppppppp, ttttttt, nnnnnnnn, xxxx*

Destination: CSZL

DFHSZ4153I *date time applid* **STSN processing required for FEPI pool pppppppp target ttttttt node nnnnnnnn. Transaction xxxx started.**

Explanation: The Front End Programming Interface (FEPI) invoked STSN processing for the named pool-target-node connection, by starting the named transaction.

System action: Processing continues.

User response: None.

Module: DFHSZRMP(DFHSZBST)

XMEOUT Parameters: *date, time,applid, pppppppp, ttttttt, nnnnnnnn, xxxx*

Destination: CSZL

DFHSZ4154W *date time applid* **FEPI session setup in pool pppppppp to target ttttttt and node nnnnnnnn failed with a reason code of X'rrrrrrr'. Setup will be retried later.**

Explanation: The Front End Programming Interface (FEPI) has detected an error during session setup for the named pool-target-node connection. Refer to *VTAM Messages and Codes* or to *SNA Formats* for a description of the reason code (error code or sense code) that describes this error.

System action: Processing continues; the session setup is tried again after a short interval, using a different node if one is available. If the error occurs for a request session, FEPI retries the request in 60 seconds.

User response: None.

Module: DFHSZRMP(DFHSZBLO)

XMEOUT Parameters: *date, time, applid, pppppppp, ttttttt, nnnnnnnn, X'rrrrrrr'*

Destination: CSZL

DFHSZ4155W *date time applid* **FEPI session in pool pppppppp to target ttttttt and node nnnnnnnn ended with a reason code of X'rrrrrrr'.**

Explanation: The Front End Programming Interface (FEPI) has detected this VTAM event for the named pool-target-node connection. Refer to *VTAM Messages and Codes* or to *SNA Formats* for a description of the reason code (error code or sense code) that describes this event.

System action: Processing continues.

DFHSZ4156I • DFHSZ4201I

User response: None. This message can have a reason code of zero. If a message with a reason code of zero is not wanted, we recommend the use of the XMEOUT global user exit to suppress it.

Module: DFHSZRMP(DFHSZBLO)

XMEOUT Parameters: *date, time,applid, pppppppp, ttttttt, nnnnnnnn, X'rrrrrrr'*

Destination: CSZL

DFHSZ4156I *date time applid* **End-session processing required for FEPI pool** *pppppppp target ttttttt node nnnnnnnn.*
Transaction xxx started.

Explanation: The Front End Programming Interface (FEPI) invoked end-session processing for the named pool-target-node connection, by starting the named transaction.

System action: Processing continues.

User response: None.

Module: DFHSZRMP(DFHSZBFT)

XMEOUT Parameters: *date, time,applid, pppppppp, ttttttt, nnnnnnnn, xxx*

Destination: CSZL

DFHSZ4157W *date time applid* **FEPI session setup in pool pppppppp to target ttttttt and node nnnnnnnn failed with a reason code of X'rrrrrrr'. Setup will not be retried.**

Explanation: The Front End Programming Interface (FEPI) has detected an error during session setup for the named pool-target-node connection. Refer to *VTAM Messages and Codes* or to *SNA Formats* for a description of the reason code (error code or sense code) that describes this error. Setting up a session for this connection has failed several times.

System action: Processing continues; the session setup for this connection is not tried again.

User response: None; operator intervention may be needed to make the connection available.

Module: DFHSZRMP(DFHSZBLO)

XMEOUT Parameters: *date, time,applid, pppppppp, ttttttt, nnnnnnnn, X'rrrrrrr'*

Destination: CSZL

DFHSZ4158W *date time applid* **The VTAM OPEN request for FEPI node nnnnnnnn failed with a reason code of X'rrrrrrr'. This operation will be retried.**

Explanation: The Front End Programming Interface (FEPI) has detected an error during VTAM OPEN

processing for the named node.

The possible values of X'rrrrrrr, the reason for failure, are:

Code Meaning

X'00000000
VTAM TPEND occurred with error code 0.

X'00000004
VTAM TPEND occurred with error code 4.

X'00000008
VTAM TPEND occurred with error code 8.

X'0000000C
VTAM SETLOGON failed.

other values

VTAM OPEN failed with error code given.

Refer to *VTAM Programming* for a description of these error codes.

System action: Processing continues; the VTAM OPEN for the node is repeated after a short interval.

User response: None.

Module: DFHSZRMP(DFHSZRIO)

XMEOUT Parameters: *date, time,applid, nnnnnnnn, X'rrrrrrr'*

Destination: CSZL

DFHSZ4159W *date time applid* **The VTAM OPEN request for FEPI node nnnnnnnn failed with a reason code of X'rrrrrrr'. This operation will not be retried.**

Explanation: The Front End Programming Interface (FEPI) has detected an error during VTAM OPEN processing for the named node. The reason code is the error code returned by the VTAM OPEN operation. Refer to *VTAM Programming* for a description of these error codes.

System action: Processing continues; the VTAM OPEN for the node is not repeated.

User response: None; operator intervention may be needed to make the node available.

Module: DFHSZRMP(DFHSZRIO)

XMEOUT Parameters: *date, time,applid, nnnnnnnn, X'rrrrrrr'*

Destination: CSZL

DFHSZ4201I *date time applid* **FEPI node nnnnnnnn now has status {INSERVICE | OUTSERVICE | GOINGOUT}, {ACQUIRED | RELEASED | ACQUIRING | RELEASING}.**

Explanation: The status of a Front End Programming

Interface (FEPI) node has been changed by an EXEC CICS FEPI SET NODE or a CEMT SET FENODE command, and is now as described.

System action: Processing continues.

User response: None

Module: DFHSZRMP(DFHSZRIW)

XMEOUT Parameters: *date, time,applid, nnnnnnnn, {1=INSERVICE, 2=OUTSERVICE, 3=GOINGOUT}, {4=ACQUIRED, 5=RELEASED, 6=ACQUIRING, 7=RELEASING}*

Destination: CSZL

DFHSZ4202I *date time applid FEPI pool pppppppp now has status {INSERVICE | OUTSERVICE | GOINGOUT}.*

Explanation: The status of a Front End Programming Interface (FEPI) pool has been changed by an EXEC CICS FEPI SET POOL or a CEMT SET FEPOOL command, and is now as described.

System action: Processing continues.

User response: None

DFHTCnnnn messages

DFHTC1001 *applid Terminal control initialization failed (modname).*

Explanation: The CICS terminal control restart task could not complete because a necessary step failed. The task has done some essential recovery operations and has abnormally terminated itself with code ATC1.

System action: CICS writes a transaction dump for the terminal control restart task. CICS sends two messages to the console, one to identify the error detected by the terminal control restart task, and one, DFHTC1001, to say that the task has failed. A third message follows, either to say that CICS has terminated abnormally with a dump or to ask you to reply GO or CANCEL. Depending on the nature of the original error, you may see messages from some other system component (for example, an access method).

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: First, if CICS has requested a response, you must reply. If you reply 'GO', CICS continues processing, but without terminal control. If you reply 'CANCEL', CICS terminates abnormally with a dump. Use the messages and dumps to find out the cause of the failure. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHSII1, DFHTCRP

XMEOUT Parameters: *applid, modname*

Module: DFHSZRMP(DFHSZRIW)

XMEOUT Parameters: *date, time,applid, pppppppp, {1=INSERVICE, 2=OUTSERVICE, 3=GOINGOUT}*

Destination: CSZL

DFHSZ4203I *date time applid FEPI target ttttttt now has status {INSERVICE | OUTSERVICE | GOINGOUT}.*

Explanation: The status of a Front End Programming Interface (FEPI) target has been changed by an EXEC CICS FEPI SET TARGET or a CEMT SET FETARGET command, and is now as described.

System action: Processing continues.

User response: None

Module: DFHSZRMP(DFHSZRIW)

XMEOUT Parameters: *date, time,applid, ttttttt, {1=INSERVICE, 2=OUTSERVICE, 3=GOINGOUT}*

Destination: CSZL

Destination: Console

DFHTC1002 *applid Unable to link to program DFHTCRP.*

Explanation: The CICS terminal control recovery program, DFHTCRP, is unavailable. CICS cannot find DFHTCRP in any data set concatenated in the DFHRPL DD statement in the CICS startup job stream.

System action: CICS terminates abnormally with a dump.

User response: To correct this error, place DFHTCRP in a partitioned data set in the DFHRPL DD statement.

Module: DFHSII1

XMEOUT Parameter: *applid*

Destination: Console

DFHTC1004 *applid Program DFHTORP cannot be found. Typeterms cannot be initialized*

Explanation: The CICS terminal object resolution program, DFHTORP, is not available. CICS cannot find DFHTORP in any data set concatenated in the DFHRPL DD statement in the CICS startup job stream.

System action: CICS terminates abnormally with a dump.

User response: To correct this error, place DFHTORP in a partitioned data set in the DFHRPL DD statement.

DFHTC1011 • DFHTC1014

Module: DFHTCRP

XMEOUT Parameter: *applid*

Destination: Console

DFHTC1011 *applid* **Unable to load xxxxxx During a CICS cold or initial start, CICS could not PC LOAD the CICS module, DFHxxxxxx, probably because it is missing from the library.**

System action: CICS initialization continues, but, even if it completes, VTAM resource initialization will be incorrect in some respect, depending on the function of module DFHxxxxxx.

User response: If CICS completes initialization, processing of VTAM resources will be invalid. You should cancel CICS, make module DFHxxxxxx available and then restart CICS.

Module: DFHTCRP

XMEOUT Parameters: *applid, xxxxxx*

Destination: Console

DFHTC1012 *applid* **Failure in installing VTAM resources**

Explanation: During a cold or initial start, CICS could not install all the VTAM resources defined by TCT macros. CICS has issued other message(s) identifying which resources could not be installed.

System action: CICS initialization continues.

User response: If any of the uninstalled resources is essential, use RDO to make it available, or cancel CICS. The most likely reasons for this message are

- The output of the DFHTCT assembly was corrupted, or
- A previous CICS message such as DFHTC1011, or
- CICS code contains a logic error.

If you suspect an error in CICS, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTCRP

XMEOUT Parameter: *applid*

Destination: Console

DFHTC1013 *applid* **Restore failed for xxxxxx**

Explanation: During a warm or emergency restart, CICS could not restore the resource xxxxxx.

System action: CICS continues initialization.

User response: If resource xxxxxx is essential to your system, cancel CICS. This problem is probably caused by a CICS logic error. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS*

Problem Determination Guide for guidance on how to proceed.

Module: DFHTCRP

XMEOUT Parameters: *applid, xxxxxx*

Destination: Console

DFHTC1014 *date time applid* **Communication resource definition for (*resname*) was not restored from the catalog because the resource definition for (*highname*) was not installed.**

Explanation: During an emergency restart, CICS could not restore the resource *resname* from the catalog, because the definition for another resource *highname* that it depends on is not present. Usually *resname* is a session or modegroup and *highname* is a connection.

System action: CICS continues restart, and deletes this resource from the CICS catalog. If the definition referred to was being installed when the previous CICS failed, both definitions are restored from the system log later in the restart.

User response: If resource *resname* is essential to your system and is not restored later in initialization you can reinstall the resource having first installed the resource that it depends on. This message can be caused by

- An install which was not complete when CICS failed, in which case it is forward recovered from the system log later, and no action is needed.
- A failure during warm shutdown in the previous run. In this case messages are produced for connections that were autoinstalled and were not uncataloged by the warm shutdown. In this case some auto-installed connections which would have been removed from the catalog if the warm shutdown had completed are recovered, but those which cause these messages are not.
- A corrupted CICS catalog. If large numbers of unrelated resources are missing, and the preceding CICS run was not warm keypointing at the time of failure, the catalog may have been corrupted. CICS continues, but you may want to initial start in order to get your definitions to a known state.
- A CICS logic error. In this case you need assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTCRP

XMEOUT Parameters: *date, time, applid, resname, highname*

Destination: CSMT

DFHTC1015 *applid* TCT load module contains obsolete entries

Explanation: During CICS initialization, the TCT load module DFHTCTxx (xx being the suffix) was found to contain entries not generated by the assembly macros for this release of CICS. This table cannot be used.

System action: The bring-up is abandoned.

User response: Either the incorrect TCT suffix was specified or implied, or the TCT has been assembled against the wrong level of CICS macros. Retry the bring-up, specifying a different suffix, or using a TCT assembled against the correct macros, as appropriate.

Module: DFHAPSIP

XMEOUT Parameter: *applid*

Destination: Console

DFHTC1022 *applid* Error for XRF tracking record -
Type: *type* - Key: *key*

Explanation: An error during XRF tracking prevented a change to a resource from being tracked. The resource is of type *type* and is associated with key *key*.

type is the tracking record type. This is one of the following

TCT	CONTENTS
ZCP	SESSIONS

key is the location of an object in the TCTTE hierarchy.

System action: The associated resource is in an incorrect state, missing, or not deleted at the end of takeover.

User response: Decide whether the named resource is critical and see if you can resolve the problem.

Module: DFHTCRP

XMEOUT Parameters: *applid, type, key*

Destination: Console

DFHTC1023 *applid* Logic error in tracking *condition*

Explanation: During XRF tracking, a condition was detected which is not possible within the intended design. The insert indicates which of the checked conditions has been detected

1. No broadcast message accepted outside tracking. The GETMSG routine in DFHTCRP should only accept broadcast messages and those whose id matches that in field GETMSPEC. This field should only be set during tracking.
2. Broadcast message with null key. A null-key record indicates that the catch-up stream that it arrives in is

complete. This can only happen to the broadcast tracking stream if the active has just done a normal (warm) shut-down.

System action: The message in question is ignored

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTCRP

XMEOUT Parameters: *applid, condition*

Destination: Console

DFHTC1024I *applid* XRF takeover while catching up.

Explanation: The alternate CICS that issued this message has only just started. Apparently the active CICS failed before the alternate could obtain all the information about TCT resources in the active. Please refer to messages DFHTC1034-DFHTC1036 for details of the types of information which may be missing or may be incomplete.

System action: Takeover continues.

User response: Watch for further messages.

Module: DFHTCRP

XMEOUT Parameter: *applid*

Destination: Console

DFHTC1034I *applid* TCT contents incomplete. Will read catalog.

Explanation: DFHTC1024 provides background information for this message. Apparently, the active CICS failed before the alternate CICS could obtain the definitions for all the trackable resources in the active's TCT. Definitions may be missing at this point. However, the CICS catalog in the active may contain a more complete set of definitions in the restart data set. These will now be read as for a warm or emergency restart.

System action: Takeover continues.

User response: Look out for any errors while reading the CICS catalog.

Module: DFHTCRP

XMEOUT Parameter: *applid*

Destination: Console

DFHTC1035E *applid* Session states may be incorrect

Explanation: DFHTC1024 provides background information for this message. Apparently, the active CICS failed before the alternate CICS could obtain the session-state for all the trackable resources in the active's TCT. States may be incorrect at this point.

DFHTC1036I • DFHTC1045I

System action: Takeover continues.

User response: Be prepared for some logical units (LUs) that were ACQUIRED in the old active not to be after the takeover.

Module: DFHTCRP

XMEOUT Parameter: *applid*

Destination: Console

DFHTC1036I *applid* Unimplemented tracking-type incomplete: *xxxx*

Explanation: DFHTC1024 provides background information for this message. Apparently, the active CICS failed before the alternate CICS had been sent all the information regarding a type of resource which has not been implemented. This does not have any serious consequences as the information would have been thrown away. However, it does indicate a level of incompatibility between the old active system and this system.

System action: Takeover continues.

User response: Decide whether the implied level incompatibility exists and is expected. DFHTCRP

XMEOUT Parameters: *applid, xxxx*

DFHTC1040I *applid nnnn* Terminal control tracking records received.

Explanation: An alternate is standing by and has received *nnnn* terminal control tracking messages from the active.

System action: Tracking continues.

User response: None.

Module: DFHTCRP

XMEOUT Parameters: *applid, nnnn*

Destination: Console

DFHTC1041I *applid* Terminal control tracking started.

Explanation: An alternate is initializing, and is now about to start accepting messages from the active. Message DFHTC1044 should appear shortly.

System action: Initialization continues.

User response: None.

Module: DFHTCRP

XMEOUT Parameter: *applid*

Destination: Console

DFHTC1042I *applid* Waiting for terminal control tracking to drain.

Explanation: An alternate is taking over and is processing the remaining few tracking records from the active. This message is issued every 15 seconds while the takeover is held up for processing to complete. This is potentially an error, especially if it is repeated an unusual number of times. The likely causes include a delay in STANDBY BIND or UNBIND processing in VTAM, or a CICS logic error. The system issues this message twice and then flushes the outstanding tracking activity as described in message DFHTC1046.

User response: Look for message DFHTC1046.

Module: DFHZXQO

XMEOUT Parameter: *applid*

Destination: Console

DFHTC1043I *applid* Terminal control tracking ended - *nnn* records received.

Explanation: An XRF alternate system is taking over. The last of the terminal control tracking records from the failing active system has been received and is being processed.

System action: Takeover continues.

User response: None.

Module: DFHTCRP

XMEOUT Parameters: *applid, nnn*

Destination: Console

DFHTC1044I *applid* Terminal control catch-up started.

Explanation: An XRF alternate system is preparing to standby and has received the first message from the active containing information about terminal control resources installed and/or bound before this alternate was started.

System action: Initialization continues.

User response: None.

Module: DFHTCRP

XMEOUT Parameter: *applid*

Destination: Console

DFHTC1045I *applid* Terminal control catch-up complete.

Explanation: An XRF alternate system is standing by, and has now received all the terminal control information it needs about terminal control resources installed and/or bound in the active before this alternate was started.

System action: Normal tracking continues.

User response: None.

Module: DFHTCRP

XMEOUT Parameter: *applid*

Destination: Console

DFHTC1046I *applid* **Flushing terminal control tracking.**

Explanation: An alternate is taking over and is processing the remaining few tracking records from the active. Message DFHTC1042 has been issued twice. DFHZXQO is now doing a controlled flush of the outstanding activity.

System action: CICS posts one outstanding action every 2 seconds in an attempt to free the hold-up. A system dump is taken for the first action only.

User response: This processing only occurs when an error or unforeseen circumstance arises. If the problem can be reproduced, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHZXQO

XMEOUT Parameter: *applid*

Destination: Console

DFHTC1047I *applid* **Higher node missing. Record dropped for key**

Explanation: An XRF alternate has received a tracking message from the active CICS, but either the associated system entry for this terminal is not present, or the ordering of terminal catalog records on the restart data set is incorrect (in that the terminal in error comes before the associated system entry).

key is the location of an object in the TCTTE hierarchy. This situation occurs if the active CICS was unable to send all of its tracking messages. This sometimes results in the system entry not being sent.

System action: The tracking message is discarded and so the associated action (an INSTALL or LOGON) is not performed.

User response: Ensure the CAVM message data set is large enough and restart the alternate. Check that the active CICS job is referring to the correct restart data set.

Module: DFHTCRP

XMEOUT Parameters: *applid, key*

Destination: Console

DFHTC1060 *applid* **Insufficient storage - code(X'code) in module DFHTCRP.**

Explanation: A request for storage could not be satisfied in module DFHTCRP. The specific error is identified by the *X'code* in the message. This implies that the dynamic storage area (DSA) size is too small. The *X'code* identifies an exception trace record.

System action: Terminal control initialization is terminated with a system dump and message DFHTC1001 is issued.

User response: Since sufficient storage should be obtainable from within the minimum size DSA, this may imply a logic error within CICS. Try to increase the CDSASZE parameter in the system initialization table (SIT). You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTCRP

XMEOUT Parameters: *applid, X'code'*

Destination: Console

DFHTC1575 *applid* **No TCT entry for termid**

Explanation: This message is issued when system initialization reads a warm start record for which there is no matching terminal control table (TCT) entry. *termid* is the TCT name that is missing.

System action: The record is ignored.

User response: If TCT *termid* is required, system initialization should be canceled. Ensure that a matching TCT entry for terminal *termid* exists and retry.

Module: DFHTCRP

XMEOUT Parameters: *applid, termid*

Destination: Console

DFHTC1600 *applid* **The value for SYSIDNT, sysid1, does not match the one specified in the last cold or initial start, sysid2. CICS normal operation may be affected.**

Explanation: SYSIDNT has been specified in the SIT or as a system initialization parameter override on a warm or emergency start of CICS. The value of SYSIDNT does not match that specified on the last cold or initial start. SYSIDNT should be updated only on a cold or initial start.

System action: System initialization continues.

User response: For an emergency or warm start of CICS, ensure that SYSIDNT has the same value as in the last cold or initial start. It is recommended that CICS is re-initialized with the appropriate value specified for the SYSIDNT parameter for correct operation of CICS.

DFHTC2500 • DFHTC2511

Module: DFHTCRP

XMEOUT Parameters: *applid, sysid1,sysid2*

Destination: Console

DFHTC2500 *date time applid {Line | CU | Terminal }out of service {Term |W/Term }termid*

Explanation: This message indicates the OUT-OF-SERVICE conditions on completion of error processing in DFHTACP. It is possible that some of these conditions were true before the error was detected.

System action: Other processing continues.

User response: None.

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=Line , 2=CU ,3=Terminal }, {1=Term , 2=W/Term }, termid*

Destination: CSMT

DFHTC2501 Msg too long, please resubmit

Explanation: The terminal operator has keyed in more data than was expected for this READ.

System action: The transaction in progress is terminated.

User response: Reset the terminal and restart the transaction after the message TRANSACTION HAS BEEN ABENDED has been received.

Module: DFHTACP

Destination: Terminal End User

DFHTC2502 *date time applid TCT search error {on line w/term | at term }termid{, trans | , dest }trandid|destid{, rel line=}rr,time*

Explanation: An invalid terminal address was received on the line identified by terminal *termid*. This error can normally occur only on control unit devices such as a 2980 or a 3270. This is because CICS uses general polling and not all terminals on the control unit may be defined to CICS. All other conditions are undefined. The optional part of the message "**destdestid**" applies only to TCAM. The destination *destid* is given when it does not match any of the network names (netnames) specified on the TCTTE generation.

System action: The control unit is placed out of service or, if it is not a general polled device, the line is placed out of service.

User response: Ensure that all terminals on the failing control unit are defined in the terminal control table (TCT).

Where applicable, ensure that the TCAM MCP terminal generation names match the CICS DFHTCT

TYPE=TERMINAL NETNAME parameter.

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term , 2=at term }, termid, {1=, trans ,2=, dest }, trandid|destid, {1=, rel line=}, rr, time*

Destination: CSMT

DFHTC2506 *date time applid Output event rejected return code zz {on line w/term | at term }termid{, trans }trandid{, rel line=}rrtime*

Explanation: An output operation was attempted but was halted by the I/O routines and resulted in the SAM return code *zz*. If an abnormal condition is detected after a READ or WRITE macro, the operation is not started, and control is returned to the user program at the instruction following the READ or WRITE macro.

System action: The line is placed out of service.

User response: Ensure that the system is dumped at shutdown time in order to document the failure. For an explanation of the SAM return codes, *zz*, refer to the *OS/VS SAM* manual, (GC27-6980).

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, zz, {1=on line w/term , 2=at term }, termid, {1=, trans },trandid, {1=, rel line=}, rr, time*

Destination: CSMT

DFHTC2507 *date time applid Input event rejected return code zz {on line w/term | at term }termid{, trans }trandid{, rel line=}rr,time*

Explanation: An input operation was attempted but was halted by the I/O routines, and resulted in the SAM return code *zz*. If an abnormal condition is detected after a READ or WRITE macro instruction, the operation is not started, and control is returned to your program at the instruction following the READ or WRITE macro instruction.

System action: The line is placed out of service.

User response: Ensure the system is dumped at shutdown time in order to document the failure.

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, zz, {1=on line w/term , 2=at term }, termid, {1=, trans },trandid, {1=, rel line=}, rr, time*

Destination: CSMT

DFHTC2511 *date time applid Invalid write request {on line w/term | at term }termid{, trans }trandid{, rel line=}rr,time*

Explanation: This message is issued when one of the following has occurred.

1. A transaction has issued a write to its terminal facility that currently has a terminal status of input.
2. A transaction has issued a write to a 3735 during batch transmission prior to receipt of the end-of-file (EOF) condition.

System action: The write request is not executed, and the transaction terminates abnormally. CICS processing continues.

User response: The user response depends on the condition that has occurred. For condition

1. ensure that transactions do not issue write requests to terminals in input status.
2. ensure that the 3735 batch transaction does not issue its first write request before it has received the EOF condition.

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term, 2=at term}, termid, {1=, trans}, tranid, {1=, rel line=}, rr,time*

Destination: CSTL

DFHTC2513 *date time applid Output length zero {on line w/term | at term }termid{, trans }tranid{, rel line=}rr,time*

Explanation: The data length in TIOATDL was not positive for a write operation.

System action: The transaction is abnormally terminated.

User response: Correct the zero or negative data length specification in the application program.

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term, 2=at term}, termid, {1=, trans}, tranid, {1=, rel line=}, rr,time*

Destination: CSMT

DFHTC2514 *date time applid No output area provided {on line w/term | at term }termid{, trans }tranid{, rel line=}rr,time*

Explanation: A write was requested on terminal *termid* by transaction *tranid*. However, the TCTTEDA field was not initialized.

System action: The write request is not executed, and the transaction terminates abnormally. CICS processing continues.

User response: Ensure that transaction *tranid* obtains the required storage and initializes the TCTTEDA field.

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term, 2=at term}, termid, {1=, trans}, tranid, {1=, rel line=}, rr,time*

Destination: CSTL

DFHTC2515 *date time applid Output area exceeded {on line w/term | at term }termid{, trans }tranid{, rel line=}rr,time*

Explanation: One of the following has occurred

- The terminal I/O area (TIOA) is not large enough to contain both the data and carrier control characters.
- The TIOA data length is greater than the TCAM block size specified in the DFHTCT TYPE=SDSCI macro.
- The application requires a TIOA larger than 32767 bytes.

System action: The write request is not executed, the terminal write storage is freed (if possible), and the transaction terminates abnormally. CICS processing continues.

User response: Ensure that application programs do not set the value of TIOATDL greater than the TIOA GETMAIN size, and that the TIOA data length is not greater than the TCAM blocksize. Also ensure that the application program does not require a TIOA larger than 32767 bytes.

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term, 2=at term}, termid, {1=, trans}, tranid, {1=, rel line=}, rr,time*

Destination: CSTL

DFHTC2516 *date time applid Unit check SNS=ss {on line w/term | at term }termid{, trans }tranid{, rel line=}rr,time*

Explanation: A unit check error has occurred on the line defined by terminal *termid*. The sense (SNS=ss) is provided. D/T 3275 dialed gives an automatic two-minute time out if there is no activity on the line.

System action: The line is placed out of service on SAM lines.

Intervention on a switched line causes the task to be abnormally terminated and the line to be logically disconnected. Intervention on a non-switched line with a dummy (unidentified) terminal causes the line to be placed out of service. With a real terminal, intervention causes the terminal to be placed out of service and the transaction to be abnormally terminated.

A data check with a dummy terminal causes the line to be placed out of service. With a real terminal, it causes the terminal to be placed out of service and the transaction to be abnormally terminated.

Lost data on a READ,TEXT command causes a MESSAGE TOO LONG response to be sent to the terminal. The transaction is abnormally terminated.

Time-out on a READ,TEXT command causes a MESSAGE TOO LONG response to be sent to the

terminal. Time-out with a dummy terminal causes the line to be placed out of service. With a real terminal, it causes the terminal to be placed out of service and the transaction to be abnormally terminated.

User response: Examine the system console log message generated by SAM for this error and have the unit error corrected.

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, ss, {1=on line w/term, 2=at term}, termid, {1=, trans},trandid, {1=, rel line=}, rr, time*

Destination: CSMT

DFHTC2517 *date time applid* **Unit check SNS=ss, S.N.O.** *{on line w/term l at term }termid{, trans }trandid{, rel line=}rr,time*

Explanation: A unit check error has occurred on the line defined by terminal *termid*. SAM indicates this error as undefined - S.N.O (should not occur). The sense (SNS=ss) is provided.

System action: The line is placed out of service on SAM lines.

Intervention on a switched line causes the task to be abnormally terminated and the line to be logically disconnected. Intervention on a nonswitched line with a dummy (unidentified) terminal causes the terminal to be placed out of service and the transaction (task) to be abnormally terminated. With a real terminal, intervention causes the terminal to be placed out of service and the transaction to be abnormally terminated.

A data check with a dummy terminal causes the line to be placed out of service. With a real terminal, it causes the terminal to be placed out of service and the transaction to be abnormally terminated.

A time-out on a READ,TEXT command causes a MESSAGE TOO LONG response to be sent to the terminal. Time-out with a dummy terminal causes the line to be placed out of service. With a real terminal, it causes the terminal to be placed out of service and the transaction to be abnormally terminated.

User response: Examine the system console log message generated by SAM for this error and have the unit error corrected.

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, ss, {1=on line w/term, 2=at term}, termid, {1=, trans},trandid, {1=, rel line=}, rr, time*

Destination: CSMT

DFHTC2518 *date time applid* **Unit exception on** *{on line w/term l at term }termid{, trans }trandid{, rel line=}rr,time*

Explanation: A unit exception error occurred on the line defined by terminal *termid*.

System action: With a

- Switched line, the transaction is abnormally terminated and the line is logically disconnected.
- Dummy terminal, the line is placed out of service.
- Real terminal, the terminal is placed out of service and the transaction is abnormally terminated.

User response: Examine the system console log message generated by SAM for this error and have the unit error corrected.

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term, 2=at term}, termid, {1=, trans}, trandid, {1=, rel line=}, rr,time*

Destination: CSMT

DFHTC2519 *date time applid* **Unit exception S.N.O.** *{on line w/term l at term }termid{, trans }trandid{, rel line=}rr,time*

Explanation: A unit exception error has occurred on the line defined by terminal *termid*. SAM indicates this error as undefined - S.N.O (should not occur).

System action: With a

- Switched line, the transaction is abnormally terminated and the line is logically disconnected.
- Dummy terminal, the line is placed out of service.
- Real terminal, the terminal is placed out of service and the transaction is abnormally terminated.

User response: Examine the system console log message generated by SAM for this error. Have the unit error corrected.

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term, 2=at term}, termid, {1=, trans}, trandid, {1=, rel line=}, rr,time*

Destination: CSMT

DFHTC2521 *date time applid* **Undetermined unit error** *{on line w/term l at term }termid{, trans }trandid{, rel line=}rr,time*

Explanation: An I/O error (that was *not* a unit check, a unit exception, or a negative response) occurred on the line defined by terminal *termid*.

System action: The line associated with terminal *termid* is placed out of service.

User response: Examine the system console log

message generated by SAM for this error. Have the unit error corrected.

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term, 2=at term }, termid, {1=, trans }, tranid, {1=, rel line=}, rr,time*

Destination: CSMT

DFHTC2522 *date time applid* **Intercept Required for terminal** *termid{ transaction }tranid,time*

Explanation: The task associated with terminal *termid* and transaction *tranid* was to have been abnormally terminated, but TPURGE(NO) was specified in the CSD definition for this task.

System action: The terminal is placed out of service.

User response: Use the master terminal facility to intercept or terminate the task.

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, termid, {1= transaction },tranid, time*

Destination: CSMT

DFHTC2529 *date time applid* **Unsolicited input** *{on line w/term l at term }termid{, trans }tranid{, rel line=}rr,time*

Explanation: Input has occurred on a control unit (general poll) for which terminal *termid* is out of service or has a task that has not issued a DFHTC TYPE=READ macro.

System action: No action is performed by CICS. Control is given to a user-written terminal error program, DFHTEP.

User response: Code DFHTEP as dictated by environmental needs.

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=on line w/term, 2=at term }, termid, {1=, trans }, tranid, {1=, rel line=}, rr,time*

Destination: CSMT

DFHTC2534 *date time applid* **Invalid destination at term** *termid{, trans }tranid,time*

Explanation: An invalid destination was passed to TCAM from terminal *termid*.

System action: The write is halted and the task is abnormally terminated with a dump.

User response: Ensure that the destination is defined in the TCAM message control program (MCP).

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, termid, {1=, trans }, tranid, time*

Destination: CSMT

DFHTC2536 *date time applid* **Link to DFHTEP from DFHTACP failed because** *{module DFHTEP is not AMODE 31 l module DFHTEP could not be loaded l there is no PPT entry for program DFHTEP}.*

Explanation: While processing an error for a non-VTAM terminal, CICS attempted to link to user replaceable module DFHTEP. The link failed. One or more of the default actions described in message DFHTC2538 have been taken.

System action: The default action(s) set by DFHTACP are taken.

User response: Refer to message DFHTC2538 for an explanation of the default action(s) that have been taken.

Possible solutions are

- Ensure that DFHTEP is linked with AMODE 31.
- Ensure that DFHTEP is contained in one of the data sets concatenated in the DFHRPL DD statement and has the correct name.
- Ensure that the PPT entry for module DFHTEP exists and is valid.

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, {1=module DFHTEP is not AMODE 31, 2=module DFHTEP could not be loaded, 3=there is no PPT entry for program DFHTEP}*

Destination: CSMT

DFHTC2537 *date time applid* **Abend abcode has occurred in module DFHTEP.**

Explanation: While processing an error for a non-VTAM terminal, user replaceable module DFHTEP was linked to and the program has abended with abend code *abcode*. One or more of the default actions described in message DFHTC2538 have been taken.

System action: Control is passed back to the calling module DFHTACP. DFHTACP reinstates the default action(s) set before DFHTEP was called. The action(s) are then taken.

User response: Refer to message DFHTC2538 for an explanation of the default action(s) that have been taken. Refer to abend code *abcode* for details of the original error. Follow the user response given in abend code *abcode* to solve the problem.

Module: DFHTACP

XMEOUT Parameters: *date, time,applid, abcode*

Destination: CSMT

DFHTC2538 *date time applid* **Default actions**
actions have been taken for message
number *relatedmessage*.

Explanation: A problem has arisen during the processing of an error for a non-VTAM terminal and message *msgno* has been issued. The explanations for all possible default actions are as follows

Action Meaning

LINEOS

Place line out of service

NONPRGT

Non purgeable task

TERMOS

Place terminal out of service

ABENDT

Abend task on terminal

ABORTWR

Abort write and free terminal storage

RELTIOA

Release TCAM incoming message

SIGNOFF

Call the signoff program for terminal in error

System action: The system action is stated in message *related message*.

User response: Follow the guidance given in the user response section of message *related message*.

Module: DFHTACP

XMEOUT Parameters: *date, time, applid, actions, relatedmessage*

Destination: CSMT

DFHTC8510 *date time applid* **SNA protocol violation detected in query response at termid**
termid

Explanation: CICS has detected a violation of SNA protocols in a query response from device *termid*.

System action: DFHQRY runs without effect.

User response: Find out why an invalid query response is being sent to CICS.

Module: DFHQRY

XMEOUT Parameters: *date, time, applid, termid*

Destination: CSMT

DFHTDnnnn messages

DFHTD0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a three 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; TS1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the *OS/390 MVS System Codes* manual. Then look up the CICS

alphanumeric code. This tells you, for example, whether the error is a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTDA, DFHTDB, DFHTDRM, DFHTDOC

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

Destination: Console

DFHTD0002 *applid* **A severe error (code *X'code'*) has occurred in module *modname*.**

Explanation: An error has been detected in module *modname*. The code *X'code'* is the exception trace point id which uniquely identifies what the error is and where the error was detected. For further information about

CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: An exception entry (code *X'code* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: The severity of this error depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTDA, DFHTDB, DFHTDRM, DFHTDOC

XMEOUT Parameters: *applid, X'code', modname*

Destination: Console

DFHTD0100I *applid* **Transient Data initialization has started.**

Explanation: This is an informational message indicating that transient data initialization has started.

System action: System initialization continues.

User response: None. The message can be suppressed with the system initialization parameter MSGLVL=0.

Module: DFHTDRP

XMEOUT Parameter: *applid*

Destination: Console

DFHTD0101I *applid* **Transient Data initialization has ended.**

Explanation: This is an informational message indicating that transient data initialization has completed successfully.

System action: System initialization continues.

User response: None. The message can be suppressed with the system initialization parameter MSGLVL=0.

Module: DFHTDRP, DFHTDRM

XMEOUT Parameter: *applid*

Destination: Console

DFHTD0102 *applid* **Transient Data initialization has failed.**

Explanation: Transient data initialization has failed.

The SETXIT routine in DFHTDRP has been entered following abnormal termination of the transient data initialization task.

Alternatively an attempt to open the intrapartition data set failed.

System action: Provided there are no subsequent serious errors which prevent further initialization of CICS, CICS issues one of two messages depending on what other errors, if any, have occurred during initialization.

If DFHSI1521 is issued, CICS initialization is terminated. If DFHSI1522 is issued, decide if CICS initialization is to be continued in degraded mode or to be terminated.

If, as part of a restart of CICS rather than during an initial start or a cold start, the intrapartition data set fails to open successfully when it was successfully opened on the previous CICS run, message DFHSI1521 is issued and CICS is terminated.

User response: Check previous console messages, one of which should explain why transient data initialization has failed.

Module: DFHTDRP

XMEOUT Parameter: *applid*

Destination: Console

DFHTD0103I *applid* **Transient Data initialization has been suspended pending takeover.**

Explanation: This is an informational message indicating that transient data initialization has been suspended pending takeover. Some transient data initialization can be performed while CICS is operating in standby mode. However the remaining initialization can not be performed until takeover is complete because transient data sets, with the exception of the DFHCXRF data set, are assumed to be passively shared.

System action: System initialization continues.

User response: None. The message can be suppressed with the SIT parameter MSGLVL=0.

Module: DFHTDRP

DFHTD0104I • DFHTD0182

XMEOUT Parameter: *applid*

Destination: Console

DFHTD0104I *applid* **Transient Data initialization has been resumed following takeover.**

Explanation: This is an informational message indicating that transient data initialization has been resumed following takeover.

System action: System initialization continues.

User response: None. This message can be suppressed with the system initialization parameter MSGLVL=0.

Module: DFHTDRP

XMEOUT Parameter: *applid*

Destination: Console

DFHTD0105I *applid* **Transient Data intrapartition queues will be initialized empty as EMPTY was specified on the TDINTRA SIT parameter.**

Explanation: This is an informational message indicating that transient data is being initialized with TDINTRA=EMPTY specified on the SIT. This has the effect of initializing all intrapartition TD queues in an empty state. The TDINTRA SIT parameter is ignored during a cold or initial start.

System action: System initialization continues.

User response: None. The message can be suppressed with the system initialization parameter MSGLVL=0.

Module: DFHTDRP

XMEOUT Parameter: *applid*

Destination: Console

DFHTD0170 *applid* **The intrapartition data set has been corrupted.**

Explanation: During a warm or emergency restart, CICS has found that the contents of the intrapartition data set are not consistent with that in the DCTEs. The intrapartition data set could have been corrupted.

System action: CICS terminates after producing a dump and writing an exception trace.

A system dump with dumpcode TD0170 is taken unless you have specifically suppressed dumps in the dump table.

User response: Reinitialize the intrapartition data set. Perform a cold start or an initial start of CICS.

Module: DFHTDRM

XMEOUT Parameter: *applid*

1000 Messages and Codes

Destination: Console

DFHTD0180 *applid* **Unexpected response (code X'response) and reason (code X'reason) from a dfhxyym call.**

Explanation: A transient data module cannot continue processing following the failure of a *dfhxyym* call to domain *xx*.

The response (code *X'response*) and reason (code *X'reason*) are those returned from the domain call (that is, *xyy_response* and *xyy_reason*).

System action: This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

A system dump with dumpcode TD0180 is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTDA, DFHTDB, DFHTDOC, DFHTDRM

XMEOUT Parameters: *applid, X'response', X'reason', dfhxyym*

Destination: Console

DFHTD0182 *applid* **Unexpected response (code X'response) and reason (code X'reason) from a dfhxyym call.**

Explanation: Module DFHTDRP cannot continue processing following the failure of a *dfhxyym* call to domain *xx*.

The response (code *X'response*) and reason (code *X'reason*) are those returned from the domain call (that is, *xyy_response* and *xyy_reason*).

System action: This is a critical error.

CICS writes a dump and terminates abnormally.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTDRP

XMEOUT Parameters: *applid, X'response', X'reason', dfhxyym*

Destination: Console

DFHTD0183 *applid* **Unexpected response (code *X'response*) and reason (code *X'reason*) from a *dfhxyym* call during processing of intrapartition queue *queue*.**

Explanation: The trigger level has been reached for intrapartition transient data queue *queue*.

Module DFHTDB or DFHTDRM could not initiate the associated transaction following the response of a *dfhxyym* call to domain *xx*.

The response (code *X'response*) and reason (code *X'reason*) are those returned from the domain call (that is, *xyyy_response* and *xyyy_reason*).

Initiation of the associated transaction has failed.

System action: This is probably a CICS logic error.

Each subsequent write to the transient data queue causes another attempt to initiate the transaction, which will fail. However, this message is only issued the first time the error is detected.

CICS writes a dump and continues processing. Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid*, *X'response*', *X'reason*', *dfhxyym*, *queue*

Destination: Console

DFHTD0240 *applid* **Queue *queue* (DD name *ddname*) is full.**

Explanation: No more data can be written to extrapartition queue *queue*.

A system abend, MVS code X'37, has occurred during processing on the data set with ddname *ddname*.

System action: If the system abend occurs during processing of an EXEC CICS WRITEQ TD command, the NOSPACE condition is returned.

If the system abend occurs during processing of an EXEC CICS SET TDQUEUE CLOSED command, the data set is not closed and the IOERR condition is returned.

Note that a second attempt to close the data set succeeds.

User response: Consider allocating more space to the data set before you bring CICS up again.

Module: DFHTDA, DFHTDOC

XMEOUT Parameters: *applid*, *queue*, *ddname*

Destination: Console

DFHTD0242 *applid* **Abend *abcode* has been detected during processing for queue *queue* (DD name *ddname*).**

Explanation: A system abend, MVS code *abcode*, has occurred during processing on the extrapartition queue *queue* (that is, the data set with ddname *ddname*).

System action: A system dump with dumpcode TD0242 is taken unless you have specifically suppressed dumps in the dump table.

Since this may not be a critical error, CICS is not terminated, and the IOERROR condition is returned.

User response: Examine the CICS job log. QSAM issues a message explaining the reason for the system abend. See *OS/390 MVS System Messages* for a description of this message.

Module: DFHTDA, DFHTDOC

XMEOUT Parameters: *applid*, *abcode*, *queue*, *ddname*

Destination: Console

DFHTD0244 *applid* **An I/O error has occurred during an output operation to an extrapartition dataset for queue *queue*. (DD name = *ddname*).**

Explanation: An I/O error has occurred during the processing of an output operation to the extrapartition data set *ddname* on queue *queue*.

System action: An IOERR condition is returned. Subsequent put requests are returned IOERR.

User response: Close data set *ddname* via CEMT. If the I/O errors persist after a subsequent open, you probably need to reallocate this data set on a different volume.

Module: DFHTDA, DFHTDOC

XMEOUT Parameters: *applid*, *queue*, *ddname*

Destination: Console

DFHTD0245 *applid* **NOSPACE condition on a PUT to the intrapartition data set (DD name *ddname*). The RBA of the next CI would have exceeded 2 gigabytes.**

Explanation: An attempt to write to intrapartition transient data set with ddname *ddname* has failed due to a NOSPACE condition. CICS did attempt to extend the data set but the relative byte address (RBA) of the next control interval (CI), if it were added, would have exceeded 2 gigabytes (x'7FFFFFFF').

System action: The system continues normally.

User response: Delete unwanted transient data queues from the intrapartition data set.

Module: DFHTDB

XMEOUT Parameters: *applid, ddname*

Destination: Console

DFHTD0246 *applid* **An I/O error has occurred during an input operation to an extrapartition dataset for queue *queue*. (DD name = *ddname*).**

Explanation: An I/O error has occurred during the processing of an input operation to the extrapartition data set *ddname* on queue *queue*.

System action: An IOERR condition is returned. Subsequent put requests are returned IOERR.

User response: Close data set *ddname* via CEMT. If the I/O errors persist after a subsequent open, you probably need to reallocate this data set on a different volume.

Check the definition of the extrapartition transient data queue. The specification of an invalid blocksize or recordsize may have caused the I/O error.

Module: DFHTDA, DFHTDOC

XMEOUT Parameters: *applid, queue, ddname*

Destination: Console

DFHTD0247 *applid* **NOSPACE condition on a PUT of the intrapartition data set (DD name *ddname*). The data set is full.**

Explanation: An attempt to write to intrapartition transient data set with *ddname ddname* has failed due to a NOSPACE condition. CICS did attempt to extend the data set but no secondary space was defined or available.

System action: The system continues normally.

User response: Delete unwanted transient data queues from the intrapartition data set, or consider redefining the intrapartition data set with additional secondary storage allocation.

Module: DFHTDB

XMEOUT Parameters: *applid, ddname*

Destination: Console

DFHTD0250 *applid* **Dynamic allocation of queue *queue* failed. Return code *X'rrrr', X'cccc'* in module *module*.**

Explanation: While dynamically allocating queue *queue*, CICS transient data issued an MVS DYNALLOC macro. The DYNALLOC failed with return code *cccc*. *rrrr* is the additional return code in register 15.

System action: CICS continues with queue *queue* closed.

User response: For the meaning of the DYNALLOC

return codes, see the *OS/390 MVS Programming Authorized Assembler Services Guide*.

Module: DFHTDOC

XMEOUT Parameters: *applid, queue, X'rrrr', X'cccc', module*

Destination: Console

DFHTD0251 *applid* **Dynamic deallocation of queue *queue* failed. Return code - *X'rrrr', X'cccc'* in module *module*.**

Explanation: While closing queue *queue*, CICS transient data issued the MVS macro, DYNALLOC, to dynamically deallocate the queue. Deallocation failed with the MVS return code, *cccc*. *rrrr* is the return code in register 15.

System action: CICS continues with the queue closed, but still allocated.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If you change the DSNAME in the DCTE, and then reopen the queue in the same CICS run, CICS may open the original data set. For an explanation of the MVS return code, see the *OS/390 MVS Programming: Authorized Assembler Services Guide*.

Module: DFHTDOC

XMEOUT Parameters: *applid, queue, X'rrrr', X'cccc', module*

Destination: Console

DFHTD0252 *applid* **Open of queue *queue* failed. DSNAME not available from JCL or DCTE. Module *module*.**

Explanation: An attempt by CICS to open queue *queue* failed because neither the JCL nor the DCTE specified the data set name.

CICS transient data has not opened queue *queue*, for the following reasons

- At initialization time, the startup JCL did not include a DD statement.
- No user-submitted routine allocated the queue dynamically.
- The DCTE does not contain a DSNAME parameter to enable CICS to allocate the file dynamically.

System action: CICS continues processing with queue *queue* closed.

User response: Before resubmitting the transaction, supply the data set name in the JCL or the DCTE. You can set the name in the DCTE while CICS is running by using CEDA to correct and reinstall the DCT entry.

Module: DFHTDOC

XMEOUT Parameters: *applid, queue,module*

Destination: Console

DFHTD0340 *applid* Transaction *tranid* initiated when the trigger level is reached for Transient Data queue *queue* is defined as REMOTE. The transaction initiation has failed.

Explanation: The trigger level has been reached for the transient data queue *queue*. The transaction associated with the queue is remote, which is invalid for trigger transactions. The initiation of the transaction has, therefore, failed.

System action: Until the error is corrected, each subsequent write to the transient data queue causes another attempt to initiate the transaction, which fails. However, in order to avoid filling the log with messages, this message is only issued the first time the error is detected.

User response: Perform one of the following, as appropriate

- If the transid in the DCT is incorrect
 - Amend the DCT, replacing the transid for the queue with a transid that is local, and reassemble, or
 - Use EXEC CICS SET TDQUEUE(*queue*) ATITRANID(*tranid*) to replace the transid for the queue with a local transid. See the *CICS System Programming Reference* for more information.
- If the transaction definition is incorrect, amend the transaction definition using CEDA to make the transaction local.
- Use CEDA to alter the DCTE definition and reinstall.

Module: DFHTDXM

XMEOUT Parameters: *applid, tranid,queue*

Destination: Console

DFHTD0341 *applid* Transaction *tranid* associated with the trigger level for Transient Data queue *queue* has not been initiated.

Explanation: The trigger level has been reached for transient data queue *queue*. Initiation of the associated transaction has failed due to an error in system set up.

System action: Until the error is corrected, each subsequent write to the transient data queue causes another unsuccessful attempt to initiate the transaction. However, in order to avoid filling the log with messages, this message is only issued the first time the error is detected.

User response: Check the definition for the queue in the DCT. The queue must have a transaction associated with it that exists, is defined as local, and is installed.

Module: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, tranid,queue*

Destination: Console

DFHTD0342 *applid* Transaction *tranid* associated with the trigger level for Transient Data queue *queue* has not been scheduled.

Explanation: The trigger level has been reached for the transient data queue *queue*. The schedule of the associated transaction has failed due to an error in system set up.

System action: Until the error is corrected, each subsequent write to the transient data queue causes another attempt to schedule the transaction, which fails. However, in order to avoid filling the log with messages, this message is only issued the first time the error is detected.

User response: Check the following and amend if necessary

- The queue must have a transaction associated with it that exists, is defined as local, and is installed. The transaction was local since the Remote attributes were not set in the transaction definition, yet the dynamic parm indicated that it could be remote.
- For DESTFAC (destination facility) of SYSTEM or TERMINAL, the named facility must exist, and any required system links must be installed and in service.

Module: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, tranid,queue*

Destination: Console

DFHTD0343 *date time applid* Automatic transaction restart for transaction *tranid* processing TD queue *queue-name* has failed.

Explanation: A transaction that was attached when a TD trigger level was reached is ending abnormally and automatic transaction restart was requested for this transaction via the user replaceable module DFHREST. A severe error occurred when CICS attempted to restart the transaction.

System action: Message DFHAP0002 is issued with a dump for the severe error that caused the restart to fail. Abnormal termination of the transaction for which restart was requested continues. The transaction is not automatically restarted.

The system attempts to reattach the trigger level transaction when the next TD request is received for this TD queue and the trigger level has been reached or exceeded.

User response: Investigate the reason for the earlier severe error. See message DFHAP0002 for further guidance.

Module: DFHTDXM

DFHTD0360 • DFHTD0363

XMEOUT Parameters: *date, time, applid, tranid, queue-name*

Destination: Console

DFHTD0360 *applid* **Logical I/O error occurred during a GET request to the intrapartition data set (DD name *ddname*); VSAM return codes are R15=*X'retcode*', FDBK=*X'fdbkcode*'.**

Explanation: An attempt to read a control interval from the intrapartition data set with *ddname* has failed due to a logical I/O error. *retcode* is the return code in register 15 and *fdbkcode* is the value of the feedback field in the request parameter list (RPL).

System action: This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate. A system dump with dumpcode TD0360 is taken unless you have specifically suppressed dumps in the dump table.

User response: Message DFHME0116 should be produced containing the symptom string for this problem. For the meaning of the codes in the message, refer to the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, ddname, X'retcode, X'fdbkcode'*

Destination: Console

DFHTD0361 *applid* **Logical I/O error occurred during a PUT request to the intrapartition data set (DD name *ddname*); VSAM return codes are R15=*X'retcode*', FDBK=*X'fdbkcode*'.**

Explanation: An attempt to write or rewrite a control interval to the intrapartition data set with *ddname* has failed due to a logical I/O error. *retcode* is the return code in register 15 and *fdbkcode* is the value of the feedback field in the request parameter list (RPL).

System action: This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

A system dump with dumpcode TD0361 is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: For the meaning of the codes in the message, refer to the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, ddname, X'retcode, X'fdbkcode'*

Destination: Console

DFHTD0362 *applid* **Physical I/O error occurred during a GET request to the intrapartition data set (DD name *ddname*); VSAM return codes are R15=*X'retcode*', FDBK=*X'fdbkcode*'.**

Explanation: An attempt to read a control interval from the intrapartition data set with *ddname* has failed due to a physical I/O error. *retcode* is the return code in register 15 and *fdbkcode* is the value of the feedback field in the request parameter list (RPL).

System action: A system dump with dumpcode TD0362 is taken unless you have specifically suppressed dumps in the dump table.

This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

User response: For the meaning of the codes in the message, refer to the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

A copy of the physical error message produced by VSAM appears in (one of) the transient data VSAM error message area(s) in the system dump.

Module: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, ddname, X'retcode, X'fdbkcode'*

Destination: Console

DFHTD0363 *applid* **Physical I/O error occurred during a PUT request to the intrapartition data set (DD name *ddname*); VSAM return codes are R15=*X'retcode*', FDBK=*X'fdbkcode*'.**

Explanation: An attempt to write or rewrite a control interval to the intrapartition data set with *ddname* has failed due to a physical I/O error. *retcode* is the return code in register 15 and *fdbkcode* is the value of the feedback field in the request parameter list (RPL).

System action: A system dump with dumpcode TD0363 is taken unless you have specifically suppressed dumps in the dump table.

This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

User response: For the meaning of the codes in the

message, refer to the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

A copy of the physical error message produced by VSAM will appear in (one of) the transient data VSAM error message area(s) in the system dump.

Module: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, ddname, X'retcode', X'fdbkcode'*

Destination: Console

DFHTD0380 *applid* **Illegal attempt to read control interval 0 for the intrapartition data set (DD name *ddname*).**

Explanation: Control interval 0 in the intrapartition data set is reserved for transient data control information. The remaining control intervals are allocated to hold data for queues as determined by transient data processing on behalf of application program requests.

An invalid attempt has been made to read control interval 0 for the intrapartition data set with *ddname*.

System action: This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

A system dump with dumpcode TD0380 is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Each intrapartition DCTE contains pointers which, if the queue is not empty, are relative byte addresses (RBAs) associated with the intrapartition data set with *ddname*.

Furthermore each allocated control interval, apart from the first, contains one or more user records as well as a queue control record. This latter record, the first in the control interval, contains the forward chain pointer or RBA for the next control interval containing data for the queue.

In each case, transient data assumes that RBAs address record boundaries within the intrapartition data set.

The assumption can be violated in several ways. The type of violation may be determined from

- a control interval print of the intrapartition data set, or
- using Access Method Services, or
- using the system dump.

Violations include

- **THE WRONG INTRAPARTITION DATA SET WAS USED** If the wrong data set has been used, that is, the data set used for this CICS start up was not used

for the previous CICS start up, then it is highly probable that most of the RBAs in the DCTEs will not address record boundaries in the intrapartition data set. A cold start or an initial start of CICS must be carried out.

- **THE INTRAPARTITION DATA SET WAS ALTERED** If the records have been moved, possibly through data set compression, then it is highly probable that control interval 0 will contain more than one record and that most of the RBAs in the DCTEs will not address record boundaries in the intrapartition data set. A cold start or an initial start of CICS must be carried out.
- **A DCTE WAS CORRUPTED** If a DCTE has been corrupted, it is highly probable that just one or two RBAs will not address record boundaries in the intrapartition data set. A specialized trap may be required to identify the offending program. CICS may be restarted. An emergency restart for transient data will result in the RBAs being reconstructed from the system log and the intrapartition data set. If an activity keypoint was taken between the occurrence of the error and its detection, it may prove necessary for a cold start or an initial start of CICS to be carried out.
- **AN I/O BUFFER WAS CORRUPTED** If an I/O buffer has been corrupted, it is highly probable one of the RBAs in the DCTE will not address record boundaries in the I/O buffer. A specialized trap may be required to identify the offending program. CICS may be restarted. An emergency restart for transient data results in the RBAs being reconstructed from the system log and the intrapartition data set. **Note:** If the contents of the I/O buffer were written to the intrapartition data set between the occurrence of the error and its detection, it may prove necessary to perform a cold start or an initial start of CICS.
- **A CICS LOGIC ERROR OCCURRED** You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, ddname*

Destination: Console

DFHTD0381 *applid* **Invalid attempt to (re)write control interval 0 for the intrapartition data set (DD name *ddname*).**

Explanation: Control interval 0 in the intrapartition data set is reserved for transient data control information; the remaining control intervals are allocated to hold data for queues as determined by transient data processing on behalf of application program requests.

An invalid attempt has been made to (re)write control

DFHTD0382 • DFHTD0385

interval 0 for the intrapartition data set with ddname *ddname*.

System action: This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

A system dump with dumpcode TD0381 is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Refer to message DFHTD0380.

Module: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, ddname*

Destination: Console

DFHTD0382 *applid* **The output pointer for queue *qqqq* does not match the contents of the intrapartition data set (DD name *ddname*).**

Explanation: The output pointer for queue *qqqq* does not address a record boundary within the intrapartition data set with ddname *ddname*.

System action: This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate. A system dump with dumpcode TD0382 is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Refer to message DFHTD0380.

Module: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, qqqq, ddname*

Destination: Console

DFHTD0383 *applid* **The input pointer for queue *qqqq* does not match the contents of the intrapartition data set (DD name *ddname*).**

Explanation: The input pointer for queue *qqqq* does not address a record boundary within the intrapartition data set with ddname *ddname*.

System action: This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate.

A system dump with dumpcode TD0383 is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Refer to message DFHTD0380.

Module: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, qqqq, ddname*

Destination: Console

DFHTD0384 *applid* **A forward chain pointer for queue *qqqq* does not match the contents of the intrapartition data set (DD name *ddname*).**

Explanation: A forward chain pointer for queue *qqqq* is invalid with respect to the intrapartition data set with ddname *ddname*.

System action: This is a critical error and CICS is terminated, even if you have specified in the dump table that CICS should not terminate. A system dump with dumpcode TD0384 is taken unless you have specifically suppressed dumps in the dump table.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Refer to message DFHTD0380.

Module: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, qqqq, ddname*

Destination: Console

DFHTD0385 *applid* **Invalid attempt to allocate/deallocate CI 0 for the intrapartition data set (DD name *ddname*).**

Explanation: Control interval (CI) 0 in the intrapartition data set, *ddname*, is reserved for transient data control information. The remaining control intervals are allocated to hold data for queues as determined by transient data processing on behalf of application program requests.

System action: System dump TD0385 is taken unless you have specifically suppressed dumps in the dump table.

This is a critical error. CICS is terminated even if you have specified in the dump table that CICS should not terminate.

User response: Refer to the **User Response** of message DFHTD0380.

Module: DFHTDB, DFHTDRM

XMEOUT Parameters: *applid, ddname*

Destination: Console

DFHTD0386 *applid* The high RBA value of the primary extent for intrapartition data set (DD name *ddname*) is *X'highrba'*. This exceeds the maximum allowable value of 2GB, and will be capped to a value of X'80000000' minus the CI size of the data set.

Explanation: The high relative byte address (RBA) value of the primary extent for intrapartition data set (DD name *ddname*) is *X'highrba'*. This exceeds the maximum allowable value of 2GB.

System action: CICS caps the area that can be used to a value of X'80000000' minus the control interval (CI) size of the data set.

User response: Consider reducing the size of the primary extent of the intrapartition data set.

Note: Do not reroute this message to a transient data queue.

Module: DFHTDRP

XMEOUT Parameters: *applid, ddname, X'highrba'*

Destination: Console

DFHTD0401 *date time applid terminal userid tranid*
TDQUEUE entry for *queue*name has been deleted.

Explanation: This is an audit log message indicating that transient data queue entry *tdqueue*name has been deleted from the DCT using the DISCARD command. Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Module: DFHTDTM

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, queue*name

Destination: CSQL

DFHTD0402 *date time applid terminal userid tranid*
TDQUEUE entry for *tdqueue*name has been added.

Explanation: This is an audit log message indicating that transient data queue entry *tdqueue*name has been added to the DCT using the INSTALL command Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Module: DFHTDTM

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, tdqueue*name

Destination: CSQL

DFHTD0403 *date time applid terminal userid tranid*
TDQUEUE entry for *tdqueue*name has been replaced.

Explanation: This is an audit log message indicating that transient data queue entry *tdqueue*name has been replaced in the DCT using the INSTALL command. Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Module: DFHTDTM

XMEOUT Parameters: *date, time,applid, terminal, userid, tranid, tdqueue*name

Destination: CSQL

DFHTD1210 *applid* DCT index in error, *xxxx* failed

Explanation: While carrying out operation *xxxx* (INSTALL) CICS found an error in the destination control table (DCT) index. This message is issued on warm or emergency restarts when transient data is installing entries from the global catalog. The most likely reasons for this error are

1. Storage violation.
An application program has overwritten the index,
or
2. CICS logic error
The CICS Directory Domain created the index incorrectly. **or**
3. Corrupt global catalog entries
The global catalog has been corrupted.

DFHTD1217 • DFHTD1261

System action: CICS writes a dump. The transaction abnormally terminates with abend code ATDY and message DFHSI1522 is issued.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Respond GO or CANCEL to message DFHSI1522.

Look at the contents of the global catalog, to determine if the catalog entry has been corrupted for the DCTE that is failing to install.

Assuming that the error is a storage violation, and that you have activated the trace facility, find in the trace the unsuccessful attempt to access the DCT by DFHTDP. Then find the last preceding successful access. You have now narrowed the search to programs that were running between these two accesses. Examine these programs for an error that could cause a storage violation.

If you have not activated trace, but you can recreate the error, activate trace, recreate the error, and proceed as in the previous paragraph.

Module: DFHTDRP

XMEOUT Parameters: *applid, xxxx*

Destination: Console

DFHTD1217 *applid* Unable to install entry *xxxx* into the DCT.

Explanation: During a warm or emergency restart, CICS was unable to add a particular entry to the destination control table (DCT) for destination *xxxx*.

System action: CICS ignores the definition and continues initialization.

User response: The cause of this install failure may be indicated in earlier messages issued from the transient data (TD) component. It may be the result of a failure to open the DFHINTRA data set, or a security error associated with any userid included in the definition. In the latter case, it is possible to create an RDO definition for the entry, with the correct userid, once CICS has initialized, and then to install it using the CEDA transaction.

Module: DFHTDRP

XMEOUT Parameters: *applid, xxxx*

Destination: Console

DFHTD1221 *applid* DCT not restored, *xxxx* failed

Explanation: During a warm start, while carrying out operation *xxxx* (STARTBROWSE, GETNEXT or ENDBROWSE), the transient data recovery program (DFHTDRP) found an error in the destination control table (DCT) catalog.

The most likely reasons for this error are I/O errors in the catalog data set, or a logic error in the CICS module, DFHCCCC.

System action: CICS writes a dump. The transaction abnormally terminates with abend code ATDY and message DFHSI1522 is issued.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Respond GO or CANCEL to message DFHSI1522.

Determine and correct the I/O errors on the catalog data set. If you cannot restore the catalog data set, or suspect that there might be a CICS logic error in DFHCCCC, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTDRP

XMEOUT Parameters: *applid, xxxx*

Destination: Console

DFHTD1260 *applid* No DD statement for intrapartition data set *ddname*

Explanation: CICS is unable to open the intrapartition data set *ddname* because no DD statement has been provided.

System action: During a cold or initial start, TD initialization continues until any DCT macro entries have been processed. Any intrapartition entries found are not installed and message DFHTD1217 is issued for each install failure encountered. At the end of TD initialization, message DFHTD0102 is issued. If no other initialization errors occur, message DFHSI1522 is issued.

For all other starts, TD checks the catalog to see if DFHINTRA had opened successfully on the previous CICS run. If it did, initialization is terminated. If it did not, TD initialization continues normally.

User response: During a cold or initial start, respond GO or CANCEL to message DFHSI1522.

Modify the CICS JCL to add a DD statement defining the intrapartition data set (DFHINTRA).

Module: DFHTDRP

XMEOUT Parameters: *applid, ddname*

Destination: Console

DFHTD1261 *applid* Intrapartition data set *ddname* not defined as VSAM ESDS

Explanation: CICS is unable to open the intrapartition data set *ddname* because it is not defined as VSAM ESDS.

System action: During a cold or initial start, TD initialization continues until any DCT macro entries have

been processed. Any intrapartition entries found are not installed and message DFHTD1217 is issued for each install failure encountered. At the end of TD initialization, message DFHTD0102 is issued. If no other initialization errors occur, message DFHSI1522 is issued.

For all other starts, TD checks the catalog to see if DFHINTRA had opened successfully on the previous CICS run. If it did, initialization is terminated. If it did not, TD initialization continues normally.

User response: On a cold or initial start, respond GO or CANCEL to message DFHSI1522.

Recreate the intrapartition data set as a VSAM ESDS and restart CICS.

Module: DFHTDRP

XMEOUT Parameters: *applid, ddname*

Destination: Console

DFHTD1262 *applid* **Intrapartition data set** *ddname*
not formatted

Explanation: The intrapartition data set *ddname* is not formatted (it is empty). Initial formatting is done (if necessary) when CICS is cold or initial started.

System action: CICS continue to initialize until the destination control table has been completed. Any intrapartition definitions being read from the global catalogue will fail to install because of the original failure. When DFHTDRP completes its processing, CICS writes a dump. The transaction abnormally terminates with abend code ATDY and message DFHSI1522 is issued.

User response: Respond GO or CANCEL to message DFHSI1522.

Perform a cold or initial start when CICS is next brought up.

Module: DFHTDRP

XMEOUT Parameters: *applid, ddname*

Destination: Console

DFHTD1263 *applid* **Invalid control record for**
Intrapartition data set *ddname*

Explanation: The intrapartition data set *ddname* was not initialized for intrapartition transient data. The most likely reason for this is data corruption by

- VSAM export and import
- DFHSM migration and recall.

System action: CICS writes a dump. The transaction abnormally terminates with abend code ATDY and message DFHSI1522 is issued.

User response: Respond GO or CANCEL to message DFHSI1522.

Reinitialize the intrapartition data set.

Module: DFHTDRP

XMEOUT Parameters: *applid, ddname*

Destination: Console

DFHTD1271 *applid* **VSAM error processing**
SHOWCB for intrapartition data set
ddname, R15=retcode

Explanation: VSAM has detected an error during SHOWCB processing for the intrapartition data set *ddname* with VSAM return code *retcode*.

System action: CICS writes a dump. The transaction abnormally terminates with abend code ATDY and message DFHSI1522 is issued.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Respond GO or CANCEL to message DFHSI1522.

Check the return code in the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

Module: DFHTDRP

XMEOUT Parameters: *applid, ddname,retcode*

Destination: Console

DFHTD1272 *applid* **VSAM error processing OPEN**
for Intrapartition data set *ddname,*
R15=retcode, RC=errorcode

Explanation: VSAM has detected an error during OPEN processing for the intrapartition data set *ddname*. *retcode* is the VSAM return code and *errorcode* is the VSAM error code.

System action: CICS writes a dump, then attempts to continue with initialization. If a cold or initial start is taking place, any entries found in a DCT load module are installed, except for any intrapartition entries. If any of these are found, message DFHTD1217 is issued for each install failure. When TDRP completes its processing message DFHTD0102 is issued followed by message DFHSI1522.

For all other types of start, if DFHINTRA had failed during the previous run of CICS, processing continues as normal. If DFHINTRA was open on the previous run, CICS terminates.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: On a cold or initial start, respond GO or CANCEL to message DFHSI1522.

Check the return code and error code in the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

Module: DFHTDRP

DFHTD1273 • DFHTD1278

XMEOUT Parameters: *applid, ddname,retcode, errorcode*

Destination: Console

DFHTD1273 *applid* VSAM error processing CLOSE for intrapartition data set *ddname*, R15=*retcode*

Explanation: VSAM has detected an error during CLOSE processing for the intrapartition data set *ddname*. *retcode* is the VSAM return code.

System action: CICS writes a dump, then attempts to continue with initialization. If a cold or initial start is taking place, any entries found in a DCT load module are installed, except for any intrapartition entries. If any of these are found, message DFHTD1217 is issued for each install failure. When TDRP completes its processing message DFHTD0102 is issued followed by message DFHSI1522.

For all other types of start, if DFHINTRA had failed during the previous run of CICS, processing continues as normal. If DFHINTRA was open on the previous run, CICS terminates.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: For a cold or initial start, respond GO or CANCEL to message DFHSI1522.

Check the return code in the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

Module: DFHTDRP

XMEOUT Parameters: *applid, ddname,retcode*

Destination: Console

DFHTD1274 *applid* VSAM error processing PUT for intrapartition data set *ddname*, R15=*retcode*, RC=*errorcode*

Explanation: VSAM has detected an error during PUT processing for the intrapartition data set *ddname*. *retcode* is the VSAM return code and *errorcode* is the VSAM error code.

System action: CICS writes a dump. The transaction abnormally terminates with abend code ATDY and message DFHSI1522 is issued.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Respond GO or CANCEL to message DFHSI1522.

Check the return code and error code in the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

Module: DFHTDRP

XMEOUT Parameters: *applid, ddname,retcode, errorcode*

1010 Messages and Codes

Destination: Console

DFHTD1275 *applid* VSAM error processing GET for intrapartition data set *ddname*, R15=*retcode*, RC=*errorcode*

Explanation: VSAM has detected an error during GET processing for the intrapartition data set *ddname*. *retcode* is the VSAM return code and *errorcode* is the VSAM error code.

System action: CICS writes a dump. The transaction abnormally terminates with abend code ATDY and message DFHSI1522 is issued.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Respond GO or CANCEL to message DFHSI1522.

Check the return code and error code in the *OS/390 V2R10.0 DFSMS Macro Instructions for Data Sets*.

Module: DFHTDRP

XMEOUT Parameters: *applid, ddname,retcode, errorcode*

Destination: Console

DFHTD1278 *applid* An error occurred during initialization of intrapartition queue *queuename* for userid *userid*. The queue has not been added to the Destination Control Table.

Explanation: Transient data initialization detected an error with userid *userid* during installation of the intrapartition queue for automatic transaction initiation.

The specified userid is not valid for use by this CICS job for non-terminal transactions initiated by the transient data trigger.

There may be a previous message which gives the cause of this error.

System action: Transient data initialization continues.

The intrapartition queue definition is not added to the destination control table.

User response: Notify the system programmer.

If the userid is invalid, correct the userid specified in the resource definition for the intrapartition queue.

If the userid is valid, ensure that it can be used by non-terminal transactions that are initiated by trigger for the intrapartition queue. See the *CICS RACF Security Guide* for guidance.

Module: DFHTDTM

XMEOUT Parameters: *applid, queuename, userid*

Destination: Console

DFHTD1279 *applid* **Unexpected response (code *X'response*) and reason (code *X'reason*) from a *dfhxyym* call.**

Explanation: Module DFHTDTM detected the failure of a *dfhxyym* call to domain *xx* while attempting to install an intrapartition entry containing a USERID.

The response (code *X'response*) and reason (code *X'reason*) are those returned from the domain call (that is, *xyyy_response* and *xyyy_reason*).

This can be due to a CICS logic error.

System action: If the error occurred during transient data initialization, this process will continue if possible. If processing cannot continue then a dump will be taken and an abend ATDY is issued.

User response: Refer to earlier messages and the dump produced by domain *xx*.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTDTM

XMEOUT Parameters: *applid*, *X'response*', *X'reason*', *dfhxyym*

Destination: Console

DFHTD1280 *applid* **An attempt to establish security has failed for userid *userid*. SAF codes are (*X'safresp*,*X'safreas*). ESM codes**

are (*X'esmresp*,*X'esmreas*).

Explanation: An attempt was made to establish security for userid *userid*. The attempt was rejected by the external security manager (ESM).

System action: Security has not been established for the userid.

User response: The response and reason codes (*safresp* and *safreas*) returned by the system authorization facility (SAF), and the response and reason codes (*esmresp* and *esmreas*) returned by the external security manager (ESM) are those issued by the RACROUTE REQUEST=VERIFY or RACROUTE REQUEST=EXTRACT macros. These return codes are described in the *OS/390 MVS Programming: Authorized Assembler Services Guide* and in *External Security Interface (RACROUTE) Macro Reference for MVS and VM (SC28-1366)*. See these manuals for an explanation of the codes.

There may be further messages produced by CICS or the external security manager (ESM) which provide more information.

Module: DFHTDTM

XMEOUT Parameters: *applid*, *userid*,*X'safresp*', *X'safreas*', *X'esmresp*',*X'esmreas*'

Destination: Console

DFHTFnnnn messages

DFHTF0001 *applid* **An abend (code *aaa/bbbb*) has occurred at offset *X'offset*' in module *modname*.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. In some circumstances CICS is terminated directly if the error occurred in a crucial XM domain module.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Next, look up the CICS alphanumeric code in this manual.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTFIQ, DFHZSUP, DFHTFRF, DFHTFAL, DFHTFXM

DFHTF0002 • DFHTI0001

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

Destination: Console

DFHTF0002 *applid* **A severe error (code X'code') has occurred in module modname.**

Explanation: An error has been detected in module *modname*. The code X'code' is the exception trace point id which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code X'code' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. In some circumstances CICS is terminated directly if the error is critical.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTFIQ, DFHZSUP, DFHTFRF, DFHTFAL

XMEOUT Parameters: *applid, X'code', modname*

Destination: Console

DFHTF0100 *date time applid nnnn* **AIDs canceled for**

DFHTInnnn messages

DFHTI0001 *applid* **An abend (code aaa/bbbb) has occurred at offset X'offset' in module modname.**

Explanation: An abnormal end (abend) or program check has occurred in module *module*. This implies that there may be an error in CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a three digit hexadecimal MVS

terminal termid. nnnn AIDs remain.

Explanation: AIDs queuing for terminal *termid* have been canceled. This could be due to the terminal being deleted, or as a result of an SPI or CEMT SET TERMINAL(*termid*) CANCEL command. Any AIDs remaining after this operation are also enumerated in this message. For programming information about CICS SET TERMINAL, see the *CICS System Programming Reference*. For information about the equivalent CEMT command, see the *CICS Supplied Transactions*.

System action: Requests represented as AIDs queuing for the terminal have been purged from the system.

User response: None.

Module: DFHALP

XMEOUT Parameters: *date, time, applid, nnnn, termid, nnnn*

Destination: CSMT

DFHTF0101 *date time applid nnnn* **AIDs {canceled / force-canceled} for connection conname. nnnn AIDs remain.**

Explanation: AIDs queuing for connection *conname* have been canceled or force-canceled. This could be due to connection reinstall, or as a result of a SPI or CEMT SET CONNECTION(*conname*) CANCEL or FORCECANCEL command. Any AIDs remaining after this operation are also enumerated in this message. See the *CICS System Programming Reference* for more information.

System action: Requests represented as AIDs queuing for the connection will have been purged from the system.

User response: None.

Module: DFHALP

XMEOUT Parameters: *date, time, applid, nnnn, {1=canceled, 2=force-canceled}, conname, nnnn*

Destination: CSMT

code (if applicable), followed by a four digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

Message DFHME0116 should be produced containing the symptom string for this problem.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example the domain manager, DFHDMDM). A message is issued to this effect.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual. Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTISR, DFHTIDM

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

Destination: Console

DFHTI0004 *applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset *X'offset'*. This is the offset of the instruction which was executing at the time when the error was detected.

Message DFHME0116 should be produced containing the symptom string for this problem.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example the domain manager, DFHDMDM). A message is issued to this effect.

User response: If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname* and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTISR, DFHTIDM

XMEOUT Parameters: *applid, X'offset', modname*

Destination: Console

DFHTI0005 *applid* **A hardware error has occurred (module *modname*, code *X'code'*). The Time-of-Day clock is invalid.**

Explanation: An error has occurred during the running of module *modname*. The MVS Store Clock facility is the timing mechanism for the operating system.

The code *X'code'* is the exception trace point id which uniquely identifies the place where the error was detected.

Message DFHME0116 should be produced containing the symptom string for this problem.

System action: An exception entry (code *X'code'* in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues if possible, unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example the domain manager, DFHDMDM). A message is issued to this effect.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS. First, investigate the MVS Store Clock and find out whether it is working

DFHTI0100 • DFHTM1711I

properly. If this is the cause, you should take the appropriate action to have it repaired or replaced.

In the unlikely event that this is not a hardware problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTISR, DFHTIDM

XMEOUT Parameters: *applid, modname, X'code'*

Destination: Console

DFHTI0100 *applid* **This is the Beta version of CICS TS which expires on *date*.**

Explanation: You are running a version of CICS Transaction Server released as part of the Beta program. This version can be used under the terms and conditions described in the CICS Announcement letter. The Beta version can be used until the *beta_enddate* given in the message.

System action: CICS continues until *beta_enddate*.

DFHTMnnnn messages

DFHTM1703 *applid product* **is being terminated by userid *userid* in transaction *tranid*{at *netname* | at *terminal* }terminal.**

Explanation: This message is issued after a PERFORM SHUT IMMEDIATE request.

System action: The termination process continues.

User response: None.

Module: DFHSTP

XMEOUT Parameters: *applid, product,userid, tranid, {1= at *netname* , 2= at *terminal* }, terminal*

Destination: Console and Terminal End User

DFHTM1707I *applid* **Program DFHWKP cannot be found. No warm keypoint taken.**

Explanation: CICS cannot take a warm keypoint because the CICS module, DFHWKP, cannot be found in any data set concatenated in the DFHRPL DD statement in the CICS startup job stream.

System action: CICS passes control to the user phase 1 PLT program.

User response: None.

Module: DFHSTP

XMEOUT Parameter: *applid*

Destination: Console

DFHTM1709I *applid* **About to link to PLT programs.**

Explanation: DFHSTP is about to link to the user PLT

User response: None.

Module: DFHTIDM, DFHAPTIM

XMEOUT Parameters: *applid, date*

Destination: Console

DFHTI0101 *applid* **CICS failed to initialize. Beta version of CICS TS expired on *date*.**

Explanation: You are attempting to run a version of CICS Transaction Server released as part of the Beta program. This program has now finished.

System action: CICS terminates. The Beta version of CICS Transaction Server will not initialize.

User response: None.

Module: DFHTIDM, DFHAPTIM

XMEOUT Parameters: *applid, date*

Destination: Console

program PLTSD parameter in the system initialization table. Note that this message may be issued even if PLTSD=NO is used. This occurs if the implied PLT program, EYU9VKIT, is executed because CPSMCONN=WUI is specified.

System action: Control is passed to the user PLT programs.

User response: None.

Module: DFHSTP

XMEOUT Parameter: *applid*

Destination: Console

DFHTM1710I *applid* **Control returned from PLT programs.**

Explanation: Control is returned to DFHSTP to continue system termination. Note that this message may be issued even if PLTSD=NO is used. This occurs if the implied PLT program, EYU9VKIT, is executed because CPSMCONN=WUI is specified.

System action: Control is returned to DFHSTP.

User response: None.

Module: DFHSTP

XMEOUT Parameter: *applid*

Destination: Console

DFHTM1711I *applid* **About to link to phase 2 PLT programs.**

Explanation: DFHSTP is about to link to the phase 2

PLT programs as defined by the PLTSD parameter in the system initialization table.

System action: CICS passes control to the phase 2 user PLT programs.

User response: None.

Module: DFHSTP

XMEOUT Parameter: *applid*

Destination: Console

DFHTM1712I *applid* **Control returned from phase 2 PLT programs.**

Explanation: CICS returns control to DFHSTP so that system shutdown may continue.

System action: CICS returns control to DFHSTP.

User response: None.

Module: DFHSTP

XMEOUT Parameter: *applid*

Destination: Console

DFHTM1715 *applid product* **is being quiesced by userid *userid* in transaction *tranid*{at *netname* | at terminal }terminal.**

Explanation: This message is issued after a PERFORM SHUT request.

System action: Quiesce of CICS continues.

User response: None.

Module: DFHSTP

XMEOUT Parameters: *applid, product,userid, tranid, {1= at netname , 2= at terminal }, terminal*

Destination: Console and Terminal End User

DFHTM1752 *applid* **PLT - program *progrname* not available.**

Explanation: The program list table (PLT) specified for shutdown contains program *progrname*, but CICS is unable to link to the program because one of the following has occurred

- An executable copy of the program could not be brought into storage.
- The installed definition for the program is disabled.
- There is no installed definition for the program.

Note that this message may be issued even if PLTSD=NO is used. This occurs if the implied PLT program, EYU9VKIT, is executed because CPSMCONN=WUI is specified.

System action: CICS termination continues without executing program *progrname*.

User response: In the next execution, check that each program specified in the PLT is contained as a data set concatenated to the DFHRPL DD statement in the startup job stream, and ensure that the program is defined and enabled.

Module: DFHSTP

XMEOUT Parameters: *applid, progrname*

Destination: Console

DFHTM1780 *applid* **Abend has occurred while processing program *progrname* during termination, code=*abcode*.**

Explanation: Program *progrname* specified in the program list table (PLT) for shutdown has abnormally terminated. *abcode* is the abend code. Note that this message may be issued even if PLTSD=NO is used. This occurs if the implied PLT program, EYU9VKIT, is executed because CPSMCONN=WUI is specified.

System action: Control is passed to the next program specified in the PLT and a CICS dump is supplied for review.

User response: Refer to abend code *abcode* for further information about the error. Try and correct program *progrname*.

Module: DFHSTP

XMEOUT Parameters: *applid, progrname, abcode*

Destination: Console

DFHTM1781 *applid* **CICS shutdown cannot complete because some non-system user tasks have not terminated.**

Explanation: This message is issued during shutdown of the CICS session and indicates that one or more CICS tasks are still active, thereby delaying the successful termination of CICS.

System action: CICS shutdown waits until the active task or tasks are successfully terminated.

If the default shutdown transaction (CESD) is active, it attempts, after a delay, to purge and backout all active tasks. This usually leads to a successful termination of CICS within a few minutes without operator intervention.

User response: If the default shutdown transaction (CESD) is not active, determine which CICS tasks are still running, using the CEMT INQUIRE TASK command, and take whatever steps are necessary to terminate them.

Module: DFHSTP

XMEOUT Parameter: *applid*

Destination: Console

DFHTM1782I *applid* All non-system tasks have been successfully terminated.

Explanation: This message is issued during shutdown of the CICS session after successful termination by the user of any active tasks which had previously prevented termination.

System action: CICS shutdown continues normally.

User response: None

Module: DFHSTP

XMEOUT Parameter: *applid*

Destination: Console

DFHTM1783 *applid* CICS shutdown cannot complete because a system task which prevents normal shutdown has not terminated.

Explanation: This message is issued during shutdown of the CICS session and indicates that CICS system transaction CLS1 is still active, thereby preventing the successful termination of CICS.

System action: CICS shutdown waits until the active task is successfully terminated.

User response: Determine, what is delaying the CLS1 transaction (for example the other CICS job or system being hung), and take whatever steps are necessary to resolve the situation.

Module: DFHSTP

XMEOUT Parameter: *applid*

Destination: Console

DFHTM1784 *applid* The user shutdown assist transaction *transid* cannot be started.

Explanation: This message is issued during CICS shutdown and indicates that the user shutdown assist transaction specified on the system initialization table (SIT), or on the CEMT or EXEC CICS PERFORM SHUTDOWN SDTRAN option could not be started.

System action: CICS shutdown continues without starting a shutdown assist transaction.

User response: Do one of the following

- Determine why the shutdown transaction could not start.
- Change or remove the SIT SDTRAN option.
- Change or remove the CEMT or EXEC CICS PERFORM SHUTDOWN SDTRAN option.

Module: DFHSTP

XMEOUT Parameters: *applid, transid*

Destination: Console and Terminal End User

DFHTM1785 *date time applid* The user shutdown assist transaction *transid* cannot be started.

Explanation: This message is issued during CICS shutdown and indicates that the user shutdown assist transaction specified on the system initialization table (SIT), or on the CEMT or EXEC CICS PERFORM SHUTDOWN SDTRAN option could not be started.

System action: A TRANIDERR is returned and CICS shutdown is not performed.

User response: Do one of the following

- Correct the shutdown transaction definition.
- Change or remove the SIT SDTRAN option.
- Change or remove the CEMT or EXEC CICS PERFORM SHUTDOWN SDTRAN option.

Module: DFHEIPSH

XMEOUT Parameters: *date, time, applid, transid*

Destination: CSMT

DFHTM1797 *applid* System termination program has abended.

Explanation: While terminating CICS, the CICS system termination program DFHSTP has abnormally terminated.

System action: CICS terminates abnormally with a system dump.

User response: Try to find out why DFHSTP terminated. If you cannot resolve the problem, keep the dump and contact your IBM Support Center.

Module: DFHSTP

XMEOUT Parameter: *applid*

Destination: Console

DFHTM1798 *applid* Requested dump in progress.

Explanation: This message is issued when CICS is terminated before the requested dump has started.

System action: CICS produces a system dump and shutdown continues.

User response: None.

Module: DFHSTP

DFHTO6009E *date time applid* **The definition for SESSIONs** *sesdef* **refers to CONNECTION** *condef* **which specifies a different PROTOCOL.**

Explanation: While installing a GRPLIST during initialization, or while executing a CEDA CHECK, a CEDA INSTALL, or an EXEC CICS CREATE command, CICS detected a SESSIONS definition (*sesdef*) that referred to a CONNECTION definition (*condef*) that specified a different PROTOCOL.

System action: The SESSIONS definition is not installed.

User response: Correct the SESSIONS or CONNECTION definition.

Module: DFHTOR

XMEOUT Parameters: *date, time, applid, sesdef, condef*

Destination: CSMT

DFHTO6010E *date time applid* **The definition for SESSIONs** *sesdef* **must specify PROTOCOL LU61 as it refers to an MRO CONNECTION** *condef*.

Explanation: While installing a GRPLIST during initialization, or while executing a CEDA CHECK, a CEDA INSTALL, or an EXEC CICS CREATE command, CICS detected a SESSIONS definition (*sesdef*), specified without LU61, which referred to a CONNECTION definition (*condef*) that specified ACCESSMETHOD={IRCIXM} (MRO).

System action: The SESSIONS definition is not installed.

User response: Correct the SESSIONS or CONNECTION definition.

Module: DFHTOR

XMEOUT Parameters: *date, time, applid, sesdef, condef*

Destination: CSMT

DFHTO6011E *date time applid* **SESSIONs sesdef must specify both SENDCOUNT and RECEIVECOUNT as it refers to an MRO CONNECTION condef.**

Explanation: While installing a GRPLIST during initialization, or while executing a CEDA CHECK, a CEDA INSTALL, or an EXEC CICS CREATE command, CICS detected a SESSIONS definition (*sesdef*), specified with either SENDCOUNT=0 or RECEIVECOUNT=0, which referred to a CONNECTION definition (*condef*) that specified ACCESSMETHOD={IRCIXM} (MRO).

System action: The SESSIONS definition is not installed.

User response: Correct the SESSIONS or CONNECTION definition.

Module: DFHTOR

XMEOUT Parameters: *date, time,applid, sesdef, condef*

Destination: CSMT

DFHTO6012 *date time applid* **The catalog dataset is not available. RDO function is restricted.**

Explanation: During initialization for a cold or initial start, CICS could not find the global catalog data set.

System action: CICS continues, but with the following restrictions to RDO function

- A TYPETERM definition must be in the same group as the TERMINAL definitions that refer to it.
- AUTOINSTALL is not available, because the MODEL definitions cannot be stored.

User response: If you wish to avoid the above restrictions to RDO function in future CICS runs, create a global catalog data set and make it available to CICS in the DFHGCDD statement of the CICS startup job stream.

Module: DFHTORP

XMEOUT Parameters: *date, time,applid*

Destination: CSMT

DFHTO6013E *date time applid* **No SESSIONs definition refers to CONNECTION condef.**

Explanation: During installation of a GRPLIST at initialization time, during CEDA INSTALL of a GROUP, a CHECK, or an EXEC CICS CREATE command, a CONNECTION definition was detected that had no valid SESSIONS definitions. This is valid only for INDIRECT or REMOTE connections.

System action: The CONNECTION is not installed.

If the reason for the failure is one or more invalid

SESSIONS definitions, CICS issues another message which identifies the incorrect definition(s). If the reason was a missing SESSIONS definition, this is the only message.

User response: Correct the CONNECTION definition, create a SESSIONS definition, or correct existing SESSIONS definition(s), as appropriate.

Module: DFHTOR

XMEOUT Parameters: *date, time,applid, condef*

Destination: CSMT

DFHTO6014E *date time applid* **POOL is required for TERMINAL termdef as it refers to TYPETERM typedef which specifies SESSIONTYPE=PIPELINE.**

Explanation: An attempt has been made to install a terminal whose TYPETERM specified SESSIONTYPE=PIPELINE, but whose terminal definition did not specify POOL.

System action: CICS initialization continues, but TERMINAL *termdef* is not installed.

User response: Correct the TERMINAL definition, or the TYPETERM definition.

Module: DFHTOR

XMEOUT Parameters: *date, time,applid, termdef, typedef*

Destination: CSMT

DFHTO6015E *date time applid* **TRANSACTION for TERMINAL termdef is invalid for the DEVICE specified in TYPETERM typedef.**

Explanation: An attempt has been made to install a TERMINAL definition which specified TRANSACTION, but referred to a TYPETERM specifying device APPC.

System action: CICS initialization continues, but TERMINAL *termdef* is not installed.

User response: Correct the TERMINAL definition, or the TYPETERM definition.

Module: DFHTOR

XMEOUT Parameters: *date, time,applid, termdef, typedef*

Destination: CSMT

DFHTO6016E *date time applid* **The MRO CONNECTION condef is referenced by more than one SESSIONs definition, including sesdef.**

Explanation: When installing a GRPLIST during initialization, or while executing a CEDA CHECK, a

CEDA INSTALL, or an EXEC CICS CREATE command, CICS has detected a CONNECTION definition *condef* that specified ACCESSMETHOD=(IRCIXM), which implies that it is an MRO connection. This CONNECTION was then referenced by more than one SESSIONS definition, one of which was *sesdef*. An MRO connection must only have one SESSIONS definition referencing it. Other SESSION definition names that reference this CONNECTION are listed in further occurrences of this message.

System action: The CONNECTION definition is not installed.

User response: Correct the CONNECTION definition or the SESSIONS definitions.

Module: DFHTOR

XMEOUT Parameters: *date, time, applid, condef, sesdef*

Destination: CSMT

DFHTO6017E *date time applid* **REMOTESYSTEM for TERMINAL 'termid' is invalid for the DEVICE specified in TYPETERM 'typeterm'.**

Explanation: When installing a GRPLIST during initialization, or while executing a CEDA CHECK, a CEDA INSTALL, or an EXEC CICS CREATE command, CICS detected a CONSOLE that was defined as remote. This is an invalid option.

System action: The CONSOLE is not installed.

User response: Correct the CONSOLE that is defined as remote.

Module: DFHTOR

XMEOUT Parameters: *date, time, applid, termid, typeterm*

Destination: CSMT

DFHTO6018E *date time applid* **TERMINAL 'termid' refers to TYPETERM 'typeterm' which has an invalid ALTSCREEN.**

Explanation: A TYPETERM definition includes an invalid ALTSCREEN. ALTSCREEN has two components; width and height. One of these components is zero while the other is nonzero. This is an invalid combination. CICS has detected this problem in a TERMINAL definition while installing a GRPLIST during initialization, or while executing a CEDA CHECK, a CEDA INSTALL, or an EXEC CICS CREATE command.8

System action: The TERMINAL definition is not installed.

User response: Correct the TYPETERM that is referenced or reference a different TYPETERM in the TERMINAL definition. See the *CICS Resource Definition*

Guide for details of valid ALTSCREEN values.

Module: DFHTOR

XMEOUT Parameters: *date, time, applid, termid, typeterm*

Destination: CSMT

DFHTO6019E *date time applid* **User userid is not authorized to install TERMINAL tttt with preset security.**

Explanation: User *userid* was attempting to install TERMINAL *tttt* but the userid does not have sufficient authority. This is because the TERMINAL has preset security (the definition for TERMINAL *tttt* specifies a USERID value). Installing a resource with preset security requires special authorization.

System action: Resource security violation messages are logged to the CSCS transient data queue and to the system console. The resource is not installed. CICS continues.

User response: In order to install this resource, do one of the following

- Use the CESN transaction to sign on with a userid that is permitted to install TERMINALS with preset security.
- Ask your security administrator to authorize user *userid* to install terminals with preset security.
- Remove the USERID specification from the resource definition and install the resource without preset security.

Module: DFHTOATM

XMEOUT Parameters: *date, time, applid, userid, tttt*

Destination: CSMT

DFHTO6020E *date time applid* **SESSIONS sesdef refers to single-session CONNECTION condef but has an invalid MAXIMUM option specified.**

Explanation: The value specified for the MAXIMUM option in the SESSIONS definition *sesdef* is incompatible with the CONNECTION definition *condef* because *condef* is defined as single-session. This was detected when *sesdef* referred to *condef* during installation of a GRPLIST at initialization, during CEDA INSTALL of a GROUP, or following a CHECK command, or during an EXEC CICS CREATE.

When a SESSION definition refers to a single-session CONNECTION definition, the value of the MAXIMUM option should be (1,0).

System action: The SESSIONS definition is not installed.

User response: There are two ways to solve this problem

- Correct the SESSIONS definition by specifying MAXIMUM(1,0) using either CEDA or the CSD batch update utility DFHCSDUP.
- Redefine the CONNECTION definition so that it is no longer single-session by specifying SINGLESESS=NO.

Module: DFHTOR

XMEOUT Parameters: *date, time, applid, sesdef, condef*

Destination: CSMT

DFHTO6023E *date time applid* **Connection definition @BCH detected. Batch shared database connections are not supported.**

Explanation: While installing a GRPLIST during initialization, or while executing a CEDA CHECK, a CEDA INSTALL, or an EXEC CICS CREATE command, CICS detected a CONNECTION definition named @BCH. In previous releases this connection definition was reserved for use with batch shared database support, and allowed zero send sessions to be defined for an IRC connection. CICS Transaction Server for z/OS, Version 3 Release 2 does not support batch shared database and does not allow the associated sessions definition to specify zero send sessions.

System action: Installation of @BCH sessions fails.

DFHTPnnnn messages

DFHTP4101 **Cannot reset from temporary paging to autopaging.**

Explanation: A terminal requested that it be reset from temporary paging status to autopaging status. However, the terminal is defined as a paging terminal, or the message is marked to state that the operator must purge it.

System action: Other processing continues.

User response: If the terminal is defined as a purging terminal, use the master terminal program to change the status of the terminal.

If the message is so marked, the operator must purge the message. The system then automatically resets the status to autopaging.

Module: DFHTPR

Destination: Terminal End User

DFHTP4102 *nnnn* **messages are queued for immediate delivery.**

Explanation: The operator requested the *nnnn* messages to be delivered via the page retrieve command queue.

System action: The count of messages queued for

User response: Remove the SESSIONS and CONNECTION definitions for batch shared database.

Module: DFHTOR

XMEOUT Parameters: *date, time, applid*

Destination: CSMT

DFHTO6025E *date time applid* **The definition for LU6.1 SESSIONs *sesdef* specifies a send or receive count with no prefix.**

Explanation: While installing a GRPLIST during initialization, or while executing a CEDA CHECK, a CEDA INSTALL, or an EXEC CICS CREATE command, CICS detected an LU6.1 SESSIONS definition (*sesdef*) that specified a send count with no send prefix or a receive count with no receive prefix. Prefixes must be specified for LU6.1.

System action: The SESSIONS definition is not installed.

User response: Correct the definition referred to in the message.

Module: DFHTOR

XMEOUT Parameters: *date, time, applid, sesdef*

Destination: CSMT

this operator or terminal is displayed.

User response: None.

Module: DFHTPR

Destination: Terminal End User

DFHTP4103 **Attempting to PURGE, COPY or CHAIN, but no pages are currently connected to this terminal.**

Explanation: There are currently no tasks attached to this terminal.

System action: Other processing continues.

User response: None.

Module: DFHTPR

Destination: Terminal End User

DFHTP4104 **A paging request was received but there are no pages for display.**

Explanation: The CICS paging command (CSPG) or a request for paging was entered from a terminal in transaction status, but there are no pages to be displayed at the terminal.

System action: Other processing continues.

DFHTP4105 • DFHTP4110

User response: None.

Module: DFHTPR

Destination: Terminal End User

DFHTP4105 The specified message is not recognized.

Explanation: The terminal operator tried to retrieve or purge a specific message using a message identifier (rather than the current or next available message). However, the specified message does not exist, or is not destined for this terminal.

System action: Other processing continues.

User response: None.

Module: DFHTPR

Destination: Terminal End User

DFHTP4106 You are not allowed to RETRIEVE or PURGE this message.

Explanation: The terminal operator tried to retrieve or purge a specific message using a message identifier (rather than the current or next available message). However, the specified message is not destined for this operator identifier.

System action: Other processing continues.

User response: None.

Module: DFHTPR

Destination: Terminal End User

DFHTP4107 Chain value *chain* is less than 1 or greater than the level of chaining allowed.

Explanation: The chain value, *chain*, as indicated by the page retrieval command, is either less than one or is greater than the level of chaining at that terminal.

System action: Other processing continues.

User response: None.

Module: DFHTPR

Destination: Terminal End User

DFHTP4108 Requested page *pageno* does not exist (it is less than 1 or more than the number of pages in the message).

Explanation: The page *pageno*, as indicated by the page retrieval command, is either less than one or is greater than the number of pages in the message. This can be caused, for example, by requesting the previous page after the first page, or the next page after the last page.

System action: Other processing continues.

User response: The paging session can be continued with a valid page value. The last valid page displayed is still the current page. For example, to recall the last valid page displayed, execute the page retrieval command used to get a current page.

Module: DFHTPR

Destination: Terminal End User

DFHTP4109 The requested command *command* was not recognized. Check that you have the correct value.

Explanation: Transaction CSPG was entered at the terminal, but what follows cannot be identified as a paging command. *command* represents the first four nonblank characters after CSPG.

System action: Other processing continues.

User response: None.

Module: DFHTPR

Destination: Terminal End User

DFHTP4110 *function* is not valid. Page RETRIEVE function must be A, C, L, N, P, Q, or a number.

Explanation: The page retrieve function represented by *function* is not one of the following: A, C, L, N, P, Q, or a number that may be preceded by a + (plus) or a - (minus) sign, where

Function

Meaning

- | | |
|----------|--|
| A | All logical messages destined for and being displayed on that terminal. |
| C | The current (level) logical message. |
| L | The last page. |
| N | The next page. |
| P | The previous page. |
| Q | (Query) display the identifier of all logical messages destined for this terminal. If the message is security protected, its identifier is displayed only if the operator identifier and class for the signed-on operator match those in the message. The identifier consists of 1-to-6-digit hexadecimal number, and optionally, a message title. |

System action: Other processing continues.

User response: Use a valid page retrieve function.

Module: DFHTPR

Destination: Terminal End User

DFHTP4111 *function is not valid. Page PURGE function must be A, B, C, H, or R.*

Explanation: The page purge function represented by *function* is not A, B, C, H, or R. The functions have the following meanings.

Function

Meaning

- | | |
|----------|--|
| A | All logical messages destined for and being displayed on that terminal. |
| B | The logical message being displayed on that terminal and all logical messages chained to it. |
| C | The current (level) logical message. |
| H | All logical messages chained to the base logical message being displayed on that terminal. |
| R | All logical messages queued for immediate delivery (routed) to the terminal. |

System action: Other processing continues.

User response: Use a valid page purge function.

Module: DFHTPR

Destination: Terminal End User

DFHTP4112 *The terminal identifier *termid* is unknown or is not supported.*

Explanation: The terminal identifier represented by *termid* does not exist or is not supported under basic mapping support (BMS).

System action: Other processing continues.

User response: Use a valid terminal identifier.

Module: DFHTPR

Destination: Terminal End User

DFHTP4113 *date time applid msgno termtpe pageno I/O error on MCR or Page (MODULE NAME: modname).*

Explanation: While attempting to retrieve a message control record (MCR) or page of a message, a temporary storage I/O error occurred. *msgno* represents the message number in hexadecimal; *termtpe* is the terminal type; *pageno* is zero if the error occurred for the MCR, or is the page number. The message or page noted may be lost for this and/or other terminals.

System action: If pages are being displayed at an autopaging terminal, the next page if any is displayed. Otherwise no action takes place.

User response: None.

Module: DFHTPQ

XMEOUT Parameters: *date, time, applid, msgno,*

termtpe, pageno, modname

Destination: CSMT

DFHTP4114 *You must purge messages from the terminal before issuing a new transaction.*

Explanation: While messages were being displayed at the terminal, the operator entered data that was not a paging command, either in error or to initiate a new transaction. However, at least one of the messages on the terminal is marked that the operator must specifically purge it before initiating a new transaction.

System action: Other processing continues.

User response: Purge all messages being displayed at this terminal (T/A), or chain the desired transaction using the chaining command.

Module: DFHTPR

Destination: Terminal End User

DFHTP4115 *You must purge the message from your terminal to continue.*

Explanation: A transaction is displaying pages at the terminal. Before the operator can continue with the transaction, the message must be purged.

System action: Other processing continues.

User response: Purge the current message (T/C).

Module: DFHTPR

Destination: Terminal End User

DFHTP4116 *Your message request cannot be done while another message is being displayed.*

Explanation: While viewing a message, the operator entered a request for a specific message (for example, P/1,xxx) or requested the message identifiers of messages waiting to be displayed (P/Q). CICS cannot service this request while another message is being displayed. xxx is the message identifier of one of the messages waiting to be displayed.

System action: Other processing continues.

User response: If desired, reenter the request when there are no messages being displayed at the terminal.

Module: DFHTPR

Destination: Terminal End User

DFHTP4117 *Purge display % after viewing.*

Explanation: The operator at a 3270 has requested a display of message identifiers waiting to be displayed. The reply is constructed as one or more pages stored in temporary storage and can be viewed like any page

DFHTP4118 • DFHTP4123

message. % is the page number indicator.

System action: Other processing continues.

User response: Purge the message when viewing is complete.

Module: DFHTPR

Destination: Terminal End User

DFHTP4118 An ID error occurred while retrieving a Message Control Record (MCR) or Message Page. Message *bmsid*, terminal type *termtype*, page *pageno*.

Explanation: CICS was trying to retrieve page *pageno* of a message from temporary storage when an identifier error was received.

Alternatively, if page *pageno* is equal to zero, CICS could have been trying to retrieve a message control record (MCR) when the identifier error was received. The probable cause of the error is that temporary storage was cold started after the message was scheduled or after the message was saved. Otherwise the message had already been purged.

The insert *bmsid* is the BMS logical message identifier, which is a unique hexadecimal identifier used in the generation of a TS key for saving this page or message. The insert *termtype* identifies the terminal type.

System action: The message or page may be lost. Other processing continues.

User response: None.

Module: DFHTPR

Destination: Terminal End User

DFHTP4119 An invalid request on Message Control Record (MCR) or Page Retrieval has occurred. Message *bmsid*, terminal type *termtype*, page *pageno*.

Explanation: CICS was trying to store or retrieve page *pageno* of a message when a temporary storage invalid request occurred. Alternatively, CICS could have been trying to store or retrieve a message control record (MCR) if the page *pageno* equaled zero when the temporary storage invalid error was received.

The message or page may be lost. The probable cause is that temporary storage was not loaded. *bmsid* is the BMS logical message identifier, which is a unique hexadecimal identifier used in the generation of a TS key for saving this page or message. *termtype* is the terminal type.

System action: Other processing continues.

User response: Ensure that the temporary storage program is loaded.

Module: DFHTPR

Destination: Terminal End User

DFHTP4120 Unable to interpret input. Please try again.

Explanation: The operator entered data that could not be interpreted.

System action: Input is discarded.

User response: Verify that input is valid under existing conditions.

Module: DFHTPR

Destination: Terminal End User

DFHTP4121 An I/O error occurred while retrieving a message control record or message page. Message *bmsid*, terminal type *termtype*, page *pageno*.

Explanation: CICS was trying to retrieve page *pageno* of a message when a temporary storage I/O error occurred. Alternatively, CICS could have been trying to store or retrieve a message control record (MCR) if the page *pageno* equaled zero when the temporary storage I/O error occurred.

The message or page may be lost. *bmsid* is the BMS logical message identifier, which is a unique hexadecimal identifier used in the generation of a TS key for saving this page or message. *termtype* is the terminal type.

System action: If pages are being displayed at an autopaging terminal, the next page, if any, is displayed. Otherwise no action takes place.

User response: None.

Module: DFHTPR

Destination: Terminal End User

DFHTP4122 Requested purge completed successfully.

Explanation: CICS has completed a page purge function requested from the terminal.

System action: Processing continues.

User response: None.

Module: DFHTPR

Destination: Terminal End User

DFHTP4123 Terminal is now Autopaging.

Explanation: The terminal operator has requested that CICS reset a terminal that is temporarily in paging status, to autopaging status.

System action: The rest of the pages in the message are displayed. If there are none left and the message

can be purged automatically, it is purged.

User response: None.

Module: DFHTPR

Destination: Terminal End User

DFHTP4124 Page copied from terminal *termid* (Message number *msgno*).

Explanation: This message appears in the display of messages waiting to be displayed (P/Q) and identifies a copied page. *msgno* is the message number of the copied page and *termid* is the terminal for which it is queued.

System action: Processing continues.

User response: None.

Module: DFHTPR

Destination: Terminal End User

DFHTP4126 *msgno* has been copied.

Explanation: This message is issued in response to a request to copy to another terminal. *msgno* is the message number of the message being displayed.

System action: Processing continues.

User response: None.

Module: DFHTPR

Destination: Terminal End User

DFHTP4127 *nnnn* must be a number. Please try again.

Explanation: The characters *nnnn* are not valid. The system expected a decimal value for a page or chain number, or a hexadecimal value for a message number.

System action: Other processing continues.

User response: Reenter the paging command. Use a valid number.

Module: DFHTPR

Destination: Terminal End User

DFHTP4128 *command* is undefined for page retrieval.

Explanation: After a page retrieval (PR) session had been started, the operator pressed a PA or PF key for which no PR command had been defined in the SIT.

System action: The command is ignored. The display status bit is not altered.

User response: Ensure that the PR command in question is defined in the SIT.

Module: DFHTPR

Destination: Terminal End User

DFHTP4130 You have used an unrecognized logical device. The valid names are *xxx,yyy*.

Explanation: A paging command containing an invalid logical device mnemonic was entered. *xxx,yyy,...* indicates the valid logical device mnemonics for the requested logical message.

System action: Input is discarded and other processing continues.

User response: Reenter the paging command with a logical device mnemonic chosen from those listed in the message.

Module: DFHTPR

Destination: Terminal End User

DFHTP4131 Requested page cannot be copied to that terminal.

Explanation: The operator has tried to copy a page that refers to an outboard format

- To a terminal that does not support outboard formats, or
- To a terminal that does support outboard formats, but which has a different page width or a smaller page depth than the source terminal.

System action: The paging request is ignored.

User response: Carry out whichever one of the following is appropriate

- Copy the offending page to a terminal that supports outboard formatting
- Make the referenced format nonoutboard
- Copy the offending page to a terminal that does support outboard formatting and which has a page size the same as that of the source terminal.

Module: DFHTPR

Destination: Terminal End User

DFHTP4132 No pages have been built for this partition.

Explanation: This an information message issued during a page retrieval session. It appears in a screen partition for which no pages have been built.

System action: Processing continues.

User response: None, unless a display was expected in the affected partition. In this case, check for an operator or application error.

Module: DFHTPR

Destination: Terminal End User

DFHTP4133 *date time applid bmsid termtype pageno*
ID error on MCR or page.

Explanation: CICS was trying to retrieve page *pageno* of a message when an identifier error was received. Alternatively, CICS could have been trying retrieve a message control record (MCR) if the page *pageno* equaled zero when the identifier error was received. The message or page may be lost.

The probable cause is that temporary storage was cold-started after the message was scheduled or saved, or the message has already been purged.

bmsid is the BMS logical message identifier, which is a unique hexadecimal identifier used in the generation of a TS key for saving this page/message. *termtype* is the terminal type.

System action: Other processing continues.

User response: None.

Module: DFHTPQ

XMEOUT Parameters: *date, time, applid, bmsid, termtype, pageno*

Destination: CSMT

DFHTP4134 *date time applid bmsid termtype pageno*
Invalid request on MCR or page.

Explanation: CICS was trying to store or retrieve page *pageno* of a message when a temporary storage invalid request error occurred. Alternatively, CICS could have been trying to store or retrieve a message control record (MCR) if the page *pageno* equaled zero when the temporary storage invalid request error occurred. The message or page may be lost.

The probable cause is that temporary storage was not loaded.

bmsid is the BMS logical message identifier, which is a unique hexadecimal identifier used in the generation of a TS key for saving this page/message. *termtype* is the terminal type.

System action: Other processing continues.

User response: Ensure that the temporary storage program is loaded.

Module: DFHTPQ

XMEOUT Parameters: *date, time, applid, bmsid, termtype, pageno*

Destination: CSMT

DFHTP4150 *date time applid* **ID error on MCR.**

Explanation: During processing of a delayed delivery message a temporary storage identification error occurred. The message is lost for all destination terminals. Temporary storage was probably cold started

after the message was originally scheduled.

System action: Other processing continues.

User response: None.

Module: DFHTPS

XMEOUT Parameters: *date, time, applid*

Destination: CSMT

DFHTP4151 *date time applid* **I/O error on MCR.**

Explanation: During processing of a delayed delivery message a temporary storage I/O error occurred. The message is lost for all destination terminals.

System action: Other processing continues.

User response: None.

Module: DFHTPS

XMEOUT Parameters: *date, time, applid*

Destination: CSMT

DFHTP4152 *date time applid* **Invalid request on MCR.**

Explanation: During processing of a delayed delivery message, a temporary storage invalid request error occurred. The message is lost for all destination terminals. The system was probably initialized without temporary storage.

System action: Other processing continues.

User response: Ensure that the system is initialized with temporary storage.

Module: DFHTPS

XMEOUT Parameters: *date, time, applid*

Destination: CSMT

DFHTP4160 *date time applid* **Message *msgno* purged as undeliverable from *nnnn* terminal(s).**

Explanation: The message numbered *msgno* has been waiting for display at a terminal, but *nnnn* of these terminals are unable to display the message because they are out of service. This message is sent to the master terminal operator.

System action: To avoid affecting system performance, messages waiting longer than a time specified by the installation are purged.

User response: None.

Module: DFHTPQ

XMEOUT Parameters: *date, time, applid, msgno, nnnn*

Destination: CSMT

DFHTP4161 Message *msgno* was not delivered. It was purged from terminal(s) *termid*. Message title was *title*.

Explanation: The message numbered *msgno* has been purged because it was not delivered within the system-defined time limit.

title is the title of message *msgno* and appears in this message only if one exists. *termid* is the terminal from which the message was purged.

System action: The message is purged from the system. No further attempt is made to deliver the message.

User response: None.

Module: DFHTPQ

Destination: Terminal End User

DFHTP4162 *date time applid nnnn* BMS system messages purged as undeliverable from error notification terminal.

Explanation: Basic mapping support (BMS) system messages (for example, DFHTP4161) have been waiting to be displayed at the error notification terminal, but the terminal is unable to display them because its status is not consistent with their status, or because traffic is too heavy.

nnnn is the number of BMS system messages purged and *termid* is the error notification terminal's identifier.

System action: To avoid affecting system performance, messages waiting longer than a time specified by the installation, are purged.

User response: Either alter the status of the terminal to allow messages to be displayed or increase purge delay time at CICS system initialization.

Module: DFHTPQ

XMEOUT Parameters: *date, time, applid, nnnn*

Destination: CSMT

DFHTP4164 *date time applid termid* cannot accept message DFHTP4161. It is undefined or does not support paging.

Explanation: *termid* is the identifier of a terminal specified to receive notification if a message could not be delivered. However, *termid* is not now in the TCT or is not defined as a terminal supported by BMS. This message is followed by DFHTP4161, which contains the error notification.

System action: Other processing continues.

User response: Notify terminal *termid* of the contents of message DFHTP4161, which is issued following this message.

Module: DFHTPQ

XMEOUT Parameters: *date, time, applid, termid*

Destination: CSMT

DFHTP4165 Undeliverable messages are being purged. The terminal is available for use.

Explanation: This message is sent to destination CSMT. It is also sent to the originating terminal if transaction CSPQ is entered from the terminal. Program DFHTPQ has been time-initiated to purge any messages that are considered undeliverable.

System action: A non-terminal task is initiated to purge undeliverable messages.

User response: None. The message is displayed at the terminal to indicate that the terminal is available for use.

Module: DFHTPQ

Destination: Terminal End User

DFHTP4166 *date time applid* BMS has received an error return code *retcode* from CICS macro *{TS PURGE | BMS TEXTBLD | BMS PAGEOUT | TS PUT}*.

Explanation: BMS received an error return code after issuing a CICS system macro request. *retcode* is the return code and *macro* is the macro request.

System action: Message DFHME0116 should be produced containing the symptom string for this problem.

User response: You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTPQ

XMEOUT Parameters: *date, time, applid, retcode, {1=TS PURGE, 2=BMS TEXTBLD, 3=BMS PAGEOUT, 4=TS PUT}*

Destination: CSMT

DFHTP4170 *date time applid* Request from system *sysid* to route message number *msgno* to terminal *termid* was not executed.

Explanation: BMS received a request from system *sysid* to route message *msgno* to terminal *termid*. The request could not be executed.

System action: Processing continues.

User response: Ensure that the TCTs for the two systems are consistent.

Module: DFHTPS

XMEOUT Parameters: *date, time, applid, sysid, msgno, termid*

Destination: CSMT

DFHTP4171 *date time applid* **Request from system *sysid* to route message number *msgno* to terminal *termid* was not executed. Terminal not valid.**

Explanation: BMS received a request from system *sysid* to route message *msgno* to terminal *termid*. The request could not be executed because terminal *termid* is not defined on this system.

System action: Processing continues.

User response: Ensure that the TCTs for the two systems are consistent.

Module: DFHTPS

XMEOUT Parameters: *date, time, applid, sysid, msgno, termid*

Destination: CSMT

DFHTP4172 *date time applid* **Request from system *sysid* to route message number *msgno* to terminal *termid* was not executed. Terminal not supported by BMS.**

Explanation: BMS received a request from system *sysid* to route message *msgno* to terminal *termid*. The request could not be executed because terminal *termid* is of a type not supported by BMS.

System action: Processing continues.

User response: Ensure that the TCTs for the two systems are consistent.

Module: DFHTPS

XMEOUT Parameters: *date, time, applid, sysid, msgno, termid*

Destination: CSMT

DFHTP4173 *date time applid* **Request from system *sysid* to route message number *msgno* to terminal *termid* was not executed. Invalid LDC specified.**

Explanation: BMS has received a request from system *sysid* to route message *msgno* to terminal *termid*. The request could not be executed because the LDC specification was invalid.

System action: Processing continues.

User response: Ensure that the TCTs for the two systems are consistent.

Module: DFHTPS

XMEOUT Parameters: *date, time, applid, sysid, msgno, termid*

1028 Messages and Codes

Destination: CSMT

DFHTP4174 *date time applid* **Message routing has failed for terminal *termid*. The *termid* was invalid or could not be located.**

Explanation: BMS has received a request to route a message to terminal *termid*. The request could not be executed because *termid* is invalid or could not be located.

This message is produced if an attempt is made to route to some of the terminals for which CICS supplies default or sample definitions, perhaps by using the ALL option on CMSG. An example of this is the default 3270 bridge template terminal CBRF, which fails for routing because it is defined with REMOTESYSTEM(CBR), for which no definition is supplied.

System action: Processing continues.

User response: There are several possible courses of action, depending on the cause of the message.

- Remove or correct the terminal definition.
- Remove the terminal from the routing list.
- Ignore the message if the terminal is a sample or default definition.

Module: DFHTPS

XMEOUT Parameters: *date, time, applid, termid*

Destination: CSMT

DFHTP4180 *date time applid* **Terminal *termid* specified as error terminal for message *msgno* from system *sysid* invalid and ignored.**

Explanation: BMS has received a request from system *sysid* to route message *msgno*, specifying terminal *termid* to be notified in the event of the message not being delivered. Terminal *termid* is not defined in the terminal control table.

System action: Processing continues.

User response: Ensure that the TCTs for the two systems are consistent.

Module: DFHTPS

XMEOUT Parameters: *date, time, applid, termid, msgno, sysid*

Destination: CSMT

DFHTP4190 **Please enter your data again in the partition containing the cursor.**

Explanation: The terminal operator entered data from a partition other than the expected input partition. The expected input partition is activated (that is, the cursor is moved into it), and the terminal operator should reenter data in this partition.

System action: Processing continues.

User response: Ensure that the terminal operator enters data in the correct partition.

Module: DFHPHP

Destination: Terminal End User

DFHTRnnnn messages

DFHTR0001 *applid* **An abend (code *abcode*) has occurred at offset *X'offset'* in module *modname*.**

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in CICS code.

Alternatively, unexpected data has been input, or storage has been overwritten.

The code *abcode* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual which is detailed in the book list in the front of this manual.

Next, look up the CICS alphanumeric code in this manual. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTRSR, DFHTRPT, DFHTRDM, DFHTRFT

XMEOUT Parameters: *applid, abcode, X'offset', modname*

Destination: Console

DFHTR0002 *applid* **A severe error (code *X'code*) has occurred in module *modname*.**

Explanation: An error has been detected in module *modname*. The code *X'code* is the exception trace point id which uniquely identifies what the error is and where the error was detected. For further information about CICS exception trace entries, refer to the *CICS Problem Determination Guide*.

System action: An exception entry (code *X'code*) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: There may be an error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTRSR

XMEOUT Parameters: *applid, X'code', modname*

Destination: Console

DFHTR0004 *applid* **A possible loop has been detected at offset *X'offset'* in module *modname*.**

Explanation: A CICS function is taking more time to process than CICS expects. A possible loop has been detected in module *modname* at offset *X'offset'*. This is

DFHTR0101 • DFHTR0104

the offset of the instruction which was executing at the time the error was detected.

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: If CICS has not been terminated, it is necessary to decide whether the problem is serious enough to bring CICS down.

Since some CICS functions can use a lot of processor time, this message may have been caused by a long-running function. So there may not be an error here. Usually, CICS purges a CICS function which exceeds the runaway task time interval which you have specified in the SIT (this is the ICVR which is measured in milliseconds). This means that module *modname* is terminated and CICS continues.

But if you have declared ICVR=0 in the SIT and you consider that module *modname* has gone into a loop, you have to terminate CICS in order to terminate the runaway function.

If CICS has terminated module *modname* and you consider that it was not a runaway, you should increase the ICVR time interval in the SIT. You have to bring CICS down at a suitable time to do this permanently. But you can change the ICVR time interval temporarily online, using the CEMT transaction.

If raising the ICVR time does not solve the problem, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTRSR, DFHTRPT, DFHTRDM, DFHTRFT

XMEOUT Parameters: *applid*, *X'offset'*, *modname*

Destination: Console

DFHTR0101 STORAGE FOR INTERNAL TRACE TABLE NOT AVAILABLE -TRACE INOPERATIVE.

Explanation: During CICS initialization, there was insufficient storage for even the minimum allowable internal trace table size (16KB).

System action: CICS terminates with a system dump.

User response: The failure to get even 16KB from MVS at this early stage of initialization almost certainly means that other areas of CICS and other system functions will not be able to acquire the storage they require to operate, so the system is unlikely to initialize completely. A possible solution is to increase the value

for the REGION keyword on the EXEC statement for the CICS job.

Module: DFHTRDM

Destination: Console

DFHTR0102 REQUESTED TRACE TABLE SIZE NOT AVAILABLE.

Explanation: CICS issues a variable-type GETMAIN to MVS for the internal trace table storage. This message indicates that the upper limit specified (on the TRTABSZ keyword) was not available, but that at least the lower limit of 16K was obtained.

Message DFHTR0103 which follows this message gives the actual size acquired.

System action: CICS continues with an internal trace table of the size given by message DFHTR0103.

User response: There are three possible courses of action

- Allow CICS to run with the decreased table size if this is thought to be adequate.
- Terminate the system and reinitialize after increasing the region size available to CICS.
- Once the system is initialized, use CETR to increase the table size to the required value.

Module: DFHTRDM

Destination: Console

DFHTR0103 TRACE TABLE SIZE IS *nn*K.

Explanation: The internal trace table acquired during CICS initialization has a table size *nn*KB.

This is either the same as that specified on the TRTABSZ keyword of the SIT or message DFHTR0101 or DFHTR0102 has preceded this on the console.

System action: CICS continues.

User response: None.

Module: DFHTRDM

Destination: Console

DFHTR0104 *applid* No buffer storage available for auxiliary trace data set. Auxiliary trace is inoperative.

Explanation: An attempt to start auxiliary trace failed because there was insufficient storage available from MVS for the 4KB output buffer.

System action: A CICS system dump with dump code TR0104 is taken. CICS then continues with auxiliary trace inactive.

User response: Determine why so little MVS storage is available and retry if possible.

Module: DFHTRDM

XMEOUT Parameter: *applid*

Destination: Console

DFHTR0105 AUXILIARY TRACE DATA SET *dataset* COULD NOT BE OPENED - AUXILIARY TRACE INOPERATIVE.

Explanation: An attempt to start auxiliary trace or to switch auxiliary trace extents has failed because the request to BSAM to open data set *dataset* failed.

System action: There are two cases

- If the error occurs after an explicit request to start auxiliary trace (as opposed to switching extents), a CICS system dump with dump code TR0105 is taken. CICS then continues with auxiliary trace inactive.
- If the error occurs when auxiliary trace is already active, that is, an explicit switch request when auxiliary trace starts or an end-of-extent with autoswitching active, an SDUMP with dump code KERNDUMP is taken. This type of dump is not subject to suppression or modification by use of the dump table.

User response: Check that the DD statement for data set *dataset* is present.

If it is, format the system dump and examine the TR domain information. The DCB for the auxiliary trace data set should be present. Use this to determine the reason for the open failure.

Module: DFHTRSR, DFHTRSU

Destination: Console

DFHTR0106 *applid* DFHTRAO could not be loaded. Auxiliary trace is inoperative.

Explanation: An attempt to start auxiliary trace failed because the CICS module, DFHTRAO, which is used to write to the auxiliary trace data set, could not be loaded.

System action: The loader domain (LD) will have issued messages and dumps as necessary. CICS continues with auxiliary trace inactive.

User response: Refer to the associated loader domain messages for further information and guidance.

Module: DFHTRSR

XMEOUT Parameter: *applid*

Destination: Console

DFHTR0107 ABEND *X'abcode'* ON AUXILIARY TRACE DATA SET *dataset* - AUXILIARY TRACE STOPPED.

Explanation: The DCB abend exit for named auxiliary trace data set *dataset* was driven after a request to BSAM.

The 3-digit abend code is indicated as *X'abcode*

System action: CICS continues with auxiliary trace inactive.

User response: Refer to the *OS/390 MVS System Codes* manual for an explanation of the abend code, *X'abcode*.

Module: DFHTRAO

Destination: Console

DFHTR0108 I/O ERROR ON AUXILIARY TRACE DATA SET *dataset* - AUXILIARY TRACE STOPPED.

Explanation: The SYNAD exit for the auxiliary trace data set *dataset* was driven after a request to BSAM.

System action: CICS will continue with auxiliary trace inactive.

User response: Use this message and any BSAM messages to determine the source of the error.

Module: DFHTRAO

Destination: Console

DFHTR0109 AUXILIARY TRACE DATA SET *dataset* FULL -AUXILIARY TRACE HAS BEEN STOPPED.

Explanation: The auxiliary trace data set *dataset* is full. Auxiliary trace has been stopped because autoswitch is not active.

System action: CICS continues with auxiliary trace inactive.

User response: The auxiliary trace data set *dataset* can now be processed by the print routine DFHTU650.

Module: DFHTRSU

Destination: Console

DFHTR0110 AUXILIARY TRACE DATA SET *dataset1* FULL - SWITCHING TO *dataset2*.

Explanation: The auxiliary trace data set *dataset1* is full. Auxiliary trace is continuing on data set *dataset2* because autoswitching was requested.

System action: CICS continues with auxiliary trace active on the data set *dataset2*.

User response: Process the full data set if required.

Module: DFHTRSU

Destination: Console

DFHTR0111 *applid* Unable to acquire storage for GTF buffer - GTF trace inoperative.

Explanation: An attempt to start CICS tracing to the MVS Generalized Trace Facility (GTF) failed because there was insufficient storage available from MVS for

DFHTR0112 • DFHTR0114

the 256-byte buffer required.

This message can be issued by DFHTRDM during CICS initialization if GTFTR=ON is specified on the SIT or start-up overrides, or by DFHTRSU if the request to start GTF was made after CICS was up and running.

System action: CICS continues with GTF tracing inactive.

User response: The failure to acquire even 256 bytes of storage indicates that the CICS region is probably in a stall condition. This can only be relieved by removing some of the users of MVS storage or by restarting CICS, possibly with a larger region size.

Module: DFHTRDM, DFHTRSU

XMEOUT Parameter: *applid*

Destination: Console

DFHTR0112 *applid* **Bad data passed for tracing to module *modname*.**

Explanation: Some data passed to the trace (TR) domain for addition to the internal trace table, auxiliary trace data set or GTF trace caused a program check when an attempt was made to access it.

This could either be as a result of a request made by CICS system code or a request made by a user program through the API or XPI.

If transaction isolation is active, this message can be issued if a transaction passes another transaction's storage to CICS. A program check occurs when CICS attempts to trace this storage because the storage is fetch protected.

System action: A system dump with dump code TR0112 is taken.

If the message was issued by DFHTRPT the dump contains an exception trace entry (point ID TR0102) that includes the erroneous parameter list passed to DFHTRPT.

If the message was issued by DFHTRFT the dump contains an exception trace entry (point ID TR0402) that includes the erroneous parameter list passed to DFHTRFT.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Examine the interpreted exception trace entry to determine the domain that issued the call and the ID of the entry. Then look at the specified addresses and lengths in the *data*n** fields to see if they contain reasonable values. The fault is in the module that set up these fields for the trace call.

If transaction isolation is active, examine the calling domain's parameter list, *data2*, for storage that belongs to another transaction. Correct the offending application program. It should not be passing another transaction's

storage. Alternatively, alter the definition of the application so that it can validly access another transaction's storage. See the *CICS Resource Definition Guide* for more information on how to alter the definition.

Module: DFHTRPT, DFHTRFT

XMEOUT Parameters: *applid, modname*

Destination: Console

DFHTR0113 *applid* **Auxiliary trace is being started on data set *dataset*.**

Explanation: A request to start auxiliary trace has been successfully processed. The trace records are being written to data set *dataset*.

System action: CICS continues with auxiliary trace active.

User response: None.

Module: DFHTRSR

XMEOUT Parameters: *applid, dataset*

Destination: Console

DFHTR0114 **AN ABEND HAS OCCURRED DURING INITIALIZATION OF TRACE IN MODULE *modname*.**

Explanation: Module *modname*'s recovery routine received control during pre-initialization of the trace (TR) domain. This indicates that a program check has occurred in module *modname*.

There are three possible causes of this condition.

1. The module has been overwritten in main storage.
2. The module is at an incompatible level with the rest of the CICS modules.
3. There is an error in the module.

System action: A system dump with dump code KERNDUMP is taken.

User response: Inform the system programmer.

There may be an error in CICS code. The severity of its impact will depend on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

Use the dump to determine the cause of the condition.

Module: DFHTRDM , DFHTRSR

Destination: Console

DFHTR0115 AN ABEND HAS OCCURRED IN THE AUXILIARY TRACE MODULE DFHTRAO.

Explanation: Module DFHTRAO's recovery routine has received control.

This indicates a program check or MVS abend has occurred in DFHTRAO.

There are three possible causes of this condition

- DFHTRAO has been overwritten in main storage
- DFHTRAO is at an incompatible level with the rest of the CICS modules
- There is an error in DFHTRAO.

System action: A system dump with dump code KERNDUMP is taken.

User response: There may be an error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module DFHTRAO is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module DFHTRAO, you should bring CICS down in a controlled shutdown.

Use the dump to determine the cause of the condition.

Module: DFHTRAO

Destination: Console

DFHTR0116 AN ABEND HAS OCCURRED IN THE TRACE SUBROUTINES MODULE DFHTRSU.

Explanation: The recovery routine belonging to the trace domain module DFHTRSU has received control.

This indicates a program check or MVS abend has occurred in that module.

There are three possible causes of this condition

- DFHTRSU has been overwritten in main storage.
- DFHTRSU is at an incompatible level with the rest of the CICS modules.
- There is an error in DFHTRSU.

System action: A system dump with dump code KERNDUMP is taken.

User response: There may be an error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated.

If the message occurs once and module DFHTRSU is

not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module DFHTRSU, bring CICS down in a controlled shutdown.

Use the dump to determine the cause of the condition.

Module: DFHTRSU

Destination: Console

DFHTR0117 applid Auxiliary trace on data set dataset has been stopped.

Explanation: An operator or application program request, to stop CICS tracing to the auxiliary trace data set *dataset*, has been successfully processed.

System action: CICS continues with auxiliary trace inactive.

User response: The auxiliary trace data set *dataset* can now be processed by the print routine DFHTU650.

Module: DFHTRSR

XMEOUT Parameters: *applid, dataset*

Destination: Console

DFHTR0118 applid Auxiliary trace is being switched from dataset1 to dataset2.

Explanation: An operator or application program request to switch extents on the auxiliary trace data set while auxiliary trace is active is being processed.

System action: CICS stops tracing on the first named data set *dataset1*, and resumes tracing on the second named data set *dataset2*.

User response: The first named auxiliary trace data set *dataset1* can now be processed by the print routine DFHTU650.

Module: DFHTRSR

XMEOUT Parameters: *applid, dataset1, dataset2*

Destination: Console

DFHTR1000 applid CICS abend requested by global trap exit DFHTRAP in module modname.

Explanation: The field engineering global trap exit program (DFHTRAP) requested termination of CICS.

System action: CICS disables the trap exit so that it will not be reentered, and terminates CICS.

User response: Determine why DFHTRAP has requested system termination and act accordingly. **You should use the global trap exit only in consultation with an IBM support representative.**

DFHTR1001 • DFHTR2001

Module: DFHTRPT, DFHTRFT

XMEOUT Parameters: *applid, modname*

Destination: Console

DFHTR1001 *applid* Program check occurred within global trap exit - DFHTRAP now marked unusable by module *modname*.

Explanation: After making a trace entry, the CICS trace domain (TR) called the field engineering global trap exit program (DFHTRAP). A program check occurred during execution of DFHTRAP.

System action: CICS marks the currently active version of DFHTRAP unusable, and will ignore it on future calls to TR domain. CICS then takes a dump with system dump code TR1001, and continues execution.

User response: Use the dump to find the cause of the program check. To replace the currently active but unusable DFHTRAP by a new version in the CICS program library, issue the following commands in the sequence shown

```
CSFE DEBUG,TRAP=OFF (to deactivate the current trap)
CEMT SET PROGRAM(DFHTRAP) NEWCOPY (to update the trap disk address known to CICS)
CSFE DEBUG,TRAP=ON (to activate the new version of the trap)
```

You should use the global trap exit only in consultation with an IBM support representative.

Module: DFHTRPT, DFHTRFT

XMEOUT Parameters: *applid, modname*

Destination: Console

DFHTR1002 *applid* Program DFHTRAP is not available - global trap not activated

Explanation: CICS could not activate the field engineering global trap exit program, DFHTRAP, during processing of the TRAP=ON SIT keyword or override in CICS initialization. This is almost certainly because DFHTRAP is not present in the program library.

System action: CICS takes a system dump with dump code TR1002 and continues with the global trap not activated.

User response: Ensure that DFHTRAP is defined to RDO and made available in the program library.

You should use the global trap exit only in consultation with an IBM support representative.

Module: DFHTRDM

XMEOUT Parameter: *applid*

Destination: Console

DFHTR1003 *applid* CICS system dump requested by global trap exit DFHTRAP in module *modname*.

Explanation: The user-coded global trap exit program (DFHTRAP) has requested a system dump in its return action settings.

System action: CICS takes a system dump with dump code TR1003 and continues with the global trap still active.

User response: Analyze the requested dump.

You should use the global trap exit only in consultation with an IBM support representative.

Module: DFHTRPT, DFHTRFT

XMEOUT Parameters: *applid, modname*

Destination: Console

DFHTR2000 INCOMPLETE ENTRY IGNORED.

Explanation: CICS trace entries longer than 256 bytes have to be split into multiple Generalized Trace Facility (GTF) entries because of GTF's length restriction. The CICS entry becomes a header entry followed by one or more continuation entries. This message in the GTF printout indicates that a CICS entry on GTF longer than 256 bytes has not been printed because a new header entry from the same MVS TCB was encountered before all of the continuation entries from a previous split entry were received.

System action: The incomplete entry is ignored.

User response: This situation can arise in one of two ways

- The MVS TCB making the first split trace entry abnormally terminated while writing the continuation entries.
This results in messages and a system dump during the CICS run.
Refer to the associated messages for further information and guidance. Use the dump to determine and solve the problem.
- GTF has failed to record one or more of the continuation entries because of an internal error. You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTRPRG

Destination: SYSPRINT

DFHTR2001 INSUFFICIENT STORAGE FOR RECONSTRUCTION BUFFER.

Explanation: A CICS entry longer than 256 bytes has been split into a header record and one or more continuation records on the generalized trace facility

(GTF). It cannot be formatted because MVS could not allocate sufficient working storage for a buffer to allow reconstruction of the segmented entry.

System action: The entry is printed in hexadecimal and the print job continues.

User response: Rerun the GTF print job with a larger region size.

Module: DFHTRPRG

Destination: SYSPRINT

DFHTR2002 INVALID ENTRY PASSED FOR FORMATTING.

Explanation: A GTF entry with the CICS format identifier (X'EF) has been passed to the CICS GTF print routine but the data it contains is not part of a valid CICS trace entry.

System action: The invalid entry is printed in hexadecimal and the print job continues.

User response: Examine the entry for clues to its origin.

Module: DFHTRPRG

Destination: SYSPRINT

DFHTR2003 UNEXPECTED CONTINUATION ENTRY ENCOUNTERED.

Explanation: CICS trace entries longer than 256 bytes have to be split into multiple GTF entries because of GTF's length restriction. The CICS entry becomes a header entry followed by one or more continuation entries. This message in the GTF printout indicates that a GTF entry has been passed to the CICS GTF print routine that is not the start of a CICS segmented entry and the entry type is not one for which a continuation is currently expected.

System action: The invalid entry is printed in hexadecimal and the print job continues.

User response: This situation could arise if the header record for a segmented entry is overwritten because of GTF's normal cyclic re-use of space in its data set. In this case the invalid entries would be very close to the start of the printout.

If this is not so, examine the entry for clues to its origin.

Module: DFHTRPRG

Destination: SYSPRINT

DFHTR2004 THE MAXIMUM NUMBER OF BUFFERS (nn) HAVE BEEN ALLOCATED. NONE ARE FREE FOR REUSE.

Explanation: A CICS trace entry longer than 256 bytes has been split into a header record and one or more continuation records on the generalized trace

facility (GTF). However, it cannot be formatted because the maximum number of buffers allowed for reconstruction of segmented entries for a specific type has been reached. This maximum is currently set to *nn*. The number of buffers for a specific type relates directly to the number of regions or systems writing trace entries to the GTF trace data set. During writing, the segmented entries for some of the different regions or systems could become interleaved in the data set. To ensure that the entries are formatted completely and correctly, it is necessary to have a buffer available for each region or system whose trace entries have become interleaved in this way. For further information on trace types and segmented entries see the section on trace formatting in the *CICS Diagnosis Reference*.

System action: The entry is printed in hexadecimal and the print job continues.

User response: None, but if the situation occurs regularly, contact your IBM Support Center to discuss whether the maximum value set is too low.

Module: DFHTRPRG

Destination: SYSPRINT

DFHTR2005 THE LOAD FAILED FOR LOAD MODULE *modname*. PLACE MODULE IN THE LINK LIST AND TRY AGAIN.

Explanation: The generalized trace facility (GTF) trace formatter tried to load the correct release of trace formatter for the trace entry being processed.

System action: The job continues printing trace entries in hexadecimal only.

User response: Place the named trace formatter load module into the link list and rerun the job. If the named trace formatter is not available, you will need further assistance from IBM. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTRPRG

Destination: SYSPRINT

DFHTR2006 UNKNOWN ENTRY PASSED FOR FORMATTING.

Explanation: An unknown CICS GTF trace entry has been passed to the CICS GTF print routine. The probable reason for this is that the CICS GTF formatting routine being used is from a previous CICS release and therefore does not recognize entries from the current release.

System action: The unknown entry is printed in hexadecimal and the print job continues.

User response: Examine the entry for clues to its origin. Ensure you are running GTF formatting routine DFHTGxxx where xxx is the current CICS release level.

Module: DFHTRPRG

Destination: SYSPRINT

DFHTR3001 ERROR IN OPENING DFHAXPRT FILE.

Explanation: The auxiliary trace print program DFHTU650 could not open the data set defined to receive the print output.

System action: The print job terminates with a return code of 8.

User response: Ensure that the DD statement for DFHAXPRT is present and correct in the DFHTU650 job.

Module: DFHTRPRA

Destination: Console

DFHTR3002 ERROR IN OPENING DFHAUXT FILE.

Explanation: The auxiliary trace print program DFHTU650 could not open the auxiliary trace data set to be processed.

System action: The print job terminates with a return code of 8.

User response: Ensure that the DD statement for DFHAUXT is present and correct in the DFHTU650 job.

Module: DFHTRPRA

Destination: Console

DFHTR3003 ERROR IN OPENING DFHAXPRM FILE.

Explanation: The auxiliary trace print program DFHTU650 could not open the parameter input data set DFHAXPRM.

System action: The print job terminates with a return code of 8.

User response: Ensure that the DD statement for DFHAXPRM is present and correct in the DFHTU650 job, or specify your input parameters on the PARM keyword of the EXEC statement.

Module: DFHTRPRA

Destination: Console

DFHTR3010 ERROR IN TRACE DATA - ENTRIES MAY HAVE BEEN LOST.

Explanation: The trace block being formatted contains invalid length and/or pointer fields. This can happen if the trace table is accidentally overwritten.

System action: The trace formatting code scans the block to try and find valid entries. Any that are found are printed. The rest of the data is ignored.

User response: Try and determine what caused the overwriting of the internal trace table.

The trace entries immediately before and after this

message in the print out should be viewed with suspicion. They may contain incorrect data, or there may be one or more entries missing altogether at this point.

Module: DFHTRFPB

Destination: SYSPRINT

DFHTR4001 Pos position, Blank record.

Explanation: The trace selection parameters for either the auxiliary trace print program DFHTU650, the system dump print program DFHPD650, or the GTF trace print program DFHTR650 are not correctly specified. There were no valid selective trace print parameters found.

System action: The print job terminates with a return code of 8.

User response: Ensure that the DD statement for DFHAXPRM is present and correct in the print job, or specify your input parameters on the PARM keyword of the EXEC statement. A blank line has been found as input on a job control statement. Specify at least one valid selection parameter on this job control statement and rerun the print job. Please refer to the *CICS Operations and Utilities Guide* for a list of valid trace print selection parameters.

Module: DFHTRFPP

Destination: SYSPRINT

DFHTR4002 Pos position, Invalid keyword.

Explanation: The trace selection parameters for either the auxiliary trace print program DFHTU650, the system dump print program DFHPD650, or the GTF trace print program DFHTR650 are not correctly specified. The keyword found in *position* of the control statement is not a valid trace selection parameter or has been specified incorrectly.

System action: The print job terminates with a return code of 8.

User response: Specify a valid selective trace print parameter and rerun the job. Please refer to the *CICS Operations and Utilities Guide* for a list of valid trace print selection parameters. DFHTRFPP

DFHTR4003 Pos position, Unexpected end of data.

Explanation: The trace selection parameters for either the auxiliary trace print program DFHTU650, the system dump print program DFHPD650, or the GTF trace print program DFHTR650 are not correctly specified. An unexpected end of data has been encountered.

System action: The print job terminates with a return code of 8.

User response: Ensure that the DD statement for DFHAXPRM is present and correct in the print job, or

specify your input parameters on the PARM keyword of the EXEC statement. Specify the trace selection parameters correctly. Refer to the *CICS Operations and Utilities Guide* for further information on how to do this.

Module: DFHTRFPP

Destination: SYSPRINT

DFHTR4004 Pos position, Missing parenthesis.

Explanation: The trace selection parameters for either the auxiliary trace print program DFHTU650, the system dump print program DFHPD650, or the GTF trace print program DFHTR650 are not correctly specified. Keywords have been specified which need matching parentheses and one of these is missing.

System action: The print job terminates with a return code of 8.

User response: To specify more than one entry for a selection, you must put the list of entries in parentheses. For example, to select tranids ABRQ, AORD, and MYTR, specify TRANID=(ABRQ,AORD,MYTR). Ensure you have specified matching pairs of parentheses as required.

Module: DFHTRFPP

Destination: SYSPRINT

DFHTR4005 Pos position, Null data.

Explanation: The trace selection parameters for either the auxiliary trace print program DFHTU650, the system dump print program DFHPD650, or the GTF trace print program DFHTR650 are not correctly specified. Null data has been found at *position* in the trace selection parameter statement.

System action: The print job terminates with a return code of 8.

User response: Ensure you put valid data in the trace selection parameters. Please refer to the *CICS Operations and Utilities Guide* for guidance on valid trace print selection parameters.

Module: DFHTRFPP

Destination: SYSPRINT

DFHTR4007 Pos position, Invalid separator.

Explanation: The trace selection parameters for either the auxiliary trace print program DFHTU650, the system dump print program DFHPD650, or the GTF trace print program DFHTR650 are not correctly specified. An invalid separator has been found at *position*.

System action: The print job terminates with a return code of 8.

User response: You must use commas to separate keywords and entries in a list.

Module: DFHTRFPP

Destination: SYSPRINT

DFHTR4008 Pos position, Parameter length invalid.

Explanation: The trace selection parameters for the auxiliary trace print program DFHTU650, the system dump print program DFHPD650, or the GTF trace print program DFHTR650 are not correctly specified. A trace selection parameter has been specified with an incorrect length.

System action: The print job terminates with a return code of 8.

User response: Ensure that the length of the specified trace selection parameter is correct.

Module: DFHTRFPP

Destination: SYSPRINT

DFHTR4009 Pos position, Parameter value invalid.

Explanation: The trace selection parameters for either the auxiliary trace print program DFHTU650, the system dump print program DFHPD650, or the GTF trace print program DFHTR650 are not correctly specified. A trace selection parameter has been specified with an invalid value at *position*.

System action: The print job terminates with a return code of 8.

User response: Correct the incorrect parameter value. Refer to the *CICS Operations and Utilities Guide* for guidance on valid trace print selection parameters.

Module: DFHTRFPP

Destination: SYSPRINT

DFHTR4010 Pos position, Parameter range invalid.

Explanation: The trace selection parameters for either the auxiliary trace print program DFHTU650, the system dump print program DFHPD650, or the GTF trace print program DFHTR650 are not correctly specified. A value has been specified at *position* which is outside the valid range for this parameter.

System action: The print job terminates with a return code of 8.

User response: Ensure that the value specified is in the correct range for this selection parameter. Refer to the *CICS Operations and Utilities Guide* for guidance on valid trace print selection parameters.

Module: DFHTRFPP

Destination: SYSPRINT

DFHTR4011 Pos *position*, Invalid page size range.

Explanation: The trace selection parameters for either the auxiliary trace print program DFHTU650, or the system dump print program DFHPD650 are not correctly specified. The value specified at *position* for the PAGESIZE=(value) selection parameter is outside the valid range allowed.

System action: The print job terminates with a return code of 8.

User response: Specify a value for PAGESIZE=(value) in the range 20 through 9999 lines per page.

Module: DFHTRFPP

Destination: SYSPRINT

DFHTR4012 Pos *position*, Invalid combination of FULL, ABBREV and SHORT trace.

Explanation: The trace selection parameters for either the auxiliary trace print program DFHTU650, the system dump print program DFHPD650, or the GTF trace print program DFHTR650 are not correctly specified. Two or more of the selection parameters ABBREV, SHORT, or FULL have been specified together. These parameters are mutually exclusive.

System action: The print job terminates with a return code of 8.

User response: Specify either ABBREV or SHORT or FULL and rerun the print job.

DFHTSnnnn messages

DFHTS0001 *applid* An abend (code *aaa/bbbb*) has occurred at offset *X'offset'* in module *modname*.

Explanation: An abnormal end (abend) or program check has occurred in module *modname*. This implies that there may be an error in the CICS code. Alternatively, unexpected data has been input, or storage has been overwritten.

The code *aaa/bbbb* is a 3-digit hexadecimal MVS code (if applicable), followed by a 4-digit alphanumeric CICS code. The MVS code is a system completion code (for example, 0C1 or D37). If an MVS code is not applicable, this field is filled with three hyphens. The CICS code is an abend code or a number referring to a CICS message (for example, AKEA is a CICS abend code; 1310 refers to message DFHTS1310).

System action: An exception entry is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In

Module: DFHTRFPP

Destination: SYSPRINT

DFHTR5001 THE LOAD FOR A FEATURE PROGRAM HAS FAILED.

Explanation: The load for a feature formatting program has failed. This can happen if the program text is not included in one of the named datasets for the job.

System action: The trace formatting continues without feature tracing.

User response: Try and determine what caused the load error.

Module: DFHTRFFE

Destination: SYSPRINT

DFHTR5002 FEATURE FORMATTING PROGRAM HAS FAILED.

Explanation: A feature formatting program has failed.

System action: The trace formatting continues without feature tracing.

User response: Refer to the documentation provided with your feature.

Module: DFHTRFFE

Destination: SYSPRINT

this case CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Notify the system programmer. If CICS is still running, it is necessary to decide whether to terminate CICS.

Look up the MVS code, if there is one, in the relevant MVS codes manual.

Next, look up the CICS alphanumeric code. This tells you, for example, whether the error was a program check, an abend, or a runaway, and may give you some guidance concerning user response.

If module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If you cannot run without the full use of module *modname* you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTSAM, DFHTSBR, DFHTSDM, DFHTSPT, DFHTSQR, DFHTSRM, DFHTSSH, DFHTSSR, DFHTSST, DFHTSWQ.

XMEOUT Parameters: *applid, aaa/bbbb, X'offset', modname*

Destination: Console

DFHTS0002 *applid* **A severe error (code X'code') has occurred in module modname.**

Explanation: An error has been detected in module *modname*. The code X'code' is the exception trace point ID which uniquely identifies what the error is and where the error was detected.

System action: An exception entry (code X'code' in the message) is made in the trace table. A system dump is taken, unless you have specifically suppressed dumps in the dump table.

CICS continues unless you have specified in the dump table that CICS should terminate. If appropriate, an error return code is sent to the caller of this domain. In this case, CICS could be terminated by the caller (for example, the domain manager, DFHDMDM). A message is issued to this effect.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: This indicates a possible error in CICS code. The severity of its impact depends on the importance of the function being executed at the time of the error.

CICS may not have been terminated. If the message occurs once and module *modname* is not crucial to the running of your CICS system, you may decide to continue to run and bring CICS down at a convenient time to resolve the problem.

If the message recurs or if you cannot run without the full use of module *modname*, you should bring CICS down in a controlled shutdown.

You need further assistance from IBM to resolve this problem. See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTSAM, DFHTSBR, DFHTSDM, DFHTSPT, DFHTSQR, DFHTSRM, DFHTSSH, DFHTSSR, DFHTSST, DFHTSWQ.

XMEOUT Parameters: *applid, X'code', modname*

Destination: Console

DFHTS01001 *applid* **Temporary Storage initialization has started.**

Explanation: This is an informational message indicating the start of temporary storage domain initialization.

System action: Initialization continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHTSDM

XMEOUT Parameter: *applid*

Destination: Console

DFHTS01011 *applid* **Temporary Storage initialization has ended.**

Explanation: Temporary storage domain initialization has completed successfully

System action: Initialization continues.

User response: None. You can suppress this message with the system initialization parameter, MSGLVL=0.

Module: DFHTSDM

XMEOUT Parameter: *applid*

Destination: Console

DFHTS01021 *applid* **About to format the temporary storage data set (numcis control intervals).**

Explanation: Temporary storage has been cold-started with a new data set. This message is issued when formatting of the data set commences, and indicates the number *numcis* of control intervals which will be formatted.

System action: CICS continues. Message DFHTS0101 is issued when temporary storage initialization has been completed. Note that formatting can take a significant time if the data set is large.

User response: None. You can suppress this message with the message level system initialization parameter, MSGLVL=0.

Module: DFHTSDM.

XMEOUT Parameters: *applid, numcis*

Destination: Console

DFHTS0103 *applid* **Invalid attempt to switch between a TST and RDO for Temporary Storage. The attempt is ignored.**

Explanation: Temporary storage has detected an implicit attempt to switch between using a TST and

DFHTS0104 • DFHTS1301

RDO for TS queues, but CICS has not been COLD started.

Switching from using a TST to RDO for TS (or vice versa) is permitted only on a COLD or INITIAL start of CICS.

System action: CICS continues. The attempt to switch is ignored. CICS will use a TST (if specified) or RDO models for TS queues, as for the previous CICS run.

User response: You may wish to restart CICS specifying an INITIAL or COLD start in order to complete the switch.

Module: DFHTSAD

XMEOUT Parameter: *applid*

Destination: Console

DFHTS0104 *date time applid terminal userid tranid*
TSMODEL entry for *tsmodelname* has been added.

Explanation: This is an audit log message indicating that temporary storage model *tsmodelname* has been added to the system using the INSTALL command Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Module: DFHTSAD

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, tsmodelname*

Destination: CSMT

DFHTS0105 *date time applid terminal userid tranid*
TSMODEL entry for *tsmodelname* has been replaced.

Explanation: This is an audit log message indicating that temporary storage model entry *tsmodelname* has been replaced in the system using the INSTALL command. Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Module: DFHTSAD

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, tsmodelname*

Destination: CSMT

DFHTS0106 *date time applid terminal userid tranid*
TSMODEL entry for *tsmodelname* has been discarded.

Explanation: This is an audit log message indicating that temporary storage model *tsmodelname* has been deleted from the system using the DISCARD command Where

- *terminal* is the netname or termid of the terminal associated with the transaction issuing the message. If there is no terminal associated with the transaction, the terminal name is suppressed.
- *userid* is the user identifier of the user associated with the transaction issuing the message.
- *tranid* is the transaction issuing the message.

System action: The system continues normally.

User response: None.

Module: DFHTSAD

XMEOUT Parameters: *date, time, applid, terminal, userid, tranid, tsmodelname*

Destination: CSMT

DFHTS1301 *applid {READ | WRITE}* **Error detected by temporary storage. RPL feedback area is X'yyyyy'.**

Explanation: An I/O error has been detected by temporary storage. Either

- A hardware error occurred while a task was accessing the temporary storage data set, or
- VSAM detected a logic error in the request. The most likely cause of this is that the data set was defined incorrectly.

System action: An abend ATSD or ATSU is returned to the application program.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Ensure that the definition of the temporary storage data set is correct. For logic errors see the OS/390 DFSMS Macro Instructions for Data Sets manual for assistance in interpreting RPL feedback codes.

See the *CICS Problem Determination Guide* for more guidance in dealing with temporary storage problems.

Module: DFHTSAM

XMEOUT Parameters: *applid*, {1=READ, 2=WRITE}, X'yyyyy'

Destination: Console

DFHTS1310 *applid* **Temporary storage data set does not match bit map**

Explanation: The temporary storage domain has detected an inconsistency between its control blocks. The inconsistency was detected either during compression of an I/O buffer or by the TS control block checking which is enabled via TS trace level 3.

Possible causes of the inconsistency are

- An incorrect temporary storage data set (DFHTEMP) was used.
- The control interval size (CISIZE) of the temporary storage data set was changed between CICS runs.
- A storage overlay has occurred.
- An internal error has occurred within the TS domain.

System action: CICS is abnormally terminated with a dump.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: To determine the cause of the error, check that

- The correct data set was used.
- The CISIZE of DFHTEMP was not altered between CICS runs (if CISIZE **was** altered, temporary storage should have been cold started).

Whatever the cause of the error, temporary storage must now be cold started.

See the *CICS Problem Determination Guide* for more guidance in dealing with temporary storage problems. If an overlay has occurred, you will need further assistance from IBM.

See Part 4 of the *CICS Problem Determination Guide* for guidance on how to proceed.

Module: DFHTSAM

XMEOUT Parameter: *applid*

Destination: Console

DFHTS1311 *applid* **Temporary storage data set is full and cannot be extended**

Explanation: The temporary storage data set is full. CICS has failed in an attempt to extend it.

System action: Processing continues.

User response: Consider whether you need to increase the space allocation for the temporary storage data set.

Module: DFHTSAM

XMEOUT Parameter: *applid*

Destination: Console

DFHTS1315 *applid* **The temporary storage data set has exceeded the maximum number of control intervals supported.**

Explanation: During a temporary storage write request, an attempt has been made to add a new control interval to the temporary storage data set. The temporary storage data set already contains the maximum number of supported control intervals and cannot be extended.

System action: Processing continues.

User response: Consider whether you need to increase the control interval size for the temporary storage data set. See the *CICS System Definition Guide* for guidance on defining the temporary storage data set.

Module: DFHTSAM

XMEOUT Parameter: *applid*

Destination: Console

DFHTS1340 *applid* **No DD statement provided for temporary storage data set.**

Explanation: CICS is unable to open the auxiliary temporary storage data set because no DD statement has been provided.

System action: A dump is provided and CICS is terminated.

User response: Correct the error and restart CICS.

Module: DFHTSDM

XMEOUT Parameter: *applid*

Destination: Console

DFHTS1341 *applid* **VSAM error processing SHOWCAT for temporary storage data set.**

Explanation: VSAM has detected an error during SHOWCAT processing for the auxiliary temporary storage data set.

System action: A dump is provided and CICS is terminated.

User response: Correct the error and restart CICS.

Module: DFHTSDM

XMEOUT Parameter: *applid*

Destination: Console

DFHTS1342 *applid* Invalid VSAM definition for temporary storage data set.

Explanation: CICS is unable to open the auxiliary temporary storage data set because it is not defined as VSAM ESDS.

System action: A dump is provided and CICS is terminated.

User response: Correct the error and restart CICS.

Module: DFHTSDM

XMEOUT Parameter: *applid*

Destination: Console

DFHTS1362 *applid* Temporary storage data set not formatted

Explanation: The auxiliary temporary storage data set is not formatted. It is empty. If initial formatting is necessary, it is performed when temporary storage is cold started.

System action: The temporary storage initialization task is abnormally terminated.

User response: Correct the error and restart CICS.

Module: DFHTSDM

XMEOUT Parameter: *applid*

Destination: Console

DFHTS1363 *applid* Invalid control record for temporary storage data set

Explanation: The auxiliary temporary storage data set was not initialized for temporary storage.

System action: The temporary storage initialization task is abnormally terminated.

User response: Correct the error and restart CICS.

Module: DFHTSDM

XMEOUT Parameter: *applid*

Destination: Console

DFHTS1371 *applid* VSAM error processing SHOWCB for temporary storage data set, RC=*X'retcode'*

Explanation: VSAM has detected an error during SHOWCB processing for the auxiliary temporary storage data set.

System action: The temporary storage initialization task is abnormally terminated.

Message DFHME0116 should be produced containing the symptom string for this problem.

User response: Check the return code in the

appropriate VSAM publication.

Module: DFHTSDM

XMEOUT Parameters: *applid, X'retcode'*

Destination: Console

DFHTS1372 *applid* VSAM error processing OPEN for temporary storage data set, R15=*X'retcode'*, RC=*X'errorcode'*
